Ace raised her blaster.

'You've already killed me once, girl,' Kreer said. 'Didn't you learn anything from that?'

When Bernice asks to see the dawn of the space age, the Doctor takes the TARDIS to the United States of America in 1957 - and into the midst of distrust and paranoia. The Cold War is raging, bringing the whole world to the brink of atomic destruction.

But the threat facing America is far more deadly than Communist Russia. The militaristic Tzun Confederacy have made Earth their next target for conquest - and the aliens are already among us.

Two nuclear warheads have been stolen; there are traitors to the human species in the highest ranks of the army; and alien infiltrators have assumed human form. Only one person seems to know what's going on: the army's mysterious scientific adviser, the enigmatic Major Kreer.

David A. McIntee is the author of *White Darkness*. He lives near Stirling with a dog who thinks she's a cat, and a cat who thinks she's a dog.

This has been another research-heavy book, and I wouldn't want to  
leave you without a few pointers as to the non-fiction sources. The organizations referred to all did or do exist,  
though the IPU was disbanded in 1947 - that's dramatic license. All the locations also really  
Transcribed for the internet by Kara Jade  
extist, with the exception, for reasons which will become obvious, of Corman AFB, though it is a combination  
of different elements attributed to  
Neither intentional nor unintentional claim of ownership is levied against  
different bases in UFO myth. The main sources of research for this facet,  
this work, and no profit has been made by its transcription or distribution.  
and the occasional UFO report which has been fictionalized here, were:  
We respect the original copyright holders, and encourage readers to  
*Aliens From Space* by Donald Keyhoe; *Above Top Secret* by Timothy purchase original copies from bookstores  
when available.

Good; the reports of Robert Lazar which appeared in *Alien Liaison*, edited  
by Timothy Good; *Farewell Good Brothers*, an Oscar-winning short documentary about 1950s contactees; and  
finally Finnish TV's *UFOs*, which was shown on BBC2 over Christmas 1993.

The characters are fictional, except for Shadow.

Finally, I've been warned to mention my mum and dad, who
complained when I didn't do so last time.

If you're wondering what to expect here, well: last time I did a doom-laden historical, next time - chance'd be a fine thing - I plan a doom-laden historical, so for now let's just have some fun, eh?

Cue the white circle.

I knew myself, at the first breath of this new life, to be more wicked, tenfold more wicked, sold a slave to original evil.

*Heat scalded every cell. The searing molten fire of liquid rock The Strange Case of Dr Jekyll And Mr Hyde overwhelmed every sensation, a red-tinged whiteness the only vision possible.*

*Shuddering tremors racked the body, painfully threatening to shake the very cells apart, molecule by molecule.*

*The only thought that existed in the blinded mind was to be free of the fire, free of the pain, and free of the searing brightness.*

*Two minds flowed, fusing briefly of necessity, sensing an opening, an opportunity between what was and what could be. Mutual strengths interlocked, seeking remembered calmness.*

*If time still existed at all, there could be little of it left, but the speed of thought was fast enough to take advantage. The minds' eyes, operating as one, saw past and present, and focused, blotting out the liquid fire.*

*Deep within the heart of linked minds something burst free, flashing outwards in the blink of an eye. The heat flared beyond the limits of imagination, searing the mind with a flash.*

*The senses revelled in their freedom, far from their erstwhile prison.*

*And then there was merciful blackness.*
FIRST FRONTIER

May Day, 1957
Occulting the diamond-scattered sea of stars beyond, the dark night-side of the planet wheeled slowly amidst the sluggish backwaters of the galaxy. Through the cloud-cover, tiny pin-points of light were barely perceptible from low orbit, marking the locations of several cities on the surface far below.

Although its origin was too tiny to be seen by the naked eye, one small spark abruptly swelled into a blazing torch as it tore its way out into a trailing pillar of flame, a cylinder of gleaming steel, already scorched in places by its own exhaust, broke free of the restrictive blanket of gases around the planet. The flame flickered and died as the rocket coasted out into the vacuum, sharp moonlight picking out the scarlet 'CCCP' that was the only matt area on the polished surface.

At a preprogrammed altitude, explosive bolts fired around the nose-cone, splintering it to allow a smooth metal sphere with four trailing antennae to float gently out of its metal womb and into its own orbit.

In a cavernous bunker deep within the northerly Nykortny Cosmodrome, warning lights flickered crazily along the serried ranks of battleship-grey consoles and telemetry stations. Dozens of technicians in the olive drab shirts of the Raketnye Voiska Strategicheskogo Naznacheniya branch of the army struggled to douse the warning lights and restore control.

Heavy doors at one end of the room burst open and a group of uniformed men bedecked with medals strode in. One of them, with a granite face, briefly glanced at the world map dominating the far wall of the room, on which a skewed orbital track was being projected. 'What has gone wrong?' he demanded gruffly.

A nervous scientist in his shirt-sleeves looked up from studying a console. 'The satellite has gone out of control. It has deviated from its projected path and will not respond to our instructions - not even the abort signal. Also,' he went on reluctantly, 'it appears to be transmitting some kind of signal which we cannot understand.'

'Meaning?' the officer prompted.

'It registers on our receivers but is not a radio signal. In fact it doesn't appear to follow any sort of logical binary sequence. Here, I'll let you hear it,' the scientist finished, leaning across to twist a dial on one panel.

Immediately the room was filled with a strange and atonal electronic warbling.

The granite-faced man nodded, looking around at the staff with a calculating air. 'This operation is at an end,' he declared finally. 'The Praesidium will consider what action to take. Meanwhile, make sure that no word of these events leak out. When we next launch a satellite, it will and could hear more Praesidium will consider what action to take. Meanwhile, make sure that no word of these events leak out. When we next launch a satellite, it will and could hear more Praesidium will consider what action to take. failure must be erased from the like a rose and pitched the bloodied guards to the floor below.

Another couple of guards appeared through a ground-level doorway as it opened again, and poured a stream of fire into the Doctor as he tried to

A seepage of amber desert twilight speared across concrete, staining it rise. His body jerked spasmodically and collapsed once again. With a darkly with bloodied shadows. Blackness flickered as a girl, perhaps in howl, Ace threw herself towards one of the guns that had fallen with the her late teens or early twenties, slipped through the narrow doorway that guards from the catwalk. It was a Thompson sub-machine-gun, but the admitted the light. Her badge-encrusted bomber jacket rustled faintly as method of operation was simple enough. She unleashed a volley of fire she looked around in the dim light, a small silver can in one hand and a into the guards, who were knocked to the floor under the impacts.

metallic baseball bat in the other. 'No ground station and no guards, Ace took a deep shuddering breath, too stunned to attempt anything

Professor,' she whispered in a fain west-London accent.
else. Nevertheless, it was only an instant before she took her first step

'There'll be some somewhere, and I wish you'd remember to call me towards the Doctor's body and its satellite blood pools.

Doctor,' her companion replied exasperatedly. He was a small man in checked trousers and a chocolate-brown jacket. Barely sparing a glance be beyond pain pounded into her back, shattering ribs as she pitched for the empty hallway they were passing through, he stalked over to the face-first to the floor, and all sensation faded.

far wall, running an extendable electronic probe over the prefabricated sections. 'I thought as much,' he announced with a satisfied nod. 'There's Boots crunched shards of metal and concrete as the guards circled the some sort of hidden chamber here. Blow me a nice hole in this wall, Ace.'

room, ignoring the metallic scents of blood and acrid cordite fumes that

'Right.' The girl grinned eagerly, twisting the cap of the can she held, clouded the area. With a snap, a powerful spotlight came on in an alcove, and laying it at the foot of the wall. 'Down!' she called, hurling herself to the floor. The man who had reminded her that he was the Doctor did on top.

likewise, an instant before a hollow boom heralded the blast that left a smoking hole in the grey wall. Lights flickered distantly on the other side the shadows of the nearest catwalk doorway. A ghostly reflection tinted of the breach.

his almost invisible eyes as he looked down at the bloodstained scene.

Beyond the shattered edges of the wall was a sloping corridor that led down to a room filled with machinery and electronics. Lights flashed feeling for a pulse at her neckline below the blonde roots of her otherwise brightly over the ebon surfaces of tall cabinets ranged around the walls, dark hair.

Pulling her aside, he listened at the left side of the Doctor's white thick pipes and cables rose in a column in the centre of the room chest. He looked back up at the figure in the shadows and drew a hand and spread out along the walls at the same level as a catwalk, some across his throat in a curt gesture.

twenty feet up. Two doorways stood open on either side, with another two

A faint chuckle drifted from the corner as the man consulted his gold above, giving access to or from the catwalk. The Doctor stepped smartly watch. 'Precisely twenty-eight seconds. That's excellent. Have this room up to the column of pipes and cables as Ace turned on her heels, sniffing cleared for installation of Shok'Arl's telemetry equipment when it arrives.'

at the air and looking around suspiciously.

He turned away towards an inner door, then paused for a moment, a

'Aha, Ace,' the Doctor commented, 'there's a console here that seems glimmer of light outlining his sardonic smile. His arm shot out, pointing at to be the main.' A harsh rattle cut off his words, and his left leg was the blue box. 'Now destroy that object,' he hissed as he vanished back smashed out from under him, spots of blood spraying across the floor as into the shadows.

doubted it; nothing ever happened in Alamagordo these days. It was a situation which left him wondering whether he should be disappointed by

Shaking his head, Larry stepped back from the window, as the assessment of him as a 'cupcake', since Agar himself was beginning to sheriff's car also vanished from sight.

doubt the stability of his own mind.

Unlike Brady or Muldoon, he didn't have to consult the copy of the

The tag reading 'S Brady' gleamed on the sheriff's barrel-chest as he got Socorro Sun in his glove compartment to find out about aliens. He had out of the Sheriff's Department Ford Thunderbird outside the County met them.

Sheriff's Office. He had already forgotten acknowledging Joe's nod

Fanning himself gently with his hat, he leaned against the warm metal outside Larry's hardware store, his thoughts occupied by wondering of the car and searched the blue expanse above, ignoring the sulphur-whether anything of importance had happened over lunch. Somehow, he and-sawdust surface of the desert all around. The being he had told the man from the paper about had said that he and his people would meet

With the exception of the three equidistant hemispheres sited around him again today; that fact, above all else, he recalled from the previous the circular exhaust on the lowermost surface, the disc was completely meeting. He had wanted to bring some friends along, but they had smooth and featureless, sunlight seeming to wash from its polished advised against it. Agar recalled the voice of the one who had seemed to surface like water from a duck's back. 'Stay where you are,' a melodic be their leader. It was a soothing and reasonable voice, which had told voice chimed. It was clearly an order, but its tone was not unkind. 'Do not him that one-to-one contact was best for now, as they did not wish to be afraid. We mean no harm to you.'

frighten their brothers on Earth unduly.

Agar already knew this from his previous meeting and strove not to feel

He wasn't sure that he understood what they meant by that, but it had fear. He couldn't help being a little shaky, however, and quite nervous. His seemed such a reasonable point of view that he couldn't really disagree legs too shaky to take him anywhere, he watched as the craft descended.

with them. He had to admit, however, that 'brothers on Earth' was an odd Three landing legs extended themselves from the underside, though there turn of phrase.

had been no sign either of them, or of any hatch-covers or mechanisms.

He wasn't about to let a trick of semantics dissuade him from seeing Silently, and without disturbing any dust, the disc settled onto the ground.

his unusual friends again, however, and he smiled contentedly at the For a moment nothing happened, then an invisible seam parted in the prospect. Somehow he felt at ease with them, unlike his fellow humans form of a door and a ramp lowered itself. No one emerged, but the implicit who always made him feel so small, like an insect crawling on the planet's invitation was plain. Taking a calming breath, Agar walked up the ramp, face.

having to bow his head slightly as he passed through the low door. On the other side, he found himself in a smooth-walled chamber six feet across.

The forms of Agar and his car were no bigger than an ant as they glowed As he had done before, Agar squinted at the wall, trying to either spot the faintly within the spherical hologram viewer, the image clearly taken from seams or identify the strange metal it was made from. It certainly wasn't some point far above. The holosphere was one of many such devices steel, brass or any allow he was even remotely familiar with. Abruptly, an suspended in the centre of a round room like bubbles trapped in amber. inner door slid open and a man beckoned to him.

The spheres illuminated the room softly with the glow of dozens of The man was lean and clean-shaven, with straight shoulder-length images, sensor read-outs and communications messages. Shadowy blond hair. He wore a pale blue overall of some smooth material, though, figures flitted around them, dancing through the air in the microgravity. try as he might, Agar could see no sign of any zippers or buttons. The The reflections of that light gave a chilling depth to the inky black eyes smooth chin was slightly narrow, and the man's large and slightly canted that peered out at them from bulbous, mushroom-coloured heads. eyes were a strange shade of violet that reminded Agar of his service in Korea five years earlier. 'Welcome, brother,' the man greeted him, his voices emanated from the shadows all around.

voice cultured yet toneless. 'We are glad you returned.'

Presently, one pair of midnight eyes glanced at Agar's image, and 'How could I stay away?' Agar asked, momentarily wondering why he flickered over the glyphs that floated at the edges of the image. The hadn't.

watcher added its voice to the soft chorus, activating its communication
'This way,' the man said, gesturing through the inner door with a smile. 

As you command, Captain,' a voice acknowledged. Satisfied, the sure how it was done. He led Agar into a larger chamber, twenty feet captain moved to consult another of the spheres which dotted the across and eight high. The centre of the room was dominated by two darkness. 

hemispheres, each two feet high, one growing up from the floor while the other bulged downwards from the ceiling. A thick, four-foot crystalline Agar somehow felt the presence of the craft before it appeared, his ears column, pulsating with blue light, joined the two domes. At the edges of popping under the pressure and his hair swirling as if from a static charge. the room, a series of partitions divided the surrounding area into alcove Apprehensive in spite of his excitement and curiosity, he looked up, tilting his head far enough back to make his neck ache. A few tens of metres were calmly at work in the alcoves, not even sparing a glance for Agar. 

above, the sky shimmered and rippled as if it was a pool of blue ink into which someone had tossed a pebble. As the laws of optical physics some kind of recognizable instrumentation. 

It was a wasted effort as the reasserted themselves, the light ceased swirling as a large silver disc panels were all covered in some kind of touch-sensitive spots. There were swam into steady focus. circular dials, but with no needles, pointers or incrementations. 

Cautiously, he reached out towards one, but the man's long-fingered hand blocked his path. 'Do not touch the consoles.' 

No one was around in the garish desert countryside when a red Plymouth 

'How can you tell what those meters are reading?' Agar asked convertible with white trim and, naturally, plenty of chrome, pulled to a halt curiously. 

at the side of the road, wearing its cloud of tan dust like an Arab woman. The man looked at him steadily for a moment, his eyes distant and wears a yashmak. unfocused, before answering. 'The degree of illumination indicates the status level,' he stated, turning away before a puzzled Agar could ask for clarification. 

Almost immediately, the short man in the passenger seat got out and looked around approvingly from under the sagging brim of a limp fedora clarification. 

that matched the cream-coloured field of his rumpled linen suit, unbroken. 

Agar followed hastily as the man led him over to a glassy sphere which but for a jade Aztec brooch on his lapel. He had had to give special glowed with an inner fire. As Agar stood in front of it, the fuzzy glow gave instructions to Groenewegen's Millinery on Neo-Sydney to get the white way to a perfect three-dimensional image of a gladius-shaped vessel hat made, but it was worth it in climates like this. Ahead of him, a hazy basking in the unfiltered sunlight of a hight orbit. Though the image was sea of gleaming gypsum crystals glittered with the searing whiteness of only as large as Agar's hand, something about it gave him the impression an Alpine snowscape under the cloudless azure sky. The grey-blue tint of tremendous size and power. 'Is that how you came here?' he asked. 

that the haze gave tot he surrounding mountains reinforced the

impression of coolness, despite the afternoon heat. A faint breeze wafted 

'Which planet is that? Mars? Venus?' 

across the sparkling sands with a scent of stone and dry spices. 'The old 

There was another odd pause before the man nodded. 'Your home universe again,' the Doctor commented. 

astronomers would term it Venus.' 

Ace stood on the driver's seat and leaned the heels of her hands atop 

Agar's breath caught in his throat. So Venus was inhabited by men and the windscreen, her 26th-century combat suit partially hidden by the long women as well! He tried to swallow his excitement and think of a rational black duster coat she occasionally wore. Mirrored sunglasses and a wide-question. 'What is it like there? I mean...' he racked his brain for the right brimmed black hat which kept half her face in shadow completed the words. 'What's the climate like? Do you live like us? How do you keep the ensemble. 'For how long?' she said suspiciously, surveying the gleaming peace? 

wilderness. 'Are you sure this is the real Earth and not the Twilight Zone?'

This time the pause was longer. For a worrying instant, Agar was
'Of course it is,' the Doctor answered crossly. He bent to scoop up a handful of the glittering crystals, preferring them to her. 'White Sands.'

man - the Venusian, Agar reminded himself - replied finally. 'No wars. Our life is... different. Because we have no diseases, our life expectancy is her dark hair not quite managing to clash with her plain jeans and reddish many times that of yours.' He made an adjustment to a control and the checked workshirt. 'You're probably right - nobody would create a climate view changed to that of artistically curved domes and spires under a like this deliberately. What is this anyway? The waste-tip from a salt vibrant golden sky. 'This is how we live.'

mine?' Ace nodded in sympathy.

Agar looked on in fascination. If he could only tell the world, he thought. The papers would lap this up... 'Why do you come here?'

away from the car in a peculiar manner. When he saw that the women were strolling normally after him, he harrumphed loudly and wandered off.

'to observe us.' The alien paused again. 'You must halt, looking curiously on the scene below. 'Well, I'm impressed,' the tell them of us,' he added. Doctor prompted.

A chill touched Agar's spine as he wondered if the alien had read his mind. 'One last thing. Do you have names?'

Spread out below the other side of the rise was a sprawling mass of differently shaded surfaces that made up roads, parade grounds, spires still in position - and low me... Xeno.' He led Agar to the doorway. 'Tell your people - do not be bunkers half-buried in the soil. Toy-sized people and vehicles moved afraid.'

along the greyish lines of the roads. A couple of miles beyond that were the stretched-out runways and hangars of an airfield. 'That,' the Doctor

After a moment, the Doctor realized he was forging on alone, and said, pointing off towards the airfield, 'is Holloman Air Force Base.' He turned back to them. 'Don't you have any curiosity about the history of this spread his arms wide like a tour guide from hell. 'Welcome to White little planet of yours?' Ace ignored that: she'd proved just such an interest Sands Proving Grounds.'

many times before, and she knew he was only trying to wind her up. 'Or in how many took the first tentative steps that would eventually lead to One of the minuscule vehicles crawling through the complex network of Spacefleet and beyond?' he went on. His tone was imploring as he roads at the heart of the Proving Grounds was a jeep moving at a stately returned to the two women, but Ace could see him realize that he wasn't five miles per hour. Caked in dust, it finally pulled off the narrow roadway really getting through to her. 'Look,' he added, 'how long have we and into a space between two blast walls at the back of a long, slope-travelled together?' He snapped up a hand in a silencing gesture before walled concrete bunker. Two men in tan uniforms hopped out; the driver's she could see. 'Exactly, and I've never got us killed not even once.'

'sergeant's stripes wrinkling as he moved, while the passenger's peaked cap betrayed his officer status even before his colonel's peps caught the sunlight. While the sergeant held the heavy door open, Colonel John C. blankly, 'but never since. So come on. It'll be all right - I have friends in Finney ducked into the cool shade of the launch control bunker. Even low places.' With that, he turned away and continued on
towards the under the strong desert sun, the lights were on, since the narrow windows base.

were heavily tinted against the glare.

Ace and Benny exchanged weary looks. Ace knew they would

"space brothers" crap! Are you trying to tell me you haven't seen one of

'Okay,' Jack said slowly, the looks in his family's eyes convincing him

these things in the last couple of months? They've been all over the that they weren't joking. 'Hang on to that
twelve-gauge, Rick, and I'll get place.'

the 30-06. Then we'll go take a look.' He slipped back down the stairs,

'Look, Frank, I was over at Holloman yesterday, taking over the week's making for the gun rack in the hall. As

he lifted the Winchester free, a supply of saucer reports. Wouldn't they have said something if these frenzied barking

and whinnying erupted outside. 'What the hell...? he things really existed?

grumbled, snatching the rifle from the rack.

'Not if they don't want to announce to the voters and taxpayers that
Rick and the women descended, bringing the children. The youngest foreign aircraft of some kind are buzzing our bases, and that our planes was eight, so none of them were crying, but they all looked hunted, their can't stop them.'

eyes darting about. ‘What's wrong with Jerry and Dino?’ Jay asked.
‘That's true, I suppose...’ the deputy answered in a slightly mollified tone which made Benny grimace as if there was something distasteful in on, Rick,’ he urged, slipping ammunition into the rifle as he walked to the the air. Obviously, she thought, this pair preferred to worry about door. As Rick opened it, Jack turned to the others. ‘Keep the door locked -

just in case.’ With that, he followed Rick outside.
It was Sara who approached Benny's bar stool. ‘What’ll it be?’
There was no sign of anyone around as they stepped off the porch and 'A Spine-Spinner?’ she asked hopefully.
away from the house. For the second time that night, Jack stepped away,
'This isn't Las Vegas,' Sara answered in a not unkind tone.
trying to get a good view of the roof. As they walked, they came into sight 'Warnog? Zombie?'
of Jerry and Dino, the two German Shepherds, in their fenced-off little Sara shook her head.
enclosure. The dogs began to bark more furiously, tails wagging in relief;
'Vodka Martini? Shaken, not stirred,' she added, a little self—
or so Jack guessed. The horses in the stable whinnied fearfully and consciously.
stamped their hooves, though there was no sign of whatever was causing 'Coming right up.’ Sara took a glass from under the counter and started their agitation.
filling it from the relevant bottles. 'You're obviously not from around here.
An abrupt sound of movement drew their attention as soon as their The other girl sounds English-'
backs were turned to the house to investigate the stable. Spinning back 'She is.'
round, Jack saw a small shadowy figure flit around the corner of the 'And the man sounds like he's from Scotland-
house and vanish into the encroaching darkness. 'Did you get a look at 'Probably.'
him?’ he asked Rick. 'Looked like a kid.'
'But your accent, I can't place.'
‘One weird kid, then. I just caught a glimpse, but it moved way too 'I'm from...’ Benny paused. Clearly she couldn't tell the truth, so she weird for a kid.' They had already reached the corner of the house. tried to think of somewhere suitably colonial that couldn't be seen as a Rounding it, they looked westwards. A faint glow lit the foothills eerily and hostile power in the Cold War era. 'Australia,' she finished finally, fervently Jack had to fight to suppress a shudder.
hoping that Sara had never heard a genuine Australian accent.
Without warning, something dropped from the sky, slamming into the 'Really? So what brings you to New Mexico?’
two men and knocking them into a sprawling heap. Jack rolled with his 'I'm an archaeologist.'
own momentum, and rose to a kneeling position in an instant. Vanishing 'No kidding?’ Sara brightened considerably. ‘Taking a look at the ahead was a stalky figure, less like a young vandal than some kind of Carlsbad caverns?’
monkey. Unsure as to whether it was the same one they had seen a 'I have seen them, yes.' In about half a millennium, she added silently.
moment ago, or another of the same type of creature, Jack fired at it as it 'There's an old pueblo much nearer here, you know. Some people dashed for the water tower. Rick also fired a blast from the twelve-gauge, think it may be Anasazi. It was discovered only very recently.'
but there came no cry of pain or thud of a falling body.
There is? Where? Perhaps this trip wouldn't be a total loss, she
'Here's an idea,' Rick suggested. 'We go back to the house and lock though.
ourselves in. That definitely wasn't no kid.'
'Just off Route 54. You can't miss it - there's a turning off to a farm just
'You're damn right it wasn't, but I want a good look at whatever it was.' outside of town, and the pueblo is in the
hills beyond that.'

Cautiously, Jack edged towards the water tower, the ghost stories of their
'Thank you,' Benny said with feeling. 'Oh, there is one other thing -
old Navajo cook coming back to haunt his mind.
about your beer glasses...'

Anything from anyone?' Benny asked.
When it came, it was with the speed of a jet. Emerging from the lee of the
'Not really.' The Doctor shook his head. 'Half these people seem to water tower, a spindly grey form with night-

would undoubtedly refer to as the 'flying saucer'.
Davison would have liked to think that she could have told them something about it. This wasn't going to
happen, though; the AFOSI representatives had already given her the bones of a dismissal story to be
written. They were claiming that a weather balloon, launched as part of
the preflight activity, had somehow come down and become entangled
with the missile. Everyone on base knew differently, of course, but none
of them were willing to risk the steep penalties that would follow any such
revelation.
Theoretically, Davison knew, she could just go ahead and write the
cover story. She could issue it to the locals without bothering to check the background to it. That wasn't her style, however. She had been intrigued by the disc or discs, ever since she first saw it - or one - several months earlier.

Davison had joined the air force in the hope of becoming a pilot, and flying like a bird. Women were only permitted to be transport pilots, of course, but she felt that was enough. The injuries she'd received in training had put paid to that ambition, however. Instead, her grades and former position on her high-school newspaper had convinced her superiors to assign her to military journalism, and her natural curiosity had agreed with the sentiment. Therefore, although her job didn't always require the precise truth to be told, she liked to ferret out the facts just for the record, and for personal satisfaction.

Searching for facts on a military base wasn't exactly encouraged, of course, and she did get the occasional suspicious look while on duty. For that reason, she was most at home digging through reports and researches rather than actually interviewing people. She wondered fleetingly how the tower crew would react to her today, and paused for breath outside the door. Though only in her early twenties and leanly built, she felt the way that Alfred Hitchcock might if he'd had to run a marathon. She filed a thought to apply for quarters nearer the centre of the base. Next to the door, above the fire extinguisher and safety notices, was a sign reading 'Loose lips sink ships.' She shook her head wearily - didn't they know the war was over? Or were they just preparing for the next a searching expression. 'Something wrong?'

'I just had that feeling - you know, somebody walking over your grave.' Of course, there were certain advantages to her position. She was the 'Interesting,' he murmured inscrutably. one person who might be positively expected to ask questions about the 'Aren't we going to be poking our noses into that flying saucer?' day's events, even if she was nervous about it. She didn't want to shirk 'Probably, but there are so many things zipping around Earth's her duty, did she? Opening the door, she stepped through. atmosphere at this point in time that we could be stuck here forever trying A guard was inside, but the officer of the day waved him away. to find out which one we'd seen.' Lieutenant Vincente was the OD on duty, and he gave Davison a 'What's that supposed to mean?' Benny asked. 'What are you talking querying look. 'Hi Marion, come to see where the real work happens?'

'Well, people in this era were always seeing UFOs, and usually 'Sort of,' Davison replied after the obligatory chuckle at the standard considering them alien spaceships, but,' he added pointedly, 'even in the joke. 'I thought I'd pick your brains for a few quotes about the afternoon's unexplained cases, you have historians from the future; ball lightning; a excitement.'

rather odd bunch of Sidhe who inhabit the upper dimensions of Earth's Vincente frowned. 'What excitement?'

timeline... the list is endless. Either way, it's all a recorded part of Earth 'Well, the flying disc,' Davison prompted with a determined history, and exactly the sort of thing you'd expect to see in this time seriousness.

'What are you talking Benny wasn't born yesterday, however - or tomorrow, for that matter - about?' and grinned slowly. 'That's why you really brought us here, isn't it? So you 'Wait a minute.' Davison's voice threatened to break into a laugh. could see for yourself what these things looked like.'
Surely, she thought, Vincente was trying to pull a fast one on her. 'You've

somewhat uncomfortable to see him use it on someone. She wouldn't

'If they're only coming down at night, there's not a lot we can do at the dream of using violence to uncover a story from an innocent bystander, moment.' He started towards the door.

'For now, we go and visit Benny's but she couldn't help feeling that there was something more honest about pueblo. Tonight we'll offer our services at Holloman, and see if we catch the more physical ways of doing things than this raping of the soul, which the culprits. Get the car started, Ace. I'll go and fill the others in on what's could have dangerous and invisible side-effects.

happened. Well, mostly, anyway...'

Repressing a shudder, she watched from the doorway as the Doctor

removed his hands from Jack's temples. 'Tell us it as it happens.'

Jack's head lolled on his shoulders as if his neck was broken, occasionally raising itself jerkily as if on strings.

His teeth were gritted and

his lips drawn back from the gums with fear. 'Open the door,' he gasped hoarsely, looking over his shoulder sightlessly.

'Thank God,' he groaned, sagging in the chair with relief. 'Move it Rick.'

With a wide-eyes stare of horror, he looked down at his shoulder, then quickly up at a point above his face. 'Holy Christ,' he moaned, his fingers twitching spasmodically. 'Let me go!' 'What is it?' the Doctor hissed. 'What has a hold of you?' 'Some sort of shape... Rick? Mary, where are...'}
'Describe the shape.'
'Small, grey... I don't want to see! There's a door. Lights inside...
metal.' He snorted and gagged. 'What is that smell? Cleaning flui...
ammonia. More shapes pushing me... I don't want to... to... It's a table. I'm
on a table; my clothes, where? I can't move.' His voice began to rise.
'Something above me... Oh, shit, no! Needle, with machinery at the far
end. It's longer than my hand! Digging into my stomach!' he screeched.
'Who? Who is doing this?'
'I can't! I mustn't see!'
'You must!'
'Not like us,' Jack gasped, through gritted teeth. 'Dead skin, but their
eyes... No! Mustn't see their black eyes,' he gasped painfully. 'Oh jeez,
the eyes are pure black, and I ain't hypnotized any more, Doc,' he finished, drawing in shuddery breaths.
Aghast, Ace let out a breath she hadn't realized she'd been holding.

Three long hangars stood out at the lake; white-roofed, they blended in

away from the cab. The second shot blew the wing mirror off as the baby-faced one vanished inside. The rearmost men at the back of the truck Ahead, in the driver's seat of the truck, a sergeant floored the accelerator.

leaned out, and the whine of disruptor-fire overlaid the truck's throaty roar A curved silver surface gleamed in a hollow a short distance ahead. 'Did as it pulled away from the building.

any of the base personnel see you, sir?' he asked Stoker. Ace loosed off more shots at the rear of the truck, the blazing energy 'Only the ones inside the briefing room. They've been given memory bolts sending sprays of sparks from the tailgate. Rapidly obscured by a wipes as well.' The two guards he had posted at the ship were alert, he rising cloud of dust, the truck roared off into the distance. Not interested in noted with a sense of pride. He could see them take up firing stances wasting her power-pack's energy by firing blind, but equally unwilling to among the rocks that masked the ship.

countenance the idea of letting them get away, Ace looked around for The truck shook again as a flash lit up the rear-view mirror, and a cry some way to get another chance to deal with them.

from behind rapidly faded. Glancing out of the door window, Stoker saw

one of his men roll to a halt in the dirt, almost run over by the motorcycle. Gritting his teeth, Stoker felt a part of himself die with his man.

Forcing himself to pay attention to the road in front, he saw the guards fire on his pursuer mere instants before the truck skidded to a halt in a cloud of dust.

Kicking the door open, Stoker kept glancing back towards the Benny kept a hand clamped down on her hat as the Doctor, thin-lipped motorcycle as the dust cleared. To his satisfaction, its position was and grim, drove manically along the desert track, the Plymouth's marked by another cloud of dust, its twisted wheels barely visible lying on bodywork dented and scratched by stones kicked up by the wheels.

the ground. Dashing to the rear of the truck, Stoker opened the tailgate Squinting against the baleful glare of the low sun, Benny could feel her even as two of his men clambered out, carrying one of the crates between heart beat faster in its desperation to know what had happened to Ace.

them.

She tried to tell herself that it would be best to know, and promised herself Ushering his men to take the crates into the disc, Stoker watched for that heads would roll if Ace was... Well, she didn't even want to think of any sign of movement from his erstwhile pursuer. Vaguely relieved that that.

there was none, he climbed in after his men, and the silver wall of the hull Up ahead, a throbbing hum presaged the lift-off of a silver disc, which shone closed.

shimmered and vanished as it rose and banked westwards.

Amidst the dust stirred by the disc, a twisted mass of metal lay beside a motionless figure slumped in the dust. The Doctor stopped the car and leapt out. Benny followed anxiously.

In the middle of a patch of churned ground, Ace lay sprawled a few feet from the overturned motorcycle, a large bruise forming on her cheek and blood oozing from several small cuts. The Doctor pulled the curved part the handle away from the stem of his umbrella and removed the sphere that punctuated its question-mark shape. Undoing a small cap on the red globe, he waved it under Ace's nose. Benny's nerves calmed themselves as Ace coughed, waving away the phial as she struggled to rise. She winced as she touched her temple gingerly, almost immediately falling back to her knees and retching loudly. 'Shades!' she muttered thickly. 'I hate disruptor stuns.' She stood a little more steadily, spitting out a mouthful of dirt as she looked towards the abandoned truck. 'They got away, obviously.'

'Didn't they teach you about plans and tactics in the military?' Benny sighed, lifting the first-aid kit from the car.

'You must be joking! Spacefleet weren't that concerned about the mere
Irregular Auxies.'
'That figures,' Benny agreed wryly. She sprayed some antiseptic on
Ace's cuts and then waited as Ace attached healing patches to them,
using the car's wing mirror for accuracy. The truth was, though Benny was
reluctant to admit it to herself except on occasions like this, that the Doctor and Ace were the only family she
knew now. She had already lost
both her parents to raw hostility, and was beginning to realize of late that
she couldn't face losing either of them the same way. With ordinary people that wouldn't have made much
difference, but considering the way
Ace grabbed trouble by the throat it probably wouldn't be long before she
gave herself an ulcer. If her heart didn't give up before that, strained by its
innumerable leaps into her throat, she added mentally. 'Come on,' she
said to her - almost - adopted kid sister, 'the Doctor seems to have found
something interesting.'
Together they strolled - or at least Benny strolled, while Ace limped - to join the Doctor at the damaged truck. The Time Lord was waving his pocket radiation probe around the floor, and it crackled like hot fat on a "Take us to Corman," Kreer ordered smoothly as Stoker secured the two stove. 'So they were nukes, then?' Ace thought aloud.

'Yes,' the Doctor agreed with a frown of distaste. 'Probably simple casings for flight.

'As you command, sir,' Xeno responded from the central station of the medium-yield warheads and not hydrogen bombs, but bad enough.' He circular flight deck. In the main holosphere, the desert fell away, blurring jumped down from the truck. 'The question is, what do they want them as the skiff accelerated.

for?'

'You were almost late,' Kreer chided as Stoker came to stand beside him. Kreer seethed inwardly at Stoker. What was the point of planning the operation to the second if you were unpunctual? 'Was there any difficulty?' Kreer asked irritably.

'It can hardly be anything so obvious, simple, or mundane. Look at it this way,' he added, pointing at Ace. 'You were shot with a disruptor on medium stun, and you,' he turned to Benny, 'saw the ship that took off. She tried to stop us.'

With technology that far above current terrestrial developments, they could empty Fort Knox, destroy the White House, conquer any and every planet came under threat. You destroyed her, of course?' Kreer went on country they chose. But for some reason they feel they need inferior warningly.

human technology...'

'Possibly. We couldn't stop to check. She was certainly out of the fuel for their ships?' Ace hazarded.

action, though.'

'They'd have brought a supply with them, surely?' Benny pointed out.

'I suppose that will have to do,' Kreer mused with displeasure.

'Yes,' the Doctor agreed absently. 'Something doesn't add up here.' He snapped the radiation probe closed with a sigh, and jammed it back in his pocket. 'There's something not quite right about any of this.'

'What now?' Ace asked. Several jeeps were heading towards them and The artificial mountain root that was Corman AFB echoed to warning bells a helicopter buzzed overhead.

that sent airmen scurrying out into the circular area enclosed by foothills.

'Colonel Finney has offered us a place to wait, and an escort to the runway in from the dry lake. Instead, a silver disc lowered itself onto the warheads tonight,' Kreer announced. 'Meanwhile, your men can store them in hangar 18 along with Snowbird here.' He patted the hull of the
skiff as he finished.

'Your strategy is well-prepared,' Stoker acknowledged.

'Of course,' Kreer said with proud dismissiveness, as if he had been praised by a child for completing the simplest task that seemed magical to a youngster. 'Let's just say that isn't the first time I've hijacked something. Although at least this time I have a more suitable band of followers,' he added in satisfaction, indicating a group of men - in Air Force uniforms and dark blue berets - who were forming up before the ship.

From a nearby concrete root, a small tractor was towing a large Sikorsky S-58 transport helicopter. 'We'll need the other skiff recovered.'

He felt honoured that his men now knew him well enough to break up before the authorities can examine it too closely. Finney has it under conversations when he approached. He had nothing against talk per se, guard already, but the drive is still operating so it will no be cool enough to of course, provided it wasn't about sensitive subjects. Cosy family chats approach for a couple of hours yet. Take Dr Marlowe in the helicopter - it's were, after all, a cornerstone of his beloved society, and he liked his men slower, but you can't show up in another identical ship. You should arrive to feel that they were all part of one big happy family. Three was a crowd, about midnight.'

however, and he didn't like seeing crowds even that small, unless it was

'It would make good sense to fly it out before dawn.'

as part of a platoon or work squad. He could never be certain what such a

'You'd have to dismantle it first,' Kreer said.

'Leave that to me. If you keep the runway clear for morning, I'll have that Communists were organized in cells, and that was just another name the skiff split into its separate sections and flown here in a transport.'

for groups, wasn't it? That sort of thing was un-American, and to be

the project was over. 'General,' from the truck.'
Kreer greeted him. 'One did. I don't know where the body went. As for how should you 'Busy, Major?'
know...' Ace shrugged. 'You always do.' 'Some new equipment has arrived. I'm having it stored safely.' 'I'm glad to hear that,' Nyby said, looking into the dim hangar beyond.

His dark skin and temperament giving him the carefully cultivated image with a sense of unease. The Pentagon had sent some strange things of a human thundercloud, Nyby liked to tour his mountain-encircled base along to his base along with Kreer, and Nyby sometimes wondered if once in a while, in the firm conviction that fear of such unexpected there weren't some suspect characters among the top brass as well. In inspections would encourage his men to stay on their toes.

particular, he didn't like being given the responsibility of looking after it. Or He liked to find them hard at work when on duty, or asleep when not. perhaps he should say him, though it was difficult to tell. Kreer was the He was willing to tolerate the fact that the men played healthy, exciting, focus of all these irregularities, however, and so Nyby invariably focused American sports like baseball and football when off-duty, though he his ire on him. 'Was this authorized?'

accepted it only as a poor second best to resting or preparing for their

'Of course,' Kreer answered smugly. 'I have complete discretion to next shift. Sleep was fine as far as he was concerned, as it meant they procure equipment. The papers are all signed and sealed.' Nyby didn't would stay alert when on duty.

doubt that for a minute, but Kreer's posting orders were all in order as well

and he didn't think much of them either.

'That's fine, I'm sure. It's just that I sometimes wonder if you and it have America's interests at heart the way I do.'
'How can you doubt that?' Kreer tutted softly. 'Didn't President Eisenhower himself give you the orders when he came to welcome EBE-1 to America?' Ace had been looking forward to repaying some of the bumps she had 'Yes, of course,' Nyby rumbled happily, remembering with pride. Nyby already received, and had been grimly eager when the Doctor announced himself meeting the legendary Ike. He had been... It was odd, but he that he had a plan of action. Unfortunately, this had consisted solely of couldn't quite recall exactly what had happened. letting the Hispanic Sergeant Montoya drive them that evening to the bluff 'Excellent,' Kreer said in an approving tone that made Nyby furrow his where the disc had crashed. brow in thought. The Doctor, Ace and Bernice walked through the twilit activity with equally false calm. Small groups of overalled soldiers were trotting around Leaving Marlowe in the rear compartment, Stoker pulled himself into into the perimeter and roughly pounding fence-posts into the ground, while the empty co-pilot's seat as the ground fell away beneath the helicopter. another team followed in their wake with huge rolls of barbed wire. Under The pilot was listening to Chuck Berry over a commercial radio the lee of the weathered bluff, men were erecting a marquee-sized frequency. Stoker considered ordering him to switch it off, but decided camouflage tarpaulin over the disc. Drably painted trucks and jeeps were against it. Nyby would have censured the pilot for listening to subversive spaced at irregular intervals, some of whose engines were still idling to music, Stoker thought, probably believing that only the likes of Sinatra provide start-up power for the several generators that were connected to and Crosby were worthy American entertainers. He doubted that it would arc lamps set up under the tarpaulin, make any difference if Nyby knew that this type of music was considered The crunch of footsteps and the metallic rattle of equipment was an subversive in the Communist bloc as well. unending accompaniment to the time-travellers' passage through to the Stoker suspected that too many restrictions would harm morale. He let crash site. Occasionally Ace or Benny would have to cover their mouth the pilot have his fun, since he sensed the small pleasure afforded would and nose with a handkerchief to protect against the dust that was filling make him more relaxed and happier, and therefore more efficient. the air. Discipline had its place, but the carrot was as important as the stick it was Abruptly, as they rounded the front of the M59 that was serving as a tied to. field command post, the Doctor waved them to a halt. He silently pointed Settled in, Stoker drew out the envelope which Kreer had given him out a bus with blacked-out windows, which was disgorging men and before departure. Inside was a four-by-six monochrome photograph of a women in civilian dress. The newcomers were invariably doing almost group of smiling men in uniform. Stoker recognized only one of them. comical double-takes at their first sight of the disc. A pair of officers were Impossible though it seemed, it was himself. greeting them as they emerged, gesturing towards the disc now and He stared at the picture, wishing that one of the frozen grey faces again. 'Scientists,' the Doctor whispered. 'Let's go and see how wrong could begin speaking and tell him what he was doing among them several they get things, shall we?' months before he first came to the planet Earth. Marion Davison stepped off the bus and froze, as shocked as if she had just seen Eisenhower kiss Nikita Khrushchev. The sounds of hurried activity all around were blocked out by her own private silence, which seemed to emanate from the disc. Captain Vincente waved her aside with a disgruntled expression that reminded Davison that there were others waiting to disembark behind her. She stepped away from the bus, her line of sight a leash that tied her to
the gleaming disc which was swimming with liquid gold reflections from
the arc lamps.

The disc was incredible, projecting form the shattered earth like a frozen bead of quicksilver. Davison had
never seen its like, and was sure

that no one else had either. She wasn't old enough to remember Orson the ground a couple of hundred yards
away. Checking that no one was Welles' War of the Worlds radio broadcast of some twenty-odd years looking her
way, she slipped off in the direction of the landing helicopter.

earlier, but had heard a rerun as part of a documentary on the panic it had
caused. She had listened to that as an excited twelve-year-old, blissfully Stoker hopped from the helicopter with
practised ease and started off unaware of the chaos that the show had created in some towns. She had towards the
activity under the arc lamps. He had neither eaten nor slept in heard the documentary that followed with a great deal
of shock, scarcely over forty-eight hours, but showed no signs of weariness. He was believing how anyone could
have given any credence to such a fanciful concerned, however, about the photograph. He knew he hadn't been on
broadcast.

Earth at the time it was taken, but that wasn't what was bothering him.
Yet here she was, she told herself, facing a genuine alien artifact, and
He had wondered where he had been when the picture was taken, and
possibly one even more fanciful that those of Wells and Welles. The sight had been trying to remember just
that. It was a natural progression; little of the disc made her think twice about her idea of announcing its incidents
tended to provoke memories of one kind or another, though discovery to the press. If one Victorian drama could

control bunker at White Sands.

her. 'He did say we were observers and to be looked after?'

A number of technicians were busily reviewing the previous day's radar

'tapes, trying to glean what information they could about the destruction of

Well, what we're observing is about to move,' he said pointedly, the missile.
indicating the floodlit nose of the Guppy, which was split to allow a hoist to

'Sir,' someone called, and Finney moved towards the radar display

manoeuvre sections of the disc aboard. 'So look after us.'

showing current events.

Marion wasn't certain, and suspected that the Doctor was interpreting

'What is it, Montoya?'

Finney's decisions somewhat loosely. On the other hand, he could well be

'This.' Montoya pointed at a small blip on the screen, which was rapidly

right. She looked at the three strangers reservedly. 'Well, I suppose, as a dropping in altitude. It just appeared

out of nowhere at Angels-five-zero major I have the rank to take command of the escort...'

and started dropping.' Already the blip was pausing at ground level. It

'Splendid idea!' the Doctor said delightedly. He hurried on board before suddenly started rising again.

she could change her mind.

'Get on to Vincente over at Holloman tower and ask if he's tracking

this. If we can triangulate-' The blip vanished at five hundred feet. 'Damn!

Ask if they tracked it anyway.'

'It could have just been an angel,' Montoya suggested.

'It's possible, I suppose,' Finney admitted sceptically. The temperature

inversion that produced a volume of air dense enough to be detectable on

radar wasn't uncommon in the local climate. Finney didn't believe it, though. There had been just too much

happening recently to allow him to

believe in coincidence to that extent.

He wished he could have been surprised when Kreer walked in the
door five minutes later.

Its polished fuselage gleaming almost as brightly as the quicksilver surface of a Tzun skiff, a rounded and
ungainly aircraft with a grotesquely

inflated forward fuselage lumbered through the clear air high above the
mountainous Four Corners region of northern New Mexico. Unusually, the
plane carried no national or service markings. Instead, there was merely a
serial number repeated here and there in tiny lettering. A row of scalloped
mounds, tightly wrapped in tarpaulins, were arranged along the full length
of the Guppy's cavernous cargo hold. Marion Davison descended from
the bulkhead that separated the hold from the small passenger section

where Stoker, Marlowe, and the guards were ensconced. 'Stoker isn't happy about my being here,' she admitted
to the three new advisers, 'but
there isn't much he can do as I'm legit. If he notices that two of you are women, though...'

'What difference would that make?' Benny asked. 'So are you.'

'Women aren't allowed to be combat troops, not even guards, so I can't see him accepting that the Intelligence community is more open. We're least.'

squirming being one of his few pleasures of late. 'As soon as the Guppy

'That's the principle behind warp matrix engineering, a cornerstone of returns from Corman, I shall fly this material out there personally. You'll Time Lord science!' the Doctor exclaimed in an offended tone. 'Anyway, find the requisition papers all in order.'

you did ask how we got here.'
'No doubt,' Finney replied, unconsciously mimicking Nyby's tone. 'I meant how did you get into the crash site without the guards carting you off in a strait-jacket?'

'Perhaps you would feel happier if I went around giving away classified information to all and sundry,' Kreer suggested snidely. 'You yourself, of course, have sufficient clearance to accompany me.'

little disappointed, judging by his crestfallen expression. 'I'm a friend of the director of Central Intelligence.'

reply was a little more hasty and forceful than usual. 'I can't leave this area while the missile tests are still incomplete.'

Kreer was absentmindedly turning a piece of charred metal over and over in his hand when Finney stormed angrily into the room after him. The chamber was naturally; doing so would be neglecting your duty to the country.'

hand when Finney stormed angrily into the room after him. The chamber

Exactly,' Finney agreed, nodding. 'I can't let America down, not at a time when he was expected to complete the impossible in half the time it would have taken to check that everything was secure.'

With a weak salute, he turned and took leave. At least the Englishman who had co-opted him then had been a little left.

more understanding than Finney, and considerably more so than Nyby.

Kreer ignored him at first, almost unwillingly recalling the previous occasion when he had served as a scientific adviser of sorts. Then, as before, the analysis will be forwarded to you, of course. Was there anything else?'

'Not really,' Finney answered in a vaguely puzzled tone. 'I just wanted to know why you are so keen to have the Atlas missile tested here, and before the missile tests are completed.'

Kreer watched him go, amused by the ease with which the suggestion suggested by the analysis will be forwarded to you, of course. Was there occasion when he had served as a scientific adviser of sorts. Then, as

'Not really,' Finney answered in a vaguely puzzled tone. 'I just wanted now, he was expected to complete the impossible in half the time it would to check that everything was secure.'

With a weak salute, he turned and take. At least the Englishman who had co-opted him then had been a little left.

more understanding than Finney, and considerably more so than Nyby.

Kreer thought that was quite strange, considering the circumstances of a flight deflected Finney's interest more efficiently than bonded that service. Typical human woolly thinking, he sneered to himself. Kreer polycarbide armour deflected energy-bolts. As if the contemplation of the would have been the first to admit, though, that he himself could be the other man's weakness reminded him of something, Kreer raised one most unforgiving of them all. That was his privilege as a superior being, gloved hand in front of his face, squinting at the fingertips without really he knew instinctively. It was time, however, that he acknowledged knowing why.

Finney's presence. The renewed realization shocked him like a dousing with iced water.

'Yes?' he snapped before adding, in a baldly and deliciously 'No... Not again... I will not allow this to distract me,' he muttered forcefully disrespectful tone, 'sir?'

to himself in a tight voice. 'I will not fear my own body,' he snarled,

'I sometimes wonder if you aren't letting un-American thoughts get the resisting the sense of discomfort that flooded him as completely as if his better of you, Major,' Finney said sharply. 'This is the Atlas wreckage,' he worst enemy had walked in.

stated in an accusing tone.

In front of his haunted eyes, the tips of the black leather fingers were

perfected genetic engineering to an almost legendary degree.'

'Necessity being the mother of invention.'

'Exactly. The Tzun geneticists eventually discovered that the only way
to stabilize their genome was to piggy-back it with a stronger one. Their
affliction was eventually cured, but they’d got into the habit of evolving.'

'You mean they want to interbreed with us?' Marion gasped

incredulously, aghast at the mental image projected by a subconscious

that had been fed on movies of the 'aliens coming to steal Earth women' type.

'Not literally,' the Doctor said with a 'why me?' look. 'They combine the

DNA strands of conquered races with their own, and vice versa. That way
they develop more of an acclimatization to other environments and ways
of thinking, while the conquered race think along Tzun lines. And become
suitable for processing into S'Raph, of course.'

'And they've got disruptors,' Ace reminded them.

'Whatever they are,' Marion grumbled. Mere technology didn't concern

her after that little story. Wherever they got their psychological techniques
from, she thought, the CIA couldn't have paid the inventor nearly enough
for such an effective piece of work.

'Dangerous anachronisms is what they are,' the Doctor informed her.

'A disruptor projects ultrasonics along a microwave beam, and vibrates
the molecules of the target so violently from the inside out that they rupture cell by cell.'

'Why haven't they just invaded and got on with it?' Ace asked

practically.

'I'm not sure. A single Stormblade could conquer this planet as easily
as most people change TV channels. They're cunning and ruthless, but

between themselves and Stoker. 'Interesting dish over there,' the Doctor

murmured, indicating a structure reminiscent of a small radio telescope.
'We'll have to take a look at that."
'What's more interesting,' Benny added, 'is that all the guards and all
the men coming over to deal with the disc are blond like Stoker. It's like a

There are no survivors.; secured small nose-plugs before entering the corridor. Other passages Banking slightly as it hung in the air, the gunboat rippled and faded branched off to smooth doorways, but the men stuck rigidly to the well-before rising back into radar range as it moved away.
the worn path they had come to know so well.
Metal panels gradually began to take over from concrete, and they
were soon walking down a metal corridor. Nyby's lunch tried to crawl back up his throat as, with a sudden lurch, the gravity lessened by three-quarters. His footsteps barely hit the floor with enough force to make them
ring on the metal inspection panels. Beneath them, he knew, ran the web of terullian which conducted the gravity waves, shifted ninety degrees out of phase by a mechanism elsewhere in the bunker.
They came at last to another sealed door, before which stood two men in plain overalls. Unlike the other Ph'Sor on the base, their long hair was piled on their shoulders, though the searching looks that their violet eyes gave the visitors was unnerving when compared to their angelic appearance. As the four men approached, the pair took semi-sheltered stances in the lee of the doorway, their disruptor rifles swinging to bear.
'Klaatu barada nikto,' Kreer announced clearly. The two guards immediately lowered their weapons and took up 'at ease' stances to either side. The two air policemen, whose hands had briefly dropped towards their automatics, took up positions opposite.
Nyby and Kreer simultaneously pressed their palms onto glowing plates to reveal a warren of gridded metal tunnels dimly illuminated with a
fierce blue light. Beyond, the air had a noticeable taint of ammonia.

Ignoring sealed iris doors, Kreer and Nyby wound their way,

'Is the next jamming exercise prepared?'
'Continue.'
'Surface events have not affected aerial operations. The duties of the 'Wouldn't it be wise to let me eliminate the Doctor as soon as skiff which crashed have been reassigned to a reserve vessel. All possible?' Kreer asked with a silky hunger in his voice. 'Not least to operations remain on schedule as per the mission briefing.'
preclude the possibility of a repeat occurrence of his interference. Nothing 'What are the preliminary results of the exercises so far?'
else could prevent it, I assure you.'
'The skiffs have relayed telemetry on all human military vehicles 'Your reasoning is sound,' Shok'Arl conceded, 'as far as it goes. All engaged in aerospace manoeuvring.
Tactical analyses of this data by strategies employed by all parties involved at Mimosa II have been R'Shal's strategy computer indicates that all vehicles depend in some part analysed and incorporated into the Tzun central tactical database. Our on electromagnetic propagation by either carrier wave signal or electron procedures and technology have progressed exponentially since then, as flow. Both of these can be disrupted globally, with a projected human has our culture. We never,' it added more firmly, 'make the same mistake casualty rate of approximately fifteen thousand individuals who may be twice. All possible measures the Doctor can take have been projected airbourne at zero hour.'
and countered.' It moved to a low console, brining a DNA chain into view 'Projected casualties from warhead detonation?'
in the nearest holosphere. Several strands glowed an icy blue in chill 'Approximately six hundred thousand in Washington DC, and four contrast to the warmer tones of the remainder. hundred thousand in Moscow.'
Kreer stared at it with longing, his breath shortening. The display was Shok'Arl nodded. It was unfortunate, but a necessary evil that they both the pot of gold at then end of his rainbow, and the albatross around would just have to live with. 'A mere zero point zero zero two five percent his neck.
of planetary population is an acceptable casualty rate. Order a suitable 'As you see,' Shok'Arl continued, 'we are keeping to our side of the aircraft to be taken as a prize of war.' bargain. Our genetic strategists have isolated the DNA corruption. You must therefore keep to your side of the bargain. Should you endanger us Three guards patrolled the open compound in front of the gate at Corman, in any way, we will be forced to neutralize such a threat.' Kreer ignored the area permanently shadowed by the looming mountains. Their pace the implication, looking down at the misshapen gloves he wore. Better was steady, even and measured; you could probably set your watch by dead than non-sapient, he thought. 'I will permit no deviation from the them.
plan,' Shok'Arl went on, 'and no dishonour to our forces.'

All of which made it easier for Ace, Benny, and the Doctor to rise up

'I can sympathize with that,' Kreer lied glibly. The Tzun turned away, from behind a jeep, falling into step behind the guards in time to put them busying itself at the console. Realizing that the audience was over, Kreer out of action. Almost as one, Ace clubbed one with the hilt of her blaster, left the room, his face a barely controlled rictus of disgusted anger. Better Benny swung one around by the shoulder to deliver a roundhouse punch dead than non-sapient, he reminded himself, but better still alive and that would have felled a charging bull, and the Doctor applied a half-avenged. 'Deviation,' he thought; Shok'Arl doesn't even know the remembered Venusian Aikido strike to the last.

sunlight reflected off the differently grained metal panels of its unpainted fuselage, sat on the wide expanse of gridded tarmac. The plane was 'Come on,' the Doctor ordered. He pulled himself up to his full height, connected to a tanker truck by a series of hoses, and the rear ramp and such as it was, and made for the door.

both doors on the nearer side of the fuselage were open. A couple of men 'Where to?' Ace prompted.
in overalls were climbing in and out.

'In your case and Benny's, Washington DC.' Hunting around in his Ace grinned, almost purring, as she watched the men disconnect the pockets - which both women had occasionally suspected might be just as first of the fuel lines.
dimensionally transcendent as the TARDIS itself - he handed over the 'You must be joking,' Benny hissed as they dropped behind some slim radiation probe he usually carried. 'You're the weapons expert,' he drums a few yards from the activity around the plane. 'You can't hijack a told her, 'so you should be able to work out where to look for those two crukking military transport! What are you going to do? Stick a gun in the warheads.'
pilot's ear and say "take us to Cuba"?'

'And defuse them?' Ace asked with an eager smile.
'Course not.'
'Meaning no insult to your professional capabilities,' the Doctor answered hastily, 'no. Turn them over to the proper authorities, and 'Thank God for that.'
'I'm going to nick it before the pilot arrives.'
'Please try not to blow anything up.'
'What?! Don't tell me you can fly one of those things?'
'Where will you be while we're re-enacting Thunderball?' Benny asked.
'I flew the occasional assault hopper in Spacefleet; how much different...'

'Now that we have a time and place for a Tzun fly-past, I'll get Marion can this be?' Ignoring the mask of horror on Benny's face, Ace moved as back to New Mexico and arrange a suitable reception. If I can get hold of the men disappeared around the tail-ramp to disconnect the fuel lines on an operational Tzun ship...' He strode out the door with seemingly the other side.

boundless energy. 'Marion and I can stow away on the Guppy again for its ingenuity to get to baking tarmac and up the three-stepped door set into the lower port side Washington on your own?'

just behind the cockpit. Throwing a quick glance through the aft bulkhead 'It's just possible,' Benny replied dryly.

to check that there was no one in the cargo bay, Ace pulled herself up.

Outside, a man passed the end of the duck-egg blue corridor and into the cockpit. A red-headed engineer turned from monitoring the flow of glanced round with surprise. He just managed to hit the alarm before Ace fuel. 'What the hell?'

shot him.

'Excuse me,' Ace said in her most businesslike tone, 'but does this crate have enough fuel to get us to Cuba?' Benny groaned aloud.

Stoker pounded swiftly on his way to the Blue Room with a strong 'Sure, I-' A rabbit-punch from Ace doubled him over enough for her to demand in his mind, when the alarm stopped him. His consternation over grab him by the scruff of the neck and toss him head-first out of the hatch.

the photograph and his emotions all vanished as his professionalism 'Don't forget to tell them when you wake up, nanoceph,' she muttered, came to the fore. 'What's happening?' he called over the communicator ducking into the cockpit.

network.
The sight of the array of glass-faced dials under the large windscreen 'Intruder alert! Nyby's office has been penetrated.'

almost stopped her in her tracks. Trying not to give away any sign of

small cupboard space filled with nozzle-topped cylinders which he
suspected to be fire extinguishers of some kind. Through the gap between the door and the wall, he saw the
blond men spread out through
the ship as silently as cats, moving with impassive precision to each station. A nervous sweat began to ooze
from Finney's pores as he realized that he might be about to fly for the first time in nearly seven years - and quite possibly on the longest journey any man had ever made. He concentrated on trying to keep his heart beating on a regular basis, instead of rattling away at triple speed.

Although all the newcomers were inside, another set of purposeful footfalls drew Finney's attention to the gap. His eyes widened as Stoker, one of the control surfaces, but couldn't see it in the dark. The plane strode smoothly over to the central column and sat on a slightly raised seat. It should have been able to fly on one engine, but it was already dangerously overloaded with wounded men.

The AFOSI officer looked towards someone at a panel opposite, and while his co-pilot helped pull on the yoke, Finney tried to guide the plane smoothly towards the central column sparkled a fiercer azure blue and a strange high-pitched hum built up, forcing him to try to block his ears. The sound, not unlike that of a large generator, remained unaffected, as if it were a sound and finally a tidal wave of pain that washed away all thought and tinnitus attack forming inside his head. There was no sensation of motion, feeling. but Finney was certain that the increase in light and sound could only mean that some engine was in operation, and that they were now in flight.

His breath coming in short gasps as if trying to match his racing heart, cold sweat was still in full flow. He realized belatedly that he was still Finney slid down the rear wall into a crouching position and tried to shut alive, and that what had happened to him seven years ago was very much in the past. He hoped he hadn't made any sounds that the men outside could have heard. Never mind, he told himself, just being here, but Finney was certain that the increase in light and sound could only mean that some engine was in operation, and that they were now in flight.

The darkness of the air was scattered with a wall of swirling white flakes proves that the fear can be conquered. but Finney was certain that the increase in light and sound could only mean that some engine was in operation, and that they were now in flight.

Visibility was practically zero, though faint glows below marked out his scientific advisor being one of these Tzun things, and concentrated where artillery fire was being concentrated on the far shore of the Chosin instead on the use of the word 'Corman'. He hardly dared hope that was the reservoir. The groans from the cargo section were counterpointed by the where they were, the incredibly short journey time notwithstanding. The darkness of the air was scattered with a wall of swirling white flakes proves that the fear can be conquered.

He forced a grin for his own that made the windscreen look like a TV set under heavy interference. benefit, though there was no one to see it. From the flight deck outside, Hands wrapped around the control yoke with white-knuckle tightness, he heard a voice call Stoker's name.

Captain John C. Finney struggled as much with his own despair at the 'Ko?' situation as with the pitching C-47 Skytrain, a military version of the DC3 Dakota.

The major? Finney wondered. His mind shied away from the thought of Visibility was practically zero, though faint glows below marked out his scientific advisor being one of these Tzun things, and concentrated where artillery fire was being concentrated on the far shore of the Chosin instead on the use of the word 'Corman'. He hardly dared hope that was the reservoir. The groans from the cargo section were counterpointed by the where they were, the incredibly short journey time notwithstanding.

The darkness of the air was scattered with a wall of swirling white flakes proves that the fear can be conquered.

Affinity for picking up languages quickly. Alert to any recognizable Finney looked around, the soft drone of the engines failing to have the patterns of sounds, he listened carefully. He had heard the syllables 'roch' usual effect on him in this weather. He opened his mouth to speak to the and 'wey' when they took off and again just now, in connection with co-pilot but before the words could come, the plane bucked as some Corman. Could one of those syllables mean 'up', 'over', or 'above', he vague flashed flitted by outside. The plane made a stomach-wrenching wondered. It seemed a reasonable guess that the other man had just told lurch to the left, and Finney hauled back on the yoke. The aircraft Stoker that they were now at or above Corman.

Stabilized slightly, but was straining to do so. An engine-fire warning light

'Hosh-chom Kreer,' Stoker commanded, looking towards someone or
was flashing on the instrument panel, and Finney risked a quick glance something out of Finney's narrow field of vision. 'Snowbird here. We are out of his window.

above you, Major.' Finney's mind reeled again. This craft was Snowbird! A

humans to ignore.' Kreer drew a small crystalline disc from his pocket and prompt the authorities to launch earlier, to forestall a repeat occurrence.

motioned to two crewmen to hold Finney still. Finney struggled against Except that if my theory's right there wouldn't need to be a repeat. Some their grip, but his fear of flying had robbed his muscles of some of their signal or the like transmitted from the first launch was sufficient to attract power, and in any case the crewmen seemed to have superhuman the Tzun. Yes! I'm sure that's what happened; it's always been a bit of a strength. mystery why they launched ten days before the big celebrations, and this Kreer smiled and puffed himself up, as if he was drinking in Finney's would provide a reason.' The Doctor paced furiously around the cluttered discomfort. 'This can be done painlessly, if you have the right equipment room.

and time to spare,' Kreer began, pressing the disc to the side of Finney's 'But who would be able to interfere?' Marion asked, hoping he would head, just behind the ear. 'But it's so much more... invigorating this way.' name a terrestrial nation.

'Who indeed? The only thing that's certain is that if they knew about The Doctor and Marion flipped through mountainous piles of photographs the Tzun then whoever it was must also be an alien.'

and documentation in Davison's office.

'Ober Tzun?' Marion suggested.

'There have been reports of various kinds since the Forties,' Marion 'No. that's the other piece of the puzzle. They would have began, thinking aloud. 'But ones matching this pattern only since the early communications equipment and technology capable of contacting their summer of this year.'

people directly. Castaways, perhaps.'

'Same here,' the Doctor agreed. 'But why did they turn up in May 1957 'Someone or something stranded without a ship?' particularly?

'Could be. But they'd still have some salvaged technology surely? No,' 'Why not? It's as good a time as any,' Marion shrugged, refusing to be we're after a visitor who's stranded here with no technology of their own, drawn.

but who has the skills to construct advanced technology from Fifties parts.'

'Such as?' Marion urged, intrigued by the idea despite herself.

'I can't think of anyone offhand. Not that wouldn't stand out in a crowd Chapter 14 anyway. We'll go and see Finney. There's a favour I want to ask of him.'

Nodding, Marion opened the door. Together, they strolled down the pale beige corridor, before Marion pointed out a window. Outside, a jeep Marion looked on, stunned, as the Doctor examined the back of Finney's came to a halt in a reserved space. Finney was sitting in it and, as they neck.

The colonel was staring blankly at a weather report. It was obvious watched, debarked stiffly. 'I wonder where he's been,' Marion began.

that whatever had happened to Nyby had also now happened to Finney - 'You took the words right out of my mouth. He's walking like a zombie.' or possibly worse.

'You sure?'

'Marion,' the Doctor said loudly, startling the major. 'Do you remember 'Very sure,' the Doctor said firmly. what I told you about humans building barriers in their minds?'

'He's heading for his office; if we hurry, we can catch up and see if 'Whatever that meant, yeah.'

there's something wrong.' She wasn't really sure if she actually wanted to 'Are you ready to cross some?' know. It wasn't an idea she relished.

'Such as?'

'You once said you didn't like giving orders. Well, you're going to have to get used to doing just that. Keep Finney confined to the medical wing. As the next senior officer you'll have to take charge of day-to-day operations here.'

'Much as I hate to admit it, a lot of men here won't like that.'

'Then that's their tough luck. Be firm and they'll follow you. If it comes
to the worst, find another man they respect to relay your orders,' the Doctor finished in a disdainful tone.

'Humans...' he muttered disconsolately. 'I'm going on to that power station at Elephant Butte reservoir. If you haven't heard from me by noon tomorrow, get every man you can muster and head for Corman. Arrest everyone there, and take any other measures you see fit.'

For a moment, Marion was about to refuse. She wasn't sure if a mere journalist was authoritarian enough to do what was needed. But, there was only one way to be sure, and it was closer to the sort of career she'd hoped for. 'I'll do my best,' she said sadly.

'I know you will.'

Nyby glared at Shok'Arl, his dark features twisted with the fury that only the betrayed can feel. 'The Soviets have put a rocket into space,' he thundered. 'Your part of the agreement with the Pentagon included preventing such action!'

'The terms of our agreement,' Shok'Arl corrected calmly, 'are that no missile strike will be allowed to impact on this country. A simple binary transmitter in a decaying orbit is not such a missile, and does not fall within the terms of reference.'

'How could you know it wasn't a missile launch? They did use an ICBM, according to our intelligence sources.' 'An SS-6, I believe,' Shok'Arl acknowledged. 'Its trajectory was not suited to a missile strike, and our ship's sensors detected no warhead.

Nyby, we have not betrayed you.' The Tzun turned away. counting down the seconds.

Not yet, you mean, Nyby thought. This was obviously just a first step; Kreer smiled hungrily.

what if the Russians launched an attack and it wasn't recognized as such until too late? Or what if Shok'Arl was just stringing him along? Nyby stormed away before he did something he might regret.

A long black limousine pulled up on a weed-strewn expanse of concrete jetty, having driven in from Axon Run Park, southeast of DC. Leaving his blank-faced chauffeur to park the car where it would be secure, Major Kreer walked the length of the concrete jetty. His destination was the gently sloped gangplank of a lean Fletcher class destroyer moored under the slate-grey skies at the Naval Research Laboratories at the junction of the Potomac, the Anacostia, and the Washington Channel.

Although the Jessup had been commissioned during the second world war, it - like many others of its class - had been retrofitted for electronic warfare in the early Fifties. A thick-legged tripod radar mast had been added to the rear of the superstructure, and several weapons had been updated. The sailors busying themselves about their tasks on deck paid no heed to the fact that an officer in Air Force uniform was boarding the ship.

Kreer considered it apt that a vessel of the past should be his base of operations. After all, the past was what drove him. He passed quickly through a hatch in the forward shelter deck, just forward of the legs of the radar mast, and moved with familiar ease through the corridors and companionways below decks. It took only moments for him to wend his way to what would normally have been the captain's cabin, just below the forward edge of the shelter deck.

Opening the door, he slipped into the room and shrugged off his coat. 'Shadow?' he called softly. A low purr answered him from the top of a narrow cupboard overlooking the door. 'Ah, excellent,' he murmured, locating Shadow's greenish-golden eyes. 'Be assured, it will soon be time to feed,' he told the cat solemnly. Nodding to himself, he turned his attention to the rest of the room. There was...
no bunk inside, since Kreer had long since taken a suite at Washington Circle. Instead, the cabin was packed with softly humming machinery. Something of an odd mixture of technologies, it had parts of USAF and Navy communications and radar circuitry cobbled together with crystalline I-O chips, optical nanoprocessors and a holosphere, all clearly of Tzun manufacture. The whole thing was lashed together with skeins of copper wiring and fibreoptics. Seating himself in the single chair, Kreer twisted a dial that had been cannibalized from a radar range-finding apparatus and gazed at a matt ebon plate. In a few seconds, the plate began to glow faintly with characters reading 'Transference in progress. ETA 4:16:59', the digits her composure, she spread a chart across the instrument panel. 'All right, look at this.' She pointed to a waterway several miles beyond the city, its
edges as crinkled as those of any fjord. 'We should still have enough fuel
to carry on past Washington, eject over Annapolis on the shore and let
the plane crash harmlessly into Chesapeake Bay.'
The radio was active again when Ace returned to the flight deck after

reckoning to make...''
Benny's curiosity about this ancient mode of transport had kept her
amused during the flight, but practicality was a strong instinct in her. 'Are The distant rumble of water rushing through giant turbines slightly muffled you sure you can land this thing?' she asked. Ace had been behaving the distorted groaning of strained reality that echoed through the professionally enough to leave Benny with no doubts as to her experience cathedral-sized generator hall. The TARDIS solidified into being on an with assault hoppers, but she had notices a few tension lines whenever empty walkway half-way up one wall.

Ace had to do any major manoeuvring with this low-tech but complex vehicle.

The Doctor emerged a few seconds later, patting the door gently as he closed it. The steel walkways stretched on for tens of yards on either side 'If you mean can I get it on the ground, the answer is a definite yes. If before dropping off at flights of steep steps. Large and rounded grey you mean can I get it on the ground in a safe enough manner for us to generators buzzed and hummed on the floor forty feet below, like snoring walk away from... That's be difficult enough even if we still had a complete elephants. Overalled men toured the scattered machinery, checking on undercarriage.'

the generators and the thick pipes that festooned the whole complex.

Benny had expected that, but it still chilled her to the bone. Recovering 'Perfect,' he said happily.

'Hold it right there,' a voice drawled, accompanied by the soft clicks of revolvers being cocked.

'Right,' Ace pressed a stud on her wrist computer. In the cargo hold, the rewired plasma rifles exploded. In a chain reaction, the power cells in 'Not so perfect,' the Doctor said to the two tan-uniformed guards.

the other rifles also detonated, the fireflash spreading to what little fuel remained in the wing tanks.

'Hold tight,' Ace recommended as she pushed the control yokes gently The Hercules didn't quite explode. Flame rippled along its length, towards the double-row of lights in the early morning darkness.

cracking over every surface with ravenous energy. 'Now we make like Benny checked her harness and looked out with a feeling of dread as shepherds and get the flock out of here,' Ace added.

the lights rushed up at them all too quickly. 'Aren't you going to lower the 'Where to?'

two landing legs we have got?'

'Good question.' Ace looked around quickly. On the other side of the 'Best not. That would just help tip the plane over.'

silver trail of the Potomac, lights were rising from Bolling AFB and Benny gave a maudlin nod. 'I'm content to dig these things up, but I approaching the airport. To the left, street-lights like a string of glowing don't know how you work them.' She almost wished Ace were calling out beads traced the line of the Williams Memorial Bridge. 'That bridge,' Ace their speed and altitude, so that at least she would have some idea of decided. 'That looks like another airbase over there, so we don't want to when to close her eyes. Instead, however, the younger woman simple go there.'

things - all bad - but they do know about strengths and weaknesses,
including their own. They had already anticipated the use of disruptors
and had prepared for it. They'd discovered that since the focusing crystal
of a disruptor is designed to handle ultrasonics, it was particularly susceptible to interference from infrasonics.

She closed the back of the speaker with a smile, and handed it to Benny. 'When I give the word, point this towards them and press the power cables into their connectors.' Benny nodded slowly as realization dawned. 'Ready when you are.' Ace drew her blaster. 'Now!'

Benny pressed the cable to its connector at the back of the speaker, and held it firmly in place as she directed it around the door-jamb. No sound came from it that she could hear, but she could feel a disconcerting numbness crawling up her arms.

The effect on the Ph'Sor was more dramatic. The disruptor of the nearest one exploded without warning, bathing him in fire and sending him running with a scream towards the pool. The others barely had time to toss their weapons aside before they too exploded in a shower of sparks. Most of the Ph'Sor scattered, policemen running after them. Two rolled for cover, however, picking up their Thompsons.

Benny suspected that Ace had been waiting for this, and her feeling way as his wallet tried to hide itself any time his ex-wife called. His brain was already gearing up to ignore the words which, he knew with a terrible
clarity, were about to be inflicted on him.

in a feedback loop.'
'Excellent. You have your orders. Obey them.'
'Sound general quarters! Restore graviton power flow to cloaking level
and set course zero-seven-zero mark zero-eight-five.'
Long fingers slid across the onyx consoles. 'Helm not responding.
Feedback loop is dephasing our drive field.' The ship suddenly lurched
downwards.
'Stabilize!' The ship plunged sideways. 'All systems overloaded and shutting
'We must not be examined by human biologists,' Xeno reminded his crew. 'You know what to do.'
Andrews watched in amazement as the disc slipped sideways and swung round before finally slamming into the rocky plain, blue sparks coruscating over its surface.
Below, the alarms stopped. Andrews was painfully aware that it would be several hours before the generators could be restarted.
'That was the easy bit,' the Doctor commented beside him. 'Can I borrow a few more bits and bobs from you?'
'Why not?' Andrews said, half-dreamily for the sake of his mind. 'What for?'
'For the difficult bit, of course. Getting that ship working again.'
The wreckage of the burnt-out Hercules had been transferred to an empty hangar so that normal services could be resumed. A clean white DH Comet cargo conversion, long and slim with gentle curves, waited at a nearby loading area. Overalled men were busy carrying out fuelling and preflight checks, while two men in dark BOAC uniforms toured the plane on an inspection with emotionless professionalism.
A drab green cargo helicopter swept low across the river and over the airport. It settled down only yards from the Comet. Kreer jumped down from the side doors as the groundcrew pushed a scissor-legged trolley towards the helicopter.
The crew raised the platform of the trolley about three feet and rolled a Dulles that the Doctor's party needs your assistance.'
'The director of Central Intelligence is a busy man, so that might take a
while.'
'Don't bet on it.' One thing Ace was confident of was the pulling power of the Doctor's name with those who valued his help.
Ace had been glaring at the heavy door for some time before the lock clicked and a man with a lean and firm yet somehow not quite mature, claim was an unlikely one at best. After a few seconds, however, he face came in. 'So you're the one behind all the excitement at the nodded curtly. 'That's your one phone call, but if you're lying...' He left the Monument today?'

Ace merely cocked an eyebrow.

The concrete wall and muttered a general thanks to any world's gods that he shook his head as if to clear it, and Ace sighed in exasperation. might be listening.

Obviously they weren't letting her go yet. 'A woman at the heart of all that violence,' he went on. 'It's unbelievable.'

Riding the police motorbike that she had borrowed - she tried to convince 'Wait until the Seventies,' Ace muttered under her breath.

herself - from its former user, Benny had spent an hour discreetly tracking 'What?'

the fleeing guards southwards. Their car had entered the disused grounds

'Never heard of Bonnie and Clyde? Look, don't I get a phone call or of the wartime Naval Research Laboratories, and Benny had cautiously something?'
followed, trying to remain behind available cover.

'Eventually. Of course, as a possible fifth columnist, you're something Quietly, she abandoned the motorbike behind a wheeled refuse bin of a special case - not to mention an embarrassment.'

d that was parked against a wall. Keeping low, she moved up to a pile of

Ace laughed in disbelief. 'Fifth columnist? For who - the Russians?' broken crates a few yards from the dilapidated building. Peering around Gradually, she realized that he wasn't even smiling, and tried to the splintered wood, she saw that the car she had followed was now remember what she knew of the Fifties from TV. 'You're not joking, are parked before a gangplank that led from a weed-strewn quay to a dull and you?' she whispered, gloomily recalling what usually happened to so-solid-looking ship moored on the river. The gun-turrets betrayed the fact called 'embarrassments' in those old shows and movies.

that it was a warship of some kind, but it was relatively small and Benny

'Why else were you involved in a pitched battle in the heart of the estimated that it was either a frigate or a destroyer. There was no sign of capital?'
life on deck, but the radar antennae were rotating steadily and glimmers
'Trying to save your precious city. Didn't you find the bomb I defused?' of light could be made out through several portholes.
'Oh yes. It was stolen from Holloman AFB less than forty-eight hours ago. Guess who's the number one suspect?' He leaned against the wall here as a red herring and be hiding in one of the wartime buildings. On with a relaxed air. 'Your comic-book explanations don't hold much water; the other hand, she felt, with their superiority in numbers and technology, he continued. 'Wouldn't you rather give one that does?'

they wouldn't need to resort to stealth.
'That is a very long story, and one you probably wouldn't believe. Who She knew that she could crouch there all day debating which way to are you anyway? FBI?'
go, if she wasn't careful. The fact that she was unarmed was a major 'That's right; Agent Joe Manco at your service.'
reason to go back, but the importance of finding out what was going on,
Ace nodded to herself. She was certain he wouldn't believe the truth, of plus her natural curiosity, led her
towards the ship. Laying her mental course, and lying would be risky; but governmental aid would be debate aside,
she acted on instinct, her body moving to the gangplank extremely useful. How to enlist it, though... 'I'm Ace,' she
told him.

before her mind knew what it was doing.

'An ace what?' he asked.

Boarding the ship, she kept low. Since no one had yet spotted her, she

'Just Ace. I'm currently working under the auspices of one Allen Dulles, ducked quickly into the first hatchway

the Master,' he announced simply, then smiled to himself. 'Universally.'
He held the weapon steadily.
'Take me to your leader?' Benny raised her hands.
'I don't believe that should be necessary; I'm already here, miss...'
'Summerfield. Bernice Summerfield. My friends call me Benny, but you can call me Professor Summerfield.'

'Do not let my apparent lack of concern deceive you. Shadow and I have a somewhat unusual working relationship.' He turned to favour her
with a predatory smile. Benny drew back from his look, for now his hooded eyes were glowing internally with the same lucent gold as the cat's.

The Master removed a small control from his uniform pocket and pressed the single button on its surface. With a deep hum the fluted column split. "There's an ex-Navy destroyer, the USS Jessup, moored on the river open, the blackness inside swallowing up what little light was in the cabin. Between the old Naval Research Laboratories and Bolling AFB," Manco With a slight motion of the weapon he still held, he indicated that Benny explained. 'We've no idea what the Air Force could be doing with it and should enter the gap. The DoD aren't saying, which means it's probably under a black budget.

Warnily, Benny stepped through the doorway and found herself in a However,' he said meaningfully, 'we do have knowledge of Kreer paying TARDIS console room. Its design was superficially similar to the Doctor's, regular visits to the ship. We've intercepted phone calls between Kreer though the fittings were clearly newer, but the matt black decor gave the and the ship's captain as well, but we can't identify the language used.'

chamber a depressingly funereal air. The absence of the sorts of odds and ends of collected junk and anachronistic furnishings that characterized the Doctor's machine as a home make this machine no more than a barren and impersonal piece of technology, as lifeless as any Ace's head. Other tool.

'Take an army and the Master'll freak out. Increase the force, and you'll footsteps behind her announced the Master's presence. Benny turned just increase the bodycount - his co-conspirators will probably have round in time to see the cat slink past his leg. With a snap, the Master disruptors.

'Dis-what?' eyes. Flickers of light gleamed on its curved surface as it spun. 'As an archaeologist, you should appreciate this piece,' he said silkily. 'All I need is myself.'

'Eighteenth century, I guarantee.' He paused as Benny watched it. 'Listen to me very carefully, Professor Summerfield,' he said with surprising gentleness. 'You will hear only my voice. I am the Master, and you will by his own admission, mostly dealt with what would come to be known as obey me. You will obey me...

white-collar crimes. This was not what she would have considered an 'Master, eh?' Benny rolled the word experimentally. 'A Freudian auspicious start to a probable combat mission, and she'd already seen far compensation, it is?'

too many fighters drop like flies in their first combat. On the other hand, 'What?' The Master looked momentarily thrown by the lack of any sign she reminded herself, you could never tell how someone would perform in of subservience on the part of his captive.

any given situation until you saw them in it. Besides, he was just old 'The name, I mean. I suppose it's some sort of domination complex enough to have served in World War Two or Korea.

that's arisen to compensate for some physical impotency?' The most important consideration, however, was that - short of 'I see,' the Master said in a weary voice. 'Your inane opinions have no shooting him - there was little she could to to stop him going, while there relevance to Gallifreyan physiognomy. Stand over there and keep quiet,' was plenty he could do to stop her. She nodded in resignation. 'I'll need he finished dismissively, stuffing the watch back into his pocket as he my stuff back.'

turned to the console. 'We'll pick it up on the way out. You know, I'm risking ten years just by
While the Master's back was turned, Benny started sidling towards the not sending that stuff straight back to Corman.'

double doors, her glance falling briefly on the cat. 'One more step, 'I don't doubt that, but my stuff didn't come from Corman.' She thought Professor Summerfield, and you'll be looking at Shadow from eye level,' for a moment. 'Why do you take that risk?'

the Master snapped, without turning round from the console. 'Surely the 'I've been lucky to get this far in the Bureau so young. If I'm going to keep up the pace, I've got to show I can take it.'

'Professor Summerfield, and you'll be looking at Shadow from eye level,' for a moment. 'Why do you take that risk?'

'One more step,' she replied calmly, and stopped Ace nodded, gaining the measure of him as he spoke. This she could moving. At least she now knew what the stubby weapon was.

understand, having felt that way herself for a long time. It didn't mean it

was right, though. 'There's an old saying that there are old soldiers and

Beyond the long range of windows, the disused airbase's empty bold soldiers, but no old, bold soldiers,' she told him. 'That isn't true, but dispersal fields were slipping off to the left as the ship pulled away from there is a difference between boldness and foolhardiness.'

She rose and her mooring. Below the windows were stretched rows of instruments, moved to the window, seeing not Washington but distant battles and which were tended by several men in navy uniform. Mounted in a central desperate gambles. 'You can be bold to survive,' she went on, 'or for position was a sphere with a holographic projection inside. Several touch-honour. Even because you're not really much good at anything else any sensitive controls glowed on the smooth panel at the base of the sphere.

more. But gambling to prove a point for personal satisfaction; now that's 'Tzun technology?' Benny asked rhetorically.

foolhardiness, and if the person you're trying to prove yourself to is

'Tzun technology?' Benny asked rhetorically.

'Naturally,' the Master replied in a patronizing tone. 'An archaeologist your... There are no old foolhardy soldiers.'

such as yourself should have at least a passing familiarity with the None of this seemed to matter much to Manco, who simply leaned artifacts of the Tzun Confederacy.' He moved to the sphere, bringing up a back in his chair. He smiled contentedly, cocking an eyebrow at her. 'I series of diffuse images. Benny suspected that the hologosphere's think I'm doing all right. This all makes a change from the fraudsters I'm projection frequency was attuned to the brainwave frequency of his own used to. down the cable towards the base of the forward funnel.

Manco had only a single coil of rope in his car boot, but Ace felt it would
be strong enough to support them both. At her insistence, he had fixed it the roof to join her. Both of them looked around for any sign of defensive securely around the steel railing. Ace watched the ship's approach, forces but no one came out on deck.

something about it puzzling her. 'Why isn't anyone on deck?' she wondered aloud.

'I've got a bad feeling about this,' Manco muttered.

'You were the one who wanted to come.'

'Who cares? So long as they aren't around to see us. All that matters is that we succeed.'

obviously up to something.'

'Damn right.' Ace hoped her bravura would keep him in line, for she knew what you mean. They want us inside.' Ace's mind rushed, trying to think of any alternative to take. 'The bastard's thought of Tzun and Ph'Sor are... Chinese tongs involved in arms-smuggling. The everything,' she murmured to herself. Meanwhile Manco had drawn his Master is a codename for Kreer - as in "criminal mastermind". Bracing Browning and was reaching for the nearest door handle. Impulsively, Ace herself motioning for Manco to swing himself over first.

inexperienced. Ace, as the more experienced warrior, didn't want to be responsible for anything untoward happening to him. She wondered if this over the edge. Above, Ace pulled on her gauntlets to protect against rope-burn. Coat-tails flapping in the wind, she climbed down after him.

leader was a pain in the neck, she thought. 'The could she think of any alternative action to take. 'The bastard's thought of Tzun and Ph'Sor are... Chinese tongs involved in arms-smuggling. The everything,' she murmured to herself. Meanwhile Manco had drawn his Master is a codename for Kreer - as in "criminal mastermind". Bracing Browning and was reaching for the nearest door handle. Impulsively, Ace herself motioning for Manco to swing himself over first.

...was how the Doctor - sometimes - looked on her and Benny. Being a Swell,' he opined ironically, grasping the rope and lowering himself responsible for anything untoward happening to him. She wondered if this over the edge. Above, Ace pulled on her gauntlets to protect against rope-burn. Coat-tails flapping in the wind, she climbed down after him.

leader was a pain in the neck, she thought; what if I get him killed for nothing? She dismissed the idea. If she started thinking like that, she... Tobey was first to notice the tiny figures dangling ahead of the ship. 'Most might get careful; and that would be dangerous. 'Fools rush in,' she told curious;' he murmured. The Master looked up at the sound of his voice Manco. Before he could respond, she tugged the door open, ducking and joined him at the window, a slowly forming predatory smile exposing back out of the way in case a shot came out.

teeth that glistened. 'The Doctor and his companion?' Tobey asked.

Nothing happened.

'His companion, certainly,' the Master agreed, feeling as well as seeing Ace's presence. 'The other is not the Doctor, however.' He watched the 'If anyone is receiving, please respond,' Benny urged, twiddling some pair through narrowed eyes. 'She will suffice. Once we have both women, dials as far as they would go. Behind her, the bulkhead door opened with the Doctor will certainly come looking for them. Full alert!' As Ace and her a dull thud.

companion vanished above the top of the windows, a raucous alarm The Master, flanked by Tobey, stepped into the room. 'You needn't start blaring.

pollute the airwaves any further, my dear Professor;' the Master told her.

'Your violent friend from Perivale is already on board, and on her way to Manco was a few feet over the roof of the forward superstructure when rescue you right now.'
the alarms began. 'Jump,' Ace called to him. 'I'll get down the mast.'

'Which means you are now dispensable,' Tobey warned, coming

'Right,' he called back, letting go of the rope. He dropped onto the roof, forward with a drawn disruptor. Then rolled back up with surprising agility.

'Is that all people are to you? Disposable tools?' Benny snapped, a

Ace, meanwhile, was judging speeds as the mast rushed towards her. Surge of outrage welling up inside her. With a deep breath, she stretched out a hand to grab one of the power

'I'm afraid I am not yet finished with the Professor, Commander,' the

cables that webbed it, letting go of the rope in the same instant. The Master interrupted her. 'Once her violent friend had joined us, I will return sudden change in inertia whipped her round, winding her as she hit the with them to Corman Field to await the arrival of the Doctor's rescue mast. She managed to hold on, however, and determinedly started sliding attempt.'

'Snowbird will not be available to return you to Corman until tomorrow

Above her head, the tripod As he writhed on the floor, the illumination faded fitfully as the mainmast buckled out dangerously. symbiotically controlled lighting elements died with their master's Clambering back through the shattered bridge to the port-side flying consciousness.
bridge, Ace kept a wary eye on the mast.

‘Let... me... be... free...’ the Master gasped, clutching his head as it began to burn with a greater fire than the wound in his chest.

In the sweltering engine room, steam burst from pipes as the Ph'Sor Shadow watched silently, the tip of her tail twitching, as the burning engineers tried to stabilize the ship after the blast. The fuel-pump pain that was consuming the Master became visible. As if he were pressure was dropping, however, and they had to keep increasing power undergoing spontaneous combustion, dull fiery embers lit the ravaged to keep up the speed. No one had told them to do otherwise.

Time Lord's contorted face.

Nearby, diesel oil sprayed thinly from a buckled plate in the fuel tank bulkhead.

Ace kicked away the remnants of the door to the flying bridge and leaned out, blaster at the ready. On the deck below, the fallen sailor lay with thick While his TARDIS's power source throbbed erratically, the Master curled yellow fluid pooling round his head, which was twisted at an unnatural into a ball beneath the console, his only thought to hide away from the angle. Ace thought the colour must have been a trick of the light, but pain. The fire in his veins was even worse than that which had seared his suddenly realized that the substance was pouring from the man's wounds. and Shadow's linked minds when leaping from the exploding Cheetah It could only be blood.

Planet.

As she watched, the man's hand slowly went to the left side of his neck In front of his eyes, the material of his clenched gloves began to shift, and pressed it in a certain way. An incendiary charge of some kind ignited bulging outwards under pressure from the flesh within.

immediately, the crackling phosphorescent glow rippling along his body. When it fizzled out, only a vaguely bipedal patch of ashed was left. Benny had been edging towards the curve in the bulkhead below the Footsteps terminated any contemplation of the event, drawing Ace's main five-inch guns when she heard a footfall behind her. Before she could raise her hands, the ship had rocked like a wild horse and a searing blast had knocked her to the deck. For an instant, she thought she had Ace wasn't stupid enough to think she could take out all of them before been shot, but then she heard the anguished screams of the men behind they killed or captured her, and she looked around for an alternative. her who had been blasted into the water.

Glancing around in desperation, her eyes fell upon the quartet of torpedo tubes mounted on a turntable between the superstructure and the forward Blackened and twisted metal was smouldering all across the deck, while funnel. flames licked at the paintwork. 'Ace over-reacting again,' she muttered. Admittedly, she thought, this was supposed to be a retired ship. The Carefully she set off for the wreckage, certain that Ace would be crew were all armed, however, and knowing something of the Master... somewhere at the heart of it. Before she got far, three sailors emerges Deciding that the gamble would be worth it, she crouched below the plate from the doorway in the shelter deck.

armour of the flying bridge and sighted on the nearest torpedo tube. Skidding slightly on the water-sodden deck, Benny drew to a halt in Setting the blaster to maximum, she fired.

the blazing energy bolt slammed into the tube, its heat and destructive energy detonating the torpedo within. Instantly, the explosion set off the The pain began to ease, drifting off as if the consciousness that perceived it had dissociated itself from the form that experienced it. Gradually, light * * *

quantum charge polarizer which generated the antimatter was now linked.

Carrying himself with energetic grace, the Master strode quickly across to draw additional power from excess life support, which needed to the tarmac towards the hydraulic doors to the S-Four area. Two obviously support only one Time Lord rather than several Ph'Sor Tzun. This, the human guards approached from the direction of the helicopter dispersal Doctor hoped, would mean that the magnetic envelopes wouldn't need to area. 'Halt and identify yourself,' the nearest one snapped.

Caught like a trapped fly in the web of wiring which criss-crossed the flight deck, the Doctor slotted the last reworked I-O chip into the helm console. Mopping his brow with the back of his hand, he delicately extricated himself from the coils of wiring. 'And to think our old academy but... Wait a moment; surely I can't have changed that much?' Sighing, the Doctor turned and waved them aside impatiently. 'It's me, Major Kreer. Now do not obstruct me any further-

'Impersonating a military officer is a federal offence,' the guard warned. 'Put your hands above your head and walk ahead of us.'

'What?' the Master said, taken aback. 'I know I've changed my clothes extricated himself from the coils of wiring. 'And to think our old academy but... Wait a moment; surely I can't have changed that much?' Sighing in the face of a supercilious bunch try something like this.' He looked round at Marion, as playing child, he raised his hands. The guards looked him straight in the eye just remembering her presence. 'You'd better get back to your men, unless you want a trip into the lion's den,' he warned. 'The same rule Nyby stood in the Blue Room like a bipedal shadow when Shok'Arl heard applies - if you haven't heard from me by sun-up, get to Corman and shut his name called, but did not recognize the voice. There were only a the place down.'

limited number of people who knew his true name, however, which left 'Okay,' she acknowledged with mixed feelings, and turned to leave, only one possibility. This was confirmed less than a second later, when he then: 'Good luck,' she said from the hatchway.

turned to find an unfamiliar face staring at him from the midst of a very sensitive surface. A hollow, echoing hum gradually filled the flight deck. 'An irony we may both regret.' The Master shrugged. 'The girl Ace did and the lights of the wave-guide chamber began to pulse falteringly this on the Jessup.'

before fading away. 'The vessel has been destroyed,' Shok'Arl admitted. 'The explosion Grimacing, the Doctor gave the reactor housing a kick. The blue lights was monitored from orbit. Contact has been lost with all forward base came on more strongly, finally settling into a steady pulse. Heaving a sigh, the Doctor turned and played his fingers over the smooth touch-DNA reconstruction to take effect.'

sufficiently so. Now the ship raised itself a few yards above the green water with a rising hum, the circular exhaust glowing faintly. As the terullian hull zero hour.' He recalled what Nyby had memorized about the Earth's military procedures over his long career.

'So long as the Moscow warhead

lime-garbed Ksal checked a medical instrument of some kind. 'This will destroy this world with ease, but without any gains the energy and He pressed the instrument to the base of the Doctor's skull, just behind logistical expenditure would be entirely pointless. We could not waste the the ear. A transparent ampoule at the rear filled with pinkish liquid.

'Have you any out-of-date magazines for me to read?' the Doctor asked. The Doctor paced up and down for a moment, obviously weighing up unconcernedly.

'Scan the Elephant Butte reservoir area for latent artron energy. That will mark the location of my TARDIS. Once sphere, mixing it with a small amount of the fluid which he had just you've identified the TARDIS's energy signature, scan Washington, extracted from the Doctor, the rest of which was deposited in a smaller Holloman, and Corman for the same energy signature. That will prove sphere. Satisfied, Ksal returned to the Doctor and pressed the instrument that the Master has retrieved his TARDIS, and broken your agreement in to his neck once more. There was a soft hiss, and the ampoule emptied.

at least one way.'

'DNA only,' Ksal explained. 'It would be unwise to give you our memories well,' Shok'Arl agreed. 'And if there is no such signature?

'Then it just means he hasn't had time yet. But it will be there. I know Shok'Arl took the captain's seat on the bridge. This would be unthinkable him far better than you possibly can, and treachery and deceit are as during a flight, when the captain was absolute master, but acceptable now natural to him as breathing. His mind's so twisted that he can't even walk since they were in stationary orbit. 'Have a S'Raph pathfinder team taken in a straight line without getting dizzy.' by scout craft to a random location on the continental United States. Tell Shok'Arl considered this. 'Captain,' he called, 'have the ventral sensor them to keep a communication link open to the bridge.' arrays record the artron energy signature of the Doctor's TARDIS from Now, he thought, we shall see whether we have the desired effect, or Elephant Butte. Then scan Holloman, Washington, and Corman for the whether the Doctor is correct. same signature.'

'As you command,' the captain's voice acknowledged over the internal The Doctor rose from the stool and circled the room, examining every communications system.

detail closely. 'Shouldn't I be on the bridge?' he asked, tilting his head with 'First Councillor Shok'Arl from Surgeon-Major Ksal,' a new voice a frown. 'I must be familiar with procedure.' began.

'Excellent,' Ksal nodded unblinkingly. 'I will notify the First Councillor that you are on your way.'

Shok'Arl ignored the Doctor's footsteps as he entered the central circle of Chapter 20 holospheres. Instead, he was listening unemotionally to the sounds of cries and gunfire that were coming over the communications circuit.

'Do not engage the primitives in combat,' he ordered over the open A compressed red whirlwind sprang up on the catwalk in B Hall at link, searching his soul for its calm centre. He bathed in its relaxing Elephant Butte, the Doctor materializing in the centre. Checking that he influence as his distress and anger faded. 'Return to the ship at once.' He was alone, he grinned a little as he fished the TARDIS key from his turned to face the Doctor, glad to see that he was succumbing to the Tzun pocket. 'As you command,' he scoffed to himself. influence. He had suspected that the Doctor's misgivings about the The red whirlwind appeared again, and Ace and Benny looked process were merely the last gasp of resistance before bowing to the surprised that whoever they had been talking to on the Potomac riverbank inevitable. visit, inside the doors of the administration block which grew out of the The Master slipped back into the shadows as Ace meandered mountain roots. All the major areas were marked on it, and Benny stealthily towards the thick and sloping concrete doors.
memorized a route that would take her straight to the medical wing via the glasshouse and a large store-room. Ace moved around the sloped concrete edge at the foot of the mountain.
She set off quickly, occasionally pausing as a Ph’Sor crossed the Inside, a pair of Tzun ships were cabled up to strange pieces of corridor in the distance. The blue store-room was filled with crates of equipment. Odd metallic shapes loomed like stick insects in the dim light.
phased plasma rifles, but no humans. The glasshouse was empty. Benny She was about to move towards the nearest ship when a door slammed began to wonder what sort of architect had designed the all-blue complex. shut somewhere above.
Finally, however, she came to the windowed double doors that were the entrance to the medical wing. Airtight rubber seals rimmed the edges, and office platform which had lights on. Even if Stoker was not inside, she two Ph’Sor stood guard outside.
figured, there must be someone who could give her directions, one way or Not bothering to check the setting on the disruptor she had brought the other. Drawing her blaster, she crept up the stairs.
from Washington, Benny leaned out around the corner and swept the beam across both of them. They pitched to the ground, and she ran up to drawing a bead on the sole and relaxed occupant of the surprisingly the doors. Through the round windows, she could see that the miniature plushy furnished room.

She didn't really recognize the lean and aristocratic face, but the proud bearing and satanic beard and moustache were as incriminating as a set of fingerprints.
'Good morning, Ace,' the Master said pleasantly.
Nyby waved two men to either side of the double doors, as a wide section
of them collapsed in a cloud of heated dust.
He knew he shouldn't have given the AFOSI men such a free hand
with their alien friends, and was adamant that if this was them trying to
make up for their earlier misjudgement by releasing him... No, he corrected himself. Treason, not
misjudgement. He would waste no time in
proving that they were wasting their time trying to influence a man of such
strong character as himself.
Ready to face whatever might come through the doors, he stepped
proudly out in front of them. The doors slammed open.
Nyby was half-way through waving his men to attack when he realized
that it was neither Stoker nor Kreer who stood in the doorway. Instead, a
check-shirted woman with a mop of dark hair stood with a disruptor and
an impatient look. 'Well, what are you waiting for? she demanded in a
vaguely colonial accent. 'An invitation from the President?'
Several men immediately started for the door, but Nyby waved them to
a halt with a motion of one dark hand. Strangers shouldn't be waltzing in
and out of classified installations, he knew, and if she wasn't one of his
personnel then she couldn't be trusted. At least she seemed to be human.
'Who the hell are you?' he demanded sonorously.
'The crukking fairy godmother! Who the smeg are you?' She held up a
hand before he could answer. 'Never mind, Nyby, force of habit.'
'You're an unauthorized intruder, lady,' he rumbled.
'I'm no lady, and I've got authorization from Allen Dulles, if that name
means anything to you,' Benny responded. 'Are there any other
prisoners?'
Nyby looked at her askance. Her unsupported claim to be working for
the CIA was suspicious enough, but the claim of backing from the DCI
himself was beyond the pale. As for her knowing who he was... Still, she
seemed human enough, and had freed them. He could at least give her
enough rope, he decided. 'This is everybody. Everybody human, anyway,
except Kreer.'
'He's not human either, I'm afraid.'
The Master looked up calmly as Ace raised her blaster. Shaking his head,
he tutted softly. 'You've already killed me once, girl,' he chided. 'Didn't you
learn anything from that?'
'To aim for the head this time,' Ace said quietly, doing precisely that.
'I hardly think the Doctor would approve. Violence isn't really his style.'

'Well, I'm not him. When you've killed four, it's easy to make it five,' she
'My morality is always virtuous,' the Doctor retorted.
went on, Manco's tortured scream echoing in her head.
'Even if that implies that no one else's is?' the Master smirked nastily.
'That's very true, young lady, but you don't really want to do such a 'Of course,' he began, in a mock-thoughtful
tone, 'you could try proving thing,' he told her in a gentle and patient tone. She didn't think of holding that.' With a
sudden bound across the burgundy carpet, the Master his gaze, but nevertheless found that she could not tear her
eyes from reversed the gun and slapped the butt into the Doctor's palm his. Smiling as he pinned her with his gaze,
he repeated the words in a
tone of confidential but increasingly firm acknowledgement.
Benny skirted around the edge of the two ships in the S-Four hangar, but
'I am the Master,' he informed her firmly, the confident smile never didn't look up to see the office lights. Instead, she opened the airlock wavering, 'and you will obey me.' He moved closer to her across the rich doors at the rear of the hangar and plunged deeper into the complex in carpet, each word emphasized with a purposeful step. 'You will obey me.'

The lift.

Slowly, as if forcing its way through treacle, the thought occurred to her. She had already passed several rooms that showed signs of the recent removal of their contents, and now ran round a corner to skid to a halt as superiors in Spacefleet. Though she was glad to be free of that group, it was certainly comforting to rely on someone to do the thinking for her. A bit of discipline was something she needed to avoid becoming lazy. 'I will door to the Blue Room, the glimmer of his translator sparkling like Balor's obey,' she began slowly.

Her time spent far from her native time and place, however, had not creature to turn away and return to its lair. Her time spent far from her native time and place, however, had not creature to turn away and return to its lair. Left her unaffected. While it would be comforting to obey orders instead of 'The weapon will not be necessary,' it announced in its rich, multitonal giving bad ones as she feared she had with Manco, she could not voice. 'I have no quarrel with you.'

That's right,' Benny nodded. She looked at him in fascination. This was the leader of the animal, then impaled on a dagger carved from the tooth of some great Doctor's companion.'

There was Midge - always Midge - perverted by subservience to 'That's right,' Benny nodded. She looked at him in fascination. This was the leader of the animal, then impaled on a dagger carved from the tooth of some great Doctor's companion.'

For instance, twisting and dwindling. Perivale's milkman, lying in doubt you'll want to give me a medal.'

torn shreds in the dust of an alien planet. Karra, transformed into an animal, then impaled on a dagger carved from the tooth of some great Doctor's companion.'

hand and her knife in the other, burst from the office, and bounded down 'That can't be too big a job. Sometimes it takes more courage to deal in the stairs. Calling a group of Ph'Sor to him, he left the hangar.

life than in death,' the Doctor protested.

'How do we do that?'

'A tired argument, Doctor. I don't know if I'll ever find another such 'Gravity-drive systems are particularly sensitive to interference from worthy adversary,' the Master said quietly, in a tone which Ace couldn't gravimetric anomalies. Being an iron-cored planet, Earth has many of help thinking had the ring of truth about it. 'And I'll miss these little games those in its magnetosphere. So,' he pointed out in an overly patient tone, we have, but you've always failed to live up to your potential. I told you so—they must have a ground station somewhere which keeps their ships at the Academy,' He raised the blaster to the Doctor's forehead. 'This is updated with where the safe areas are.'

the price of failure, Doctor.'

'That dish!'

Slowly and mockingly, the Master's finger tightened on the trigger.

'Exactly. I followed the connections from it, but they lead to a door that I can't open. That's your department. If we can shut down that telemetry,

Nyby led his men out of the administration block and along the roadway their ships daren't risk atmospheric manoeuvres.' He looked at the open outside, ending up at a low blockhouse with two Ph'Sor guards outside. doors through which the Master had vanished. 'He's always been a little His mind was filled with anger at what had been done to him by those impulsive when you push the right psychological buttons. Come on.' He who claimed to be working with him for the security of America. He might rose and scampered towards the doors.

not be able to stop their plans, but at least he could take some of the traitors with him, he thought darkly.

Stoker cocked an eyebrow at the Master, who poked his head around the

The problem lay in the difficulty of knowing who to shoot. All the Ph'Sor side of his TARDIS. 'Well?'

'Predictable as ever,' the Master crowed. 'He's making straight for the left a smoking hole in the grey wall. Lights flickered dimly on the other telemetry centre. Take some men and get in there through the passage side of the breach.

from my office.'

Beyond the hole was a sloping corridor that led down to a room filled

'We'll see that he's taken care of,' Stoker said reassuringly. 'Though I with machinery and electronics. Lights flashed brightly over the ebon can't see why you didn't kill him when you had the chance.'

surface of tall cabinets ranged around the walls while thick cables rose in

'Because I need him to do something for me first,' the Master replied a column at the centre of the room. A catwalk ran along one wall twenty vaguely, to Stoker's frustration. 'The imminent threat was necessary so feet up, with a door at either end. There was a door to either side of the that he didn't suspect that he's being manipulated. If he thinks I let him go, room on the ground level. The Doctor stepped smartly up to the console he'll get suspicious. I was beginning to think that young whelp was never that surrounded the column of cables as Ace turned on her heels, looking going to use her knife.' He wiggled his fingers, the red line across his around suspiciously.

it.' His friendly smile hardened and cooled. 'Parting is such sweet sorrow,
don't you think? Perhaps I'll drink a toast to your memory - something Chapter 22
bitter-sweet, naturally. Goodbye, Doctor.' He nodded sharply to the
guards.
Disruptor whines pierced the stillness of the room.
The Doctor and Ace threw themselves behind the wreckage of the
console as the beam lanced through the room. Instead of passing
overhead, however, it bowled over the guards in the farthest doorway.
Ace darted across to grab a dropped disruptor as Benny emerged from the darkness. Together, they opened fire on the catwalk guards. The Master vanished through the nearest doorway with a curse as the guards jerked and toppled over the railing. The silence afterwards was almost deafening. 'Where did you spring from?' Ace asked.

'Shok'Arl has had more of a change of heart than his subordinates.' She tossed the disruptor aside in distaste, preferring to leave that side of things to Ace, then looked to the Doctor. 'The Tzun can't recall the plane with the Moscow bomb. It seems the Master replaced the Ph'Sor pilots with conditioned humans.'

'And knocking the plane down would set off the bomb,' the Doctor reasoned. 'Come on, we can lock on to the plane with that receiver of yours, Ace.'

'What about the Master?' The Tzun won't have anything more to do with him, and his cover's been blown in the military. I'd say he'll leave Earth, if he can, after he's finished his mysterious little vendetta with the Tzun. That's his usual technique, anyway. That warhead is a much more immediate threat to the planet; if it goes off, the Tzun won't stop the missile exchange.'

'They won't?'

'Why should they? It's purely an internal human matter now, as far as they're concerned.'

'Shades,' Benny grumbled. 'I'm definitely getting too old for this.'

The Master descended from his office and left the hangar with a purposeful air. The dry heat and neutral non-smell of the rocky area had previously seemed uncomfortable to him; mere reminders, in their way, that he was trapped here. Now, however, he held his head high, drinking in the rich and barren beauty of the ruddy morning tones as if they prompted some bitter-sweet memory within him. His not-quite-shoulder-length hair ruffling slightly in the breeze that swept in through the narrow gap that led to the white expanse of the dry lake, he climbed inside the nearest parked skiff with smooth and assured movements.

If he registered Stoker following him in, he gave no sign. He 'No one is to leave this area until I decide,' the Master snapped. 'This concentrated on making adjustments to the circuitry under the smooth ship is still needed.'

black flight console. After completing his adjustments, however, he turned 'We have been ordered, and so we obey,' the Ph'Sor replied, to the other man. 'Do you disapprove of my destroying the Stormblade?'

continuing with his preflight check.

'Yes... No... I don't know,' Stoker confessed. He followed as the Master The Master was nothing if not experienced in the means of snatching left the skiff and moved onto the next one. 'What do you plan to do with power and guarding it closely. Knowing that anyone who hesitates is lost the other skiffs?'

and deciding action was the most important aspect of gaining his The Master paused, and indicated the hatch of the next ship. 'You subordinates' attention, he shot the Ph'Sor with Ace's blaster, blowing the have an idea?' he asked neutrally. 'Let's step inside and discuss it.'

honour to which all Tzun aspire!
'You, who conquer not for survival or honour, or even mere glory, but
simply because you believe you can; you dare to question our courage?
Your ham-fisted blundering has made this world worthless to us! Now that
our intent is exposed in the worst possible light, thanks to you, none of the
people of this world will trust us one iota. They can now never allow any
co-operation between us, and without that co-operation there can be no
interrelationships of culture; they would resist us so much that we would
have to destroy that which we came to find!'
The Master applauded with a mocking slow handclap. 'If I didn't know
better I could almost swear you did absorb the Doctor's RNA.'
Shok'Arl stiffened, irritation roiling within him. 'What is the purpose of
this betrayal?'
'If I'm fortunate, the Moscow bomb will spark war and destroy this insipid little planet. At the very least,
however, I can be certain of being
safe from you. I could hardly leave you with data on my DNA and RNA, could I? It would be foolish in the extreme to risk the possibility of your cloning me, or creating a biological weapon aimed at me.'

Shok'Arl gazed impassively back at the Master, the mind behind the black eyes scarcely able to face the dishonour, even of another, of such magnitude. 'You used us,' he said in something approaching horrified awe, his vast memory unable to recall a precedent of well-considered treachery on such a scale. 'The whole assimilation of Earth was but a feint to enable your recovery; merely the means to ensure your own.'

the hand freezing on the buttoned flap as the voice on the other end of the line told him that someone had let an unidentified aircraft pass the
northern defence boundaries.

hung beyond them as a silent backdrop to their passing.

Finney awoke with a flash of pain. He flailed at his chest, trying to tug free
the harness that he felt sure was there. The plane had been going down
over frozen water, the wounded he was carrying crying out in the darkness of the passenger section. Then there
was icy pain, a jointed
cable support spearing his leg as another cannon-shell hit...
Except that the pain was in his neck this time, around the base of the
skull.

He opened his eyes to see a shaft of golden sunlight streaming through the window of a tiny private room in the
medical wing at Holloman. His mind cleared, recalling that he had followed Stoker out into
the desert and boarded a flying saucer. Then... what? He sat up, feeling
something fall from his pyjama collar. He reached around, his fingers finally touching a piece of sticky metal.
Lifting it into the rich light, he saw
that it was a thick metal needle of some kind, cloaked in drying blood. The
brassy metal crumbled as he watched.
'I'm glad you're back with us,' the Doctor said from a pool of shadow
beside the door. 'I didn't save you once just to... Well, that's another story.
You might like to know that there are two civilian pilots in need of beds
like that one, so I suggest you get up and about!' He smiled dimly in the
shadows.

Finney didn't like being confused, but had become resigned to it recently.

'What about Kreer and the disc?'

'The discs and their owners are all long gone. Some people from Washington have spirited away the odd bits
and pieces, though they've
also cleared out their own house at the Pentagon. It seems that a number
of DoD staff have mysteriously vanished. As for Kreer - well, I don't imagine you'll be seeing his face again. I
have to go now - people to see,
places to go. So do you, in fact. Poor Marion's positively snowed under
with administrative paperwork that you know how to deal with.'
'Marion Davison? The press officer?'
'Major Marion Davison, the acting station commander. You might not
be able to get her out of your chair, you know.'
'Well... I have two things to say before you go. Firstly, thanks for keeping things right.'
'And second?'
'Don't ever come here again,' Finney said simply, with neither humour
nor rancour.
High in the stratosphere, where the blueness of the sky darkened to the
