It would be idle to narrate all the monotonous and uninteresting details of the rest of the journey. Only two or three occurrences of any importance took place on the way from the lakes to the Pacific Ocean. The march was all day long across forests and plains. John took observations of the sun and stars. Neither heat nor rain increased the discomfort of the journey, but the travelers were so reduced by the trials they had undergone, that they made very slow progress; and they longed to arrive at the mission station.

They still chatted, but the conversation had ceased to be general. The little party broke up into groups, attracted to each other, not by narrow sympathies, but by a more personal communion of ideas.

Glenarvan generally walked alone; his mind seemed to recur to his unfortunate crew, as he drew nearer to the sea. He apparently lost sight of the dangers which lay before them on their way to Auckland, in the thought of his massacred men; the horrible picture haunted him.

Harry Grant was never spoken of; they were no longer in a position to make any effort on his behalf. If his name was uttered at all, it was between his daughter and John Mangles.

John had never reminded Mary of what she had said to him on that last night at Ware-Atoua. He was too wise to take advantage of a word spoken in a moment of despair. When he mentioned Captain Grant, John always spoke of further search. He assured Mary that Lord Glenarvan would re-embark in the enterprise. He persistently returned to the fact that the authenticity of the document was indisputable, and that therefore Harry Grant was somewhere to be found, and that they would find him, if they had to try all over the world. Mary drank in his words, and she and John, united by the same thought, cherished the same hope. Often Lady Helena joined in the conversation; but she did not participate in their illusions, though she refrained from chilling their enthusiasm.

McNabbs, Robert, Wilson, and Mulrady kept up their hunting parties, without going far from the rest, and each one furnished his QUOTA of game.

Paganel, arrayed in his flax mat, kept himself aloof, in a silent and pensive mood.

And yet, it is only justice to say, in spite of the general rule that, in the midst of trials, dangers, fatigues, and privations, the most amiable dispositions become ruffled and embittered, all our travelers were united, devoted, ready to die for one another.

On the 25th of February, their progress was stopped by a river which answered to the Wakari on Paganel's map, and was easily forded. For two days plains of low scrub succeeded each other without interruption. Half the distance from Lake Taupo to the coast had been traversed without accident, though not without fatigue.

Then the scene changed to immense and interminable forests, which reminded them of Australia, but here the kauri took the place of the eucalyptus. Although their enthusiasm had been incessantly called forth during their four
months’ journey, Glenarvan and his companions were compelled to admire and wonder at those gigantic pines, worthy rivals of the Cedars of Lebanon, and the "Mammoth trees" of California. The kauris measured a hundred feet high, before the ramification of the branches. They grew in isolated clumps, and the forest was not composed of trees, but of innumerable groups of trees, which spread their green canopies in the air two hundred feet from the ground.

Some of these pines, still young, about a hundred years old, resembled the red pine of Europe. They had a dark crown surmounted by a dark conical shoot. Their older brethren, five or six hundred years of age, formed great green pavilions supported on the inextricable network of their branches. These patriarchs of the New Zealand forest measured fifty yards in circumference, and the united arms of all the travelers could not embrace the giant trunk.

For three days the little party made their way under these vast arches, over a clayey soil which the foot of man had never trod. They knew this by the quantity of resinous gum that lay in heaps at the foot of the trees, and which would have lasted for native exportation many years.

The sportsmen found whole coveys of the kiwi, which are scarce in districts frequented by the Maories; the native dogs drive them away to the shelter of these inaccessible forests. They were an abundant source of nourishing food to our travelers.

Paganel also had the good fortune to espy, in a thicket, a pair of gigantic birds; his instinct as a naturalist was awakened. He called his companions, and in spite of their fatigue, the Major, Robert, and he set off on the track of these animals.

His curiosity was excusable, for he had recognized, or thought he had recognized, these birds as "moas" belonging to the species of "dinornis," which many naturalists class with the extinct birds. This, if Paganel was right, would confirm the opinion of Dr. Hochstetter and other travelers on the present existence of the wingless giants of New Zealand.

These moas which Paganel was chasing, the contemporaries of the Megatherium and the Pterodactyles, must have been eighteen feet high. They were huge ostriches, timid too, for they fled with extreme rapidity. But no shot could stay their course. After a few minutes of chase, these fleet-footed moas disappeared among the tall trees, and the sportsmen lost their powder and their pains.

That evening, March 1, Glenarvan and his companions, emerging at last from the immense kauri-forest, camped at the foot of Mount Ikirangi, whose summit rose five thousand five hundred feet into the air. At this point they had traveled a hundred miles from Maunganamu, and the shore was still thirty miles away. John Mangles had calculated on accomplishing the whole journey in ten days, but he did not foresee the physical difficulties of the country.

On the whole, owing to the circuits, the obstacles, and the imperfect observations, the journey had been extended by fully one-fifth, and now that they had reached Mount Ikirangi, they were quite worn out.

Two long days of walking were still to be accomplished, during which time all their activity and vigilance would be required, for their way was through a district often frequented by the natives. The little party conquered their weariness, and set out next morning at daybreak.

Between Mount Ikirangi which was left to the right, and Mount Hardy whose summit rose on the left to a height of 3,700 feet, the journey was very trying; for about ten miles the bush was a tangle of "supple-jack," a kind of flexible rope, appropriately called "stifling-creeper," that caught the feet at every step. For two days, they had to cut their way with an ax through this thousand-headed hydra. Hunting became impossible, and the sportsmen failed in their accustomed tribute. The provisions were almost exhausted, and there was no means of renewing them; their thirst was increasing by fatigue, and there was no water wherewith to quench it.

The sufferings of Glenarvan and his party became terrible, and for the first time their moral energy threatened to give way. They no longer walked, they dragged themselves along, soulless bodies, animated only by the instinct of self-preservation which survives every other feeling, and in this melancholy plight they reached Point Lottin on the shores of the Pacific.

Here they saw several deserted huts, the ruins of a village lately destroyed by the war, abandoned fields, and everywhere signs of pillage and incendiary fires.

They were toiling painfully along the shore, when they saw, at a distance of about a mile, a band of natives, who rushed toward them brandishing their weapons. Glenarvan, hemmed in by the sea, could not fly, and summoning all his remaining strength he was about to meet the attack, when John Mangles cried:

"A boat! a boat!"

And there, twenty paces off, a canoe with six oars lay on the beach. To launch it, jump in and fly from the dangerous shore, was only a minute’s work. John Mangles, McNabbs, Wilson and Mulrady took the oars; Glenarvan the helm; the two women, Robert and Olbinett stretched themselves beside him. In ten minutes the canoe was a quarter of a mile from the shore. The sea was calm. The fugitives were silent. But John, who did not want to get too far from land, was about to give the order to go up the coast, when he suddenly stopped rowing.
He saw three canoes coming out from behind Point Lottin and evidently about to give chase.
"Out to sea! Out to sea!" he exclaimed. "Better to drown if we must!"

The canoe went fast under her four rowers. For half an hour she kept her distance; but the poor exhausted fellows grew weaker, and the three pursuing boats began to gain sensibly on them. At this moment, scarcely two miles lay between them. It was impossible to avoid the attack of the natives, who were already preparing to fire their long guns.

What was Glenarvan about?--standing up in the stern he was looking toward the horizon for some chimerical help. What did he hope for? What did he wish? Had he a presentiment?

In a moment his eyes gleamed, his hand pointed out into the distance.
"A ship! a ship!" he cried. "My friends, row! row hard!"

Not one of the rowers turned his head—not an oar-stroke must be lost. Paganel alone rose, and turned his telescope to the point indicated.
"Yes," said he, "a ship! a steamer! they are under full steam! they are coming to us! Found now, brave comrades!"

The fugitives summoned new energy, and for another half hour, keeping their distance, they rowed with hasty strokes. The steamer came nearer and nearer. They made out her two masts, bare of sails, and the great volumes of black smoke. Glenarvan, handing the tiller to Robert, seized Paganel's glass, and watched the movements of the steamer.

John Mangles and his companions were lost in wonder when they saw Glenarvan's features contract and grow pale, and the glass drop from his hands. One word explained it.
"The DUNCAN!" exclaimed Glenarvan. "The DUNCAN, and the convicts!"
"The DUNCAN!" cried John, letting go his oar and rising.
"Yes, death on all sides!" murmured Glenarvan, crushed by despair.

It was indeed the yacht, they could not mistake her—the yacht and her bandit crew!

The major could scarcely restrain himself from cursing their destiny.

The canoe was meantime standing still. Where should they go? Whither fly? What choice was there between the convicts and the savages?

A shot was fired from the nearest of the native boats, and the ball struck Wilson's oar.

A few strokes then carried the canoe nearer to the DUNCAN.
The yacht was coming down at full speed, and was not more than half a mile off.

John Mangles, between two enemies, did not know what to advise, whither to fly! The two poor ladies on their knees, prayed in their agony.

The savages kept up a running fire, and shots were raining round the canoe, when suddenly a loud report was heard, and a ball from the yacht's cannon passed over their heads, and now the boat remained motionless between the DUNCAN and the native canoes.

John Mangles, frenzied with despair, seized his ax. He was about to scuttle the boat and sink it with his unfortunate companions, when a cry from Robert arrested his arm.
"Tom Austin! Tom Austin!" the lad shouted. "He is on board! I see him! He knows us! He is waving his hat."
The ax hung useless in John's hand.

A second ball whistled over his head, and cut in two the nearest of the three native boats, while a loud hurrah burst forth on board the DUNCAN.
The savages took flight, fled and regained the shore.
"Come on, Tom, come on!" cried John Mangles in a joyous voice.

And a few minutes after, the ten fugitives, how, they knew not, were all safe on board the DUNCAN.

CHAPTER XVI WHY THE "DUNCAN" WENT TO NEW ZEALAND

It would be vain to attempt to depict the feelings of Glenarvan and his friends when the songs of old Scotia fell on their ears. The moment they set foot on the deck of the DUNCAN, the piper blew his bagpipes, and commenced the national pibroch of the Malcolm clan, while loud hurrahs rent the air.

Glenarvan and his whole party, even the Major himself, were crying and embracing each other. They were delirious with joy. The geographer was absolutely mad. He frisked about, telescope in hand, pointing it at the last canoe approaching the shore.

But at the sight of Glenarvan and his companions, with their clothing in rags, and thin, haggard faces, bearing marks of horrible sufferings, the crew ceased their noisy demonstrations. These were specters who had returned—not the bright, adventurous travelers who had left the yacht three months before, so full of hope! Chance, and chance only, had brought them back to the deck of the yacht they never thought to see again. And in what a state of exhaustion and feebleness. But before thinking of fatigue, or attending to the imperious demands of hunger and
thirst, Glenarvan questioned Tom Austin about his being on this coast.

Why had the DUNCAN come to the eastern coast of New Zealand? How was it not in the hands of Ben Joyce? By what providential fatality had God brought them in the track of the fugitives?

Why? how? and for what purpose? Tom was stormed with questions on all sides. The old sailor did not know which to listen to first, and at last resolved to hear nobody but Glenarvan, and to answer nobody but him.

"But the convicts?" inquired Glenarvan. "What did you do with them?"

"The convicts?" replied Tom, with the air of a man who does not in the least understand what he is being asked.

"Yes, the wretches who attacked the yacht."

"What yacht? Your Honor's?"

"Why, of course, Tom. The DUNCAN, and Ben Joyce, who came on board."

"I don't know this Ben Joyce, and have never seen him."

"Never seen him!" exclaimed Paganel, stupefied at the old sailor's replies. "Then pray tell me, Tom, how it is that the DUNCAN is cruising at this moment on the coast of New Zealand?"

But if Glenarvan and his friends were totally at a loss to understand the bewilderment of the old sailor, what was their amazement when he replied in a calm voice:

"The DUNCAN is cruising here by your Honor's orders."

"By my orders?" cried Glenarvan.

"Yes, my Lord. I only acted in obedience to the instructions sent in your letter of January fourteenth."

"My letter! my letter!" exclaimed Glenarvan.

The ten travelers pressed closer round Tom Austin, devouring him with their eyes. The letter dated from Snowy River had reached the DUNCAN, then.

"Let us come to explanations, pray, for it seems to me I am dreaming. You received a letter, Tom?"

"Yes, a letter from your Honor."

"At Melbourne?"

"At Melbourne, just as our repairs were completed."

"And this letter?"

"It was not written by you, but bore your signature, my Lord."

"Just so; my letter was brought by a convict called Ben Joyce."

"No, by a sailor called Ayrton, a quartermaster on the BRITANNIA."

"Yes, Ayrton or Ben Joyce, one and the same individual. Well, and what were the contents of this letter?"

"It contained orders to leave Melbourne without delay, and go and cruise on the eastern coast of--".

"Australia!" said Glenarvan with such vehemence that the old sailor was somewhat disconcerted.

"Of Australia?" repeated Tom, opening his eyes. "No, but New Zealand."

"Australia, Tom! Australia!" they all cried with one voice.

Austin's head began to feel in a whirl. Glenarvan spoke with such assurance that he thought after all he must have made a mistake in reading the letter. Could a faithful, exact old servant like himself have been guilty of such a thing? He turned red and looked quite disturbed.

"Never mind, Tom," said Lady Helena. "God so willed it."

"But, no, madam, pardon me," replied old Tom. "No, it is impossible, I was not mistaken. Ayrton read the letter as I did, and it was he, on the contrary, who wished to bring me to the Australian coast."

"Ayrton!" cried Glenarvan.

"Yes, Ayrton himself. He insisted it was a mistake: that you meant to order me to Twofold Bay."

"Have you the letter still, Tom?" asked the Major, extremely interested in this mystery.

"Yes, Mr. McNabbs," replied Austin. "I'll go and fetch it."

V. IV Verne

He ran at once to his cabin in the forecastle. During his momentary absence they gazed at each other in silence, all but the Major, who crossed his arms and said:

"Well, now, Paganel, you must own this would be going a little too far."

"What?" growled Paganel, looking like a gigantic note of interrogation, with his spectacles on his forehead and his stooping back.

Austin returned directly with the letter written by Paganel and signed by Glenarvan.

"Will your Honor read it?" he said, handing it to him.

Glenarvan took the letter and read as follows:

"Order to Tom Austin to put out to sea without delay, and to take the Duncan, by latitude 37 degrees to the eastern coast of New Zealand!"

"New Zealand!" cried Paganel, leaping up.
And he seized the letter from Glenarvan, rubbed his eyes, pushed down his spectacles on his nose, and read it for himself.

"New Zealand!" he repeated in an indescribable tone, letting the order slip between his fingers.
That same moment he felt a hand laid on his shoulder, and turning round found himself face to face with the Major, who said in a grave tone:

"Well, my good Paganel, after all, it is a lucky thing you did not send the DUNCAN to Cochin China!"

This pleasantry finished the poor geographer. The crew burst out into loud Homeric laughter. Paganel ran about like a madman, seized his head with both hands and tore his hair. He neither knew what he was doing nor what he wanted to do. He rushed down the poop stairs mechanically and paced the deck, nodding to himself and going straight before without aim or object till he reached the forecastle. There his feet got entangled in a coil of rope. He stumbled and fell, accidentally catching hold of a rope with both hands in his fall.

Suddenly a tremendous explosion was heard. The forecastle gun had gone off, riddling the quiet calm of the waves with a volley of small shot. The unfortunate Paganel had caught hold of the cord of the loaded gun. The geographer was thrown down the forecastle ladder and disappeared below.

A cry of terror succeeded the surprise produced by the explosion. Everybody thought something terrible must have happened. The sailors rushed between decks and lifted up Paganel, almost bent double. The geographer uttered no sound.

They carried his long body onto the poop. His companions were in despair. The Major, who was always the surgeon on great occasions, began to strip the unfortunate that he might dress his wounds; but he had scarcely put his hands on the dying man when he started up as if touched by an electrical machine.

"Never! never!" he exclaimed, and pulling his ragged coat tightly round him, he began buttoning it up in a strangely excited manner.

"But, Paganel," began the Major.
"No, I tell you!"
"I must examine--"
"You shall not examine."
"You may perhaps have broken--" continued McNabbs.
"Yes," continued Paganel, getting up on his long legs, "but what I have broken the carpenter can mend."
"What is it, then?"
"There."

Bursts of laughter from the crew greeted this speech. Paganel's friends were quite reassured about him now. They were satisfied that he had come off safe and sound from his adventure with the forecastle gun.

At any rate," thought the Major, "the geographer is wonderfully bashful."
But now Paganel was recovered a little, he had to reply to a question he could not escape.

"Now, Paganel," said Glenarvan, "tell us frankly all about it. I own that your blunder was providential. It is sure and certain that but for you the DUNCAN would have fallen into the hands of the convicts; but for you we should have been recaptured by the Maories. But for my sake tell me by what supernatural aberration of mind you were induced to write New Zealand instead of Australia?"

"Well, upon my oath," said Paganel, "it is--"

But the same instant his eyes fell on Mary and Robert Grant, and he stopped short and then went on:

"What would you have me say, my dear Glenarvan? I am mad, I am an idiot, an incorrigible fellow, and I shall live and die the most terrible absent man. I can't change my skin."

"Unless you get flayed alive."

"Get flayed alive!" cried the geographer, with a furious look. "Is that a personal allusion?"

"An allusion to what?" asked McNabbs, quietly. This was all that passed. The mystery of the DUNCAN's presence on the coast was explained, and all that the travelers thought about now was to get back to their comfortable cabins, and to have breakfast.

However, Glenarvan and John Mangles stayed behind with Tom Austin after the others had retired. They wished to put some further questions to him.

"Now, then, old Austin," said Glenarvan, "tell me, didn't it strike you as strange to be ordered to go and cruise on the coast of New Zealand?"

"Yes, your Honor," replied Tom. "I was very much surprised, but it is not my custom to discuss any orders I receive, and I obeyed. Could I do otherwise? If some catastrophe had occurred through not carrying out your injunctions to the letter, should not I have been to blame? Would you have acted differently, captain?"

"No, Tom," replied John Mangles.
"But what did you think?" asked Glenarvan.
"I thought, your Honor, that in the interest of Harry Grant, it was necessary to go where I was told to go. I thought that in consequence of fresh arrangements, you were to sail over to New Zealand, and that I was to wait for you on the east coast of the island. Moreover, on leaving Melbourne, I kept our destination a secret, and the crew only knew it when we were right out at sea, and the Australian continent was finally out of sight. But one circumstance occurred which greatly perplexed me."

"What was it, Tom?" asked Glenarvan.

"Just this, that when the quartermaster of the BRITANNIA heard our destination--"

"Ayrton!" cried Glenarvan. "Then he is on board?"

"Yes, your Honor."

"Ayrton here?" repeated Glenarvan, looking at John Mangles.

"God has so willed!" said the young captain.

In an instant, like lightning, Ayrton's conduct, his long-planned treachery, Glenarvan's wound, Mulrady's assassination, the sufferings of the expedition in the marshes of the Snowy River, the whole past life of the miscreant, flashed before the eyes of the two men. And now, by the strangest concourse of events, the convict was in their power.

"Where is he?" asked Glenarvan eagerly.

"In a cabin in the forecastle, and under guard."

"Why was he imprisoned?"

"Because when Ayrton heard the vessel was going to New Zealand, he was in a fury; because he tried to force me to alter the course of the ship; because he threatened me; and, last of all, because he incited my men to mutiny. I saw clearly he was a dangerous individual, and I must take precautions against him."

"And since then?"

"Since then he has remained in his cabin without attempting to go out."

"That's well, Tom."

Just at this moment Glenarvan and John Mangles were summoned to the saloon where breakfast, which they so sorely needed, was awaiting them. They seated themselves at the table and spoke no more of Ayrton.

But after the meal was over, and the guests were refreshed and invigorated, and they all went upon deck, Glenarvan acquainted them with the fact of the quartermaster's presence on board, and at the same time announced his intention of having him brought before them.

"May I beg to be excused from being present at his examination?" said Lady Helena. "I confess, dear Edward, it would be extremely painful for me to see the wretched man."

"He must be confronted with us, Helena," replied Lord Glenarvan; "I beg you will stay. Ben Joyce must see all his victims face to face."

Lady Helena yielded to his wish. Mary Grant sat beside her, near Glenarvan. All the others formed a group round them, the whole party that had been compromised so seriously by the treachery of the convict. The crew of the yacht, without understanding the gravity of the situation, kept profound silence.

"Bring Ayrton here," said Glenarvan.

CHAPTER XVII AYRTON'S OBSTINACY

AYRTON came. He crossed the deck with a confident tread, and mounted the steps to the poop. His eyes were gloomy, his teeth set, his fists clenched convulsively. His appearance betrayed neither effrontery nor timidity. When he found himself in the presence of Lord Glenarvan he folded his arms and awaited the questions calmly and silently.

"Ayrton," said Glenarvan, "here we are then, you and us, on this very DUNCAN that you wished to deliver into the hands of the convicts of Ben Joyce."

The lips of the quartermaster trembled slightly and a quick flush suffused his impassive features. Not the flush of remorse, but of shame at failure. On this yacht which he thought he was to command as master, he was a prisoner, and his fate was about to be decided in a few seconds.

However, he made no reply. Glenarvan waited patiently. But Ayrton persisted in keeping absolute silence.

"Speak, Ayrton, what have you to say?" resumed Glenarvan.

Ayrton hesitated, the wrinkles in his forehead deepened, and at length he said in calm voice:

"I have nothing to say, my Lord. I have been fool enough to allow myself to be caught. Act as you please."

Then he turned his eyes away toward the coast which lay on the west, and affected profound indifference to what was passing around him. One would have thought him a stranger to the whole affair. But Glenarvan was determined to be patient. Powerful motives urged him to find out certain details concerning the mysterious life of Ayrton, especially those which related to Harry Grant and the BRITANNIA. He therefore resumed his interrogations, speaking with extreme gentleness and firmly restraining his violent irritation against him.
"I think, Ayrton," he went on, "that you will not refuse to reply to certain questions that I wish to put to you; and, first of all, ought I to call you Ayrton or Ben Joyce? Are you, or are you not, the quartermaster of the BRITANNIA?"

Ayrton remained impassive, gazing at the coast, deaf to every question.

Glenarvan's eyes kindled, as he said again:

"Will you tell me how you left the BRITANNIA, and why you are in Australia?"

The same silence, the same impassibility.

"Listen to me, Ayrton," continued Glenarvan; "it is to your interest to speak. Frankness is the only resource left to you, and it may stand you in good stead. For the last time, I ask you, will you reply to my questions?"

Ayrton turned his head toward Glenarvan, and looked into his eyes.

"My Lord," he said, "it is not for me to answer. Justice may witness against me, but I am not going to witness against myself."

"Proof will be easy," said Glenarvan.

"Easy, my Lord," repeated Ayrton, in a mocking tone. "Your honor makes rather a bold assertion there, it seems to me. For my own part, I venture to affirm that the best judge in the Temple would be puzzled what to make of me. Who will say why I came to Australia, when Captain Grant is not here to tell? Who will prove that I am the Ben Joyce placarded by the police, when the police have never had me in their hands, and my companions are at liberty? Who can damage me except yourself, by bringing forward a single crime against me, or even a blameable action? Who will affirm that I intended to take possession of this ship and deliver it into the hands of the convicts? No one, I tell you, no one. You have your suspicions, but you need certainties to condemn a man, and certainties you have none. Until there is a proof to the contrary, I am Ayrton, quartermaster of the BRITANNIA."

Ayrton had become animated while he was speaking, but soon relapsed into his former indifference.

He, no doubt, expected that his reply would close the examination, but Glenarvan commenced again, and said:

"Ayrton, I am not a Crown prosecutor charged with your indictment. That is no business of mine. It is important that our respective situations should be clearly defined. I am not asking you anything that could compromise you. That is for justice to do. But you know what I am searching for, and a single word may put me on the track I have lost. Will you speak?"

Ayrton shook his head like a man determined to be silent.

"Will you tell me where Captain Grant is?" asked Glenarvan.

"No, my Lord," replied Ayrton.

"Will you tell me where the BRITANNIA was wrecked?"

"No, neither the one nor the other."

"Ayrton," said Glenarvan, in almost beseeching tones, "if you know where Harry Grant is, will you, at least, tell his poor children, who are waiting for you to speak the word?"

Ayrton hesitated. His features contracted, and he muttered in a low voice, "I cannot, my Lord."

Then he added with vehemence, as if reproaching himself for a momentary weakness:

"No, I will not speak. Have me hanged, if you choose."

"Hanged!" exclaimed Glenarvan, overcome by a sudden feeling of anger.

But immediately mastering himself, he added in a grave voice:

"Ayrton, there is neither judge nor executioner here. At the first port we touch at, you will be given up into the hands of the English authorities."

"That is what I demand," was the quartermaster's reply.

Then he turned away and quietly walked back to his cabin, which served as his prison. Two sailors kept guard at the door, with orders to watch his slightest movement. The witnesses of this examination retired from the scene indignant and despairing.

As Glenarvan could make no way against Ayrton's obstinacy, what was to be done now? Plainly no course remained but to carry out the plan formed at Eden, of returning to Europe and giving up for the time this unsuccessful enterprise, for the traces of the BRITANNIA seemed irrevocably lost, and the document did not appear to allow any fresh interpretation. On the 37th parallel there was not even another country, and the DUNCAN had only to turn and go back.

After Glenarvan had consulted his friends, he talked over the question of returning, more particularly with the captain. John examined the coal bunkers, and found there was only enough to last fifteen days longer at the outside. It was necessary, therefore, to put in at the nearest port for a fresh supply.

John proposed that he should steer for the Bay of Talcahuano, where the DUNCAN had once before been revictualled before she commenced her voyage of circumnavigation. It was a direct route across, and lay exactly along the 37th parallel. From thence the yacht, being amply provisioned, might go south, double Cape Horn, and get
back to Scotland by the Atlantic route.

This plan was adopted, and orders were given to the engineer to get up the steam. Half an hour afterward the beak-head of the yacht was turned toward Talcahuano, over a sea worthy of being called the Pacific, and at six P. M. the last mountains of New Zealand had disappeared in warm, hazy mist on the horizon.

The return voyage was fairly commenced. A sad voyage, for the courageous searching party to come back to the port without bringing home Harry Grant with them! The crew, so joyous at departure and so hopeful, were coming back to Europe defeated and discouraged. There was not one among the brave fellows whose heart did not swell at the thought of seeing his own country once more; and yet there was not one among them either who would not have been willing to brave the perils of the sea for a long time still if they could but find Captain Grant.

Consequently, the hurrahs which greeted the return of Lord Glenarvan to the yacht soon gave place to dejection. Instead of the close intercourse which had formerly existed among the passengers, and the lively conversations which had cheered the voyage, each one kept apart from the others in the solitude of his own cabin, and it was seldom that anyone appeared on the deck of the DUNCAN.

Paganel, who generally shared in an exaggerated form the feelings of those about him, whether painful or joyous— a man who could have invented hope if necessary—even Paganel was gloomy and taciturn. He was seldom visible; his natural loquacity and French vivacity gave place to silence and dejection. He seemed even more downhearted than his companions. If Glenarvan spoke at all of renewing the search, he shook his head like a man who has given up all hope, and whose convictions concerning the fate of the shipwrecked men appeared settled. It was quite evident he believed them irrevocably lost.

And yet there was a man on board who could have spoken the decisive word, and refused to break his silence. This was Ayrton. There was no doubt the fellow knew, if not the present whereabouts of the captain, at least the place of shipwreck. But it was evident that were Grant found, he would be a witness against him. Hence his persistent silence, which gave rise to great indignation on board, especially among the crew, who would have liked to deal summarily with him.

Glenarvan repeatedly renewed his attempts with the quartermaster, but promises and threats were alike useless. Ayrton's obstinacy was so great, and so inexplicable, that the Major began to believe he had nothing to reveal. His opinion was shared, moreover, by the geographer, as it corroborated his own notion about Harry Grant.

But if Ayrton knew nothing, why did he not confess his ignorance? It could not be turned against him. His silence increased the difficulty of forming any new plan. Was the presence of the quartermaster on the Australian continent a proof of Harry Grant's being there? It was settled that they must get this information out of Ayrton.

Lady Helena, seeing her husband's ill-success, asked his permission to try her powers against the obstinacy of the convict. When a man had failed, a woman perhaps, with her gentler influence, might succeed. Is there not a constant repetition going on of the story of the fable where the storm, blow as it will, cannot tear the cloak from the shoulders of the traveler, while the first warm rays of sunshine make him throw it off immediately?

Glenarvan, knowing his young wife's good sense, allowed her to act as she pleased.

The same day (the 5th of March), Ayrton was conducted to Lady Helena's saloon. Mary Grant was to be present at the interview, for the influence of the young girl might be considerable, and Lady Helena would not lose any chance of success.

For a whole hour the two ladies were closeted with the quartermaster, but nothing transpired about their interview. What had been said, what arguments they used to win the secret from the convict, or what questions were asked, remained unknown; but when they left Ayrton, they did not seem to have succeeded, as the expression on their faces denoted discouragement.

In consequence of this, when the quartermaster was being taken back to his cabin, the sailors met him with violent menaces. He took no notice except by shrugging his shoulders, which so increased their rage, that John Mangles and Glenarvan had to interfere, and could only repress it with difficulty.

But Lady Helena would not own herself vanquished. She resolved to struggle to the last with this pitiless man, and went next day herself to his cabin to avoid exposing him again to the vindictiveness of the crew.

The good and gentle Scotchwoman stayed alone with the convict leader for two long hours. Glenarvan in a state of extreme nervous anxiety, remained outside the cabin, alternately resolved to exhaust completely this last chance of success, alternately resolved to rush in and snatch his wife from so painful a situation.

But this time when Lady Helena reappeared, her look was full of hope. Had she succeeded in extracting the secret, and awakening in that adamantine heart a last faint touch of pity?

McNabbs, who first saw her, could not restrain a gesture of incredulity.

However the report soon spread among the sailors that the quartermaster had yielded to the persuasions of Lady Helena. The effect was electrical. The entire crew assembled on deck far quicker than Tom Austin's whistle could have brought them together.
Glenarvan had hastened up to his wife and eagerly asked:
"Has he spoken?"
"No," replied Lady Helena, "but he has yielded to my entreaties, and wishes to see you."
"Ah, dear Helena, you have succeeded!"
"I hope so, Edward."
"Have you made him any promise that I must ratify?"
"Only one; that you will do all in your power to mitigate his punishment."
"Very well, dear Helena. Let Ayrton come immediately."
Lady Helena retired to her cabin with Mary Grant, and the quartermaster was brought into the saloon where Lord Glenarvan was expecting him.

CHAPTER XVIII A DISCOURAGING CONFESSION

As soon as the quartermaster was brought into the presence of Lord Glenarvan, his keepers withdrew.
"You wanted to speak to me, Ayrton?" said Glenarvan.
"Yes, my Lord," replied the quartermaster.
"Did you wish for a private interview?"
"Yes, but I think if Major McNabbs and Mr. Paganel were present it would be better."
"For whom?"
"For myself."

Ayrton spoke quite calmly and firmly. Glenarvan looked at him for an instant, and then sent to summon McNabbs and Paganel, who came at once.
"We are all ready to listen to you," said Glenarvan, when his two friends had taken their place at the saloon table. Ayrton collected himself, for an instant, and then said:
"My Lord, it is usual for witnesses to be present at every contract or transaction between two parties. That is why I desire the presence of Messrs. Paganel and McNabbs, for it is, properly speaking, a bargain which I propose to make."

Glenarvan, accustomed to Ayrton's ways, exhibited no surprise, though any bargaining between this man and himself seemed strange.
"What is the bargain?" he said.
"This," replied Ayrton. "You wish to obtain from me certain facts which may be useful to you. I wish to obtain from you certain advantages which would be valuable to me. It is giving for giving, my Lord. Do you agree to this or not?"
"What are the facts?" asked Paganel eagerly.
"No," said Glenarvan. "What are the advantages?"
Ayrton bowed in token that he understood Glenarvan's distinction.
"These," he said, "are the advantages I ask. It is still your intention, I suppose, to deliver me up to the English authorities?"
"Yes, Ayrton, it is only justice."
"I don't say it is not," replied the quartermaster quietly. "Then of course you would never consent to set me at liberty."

Glenarvan hesitated before replying to a question so plainly put. On the answer he gave, perhaps the fate of Harry Grant might depend!
However, a feeling of duty toward human justice compelled him to say:
"No, Ayrton, I cannot set you at liberty."
"I do not ask it," said the quartermaster proudly.
"Then, what is it you want?"
"A middle place, my Lord, between the gibbet that awaits me and the liberty which you cannot grant me."
"And that is--"
"To allow me to be left on one of the uninhabited islands of the Pacific, with such things as are absolute necessaries. I will manage as best I can, and will repent if I have time."

Glenarvan, quite unprepared for such a proposal, looked at his two friends in silence. But after a brief reflection, he replied:
"Ayrton, if I agree to your request, you will tell me all I have an interest in knowing."
"Yes, my Lord, that is to say, all I know about Captain Grant and the BRITANNIA."
"The whole truth?"
"The whole."
"But what guarantee have I?"
"Oh, I see what you are uneasy about. You need a guarantee for me, for the truth of a criminal. That's natural. But what can you have under the circumstances. There is no help for it, you must either take my offer or leave it."

"I will trust to you, Ayrton," said Glenarvan, simply.

"And you do right, my Lord. Besides, if I deceive you, vengeance is in your own power."

"How?"

"You can come and take me again from where you left me, as I shall have no means of getting away from the island."

Ayrton had an answer for everything. He anticipated the difficulties and furnished unanswerable arguments against himself. It was evident he intended to affect perfect good faith in the business. It was impossible to show more complete confidence. And yet he was prepared to go still further in disinterestedness.

"My Lord and gentlemen," he added, "I wish to convince you of the fact that I am playing cards on the table. I have no wish to deceive you, and I am going to give you a fresh proof of my sincerity in this matter. I deal frankly with you, because I reckon on your honor."

"Speak, Ayrton," said Glenarvan.

"My Lord, I have not your promise yet to accede to my proposal, and yet I do not scruple to tell you that I know very little about Harry Grant."

"Very little," exclaimed Glenarvan.

"Yes, my Lord, the details I am in a position to give you relate to myself. They are entirely personal, and will not do much to help you to recover the lost traces of Captain Grant."

Keen disappointment was depicted on the faces of Glenarvan and the Major. They thought the quartermaster in the possession of an important secret, and he declared that his communications would be very nearly barren. Paganel's countenance remained unmoved.

Somehow or other, this avowal of Ayrton, and surrender of himself, so to speak, unconditionally, singularly touched his auditors, especially when the quartermaster added:

"So I tell you beforehand, the bargain will be more to my profit than yours."

"It does not signify," replied Glenarvan. "I accept your proposal, Ayrton. I give you my word to land you on one of the islands of the Pacific Ocean."

"All right, my Lord," replied the quartermaster.

Was this strange man glad of this decision? One might have doubted it, for his impassive countenance betokened no emotion whatever. It seemed as if he were acting for someone else rather than himself.

"I am ready to answer," he said.

"We have no questions to put to you," said Glenarvan. "Tell us all you know, Ayrton, and begin by declaring who you are."

"Gentlemen," replied Ayrton, "I am really Tom Ayrton, the quartermaster of the BRITANNIA. I left Glasgow on Harry Grant's ship on the 12th of March, 1861. For fourteen months I cruised with him in the Pacific in search of an advantageous spot for founding a Scotch colony. Harry Grant was the man to carry out grand projects, but serious disputes often arose between us. His temper and mine could not agree. I cannot bend, and with Harry Grant, when once his resolution is taken, any resistance is impossible, my Lord. He has an iron will both for himself and others."

"But in spite of that, I dared to rebel, and I tried to get the crew to join me, and to take possession of the vessel. Whether I was to blame or not is of no consequence. Be that as it may, Harry Grant had no scruples, and on the 8th of April, 1862, he left me behind on the west coast of Australia."

"Of Australia!" said the Major, interrupting Ayrton in his narrative. "Then of course you had quitted the BRITANNIA before she touched at Callao, which was her last date?"

"Yes," replied the quartermaster, "for the BRITANNIA did not touch there while I was on board. And how I came to speak of Callao at Paddy O'Moore's farm was that I learned the circumstances from your recital."

"Go on, Ayrton," said Glenarvan.

"I found myself abandoned on a nearly desert coast, but only forty miles from the penal settlement at Perth, the capital of Western Australia. As I was wandering there along the shore, I met a band of convicts who had just escaped, and I joined myself to them. You will dispense, my Lord, with any account of my life for two years and a half. This much, however, I must tell you, that I became the leader of the gang, under the name of Ben Joyce. In September, 1864, I introduced myself at the Irish farm, where I engaged myself as a servant in my real name, Ayrton. I waited there till I should get some chance of seizing a ship. This was my one idea. Two months afterward the DUNCAN arrived. During your visit to the farm you related Captain Grant's history, and I learned then facts of which I was not previously aware-- that the BRITANNIA had touched at Callao, and that her latest news was dated June, 1862, two months after my disembarkation, and also about the document and the loss of the ship somewhere along the 37th parallel; and, lastly, the strong reasons you had for supposing Harry Grant was on the Australian
continent. Without the least hesitation I determined to appropriate the DUNCAN, a matchless vessel, able to outdistance the swiftest ships in the British Navy. But serious injuries had to be repaired. I therefore let it go to Melbourne, and joined myself to you in my true character as quartermaster, offering to guide you to the scene of the shipwreck, fictitiously placed by me on the east coast of Australia. It was in this way, followed or sometimes preceded by my gang of convicts, I directed your expedition toward the province of Victoria. My men committed a bootless crime at Camden Bridge; since the DUNCAN, if brought to the coast, could not escape me, and with the yacht once mine, I was master of the ocean. I led you in this way unsuspiciously as far as the Snowy River. The horses and bullocks dropped dead one by one, poisoned by the gastrolobium. I dragged the wagon into the marshes, where it got half buried. At my instance—but you know the rest, my Lord, and you may be sure that but for the blunder of Mr. Paganel, I should now command the DUNCAN. Such is my history, gentlemen. My disclosures, unfortunately, cannot put you on the track of Harry Grant, and you perceive that you have made but a poor bargain by coming to my terms."

The quartermaster said no more, but crossed his arms in his usual fashion and waited. Glenarvan and his friends kept silence. They felt that this strange criminal had spoken the whole truth. He had only missed his coveted prize, the DUNCAN, through a cause independent of his will. His accomplices had gone to Twofold Bay, as was proved by the convict blouse found by Glenarvan. Faithful to the orders of their chief, they had kept watch on the yacht, and at length, weary of waiting, had returned to the old haunt of robbers and incendiaries in the country parts of New South Wales.

The Major put the first question, his object being to verify the dates of the BRITANNIA.
"You are sure then," he said, "that it was on the 8th of April you were left on the west coast of Australia?"
"On that very day," replied Ayrton.
"And do you know what projects Harry Grant had in view at the time?"
"In an indefinite way I do."
"Say all you can, Ayrton," said Glenarvan, "the least indication may set us in the right course."
"I only know this much, my Lord," replied the quartermaster, "that Captain Grant intended to visit New Zealand. Now, as this part of the programme was not carried out while I was on board, it is not impossible that on leaving Callao the BRITANNIA went to reconnoiter New Zealand. This would agree with the date assigned by the document to the shipwreck—the 27th of June, 1862."
"Clearly," said Paganel.
"But," objected Glenarvan, "there is nothing in the fragmentary words in the document that could apply to New Zealand."
"That I cannot answer," said the quartermaster.
"Well, Ayrton," said Glenarvan, "you have kept your word, and I will keep mine. We have to decide now on what island of the Pacific Ocean you are to be left?"
"It matters little, my Lord," replied Ayrton.
"Return to your cabin," said Glenarvan, "and wait our decision."
The quartermaster withdrew, guarded by the two sailors.
"That villain might have been a man," said the Major.
"Yes," returned Glenarvan; "he is a strong, clear-headed fellow. Why was it that he must needs turn his powers to such evil account?"
"But Harry Grant?"
"I must fear he is irrevocably lost. Poor children! Who can tell them where their father is?"
"I can!" replied Paganel. "Yes; I can!" One could not help remarking that the geographer, so loquacious and impatient usually, had scarcely spoken during Ayrton's examination. He listened without opening his mouth. But this speech of his now was worth many others, and it made Glenarvan spring to his feet, crying out: "You, Paganel! you know where Captain Grant is?"
"Yes, as far as can be known."
"How do you know?"
"From that infernal document."
"Ah!" said the Major, in a tone of the most profound incredulity.
"Hear me first, and shrug your shoulders afterward," said Paganel. "I did not speak sooner, because you would not have believed me. Besides, it was useless; and I only speak to-day because Ayrton's opinion just supports my own."

V. IV Verne
"Then it is New Zealand?" asked Glenarvan.
"Listen and judge," replied Paganel. "It is not without reason, or, rather, I had a reason for making the blunder
which has saved our lives. When I was in the very act of writing the letter to Glenarvan's dictation, the word ZEALAND was swimming in my brain. This is why. You remember we were in the wagon. McNabbs had just apprised Lady Helena about the convicts; he had given her the number of the _Australian and New Zealand Gazette_, which contained the account of the catastrophe at Camden Bridge. Now, just as I was writing, the newspaper was lying on the ground, folded in such a manner that only two syllables of the title were visible; these two syllables were ALAND. What a sudden light flashed on my mind. ALAND was one of the words in the English document, one that hitherto we had translated _a terre_, and which must have been the termination of the proper noun, ZEALAND."

"Indeed!" said Glenarvan.

"Yes," continued Paganel, with profound conviction; "this meaning had escaped me, and do you know why? Because my wits were exercised naturally on the French document, as it was most complete, and in that this important word was wanting."

"Oh, oh!" said the Major; "your imagination goes too far, Paganel; and you forget your former deductions."

"Go on, Major; I am ready to answer you."

"Well, then, what do you make of your word AUSTRAL?"

"What it was at first. It merely means southern countries."

"Well, and this syllable, INDI, which was first the root of the INDIANS, and second the root of the word _indigenes?""

"And CONTIN?" cried McNabbs. "Does that still mean CONTINENT?"

"No; since New Zealand is only an island."

"What then?" asked Glenarvan.

"My dear lord," replied Paganel, "I am going to translate the document according to my third interpretation, and you shall judge. I only make two observations beforehand. First, forget as much as possible preceding interpretations, and divest your mind of all preconceived notions. Second, certain parts may appear to you strained, and it is possible that I translate them badly; but they are of no importance; among others, the word AGONIE, which chokes me; but I cannot find any other explanation. Besides, my interpretation was founded on the French document; and don't forget it was written by an Englishman, who could not be familiar with the idioms of the French language. Now then, having said this much, I will begin."

And slowly articulating each syllable, he repeated the following sentences:

"LE 27th JUIN, 1862, _le trois-mats Britannia_, de _Glasgow, a submergé apres une longue AGONIE dans les mers AUSTRALES sur les cotes de la Nouvelle ZELANDE--in English _Zealand. Deux matelots et le _Capitaine Grant_ ont pu y ABORDER. La CONTINUEllement en PRoie a une CRUELle INDIgence, ils ont _jete ce document_ par--_de longitude ET 37 degrees 11' de LATItude. _Venex a leur_ secours, ou ils sont PERDUS!" (On the 27th of June, 1865, the three-mast vessel BRITANNIA, of Glasgow, has foundered after a long AGOnie in the Southern Seas, on the coast of New Zealand. Two sailors and Captain Grant have succeeded in landing. Continually a prey to cruel indigence, they have thrown this document into the sea in-- longitude and 37 degrees 11' latitude. Come to their help, or they are lost.)

Paganel stopped. His interpretation was admissible. But precisely because it appeared as likely as the preceding, it might be as false. Glenarvan and the Major did not then try and discuss it. However, since no traces of the BRITANNIA had yet been met with, either on the Patagonian or Australian coasts, at the points where these countries are crossed by the 37th parallel, the chances were in favor of New Zealand.

"Now, Paganel," said Glenarvan, "will you tell me why you have kept this interpretation secret for nearly two months?"

"Because I did not wish to buoy you up again with vain hopes. Besides, we were going to Auckland, to the very spot indicated by the latitude of the document."

"But since then, when we were dragged out of the route, why did you not speak?"

"Because, however just the interpretation, it could do nothing for the deliverance of the captain."

"Why not, Paganel?"

"Because, admitting that the captain was wrecked on the New Zealand coast, now that two years have passed and he has not reappeared, he must have perished by shipwreck or by the New Zealanders."

"Then you are of the opinion," said Glenarvan, "that--"

"That vestiges of the wreck might be found; but that the survivors of the BRITANNIA have, beyond doubt, perished."

"Keep all this silent, friends," said Glenarvan, "and let me choose a fitting moment to communicate these sad tidings to Captain Grant's children."
CHAPTER XIX A CRY IN THE NIGHT

THE crew soon heard that no light had been thrown on the situation of Captain Grant by the revelations of Ayrton, and it caused profound disappointment among them, for they had counted on the quartermaster, and the quartermaster knew nothing which could put the DUNCAN on the right track.

The yacht therefore continued her course. They had yet to select the island for Ayrton's banishment.

Paganel and John Mangles consulted the charts on board, and exactly on the 37th parallel found a little isle marked by the name of Maria Theresa, a sunken rock in the middle of the Pacific Ocean, 3,500 miles from the American coast, and 1,500 miles from New Zealand. The nearest land on the north was the Archipelago of Pomotou, under the protectorate of France; on the south there was nothing but the eternal ice-belt of the Polar Sea. No ship would come to reconnoiter this solitary isle. No echoes from the world would ever reach it. The storm birds only would rest awhile on it during their long flight, and in many charts the rock was not even marked.

If ever complete isolation was to be found on earth, it was on this little out-of-the-way island. Ayrton was informed of its situation, and expressed his willingness to live there apart from his fellows. The head of the vessel was in consequence turned toward it immediately.

Two days later, at two o'clock, the man on watch signaled land on the horizon. This was Maria Theresa, a low, elongated island, scarcely raised above the waves, and looking like an enormous whale. It was still thirty miles distant from the yacht, whose stem was rapidly cutting her way over the water at the rate of sixteen knots an hour.

Gradually the form of the island grew more distinct on the horizon. The orb of day sinking in the west, threw up its peculiar outlines in sharp relief. A few peaks of no great elevation stood out here and there, tipped with sunlight.

At five o'clock John Mangles could discern a light smoke rising from it.

"Is it a volcano?" he asked of Paganel, who was gazing at this new land through his telescope.

"I don't know what to think," replied the geographer; "Maria Theresa is a spot little known; nevertheless, it would not be surprising if its origin were due to some submarine upheaval, and consequently it may be volcanic."

"But in that case," said Glenarvan, "is there not reason to fear that if an eruption produced it, an eruption may carry it away?"

"That is not possible," replied Paganel. "We know of its existence for several centuries, which is our security. When the Isle Julia emerged from the Mediterranean, it did not remain long above the waves, and disappeared a few months after its birth."

"Very good," said Glenarvan. "Do you think, John, we can get there to-night?"

"No, your honor, I must not risk the DUNCAN in the dark, for I am unacquainted with the coast. I will keep under steam, but go very slowly, and to-morrow, at daybreak, we can send off a boat."

At eight o'clock in the evening, Maria Theresa, though five miles to leeward, appeared only an elongated shadow, scarcely visible. The DUNCAN was always getting nearer.

At nine o'clock, a bright glare became visible, and flames shot up through the darkness. The light was steady and continued.

"That confirms the supposition of a volcano," said Paganel, observing it attentively.

"Yet," replied John Mangles, "at this distance we ought to hear the noise which always accompanies an eruption, and the east wind brings no sound whatever to our ear."

"That's true," said Paganel. "It is a volcano that blazes, but does not speak. The gleam seems intermittent too, sometimes, like that of a lighthouse."

"You are right," said John Mangles, "and yet we are not on a lighted coast."

"Ah!" he exclaimed, "another fire? On the shore this time! Look! It moves! It has changed its place!"

John was not mistaken. A fresh fire had appeared, which seemed to die out now and then, and suddenly flare up again.

"Is the island inhabited then?" said Glenarvan.

"By savages, evidently," replied Paganel.

"But in that case, we cannot leave the quartermaster there."

"No," replied the Major, "he would be too bad a gift even to bestow on savages."

"We must find some other uninhabited island," said Glenarvan, who could not help smiling at the delicacy of McNabbs. "I promised Ayrton his life, and I mean to keep my promise."

"At all events, don't let us trust them," added Paganel. "The New Zealanders have the barbarous custom of deceiving ships by moving lights, like the wreckers on the Cornish coast in former times. Now the natives of Maria Theresa may have heard of this proceeding."

"Keep her off a point," called out John to the man at the helm. "To-morrow at sunrise we shall know what we're about."

At eleven o'clock, the passengers and John Mangles retired to their cabins. In the forepart of the yacht the man
on watch was pacing the deck, while aft, there was no one but the man at the wheel.

At this moment Mary Grant and Robert came on the poop.

The two children of the captain, leaning over the rail, gazed sadly at the phosphorescent waves and the luminous wake of the DUNCAN. Mary was thinking of her brother's future, and Robert of his sister's. Their father was uppermost in the minds of both. Was this idolized parent still in existence? Must they give him up? But no, for what would life be without him? What would become of them without him? What would have become of them already, but for Lord Glenarvan and Lady Helena?

The young boy, old above his years through trouble, divined the thoughts that troubled his sister, and taking her hand in his own, said, "Mary, we must never despair. Remember the lessons our father gave us. Keep your courage up and no matter what befalls you, let us show this obstinate courage which can rise above everything. Up to this time, sister, you have been working for me, it is my turn now, and I will work for you."

"Dear Robert!" replied the young girl.

"I must tell you something," resumed Robert. "You mustn't be vexed, Mary!"

"Why should I be vexed, my child?"

"And you will let me do it?"

"What do you mean?" said Mary, getting uneasy.

"Sister, I am going to be a sailor!"

"You are going to leave me!" cried the young girl, pressing her brother's hand.

"Yes, sister; I want to be a sailor, like my father and Captain John. Mary, dear Mary, Captain John has not lost all hope, he says. You have confidence in his devotion to us, and so have I. He is going to make a grand sailor out of me some day, he has promised me he will; and then we are going to look for our father together. Tell me you are willing, sister mine. What our father would have done for us it is our duty, mine, at least, to do for him. My life has one purpose to which it should be entirely consecrated-- that is to search, and never cease searching for my father, who would never have given us up. Ah, Mary, how good our father was!"

"And so noble, so generous!" added Mary. "Do you know, Robert, he was already a glory to our country, and that he would have been numbered among our great men if fate had not arrested his course."

"Yes, I know it," said Robert.

Mary put her arm around the boy, and hugged him fondly as he felt her tears fall on his forehead.

"Mary, Mary!" he cried, "it doesn't matter what our friends say, I still hope, and will always hope. A man like my father doesn't die till he has finished his work."

Mary Grant could not reply. Sobs choked her voice. A thousand feelings struggled in her breast at the news that fresh attempts were about to be made to recover Harry Grant, and that the devotion of the captain was so unbounded.

"And does Mr. John still hope?" she asked.

"Yes," replied Robert. "He is a brother that will never forsake us, never! I will be a sailor, you'll say yes, won't you, sister? And let me join him in looking for my father. I am sure you are willing."

"Yes, I am willing," said Mary. "But the separation!" she murmured.

"You will not be alone, Mary, I know that. My friend John told me so. Lady Helena will not let you leave her. You are a woman; you can and should accept her kindness. To refuse would be ungrateful, but a man, my father has said a hundred times, must make his own way."

"But what will become of our own dear home in Dundee, so full of memories?"

"We will keep it, little sister! All that is settled, and settled so well, by our friend John, and also by Lord Glenarvan. He is to keep you at Malcolm Castle as if you were his daughter. My Lord told my friend John so, and he told me. You will be at home there, and have someone to speak to about our father, while you are waiting till John and I bring him back to you some day. Ah! what a grand day that will be!" exclaimed Robert, his face glowing with enthusiasm.

"My boy, my brother," replied Mary, "how happy my father would be if he could hear you. How much you are like him, dear Robert, like our dear, dear father. When you grow up you'll be just himself."

"I hope I may," said Robert, blushing with filial and sacred pride.

"But how shall we requite Lord and Lady Glenarvan?" said Mary Grant.

"Oh, that will not be difficult," replied Robert, with boyish confidence. "We will love and revere them, and we will tell them so; and we will give them plenty of kisses, and some day, when we can get the chance, we will die for them."

"We'll live for them, on the contrary," replied the young girl, covering her brother's forehead with kisses. "They will like that better, and so shall I."

The two children then relapsed into silence, gazing out into the dark night, and giving way to long reveries,
interrupted occasionally by a question or remark from one to the other. A long swell undulated the surface of the calm sea, and the screw turned up a luminous furrow in the darkness.

A strange and altogether supernatural incident now occurred. The brother and sister, by some of those magnetic communications which link souls mysteriously together, were the subjects at the same time and the same instant of the same hallucination.

Out of the midst of these waves, with their alternations of light and shadow, a deep plaintive voice sent up a cry, the tones of which thrilled through every fiber of their being.
"Come! come!" were the words which fell on their ears.
They both started up and leaned over the railing, and peered into the gloom with questioning eyes.
"Mary, you heard that? You heard that?" cried Robert.
But they saw nothing but the long shadow that stretched before them.
"Robert," said Mary, pale with emotion, "I thought--yes, I thought as you did, that--We must both be ill with fever, Robert."

A second time the cry reached them, and this time the illusion was so great, that they both exclaimed simultaneously, "My father! My father!"

It was too much for Mary. Overcome with emotion, she fell fainting into Robert's arms.
"Help!" shouted Robert. "My sister! my father! Help! Help!"
The man at the wheel darted forward to lift up the girl. The sailors on watch ran to assist, and John Mangles, Lady Helena, and Glenarvan were hastily roused from sleep.
"My sister is dying, and my father is there!" exclaimed Robert, pointing to the waves.
They were wholly at a loss to understand him.
"Yes!" he repeated, "my father is there! I heard my father's voice; Mary heard it too!"

Just at this moment, Mary Grant recovering consciousness, but wandering and excited, called out, "My father! my father is there!"

And the poor girl started up, and leaning over the side of the yacht, wanted to throw herself into the sea.
"My Lord--Lady Helena!" she exclaimed, clasping her hands, "I tell you my father is there! I can declare that I heard his voice come out of the waves like a wail, as if it were a last adieu."
The young girl went off again into convulsions and spasms, which became so violent that she had to be carried to her cabin, where Lady Helena lavished every care on her. Robert kept on repeating, "My father! my father is there! I am sure of it, my Lord!"

The spectators of this painful scene saw that the captain's children were laboring under an hallucination. But how were they to be undeceived?

Glenarvan made an attempt, however. He took Robert's hand, and said, "You say you heard your father's voice, my dear boy?"
"Yes, my Lord; there, in the middle of the waves. He cried out, 'Come! come!'"
"And did you recognize his voice?"
"Yes, I recognized it immediately. Yes, yes; I can swear to it! My sister heard it, and recognized it as well. How could we both be deceived? My Lord, do let us go to my father's help. A boat! a boat!"

Glenarvan saw it was impossible to undeceive the poor boy, but he tried once more by saying to the man at the wheel:
"Hawkins, you were at the wheel, were you not, when Miss Mary was so strangely attacked?"
"Yes, your Honor," replied Hawkins.
"And you heard nothing, and saw nothing?"
"Nothing."
"Now Robert, see?"
"If it had been Hawkins's father," returned the boy, with indomitable energy, "Hawkins would not say he had heard nothing. It was my father, my lord! my father."

Sobs choked his voice; he became pale and silent, and presently fell down insensible, like his sister.
Glenarvan had him carried to his bed, where he lay in a deep swoon.
"Poor orphans," said John Mangles. "It is a terrible trial they have to bear!"
"Yes," said Glenarvan; "excessive grief has produced the same hallucination in both of them, and at the same time."

"In both of them!" muttered Paganel; "that's strange, and pure science would say inadmissible."
He leaned over the side of the vessel, and listened attentively, making a sign to the rest to keep still.
But profound silence reigned around. Paganel shouted his loudest. No response came.
"It is strange," repeated the geographer, going back to his cabin. "Close sympathy in thought and grief does not
suffice to explain this phenomenon.

Next day, March 4, at 5 A.M., at dawn, the passengers, including Mary and Robert, who would not stay behind, were all assembled on the poop, each one eager to examine the land they had only caught a glimpse of the night before.

The yacht was coasting along the island at the distance of about a mile, and its smallest details could be seen by the eye.

Suddenly Robert gave a loud cry, and exclaimed he could see two men running about and gesticulating, and a third was waving a flag.

"The Union Jack," said John Mangles, who had caught up a spy-glass.

"True enough," said Paganel, turning sharply round toward Robert.

"My Lord," said Robert, trembling with emotion, "if you don't want me to swim to the shore, let a boat be lowered. Oh, my Lord, I implore you to let me be the first to land.

No one dared to speak. What! on this little isle, crossed by the 37th parallel, there were three men, shipwrecked Englishmen! Instantaneously everyone thought of the voice heard by Robert and Mary the preceding night. The children were right, perhaps, in the affirmation. The sound of a voice might have reached them, but this voice-- was it their father's? No, alas, most assuredly no. And as they thought of the dreadful disappointment that awaited them, they trembled lest this new trial should crush them completely. But who could stop them from going on shore? Lord Glenarvan had not the heart to do it.

"Lower a boat," he called out.

Another minute and the boat was ready. The two children of Captain Grant, Glenarvan, John Mangles, and Paganel, rushed into it, and six sailors, who rowed so vigorously that they were presently almost close to the shore.

At ten fathoms' distance a piercing cry broke from Mary's lips.

"My father!" she exclaimed.

A man was standing on the beach, between two others. His tall, powerful form, and his physiognomy, with its mingled expression of boldness and gentleness, bore a resemblance both to Mary and Robert. This was indeed the man the children had so often described. Their hearts had not deceived them. This was their father, Captain Grant!

The captain had heard Mary's cry, for he held out his arms, and fell flat on the sand, as if struck by a thunderbolt.

CHAPTER XX CAPTAIN GRANT'S STORY

JOY does not kill, for both father and children recovered before they had reached the yacht. The scene which followed, who can describe? Language fails. The whole crew wept aloud at the sight of these three clasped together in a close, silent embrace.

The moment Harry Grant came on deck, he knelt down reverently. The pious Scotchman's first act on touching the yacht, which to him was the soil of his native land, was to return thanks to the God of his deliverance. Then, turning to Lady Helena and Lord Glenarvan, and his companions, he thanked them in broken words, for his heart was too full to speak. During the short passage from the isle to the yacht, his children had given him a brief sketch of the DUNCAN'S history.

What an immense debt he owed to this noble lady and her friends! From Lord Glenarvan, down to the lowest sailor on board, how all had struggled and suffered for him! Harry Grant expressed his gratitude with such simplicity and nobleness, his manly face suffused with pure and sweet emotion, that the whole crew felt amply recompensed for the trials they had undergone. Even the impassable Major himself felt a tear steal down his cheek in spite of all his self-command; while the good, simple Paganel cried like a child who does not care who sees his tears.

Harry Grant could not take his eyes off his daughter. He thought her beautiful, charming; and he not only said so to himself, but repeated it aloud, and appealed to Lady Helena for confirmation of his opinion, as if to convince himself that he was not blinded by his paternal affection. His boy, too, came in for admiration. "How he has grown! he is a man!" was his delighted exclamation. And he covered the two children so dear to him with the kisses he had been heaping up for them during his two years of absence.

Robert then presented all his friends successively, and found means always to vary the formula of introduction, though he had to say the same thing about each. The fact was, each and all had been perfect in the children's eyes.

John Mangles blushed like a child when his turn came, and his voice trembled as he spoke to Mary's father.

Lady Helena gave Captain Grant a narrative of the voyage, and made him proud of his son and daughter. She told him of the young hero's exploits, and how the lad had already paid back part of the paternal debt to Lord Glenarvan. John Mangles sang Mary's praises in such terms, that Harry Grant, acting on a hint from Lady Helena, put his daughter's hand into that of the brave young captain, and turning to Lord and Lady Glenarvan, said: "My Lord, and you, Madam, also give your blessing to our children."

When everything had been said and re-said over and over again, Glenarvan informed Harry Grant about Ayrton. Grant confirmed the quartermaster's confession as far as his disembarkation on the coast of Australia was concerned.
"He is an intelligent, intrepid man," he added, "whose passions have led him astray. May reflection and repentance bring him to a better mind!"

But before Ayrton was transferred, Harry Grant wished to do the honors of his rock to his friends. He invited them to visit his wooden house, and dine with him in Robinson Crusoe fashion.

Glenarvan and his friends accepted the invitation most willingly. Robert and Mary were eagerly longing to see the solitary house where their father had so often wept at the thought of them. A boat was manned, and the Captain and his two children, Lord and Lady Glenarvan, the Major, John Mangles, and Paganel, landed on the shores of the island.

A few hours sufficed to explore the whole domain of Harry Grant. It was in fact the summit of a submarine mountain, a plateau composed of basaltic rocks and volcanic debris. During the geological epochs of the earth, this mountain had gradually emerged from the depths of the Pacific, through the action of the subterranean fires, but for ages back the volcano had been a peaceful mountain, and the filled-up crater, an island rising out of the liquid plain. Then soil formed. The vegetable kingdom took possession of this new land. Several whalers landed domestic animals there in passing; goats and pigs, which multiplied and ran wild, and the three kingdoms of nature were now displayed on this island, sunk in mid ocean.

When the survivors of the shipwrecked Britannia took refuge there, the hand of man began to organize the efforts of nature. In two years and a half, Harry Grant and his two sailors had metamorphosed the island. Several acres of well-cultivated land were stocked with vegetables of excellent quality.

The house was shaded by luxuriant gum-trees. The magnificent ocean stretched before the windows, sparkling in the sunlight. Harry Grant had the table placed beneath the grand trees, and all the guests seated themselves. A hind quarter of a goat, nardou bread, several bowls of milk, two or three roots of wild endive, and pure fresh water, composed the simple repast, worthy of the shepherds of Arcadia.

Paganel was enchanted. His old fancies about Robinson Crusoe revived in full force. "He is not at all to be pitied, that scoundrel, Ayrton!" he exclaimed, enthusiastically. "This little isle is just a paradise!"

"Yes," replied Harry Grant, "a paradise to these poor, shipwrecked fellows that Heaven had pity on, but I am sorry that Maria Theresa was not an extensive and fertile island, with a river instead of a stream, and a port instead of a tiny bay exposed to the open sea."

"And why, captain?" asked Glenarvan.

"Because I should have made it the foundation of the colony with which I mean to dower Scotland."

"Ah, Captain Grant, you have not given up the project, then, which made you so popular in our old country?"

"No, my Lord, and God has only saved me through your efforts that I might accomplish my task. My poor brothers in old Caledonia, all who are needy must have a refuge provided for them in another land against their misery, and my dear country must have a colony of her own, for herself alone, somewhere in these seas, where she may find that independence and comfort she so lacks in Europe."

"Ah, that is very true, Captain Grant," said Lady Helena. "This is a grand project of yours, and worthy of a noble heart. But this little isle--"

"No, madam, it is a rock only fit at most to support a few settlers; while what we need is a vast country, whose virgin soil abounds in untouched stores of wealth," replied the captain.

"Well, captain," exclaimed Glenarvan, "the future is ours, and this country we will seek for together."

And the two brave Scotchmen joined hands in a hearty grip and so sealed the compact.

A general wish was expressed to hear, while they were on the island, the account of the shipwreck of the Britannia, and of the two years spent by the survivors in this very place. Harry Grant was delighted to gratify their curiosity, and commenced his narration forthwith.

"My story," he said, "is that of all the Robinson Crusoes cast upon an island, with only God and themselves to rely on, and feeling it a duty to struggle for life with the elements."

"It was during the night of the 26th or 27th of June, 1862, that the Britannia, disabled by a six days' storm, struck against the rocks of Maria Theresa. The sea was mountains high, and lifeboats were useless. My unfortunate crew all perished, except Bob Learce and Joe Bell, who with myself managed to reach shore after twenty unsuccessful attempts.

"The land which received us was only an uninhabited island, two miles broad and five long, with about thirty trees in the interior, a few meadows, and a brook of fresh water, which fortunately never dried up. Alone with my sailors, in this corner of the globe, I did not despair. I put my trust in God, and accustomed myself to struggle resolutely for existence. Bob and Joe, my brave companions in misfortune, my friends, seconded me energetically.

"We began like the fictitious Robinson Crusoe of Defoe, our model, by collecting the planks of the ship, the tools, a little powder, and firearms, and a bag of precious seeds. The first few days were painful enough, but hunting and fishing soon afforded us a sure supply of food, for wild goats were in abundance in the interior of the island, and
marine animals abounded on the coast. By degrees we fell into regular ways and habits of life.

"I had saved my instruments from the wreck, and knew exactly the position of the island. I found we were out of the route of vessels, and could not be rescued unless by some providential chance. I accepted our trying lot composedly, always thinking, however, of my dear ones, remembering them every day in my prayers, though never hoping to see them again.

"However, we toiled on resolutely, and before long several acres of land were sown with the seed off the BRITANNIA; potatoes, endive, sorrel, and other vegetables besides, gave wholesome variety to our daily fare. We caught some young kids, which soon grew quite tame. We had milk and butter. The nardou, which grew abundantly in dried up creeks, supplied us with tolerably substantial bread, and we had no longer any fears for our material life.

"We had built a log hut with the DEBRIS of the BRITANNIA, and this was covered over with sail cloth, carefully tarred over, and beneath this secure shelter the rainy season passed comfortably. Many a plan was discussed here, and many a dream indulged in, the brightest of which is this day realized.

"I had at first the idea of trying to brave the perils of the ocean in a canoe made out of the spars of the ship, but 1,500 miles lay between us and the nearest coast, that is to say the islands of the Archipelago of Pomotou. No boat could have stood so long a voyage. I therefore relinquished my scheme, and looked for no deliverance except from a divine hand.

"Ah, my poor children! how often we have stood on the top of the rocks and watched the few vessels passing in the distance far out at sea. During the whole period of our exile only two or three vessels appeared on the horizon, and those only to disappear again immediately. Two years and a half were spent in this manner. We gave up hoping, but yet did not despair. At last, early yesterday morning, when I was standing on the highest peak of the island, I noticed a light smoke rising in the west. It increased, and soon a ship appeared in sight. It seemed to be coming toward us. But would it not rather steer clear of an island where there was no harbor.

"Ah, what a day of agony that was! My heart was almost bursting. My comrades kindled a fire on one of the peaks. Night came on, but no signal came from the yacht. Deliverance was there, however. Were we to see it vanish from our eyes?

"I hesitated no longer. The darkness was growing deeper. The ship might double the island during the night. I jumped into the sea, and attempted to make my way toward it. Hope trebled my strength, I cleft the waves with superhuman vigor, and had got so near the yacht that I was scarcely thirty fathoms off, when it tacked about.

"This provoked me to the despairing cry, which only my two children heard. It was no illusion.

"Then I came back to the shore, exhausted and overcome with emotion and fatigue. My two sailors received me half dead. It was a horrible night this last we spent on the island, and we believed ourselves abandoned forever, when day dawned, and there was the yacht sailing nearly alongside, under easy steam. Your boat was lowered--we were saved--and, oh, wonder of Divine goodness, my children, my beloved children, were there holding out their arms to me!"

Robert and Mary almost smothered their father with kisses and caresses as he ended his narrative.

It was now for the first time that the captain heard that he owed his deliverance to the somewhat hieroglyphical V. IV Verne document which he had placed in a bottle and confined to the mercy of the ocean.

But what were Jacques Paganel's thoughts during Captain Grant's recital? The worthy geographer was turning over in his brain for the thousandth time the words of the document. He pondered his three successive interpretations, all of which had proved false. How had this island, called Maria Theresa, been indicated in the papers originally?

At last Paganel could contain himself no longer, and seizing Harry Grant's hand, he exclaimed:

"Captain! will you tell me at last what really was in your indecipherable document?"

A general curiosity was excited by this question of the geographer, for the enigma which had been for nine months a mystery was about to be explained.

"Well, captain," repeated Paganel, "do you remember the precise words of the document?"

"Exactly," replied Harry Grant; "and not a day has passed without my recalling to memory words with which our last hopes were linked."

"And what are they, captain?" asked Glenarvan. "Speak, for our _amour propre_ is wounded to the quick!"

"I am ready to satisfy you," replied Harry Grant; "but, you know, to multiply the chances of safety, I had inclosed three documents in the bottle, in three different languages. Which is it you wish to hear?"

"They are not identical, then?" cried Paganel.

"Yes, they are, almost to a word."

"Well, then, let us have the French document," replied Glenarvan. "That is the one that is most respected by the waves, and the one on which our interpretations have been mostly founded."

"My Lord, I will give it you word for word," replied Harry Grant.
LE 27 JUIN, 1862, le trois-mats Britannia, de Glasgow, s'est perdu a quinze cents lieues de la Patagonie, dans l'hémisphère austral. Partes a terre, deux matelots et le Capitaine Grant ont atteint l'île Tabor._

"Oh!" exclaimed Paganel.

"LA," continued Harry Grant, "continuellement en proie a une cruelle indigence, ils ont jete ce document par 153 degrees de longitude et 37 degrees 11' de latitude. Venes a leur secours, ou ils sont perdus._

At the name of Tabor, Paganel had started up hastily, and now being unable to restrain himself longer, he called out:

"How can it be Isle Tabor? Why, this is Maria Theresa!"

"Undoubtedly, Monsieur Paganel," replied Harry Grant. "It is Maria Theresa on the English and German charts, but is named Tabor on the French ones!"

At this moment a vigorous thump on Paganel's shoulder almost bent him double. Truth obliges us to say it was the Major that dealt the blow, though strangely contrary to his usual strict politeness.

"Geographer!" said McNabbs, in a tone of the most supreme contempt.

But Paganel had not even felt the Major's hand. What was that compared to the geographical blow which had stunned him?

He had been gradually getting nearer the truth, however, as he learned from Captain Grant. He had almost entirely deciphered the indecipherable document. The names Patagonia, Australia, New Zealand, had appeared to him in turn with absolute certainty. CONTIN, at first CONTIENT, had gradually reached its true meaning, _continuelle. Indi_ had successively signified _indiens, indigenes_, and at last the right word was found--_INDIGENCE. But one mutilated word, ABOR, had baffled the geographer's sagacity. Paganel had persisted in making it the root of the verb ABORDER, and it turned out to be a proper name, the French name of the Isle Tabor, the isle which had been a refuge for the shipwrecked sailors of the BRITANNIA. It was difficult to avoid falling into the error, however, for on the English planispheres on the DUNCAN, the little isle was marked Maria Theresa.

"No matter?" cried Paganel, tearing his hair; "I ought not to have forgotten its double appellation. It is an unpardonable mistake, one unworthy of a secretary of the Geographical Society. I am disgraced!"

"Come, come, Monsieur Paganel," said Lady Helena; "moderate your grief."

"No, madam, no; I am a mere ass!"

"And not even a learned one!" added the Major, by way of consolation.

When the meal was over, Harry Grant put everything in order in his house. He took nothing away, wishing the guilty to inherit the riches of the innocent. Then they returned to the vessel, and, as Glenarvan had determined to start the same day, he gave immediate orders for the disembarkation of the quartermaster. Ayrton was brought up on the poop, and found himself face to face with Harry Grant.

"It is I, Ayrton!" said Grant.

"Yes, it is you, captain," replied Ayrton, without the least sign of surprise at Harry Grant's recovery. "Well, I am not sorry to see you again in good health."

"It seems, Ayrton, that I made a mistake in landing you on an inhabited coast."

"It seems so, captain."

"You are going to take my place on this uninhabited island. May Heaven give you repentance!"

"Amen," said Ayrton, calmly.

Glenarvan then addressed the quartermaster.

"It is still your wish, then, Ayrton, to be left behind?"

"Yes, my Lord!"

"And Isle Tabor meets your wishes?"

"Perfectly."

"Now then, listen to my last words, Ayrton. You will be cut off here from all the world, and no communication with your fellows is possible. Miracles are rare, and you will not be able to quit this isle. You will be alone, with no eye upon you but that of God, who reads the deepest secrets of the heart; but you will be neither lost nor forsaken, as Captain Grant was. Unworthy as you are of anyone's remembrance, you will not be dropped out of recollection. I know where you are, Ayrton; I know where to find you-- I shall never forget."

"God keep your Honor," was all Ayrton's reply.

These were the final words exchanged between Glenarvan and the quartermaster. The boat was ready and Ayrton got into it.

John Mangles had previously conveyed to the island several cases of preserved food, besides clothing, and tools and firearms, and a supply of powder and shot. The quartermaster could commence a new life of honest labor. Nothing was lacking, not even books; among others, the Bible, so dear to English hearts.

The parting hour had come. The crew and all the passengers were assembled on deck. More than one felt his
heart swell with emotion. Mary Grant and Lady Helena could not restrain their feelings.

"Must it be done?" said the young wife to her husband. "Must the poor man be left there?"

"He must, Helena," replied Lord Glenarvan. "It is in expiation of his crimes."

At that moment the boat, in charge of John Mangles, turned away. Ayrton, who remained standing, and still unmoved, took off his cap and bowed gravely.

Glenarvan uncovered, and all the crew followed his example, as if in presence of a man who was about to die, and the boat went off in profound silence.

On reaching land, Ayrton jumped on the sandy shore, and the boat returned to the yacht. It was then four o'clock in the afternoon, and from the poop the passengers could see the quartermaster gazing at the ship, standing with folded arms on a rock, motionless as a statue.

"Shall we set sail, my Lord?" asked John Mangles.

"Yes, John," replied Glenarvan, hastily, more moved than he cared to show.

"Go on!" shouted John to the engineer.

The steam hissed and puffed out, the screw began to stir the waves, and by eight o'clock the last peaks of Isle Tabor disappeared in the shadows of the night.

CHAPTER XXI PAGANEL'S LAST ENTANGLEMENT

ON the 19th of March, eleven days after leaving the island, the DUNCAN sighted the American coast, and next day dropped anchor in the bay of Talcahuano. They had come back again after a voyage of five months, during which, and keeping strictly along the 37th parallel, they had gone round the world. The passengers in this memorable expedition, unprecedented in the annals of the Travelers' Club, had visited Chili, the Pampas, the Argentine Republic, the Atlantic, the island of Tristan d'Acunha, the Indian Ocean, Amsterdam Island, Australia, New Zealand, Isle Tabor, and the Pacific. Their search had not been fruitless, for they were bringing back the survivors of the shipwrecked BRITANNIA.

Not one of the brave Scots who set out at the summons of their chief, but could answer to their names; all were returning to their old Scotia.

As soon as the DUNCAN had re-provisioned, she sailed along the coast of Patagonia, doubled Cape Horn, and made a swift run up the Atlantic Ocean. No voyage could be more devoid of incident. The yacht was simply carrying home a cargo of happiness. There was no secret now on board, not even John Mangles's attachment to Mary Grant.

Yes, there was one mystery still, which greatly excited McNabbs's curiosity. Why was it that Paganel remained always hermetically fastened up in his clothes, with a big comforter round his throat and up to his very ears? The Major was burning with desire to know the reason of this singular fashion. But in spite of interrogations, allusions, and suspicions on the part of McNabbs, Paganel would not unbutton.

Not even when the DUNCAN crossed the line, and the heat was so great that the seams of the deck were melting, "He is so DISTRAINT that he thinks he is at St. Petersburg," said the Major, when he saw the geographer wrapped in an immense great-coat, as if the mercury had been frozen in the thermometer.

At last on the 9th of May, fifty-three days from the time of leaving Talcahuano, John Mangles sighted the lights of Cape Clear. The yacht entered St. George's Channel, crossed the Irish Sea, and on the 10th of May reached the Firth of Clyde. At 11 o'clock she dropped anchor off Dunbarton, and at 2 P.M. the passengers arrived at Malcolm Castle amidst the enthusiastic cheering of the Highlanders.

As fate would have it then, Harry Grant and his two companions were saved. John Mangles wedded Mary Grant in the old cathedral of St. Mungo, and Mr. Paxton, the same clergyman who had prayed nine months before for the deliverance of the father, now blessed the marriage of his daughter and his deliverer. Robert was to become a sailor like Harry Grant and John Mangles, and take part with them in the captain's grand projects, under the auspices of Lord Glenarvan.

But fate also decreed that Paganel was not to die a bachelor? Probably so.

The fact was, the learned geographer after his heroic exploits, could not escape celebrity. His blunders made quite a FURORE among the fashionables of Scotland, and he was overwhelmed with courtesies.

It was then that an amiable lady, about thirty years of age, in fact, a cousin of McNabbs, a little eccentric herself, but good and still charming, fell in love with the geographer's oddities, and offered him her hand. Forty thousand pounds went with it, but that was not mentioned.

Paganel was far from being insensible to the sentiments of Miss Arabella, but yet he did not dare to speak. It was the Major who was the medium of communication between these two souls, evidently made for each other. He even told Paganel that his marriage was the last freak he would be able to allow himself. Paganel was in a great state of embarrassment, but strangely enough could not make up his mind to speak the fatal word.

"Does not Miss Arabella please you then?" asked McNabbs.
"Oh, Major, she is charming," exclaimed Paganel, "a thousand times too charming, and if I must tell you all, she
would please me better if she were less so. I wish she had a defect!"

"Be easy on that score," replied the Major, "she has, and more than one. The most perfect woman in the world
has always her quota. So, Paganel, it is settled then, I suppose?"

"I dare not."

"Come, now, my learned friend, what makes you hesitate?"

"I am unworthy of Miss Arabella," was the invariable reply of the geographer. And to this he would stick.

At last, one day being fairly driven in a corner by the intractable Major, he ended by confiding to him, under the
seal of secrecy, a certain peculiarity which would facilitate his apprehension should the police ever be on his track.

"Bah!" said the Major.

"It is really as I tell you," replied Paganel.

"What does it matter, my worthy friend?"

"Do you think so, Major?"

"On the contrary, it only makes you more uncommon. It adds to your personal merits. It is the very thing to
make you the nonpareil husband that Arabella dreams about."

And the Major with imperturbable gravity left Paganel in a state of the utmost disquietude.

A short conversation ensued between McNabbs and Miss Arabella. A fortnight afterwards, the marriage was
celebrated in grand style in the chapel of Malcolm Castle. Paganel looked magnificent, but closely buttoned up, and
Miss Arabella was arrayed in splendor.

And this secret of the geographer would have been forever buried in oblivion, if the Major had not mentioned it
to Glenarvan, and he could not hide it from Lady Helena, who gave a hint to Mrs. Mangles. To make a long story
short, it got in the end to M. Olbinett's ears, and soon became noised abroad.

Jacques Paganel, during his three days' captivity among the Maories, had been tattooed from the feet to the
shoulders, and he bore on his chest a heraldic kiwi with outspread wings, which was biting at his heart.

This was the only adventure of his grand voyage that Paganel could never get over, and he always bore a grudge
to New Zealand on account of it. It was for this reason too, that, notwithstanding solicitation and regrets, he never
would return to France. He dreaded lest he should expose the whole Geographical Society in his person to the jests
of caricaturists and low newspapers, by their secretary coming back tattooed.

The return of the captain to Scotland was a national event, and Harry Grant was soon the most popular man in
old Caledonia. His son Robert became a sailor like himself and Captain Mangles, and under the patronage of Lord
Glenarvan they resumed the project of founding a Scotch colony in the Southern Seas.

MICHAEL STROGOFF
OR, THE COURIER OF THE CZAR
by Jules Verne

BOOK I

CHAPTER I A FETE AT THE NEW PALACE
"SIRE, a fresh dispatch."

"Whence?"

"From Tomsk?"

"Is the wire cut beyond that city?"

"Yes, sire, since yesterday."

"Telegraph hourly to Tomsk, General, and keep me informed of all that occurs."

"Sire, it shall be done," answered General Kissoff.

These words were exchanged about two hours after midnight, at the moment when the fete given at the New
Palace was at the height of its splendor.

During the whole evening the bands of the Preobra-jensky and Paulowsky regiments had played without
cessation polkas, mazurkas, schottisches, and waltzes from among the choicest of their repertoires. Innumerable
couples of dancers whirled through the magnificent saloons of the palace, which stood at a few paces only from the
"old house of stones"—in former days the scene of so many terrible dramas, the echoes of whose walls were this
night awakened by the gay strains of the musicians.

The grand-chamberlain of the court, was, besides, well seconded in his arduous and delicate duties. The grand-
dukes and their aides-de-camp, the chamberlains-in-waiting and other officers of the palace, presided personally in
the arrangement of the dances. The grand duchesses, covered with diamonds, the ladies-in-waiting in their most
exquisite costumes, set the example to the wives of the military and civil dignitaries of the ancient "city of white
stone." When, therefore, the signal for the "polonaise" resounded through the saloons, and the guests of all ranks
took part in that measured promenade, which on occasions of this kind has all the importance of a national dance,
the mingled costumes, the sweeping robes adorned with lace, and uniforms covered with orders, presented a scene
dazzling splendor, lighted by hundreds of lusters multiplied tenfold by the numerous mirrors adorning the walls.

The grand saloon, the finest of all those contained in the New Palace, formed to this procession of exalted
personages and splendidly dressed women a frame worthy of the magnificence they displayed. The rich ceiling, with
its gilding already softened by the touch of time, appeared as if glittering with stars. The embroidered drapery of the
curtains and doors, falling in gorgeous folds, assumed rich and varied hues, broken by the shadows of the heavy
masses of damask.

Through the panes of the vast semicircular bay-windows the light, with which the saloons were filled, shone
forth with the brilliancy of a conflagration, vividly illuminating the gloom in which for some hours the palace had
been shrouded. The attention of those of the guests not taking part in the dancing was attracted by the contrast.
Resting in the recesses of the windows, they could discern, standing out dimly in the darkness, the vague outlines
of the countless towers, domes, and spires which adorn the ancient city. Below the sculptured balconies were visible
numerous sentries, pacing silently up and down, their rifles carried horizontally on the shoulder, and the spikes of
their helmets glittering like flames in the glare of light issuing from the palace. The steps also of the patrols could be
heard beating time on the stones beneath with even more regularity than the feet of the dancers on the floor of the
saloon. From time to time the watchword was repeated from post to post, and occasionally the notes of a trumpet,
ingling with the strains of the orchestra, penetrated into their midst. Still farther down, in front of the facade, dark
masses obscured the rays of light which proceeded from the windows of the New Palace. These were boats
descending the course of a river, whose waters, faintly illuminated by a few lamps, washed the lower portion of the
terraces.

The principal personage who has been mentioned, the giver of the fete, and to whom General Kissoff had been
speaking in that tone of respect with which sovereigns alone are usually addressed, wore the simple uniform of an
officer of chasseurs of the guard. This was not affectation on his part, but the custom of a man who cared little for
dress, his contrasting strongly with the gorgeous costumes amid which he moved, encircled by his escort of
Georgians, Cossacks, and Circassians—a brilliant band, splendidly clad in the glittering uniforms of the Caucasus.

This personage, of lofty stature, affable demeanor, and physiognomy calm, though bearing traces of anxiety,
moved from group to group, seldom speaking, and appearing to pay but little attention either to the merriment of the
younger guests or the graver remarks of the exalted dignitaries or members of the diplomatic corps who represented
at the Russian court the principal governments of Europe. Two or three of these astute politicians—physiognomists
by virtue of their profession—failed not to detect on the countenance of their host symptoms of disquietude, the
source of which eluded their penetration; but none ventured to interrogate him on the subject.

It was evidently the intention of the officer of chasseurs that his own anxieties should in no way cast a shade
over the festivities; and, as he was a personage whom almost the population of a world in itself was wont to obey,
the gayety of the ball was not for a moment checked.

Nevertheless, General Kissoff waited until the officer to whom he had just communicated the dispatch
forwarded from Tomsk should give him permission to withdraw; but the latter still remained silent. He had taken the
telegram, he had read it carefully, and his visage became even more clouded than before. Involuntarily he sought the
hilt of his sword, and then passed his hand for an instant before his eyes, as though, dazzled by the brilliancy of the
light, he wished to shade them, the better to see into the recesses of his own mind.

"We are, then," he continued, after having drawn General Kissoff aside towards a window, "since yesterday
without intelligence from the Grand Duke?"

"Without any, sire; and it is to be feared that in a short time dispatches will no longer cross the Siberian frontier."

"But have not the troops of the provinces of Amoor and Irkutsk, as those also of the Trans-Balkan territory,
received orders to march immediately upon Irkutsk?"

"The orders were transmitted by the last telegram we were able to send beyond Lake Baikal."

"And the governments of Yeniseisk, Omsk, Semipolatinsk, and Tobolsk—are we still in direct communication
with them as before the insurrection?"

"Yes, sire; our dispatches have reached them, and we are assured at the present moment that the Tartars have not
advanced beyond the Irdish and the Obi."

"And the traitor Ivan Ogareff, are there no tidings of him?"

"None," replied General Kissoff. "The head of the police cannot state whether or not he has crossed the frontier."
"Let a description of him be immediately dispatched to Nijni-Novgorod, Perm, Ekaterenburg, Kasirnov, Tioumen, Ishim, Omsk, Tomsk, and to all the telegraphic stations with which communication is yet open."

"Your majesty's orders shall be instantly carried out."

"You will observe the strictest silence as to this."

The General, having made a sign of respectful assent, bowing low, mingled with the crowd, and finally left the apartments without his departure being remarked.

The officer remained absorbed in thought for a few moments, when, recovering himself, he went among the various groups in the saloon, his countenance reassuming that calm aspect which had for an instant been disturbed.

Nevertheless, the important occurrence which had occasioned these rapidly exchanged words was not so unknown as the officer of the chasseurs of the guard and General Kissoff had possibly supposed. It was not spoken of officially, it is true, nor even officiously, since tongues were not free; but a few exalted personages had been informed, more or less exactly, of the events which had taken place beyond the frontier. At any rate, that which was only slightly known, that which was not matter of conversation even between members of the corps diplomatique, two guests, distinguished by no uniform, no decoration, at this reception in the New Palace, discussed in a low voice, and with apparently very correct information.

By what means, by the exercise of what acuteness had these two ordinary mortals ascertained that which so many persons of the highest rank and importance scarcely even suspected? It is impossible to say. Had they the gifts of foreknowledge and foresight? Did they possess a supplementary sense, which enabled them to see beyond that limited horizon which bounds all human gaze? Had they obtained a peculiar power of divining the most secret events? Was it owing to the habit, now become a second nature, of living on information, that their mental constitution had thus become really transformed? It was difficult to escape from this conclusion.

Of these two men, the one was English, the other French; both were tall and thin, but the latter was sallow as are the southern Provencals, while the former was ruddy like a Lancashire gentleman. The Anglo-Norman, formal, cold, grave, parsimonious of gestures and words, appeared only to speak or gesticulate under the influence of a spring operating at regular intervals. The Gaul, on the contrary, lively and petulant, expressed himself with lips, eyes, hands, all at once, having twenty different ways of explaining his thoughts, whereas his interlocutor seemed to have only one, immutably stereotyped on his brain.

The strong contrast they presented would at once have struck the most superficial observer; but a physiognomist, regarding them closely, would have defined their particular characteristics by saying, that if the Frenchman was "all eyes," the Englishman was "all ears."

In fact, the visual apparatus of the one had been singularly perfected by practice. The sensibility of its retina must have been as instantaneous as that of those conjurors who recognize a card merely by a rapid movement in cutting the pack or by the arrangement only of marks invisible to others. The Frenchman indeed possessed in the highest degree what may be called "the memory of the eye."

The Englishman, on the contrary, appeared especially organized to listen and to hear. When his aural apparatus had been once struck by the sound of a voice he could not forget it, and after ten or even twenty years he would have recognized it among a thousand. His ears, to be sure, had not the power of moving as freely as those of animals who are provided with large auditory flaps; but, since scientific men know that human ears possess, in fact, a very limited power of movement, we should not be far wrong in affirming that those of the said Englishman became erect, and turned in all directions while endeavoring to gather in the sounds, in a manner apparent only to the naturalist. It must be observed that this perfection of sight and hearing was of wonderful assistance to these two men in their vocation, for the Englishman acted as correspondent of the Daily Telegraph, and the Frenchman, as correspondent of what newspaper, or of what newspapers, he did not say; and when asked, he replied in a jocular manner that he corresponded with "his cousin Madeleine." This Frenchman, however, neath his careless surface, was wonderfully shrewd and sagacious. Even while speaking at random, perhaps the better to hide his desire to learn, he never forgot himself. His loquacity even helped him to conceal his thoughts, and he was perhaps even more discreet than his confrere of the Daily Telegraph. Both were present at this fete given at the New Palace on the night of the 15th of July in their character of reporters.

It is needless to say that these two men were devoted to their mission in the world--that they delighted to throw themselves in the track of the most unexpected intelligence--that nothing terrified or discouraged them from succeeding--that they possessed the imperturbable sang froid and the genuine intrepidity of men of their calling. Enthusiastic jockeys in this steeplechase, this hunt after information, they leaped hedges, crossed rivers, sprang over fences, with the ardor of pure-blooded racers, who will run "a good first" or die!

Their journals did not restrict them with regard to money--the surest, the most rapid, the most perfect element of information known to this day. It must also be added, to their honor, that neither the one nor the other ever looked over or listened at the walls of private life, and that they only exercised their vocation when political or social
interests were at stake. In a word, they made what has been for some years called "the great political and military reports."

It will be seen, in following them, that they had generally an independent mode of viewing events, and, above all, their consequences, each having his own way of observing and appreciating.

The French correspondent was named Alcide Jolivet. Harry Blount was the name of the Englishman. They had just met for the first time at this fete in the New Palace, of which they had been ordered to give an account in their papers. The dissimilarity of their characters, added to a certain amount of jealousy, which generally exists between rivals in the same calling, might have rendered them but little sympathetic. However, they did not avoid each other, but endeavored rather to exchange with each other the chat of the day. They were sportsmen, after all, hunting on the same ground. That which one missed might be advantageously secured by the other, and it was to their interest to meet and converse.

This evening they were both on the look out; they felt, in fact, that there was something in the air.

"Even should it be only a wildgoose chase," said Alcide Jolivet to himself, "it may be worth powder and shot."

The two correspondents therefore began by cautiously sounding each other.

"Really, my dear sir, this little fete is charming!" said Alcide Jolivet pleasantly, thinking himself obliged to begin the conversation with this eminently French phrase.

"I have telegraphed already, 'splendid!'" replied Harry Blount calmly, employing the word specially devoted to expressing admiration by all subjects of the United Kingdom.

"Nevertheless," added Alcide Jolivet, "I felt compelled to remark to my cousin--"

"Your cousin?" repeated Harry Blount in a tone of surprise, interrupting his brother of the pen.

"Yes," returned Alcide Jolivet, "my cousin Madeleine. It is with her that I correspond, and she likes to be quickly and well informed, does my cousin. I therefore remarked to her that, during this fete, a sort of cloud had appeared to overshadow the sovereign's brow."

"To me, it seemed radiant," replied Harry Blount, who perhaps, wished to conceal his real opinion on this topic.

"And, naturally, you made it 'radiant,' in the columns of the Daily Telegraph."

"Exactly."

"Do you remember, Mr. Blount, what occurred at Zakret in 1812?"

"I remember it as well as if I had been there, sir," replied the English correspondent.

"Then," continued Alcide Jolivet, "you know that, in the middle of a fete given in his honor, it was announced to the Emperor Alexander that Napoleon had just crossed the Niemen with the vanguard of the French army. Nevertheless the Emperor did not leave the fete, and notwithstanding the extreme gravity of intelligence which might cost him his empire, he did not allow himself to show more uneasiness."

"Than our host exhibited when General Kissoff informed him that the telegraphic wires had just been cut between the frontier and the government of Irkutsck."

"Ah! you are aware of that?"

"I am!"

"As regards myself, it would be difficult to avoid knowing it, since my last telegram reached Udinsk," observed Alcide Jolivet, with some satisfaction.

"And mine only as far as Krasnoiarsk," answered Harry Blount, in a no less satisfied tone.

"Then you know also that orders have been sent to the troops of Nikolaevsk?"

"I do, sir; and at the same time a telegram was sent to the Cossacks of the government of Tobolsk to concentrate their forces."

"Nothing can be more true, Mr. Blount; I was equally well acquainted with these measures, and you may be sure that my dear cousin shall know of them to-morrow."

"Exactly as the readers of the Daily Telegraph shall know it also, M. Jolivet."

"Well, when one sees all that is going on...."

"And when one hears all that is said...."

"An interesting campaign to follow, Mr. Blount."

"I shall follow it, M. Jolivet!"

"Then it is possible that we shall find ourselves on ground less safe, perhaps, than the floor of this ball-room."

"Less safe, certainly, but--"

"But much less slippery," added Alcide Jolivet, holding up his companion, just as the latter, drawing back, was about to lose his equilibrium.

Thereupon the two correspondents separated, pleased that the one had not stolen a march on the other.

At that moment the doors of the rooms adjoining the great reception saloon were thrown open, disclosing to view several immense tables beautifully laid out, and groaning under a profusion of valuable china and gold plate.
On the central table, reserved for the princes, princesses, and members of the corps diplomatique, glittered an epergne of inestimable price, brought from London, and around this chef-d’œuvre of chased gold reflected under the light of the lusters a thousand pieces of most beautiful service from the manufactories of Sevres.

The guests of the New Palace immediately began to stream towards the supper-rooms.

At that moment. General Kissoff, who had just re-entered, quickly approached the officer of chasseurs.

"Well?" asked the latter abruptly, as he had done the former time.

"Telegram pass Tomsk no longer, sire."

"A courier this moment!"

The officer left the hall and entered a large ante-chamber adjoining. It was a cabinet with plain oak furniture, situated in an angle of the New Palace. Several pictures, amongst others some by Horace Vernet, hung on the wall.

The officer hastily opened a window, as if he felt the want of air, and stepped out on a balcony to breathe the pure atmosphere of a lovely July night. Beneath his eyes, bathed in moonlight, lay a fortified inclosure, from which rose two cathedrals, three palaces, and an arsenal. Around this inclosure could be seen three distinct towns: Kitai-Gorod, Beloi-Gorod, Zemlianai-Gorod--European, Tartar, and Chinese quarters of great extent, commanded by towers, belfries, minarets, and the cupolas of three hundred churches, with green domes, surmounted by the silver cross. A little winding river, here and there reflected the rays of the moon.

This river was the Moskowa; the town Moscow; the fortified inclosure the Kremlin; and the officer of chasseurs of the guard, who, with folded arms and thoughtful brow, was listening dreamily to the sounds floating from the New Palace over the old Muscovite city, was the Czar.

CHAPTER II RUSSIANS AND TARTARS

The Czar had not so suddenly left the ball-room of the New Palace, when the fete he was giving to the civil and military authorities and principal people of Moscow was at the height of its brilliancy, without ample cause; for he had just received information that serious events were taking place beyond the frontiers of the Ural. It had become evident that a formidable rebellion threatened to wrest the Siberian provinces from the Russian crown.

Asiatic Russia, or Siberia, covers a superficial area of 1,790,208 square miles, and contains nearly two millions of inhabitants. Extending from the Ural Mountains, which separate it from Russia in Europe, to the shores of the Pacific Ocean, it is bounded on the south by Turkestan and the Chinese Empire; on the north by the Arctic Ocean, from the Sea of Kara to Behring's Straits. It is divided into several governments or provinces, those of Tobolsk, Yeniseisk, Irkutsk, Omsk, and Yakutsk; contains two districts, Okhotsk and Kamtschatka; and possesses two countries, now under the Muscovite dominion--that of the Kirghiz and that of the Tshouktshes. This immense extent of steppes, which includes more than one hundred and ten degrees from west to east, is a land to which criminals and political offenders are banished.

Two governor-generals represent the supreme authority of the Czar over this vast country. The higher one resides at Irkutsk, the far capital of Eastern Siberia. The River Tchouna separates the two Siberias.

No rail yet furrows these wide plains, some of which are in reality extremely fertile. No iron ways lead from those precious mines which make the Siberian soil far richer below than above its surface. The traveler journeys in summer in a kibick or telga; in winter, in a sledge.

An electric telegraph, with a single wire more than eight thousand versts in length, alone affords communication between the western and eastern frontiers of Siberia. On issuing from the Ural, it passes through Ekaterenburg, Kasirnov, Tioumen, Ishim, Omsk, Kolyvan, Tomsk, Krasnoiarsk, Nijni-Udinsk, Irkutsk, Verkne-Nertschink, Strelink, Albazine, Blagowstenks, Radde, Orlomskaya, Alexandrowskoe, and Nikolaevsk; and six roubles and nineteen copecks are paid for every word sent from one end to the other. From Irkutsk there is a branch to Kiatka, on the Mongolian frontier; and from thence, for thirty copecks a word, the post conveys the dispatches to Pekin in a fortnight.

It was this wire, extending from Ekaterenburg to Nikolaevsk, which had been cut, first beyond Tomsk, and then between Tomsk and Kolyvan.

This was why the Czar, to the communication made to him for the second time by General Kissoff, had answered by the words, "A courier this moment!"

The Czar remained motionless at the window for a few moments, when the door was again opened. The chief of police appeared on the threshold.

"Enter, General," said the Czar briefly, "and tell me all you know of Ivan Ogareff."

"He is an extremely dangerous man, sire," replied the chief of police.

"He ranked as colonel, did he not?"

"Yes, sire."
"Was he an intelligent officer?"

"Very intelligent, but a man whose spirit it was impossible to subdue; and possessing an ambition which stopped at nothing, he became involved in secret intrigues, and was degraded from his rank by his Highness the Grand Duke, and exiled to Siberia."

"How long ago was that?"

"Two years since. Pardoned after six months of exile by your majesty's favor, he returned to Russia."

"And since that time, has he not revisited Siberia?"

"Yes, sire; but he voluntarily returned there," replied the chief of police, adding, and slightly lowering his voice, "there was a time, sire, when NONE returned from Siberia."

"Well, whilst I live, Siberia is and shall be a country whence men CAN return."

The Czar had the right to utter these words with some pride, for often, by his clemency, he had shown that Russian justice knew how to pardon.

The head of the police did not reply to this observation, but it was evident that he did not approve of such half-measures. According to his idea, a man who had once passed the Ural Mountains in charge of policemen, ought never again to cross them. Now, it was not thus under the new reign, and the chief of police sincerely deplored it. What! no banishment for life for other crimes than those against social order! What! political exiles returning from Tobolsk, from Yakutsk, from Irkutsk! In truth, the chief of police, accustomed to the despotic sentences of the ukase which formerly never pardoned, could not understand this mode of governing. But he was silent, waiting until the Czar should interrogate him further. The questions were not long in coming.

"Did not Ivan Ogareff," asked the Czar, "return to Russia a second time, after that journey through the Siberian provinces, the object of which remains unknown?"

"He did."

"And have the police lost trace of him since?"

"No, sire; for an offender only becomes really dangerous from the day he has received his pardon."

The Czar frowned. Perhaps the chief of police feared that he had gone rather too far, though the stubbornness of his ideas was at least equal to the boundless devotion he felt for his master. But the Czar, disdaining to reply to these indirect reproaches cast on his policy, continued his questions. "Where was Ogareff last heard of?"

"In the province of Perm."

"In what town?"

"At Perm itself."

"What was he doing?"

"He appeared unoccupied, and there was nothing suspicious in his conduct."

"Then he was not under the surveillance of the secret police?"

"No, sire."

"When did he leave Perm?"

"About the month of March?"

"To go...?"

"Where, is unknown."

"And it is not known what has become of him?"

"No, sire; it is not known."

"Well, then, I myself know," answered the Czar. "I have received anonymous communications which did not pass through the police department; and, in the face of events now taking place beyond the frontier, I have every reason to believe that they are correct."

"Do you mean, sire," cried the chief of police, "that Ivan Ogareff has a hand in this Tartar rebellion?"

"Indeed I do; and I will now tell you something which you are ignorant of. After leaving Perm, Ivan Ogareff crossed the Ural mountains, entered Siberia, and penetrated the Kirghiz steppes, and there endeavored, not without success, to foment rebellion amongst their nomadic population. He then went so far south as free Turkestan; there, in the provinces of Bokhara, Khokhand, and Koondooz, he found chiefs willing to pour their Tartar hordes into Siberia, and excite a general rising in Asiatic Russia. The storm has been silently gathering, but it has at last burst like a thunderclap, and now all means of communication between Eastern and Western Siberia have been stopped. Moreover, Ivan Ogareff, thirsting for vengeance, aims at the life of my brother!"

The Czar had become excited whilst speaking, and now paced up and down with hurried steps. The chief of police said nothing, but he thought to himself that, during the time when the emperors of Russia never pardoned an exile, schemes such as those of Ivan Ogareff could never have been realized. Approaching the Czar, who had thrown himself into an armchair, he asked, "Your majesty has of course given orders so that this rebellion may be suppressed as soon as possible?"
"Yes," answered the Czar. "The last telegram which reached Nijni-Udinsk would set in motion the troops in the governments of Yenisei, Irkutsk, Yakutsk, as well as those in the provinces of the Amoor and Lake Baikal. At the same time, the regiments from Perm and Nijni-Novgorod, and the Cossacks from the frontier, are advancing by forced marches towards the Ural Mountains; but some weeks must pass before they can attack the Tartars."

"And your majesty's brother, his Highness the Grand Duke, is now isolated in the government of Irkutsk, and is no longer in direct communication with Moscow?"

"That is so."

"But by the last dispatches, he must know what measures have been taken by your majesty, and what help he may expect from the governments nearest Irkutsk?"

"He knows that," answered the Czar; "but what he does not know is, that Ivan Ogareff, as well as being a rebel, is also playing the part of a traitor, and that in him he has a personal and bitter enemy. It is to the Grand Duke that Ogareff owes his first disgrace; and what is more serious is, that this man is not known to him. Ogareff's plan, therefore, is to go to Irkutsk, and, under an assumed name, offer his services to the Grand Duke. Then, after gaining his confidence, when the Tartars have invested Irkutsk, he will betray the town, and with it my brother, whose life he seeks. This is what I have learned from my secret intelligence; this is what the Grand Duke does not know; and this is what he must know!"

"Well, sire, an intelligent, courageous courier..."

"I momentarily expect one."

"And it is to be hoped he will be expeditious," added the chief of police; "for, allow me to add, sire, that Siberia is a favorable land for rebellions."

"Do you mean to say, General, that the exiles would make common cause with the rebels?" exclaimed the Czar.

"Excuse me, your majesty," stammered the chief of police, for that was really the idea suggested to him by his uneasy and suspicious mind.

"I believe in their patriotism," returned the Czar.

"There are other offenders besides political exiles in Siberia," said the chief of police.

"The criminals? Oh, General, I give those up to you! They are the vilest, I grant, of the human race. They belong to no country. But the insurrection, or rather, the rebellion, is not to oppose the emperor; it is raised against Russia, against the country which the exiles have not lost all hope of again seeing—and which they will see again. No, a Russian would never unite with a Tartar, to weaken, were it only for an hour, the Muscovite power!"

The Czar was right in trusting to the patriotism of those whom his policy kept, for a time, at a distance. Clemency, which was the foundation of his justice, when he could himself direct its effects, the modifications he had adopted with regard to applications for the formerly terrible ukases, warranted the belief that he was not mistaken. But even without this powerful element of success in regard to the Tartar rebellion, circumstances were not the less very serious; for it was to be feared that a large part of the Kirghiz population would join the rebels.

The Kirghiz are divided into three hordes, the greater, the lesser, and the middle, and number nearly four hundred thousand "tents," or two million souls. Of the different tribes some are independent and others recognize either the sovereignty of Russia or that of the Khans of Khiva, Khokhand, and Bokhara, the most formidable chiefs of Turkestan. The middle horde, the richest, is also the largest, and its encampments occupy all the space between the rivers Sara Sou, Irtish, and the Upper Ishim, Lake Saisang and Lake Aksakal. The greater horde, occupying the countries situated to the east of the middle one, extends as far as the governments of Omsk and Tobolsk. Therefore, if the Kirghiz population should rise, it would be the rebellion of Asiatic Russia, and the first thing would be the separation of Siberia, to the east of the Yenisei.

It is true that these Kirghiz, mere novices in the art of war, are rather nocturnal thieves and plunderers of caravans than regular soldiers. As M. Levchine says, "a firm front or a square of good infantry could repel ten times the number of Kirghiz; and a single cannon might destroy a frightful number."

That may be; but to do this it is necessary for the square of good infantry to reach the rebellious country, and the cannon to leave the arsenals of the Russian provinces, perhaps two or three thousand versts distant. Now, except by the direct route from Ekaterenburg to Irkutsk, the often marshy steppes are not easily practicable, and some weeks must certainly pass before the Russian troops could reach the Tartar hordes.

Omsk is the center of that military organization of Western Siberia which is intended to overawe the Kirghiz population. Here are the bounds, more than once infringed by the half-subdued nomads, and there was every reason to believe that Omsk was already in danger. The line of military stations, that is to say, those Cossack posts which are ranged in echelon from Omsk to Semipolatinsk, must have been broken in several places. Now, it was to be feared that the "Grand Sultans," who govern the Kirghiz districts would either voluntarily accept, or involuntarily submit to, the dominion of Tartars, Mussulmen like themselves, and that to the hate caused by slavery was not united the hate due to the antagonism of the Greek and Mussulman religions. For some time, indeed, the Tartars of
Turkestan had endeavored, both by force and persuasion, to subdue the Kirghiz hordes.

A few words only with respect to these Tartars. The Tartars belong more especially to two distinct races, the Caucasian and the Mongolian. The Caucasian race, which, as Abel de Remusat says, "is regarded in Europe as the type of beauty in our species, because all the nations in this part of the world have sprung from it," includes also the Turks and the Persians. The purely Mongolian race comprises the Mongols, Manchoux, and Thibetans.

The Tartars who now threatened the Russian Empire, belonged to the Caucasian race, and occupied Turkestan. This immense country is divided into different states, governed by Khans, and hence termed Khanats. The principal khanats are those of Bokhara, Khokhand, Koondooz, etc. At this period, the most important and the most formidable khanat was that of Bokhara. Russia had already been several times at war with its chiefs, who, for their own interests, had supported the independence of the Kirghiz against the Muscovite dominion. The present chief, Feofar-Khan, followed in the steps of his predecessors.

The khanat of Bokhara has a population of two million five hundred thousand inhabitants, an army of sixty thousand men, trebled in time of war, and thirty thousand horsemen. It is a rich country, with varied animal, vegetable, and mineral products, and has been increased by the accession of the territories of Balkh, Aukoi, and Meimanah. It possesses nineteen large towns. Bokhara, surrounded by a wall measuring more than eight English miles, and flanked with towers, a glorious city, made illustrious by Avicenna and other learned men of the tenth century, is regarded as the center of Mussulman science, and ranks among the most celebrated cities of Central Asia. Samarcan, which contains the tomb of Tamerlane and the famous palace where the blue stone is kept on which each new khan must seat himself on his accession, is defended by a very strong citadel. Karschi, with its triple cordon, situated in an oasis, surrounded by a marsh peopled with tortoises and lizards, is almost impregnable. Ischardjoui is defended by a population of twenty thousand souls. Protected by its mountains, and isolated by its steppes, the khanat of Bokhara is a most formidable state; and Russia would need a large force to subdue it.

The fierce and ambitious Feofar now governed this corner of Tartary. Relying on the other khans--principally those of Khokhand and Koondooz, cruel and rapacious warriors, all ready to join an enterprise so dear to Tartar instincts--aided by the chiefs who ruled all the hordes of Central Asia, he had placed himself at the head of the rebellion of which Ivan Ogareff was the instigator. This traitor, impelled by insane ambition as much as by hate, had ordered the movement so as to attack Siberia. Mad indeed he was, if he hoped to rupture the Muscovite Empire. Acting under his suggestion, the Emir--which is the title taken by the khans of Bokhara--had poured his hordes over the Russian frontier. He invaded the government of Semipolatinsk, and the Cossacks, who were only in small force there, had been obliged to retire before him. He had advanced farther than Lake Balkhash, gaining over the Kirghiz population on his way. Pillaging, ravaging, enrolling those who submitted, taking prisoners those who resisted, he marched from one town to another, followed by those impedimenta of Oriental sovereignty which may be called his household, his wives and his slaves--all with the cool audacity of a modern Ghengis-Khan. It was impossible to ascertain where he now was; how far his soldiers had marched before the news of the rebellion reached Moscow; or to what part of Siberia the Russian troops had been forced to retire. All communication was interrupted. Had the wire between Kolyvan and Tomsk been cut by Tartar scouts, or had the Emir himself arrived at the Yeniseisk provinces? Was all the lower part of Western Siberia in a ferment? Had the rebellion already spread to the eastern regions? No one could say. The only agent which fears neither cold nor heat, which can neither be stopped by the rigors of winter nor the heat of summer, and which flies with the rapidity of lightning--the electric current--was prevented from traversing the steppes, and it was no longer possible to warn the Grand Duke, shut up in Irkutsk, of the danger threatening him from the treason of Ivan Ogareff.

A courier only could supply the place of the interrupted current. It would take this man some time to traverse the five thousand two versts between Moscow and Irkutsk. To pass the ranks of the rebels and invaders he must display almost superhuman courage and intelligence. But with a clear head and a firm heart much can be done.

"Shall I be able to find this head and heart?" thought the Czar.

CHAPTER III MICHAEL STROGOFF MEETS THE CZAR

THE door of the imperial cabinet was again opened and General Kissoff was announced.

"The courier?" inquired the Czar eagerly.

"He is here, sire," replied General Kissoff.

"Have you found a fitting man?"

"I will answer for him to your majesty."

"Has he been in the service of the Palace?"

"Yes, sire."

"You know him?"
"Personally, and at various times he has fulfilled difficult missions with success."

"Abroad?"

"In Siberia itself."

"Where does he come from?"

"From Omsk. He is a Siberian."

"Has he coolness, intelligence, courage?"

"Yes, sire; he has all the qualities necessary to succeed, even where others might possibly fail."

"What is his age?"

"Thirty."

"Is he strong and vigorous?"

"Sire, he can bear cold, hunger, thirst, fatigue, to the very last extremities."

"He must have a frame of iron."

"Sire, he has."

"And a heart?"

"A heart of gold."

"His name?"

"Michael Strogoff."

"Is he ready to set out?"

"He awaits your majesty's orders in the guard-room."

"Let him come in," said the Czar.

In a few moments Michael Strogoff, the courier, entered the imperial library. He was a tall, vigorous, broad-shouldered, deep-chested man. His powerful head possessed the fine features of the Caucasian race. His well-knit frame seemed built for the performance of feats of strength. It would have been a difficult task to move such a man against his will, for when his feet were once planted on the ground, it was as if they had taken root. As he doffed his Muscovite cap, locks of thick curly hair fell over his broad, massive forehead. When his ordinarily pale face became at all flushed, it arose solely from a more rapid action of the heart. His eyes, of a deep blue, looked with clear, frank, firm gaze. The slightly-contracted eyebrows indicated lofty heroism—"the hero's cool courage," according to the definition of the physiologist. He possessed a fine nose, with large nostrils; and a well-shaped mouth, with the slightly-projecting lips which denote a generous and noble heart.

Michael Strogoff had the temperament of the man of action, who does not bite his nails or scratch his head in doubt and indecision. Sparing of gestures as of words, he always stood motionless like a soldier before his superior; but when he moved, his step showed a firmness, a freedom of movement, which proved the confidence and vivacity of his mind.

Michael Strogoff wore a handsome military uniform something resembling that of a light-cavalry officer in the field—boots, spurs, half tightly-fitting trousers, brown pelisse, trimmed with fur and ornamented with yellow braid. On his breast glittered a cross and several medals.

Michael Strogoff belonged to the special corps of the Czar's couriers, ranking as an officer among those picked men. His most discernible characteristic—particularly in his walk, his face, in the whole man, and which the Czar perceived at a glance—was, that he was "a fulfiller of orders." He therefore possessed one of the most serviceable qualities in Russia—one which, as the celebrated novelist Tourgueneff says, "will lead to the highest positions in the Muscovite empire."

In short, if anyone could accomplish this journey from Moscow to Irkutsk, across a rebellious country, surmount obstacles, and brave perils of all sorts, Michael Strogoff was the man.

A circumstance especially favorable to the success of his plan was, that he was thoroughly acquainted with the country which he was about to traverse, and understood its different dialects—not only from having traveled there before, but because he was of Siberian origin.

His father—old Peter Strogoff, dead ten years since—inhabited the town of Omsk, situated in the government of the same name; and his mother, Marfa Strogoff, lived there still. There, amid the wild steppes of the provinces of Omsk and Tobolsk, had the famous huntsman brought up his son Michael to endure hardship. Peter Strogoff was a huntsman by profession. Summer and winter—in the burning heat, as well as when the cold was sometimes fifty degrees below zero—he scoured the frozen plains, the thickets of birch and larch, the pine forests; setting traps; watching for small game with his gun, and for large game with the spear or knife. The large game was nothing less than the Siberian bear, a formidable and ferocious animal, in size equaling its fellow of the frozen seas. Peter Strogoff had killed more than thirty-nine bears—that is to say, the fortieth had fallen under his blows; and, according to Russian legends, most huntsmen who have been lucky enough up to the thirty-ninth bear, have succumbed to the fortieth.
Peter Strogoff had, however, passed the fatal number without even a scratch. From that time, his son Michael, aged eleven years, never failed to accompany him to the hunt, carrying the ragatina or spear to aid his father, who was armed only with the knife. When he was fourteen, Michael Strogoff had killed his first bear, quite alone—that was nothing; but after stripping it he dragged the gigantic animal's skin to his father's house, many versts distant, exhibiting remarkable strength in a boy so young.

This style of life was of great benefit to him, and when he arrived at manhood he could bear any amount of cold, heat, hunger, thirst, or fatigue. Like the Yakout of the northern countries, he was made of iron. He could go four- and-twenty hours without eating, ten nights without sleeping, and could make himself a shelter in the open steppe where others would have been frozen to death. Gifted with marvelous acuteness, guided by the instinct of the Delaware of North America, over the white plain, when every object is hidden in mist, or even in higher latitudes, where the polar night is prolonged for many days, he could find his way when others would have had no idea whither to turn. All his father's secrets were known to him. He had learnt to read almost imperceptible signs—the forms of icicles, the appearance of the small branches of trees, mists rising far away in the horizon, vague sounds in the air, distant reports, the flight of birds through the foggy atmosphere, a thousand circumstances which are so many words to those who can decipher them. Moreover, tempered by snow like a Damascus blade in the waters of Syria, he had a frame of iron, as General Kissoff had said, and, what was no less true, a heart of gold.

The only sentiment of love felt by Michael Strogoff was that which he entertained for his mother, the aged Marfa, who could never be induced to leave the house of the Strogoffs, at Omsk, on the banks of the Irtish, where the old huntsman and she had lived so long together. When her son left her, he went away with a full heart, but promising to come and see her whenever he could possibly do so; and this promise he had always religiously kept.

When Michael was twenty, it was decided that he should enter the personal service of the Emperor of Russia, in the corps of the couriers of the Czar. The hardy, intelligent, zealous, well-conducted young Siberian first distinguished himself especially, in a journey to the Caucasus, through the midst of a difficult country, ravaged by some restless successors of Schamyl; then later, in an important mission to Petropolowski, in Kamtschatka, the extreme limit of Asiatic Russia. During these long journeys he displayed such marvelous coolness, prudence, and courage, as to gain him the approbation and protection of his chiefs, who rapidly advanced him in his profession.

The furloughs which were his due after these distant missions, he never failed to devote to his old mother. Having been much employed in the south of the empire, he had not seen old Marfa for three years—three ages!—the first time in his life he had been so long absent from her. Now, however, in a few days he would obtain his furlough, and he had accordingly already made preparations for departure for Omsk, when the events which have been related occurred. Michael Strogoff was therefore introduced into the Czar's presence in complete ignorance of what the emperor expected from him.

The Czar fixed a penetrating look upon him without uttering a word, whilst Michael stood perfectly motionless.

The Czar, apparently satisfied with his scrutiny, motioned to the chief of police to seat himself, and dictated in a low voice a letter of not more than a few lines.

The letter penned, the Czar re-read it attentively, then signed it, preceding his name with the words "Byt po semou," which, signifying "So be it," constitutes the decisive formula of the Russian emperors.

The letter was then placed in an envelope, which was sealed with the imperial arms.

The Czar, rising, told Michael Strogoff to draw near.

Michael advanced a few steps, and then stood motionless, ready to answer.

The Czar again looked him full in the face and their eyes met. Then in an abrupt tone, "Thy name?" he asked.

"Michael Strogoff, sire."

"Thy rank?"

"Captain in the corps of couriers of the Czar."

"Thou dost know Siberia?"

"I am a Siberian."

"A native of?"

"Omsk, sire."

"Hast thou relations there?"

"Yes sire."

"What relations?"

"My old mother."

The Czar suspended his questions for a moment. Then, pointing to the letter which he held in his hand, "Here is a letter which I charge thee, Michael Strogoff, to deliver into the hands of the Grand Duke, and to no other but him."

"I will deliver it, sire."

"The Grand Duke is at Irkutsk."
"I will go to Irkutsk."
"Thou wilt have to traverse a rebellious country, invaded by Tartars, whose interest it will be to intercept this letter."
"I will traverse it."
"Above all, beware of the traitor, Ivan Ogareff, who will perhaps meet thee on the way."
"I will beware of him."
"Wilt thou pass through Omsk?"
"Sire, that is my route."
"If thou dost see thy mother, there will be the risk of being recognized. Thou must not see her!"
Michael Strogoff hesitated a moment.
"I will not see her," said he.
"Swear to me that nothing will make thee acknowledge who thou art, nor whither thou art going."
"I swear it."
"Michael Strogoff," continued the Czar, giving the letter to the young courier, "take this letter; on it depends the safety of all Siberia, and perhaps the life of my brother the Grand Duke."
"This letter shall be delivered to his Highness the Grand Duke."
"Then thou wilt pass whatever happens?"
"I shall pass, or they shall kill me."
"I want thee to live."
"I shall live, and I shall pass," answered Michael Strogoff.
The Czar appeared satisfied with Strogoff's calm and simple answer.
"Go then, Michael Strogoff," said he, "go for God, for Russia, for my brother, and for myself!"
The courier, having saluted his sovereign, immediately left the imperial cabinet, and, in a few minutes, the New Palace.
"You made a good choice there, General," said the Czar.
"I think so, sire," replied General Kissoff; "and your majesty may be sure that Michael Strogoff will do all that a man can do."
"He is indeed a man," said the Czar.

CHAPTER IV FROM MOSCOW TO NIJNI-NOVGOROD

The distance between Moscow and Irkutsk, about to be traversed by Michael Strogoff, was three thousand four hundred miles. Before the telegraph wire extended from the Ural Mountains to the eastern frontier of Siberia, the dispatch service was performed by couriers, those who traveled the most rapidly taking eighteen days to get from Moscow to Irkutsk. But this was the exception, and the journey through Asiatic Russia usually occupied from four to five weeks, even though every available means of transport was placed at the disposal of the Czar's messengers.

Michael Strogoff was a man who feared neither frost nor snow. He would have preferred traveling during the severe winter season, in order that he might perform the whole distance by sleighs. At that period of the year the difficulties which all other means of locomotion present are greatly diminished, the wide steppes being leveled by snow, while there are no rivers to cross, but simply sheets of glass, over which the sleigh glides rapidly and easily.

Perhaps certain natural phenomena are most to be feared at that time, such as long-continuing and dense fogs, excessive cold, fearfully heavy snow-storms, which sometimes envelop whole caravans and cause their destruction. Hungry wolves also roam over the plain in thousands. But it would have been better for Michael Strogoff to face these risks; for during the winter the Tartar invaders would have been stationed in the towns, any movement of their troops would have been impracticable, and he could consequently have more easily performed his journey. But it was not in his power to choose either weather or time. Whatever the circumstances, he must accept them and set out.

Such were the difficulties which Michael Strogoff boldly confronted and prepared to encounter.

In the first place, he must not travel as a courier of the Czar usually would. No one must even suspect what he really was. Spies swarm in a rebellious country; let him be recognized, and his mission would be in danger. Also, while supplying him with a large sum of money, which was sufficient for his journey, and would facilitate it in some measure, General Kissoff had not given him any document notifying that he was on the Emperor's service, which is the Sesame par excellence. He contented himself with furnishing him with a "podorojna."

This podorojna was made out in the name of Nicholas Korpanoff, merchant, living at Irkutsk. It authorized Nicholas Korpanoff to be accompanied by one or more persons, and, moreover, it was, by special notification, made available in the event of the Muscovite government forbidding natives of any other countries to leave Russia.

The podorojna is simply a permission to take post-horses; but Michael Strogoff was not to use it unless he was
sure that by so doing he would not excite suspicion as to his mission, that is to say, whilst he was on European territory. The consequence was that in Siberia, whilst traversing the insurgent provinces, he would have no power over the relays, either in the choice of horses in preference to others, or in demanding conveyances for his personal use; neither was Michael Strogoff to forget that he was no longer a courier, but a plain merchant, Nicholas Korpanoff, traveling from Moscow to Irkutsk, and, as such exposed to all the impediments of an ordinary journey.

To pass unknown, more or less rapidly, but to pass somehow, such were the directions he had received.

Thirty years previously, the escort of a traveler of rank consisted of not less than two hundred mounted Cossacks, two hundred foot-soldiers, twenty-five Baskir horsemen, three hundred camels, four hundred horses, twenty-five wagons, two portable boats, and two pieces of cannon. All this was requisite for a journey in Siberia.

Michael Strogoff, however, had neither cannon, nor horsemen, nor foot-soldiers, nor beasts of burden. He would travel in a carriage or on horseback, when he could; on foot, when he could not.

There would be no difficulty in getting over the first thousand miles, the distance between Moscow and the Russian frontier. Railroads, post-carriages, steamboats, relays of horses, were at everyone's disposal, and consequently at the disposal of the courier of the Czar.

Accordingly, on the morning of the 16th of July, having doffed his uniform, with a knapsack on his back, dressed in the simple Russian costume--tightly-fitting tunic, the traditional belt of the Moujik, wide trousers, gartered at the knees, and high boots--Michael Strogoff arrived at the station in time for the first train. He carried no arms, openly at least, but under his belt was hidden a revolver and in his pocket, one of those large knives, resembling both a cutlass and a yataghan, with which a Siberian hunter can so neatly disembowel a bear, without injuring its precious fur.

A crowd of travelers had collected at the Moscow station. The stations on the Russian railroads are much used as places for meeting, not only by those who are about to proceed by the train, but by friends who come to see them off. The station resembles, from the variety of characters assembled, a small news exchange.

The train in which Michael took his place was to set him down at Nijni-Novgorod. There terminated at that time, the iron road which, uniting Moscow and St. Petersburg, has since been continued to the Russian frontier. It was a journey of under three hundred miles, and the train would accomplish it in ten hours. Once arrived at Nijni-Novgorod, Strogoff would either take the land route or the steamer on the Volga, so as to reach the Ural Mountains as soon as possible.

Michael Strogoff ensconced himself in his corner, like a worthy citizen whose affairs go well with him, and who endeavors to kill time by sleep. Nevertheless, as he was not alone in his compartment, he slept with one eye open, and listened with both his ears.

In fact, rumor of the rising of the Kirghiz hordes, and of the Tartar invasion had transpired in some degree. The occupants of the carriage, whom chance had made his traveling companions, discussed the subject, though with that caution which has become habitual among Russians, who know that spies are ever on the watch for any treasonable expressions which may be uttered.

These travelers, as well as the large number of persons in the train, were merchants on their way to the celebrated fair of Nijni-Novgorod;--a very mixed assembly, composed of Jews, Turks, Cossacks, Russians, Georgians, Kalmucks, and others, but nearly all speaking the national tongue.

They discussed the pros and cons of the serious events which were taking place beyond the Ural, and those merchants seemed to fear lest the government should be led to take certain restrictive measures, especially in the provinces bordering on the frontier--measures from which trade would certainly suffer. They apparently thought only of the struggle from the single point of view of their threatened interests. The presence of a private soldier, clad in his uniform--and the importance of a uniform in Russia is great--would have certainly been enough to restrain the merchants' tongues. But in the compartment occupied by Michael Strogoff, there was no one who seemed a military man, and the Czar's courier was not the person to betray himself. He listened, then.

"They say that caravan teas are up," remarked a Persian, known by his cap of Astrakhan fur, and his ample brown robe, worn threadbare by use.

"Oh, there's no fear of teas falling," answered an old Jew of sullen aspect. "Those in the market at Nijni-Novgorod will be easily cleared off by the West; but, unfortunately, it won't be the same with Bokhara carpets."

"What! are you expecting goods from Bokhara?" asked the Persian.

"No, but from Samarcand, and that is even more exposed. The idea of reckoning on the exports of a country in which the khans are in a state of revolt from Khiva to the Chinese frontier!"

"Well," replied the Persian, "if the carpets do not arrive, the drafts will not arrive either, I suppose."

"And the profits, Father Abraham!" exclaimed the little Jew, "do you reckon them as nothing?"

"You are right," said another; "goods from Central Asia run a great risk in the market, and it will be the same with the tallow and shawls from the East."
"Why, look out, little father," said a Russian traveler, in a bantering tone; "you'll grease your shawls terribly if you mix them up with your tallow."

"That amuses you," sharply answered the merchant, who had little relish for that sort of joke.

"Well, if you tear your hair, or if you throw ashes on your head," replied the traveler, "will that change the course of events? No; no more than the course of the Exchange."

"One can easily see that you are not a merchant," observed the little Jew.

"Faith, no, worthy son of Abraham! I sell neither hops, nor eider-down, nor honey, nor wax, nor hemp-seed, nor salt meat, nor caviare, nor wood, nor wool, nor ribbons, nor, hemp, nor flax, nor morocco, nor furs."

"But do you buy them?" asked the Persian, interrupting the traveler's list.

"As little as I can, and only for my own private use," answered the other, with a wink.

"He's a wag," said the Jew to the Persian.

"Or a spy," replied the other, lowering his voice. "We had better take care, and not speak more than necessary. The police are not over-particular in these times, and you never can know with whom you are traveling."

In another corner of the compartment they were speaking less of mercantile affairs, and more of the Tartar invasion and its annoying consequences.

"All the horses in Siberia will be requisitioned," said a traveler, "and communication between the different provinces of Central Asia will become very difficult."

"Is it true," asked his neighbor, "that the Kirghiz of the middle horde have joined the Tartars?"

"So it is said," answered the traveler, lowering his voice; "but who can flatter themselves that they know anything really of what is going on in this country?"

"I have heard of a concentration of troops on the frontier. The Don Cossacks have already gathered along the course of the Volga, and they are to be opposed to the rebel Kirghiz."

"If the Kirghiz descend the Irtish, the route to Irkutsk will not be safe," observed his neighbor. "Besides, yesterday I wanted to send a telegram to Krasnoiarsk, and it could not be forwarded. It's to be feared that before long the Tartar columns will have isolated Eastern Siberia."

"In short, little father," continued the first speaker, "these merchants have good reason for being uneasy about their trade and transactions. After requisitioning the horses, they will take the boats, carriages, every means of transport, until presently no one will be allowed to take even one step in all the empire."

"I'm much afraid that the Nijni-Novgorod fair won't end as brilliantly as it has begun," responded the other, shaking his head. "But the safety and integrity of the Russian territory before everything. Business is business."

This was especially remarked by a traveler in a carriage at the front part of the train. This person—evidently a stranger—made good use of his eyes, and asked numberless questions, to which he received only evasive answers. Every minute leaning out of the window, which he would keep down, to the great disgust of his fellow-travelers, he lost nothing of the views to the right. He inquired the names of the most insignificant places, their position, what were their commerce, their manufactures, the number of their inhabitants, the average mortality, etc., and all this he wrote down in a note-book, already full.

This was the correspondent Alcide Jolivet, and the reason of his putting so many insignificant questions was, that amongst the many answers he received, he hoped to find some interesting fact "for his cousin." But, naturally enough, he was taken for a spy, and not a word treating of the events of the day was uttered in his hearing.

Finding, therefore, that he could learn nothing of the Tartar invasion, he wrote in his book, "Travelers of great discretion. Very close as to political matters."

Whilst Alcide Jolivet noted down his impressions thus minutely, his confrere, in the same train, traveling for the same object, was devoting himself to the same work of observation in another compartment. Neither of them had seen each other that day at the Moscow station, and they were each ignorant that the other had set out to visit the scene of the war. Harry Blount, speaking little, but listening much, had not inspired his companions with the suspicions which Alcide Jolivet had aroused. He was not taken for a spy, and therefore his neighbors, without constraint, gossiped in his presence, allowing themselves even to go farther than their natural caution would in most cases have allowed them. The correspondent of the Daily Telegraph had thus an opportunity of observing how much recent events preoccupied the merchants of Nijni-Novgorod, and to what a degree the commerce with Central Asia was threatened in its transit.

He therefore noted in his book this perfectly correct observation, "My fellow-travelers extremely anxious. Nothing is talked of but war, and they speak of it, with a freedom which is astonishing, as having broken out
The readers of the Daily Telegraph would not fail to be as well informed as Alcide Jolivet's "cousin." But as Harry Blount, seated at the left of the train, only saw one part of the country, which was hilly, without giving himself the trouble of looking at the right side, which was composed of wide plains, he added, with British assurance, "Country mountainous between Moscow and Wladimir."

It was evident that the Russian government purposed taking severe measures to guard against any serious eventualities even in the interior of the empire. The rebel lion had not crossed the Siberian frontier, but evil influences might be feared in the Volga provinces, so near to the country of the Kirghiz.

The police had as yet found no traces of Ivan Ogareff. It was not known whether the traitor, calling in the foreigner to avenge his personal rancor, had rejoined Feofar-Khan, or whether he was endeavoring to foment a revolt in the government of Niijni-Novgorod, which at this time of year contained a population of such diverse elements. Perhaps among the Persians, Armenians, or Kalmucks, who flocked to the great market, he had agents, instructed to provoke a rising in the interior. All this was possible, especially in such a country as Russia. In fact, this vast empire, 4,000,000 square miles in extent, does not possess the homogeneousness of the states of Western Europe. The Russian territory in Europe and Asia contains more than seventy millions of inhabitants. In it thirty different languages are spoken. The Sclavonian race predominates, no doubt, but there are besides Russians, Poles, Lithuanians, Courlanders. Add to these, Finns, Laplanders, Estonians, several other northern tribes with unpronounceable names, the Permiaks, the Germans, the Greeks, the Tartars, the Caucasian tribes, the Mongol, Kalmuck, Samoid, Kamtschatkan, and Aleutian hordes, and one may understand that the unity of so vast a state must be difficult to maintain, and that it could only be the work of time, aided by the wisdom of many successive rulers.

Be that as it may, Ivan Ogareff had hitherto managed to escape all search, and very probably he might have rejoined the Tartar army. But at every station where the train stopped, inspectors came forward who scrutinized the travelers and subjected them all to a minute examination, as by order of the superintendent of police, these officials were seeking Ivan Ogareff. The government, in fact, believed it to be certain that the traitor had not yet been able to quit European Russia. If there appeared cause to suspect any traveler, he was carried off to explain himself at the police station, and in the meantime the train went on its way, no person troubling himself about the unfortunate one left behind.

With the Russian police, which is very arbitrary, it is absolutely useless to argue. Military rank is conferred on its employees, and they act in military fashion. How can anyone, moreover, help obeying, unhesitatingly, orders which emanate from a monarch who has the right to employ this formula at the head of his ukase: "We, by the grace of God, Emperor and Autocrat of all the Russians of Moscow, Kiev, Wladimir, and Novgorod, Czar of Kasan and Astrakhan, Czar of Poland, Czar of Siberia, Czar of the Tauric Chersonese, Seignior of Pskov, Prince of Smolensk, Lithuania, Volynia, Podolia, and Finland, Prince of Esthonia, Livonia, Courland, and of Semigallia, of Bialystok, Karelia, Sougria, Perm, Viatka, Bulgaria, and many other countries; Lord and Sovereign Prince of the territory of Niijni-Novgorod, Tchemigoff, Riazan, Polotsk, Rostov, Jaroslavl, Bielozersk, Oudoria, Obdoria, Kondinia, Vitep, and of Mtsisla, Governor of the Hyperborean Regions, Lord of the countries of Iveria, Kartalinia, Grou-zinia, Kabardinia, and Armenia, Hereditary Lord and Suzerain of the Scherkess princes, of those of the mountains, and of others; heir of Norway, Duke of Schleswig-Holstein, Stormarn, Dittmarsen, and Oldenburg." A powerful lord, in truth, is he whose arms are an eagle with two heads, holding a scepter and a globe, surrounded by the escutcheons of Novgorod, Wladimir, Kiev, Kasan, Astrakhan, and of Siberia, and environed by the collar of the order of St. Andrew, surmounted by a royal crown!

As to Michael Strogoff, his papers were in order, and he was, consequently, free from all police supervision.

At the station of Wladimir the train stopped for several minutes, which appeared sufficient to enable the correspondent of the Daily Telegraph to take a twofold view, physical and moral, and to form a complete estimate of this ancient capital of Russia.

At the Wladimir station fresh travelers joined the train. Among others, a young girl entered the compartment occupied by Michael Strogoff. A vacant place was found opposite the courier. The young girl took it, after placing by her side a modest traveling-bag of red leather, which seemed to constitute all her luggage. Then seating herself with downcast eyes, not even glancing at the fellow-travelers whom chance had given her, she prepared for a journey which was still to last several hours.

Michael Strogoff could not help looking attentively at his newly-arrived fellow-traveler. As she was so placed as to travel with her back to the engine, he even offered her his seat, which he might prefer to her own, but she thanked him with a slight bend of her graceful neck.

The young girl appeared to be about sixteen or seventeen years of age. Her head, truly charming, was of the purest Sclavonic type—slightly severe, and likely in a few summers to unfold into beauty rather than mere prettiness.
From beneath a sort of kerchief which she wore on her head escaped in profusion light golden hair. Her eyes were brown, soft, and expressive of much sweetness of temper. The nose was straight, and attached to her pale and somewhat thin cheeks by delicately mobile nostrils. The lips were finely cut, but it seemed as if they had long since forgotten how to smile.

The young traveler was tall and upright, as far as could be judged of her figure from the very simple and ample pelisse that covered her. Although she was still a very young girl in the literal sense of the term, the development of her high forehead and clearly-cut features gave the idea that she was the possessor of great moral energy—a point which did not escape Michael Strogoff. Evidently this young girl had already suffered in the past, and the future doubtless did not present itself to her in glowing colors; but she had surely known how to struggle still with the trials of life. Her energy was evidently both prompt and persistent, and her calmness unalterable, even under circumstances in which a man would be likely to give way or lose his self-command.

Such was the impression which she produced at first sight. Michael Strogoff, being himself of an energetic temperament, was naturally struck by the character of her physiognomy, and, while taking care not to cause her annoyance by a too persistent gaze, he observed his neighbor with no small interest. The costume of the young traveler was both extremely simple and appropriate. She was not rich—that could be easily seen; but not the slightest mark of negligence was to be discerned in her dress. All her luggage was contained in the leather bag which, for want of room, she held on her lap.

She wore a long, dark pelisse, gracefully adjusted at the neck by a blue tie. Under this pelisse, a short skirt, also dark, fell over a robe which reached the ankles. Half-boots of leather, thickly soled, as if chosen in anticipation of a long journey, covered her small feet.

Michael Strogoff fancied that he recognized, by certain details, the fashion of the costume of Livonia, and thought his neighbor a native of the Baltic provinces.

But whither was this young girl going, alone, at an age when the fostering care of a father, or the protection of a brother, is considered a matter of necessity? Had she now come, after an already long journey, from the provinces of Western Russia? Was she merely going to Nijni-Novgorod, or was the end of her travels beyond the eastern frontiers of the empire? Would some relation, some friend, await her arrival by the train? Or was it not more probable, on the contrary, that she would find herself as much isolated in the town as she was in this compartment? It was probable.

In fact, the effect of habits contracted in solitude was clearly manifested in the bearing of the young girl. The manner in which she entered the carriage and prepared herself for the journey, the slight disturbance she caused among those around her, the care she took not to incommode or give trouble to anyone, all showed that she was accustomed to be alone, and to depend on herself only.

Michael Strogoff observed her with interest, but, himself reserved, he sought no opportunity of accosting her. Once only, when her neighbor—the merchant who had jumbled together so imprudently in his remarks tallow and shawls—being asleep, and threatening her with his great head, which was swaying from one shoulder to the other, Michael Strogoff awoke him somewhat roughly, and made him understand that he must hold himself upright.

The merchant, rude enough by nature, grumbled some words against "people who interfere with what does not concern them," but Michael Strogoff cast on him a glance so stern that the sleeper leant on the opposite side, and relieved the young traveler from his unpleasant vicinity.

The latter looked at the young man for an instant, and mute and modest thanks were in that look.

But a circumstance occurred which gave Strogoff a just idea of the character of the maiden. Twelve verst before arriving at Nijni-Novgorod, at a sharp curve of the iron way, the train experienced a very violent shock. Then, for a minute, it ran onto the slope of an embankment.

Travelers more or less shaken about, cries, confusion, general disorder in the carriages—such was the effect at first produced. It was to be feared that some serious accident had happened. Consequently, even before the train had stopped, the doors were opened, and the panic-stricken passengers thought only of getting out of the carriages.

Michael Strogoff thought instantly of the young girl; but, while the passengers in her compartment were precipitating themselves outside, screaming and struggling, she had remained quietly in her place, her face scarcely changed by a slight pallor.

She waited—Michael Strogoff waited also.

"A determined nature!" thought Michael Strogoff.

However, all danger had quickly disappeared. A breakage of the coupling of the luggage-van had first caused the shock to, and then the stoppage of, the train, which in another instant would have been thrown from the top of the embankment into a bog. There was an hour's delay. At last, the road being cleared, the train proceeded, and at half-past eight in the evening arrived at the station of Nijni-Novgorod.
Before anyone could get out of the carriages, the inspectors of police presented themselves at the doors and examined the passengers.

Michael Strogoff showed his podorojna, made out in the name of Nicholas Korpanoff. He had consequently no difficulty. As to the other travelers in the compartment, all bound for Nijni-Novgorod, their appearance, happily for them, was in nowise suspicious.

The young girl in her turn, exhibited, not a passport, since passports are no longer required in Russia, but a permit indorsed with a private seal, and which seemed to be of a special character. The inspector read the permit with attention. Then, having attentively examined the person whose description it contained:

"You are from Riga?" he said.
"Yes," replied the young girl.
"You are going to Irkutsk?"
"Yes."
"By what route?"
"By Perm."
"Good!" replied the inspector. "Take care to have your permit vised, at the police station of Nijni-Novgorod."

The young girl bent her head in token of assent.

Hearing these questions and replies, Michael Strogoff experienced a mingled sentiment both of surprise and pity. What! this young girl, alone, journeying to that far-off Siberia, and at a time when, to its ordinary dangers, were added all the perils of an invaded country and one in a state of insurrection! How would she reach it? What would become of her?

The inspection ended, the doors of the carriages were then opened, but, before Michael Strogoff could move towards her, the young Livonian, who had been the first to descend, had disappeared in the crowd which thronged the platforms of the railway station.

CHAPTER V THE TWO ANNOUNCEMENTS

NIJNI-NOVGOROD, Lower Novgorod, situate at the junction of the Volga and the Oka, is the chief town in the district of the same name. It was here that Michael Strogoff was obliged to leave the railway, which at the time did not go beyond that town. Thus, as he advanced, his traveling would become first less speedy and then less safe.

Nijni-Novgorod, the fixed population of which is only from thirty to thirty-five thousand inhabitants, contained at that time more than three hundred thousand; that is to say, the population was increased tenfold. This addition was in consequence of the celebrated fair, which was held within the walls for three weeks. Formerly Makariew had the benefit of this concourse of traders, but since 1817 the fair had been removed to Nijni-Novgorod.

Even at the late hour at which Michael Strogoff left the platform, there was still a large number of people in the two towns, separated by the stream of the Volga, which compose Nijni-Novgorod. The highest of these is built on a steep rock, and defended by a fort called in Russia "kreml."

Michael Strogoff expected some trouble in finding a hotel, or even an inn, to suit him. As he had not to start immediately, for he was going to take a steamer, he was compelled to look out for some lodging; but, before doing so, he wished to know exactly the hour at which the steamboat would start. He went to the office of the company whose boats plied between Nijni-Novgorod and Perm. There, to his great annoyance, he found that no boat started for Perm till the following day at twelve o'clock. Seventeen hours to wait! It was very vexatious to a man so pressed for time. However, he never senselessly murmured. Besides, the fact was that no other conveyance could take him so quickly either to Perm or Kasan. It would be better, then, to wait for the steamer, which would enable him to regain lost time.

Here, then, was Michael Strogoff, strolling through the town and quietly looking out for some inn in which to pass the night. However, he troubled himself little on this score, and, but that hunger pressed him, he would probably have wandered on till morning in the streets of Nijni-Novgorod. He was looking for supper rather than a bed. But he found both at the sign of the City of Constantinople. There, the landlord offered him a fairly comfortable room, with little furniture, it is true, but not without an image of the Virgin, and a few saints framed in yellow gauze.

A goose filled with sour stuffing swimming in thick cream, barley bread, some curds, powdered sugar mixed with cinnamon, and a jug of kwass, the ordinary Russian beer, were placed before him, and sufficed to satisfy his hunger. He did justice to the meal, which was more than could be said of his neighbor at table, who, having, in his character of "old believer" of the sect of Raskalniks, made the vow of abstinence, rejected the potatoes in front of him, and carefully refrained from putting sugar in his tea.

His supper finished, Michael Strogoff, instead of going up to his bedroom, again strolled out into the town. But, although the long twilight yet lingered, the crowd was already dispersing, the streets were gradually becoming empty, and at length everyone retired to his dwelling.
Why did not Michael Strogoff go quietly to bed, as would have seemed more reasonable after a long railway journey? Was he thinking of the young Livonian girl who had been his traveling companion? Having nothing better to do, he was thinking of her. Did he fear that, lost in this busy city, she might be exposed to insult? He feared so, and with good reason. Did he hope to meet her, and, if need were, to afford her protection? No. To meet would be difficult. As to protection—what right had he—

"Alone," he said to himself, "alone, in the midst of these wandering tribes! And yet the present dangers are nothing compared to those she must undergo. Siberia! Irkutsk! I am about to dare all risks for Russia, for the Czar, while she is about to do so—For whom? For what? She is authorized to cross the frontier! The country beyond is in revolt! The steppes are full of Tartar bands!"

Michael Strogoff stopped for an instant, and reflected.

"Without doubt," thought he, "she must have determined on undertaking her journey before the invasion. Perhaps she is even now ignorant of what is happening. But no, that cannot be; the merchants discussed before her the disturbances in Siberia—and she did not seem surprised. She did not even ask an explanation. She must have known it then, and knowing it, is still resolute. Poor girl! Her motive for the journey must be urgent indeed! But though she may be brave—and she certainly is so—her strength must fail her, and, to say nothing of dangers and obstacles, she will be unable to endure the fatigue of such a journey. Never can she reach Irkutsk!"

Indulging in such reflections, Michael Strogoff wandered on as chance led him; being well acquainted with the town, he knew that he could easily retrace his steps.

Having strolled on for about an hour, he seated himself on a bench against the wall of a large wooden cottage, which stood, with many others, on a vast open space. He had scarcely been there five minutes when a hand was laid heavily on his shoulder.

"What are you doing here?" roughly demanded a tall and powerful man, who had approached unperceived.

"I am resting," replied Michael Strogoff.

"Do you mean to stay all night on the bench?"

"Yes, if I feel inclined to do so," answered Michael Strogoff, in a tone somewhat too sharp for the simple merchant he wished to personate.

"Come forward, then, so I can see you," said the man.

Michael Strogoff, remembering that, above all, prudence was requisite, instinctively drew back. "It is not necessary," he replied, and calmly stepped back ten paces.

The man seemed, as Michael observed him well, to have the look of a Bohemian, such as are met at fairs, and with whom contact, either physical or moral, is unpleasant. Then, as he looked more attentively through the dusk, he perceived, near the cottage, a large caravan, the usual traveling dwelling of the Zingaris or gypsies, who swarm in Russia wherever a few copecks can be obtained.

As the gypsy took two or three steps forward, and was about to interrogate Michael Strogoff more closely, the door of the cottage opened. He could just see a woman, who spoke quickly in a language which Michael Strogoff knew to be a mixture of Mongol and Siberian.

"Another spy! Let him alone, and come to supper. The papluka is waiting for you."

Michael Strogoff could not help smiling at the epithet bestowed on him, dreading spies as he did above all else. In the same dialect, although his accent was very different, the Bohemian replied in words which signify, "You are right, Sangarre! Besides, we start to-morrow."

"To-morrow?" repeated the woman in surprise.

"Yes, Sangarre," replied the Bohemian; "to-morrow, and the Father himself sends us--where we are going!"

Thereupon the man and woman entered the cottage, and carefully closed the door.

"Good!" said Michael Strogoff, to himself; "if these gipsies do not wish to be understood when they speak before me, they had better use some other language."

From his Siberian origin, and because he had passed his childhood in the Steppes, Michael Strogoff, it has been said, understood almost all the languages in usage from Tartary to the Sea of Ice. As to the exact signification of the words he had heard, he did not trouble his head. For why should it interest him?

It was already late when he thought of returning to his inn to take some repose. He followed, as he did so, the course of the Volga, whose waters were almost hidden under the countless number of boats floating on its bosom.

An hour after, Michael Strogoff was sleeping soundly on one of those Russian beds which always seem so hard to strangers, and on the morrow, the 17th of July, he awoke at break of day.

He had still five hours to pass in Nijni-Novgorod; it seemed to him an age. How was he to spend the morning unless in wandering, as he had done the evening before, through the streets? By the time he had finished his breakfast, strapped up his bag, had his podorojna inspected at the police office, he would have nothing to do but start. But he was not a man to lie in bed after the sun had risen; so he rose, dressed himself, placed the letter with the
imperial arms on it carefully at the bottom of its usual pocket within the lining of his coat, over which he fastened his belt; he then closed his bag and threw it over his shoulder. This done, he had no wish to return to the City of Constantinople, and intending to breakfast on the bank of the Volga near the wharf, he settled his bill and left the inn. By way of precaution, Michael Strogoff went first to the office of the steam-packet company, and there made sure that the Caucasus would start at the appointed hour. As he did so, the thought for the first time struck him that, since the young Livonian girl was going to Perm, it was very possible that her intention was also to embark in the Caucasus, in which case he should accompany her.

The town above with its kremlin, whose circumference measures two versts, and which resembles that of Moscow, was altogether abandoned. Even the governor did not reside there. But if the town above was like a city of the dead, the town below, at all events, was alive.

Michael Strogoff, having crossed the Volga on a bridge of boats, guarded by mounted Cossacks, reached the square where the evening before he had fallen in with the gipsy camp. This was somewhat outside the town, where the fair of Nijni-Novgorod was held. In a vast plain rose the temporary palace of the governor-general, where by imperial orders that great functionary resided during the whole of the fair, which, thanks to the people who composed it, required an ever-watchful surveillance.

This plain was now covered with booths symmetrically arranged in such a manner as to leave avenues broad enough to allow the crowd to pass without a crush.

Each group of these booths, of all sizes and shapes, formed a separate quarter particularly dedicated to some special branch of commerce. There was the iron quarter, the furriers’ quarter, the woolen quarter, the quarter of the wood merchants, the weavers’ quarter, the dried fish quarter, etc. Some booths were even built of fancy materials, some of bricks of tea, others of masses of salt meat--that is to say, of samples of the goods which the owners thus announced were there to the purchasers--a singular, and somewhat American, mode of advertisement.

In the avenues and long alleys there was already a large assemblage of people--the sun, which had risen at four o’clock, being well above the horizon--an extraordinary mixture of Europeans and Asiatics, talking, wrangling, haranguing, and bargaining. Everything which can be bought or sold seemed to be heaped up in this square. Furs, precious stones, silks, Cashmere shawls, Turkey carpets, weapons from the Caucasus, gauzes from Smyrna and Ispahan. Tiflis armor, caravan teas. European bronzes, Swiss clocks, velvets and silks from Lyons, English cottons, harness, fruits, vegetables, minerals from the Ural, malachite, lapis-lazuli, spices, perfumes, medicinal herbs, wood, tar, rope, horn, pumpkins, water-melons, etc--all the products of India, China, Persia, from the shores of the Caspian and the Black Sea, from America and Europe, were united at this corner of the globe.

It is scarcely possible truly to portray the moving mass of human beings surging here and there, the excitement, the confusion, the hubbub; demonstrative as were the natives and the inferior classes, they were completely outdone by their visitors. There were merchants from Central Asia, who had occupied a year in escorting their merchandise across its vast plains, and who would not again see their shops and counting-houses for another year to come. In short, of such importance is this fair of Nijni-Novgorod, that the sum total of its transactions amounts yearly to nearly a hundred million dollars.

On one of the open spaces between the quarters of this temporary city were numbers of mountebanks of every description; gypsies from the mountains, telling fortunes to the credulous fools who are ever to be found in such assemblies; Zingaris or Tsiganes--a name which the Russians give to the gypsies who are the descendants of the ancient Copts--singing their wildest melodies and dancing their most original dances; comedians of foreign theaters, acting Shakespeare, adapted to the taste of spectators who crowded to witness them. In the long avenues the bear showmen accompanied their four-footed dancers, menageries resounded with the hoarse cries of animals under the influence of the stinging whip or red-hot irons of the tamer; and, besides all these numberless performers, in the middle of the central square, surrounded by a circle four deep of enthusiastic amateurs, was a band of "mariners of the Volga," sitting on the ground, as on the deck of their vessel, imitating the action of rowing, guided by the stick of the master of the orchestra, the veritable helmsman of this imaginary vessel! A whimsical and pleasing custom!

Suddenly, according to a time-honored observance in the fair of Nijni-Novgorod, above the heads of the vast concourse a flock of birds was allowed to escape from the cages in which they had been brought to the spot. In return for a few copecks charitably offered by some good people, the bird-fanciers opened the prison doors of their captives, who flew out in hundreds, uttering their joyous notes.

It should be mentioned that England and France, at all events, were this year represented at the great fair of Nijni-Novgorod by two of the most distinguished products of modern civilization, Messrs. Harry Blount and Alcide Jolivet. Jolivet, an optimist by nature, found everything agreeable, and as by chance both lodging and food were to his taste, he jotted down in his book some memoranda particularly favorable to the town of Nijni-Novgorod. Blount, on the contrary, having in vain hunted for a supper, had been obliged to find a resting-place in the open air. He therefore looked at it all from another point of view, and was preparing an article of the most withering character
against a town in which the landlords of the inns refused to receive travelers who only begged leave to be flayed, "morally and physically."

Michael Strogoff, one hand in his pocket, the other holding his cherry-stemmed pipe, appeared the most indifferent and least impatient of men; yet, from a certain contraction of his eyebrows every now and then, a careful observer would have seen that he was burning to be off.

For two hours he kept walking about the streets, only to find himself invariably at the fair again. As he passed among the groups of buyers and sellers he discovered that those who came from countries on the confines of Asia manifested great uneasiness. Their trade was visibly suffering. Another symptom also was marked. In Russia military uniforms appear on every occasion. Soldiers are wont to mix freely with the crowd, the police agents being almost invariably aided by a number of Cossacks, who, lance on shoulder, keep order in the crowd of three hundred thousand strangers. But on this occasion the soldiers, Cossacks and the rest, did not put in an appearance at the great market. Doubtless, a sudden order to move having been foreseen, they were restricted to their barracks.

Moreover, while no soldiers were to be seen, it was not so with their officers. Since the evening before, aides-de-camp, leaving the governor's palace, galloped in every direction. An unusual movement was going forward which a serious state of affairs could alone account for. There were innumerable couriers on the roads both to Wladimir and to the Ural Mountains. The exchange of telegraphic dispatches with Moscow was incessant.

Michael Strogoff found himself in the central square when the report spread that the head of police had been summoned by a courier to the palace of the governor-general. An important dispatch from Moscow, it was said, was the cause of it.

"The fair is to be closed," said one.
"The regiment of Nijni-Novgorod has received the route," declared another.
"They say that the Tartars menace Tomsk!"
"Here is the head of police!" was shouted on every side. A loud clapping of hands was suddenly raised, which subsided by degrees, and finally was succeeded by absolute silence. The head of police arrived in the middle of the central square, and it was seen by all that he held in his hand a dispatch.

Then, in a loud voice, he read the following announcements: "By order of the Governor of Nijni-Novgorod.
"1st. All Russian subjects are forbidden to quit the province upon any pretext whatsoever.
"2nd. All strangers of Asiatic origin are commanded to leave the province within twenty-four hours."

CHAPTER VI BROTHER AND SISTER

HOWEVER disastrous these measures might be to private interests, they were, under the circumstances, perfectly justifiable.

"All Russian subjects are forbidden to leave the province;" if Ivan Ogareff was still in the province, this would at any rate prevent him, unless with the greatest difficulty, from rejoining Feofar-Khan, and becoming a very formidable lieutenant to the Tartar chief.

"All foreigners of Asiatic origin are ordered to leave the province in four-and-twenty hours;" this would send off in a body all the traders from Central Asia, as well as the bands of Bohemians, gipsies, etc., having more or less sympathy with the Tartars. So many heads, so many spies--undoubtedly affairs required their expulsion.

It is easy to understand the effect produced by these two thunder-claps bursting over a town like Nijni-Novgorod, so densely crowded with visitors, and with a commerce so greatly surpassing that of all other places in Russia. The natives whom business called beyond the Siberian frontier could not leave the province for a time at least. The tenor of the first article of the order was express; it admitted of no exception. All private interests must yield to the public weal. As to the second article of the proclamation, the order of expulsion which it contained admitted of no evasion either. It only concerned foreigners of Asiatic origin, but these could do nothing but pack up their merchandise and go back the way they came. As to the mountebanks, of which there were a considerable number, they had nearly a thousand versts to go before they could reach the nearest frontier. For them it was simply misery.

At first there rose against this unusual measure a murmur of protestation, a cry of despair, but this was quickly suppressed by the presence of the Cossacks and agents of police. Immediately, what might be called the exodus from the immense plain began. The awnings in front of the stalls were folded up; the theaters were taken to pieces; the fires were put out; the acrobats' ropes were lowered; the old broken-winded horses of the traveling vans came back from their sheds. Agents and soldiers with whip or stick stimulated the tardy ones, and made nothing of pulling down the tents even before the poor Bohemians had left them.

Under these energetic measures the square of Nijni-Novgorod would, it was evident, be entirely evacuated before the evening, and to the tumult of the great fair would succeed the silence of the desert.
It must again be repeated—for it was a necessary aggravation of these severe measures—that to all those nomads chiefly concerned in the order of expulsion even the steppes of Siberia were forbidden, and they would be obliged to hasten to the south of the Caspian Sea, either to Persia, Turkey, or the plains of Turkestan. The post of the Ural, and the mountains which form, as it were, a prolongation of the river along the Russian frontier, they were not allowed to pass. They were therefore under the necessity of traveling six hundred miles before they could tread a free soil.

Just as the reading of the proclamation by the head of the police came to an end, an idea darted instinctively into the mind of Michael Strogoff. "What a singular coincidence," thought he, "between this proclamation expelling all foreigners of Asiatic origin, and the words exchanged last evening between those two gipsies of the Zingari race. 'The Father himself sends us where we wish to go,' that old man said. But 'the Father' is the emperor! He is never called anything else among the people. How could those gipsies have foreseen the measure taken against them? how could they have known it beforehand, and where do they wish to go? Those are suspicious people, and it seems to me that to them the government proclamation must be more useful than injurious."

But these reflections were completely dispelled by another which drove every other thought out of Michael's mind. He forgot the Zingaris, their suspicious words, the strange coincidence which resulted from the proclamation. The remembrance of the young Livonian girl suddenly rushed into his mind. "Poor child!" he thought to himself. "She cannot now cross the frontier."

In truth the young girl was from Riga; she was Livonian, consequently Russian, and now could not leave Russian territory! The permit which had been given her before the new measures had been promulgated was no longer available. All the routes to Siberia had just been pitilessly closed to her, and, whatever the motive taking her to Irkutsk, she was now forbidden to go there.

This thought greatly occupied Michael Strogoff. He said to himself, vaguely at first, that, without neglecting anything of what was due to his important mission, it would perhaps be possible for him to be of some use to this brave girl; and this idea pleased him. Knowing how serious were the dangers which he, an energetic and vigorous man, would have personally to encounter, he could not conceal from himself how infinitely greater they would prove to a young unprotected girl. As she was going to Irkutsk, she would be obliged to follow the same road as himself, she would have to pass through the bands of invaders, as he was about to attempt doing himself. If, moreover, she had at her disposal only the money necessary for a journey taken under ordinary circumstances, how could she manage to accomplish it under conditions which made it not only perilous but expensive?

"Well," said he, "if she takes the route to Perm, it is nearly impossible but that I shall fall in with her. Then, I will watch over her without her suspecting it; and as she appears to me as anxious as myself to reach Irkutsk, she will cause me no delay."

But one thought leads to another. Michael Strogoff had till now thought only of doing a kind action; but now another idea flashed into his brain; the question presented itself under quite a new aspect.

"The fact is," said he to himself, "that I have much more need of her than she can have of me. Her presence will be useful in drawing off suspicion from me. A man traveling alone across the steppe, may be easily guessed to be a courier of the Czar. If, on the contrary, this young girl accompanies me, I shall appear, in the eyes of all, the Nicholas Korpanoff of my podorojna. Therefore, she must accompany me. Therefore, I must find her again at any cost. It is not probable that since yesterday evening she has been able to get a carriage and leave Nijni-Novgorod. I must look for her. And may God guide me!"

Michael left the great square of Nijni-Novgorod, where the tumult produced by the carrying out of the prescribed measures had now reached its height. Recriminations from the banished strangers, shouts from the agents and Cossacks who were using them so brutally, together made an indescribable uproar. The girl for whom he searched could not be there. It was now nine o'clock in the morning. The steamboat did not start till twelve. Michael Strogoff had therefore nearly two hours to employ in searching for her whom he wished to make his traveling companion.

He crossed the Volga again and hunted through the quarters on the other side, where the crowd was much less considerable. He entered the churches, the natural refuge for all who weep, for all who suffer. Nowhere did he meet the young Livonian.

"And yet," he repeated, "she could not have left Nijni-Novgorod yet. We'll have another look." He wandered about thus for two hours. He went on without stopping, feeling no fatigue, obeying a potent instinct which allowed no room for thought. All was in vain.

It then occurred to him that perhaps the girl had not heard of the order—though this was improbable enough, for such a thunder-clap could not have burst without being heard by all. Evidently interested in knowing the smallest news from Siberia, how could she be ignorant of the measures taken by the governor, measures which concerned her so directly?

But, if she was ignorant of it, she would come in an hour to the quay, and there some merciless agent would refuse her a passage! At any cost, he must see her beforehand, and enable her to avoid such a repulse.
But all his endeavors were in vain, and he at length almost despaired of finding her again. It was eleven o'clock, and Michael thought of presenting his podorojna at the office of the head of police. The proclamation evidently did not concern him, since the emergency had been foreseen for him, but he wished to make sure that nothing would hinder his departure from the town.

Michael then returned to the other side of the Volga, to the quarter in which was the office of the head of police. An immense crowd was collected there; for though all foreigners were ordered to quit the province, they had notwithstanding to go through certain forms before they could depart.

Without this precaution, some Russian more or less implicated in the Tartar movement would have been able, in a disguise, to pass the frontier—just those whom the order wished to prevent going. The strangers were sent away, but still had to gain permission to go.

Mountebanks, gypsies, Tsiganes, Zingaris, mingled with merchants from Persia, Turkey, India, Turkestan, China, filled the court and offices of the police station.

Everyone was in a hurry, for the means of transport would be much sought after among this crowd of banished people, and those who did not set about it soon ran a great risk of not being able to leave the town in the prescribed time, which would expose them to some brutal treatment from the governor's agents.

Owing to the strength of his elbows Michael was able to cross the court. But to get into the office and up to the clerk's little window was a much more difficult business. However, a word into an inspector's ear and a few judiciously given roubles were powerful enough to gain him a passage. The man, after taking him into the waiting-room, went to call an upper clerk. Michael Strogoff would not be long in making everything right with the police and being free in his movements.

Whilst waiting, he looked about him, and what did he see? There, fallen, rather than seated, on a bench, was a girl, prey to a silent despair, although her face could scarcely be seen, the profile alone being visible against the wall. Michael Strogoff could not be mistaken. He instantly recognized the young Livonian.

Not knowing the governor's orders, she had come to the police office to get her pass signed. They had refused to sign it. No doubt she was authorized to go to Irkutsk, but the order was peremptory—it annulled all previous authorizations, and the routes to Siberia were closed to her. Michael, delighted at having found her again, approached the girl.

She looked up for a moment and her face brightened on recognizing her traveling companion. She instinctively rose and, like a drowning man who clutches at a spar, she was about to ask his help.

At that moment the agent touched Michael on the shoulder, "The head of police will see you," he said.

"Good," returned Michael. And without saying a word to her for whom he had been searching all day, without reassuring her by even a gesture, which might compromise either her or himself, he followed the man.

The young Livonian, seeing the only being to whom she could look for help disappear, fell back again on her bench.

Three minutes had not passed before Michael Strogoff reappeared, accompanied by the agent. In his hand he held his podorojna, which threw open the roads to Siberia for him. He again approached the young Livonian, and holding out his hand: "Sister," said he.

She understood. She rose as if some sudden inspiration prevented her from hesitating a moment.

"Sister," repeated Michael Strogoff, "we are authorized to continue our journey to Irkutsk. Will you come with me?"

"I will follow you, brother," replied the girl, putting her hand into that of Michael Strogoff. And together they left the police station.

CHAPTER VII GOING DOWN THE VOLGA

A LITTLE before midday, the steamboat's bell drew to the wharf on the Volga an unusually large concourse of people, for not only were those about to embark who had intended to go, but the many who were compelled to go contrary to their wishes. The boilers of the Caucasus were under full pressure; a slight smoke issued from its funnel, whilst the end of the escape-pipe and the lids of the valves were crowned with white vapor. It is needless to say that the police kept a close watch over the departure of the Caucasus, and showed themselves pitiless to those travelers who did not satisfactorily answer their questions.

Numerous Cossacks came and went on the quay, ready to assist the agents, but they had not to interfere, as no one ventured to offer the slightest resistance to their orders. Exactly at the hour the last clang of the bell sounded, the powerful wheels of the steamboat began to beat the water, and the Caucasus passed rapidly between the two towns of which Nijni-Novgorod is composed.

Michael Strogoff and the young Livonian had taken a passage on board the Caucasus. Their embarkation was
made without any difficulty. As is known, the podorojna, drawn up in the name of Nicholas Korpanoff, authorized this merchant to be accompanied on his journey to Siberia. They appeared, therefore, to be a brother and sister traveling under the protection of the imperial police. Both, seated together at the stern, gazed at the receding town, so disturbed by the governor's order. Michael had as yet said nothing to the girl, he had not even questioned her. He waited until she should speak to him, when that was necessary. She had been anxious to leave that town, in which, but for the providential intervention of this unexpected protector, she would have remained imprisoned. She said nothing, but her looks spoke her thanks.

The Volga, the Rha of the ancients, the largest river in all Europe, is almost three thousand miles in length. Its waters, rather unwholesome in its upper part, are improved at Nijni-Novgorod by those of the Oka, a rapid affluent, issuing from the central provinces of Russia. The system of Russian canals and rivers has been justly compared to a gigantic tree whose branches spread over every part of the empire. The Volga forms the trunk of this tree, and it has for roots seventy mouths opening into the Caspian Sea. It is navigable as far as Rjef, a town in the government of Tver, that is, along the greater part of its course.

The steamboats plying between Perm and Nijni-Novgorod rapidly perform the two hundred and fifty miles which separate this town from the town of Kasan. It is true that these boats have only to descend the Volga, which adds nearly two miles of current per hour to their own speed; but on arriving at the confluence of the Kama, a little below Kasan, they are obliged to quit the Volga for the smaller river, up which they ascend to Perm. Powerful as were her machines, the Caucasus could not thus, after entering the Kama, make against the current more than ten miles an hour. Including an hour's stoppage at Kasan, the voyage from Nijni-Novgorod to Perm would take from between sixty to sixty-two hours.

The steamer was very well arranged, and the passengers, according to their condition or resources, occupied three distinct classes on board. Michael Strogoff had taken care to engage two first-class cabins, so that his young companion might retire into hers whenever she liked.

The Caucasus was loaded with passengers of every description. A number of Asiatic traders had thought it best to leave Nijni-Novgorod immediately. In that part of the steamer reserved for the first-class might be seen Armenians in long robes and a sort of miter on their heads; Jews, known by their conical caps; rich Chinese in their traditional costume, a very wide blue, violet, or black robe; Turks, wearing the national turban; Hindoos, with square caps, and a simple string for a girdle, some of whom, hold in their hands all the traffic of Central Asia; and, lastly, Tartars, wearing boots, ornamented with many-colored braid, and the breast a mass of embroidery. All these merchants had been obliged to pile up their numerous bales and chests in the hold and on the deck; and the transport of their baggage would cost them dear, for, according to the regulations, each person had only a right to twenty pounds' weight.

In the bows of the Caucasus were more numerous groups of passengers, not only foreigners, but also Russians, who were not forbidden by the order to go back to their towns in the province. There were mujiks with caps on their heads, and wearing checked shirts under their wide pelisses; peasants of the Volga, with blue trousers stuffed into their boots, rose-colored cotton shirts, drawn in by a cord, felt caps; a few women, habited in flowery-patterned cotton dresses, gay-colored aprons, and bright handkerchiefs on their heads. These were principally third-class passengers, who were, happily, not troubled by the prospect of a long return voyage. The Caucasus passed numerous boats being towed up the stream, carrying all sorts of merchandise to Nijni-Novgorod. Then passed rafts of wood interminably long, and barges loaded to the gunwale, and nearly sinking under water. A bootless voyage they were making, since the fair had been abruptly broken up at its outset.

The waves caused by the steamer splashed on the banks, covered with flocks of wild duck, who flew away uttering deafening cries. A little farther, on the dry fields, bordered with willows, and aspens, were scattered a few cows, sheep, and herds of pigs. Fields, sown with thin buckwheat and rye, stretched away to a background of half-cultivated hills, offering no remarkable prospect. The pencil of an artist in quest of the picturesque would have found nothing to reproduce in this monotonous landscape.

The Caucasus had been steaming on for almost two hours, when the young Livonian, addressing herself to Michael, said, "Are you going to Irukutsk, brother?"

"Yes, sister," answered the young man. "We are going the same way. Consequently, where I go, you shall go."

"To-morrow, brother, you shall know why I left the shores of the Baltic to go beyond the Ural Mountains."

"I ask you nothing, sister."

"You shall know all," replied the girl, with a faint smile. "A sister should hide nothing from her brother. But I cannot to-day. Fatigue and sorrow have broken me."

"Will you go and rest in your cabin?" asked Michael Strogoff.

"Yes--yes; and to-morrow--"

"Come then--"
He hesitated to finish his sentence, as if he had wished to end it by the name of his companion, of which he was
still ignorant.

"Nadia," said she, holding out her hand.

"Come, Nadia," answered Michael, "and make what use you like of your brother Nicholas Korpanoff." And he
led the girl to the cabin engaged for her off the saloon.

Michael Strogoff returned on deck, and eager for any news which might bear on his journey, he mingled in the
groups of passengers, though without taking any part in the conversation. Should he by any chance be questioned,
and obliged to reply, he would announce himself as the merchant Nicholas Korpanoff, going back to the frontier, for
he did not wish it to be suspected that a special permission authorized him to travel to Siberia.

The foreigners in the steamer could evidently speak of nothing but the occurrences of the day, of the order and
its consequences. These poor people, scarcely recovered from the fatigue of a journey across Central Asia, found
themselves obliged to return, and if they did not give loud vent to their anger and despair, it was because they dared
not. Fear, mingled with respect, restrained them. It was possible that inspectors of police, charged with watching the
passengers, had secretly embarked on board the Caucasus, and it was just as well to keep silence; expulsion, after
all, was a good deal preferable to imprisonment in a fortress. Therefore the men were either silent, or spoke with so
much caution that it was scarcely possible to get any useful information.

Michael Strogoff thus could learn nothing here; but if mouths were often shut at his approach—for they did not
know him—his ears were soon struck by the sound of one voice, which cared little whether it was heard or not.

The man with the hearty voice spoke Russian, but with a French accent; and another speaker answered him more
reservedly. "What," said the first, "are you on board this boat, too, my dear fellow; you whom I met at the imperial
fete in Moscow, and just caught a glimpse of at Nijni-Novgorod?"

"Yes, it's I," answered the second drily.

"Really, I didn't expect to be so closely followed."

"I am not following you sir, I am preceding you."

"Precede!precede! Let us march abreast, keeping step, like two soldiers on parade, and for the time, at least, let
us agree, if you will, that one shall not pass the other."

"On the contrary, I shall pass you."

"We shall see that, when we are at the seat of war; but till then, why, let us be traveling companions. Later, we
shall have both time and occasion to be rivals."

"Enemies."

"Enemies, if you like. There is a precision in your words, my dear fellow, particularly agreeable to me. One may
always know what one has to look for, with you."

"What is the harm?"

"No harm at all. So, in my turn, I will ask your permission to state our respective situations."

"State away."

"You are going to Perm—like me?"

"Like you."

"And probably you will go from Perm to Ekaterenburg, since that is the best and safest route by which to cross
the Ural Mountains?"

"Probably."

"Once past the frontier, we shall be in Siberia, that is to say in the midst of the invasion."

"We shall be there."

"Well! then, and only then, will be the time to say, Each for himself, and God for—"

"For me."

"For you, all by yourself! Very well! But since we have a week of neutral days before us, and since it is very
certain that news will not shower down upon us on the way, let us be friends until we become rivals again."

"Enemies."

"Yes; that's right, enemies. But till then, let us act together, and not try and ruin each other. All the same, I
promise you to keep to myself all that I can see—"

"And I, all that I can hear."

"Is that agreed?"

"It is agreed."

"Your hand?"

"Here it is." And the hand of the first speaker, that is to say, five wide-open fingers, vigorously shook the two
fingers coolly extended by the other.

"By the bye," said the first, "I was able this morning to telegraph the very words of the order to my cousin at
seventeen minutes past ten."
"And I sent it to the Daily Telegraph at thirteen minutes past ten."
"Bravo, Mr. Blount!"
"Very good, M. Jolivet."
"I will try and match that!"
"It will be difficult."
"I can try, however."

So saying, the French correspondent familiarly saluted the Englishman, who bowed stiffly. The governor's proclamation did not concern these two news-hunters, as they were neither Russians nor foreigners of Asiatic origin. However, being urged by the same instinct, they had left Nijni-Novgorod together. It was natural that they should take the same means of transport, and that they should follow the same route to the Siberian steppes. Traveling companions, whether enemies or friends, they had a week to pass together before "the hunt would be open." And then success to the most expert! Alcide Jolivet had made the first advances, and Harry Blount had accepted them though he had done so coldly.

That very day at dinner the Frenchman open as ever and even too loquacious, the Englishman still silent and grave, were seen hobnobbing at the same table, drinking genuine Cliquot, at six roubles the bottle, made from the fresh sap of the birch-trees of the country. On hearing them chatting away together, Michael Strogoff said to himself: "Those are inquisitive and indiscreet fellows whom I shall probably meet again on the way. It will be prudent for me to keep them at a distance."

The young Livonian did not come to dinner. She was asleep in her cabin, and Michael did not like to awaken her. It was evening before she reappeared on the deck of the Caucasus. The long twilight imparted a coolness to the atmosphere eagerly enjoyed by the passengers after the stifling heat of the day. As the evening advanced, the greater number never even thought of going into the saloon. Stretched on the benches, they inhaled with delight the slight breeze caused by the speed of the steamer. At this time of year, and under this latitude, the sky scarcely darkened between sunset and dawn, and left the steersman light enough to guide his steamer among the numerous vessels going up or down the Volga.

Between eleven and two, however, the moon being new, it was almost dark. Nearly all the passengers were then asleep on the deck, and the silence was disturbed only by the noise of the paddles striking the water at regular intervals. Anxiety kept Michael Strogoff awake. He walked up and down, but always in the stern of the steamer. Once, however, he happened to pass the engine-room. He then found himself in the part reserved for second and third-class passengers.

There, everyone was lying asleep, not only on the benches, but also on the bales, packages, and even the deck itself. Some care was necessary not to tread on the sleepers, who were lying about everywhere. They were chiefly mujiks, accustomed to hard couches, and quite satisfied with the planks of the deck. But no doubt they would, all the same, have soundly abused the clumsy fellow who roused them with an accidental kick.

Michael Strogoff took care, therefore, not to disturb anyone. By going thus to the end of the boat, he had no other idea but that of striving against sleep by a rather longer walk. He reached the forward deck, and was already climbing the forecastle ladder, when he heard someone speaking near him. He stopped. The voices appeared to come from a group of passengers enveloped in cloaks and wraps. It was impossible to recognize them in the dark, though it sometimes happened that, when the steamer's chimney sent forth a plume of ruddy flames, the sparks seemed to fall amidst the group as though thousands of spangles had been suddenly illuminated.

Michael was about to step up the ladder, when a few words reached his ear, uttered in that strange tongue which he had heard during the night at the fair. Instinctively he stopped to listen. Protected by the shadow of the forecastle, he could not be perceived himself. As to seeing the passengers who were talking, that was impossible. He must confine himself to listening.

The first words exchanged were of no importance--to him at least--but they allowed him to recognize the voices of the man and woman whom he had heard at Nijni-Novgorod. This, of course, made him redouble his attention. It was, indeed, not at all impossible that these same Tsiganes, now banished, should be on board the Caucasus.

And it was well for him that he listened, for he distinctly heard this question and answer made in the Tartar idiom: "It is said that a courier has set out from Moscow for Irkutsk."

"It is so said, Sangarre; but either this courier will arrive too late, or he will not arrive at all."

Michael Strogoff started involuntarily at this reply, which concerned him so directly. He tried to see if the man and woman who had just spoken were really those whom he suspected, but he could not succeed.

In a few moments Michael Strogoff had regained the stern of the vessel without having been perceived, and, taking a seat by himself, he buried his face in his hands. It might have been supposed that he was asleep.

He was not asleep, however, and did not even think of sleeping. He was reflecting, not without a lively
apprehension: "Who is it knows of my departure, and who can have any interest in knowing it?"

CHAPTER VIII GOING UP THE KAMA

THE next day, the 18th of July, at twenty minutes to seven in the morning, the Caucasus reached the Kasan quay, seven versts from the town.

Kasan is situated at the confluence of the Volga and Kasanka. It is an important chief town of the government, and a Greek archbishopric, as well as the seat of a university. The varied population preserves an Asiatic character. Although the town was so far from the landing-place, a large crowd was collected on the quay. They had come for news. The governor of the province had published an order identical with that of Nijni-Novgorod. Police officers and a few Cossacks kept order among the crowd, and cleared the way both for the passengers who were disembarking and also for those who were embarking on board the Caucasus, minutely examining both classes of travelers. The one were the Asiatiks who were being expelled; the other, mujiks stopping at Kasan.

Michael Strogoff unconcernedly watched the bustle which occurs at all quays on the arrival of a steam vessel. The Caucasus would stay for an hour to renew her fuel. Michael did not even think of landing. He was unwilling to leave the young Livonian girl alone on board, as she had not yet reappeared on deck.

The two journalists had risen at dawn, as all good huntsmen should do. They went on shore and mingled with the crowd, each keeping to his own peculiar mode of proceeding; Harry Blount, sketching different types, or noting some observation; Alcide Jolivet contenting himself with asking questions, confiding in his memory, which never failed him.

There was a report along all the frontier that the insurrection and invasion had reached considerable proportions. Communication between Siberia and the empire was already extremely difficult. All this Michael Strogoff heard from the new arrivals. This information could not but cause him great uneasiness, and increase his wish of being beyond the Ural Mountains, so as to judge for himself of the truth of these rumors, and enable him to guard against any possible contingency. He was thinking of seeking more direct intelligence from some native of Kasan, when his attention was suddenly diverted.

Among the passengers who were leaving the Caucasus, Michael recognized the troop of Tsiganes who, the day before, had appeared in the Nijni-Novgorod fair. There, on the deck of the steamboat were the old Bohemian and the woman. With them, and no doubt under their direction, landed about twenty dancers and singers, from fifteen to twenty years of age, wrapped in old cloaks, which covered their spangled dresses. These dresses, just then glancing in the first rays of the sun, reminded Michael of the curious appearance which he had observed during the night. It must have been the glitter of those spangles in the bright flames issuing from the steamboat's funnel which had attracted his attention.

"Evidently," said Michael to himself, "this troop of Tsiganes, after remaining below all day, crouched under the forecastle during the night. Were these gipsies trying to show themselves as little as possible? Such is not according to the usual custom of their race."

Michael Strogoff no longer doubted that the expressions he had heard, had proceeded from this tawny group, and had been exchanged between the old gypsy and the woman to whom he gave the Mongolian name of Sangarre. Michael involuntarily moved towards the gangway, as the Bohemian troop was leaving the steamboat.

The old Bohemian was there, in a humble attitude, little conformable with the effrontery natural to his race. One would have said that he was endeavoring rather to avoid attention than to attract it. His battered hat, browned by the suns of every clime, was pulled forward over his wrinkled face. His arched back was bent under an old cloak, wrapped closely round him, notwithstanding the heat. It would have been difficult, in this miserable dress, to judge of either his size or face. Near him was the Tsigane, Sangarre, a woman about thirty years old. She was tall and well made, with olive complexion, magnificent eyes, and golden hair.

Many of the young dancers were remarkably pretty, all possessing the clear-cut features of their race. These Tsiganes are generally very attractive, and more than one of the great Russian nobles, who try to vie with the English in eccentricity, has not hesitated to choose his wife from among these gypsy girls. One of them was humming a song of strange rhythm, which might be thus rendered:

"Glitters brightly the gold In my raven locks streaming Rich coral around My graceful neck gleaming; Like a bird of the air, Through the wide world I roam."

The laughing girl continued her song, but Michael Strogoff ceased to listen. It struck him just then that the Tsigane, Sangarre, was regarding him with a peculiar gaze, as if to fix his features indelibly in her memory.

It was but for a few moments, when Sangarre herself followed the old man and his troop, who had already left the vessel. "That's a bold gypsy," said Michael to himself. "Could she have recognized me as the man whom she saw at Nijni-Novgorod? These confounded Tsiganes have the eyes of a cat! They can see in the dark; and that woman
Michael Strogoff was on the point of following Sangarre and the gypsy band, but he stopped. "No," thought he, "no unguarded proceedings. If I were to stop that old fortune teller and his companions my incognito would run a risk of being discovered. Besides, now they have landed, before they can pass the frontier I shall be far beyond it. They may take the route from Kasan to Ishim, but that affords no resources to travelers. Besides a tarantass, drawn by good Siberian horses, will always go faster than a gypsy cart! Come, friend Korpanoff, be easy."

By this time the man and Sangarre had disappeared.

Kasan is justly called the "Gate of Asia" and considered as the center of Siberian and Bokharian commerce; for two roads begin here and lead across the Ural Mountains. Michael Strogoff had very judiciously chosen the one by Perm and Ekaterenburg. It is the great stage road, well supplied with relays kept at the expense of the government, and is prolonged from Ishim to Irkutsk.

It is true that a second route--the one of which Michael had just spoken--avoiding the slight detour by Perm, also connects Kasan with Ishim. It is perhaps shorter than the other, but this advantage is much diminished by the absence of post-houses, the bad roads, and lack of villages. Michael Strogoff was right in the choice he had made, and if, as appeared probable, the gipsies should follow the second route from Kasan to Ishim, he had every chance of arriving before them.

An hour afterwards the bell rang on board the Caucasus, calling the new passengers, and recalling the former ones. It was now seven o'clock in the morning. The requisite fuel had been received on board. The whole vessel began to vibrate from the effects of the steam. She was ready to start. Passengers going from Kasan to Perm were crowding on the deck.

Michael noticed that of the two reporters Blount alone had rejoined the steamer. Was Alcide Jolivet about to miss his passage?

But just as the ropes were being cast off, Jolivet appeared, tearing along. The steamer was already sheering off, the gangway had been drawn onto the quay, but Alcide Jolivet would not stick at such a little thing as that, so, with a bound like a harlequin, he alighted on the deck of the Caucasus almost in his rival's arms.

"I thought the Caucasus was going without you," said the latter.

"Bah!" answered Jolivet, "I should soon have caught you up again, by chartering a boat at my cousin's expense, or by traveling post at twenty copecks a verst, and on horseback. What could I do? It was so long a way from the quay to the telegraph office."

"Have you been to the telegraph office?" asked Harry Blount, biting his lips.

"That's exactly where I have been!" answered Jolivet, with his most amiable smile.

"And is it still working to Kolyvan?"

"That I don't know, but I can assure you, for instance, that it is working from Kasan to Paris."

"You sent a dispatch to your cousin?"

"With enthusiasm."

"You had learnt then--?"

"Look here, little father, as the Russians say," replied Alcide Jolivet, "I'm a good fellow, and I don't wish to keep anything from you. The Tartars, and Feofar-Khan at their head, have passed Semipolatinsk, and are descending the Irtish. Do what you like with that!"

What! such important news, and Harry Blount had not known it; and his rival, who had probably learned it from some inhabitant of Kasan, had already transmitted it to Paris. The English paper was distanced! Harry Blount, crossing his hands behind him, walked off and seated himself in the stern without uttering a word.

About ten o'clock in the morning, the young Livonian, leaving her cabin, appeared on deck. Michael Strogoff went forward and took her hand. "Look, sister!" said he, leading her to the bows of the Caucasus.

The view was indeed well worth seeing. The Caucasus had reached the confluence of the Volga and the Kama. There she would leave the former river, after having descended it for nearly three hundred miles, to ascend the latter for a full three hundred.

The Kama was here very wide, and its wooded banks lovely. A few white sails enlivened the sparkling water. The horizon was closed by a line of hills covered with aspens, alders, and sometimes large oaks.

But these beauties of nature could not distract the thoughts of the young Livonian even for an instant. She had left her hand in that of her companion, and turning to him, "At what distance are we from Moscow?" she asked.

"Nine hundred versts," answered Michael.

"Nine hundred, out of seven thousand!" murmured the girl.

The bell now announced the breakfast hour. Nadia followed Michael Strogoff to the restaurant. She ate little, and as a poor girl whose means are small would do. Michael thought it best to content himself with the fare which satisfied his companion; and in less than twenty minutes he and Nadia returned on deck. There they seated
themselves in the stern, and without preamble, Nadia, lowering her voice to be heard by him alone, began:

"Brother, I am the daughter of an exile. My name is Nadia Fedor. My mother died at Riga scarcely a month ago, and I am going to Irkutsk to rejoin my father and share his exile."

"I, too, am going to Irkutsk," answered Michael, "and I shall thank Heaven if it enables me to give Nadia Fedor safe and sound into her father's hands."

"Thank you, brother," replied Nadia.

Michael Strogoff then added that he had obtained a special podorojna for Siberia, and that the Russian authorities could in no way hinder his progress.

Nadia asked nothing more. She saw in this fortunate meeting with Michael a means only of accelerating her journey to her father.

"I had," said she, "a permit which authorized me to go to Irkutsk, but the new order annulled that; and but for you, brother, I should have been unable to leave the town, in which, without doubt, I should have perished."

"And dared you, alone, Nadia," said Michael, "attempt to cross the steppes of Siberia?"

"The Tartar invasion was not known when I left Riga. It was only at Moscow that I learnt the news."

"And despite it, you continued your journey?"

"It was my duty."

The words showed the character of the brave girl.

She then spoke of her father, Wassili Fedor. He was a much-esteemed physician at Riga. But his connection with some secret society having been asserted, he received orders to start for Irkutsk. The police who brought the order conducted him without delay beyond the frontier.

Wassili Fedor had but time to embrace his sick wife and his daughter, so soon to be left alone, when, shedding bitter tears, he was led away. A year and a half after her husband's departure, Madame Fedor died in the arms of her daughter, who was thus left alone and almost penniless. Nadia Fedor then asked, and easily obtained from the Russian government, an authorization to join her father at Irkutsk. She wrote and told him she was starting. She had barely enough money for this long journey, and yet she did not hesitate to undertake it. She would do what she could. God would do the rest.

CHAPTER IX DAY AND NIGHT IN A TARANTASS

The next day, the 19th of July, the Caucasus reached Perm, the last place at which she touched on the Kama.

The government of which Perm is the capital is one of the largest in the Russian Empire, and, extending over the Ural Mountains, encroaches on Siberian territory. Marble quarries, mines of salt, platina, gold, and coal are worked here on a large scale. Although Perm, by its situation, has become an important town, it is by no means attractive, being extremely dirty, and without resources. This want of comfort is of no consequence to those going to Siberia, for they come from the more civilized districts, and are supplied with all necessaries.

At Perm travelers from Siberia resell their vehicles, more or less damaged by the long journey across the plains. There, too, those passing from Europe to Asia purchase carriages, or sleighs in the winter season.

Michael Strogoff had already sketched out his programme. A vehicle carrying the mail usually runs across the Ural Mountains, but this, of course, was discontinued. Even if it had not been so, he would not have taken it, as he wished to travel as fast as possible, without depending on anyone. He wisely preferred to buy a carriage, and journey by stages, stimulating the zeal of the postillions by well-applied "na vodkou," or tips.

Unfortunately, in consequence of the measures taken against foreigners of Asiatic origin, a large number of travelers had already left Perm, and therefore conveyances were extremely rare. Michael was obliged to content himself with what had been rejected by others. As to horses, as long as the Czar's courier was not in Siberia, he could exhibit his podorojna, and the postmasters would give him the preference. But, once out of Europe, he had to depend alone on the power of his roubles.

But to what sort of a vehicle should he harness his horses? To a telga or to a tarantass? The telga is nothing but an open four-wheeled cart, made entirely of wood, the pieces fastened together by means of strong rope. Nothing could be more primitive, nothing could be less comfortable; but, on the other hand, should any accident happen on the way, nothing could be more easily repaired. There is no want of firs on the Russian frontier, and axle-trees grow naturally in forests. The post extraordinary, known by the name of "perck-ladnoi," is carried by the telga, as any road is good enough for it. It must be confessed that sometimes the ropes which fasten the concern together break, and whilst the hinder part remains stuck in some bog, the fore-part arrives at the post-house on two wheels; but this result is considered quite satisfactory.

Michael Strogoff would have been obliged to employ a telga, if he had not been lucky enough to discover a tarantass. It is to be hoped that the invention of Russian coach-builders will devise some improvement in this last-
named vehicle. Springs are wanting in it as well as in the telga; in the absence of iron, wood is not spared; but its four wheels, with eight or nine feet between them, assure a certain equilibrium over the jolting rough roads. A splash-board protects the travelers from the mud, and a strong leathern hood, which may be pulled quite over the occupiers, shelters them from the great heat and violent storms of the summer. The tarantass is as solid and as easy to repair as the telga, and is, moreover, less addicted to leaving its hinder part in the middle of the road.

It was not without careful search that Michael managed to discover this tarantass, and there was probably not a second to be found in all Perm. He haggled long about the price, for form's sake, to act up to his part as Nicholas Korpanoff, a plain merchant of Irkutsk.

Nadia had followed her companion in his search after a suitable vehicle. Although the object of each was different, both were equally anxious to arrive at their goal. One would have said the same will animated them both.

"Sister," said Michael, "I wish I could have found a more comfortable conveyance for you."

"Do you say that to me, brother, when I would have gone on foot, if need were, to rejoin my father?"

"I do not doubt your courage, Nadia, but there are physical fatigue's a woman may be unable to endure."

"I shall endure them, whatever they be," replied the girl. "If you ever hear a complaint from me you may leave me in the road, and continue your journey alone."

Half an hour later, the podorojna being presented by Michael, three post-horses were harnessed to the tarantass. These animals, covered with long hair, were very like long-legged bears. They were small but spirited, being of Siberian breed. The way in which the iemschik harnessed them was thus: one, the largest, was secured between two long shafts, on whose farther end was a hoop carrying tassels and bells; the two others were simply fastened by ropes to the steps of the tarantass. This was the complete harness, with mere strings for reins.

Neither Michael Strogoff nor the young Livonian girl had any baggage. The rapidity with which one wished to make the journey, and the more than modest resources of the other, prevented them from embarrassing themselves with packages. It was a fortunate thing, under the circumstances, for the tarantass could not have carried both baggage and travelers. It was only made for two persons, without counting the iemschik, who kept his equilibrium with packages. It was a fortunate thing, under the circumstances, for the tarantass could not have carried both baggage and travelers. It was only made for two persons, without counting the iemschik, who kept his equilibrium on his narrow seat in a marvellous manner.

The iemschik is changed at every relay. The man who drove the tarantass during the first stage was, like his horses, a Siberian, and no less shaggy than they; long hair, cut square on the forehead, hat with a turned-up brim, red belt, coat with crossed facings and buttons stamped with the imperial cipher. The iemschik, on coming up with his team, threw an inquisitive glance at the passengers of the tarantass. No luggage!--and had there been, where in the world could he have stowed it? Rather shabby in appearance too. He looked contemptuous.

"Crows," said he, without caring whether he was overheard or not; "crows, at six copecks a verst!"

"No, eagles!" said Michael, who understood the iemschik's slang perfectly; "eagles, do you hear, at nine copecks a verst, and a tip besides."

He was answered by a merry crack of the whip.

In the language of the Russian postillions the "crow" is the stingy or poor traveler, who at the post-houses only pays two or three copecks a verst for the horses. The "eagle" is the traveler who does not mind expense, to say nothing of liberal tips. Therefore the crow could not claim to fly as rapidly as the imperial bird.

Nadia and Michael immediately took their places in the tarantass. A small store of provisions was put in the box, in case at any time they were delayed in reaching the post-houses, which are very comfortably provided under direction of the State. The hood was pulled up, as it was insupport-ably hot, and at twelve o'clock the tarantass left Perm in a cloud of dust.

The way in which the iemschik kept up the pace of his team would have certainly astonished travelers who, being neither Russians nor Siberians, were not accustomed to this sort of thing. The leader, rather larger than the others, kept to a steady long trot, perfectly regular, whether up or down hill. The two other horses seemed to know no other pace than the gallop, though they performed many an eccentric curvette as they went along. The iemschik, however, never touched them, only urging them on by startling cracks of his whip. But what epithets he lavished on them, including the names of all the saints in the calendar, when they behaved like docile and conscientious animals! The string which served as reins would have had no influence on the spirited beasts, but the words "na pravo," to the right, "na levo," to the left, pronounced in a guttural tone, were more effectual than either bridle or snaffle.

And what amiable expressions! "Go on, my doves!" the iemschik would say. "Go on, pretty swallows! Fly, my little pigeons! Hold up, my cousin on the left! Gee up, my little father on the right!"

But when the pace slackened, what insulting expressions, instantly understood by the sensitive animals! "Go on, you wretched snail! Confound you, you slug! I'll roast you alive, you torture, you!"

Whether or not it was from this way of driving, which requires the iemschiks to possess strong throats more than muscular arms, the tarantass flew along at a rate of from twelve to fourteen miles an hour. Michael Strogoff was accustomed both to the sort of vehicle and the mode of traveling. Neither jerks nor jolts incommoded him. He knew
that a Russian driver never even tries to avoid either stones, ruts, bogs, fallen trees, or trenches, which may happen to be in the road. He was used to all that. His companion ran a risk of being hurt by the violent jolts of the tarantass, but she would not complain.

For a little while Nadia did not speak. Then possessed with the one thought, that of reaching her journey's end, "I have calculated that there are three hundred versts between Perm and Ekaterenburg, brother," said she. "Am I right?"

"You are quite right, Nadia," answered Michael; "and when we have reached Ekaterenburg, we shall be at the foot of the Ural Mountains on the opposite side."

"How long will it take to get across the mountains?"

"Forty-eight hours, for we shall travel day and night. I say day and night, Nadia," added he, "for I cannot stop even for a moment; I go on without rest to Irkutsk."

"I shall not delay you, brother; no, not even for an hour, and we will travel day and night."

"Well then, Nadia, if the Tartar invasion has only left the road open, we shall arrive in twenty days."

"You have made this journey before?" asked Nadia.

"Many times."

"During winter we should have gone more rapidly and surely, should we not?"

"Yes, especially with more rapidity, but you would have suffered much from the frost and snow."

"What matter! Winter is the friend of Russia."

"Yes, Nadia, but what a constitution anyone must have to endure such friendship! I have often seen the temperature in the Siberian steppes fall to more than forty degrees below freezing point! I have felt, notwithstanding my reindeer coat, my heart growing chill, my limbs stiffening, my feet freezing in triple woolen socks; I have seen my sleigh horses covered with a coating of ice, their breath congealed at their nostrils. I have seen the brandy in my flask change into hard stone, on which not even my knife could make an impression. But my sleigh flew like the wind. Not an obstacle on the plain, white and level farther than the eye could reach! No rivers to stop one! Hard ice everywhere, the route open, the road sure! But at the price of what suffering, Nadia, those alone could say, who have never returned, but whose bodies have been covered up by the snow storm."

"However, you have returned, brother," said Nadia.

"Yes, but I am a Siberian, and, when quite a child, I used to follow my father to the chase, and so became inured to these hardships. But when you said to me, Nadia, that winter would not have stopped you, that you would have gone alone, ready to struggle against the frightful Siberian climate, I seemed to see you lost in the snow and falling, never to rise again."

"How many times have you crossed the steppe in winter?" asked the young Livonian.

"Three times, Nadia, when I was going to Omsk."

"And what were you going to do at Omsk?"

"See my mother, who was expecting me."

"And I am going to Irkutsk, where my father expects me. I am taking him my mother's last words. That is as much as to tell you, brother, that nothing would have prevented me from setting out."

"You are a brave girl, Nadia," replied Michael. "God Himself would have led you."

All day the tarantass was driven rapidly by the iemschiks, who succeeded each other at every stage. The eagles of the mountain would not have found their name dishonored by these "eagles" of the highway. The high price paid for each horse, and the tips dealt out so freely, recommended the travelers in a special way. Perhaps the postmasters thought it singular that, after the publication of the order, a young man and his sister, evidently both Russians, could travel freely across Siberia, which was closed to everyone else, but their papers were all en regle and they had the right to pass.

However, Michael Strogoff and Nadia were not the only travelers on their way from Perm to Ekaterenburg. At the first stages, the courier of the Czar had learnt that a carriage preceded them, but, as there was no want of horses, he did not trouble himself about that.

During the day, halts were made for food alone. At the post-houses could be found lodging and provision. Besides, if there was not an inn, the house of the Russian peasant would have been no less hospitable. In the villages, which are almost all alike, with their white-walled, green-roofed chapels, the traveler might knock at any door, and it would be opened to him. The moujik would come out, smiling and extending his hand to his guest. He would offer him bread and salt, the burning charcoal would be put into the "samovar," and he would be made quite at home. The family would turn out themselves rather than that he should not have room. The stranger is the relation of all. He is "one sent by God."

On arriving that evening Michael instinctively asked the postmaster how many hours ago the carriage which preceded them had passed that stage.

"Two hours ago, little father," replied the postmaster.
"Is it a berlin?"
"No, a telga."
"How many travelers?"
"Two."
"And they are going fast?"
"Eagles!"
"Let them put the horses to as soon as possible."

Michael and Nadia, resolved not to stop even for an hour, traveled all night. The weather continued fine, though the atmosphere was heavy and becoming charged with electricity. It was to be hoped that a storm would not burst whilst they were among the mountains, for there it would be terrible. Being accustomed to read atmospheric signs, Michael Strogoff knew that a struggle of the elements was approaching.

The night passed without incident. Notwithstanding the jolting of the tarantass, Nadia was able to sleep for some hours. The hood was partly raised so as to give as much air as there was in the stifling atmosphere.

Michael kept awake all night, mistrusting the iemschiks, who are apt to sleep at their posts. Not an hour was lost at the relays, not an hour on the road.

The next day, the 20th of July, at about eight o'clock in the morning, they caught the first glimpse of the Ural Mountains in the east. This important chain which separates Russia from Siberia was still at a great distance, and they could not hope to reach it until the end of the day. The passage of the mountains must necessarily be performed during the next night. The sky was cloudy all day, and the temperature was therefore more bearable, but the weather was very threatening.

It would perhaps have been more prudent not to have ascended the mountains during the night, and Michael would not have done so, had he been permitted to wait; but when, at the last stage, the iemschik drew his attention to a peal of thunder reverberating among the rocks, he merely said:
"Is a telga still before us?"
"Yes."
"How long is it in advance?"
"Nearly an hour."
"Forward, and a triple tip if we are at Ekaterenburg to-morrow morning."

CHAPTER X A STORM IN THE URAL MOUNTAINS

THE Ural Mountains extend in a length of over two thousand miles between Europe and Asia. Whether they are called the Urals, which is the Tartar, or the Poyas, which is the Russian name, they are correctly so termed; for these names signify "belt" in both languages. Rising on the shores of the Arctic Sea, they reach the borders of the Caspian. This was the barrier to be crossed by Michael Strogoff before he could enter Siberian Russia. The mountains could be crossed in one night, if no accident happened. Unfortunately, thunder muttering in the distance announced that a storm was at hand. The electric tension was such that it could not be dispersed without a tremendous explosion, which in the peculiar state of the atmosphere would be very terrible.

Michael took care that his young companion should be as well protected as possible. The hood, which might have been easily blown away, was fastened more securely with ropes, crossed above and at the back. The traces were doubled, and, as an additional precaution, the nave-boxes were stuffed with straw, as much to increase the strength of the wheels as to lessen the jolting, unavoidable on a dark night. Lastly, the fore and hinder parts, connected simply by the axles to the body of the tarantass, were joined one to the other by a crossbar, fixed by means of pins and screws.

Nadia resumed her place in the cart, and Michael took his seat beside her. Before the lowered hood hung two leathern curtains, which would in some degree protect the travelers against the wind and rain. Two great lanterns, suspended from the iemschik's seat, threw a pale glimmer scarcely sufficient to light the way, but serving as warning lights to prevent any other carriage from running into them.

It was well that all these precautions were taken, in expectation of a rough night. The road led them up towards dense masses of clouds, and should the clouds not soon resolve into rain, the fog would be such that the tarantass would be unable to advance without danger of falling over some precipice.

The Ural chain does not attain any very great height, the highest summit not being more than five thousand feet. Eternal snow is there unknown, and what is piled up by the Siberian winter is soon melted by the summer sun. Shrubs and trees grow to a considerable height. The iron and copper mines, as well as those of precious stones, draw a considerable number of workmen to that region. Also, those villages termed "gavody" are there met with pretty frequently, and the road through the great passes is easily practicable for post-carriages.
But what is easy enough in fine weather and broad daylight, offers difficulties and perils when the elements are engaged in fierce warfare, and the traveler is in the midst of it. Michael Strogoff knew from former experience what a storm in the mountains was, and perhaps this would be as terrible as the snowstorms which burst forth with such vehemence in the winter.

Rain was not yet falling, so Michael raised the leathern curtains which protected the interior of the tarantass and looked out, watching the sides of the road, peopled with fantastic shadows, caused by the wavering light of the lanterns. Nadia, motionless, her arms folded, gazed forth also, though without leaning forward, whilst her companion, his body half out of the carriage, examined both sky and earth.

The calmness of the atmosphere was very threatening, the air being perfectly still. It was just as if Nature were half stifled, and could no longer breathe; her lungs, that is to say those gloomy, dense clouds, not being able to perform their functions. The silence would have been complete but for the grindings of the wheels of the tarantass over the road, the creaking of the axles, the snorting of the horses, and the clattering of their iron hoofs among the pebbles, sparks flying out on every side.

The road was perfectly deserted. The tarantass encountered neither pedestrians nor horsemen, nor a vehicle of any description, in the narrow defiles of the Ural, on this threatening night. Not even the fire of a charcoal-burner was visible in the woods, not an encampment of miners near the mines, not a hut among the brushwood.

Under these peculiar circumstances it might have been allowable to postpone the journey till the morning. Michael Strogoff, however, had not hesitated, he had no right to stop, but then--and it began to cause him some anxiety--what possible reason could those travelers in the telga ahead have for being so imprudent?

Michael Strogoff, however, had not hesitated, he had no right to stop, but then--and it began to cause him some anxiety--what possible reason could those travelers in the telga ahead have for being so imprudent?

Michael Strogoff, however, had not hesitated, he had no right to stop, but then--and it began to cause him some anxiety--what possible reason could those travelers in the telga ahead have for being so imprudent?

"At what time shall we reach the top of the ridge?" asked Michael of the iemschik.
"At one o'clock in the morning if we ever get there at all," replied he, with a shake of his head.
"Why, my friend, this will not be your first storm in the mountains, will it?"
"No, and pray God it may not be my last!"
"Are you afraid?"
"No, I'm not afraid, but I repeat that I think you were wrong in starting."
"I should have been still more wrong had I stayed."
"Hold up, my pigeons!" cried the iemschik; it was his business to obey, not to question.

Just then a distant noise was heard, shrill whistling through the atmosphere, so calm a minute before. By the light of a dazzling flash, almost immediately followed by a tremendous clap of thunder, Michael could see huge pines on a high peak, bending before the blast. The wind was unchained, but as yet it was the upper air alone which was disturbed. Successive crashes showed that many of the trees had been unable to resist the burst of the hurricane. An avalanche of shattered trunks swept across the road and dashed over the precipice on the left, two hundred feet in front of the tarantass.

The horses stopped short.
"Get up, my pretty doves!" cried the iemschik, adding the cracking of his whip to the rumbling of the thunder. Michael took Nadia's hand. "Are you asleep, sister?"
"No, brother."
"Be ready for anything; here comes the storm!"
"I am ready."

Michael Strogoff had only just time to draw the leathern curtains, when the storm was upon them.

The iemschik leapt from his seat and seized the horses' heads, for terrible danger threatened the whole party. The tarantass was at a standstill at a turning of the road, down which swept the hurricane; it was absolutely necessary to hold the animals' heads to the wind, for if the carriage was taken broadside it must infallibly capsize and be dashed over the precipice. The frightened horses reared, and their driver could not manage to quiet them. His friendly expressions had been succeeded by the most insulting epithets. Nothing was of any use. The unfortunate animals, blinded by the lightning, terrified by the incessant peals of thunder, threatened every instant to break their traces and flee. The iemschik had no longer any control over his team.
At that moment Michael Strogoff threw himself from the tarantass and rushed to his assistance. Endowed with more than common strength, he managed, though not without difficulty, to master the horses.

The storm now raged with redoubled fury. A perfect avalanche of stones and trunks of trees began to roll down the slope above them.

"We cannot stop here," said Michael.

"We cannot stop anywhere," returned the iemschik, all his energies apparently overcome by terror. "The storm will soon send us to the bottom of the mountain, and that by the shortest way."

"Take you that horse, coward," returned Michael, "I'll look after this one."

A fresh burst of the storm interrupted him. The driver and he were obliged to crouch upon the ground to avoid being blown down. The carriage, notwithstanding their efforts and those of the horses, was gradually blown back, and had it not been stopped by the trunk of a tree, it would have gone over the edge of the precipice.

"Do not be afraid, Nadia!" cried Michael Strogoff.

"I'm not afraid," replied the young Livonian, her voice not betraying the slightest emotion.

The storm had not been securely fastened, it would have been blown away long before. Michael Strogoff and the iemschik took more than two hours in getting up this bit of road, only half a verst in length, so directly exposed was it to the lashing of the storm. The danger was not only from the wind which battered against the travelers, but from the avalanche of stones and broken trunks which were hurtling through the air.

Suddenly, during a flash of lightning, one of these masses was seen crashing and rolling down the mountain towards the tarantass. The iemschik uttered a cry.

Michael Strogoff in vain brought his whip down on the team, they refused to move.

A few feet farther on, and the mass would pass behind them! Michael saw the tarantass struck, his companion crushed; he saw there was no time to drag her from the vehicle.

Then, possessed in this hour of peril with superhuman strength, he threw himself behind it, and planting his feet on the ground, by main force placed it out of danger.

The enormous mass as it passed grazed his chest, taking away his breath as though it had been a cannon-ball, then crushing to powder the flints on the road, it bounded into the abyss below.

"Oh, brother!" cried Nadia, who had seen it all by the light of the flashes.

"Nadia!" replied Michael, "fear nothing!"

"It is not on my own account that I fear!"

"God is with us, sister!"

"With me truly, brother, since He has sent thee in my way!" murmured the young girl.

The impetus the tarantass had received was not to be lost, and the tired horses once more moved forward. Dragged, so to speak, by Michael and the iemschik, they toiled on towards a narrow pass, lying north and south, where they would be protected from the direct sweep of the tempest. At one end a huge rock jutted out, round the summit of which whirled an eddy. Behind the shelter of the rock there was a comparative calm; yet once within the circumference of the cyclone, neither man nor beast could resist its power.

Indeed, some firs which towered above this protection were in a trice shorn of their tops, as though a gigantic scythe had swept across them. The storm was now at its height. The lightning filled the defile, and the thunderclaps had become one continued peal. The ground, struck by the concussion, trembled as though the whole Ural chain was shaken to its foundations.

Happily, the tarantass could be so placed that the storm might strike it obliquely. But the counter-currents, directed towards it by the slope, could not be so well avoided, and so violent were they that every instant it seemed...
as though it would be dashed to pieces.

Nadia was obliged to leave her seat, and Michael, by the light of one of the lanterns, discovered an excavation bearing the marks of a miner's pick, where the young girl could rest in safety until they could once more start.

Just then—it was one o'clock in the morning—the rain began to fall in torrents, and this in addition to the wind and lightning, made the storm truly frightful. To continue the journey at present was utterly impossible. Besides, having reached this pass, they had only to descend the slopes of the Ural Mountains, and to descend now, with the road torn up by a thousand mountain torrents, in these eddies of wind and rain, was utter madness.

"To wait is indeed serious," said Michael, "but it must certainly be done, to avoid still longer detentions. The very violence of the storm makes me hope that it will not last long. About three o'clock the day will begin to break, and the descent, which we cannot risk in the dark, we shall be able, if not with ease, at least without such danger, to attempt after sunrise."

"Let us wait, brother," replied Nadia; "but if you delay, let it not be to spare me fatigue or danger."

"Nadia, I know that you are ready to brave everything, but, in exposing both of us, I risk more than my life, more than yours, I am not fulfilling my task, that duty which before everything else I must accomplish."

"A duty!" murmured Nadia.

Just then a bright flash lit up the sky; a loud clap followed. The air was filled with sulphurous suffocating vapor, and a clump of huge pines, struck by the electric fluid, scarcely twenty feet from the tarantass, flared up like a gigantic torch.

The iemschik was struck to the ground by a counter-shock, but, regaining his feet, found himself happily unhurt.

Just as the last growlings of the thunder were lost in the recesses of the mountain, Michael felt Nadia's hand pressing his, and he heard her whisper these words in his ear: "Cries, brother! Listen!"

CHAPTER XI TRAVELERS IN DISTRESS

DURING the momentary lull which followed, shouts could be distinctly heard from farther on, at no great distance from the tarantass. It was an earnest appeal, evidently from some traveler in distress.

Michael listened attentively. The iemschik also listened, but shook his head, as though it was impossible to help.

"They are travelers calling for aid," cried Nadia.

"They can expect nothing," replied the iemschik.

"Why not?" cried Michael. "Ought not we do for them what they would for us under similar circumstances?"

"Surely you will not risk the carriage and horses!"

"I will go on foot," replied Michael, interrupting the iemschik.

"I will go, too, brother," said the young girl.

"No, remain here, Nadia. The iemschik will stay with you. I do not wish to leave him alone."

"I will stay," replied Nadia.

"Whatever happens, do not leave this spot."

"You will find me where I now am."

Michael pressed her hand, and, turning the corner of the slope, disappeared in the darkness.

"Your brother is wrong," said Strogoff simply.

Meanwhile Strogoff strode rapidly on. If he was in a great hurry to aid the travelers, he was also very anxious to know who it was that had not been hindered from starting by the storm; for he had no doubt that the cries came from the telga, which had so long preceded him.

The rain had stopped, but the storm was raging with redoubled fury. The shouts, borne on the air, became more distinct. Nothing was to be seen of the pass in which Nadia remained. The road wound along, and the squalls, checked by the corners, formed eddies highly dangerous, to pass which, without being taken off his legs, Michael had to use his utmost strength.

He soon perceived that the travelers whose shouts he had heard were at no great distance. Even then, on account of the darkness, Michael could not see them, yet he heard distinctly their words.

This is what he heard, and what caused him some surprise: "Are you coming back, blockhead?"

"You shall have a taste of the knout at the next stage."

"Do you hear, you devil's postillion! Hullo! Below!"

"This is how a carriage takes you in this country!"

"Yes, this is what you call a telga!"

"Oh, that abominable driver! He goes on and does not appear to have discovered that he has left us behind!"

"To deceive me, too! Me, an honorable Englishman! I will make a complaint at the chancellor's office and have
the fellow hanged."

This was said in a very angry tone, but was suddenly interrupted by a burst of laughter from his companion, who exclaimed, "Well! this is a good joke, I must say."

"You venture to laugh!" said the Briton angrily.

"Certainly, my dear confrere, and that most heartily. 'Pon my word I never saw anything to come up to it."

Just then a crashing clap of thunder re-echoed through the defile, and then died away among the distant peaks. When the sound of the last growl had ceased, the merry voice went on: "Yes, it undoubtedly is a good joke. This machine certainly never came from France."

"Nor from England," replied the other.

On the road, by the light of the flashes, Michael saw, twenty yards from him, two travelers, seated side by side in a most peculiar vehicle, the wheels of which were deeply imbedded in the ruts formed in the road.

He approached them, the one grinning from ear to ear, and the other gloomily contemplating his situation, and recognized them as the two reporters who had been his companions on board the Caucasus.

"Good-morning to you, sir," cried the Frenchman. "Delighted to see you here. Let me introduce you to my intimate enemy, Mr. Blount."

The English reporter bowed, and was about to introduce in his turn his companion, Alcide Jolivet, in accordance with the rules of society, when Michael interrupted him.

"Perfectly unnecessary, sir; we already know each other, for we traveled together on the Volga."

"Ah, yes! exactly so! Mr.--" "Nicholas Korpanoff, merchant, of Irkutsk. But may I know what has happened which, though a misfortune to your companion, amuses you so much?"

"Certainly, Mr. Korpanoff," replied Alcide. "Fancy! our driver has gone off with the front part of this confounded carriage, and left us quietly seated in the back part! So here we are in the worse half of a telga; no driver, no horses. Is it not a joke?"

"No joke at all," said the Englishman.

"Indeed it is, my dear fellow. You do not know how to look at the bright side of things."

"How, pray, are we to go on?" asked Blount.

"That is the easiest thing in the world," replied Alcide. "Go and harness yourself to what remains of our cart; I will take the reins, and call you my little pigeon, like a true iemschik, and you will trot off like a real post-horse."

"Mr. Jolivet," replied the Englishman, "this joking is going too far, it passes all limits and--"

"Now do be quiet, my dear sir. When you are done up, I will take your place; and call me a broken-winded snail and faint-hearted tortoise if I don't take you over the ground at a rattling pace."

Alcide said all this with such perfect good-humor that Michael could not help smiling. "Gentlemen," said he, "here is a better plan. We have now reached the highest ridge of the Ural chain, and thus have merely to descend the slopes of the mountain. My carriage is close by, only two hundred yards behind. I will lend you one of my horses, harness it to the remains of the telga, and to-mor-how, if no accident befalls us, we will arrive together at Ekaterenburg."

"That, Mr. Korpanoff," said Alcide, "is indeed a generous proposal."

"Indeed, sir," replied Michael, "I would willingly offer you places in my tarantass, but it will only hold two, and my sister and I already fill it."

"Really, sir," answered Alcide, "with your horse and our demi-telga we will go to the world's end."

"Sir," said Harry Blount, "we most willingly accept your kind offer. And, as to that iemschik--"

"Oh! I assure you that you are not the first travelers who have met with a similar misfortune," replied Michael.

"But why should not our driver come back? He knows perfectly well that he has left us behind, wretch that he is!"

"He! He never suspected such a thing."

"What! the fellow not know that he was leaving the better half of his telga behind?"

"Not a bit, and in all good faith is driving the fore part into Ekaterenburg."

"Did I not tell you that it was a good joke, confrere?" cried Alcide.

"Then, gentlemen, if you will follow me," said Michael, "we will return to my carriage, and--"

"But the telga," observed the Englishman.

"There is not the slightest fear that it will fly away, my dear Blount!" exclaimed Alcide; "it has taken such good root in the ground, that if it were left here until next spring it would begin to bud."

"Come then, gentlemen," said Michael Strogoff, "and we will bring up the tarantass."

The Frenchman and the Englishman, descending from their seats, no longer the hinder one, since the front had taken its departure, followed Michael.
Walking along, Alcide Jolivet chattered away as usual, with his invariable good-humor. "Faith, Mr. Korpanoff," said he, "you have indeed got us out of a bad scrape."

"I have only done, sir," replied Michael, "what anyone would have done in my place."

"Well, sir, you have done us a good turn, and if you are going farther we may possibly meet again, and--"

Alcide Jolivet did not put any direct question to Michael as to where he was going, but the latter, not wishing it to be suspected that he had anything to conceal, at once replied, "I am bound for Omsk, gentlemen."

"Mr. Blount and I," replied Alcide, "go where danger is certainly to be found, and without doubt news also."

"To the invaded provinces?" asked Michael with some earnestness.

"Exactly so, Mr. Korpanoff; and we may possibly meet there."

"Indeed, sir," replied Michael, "I have little love for cannon-balls or lance points, and am by nature too great a lover of peace to venture where fighting is going on."

"I am sorry, sir, extremely sorry; we must only regret that we shall separate so soon! But on leaving Ekaterenburg it may be our fortunate fate to travel together, if only for a few days?"

"Do you go on to Omsk?" asked Michael, after a moment's reflection.

"We know nothing as yet," replied Alcide, "but we shall certainly go as far as Ishim, and once there, our movements must depend on circumstances."

"Well then, gentlemen," said Michael, "we will be fellow-travelers as far as Ishim."

Michael would certainly have preferred to travel alone, but he could not, without appearing at least singular, seek to separate himself from the two reporters, who were taking the same road that he was. Besides, since Alcide and his companion intended to make some stay at Ishim, he thought it rather convenient than otherwise to make that part of the journey in their company.

Then in an indifferent tone he asked, "Do you know, with any certainty, where this Tartar invasion is?"

"Indeed, sir," replied Alcide, "we only know what they said at Perm. Feofar-Khan's Tartars have invaded the whole province of Semipolatinsk, and for some days, by forced marches, have been descending the Irtish. You must hurry if you wish to get to Omsk before them."

"Indeed I must," replied Michael.

"It is reported also that Colonel Ogareff has succeeded in passing the frontier in disguise, and that he will not be slow in joining the Tartar chief in the revolted country."

"But how do they know it?" asked Michael, whom this news, more or less true, so directly concerned.

"Oh! as these things are always known," replied Alcide; "it is in the air."

"Then have you really reason to think that Colonel Ogareff is in Siberia?"

"I myself have heard it said that he was to take the road from Kasan to Ekaterenburg."

"Ah! you know that, Mr. Jolivet?" said Harry Blount, roused from his silence.

"I knew it," replied Alcide.

"And do you know that he went disguised as a gypsy!" asked Blount.

"As a gypsy!" exclaimed Michael, almost involuntarily, and he suddenly remembered the look of the old Bohemian at Nijni-Novgorod, his voyage on board the Caucasus, and his disembarking at Kasan.

"Just well enough to make a few remarks on the subject in a letter to my cousin," replied Alcide, smiling.

"You lost no time at Kasan," dryly observed the Englishman.

"No, my dear fellow! and while the Caucasus was laying in her supply of fuel, I was employed in obtaining a store of information."

Michael no longer listened to the repartee which Harry Blount and Alcide exchanged. He was thinking of the gypsy troupe, of the old Tsigane, whose face he had not been able to see, and of the strange woman who accompanied him, and then of the peculiar glance which she had cast at him. Suddenly, close by he heard a pistol-shot.

"Ah! forward, sirs!" cried he.

"Hullo!" said Alcide to himself, "this quiet merchant who always avoids bullets is in a great hurry to go where they are flying about just now!"

Quickly followed by Harry Blount, who was not a man to be behind in danger, he dashed after Michael. In another instant the three were opposite the projecting rock which protected the tarantass at the turning of the road.

The clump of pines struck by the lightning was still burning. There was no one to be seen. However, Michael was not mistaken. Suddenly a dreadful growling was heard, and then another report.

"A bear;" cried Michael, who could not mistake the growling. "Nadia; Nadia!" And drawing his cutlass from his belt, Michael bounded round the buttress behind which the young girl had promised to wait.

The pines, completely enveloped in flames, threw a wild glare on the scene. As Michael reached the tarantass, a huge animal retreated towards him.
It was a monstrous bear. The tempest had driven it from the woods, and it had come to seek refuge in this cave, doubtless its habitual retreat, which Nadia then occupied.

Two of the horses, terrified at the presence of the enormous creature, breaking their traces, had escaped, and the iemschik, thinking only of his beasts, leaving Nadia face to face with the bear, had gone in pursuit of them.

But the brave girl had not lost her presence of mind. The animal, which had not at first seen her, was attacking the remaining horse. Nadia, leaving the shelter in which she had been crouching, had run to the carriage, taken one of Michael's revolvers, and, advancing resolutely towards the bear, had fired close to it.

The animal, slightly wounded in the shoulder, turned on the girl, who rushed for protection behind the tarantass, but then, seeing that the horse was attempting to break its traces, and knowing that if it did so, and the others were not recovered, their journey could not be continued, with the most perfect coolness she again approached the bear, and, as it raised its paws to strike her down, gave it the contents of the second barrel.

This was the report which Michael had just heard. In an instant he was on the spot. Another bound and he was between the bear and the girl. His arm made one movement upwards, and the enormous beast, ripped up by that terrible knife, fell to the ground a lifeless mass. He had executed in splendid style the famous blow of the Siberian hunters, who endeavor not to damage the precious fur of the bear, which fetches a high price.

"You are not wounded, sister?" said Michael, springing to the side of the young girl.

"No, brother," replied Nadia.

At that moment the two journalists came up. Alcide seized the horse's head, and, in an instant, his strong wrist mastered it. His companion and he had seen Michael's rapid stroke. "Bravo!" cried Alcide; "for a simple merchant, Mr. Korpanoff, you handle the hunter's knife in a most masterly fashion."

"Most masterly, indeed," added Blount.

"In Siberia," replied Michael, "we are obliged to do a little of everything."

Alcide regarded him attentively. Seen in the bright glare, his knife dripping with blood, his tall figure, his foot firm on the huge carcass, he was indeed worth looking at.

"A formidable fellow," said Alcide to himself. Then advancing respectfully, he saluted the young girl.

Nadia bowed slightly.

Alcide turned towards his companion. "The sister worthy of the brother!" said he. "Now, were I a bear, I should not meddle with two so brave and so charming."

Harry Blount, perfectly upright, stood, hat in hand, at some distance. His companion's easy manners only increased his usual stiffness.

At that moment the iemschik, who had succeeded in recapturing his two horses, reappeared. He cast a regretful glance at the magnificent animal lying on the ground, loth to leave it to the birds of prey, and then proceeded once more to harness his team.

Michael acquainted him with the travelers' situation, and his intention of loaning one of the horses.

"As you please," replied the iemschik. "Only, you know, two carriages instead of one."

"All right, my friend," said Alcide, who understood the insinuation, "we will pay double."

"Then gee up, my turtle-doves!" cried the iemschik.

Nadia again took her place in the tarantass. Michael and his companions followed on foot. It was three o'clock. The storm still swept with terrific violence across the defile. When the first streaks of daybreak appeared the tarantass had reached the telga, which was still conscientiously imbedded as far as the center of the wheel. Such being the case, it can be easily understood how a sudden jerk would separate the front from the hinder part. One of the horses was now harnessed by means of cords to the remains of the telga, the reporters took their place on the singular equipage, and the two carriages started off. They had now only to descend the Ural slopes, in doing which there was not the slightest difficulty.

Six hours afterwards the two vehicles, the tarantass preceding the telga, arrived at Ekaterenburg, nothing worthy of note having happened in the descent.

The first person the reporters perceived at the door of the post-house was their iemschik, who appeared to be waiting for them. This worthy Russian had a fine open countenance, and he smilingly approached the travelers, and, holding out his hand, in a quiet tone he demanded the usual "pour-boire."

This very cool request roused Blount's ire to its highest pitch, and had not the iemschik prudently retreated, a straight-out blow of the fist, in true British boxing style, would have paid his claim of "na vodkou."

Alcide Jolivet, at this burst of anger, laughed as he had never laughed before.

"But the poor devil is quite right!" he cried. "He is perfectly right, my dear fellow. It is not his fault if we did not know how to follow him!"

Then drawing several copecks from his pocket, "Here my friend," said he, handing them to the iemschik; "take them. If you have not earned them, that is not your fault."
This redoubled Mr. Blount's irritation. He even began to speak of a lawsuit against the owner of the telga.

"A lawsuit in Russia, my dear fellow!" cried Alcide. "Things must indeed change should it ever be brought to a conclusion! Did you never hear the story of the wet-nurse who claimed payment of twelve months' nursing of some poor little infant?"

"I never heard it," replied Harry Blount.

"Then you do not know what that suckling had become by the time judgment was given in favor of the nurse?"

"What was he, pray?"

"Colonel of the Imperial Guard!"

At this reply all burst into a laugh.

Alcide, enchanted with his own joke, drew out his notebook, and in it wrote the following memorandum, destined to figure in a forthcoming French and Russian dictionary: "Telga, a Russian carriage with four wheels, that is when it starts; with two wheels, when it arrives at its destination."

CHAPTER XII PROVOCATION

EKATERENBURG, geographically, is an Asiatic city; for it is situated beyond the Ural Mountains, on the farthest eastern slopes of the chain. Nevertheless, it belongs to the government of Perm; and, consequently, is included in one of the great divisions of European Russia. It is as though a morsel of Siberia lay in Russian jaws.

Neither Michael nor his companions were likely to experience the slightest difficulty in obtaining means of continuing their journey in so large a town as Ekaterenburg. It was founded in 1723, and has since become a place of considerable size, for in it is the chief mint of the empire. There also are the headquarters of the officials employed in the management of the mines. Thus the town is the center of an important district, abounding in manufactories principally for the working and refining of gold and platina.

Just now the population of Ekaterenburg had greatly increased; many Russians and Siberians, menaced by the Tartar invasion, having collected there. Thus, though it had been so troublesome a matter to find horses and vehicles when going to Ekaterenburg, there was no difficulty in leaving it; for under present circumstances few travelers cared to venture on the Siberian roads.

So it happened that Blount and Alcide had not the slightest trouble in replacing, by a sound telga, the famous demi-carriage which had managed to take them to Ekaterenburg. As to Michael, he retained his tarantass, which was not much the worse for its journey across the Urals; and he had only to harness three good horses to it to take him swiftly over the road to Irkutsk.

As far as Tioumen, and even up to Novo-Zaimskoe, this road has slight inclines, which gentle undulations are the first signs of the slopes of the Ural Mountains. But after Novo-Zaimskoe begins the immense steppe.

At Ichim, as we have said, the reporters intended to stop, that is at about four hundred and twenty miles from Ekaterenburg. There they intended to be guided by circumstances as to their route across the invaded country, either together or separately, according as their news-hunting instinct set them on one track or another.

This road from Ekaterenburg to Ichim—which passes through Irkutsk—was the only one which Michael could take. But, as he did not run after news, and wished, on the contrary, to avoid the country devastated by the invaders, he determined to stop nowhere.

"I am very happy to make part of my journey in your company," said he to his new companions, "but I must tell you that I am most anxious to reach Omsk; for my sister and I are going to rejoin our mother. Who can say whether we shall arrive before the Tartars reach the town! I must therefore stop at the post-houses only long enough to change horses, and must travel day and night."

"That is exactly what we intend doing," replied Blount.

"Good," replied Michael; "but do not lose an instant. Buy or hire a carriage whose—"

"Whose hind wheels," added Alcide, "are warranted to arrive at the same time as its front wheels."

Half an hour afterwards the energetic Frenchman had found a tarantass in which he and his companion at once seated themselves. Michael and Nadia once more entered their own carriage, and at twelve o'clock the two vehicles left the town of Ekaterenburg together.

Nadia was at last in Siberia, on that long road which led to Irkutsk. What must then have been the thoughts of the young girl? Three strong swift horses were taking her across that land of exile where her parent was condemned to live, for how long she knew not, and so far from his native land. But she scarcely noticed those long steppes over which the tarantass was rolling, and which at one time she had despaired of ever seeing, for her eyes were gaz ing at the horizon, beyond which she knew her banished father was. She saw nothing of the country across which she was traveling at the rate of fifteen versts an hour; nothing of these regions of Western Siberia, so different from those of the east. Here, indeed, were few cultivated fields; the soil was poor, at least at the surface, but in its bowels lay hid
quantities of iron, copper, platina, and gold. How can hands be found to cultivate the land, when it pays better to burrow beneath the earth? The pickaxe is everywhere at work; the spade nowhere.

However, Nadia's thoughts sometimes left the provinces of Lake Baikal, and returned to her present situation. Her father's image faded away, and was replaced by that of her generous companion as he first appeared on the Vladimir railroad. She recalled his attentions during that journey, his arrival at the police-station, the hearty simplicity with which he had called her sister, his kindness to her in the descent of the Volga, and then all that he did for her on that terrible night of the storm in the Urals, when he saved her life at the peril of his own.

Thus Nadia thought of Michael. She thanked God for having given her such a gallant protector, a friend so generous and wise. She knew that she was safe with him, under his protection. No brother could have done more than he. All obstacles seemed cleared away; the performance of her journey was but a matter of time.

Michael remained buried in thought. He also thanked God for having brought about this meeting with Nadia, which at the same time enabled him to do a good action, and afforded him additional means for concealing his true character. He delighted in the young girl's calm intrepidity. Was she not indeed his sister? His feeling towards his beautiful and brave companion was rather respect than affection. He felt that hers was one of those pure and rare hearts which are held by all in high esteem.

However, Michael's dangers were now beginning, since he had reached Siberian ground. If the reporters were not mistaken, if Ivan Ogareff had really passed the frontier, all his actions must be made with extreme caution. Things were now altered; Tartar spies swarmed in the Siberian provinces. His incognito once discovered, his character as courier of the Czar known, there was an end of his journey, and probably of his life. Michael felt now more than ever the weight of his responsibility.

While such were the thoughts of those occupying the first carriage, what was happening in the second? Nothing out of the way. Alcide spoke in sentences; Blount replied by monosyllables. Each looked at everything in his own light, and made notes of such incidents as occurred on the journey--few and but slightly varied--while they crossed the provinces of Western Siberia.

At each relay the reporters descended from their carriage and found themselves with Michael. Except when meals were to be taken at the post-houses, Nadia did not leave the tarantass. When obliged to breakfast or dine, she sat at table, but was always very reserved, and seldom joined in conversation.

Alcide, without going beyond the limits of strict propriety, showed that he was greatly struck by the young girl. He admired the silent energy which she showed in bearing all the fatigues of so difficult a journey.

The forced stoppages were anything but agreeable to Michael; so he hastened the departure at each relay, roused the innkeepers, urged on the iemschiks, and expedited the harnessing of the tarantass. Then the hurried meal over--always much too hurried to agree with Blount, who was a methodical eater--they started, and were driven as eagles, for they paid like princes.

It need scarcely be said that Blount did not trouble himself about the girl at table. That gentleman was not in the habit of doing two things at once. She was also one of the few subjects of conversation which he did not care to discuss with his companion.

Alcide having asked him, on one occasion, how old he thought the girl, "What girl?" he replied, quite seriously. "Why, Nicholas Korpanoff's sister."

"Is she his sister?"

"No; his grandmother!" replied Alcide, angry at his indifference. "What age should you consider her?"

"Had I been present at her birth I might have known."

Very few of the Siberian peasants were to be seen in the fields. These peasants are remarkable for their pale, grave faces, which a celebrated traveler has compared to those of the Castilians, without the haughtiness of the latter. Here and there some villages already deserted indicated the approach of the Tartar hordes. The inhabitants, having driven off their flocks of sheep, their camels, and their horses, were taking refuge in the plains of the north. Some tribes of the wandering Kirghiz, who remained faithful, had transported their tents beyond the Irtych, to escape the depredations of the invaders.

Happily, post traveling was as yet uninterrupted; and telegraphic communication could still be effected between places connected with the wire. At each relay horses were to be had on the usual conditions. At each telegraphic station the clerks transmitted messages delivered to them, delaying for State dispatches alone.

Thus far, then, Michael's journey had been accomplished satisfactorily. The courier of the Czar had in no way been impeded; and, if he could only get on to Krasnoiarsk, which seemed the farthest point attained by Feofar-Khan's Tartars, he knew that he could arrive at Irkustsk, before them. The day after the two carriages had left Ekaterenburg they reached the small town of Toulouguisk at seven o'clock in the morning, having covered two hundred and twenty versts, no event worthy of mention having occurred. The same evening, the 22d of July, they arrived at Tioumen.
Tioumen, whose population is usually ten thousand inhabitants, then contained double that number. This, the first industrial town established by the Russians in Siberia, in which may be seen a fine metal-refining factory and a bell foundry, had never before presented such an animated appearance. The correspondents immediately went off after news. That brought by Siberian fugitives from the seat of war was far from reassuring. They said, amongst other things, that Feofar-Khan's army was rapidly approaching the valley of the Ichim, and they confirmed the report that the Tartar chief was soon to be joined by Colonel Ogareff, if he had not been so already. Hence the conclusion was that operations would be pushed in Eastern Siberia with the greatest activity. However, the loyal Cossacks of the government of Tobolsk were advancing by forced marches towards Tomsk, in the hope of cutting off the Tartar columns.

At midnight the town of Novo-Saimsk was reached; and the travelers now left behind them the country broken by tree-covered hills, the last remains of the Urals.

Here began the regular Siberian steppe which extends to the neighborhood of Krasnoiarsk. It is a boundless plain, a vast grassy desert; earth and sky here form a circle as distinct as that traced by a sweep of the compasses. The steppe presents nothing to attract notice but the long line of the telegraph posts, their wires vibrating in the breeze like the strings of a harp. The road could be distinguished from the rest of the plain only by the clouds of fine dust which rose under the wheels of the tarantass. Had it not been for this white ribbon, which stretched away as far as the eye could reach, the travelers might have thought themselves in a desert.

Michael and his companions again pressed rapidly forward. The horses, urged on by the iemschik, seemed to fly over the ground, for there was not the slightest obstacle to impede them. The tarantass was going straight for Ichim, where the two correspondents intended to stop, if nothing happened to make them alter their plans.

A hundred and twenty miles separated Novo-Saimsk from the town of Ichim, and before eight o'clock the next evening the distance could and should be accomplished if no time was lost. In the opinion of the iemschiks, should the travelers not be great lords or high functionaries, they were worthy of being so, if it was only for their generosity in the matter of "na vodkou."

On the afternoon of the next day, the 23rd of July, the two carriages were not more than thirty versts from Ichim. Suddenly Michael caught sight of a carriage—scarcely visible among the clouds of dust—preceeding them along the road. As his horses were evidently less fatigued than those of the other traveler, he would not be long in overtaking it. This was neither a tarantass nor a telga, but a post-berlin, which looked as if it had made a long journey. The postillion was thrashing his horses with all his might, and only kept them at a gallop by dint of abuse and blows. The berlin had certainly not passed through Novo-Saimsk, and could only have struck the Irkutsk road by some less frequented route across the steppe.

Our travelers' first thought, on seeing this berlin, was to get in front of it, and arrive first at the relay, so as to make sure of fresh horses. They said a word to their iemschiks, who soon brought them up with the berlin.

Michael Strogoff came up first. As he passed, a head was thrust out of the window of the berlin.

He had not time to see what it was like, but as he dashed by he distinctly heard this word, uttered in an imperious tone: "Stop!"

But they did not stop; on the contrary, the berlin was soon distanced by the two tarantasses.

It now became a regular race; for the horses of the berlin—no doubt excited by the sight and pace of the others—recovered their strength and kept up for some minutes. The three carriages were hidden in a cloud of dust. From this cloud issued the cracking of whips mingled with excited shouts and exclamations of anger.

Nevertheless, the advantage remained with Michael and his companions, which might be very important to them if the relay was poorly provided with horses. Two carriages were perhaps more than the postmaster could provide for, at least in a short space of time.

Half an hour after the berlin was left far behind, looking only a speck on the horizon of the steppe.

It was eight o'clock in the evening when the two carriages reached Ichim. The news was worse and worse with regard to the invasion. The town itself was menaced by the Tartar vanguard; and two days before the authorities had been obliged to retreat to Tobolsk. There was not an officer nor a soldier left in Ichim.

On arriving at the relay, Michael Strogoff immediately asked for horses. He had been fortunate in distancing the berlin. Only three horses were fit to be harnessed. The others had just come in worn out from a long stage.

As the two correspondents intended to stop at Ichim, they had not to trouble themselves to find transport, and had their carriage put away. In ten minutes Michael was told that his tarantass was ready to start.

"Good," said he.

Then turning to the two reporters: "Well, gentlemen, the time is come for us to separate."

"What, Mr. Korpanoff," said Alcide Jolivet, "shall you not stop even for an hour at Ichim?"

"No, sir; and I also wish to leave the post-house before the arrival of the berlin which we distanced."

"Are you afraid that the traveler will dispute the horses with you?"
"I particularly wish to avoid any difficulty."
"Then, Mr. Korpanoff," said Jolivet, "it only remains for us to thank you once more for the service you rendered us, and the pleasure we have had in traveling with you."
"It is possible that we shall meet you again in a few days at Omsk," added Blount.
"It is possible," answered Michael, "since I am going straight there."
"Well, I wish you a safe journey, Mr. Korpanoff," said Alcide, "and Heaven preserve you from telgas."

The two reporters held out their hands to Michael with the intention of cordially shaking his, when the sound of a carriage was heard outside. Almost immediately the door was flung open and a man appeared.

It was the traveler of the Berlin, a military-looking man, apparently about forty years of age, tall, robust in figure, broad-shouldered, with a strongly-set head, and thick mustaches meeting red whiskers. He wore a plain uniform. A cavalry saber hung at his side, and in his hand he held a short-handled whip.

"Horses," he demanded, with the air of a man accustomed to command.
"I have no more disposable horses," answered the postmaster, bowing.
"I must have some this moment."
"It is impossible."
"What are those horses which have just been harnessed to the tarantass I saw at the door?"
"They belong to this traveler," answered the postmaster, pointing to Michael Strogoff.
"Take them out!" said the traveler in a tone which admitted of no reply.
Michael then advanced.
"These horses are engaged by me," he said.
"What does that matter? I must have them. Come, be quick; I have no time to lose."
"I have no time to lose either," replied Michael, restraining himself with difficulty.
Nadia was near him, calm also, but secretly uneasy at a scene which it would have been better to avoid.
"Enough!" said the traveler. Then, going up to the postmaster, "Let the horses be put into my berlin," he exclaimed with a threatening gesture.

The postmaster, much embarrassed, did not know whom to obey, and looked at Michael, who evidently had the right to resist the unjust demands of the traveler.

Michael hesitated an instant. He did not wish to make use of his podorojna, which would have drawn attention to him, and he was most unwilling also, by giving up his horses, to delay his journey, and yet he must not engage in a struggle which might compromise his mission.

The two reporters looked at him ready to support him should he appeal to them.
"My horses will remain in my carriage," said Michael, but without raising his tone more than would be suitable for a plain Irkutsk merchant.

The traveler advanced towards Michael and laid his hand heavily on his shoulder. "Is it so?" he said roughly.
"You will not give up your horses to me?"
"No," answered Michael.
"Very well, they shall belong to whichever of us is able to start. Defend yourself; I shall not spare you!"
So saying, the traveler drew his saber from its sheath, and Nadia threw herself before Michael.
Blount and Alcide Jolivet advanced towards him.
"I shall not fight," said Michael quietly, folding his arms across his chest.
"You will not fight?"
"No."
"Not even after this?" exclaimed the traveler. And before anyone could prevent him, he struck Michael's shoulder with the handle of the whip. At this insult Michael turned deadly pale. His hands moved convulsively as if he would have knocked the brute down. But by a tremendous effort he mastered himself. A duel! it was more than a delay; it was perhaps the failure of his mission. It would be better to lose some hours. Yes; but to swallow this affront!
"Will you fight now, coward?" repeated the traveler, adding coarseness to brutality.
"No," answered Michael, without moving, but looking the other straight in the face.
"The horses this moment," said the man, and left the room.
The postmaster followed him, after shrugging his shoulders and bestowing on Michael a glance of anything but approbation.

The effect produced on the reporters by this incident was not to Michael's advantage. Their discomfiture was visible. How could this strong young man allow himself to be struck like that and not demand satisfaction for such an insult? They contented themselves with bowing to him and retired, Jolivet remarking to Harry Blount

"I could not have believed that of a man who is so skillful in finishing up Ural Mountain bears. Is it the case that
a man can be courageous at one time and a coward at another? It is quite incomprehensible."

A moment afterwards the noise of wheels and whip showed that the berlin, drawn by the tarantass' horses, was driving rapidly away from the post-house.

Nadia, unmoved, and Michael, still quivering, remained alone in the room. The courier of the Czar, his arms crossed over his chest was seated motionless as a statue. A color, which could not have been the blush of shame, had replaced the paleness on his countenance.

Nadia did not doubt that powerful reasons alone could have allowed him to suffer so great a humiliation from such a man. Going up to him as he had come to her in the police-station at Nijni-Novgorod:

"Your hand, brother," said she.

And at the same time her hand, with an almost maternal gesture, wiped away a tear which sprang to her companion's eye.

CHAPTER XIII DUTY BEFORE EVERYTHING

NADIA, with the clear perception of a right-minded woman, guessed that some secret motive directed all Michael Strogoff's actions; that he, for a reason unknown to her, did not belong to himself; and that in this instance especially he had heroically sacrificed to duty even his resentment at the gross injury he had received.

Nadia, therefore, asked no explanation from Michael. Had not the hand which she had extended to him already replied to all that he might have been able to tell her?

Michael remained silent all the evening. The postmaster not being able to supply them with fresh horses until the next morning, a whole night must be passed at the house. Nadia could profit by it to take some rest, and a room was therefore prepared for her.

The young girl would no doubt have preferred not to leave her companion, but she felt that he would rather be alone, and she made ready to go to her room.

Just as she was about to retire she could not refrain from going up to Michael to say good-night.

"Brother," she whispered. But he checked her with a gesture. The girl sighed and left the room.

Michael Strogoff at last asked for the postmaster. The latter, a Siberian of the old type, came directly, and looking rather contemptuously at the young man, waited to be questioned.

"You belong to the country?" asked Michael.

"Yes."

"Do you know that man who took my horses?"

"No."

"Had you never seen him before?"

"Never."

"Who do you think he was?"

"A man who knows how to make himself obeyed."

Michael fixed his piercing gaze upon the Siberian, but the other did not quail before it.

"Do you dare to judge me?" exclaimed Michael.

"Yes," answered the Siberian, "there are some things even a plain merchant cannot receive without returning."

"Blows?"

"Blows, young man. I am of an age and strength to tell you so."

Michael went up to the postmaster and laid his two powerful hands on his shoulders.

Then in a peculiarly calm tone, "Be off, my friend," said he: "be off! I could kill you."

The postmaster understood. "I like him better for that," he muttered and retired without another word.

At eight o'clock the next morning, the 24th of July, three strong horses were harnessed to the tarantass. Michael Strogoff and Nadia took their places, and Ichim, with its disagreeable remembrances, was soon left far behind.

At the different relays at which they stopped during the day Strogoff ascertained that the berlin still preceded them on the road to Irkutsk, and that the traveler, as hurried as they were, never lost a minute in pursuing his way across the steppe.

At four o'clock in the evening they reached Abatskaia, fifty miles farther on, where the Ichim, one of the
principal affluents of the Irtych, had to be crossed. This passage was rather more difficult than that of the Tobol. Indeed the current of the Ichim was very rapid just at that place. During the Siberian winter, the rivers being all frozen to a thickness of several feet, they are easily practicable, and the traveler even crosses them without being aware of the fact, for their beds have disappeared under the snowy sheet spread uniformly over the steppe; but in summer the difficulties of crossing are sometimes great.

In fact, two hours were taken up in making the passage of the Ichim, which much exasperated Michael, especially as the boatmen gave them alarming news of the Tartar invasion. Some of Feofar-Khan's scouts had already appeared on both banks of the lower Ichim, in the southern parts of the government of Tobolsk. Omsk was threatened. They spoke of an engagement which had taken place between the Siberian and Tartar troops on the frontier of the great Kirghese horde—an engagement not to the advantage of the Russians, who were weak in numbers. The troops had retreated thence, and in consequence there had been a general emigration of all the peasants of the province. The boatmen spoke of horrible atrocities committed by the invaders—pillage, theft, incendiariism, murder. Such was the system of Tartar warfare.

The people all fled before Feofar-Khan. Michael Strogoff's great fear was lest, in the depopulation of the towns, he should be unable to obtain the means of transport. He was therefore extremely anxious to reach Omsk. Perhaps there they would get the start of the Tartar scouts, who were coming down the valley of the Irtych, and would find the road open to Irkutsk.

Just at the place where the tarantass crossed the river ended what is called, in military language, the "Ichim chain"—a chain of towers, or little wooden forts, extending from the southern frontier of Siberia for a distance of nearly four hundred versts. Formerly these forts were occupied by detachments of Cossacks, and they protected the country against the Kirghese, as well as against the Tartars. But since the Muscovite Government had believed these hordes reduced to absolute submission, they had been abandoned, and now could not be used; just at the time when they were needed. Many of these forts had been reduced to ashes; and the boatmen even pointed out the smoke to Michael, rising in the southern horizon, and showing the approach of the Tartar advance-guard.

As soon as the ferryboat landed the tarantass on the right bank of the Ichim, the journey across the steppe was resumed with all speed. Michael Strogoff remained very silent. He was, however, always attentive to Nadia, helping her to bear the fatigue of this long journey without break or rest; but the girl never complained. She longed to give wings to the horses. Something told her that her companion was even more anxious than herself to reach Irkutsk; and how many versts were still between!

It also occurred to her that if Omsk was entered by the Tartars, Michael's mother, who lived there, would be in danger, and that this was sufficient to explain her son's impatience to get to her.

Nadia at last spoke to him of old Marfa, and of how unprotected she would be in the midst of all these events. "Have you received any news of your mother since the beginning of the invasion?" she asked.

"None, Nadia. The last letter my mother wrote to me contained good news. Marfa is a brave and energetic Siberian woman. Notwithstanding her age, she has preserved all her moral strength. She knows how to suffer."

"I shall see her, brother," said Nadia quickly. "Since you give me the name of sister, I am Marfa's daughter."

And as Michael did not answer she added: "Perhaps your mother has been able to leave Omsk?"

"It is possible, Nadia," replied Michael; "and I hope she may have reached Tobolsk. Marfa hates the Tartars. She knows the steppe, and would have no fear in just taking her staff and going down the banks of the Irtych. There is not a spot in all the province unknown to her. Many times has she traveled all over the country with my father; and many times I myself, when a mere child, have accompanied them across the Siberian desert. Yes, Nadia, I trust that my mother has left Omsk."

"And when shall you see her?"

"I shall see her--on my return."

"If, however, your mother is still at Omsk, you will be able to spare an hour to go to her?"

"I shall not go and see her."

"You will not see her?"

"No, Nadia," said Michael, his chest heaving as he felt he could not go on replying to the girl's questions. "You say no! Why, brother, if your mother is still at Omsk, for what reason could you refuse to see her?"

"For what reason, Nadia? You ask me for what reason," exclaimed Michael, in so changed a voice that the young girl started. "For the same reason as that which made me patient even to cowardice with the villain who--" He could not finish his sentence.

"Calm yourself, brother," said Nadia in a gentle voice. "I only know one thing, or rather I do not know it, I feel it. It is that all your conduct is now directed by the sentiment of a duty more sacred—if there can be one--than that which unites the son to the mother."
Nadia was silent, and from that moment avoided every subject which in any way touched on Michael's peculiar situation. He had a secret motive which she must respect. She respected it.

The next day, July 25th, at three o'clock in the morning, the tarantass arrived at Tioukalmsk, having accomplished a distance of eighty miles since it had crossed the Ichim. They rapidly changed horses. Here, however, for the first time, the iemschik made difficulties about starting, declaring that detachments of Tartars were roving across the steppe, and that travelers, horses, and carriages would be a fine prize for them.

Only by dint of a large bribe could Michael get over the unwillingness of the iemschik, for in this instance, as in many others, he did not wish to show his podorojna. The last ukase, having been transmitted by telegraph, was known in the Siberian provinces; and a Russian specially exempted from obeying these words would certainly have drawn public attention to himself—a thing above all to be avoided by the Czar's courier. As to the iemschik's hesitation, either the rascal traded on the traveler's impatience or he really had good reason to fear.

However, at last the tarantass started, and made such good way that by three in the afternoon it had reached Koulatsinskoe, fifty miles farther on. An hour after this it was on the banks of the Irtych. Omsk was now only fourteen miles distant.

The Irtych is a large river, and one of the principal of those which flow towards the north of Asia. Rising in the Altai Mountains, it flows from the southeast to the northwest and empties itself into the Obi, after a course of four thousand miles.

At this time of year, when all the rivers of the Siberian basin are much swollen, the waters of the Irtych were very high. In consequence the current was changed to a regular torrent, rendering the passage difficult enough. A swimmer could not have crossed, however powerful; and even in a ferryboat there would be some danger.

But Michael and Nadia, determined to brave all perils whatever they might be, did not dream of shrinking from this one. Michael proposed to his young companion that he should cross first, embarking in the ferryboat with the tarantass and horses, as he feared that the weight of this load would render it less safe. After landing the carriage he would return and fetch Nadia.

The girl refused. It would be the delay of an hour, and she would not, for her safety alone, be the cause of it.

The embarkation was made not without difficulty, for the banks were partly flooded and the boat could not get in near enough. However, after half an hour's exertion, the boatmen got the tarantass and the three horses on board. The passengers embarked also, and they shoved off.

For a few minutes all went well. A little way up the river the current was broken by a long point projecting from the bank, and forming an eddy easily crossed by the boat. The two boatmen propelled their barge with long poles, which they handled cleverly; but as they gained the middle of the stream it grew deeper and deeper, until at last they could only just reach the bottom. The ends of the poles were only a foot above the water, which rendered their use difficult. Michael and Nadia, seated in the stern of the boat, and always in dread of a delay, watched the boatmen with some uneasiness.

"Look out!" cried one of them to his comrade.

The shout was occasioned by the new direction the boat was rapidly taking. It had got into the direct current and was being swept down the river. By diligent use of the poles, putting the ends in a series of notches cut below the gunwale, the boatmen managed to keep the craft against the stream, and slowly urged it in a slanting direction towards the right bank.

They calculated on reaching it some five or six versts below the landing place; but, after all, that would not matter so long as men and beasts could disembark without accident. The two stout boatmen, stimulated moreover by the promise of double fare, did not doubt of succeeding in this difficult passage of the Irtych.

But they reckoned without an accident which they were powerless to prevent, and neither their zeal nor their skillfulness could, under the circumstances, have done more.

The boat was in the middle of the current, at nearly equal distances from either shore, and being carried down at the rate of two versts an hour, when Michael, springing to his feet, bent his gaze up the river.

Several boats, aided by oars as well as by the current, were coming swiftly down upon them.

Michael's brow contracted, and a cry escaped him.

"What is the matter?" asked the girl.

But before Michael had time to reply one of the boatmen exclaimed in an accent of terror:

"The Tartars! the Tartars!"

There were indeed boats full of soldiers, and in a few minutes they must reach the ferryboat, it being too heavily laden to escape from them.

The terrified boatmen uttered exclamations of despair and dropped their poles.

"Courage, my friends!" cried Michael; "courage! Fifty roubles for you if we reach the right bank before the boats overtake us."
Incited by these words, the boatmen again worked manfully but it soon became evident that they could not escape the Tartars.

It was scarcely probable that they would pass without attacking them. On the contrary, there was everything to be feared from robbers such as these.

"Do not be afraid, Nadia," said Michael; "but be ready for anything."

"I am ready," replied Nadia.

"Even to leap into the water when I tell you?"

"Whenever you tell me."

"Have confidence in me, Nadia."

"I have, indeed!"

The Tartar boats were now only a hundred feet distant. They carried a detachment of Bokharian soldiers, on their way to reconnoiter around Omsk.

The ferryboat was still two lengths from the shore. The boatmen redoubled their efforts. Michael himself seized a pole and wielded it with superhuman strength. If he could land the tarantass and horses, and dash off with them, there was some chance of escaping the Tartars, who were not mounted.

But all their efforts were in vain. "Saryn na kitchou!" shouted the soldiers from the first boat.

Michael recognized the Tartar war-cry, which is usually answered by lying flat on the ground. As neither he nor the boatmen obeyed a volley was let fly, and two of the horses were mortally wounded.

At the next moment a violent blow was felt. The boats had run into the ferryboat.

"Come, Nadia!" cried Michael, ready to jump overboard.

The girl was about to follow him, when a blow from a lance struck him, and he was thrown into the water. The current swept him away, his hand raised for an instant above the waves, and then he disappeared.

Nadia uttered a cry, but before she had time to throw herself after him she was seized and dragged into one of the boats. The boatmen were killed, the ferryboat left to drift away, and the Tartars continued to descend the Irtysch.

CHAPTER XIV MOTHER AND SON

OMSK is the official capital of Western Siberia. It is not the most important city of the government of that name, for Tomsk has more inhabitants and is larger. But it is at Omsk that the Governor-General of this the first half of Asiatic Russia resides. Omsk, properly so called, is composed of two distinct towns: one which is exclusively inhabited by the authorities and officials; the other more especially devoted to the Siberian merchants, although, indeed, the trade of the town is of small importance.

This city has about 12,000 to 13,000 inhabitants. It is defended by walls, but these are merely of earth, and could afford only insufficient protection. The Tartars, who were well aware of this fact, consequently tried at this period to carry it by main force, and in this they succeeded, after an investment of a few days.

The garrison of Omsk, reduced to two thousand men, resisted valiantly. But driven back, little by little, from the mercantile portion of the place, they were compelled to take refuge in the upper town.

It was there that the Governor-General, his officers, and soldiers had entrenched themselves. They had made the upper quarter of Omsk a kind of citadel, and hitherto they held out well in this species of improvised "kreml," but without much hope of the promised succor. The Tartar troops, who were descending the Irtysch, received every day fresh reinforcements, and, what was more serious, they were led by an officer, a traitor to his country, but a man of much note, and of an audacity equal to any emergency. This man was Colonel Ivan Ogareff.

Ivan Ogareff, terrible as any of the most savage Tartar chieftains, was an educated soldier. Possessing on his mother's side some Mongolian blood, he delighted in deceptive strategy and ambuscades, stopping short of nothing when he desired to fathom some secret or to set some trap. Deceitful by nature, he willingly had recourse to the vilest trickery; lying when occasion demanded, excelling in the adoption of all disguises and in every species of deception. Further, he was cruel, and had even acted as an executioner. Feofar-Khan possessed in him a lieutenant well capable of seconding his designs in this savage war.

When Michael Strogoff arrived on the banks of the Irtysch, Ivan Ogareff was already master of Omsk, and was pressing the siege of the upper quarter of the town all the more eagerly because he must hasten to Tomsk, where the main body of the Tartar army was concentrated.

Tomsk, in fact, had been taken by Feofar-Khan some days previously, and it was thence that the invaders, masters of Central Siberia, were to march upon Irkutsk.

Irkutsk was the real object of Ivan Ogareff. The plan of the traitor was to reach the Grand Duke under a false name, to gain his confidence, and to deliver into Tartar hands the town and the Grand Duke himself. With such a town, and such a hostage, all Asiatic Siberia must necessarily fall into the hands of the invaders. Now it was known
that the Czar was acquainted with this conspiracy, and that it was for the purpose of baffling it that a courier had been intrusted with the important warning. Hence, therefore, the very stringent instructions which had been given to the young courier to pass incognito through the invaded district.

This mission he had so far faithfully performed, but now could he carry it to a successful completion?

The blow which had struck Michael Strogoff was not mortal. By swimming in a manner by which he had effectually concealed himself, he had reached the right bank, where he fell exhausted among the bushes.

When he recovered his senses, he found himself in the cabin of a mujik, who had picked him up and cared for him. For how long a time had he been the guest of this brave Siberian? He could not guess. But when he opened his eyes he saw the handsome bearded face bending over him, and regarding him with pitying eyes. "Do not speak, little father," said the mujik, "Do not speak! Thou art still too weak. I will tell thee where thou art and everything that has passed."

And the mujik related to Michael Strogoff the different incidents of the struggle which he had witnessed--the attack upon the ferry by the Tartar boats, the pillage of the tarantass, and the massacre of the boatmen.

But Michael Strogoff listened no longer, and slipping his hand under his garment he felt the imperial letter still secured in his breast. He breathed a sigh of relief.

But that was not all. "A young girl accompanied me," said he.

"They have not killed her," replied the mujik, anticipating the anxiety which he read in the eyes of his guest. "They have carried her off in their boat, and have continued the descent of Irtych. It is only one prisoner more to join the many they are taking to Tomsk!"

Michael Strogoff was unable to reply. He pressed his hand upon his heart to restrain its beating. But, notwithstanding these many trials, the sentiment of duty mastered his whole soul. "Where am I?" asked he.

"Upon the right bank of the Irtych, only five versts from Omsk," replied the mujik.

"What wound can I have received which could have thus prostrated me? It was not a gunshot wound?"

"No; a lance-thrust in the head, now healing," replied the mujik. "After a few days' rest, little father, thou wilt be able to proceed. Thou didst fall into the river; but the Tartars neither touched nor searched thee; and thy purse is still in thy pocket."

Michael Strogoff gripped the mujik's hand. Then, recovering himself with a sudden effort, "Friend," said he, "how long have I been in thy hut?"

"Three days."

"Three days lost!"

"Three days hast thou lain unconscious."

"Hast thou a horse to sell me?"

"Thou wishest to go?"

"At once."

"I have neither horse nor carriage, little father. Where the Tartar has passed there remains nothing!"

"Well, I will go on foot to Omsk to find a horse."

"A few more hours of rest, and thou wilt be in a better condition to pursue thy journey."

"Not an hour!"

"Come now," replied the mujik, recognizing the fact that it was useless to struggle against the will of his guest, "I will guide thee myself. Besides," he added, "the Russians are still in great force at Omsk, and thou couldst, perhaps, pass unperceived."

"Friend," replied Michael Strogoff, "Heaven reward thee for all thou hast done for me!"

"Only fools expect reward on earth," replied the mujik.

Michael Strogoff went out of the hut. When he tried to walk he was seized with such faintness that, without the assistance of the mujik, he would have fallen; but the fresh air quickly revived him. He then felt the wound in his head, the violence of which his fur cap had lessened. With the energy which he possessed, he was not a man to succumb under such a trifle. Before his eyes lay a single goal--far-distant Irkutsk. He must reach it! But he must pass through Omsk without stopping there.

"God protect my mother and Nadia!" he murmured. "I have no longer the right to think of them!"

Michael Strogoff and the mujik soon arrived in the mercantile quarter of the lower town. The surrounding earthwork had been destroyed in many places, and there were the breaches through which the marauders who followed the armies of Feofar-Khan had penetrated. Within Omsk, in its streets and squares, the Tartar soldiers swarmed like ants; but it was easy to see that a hand of iron imposed upon them a discipline to which they were little accustomed. They walked nowhere alone, but in armed groups, to defend themselves against surprise.

In the chief square, transformed into a camp, guarded by many sentries, 2,000 Tartars bivouacked. The horses, picketed but still saddled, were ready to start at the first order. Omsk could only be a temporary halting-place for this
Tartar cavalry, which preferred the rich plains of Eastern Siberia, where the towns were more wealthy, and, consequently, pillage more profitable.

Above the mercantile town rose the upper quarter, which Ivan Ogareff, notwithstanding several assaults vigorously made but bravely repelled, had not yet been able to reduce. Upon its embattled walls floated the national colors of Russia.

It was not without a legitimate pride that Michael Strogoff and his guide, vowing fidelity, saluted them.

Michael Strogoff was perfectly acquainted with the town of Omsk, and he took care to avoid those streets which were much frequented. This was not from any fear of being recognized. In the town his old mother only could have called him by name, but he had sworn not to see her, and he did not. Besides—and he wished it with his whole heart—she might have fled into some quiet portion of the steppe.

The mujik very fortunately knew a postmaster who, if well paid, would not refuse at his request either to let or to sell a carriage or horses. There remained the difficulty of leaving the town, but the breaches in the fortifications would, of course, facilitate his departure.

The mujik was accordingly conducting his guest straight to the posting-house, when, in a narrow street, Michael Strogoff, coming to a sudden stop sprang behind a jutting wall.

"What is the matter?" asked the astonished mujik.

"Silence!" replied Michael, with his finger on his lips. At this moment a detachment debouched from the principal square into the street which Michael Strogoff and his companion had just been following.

At the head of the detachment, composed of twenty horsemen, was an officer dressed in a very simple uniform. Although he glanced rapidly from one side to the other he could not have seen Michael Strogoff, owing to his precipitous retreat.

The detachment went at full trot into the narrow street. Neither the officer nor his escort concerned themselves about the inhabitants. Several unlucky ones had scarcely time to make way for their passage. There were a few half-stifled cries, to which thrusts of the lance gave an instant reply, and the street was immediately cleared.

When the escort had disappeared, "Who is that officer?" asked Michael Strogoff. And while putting the question his face was pale as that of a corpse.

"It is Ivan Ogareff," replied the Siberian, in a deep voice which breathed hatred.

"He!" cried Michael Strogoff, from whom the word escaped with a fury he could not conquer. He had just recognized in this officer the traveler who had struck him at the posting-house of Ichim. And, although he had only caught a glimpse of him, it burst upon his mind, at the same time, that this traveler was the old Zingari whose words he had overheard in the market place of Nijni-Novgorod.

Michael Strogoff was not mistaken. The two men were one and the same. It was under the garb of a Zingari, mingling with the band of Sangarre, that Ivan Ogareff had been able to leave the town of Nijni-Novgorod, where he had gone to seek his confidants. Sangarre and her Zingari, well paid spies, were absolutely devoted to him. It was he who, during the night, on the fair-ground had uttered that singular sentence, which Michael Strogoff could not understand; it was he who was voyaging on board the Caucasus, with the whole of the Bohemian band; it was he who, by this other route, from Kasan to Ichim, across the Urals, had reached Omsk, where now he held supreme authority.

Ivan Ogareff had been barely three days at Omsk, and had it not been for their fatal meeting at Ichim, and for the event which had detained him three days on the banks of the Irytych, Michael Strogoff would have evidently beaten him on the way to Irkutsk.

And who knows how many misfortunes would have been avoided in the future! In any case—and now more than ever—Michael Strogoff must avoid Ivan Ogareff, and contrive not to be seen. When the moment of encountering him face to face should arrive, he knew how to meet it, even should the traitor be master of the whole of Siberia.

The mujik and Michael resumed their way and arrived at the posting-house. To leave Omsk by one of the breaches would not be difficult after nightfall. As for purchasing a carriage to replace the tarantass, that was impossible. There were none to be let or sold. But what want had Michael Strogoff now for a carriage? Was he not alone, alas? A horse would suffice him; and, very fortunately, a horse could be had. It was an animal of strength and mettle, and Michael Strogoff, accomplished horseman as he was, could make good use of it.

It was four o'clock in the afternoon. Michael Strogoff, compelled to wait till nightfall, in order to pass the fortifications, but not desiring to show himself, remained in the posting-house, and there partook of food.

There was a great crowd in the public room. They were talking of the expected arrival of a corps of Muscovite troops, not at Omsk, but at Tomsk—a corps intended to recapture that town from the Tartars of Feofar-Khan.

Michael Strogoff lent an attentive ear, but took no part in the conversation. Suddenly a cry made him tremble, a cry which penetrated to the depths of his soul, and these two words rushed into his ear: "My son!"

His mother, the old woman Marfa, was before him! Trembling, she smiled upon him. She stretched forth her
arms to him. Michael Strogoff arose. He was about to throw himself--

The thought of duty, the serious danger for his mother and himself in this unfortunate meeting, suddenly stopped him, and such was his command over himself that not a muscle of his face moved. There were twenty people in the public room. Among them were, perhaps, spies, and was it not known in the town that the son of Marfa Strogoff belonged to the corps of the couriers of the Czar?

Michael Strogoff did not move.
"Michael!" cried his mother.
"Who are you, my good lady?" Michael Strogoff stammered, unable to speak in his usual firm tone.
"Who am I, thou askest! Dost thou no longer know thy mother?"
"You are mistaken," coldly replied Michael Strogoff. "A resemblance deceives you."

The old Marfa went up to him, and, looking straight into his eyes, said, "Thou art not the son of Peter and Marfa Strogoff?"

Michael Strogoff would have given his life to have locked his mother in his arms; but if he yielded it was all over with him, with her, with his mission, with his oath! Completely master of himself, he closed his eyes, in order not to see the inexpressible anguish which agitated the revered countenance of his mother. He drew back his hands, in order not to touch those trembling hands which sought him. "I do not know in truth what it is you say, my good woman," he replied, stepping back.

"Michael!" again cried his aged mother.
"My name is not Michael. I never was your son! I am Nicholas Korpanoff, a merchant at Irkutsk."

And suddenly he left the public room, whilst for the last time the words re-echoed, "My son! my son!"

Michael Strogoff, by a desperate effort, had gone. He did not see his old mother, who had fallen back almost inanimate upon a bench. But when the postmaster hastened to assist her, the aged woman raised herself. Suddenly a thought occurred to her. She denied by her son! It was not possible. As for being herself deceived, and taking another for him, equally impossible. It was certainly her son whom she had just seen; and if he had not recognized her it was because he would not, it was because he ought not, it was because he had some cogent reasons for acting thus! And then, her mother's feelings arising within her, she had only one thought--"Can I, unwittingly, have ruined him?"

"I am mad," she said to her interrogators. "My eyes have deceived me! This young man is not my child. He had not his voice. Let us think no more of it; if we do I shall end by finding him everywhere."

Less than ten minutes afterwards a Tartar officer appeared in the posting-house. "Marfa Strogoff?" he asked.
"It is I," replied the old woman, in a tone so calm, and with a face so tranquil, that those who had witnessed the meeting with her son would not have known her.

"Come," said the officer.

Marfa Strogoff, with firm step, followed the Tartar. Some moments afterwards she found herself in the chief square in the presence of Ivan Ogareff, to whom all the details of this scene had been immediately reported.

Ogareff, suspecting the truth, interrogated the old Siberian woman. "Thy name?" he asked in a rough voice.
"Marfa Strogoff."
"Thou hast a son?"
"Yes."
"He is a courier of the Czar?"
"Yes."
"Where is he?"
"At Moscow."
"Thou hast no news of him?"
"No news."
"Since how long?"
"Since two months."
"Who, then, was that young man whom thou didst call thy son a few moments ago at the posting-house?"
"A young Siberian whom I took for him," replied Marfa Strogoff. "This is the tenth man in whom I have thought I recognized my son since the town has been so full of strangers. I think I see him everywhere."

"So this young man was not Michael Strogoff?"
"It was not Michael Strogoff."
"Dost thou know, old woman, that I can torture thee until thou avowest the truth?"
"I have spoken the truth, and torture will not cause me to alter my words in any way."
"This Siberian was not Michael Strogoff?" asked a second time Ivan Ogareff.
"No, it was not he," replied a second time Marfa Strogoff. "Do you think that for anything in the world I would
deny a son whom God has given me?"

Ivan Ogareff regarded with an evil eye the old woman who braved him to the face. He did not doubt but that she had recognized her son in this young Siberian. Now if this son had first renounced his mother, and if his mother renounced him in her turn, it could occur only from the most weighty motive. Ogareff had therefore no doubt that the pretended Nicholas Korpanoff was Michael Strogoff, courier of the Czar, seeking concealment under a false name, and charged with some mission which it would have been important for him to know. He therefore at once gave orders for his pursuit. Then "Let this woman be conducted to Tomsk," he said.

While the soldiers brutally dragged her off, he added between his teeth, "When the moment arrives I shall know how to make her speak, this old sorceress!"

CHAPTER XV THE MARSHES OF THE BARABA

It was fortunate that Michael Strogoff had left the posting-house so promptly. The orders of Ivan Ogareff had been immediately transmitted to all the approaches of the city, and a full description of Michael sent to all the various commandants, in order to prevent his departure from Omsk. But he had already passed through one of the breaches in the wall; his horse was galloping over the steppe, and the chances of escape were in his favor.

It was on the 29th of July, at eight o’clock in the evening, that Michael Strogoff had left Omsk. This town is situated about halfway between Moscow and Irkutsk, where it was necessary that he should arrive within ten days if he wished to get ahead of the Tartar columns. It was evident that the unlucky chance which had brought him into the presence of his mother had betrayed his incognito. Ivan Ogareff was no longer ignorant of the fact that a courier of the Czar had just passed Omsk, taking the direction of Irkutsk. The dispatches which this courier bore must have been of immense importance. Michael Strogoff knew, therefore, that every effort would be made to capture him.

But what he did not know, and could not know, was that Marfa Strogoff was in the hands of Ivan Ogareff, and that she was about to atone, perhaps with her life, for that natural exhibition of her feelings which she had been unable to restrain when she suddenly found herself in the presence of her son. And it was fortunate that he was ignorant of it. Could he have withstood this fresh trial?

Michael Strogoff urged on his horse, imbuing him with all his own feverish impatience, requiring of him one thing only, namely, to bear him rapidly to the next posting-house, where he could be exchanged for a quicker conveyance.

At midnight he had cleared fifty miles, and halted at the station of Koulikovo. But there, as he had feared, he found neither horses nor carriages. Several Tartar detachments had passed along the highway of the steppe. Everything had been stolen or requisitioned both in the villages and in the posting-houses. It was with difficulty that Michael Strogoff was even able to obtain some refreshment for his horse and himself.

It was of great importance, therefore, to spare his horse, for he could not tell when or how he might be able to replace it. Desiring, however, to put the greatest possible distance between himself and the horsemen who had no doubt been dispatched in pursuit, he resolved to push on. After one hour’s rest he resumed his course across the steppe.

Hitherto the weather had been propitious for his journey. The temperature was endurable. The nights at this time of the year are very long, and as they are lighted by the moon, the route over the steppe is practicable. Michael Strogoff, moreover, was a man certain of his road and devoid of doubt or hesitation, and in spite of the melancholy thoughts which possessed him he had preserved his clearness of mind, and made for his destined point as though it were visible upon the horizon. When he did halt for a moment at some turn in the road it was to breathe his horse. Now he would dismount to ease his steed for a moment, and again he would place his ear to the ground to listen for the sound of galloping horses upon the steppe. Nothing arousing his suspicions, he resumed his way.

On the 30th of July, at nine o’clock in the morning, Michael Strogoff passed through the station of Touroumoff and entered the swampy district of the Baraba.

There, for a distance of three hundred versts, the natural obstacles would be extremely great. He knew this, but he also knew that he would certainly surmount them.

These vast marshes of the Baraba, form the reservoir to all the rain-water which finds no outlet either towards the Obi or towards the Irtysch. The soil of this vast depression is entirely argillaceous, and therefore impermeable, so that the waters remain there and make of it a region very difficult to cross during the hot season. There, however, lies the way to Irkutsk, and it is in the midst of ponds, pools, lakes, and swamps, from which the sun draws poisonous exhalations, that the road winds, and entails upon the traveler the greatest fatigue and danger.

Michael Strogoff spurred his horse into the midst of a grassy prairie, differing greatly from the close-cropped sod of the steppe, where feed the immense Siberian herds. The grass here was five or six feet in height, and had made room for swamp-plants, to which the dampness of the place, assisted by the heat of summer, had given giant
proportions. These were principally canes and rushes, which formed a tangled network, an impenetrable undergrowth, sprinkled everywhere with a thousand flowers remarkable for the brightness of their color.

Michael Strogoff, galloping amongst this undergrowth of cane, was no longer visible from the swamps which bordered the road. The tall grass rose above him, and his track was indicated only by the flight of innumerable aquatic birds, which rose from the side of the road and dispersed into the air in screaming flocks.

The way, however, was clearly traceable. Now it would lie straight between the dense thicket of marsh-plants; again it would follow the winding shores of vast pools, some of which, several versts in length and breadth, deserve the name of lakes. In other localities the stagnant waters through which the road lay had been avoided, not by bridges, but by tottering platforms ballasted with thick layers of clay, whose joists shook like a too weak plank thrown across an abyss. Some of these platforms extended over three hundred feet, and travelers by tarantass, when crossing them have experienced a nausea like sea-sickness.

Michael Strogoff, whether the soil beneath his feet was solid or whether it sank under him, galloped on without halt, leaping the space between the rotten joists; but however fast they traveled the horse and the horseman were unable to escape from the sting of the two-winged insects which infest this marshy country.

Travelers who are obliged to cross the Baraba during the summer take care to provide themselves with masks of horse-hair, to which is attached a coat of mail of very fine wire, which covers their shoulders. Notwithstanding these precautions, there are few who come out of these marshes without having their faces, necks, and hands covered with red spots. The atmosphere there seems to bristle with fine needles, and one would almost say that a knight's armor would not protect him against the darts of these dipterans. It is a dreary region, which man dearly disputes with tipulæ, gnats, mosquitoes, horse-flies, and millions of microscopic insects which are not visible to the naked eye; but, although they are not seen, they make themselves felt by their intolerable stinging, to which the most callous Siberian hunters have never been able to inure themselves.

Michael Strogoff's horse, stung by these venomous insects, sprang forward as if the rowels of a thousand spurs had pierced his flanks. Mad with rage, he tore along over verst after verst with the speed of an express train, lashing his sides with his tail, seeking by the rapidity of his pace an alleviation of his torture.

It required as good a horseman as Michael Strogoff not to be thrown by the plungings of his horse, and the sudden stops and bounds which he made to escape from the stings of his persecutors. Having become insensible, so to speak, to physical suffering, possessed only with the one desire to arrive at his destination at whatever cost, he saw during this mad race only one thing—that the road flew rapidly behind him.

Who would have thought that this district of the Baraba, so unhealthy during the summer, could have afforded an asylum for human beings? Yet it did so. Several Siberian hamlets appeared from time to time among the giant canes. Men, women, children, and old men, clad in the skins of beasts, their faces covered with hardened blisters of skin, pastured their poor herds of sheep. In order to preserve the animals from the attack of the insects, they drove them to the leeward of fires of green wood, which were kept burning night and day, and the pungent smoke of which floated over the vast swamp.

When Michael Strogoff perceived that his horse, tired out, was on the point of succumbing, he halted at one of these wretched hamlets, and there, forgetting his own fatigue, he himself rubbed the wounds of the poor animal with hot grease according to the Siberian custom; then he gave him a good feed; and it was only after he had well groomed and provided for him that he thought of himself, and recruited his strength by a hasty meal of bread and meat and a glass of kwass. One hour afterwards, or at the most two, he resumed with all speed the interminable road to Irkutsk.

On the 30th of July, at four o'clock in the afternoon, Michael Strogoff, insensible of every fatigue, arrived at Elamsk. There it became necessary to give a night's rest to his horse. The brave animal could no longer have continued the journey. At Elamsk, as indeed elsewhere, there existed no means of transport,—for the same reasons as at the previous villages, neither carriages nor horses were to be had.

Michael Strogoff resigned himself therefore to pass the night at Elamsk, to give his horse twelve hours' rest. He recalled the instructions which had been given to him at Moscow—to cross Siberia incognito, to arrive at Irkutsk, but not to sacrifice success to the rapidity of the journey; and consequently it was necessary that he should husband the sole means of transport which remained to him.

On the morrow, Michael Strogoff left Elamsk at the moment when the first Tartar scouts were signaled ten versts behind upon the road to the Baraba, and he plunged again into the swampy region. The road was level, which made it easy, but very tortuous, and therefore long. It was impossible, moreover, to leave it, and to strike a straight line across that impassable network of pools and bogs.

On the next day, the 1st of August, eighty miles farther, Michael Strogoff arrived at midday at the town of Spaskoe, and at two o'clock he halted at Pokrowskoe. His horse, jaded since his departure from Elamsk, could not have taken a single step more.
There Michael Strogoff was again compelled to lose, for necessary rest, the end of that day and the entire night; but starting again on the following morning, and still traversing the semi-inundated soil, on the 2nd of August, at four o'clock in the afternoon, after a stage of fifty miles he reached Kamsk.

The country had changed. This little village of Kamsk lies, like an island, habitable and healthy, in the midst of the uninhabitable district. It is situated in the very center of the Baraba. The emigration caused by the Tartar invasion had not yet depopulated this little town of Kamsk. Its inhabitants probably fancied themselves safe in the center of the Baraba, whence at least they thought they would have time to flee if they were directly menaced.

Michael Strogoff, although exceedingly anxious for news, could ascertain nothing at this place. It would have been rather to him that the Governor would have addressed himself had he known who the pretended merchant of Irkutsk really was. Kamsk, in fact, by its very situation seemed to be outside the Siberian world and the grave events which troubled it.

Besides, Michael Strogoff showed himself little, if at all. To be unperceived was not now enough for him: he would have wished to be invisible. The experience of the past made him more and more circumspect in the present and the future. Therefore he secluded himself, and not caring to traverse the streets of the village, he would not even leave the inn at which he had halted.

As for his horse, he did not even think of exchanging him for another animal. He had become accustomed to this brave creature. He knew to what extent he could rely upon him. In buying him at Omsk he had been lucky, and in taking him to the postmaster the generous mujik had rendered him a great service. Besides, if Michael Strogoff had already become attached to his horse, the horse himself seemed to become inured, by degrees, to the fatigue of such a journey, and provided that he got several hours of repose daily, his rider might hope that he would carry him beyond the invaded provinces.

So, during the evening and night of the 2nd of August, Michael Strogoff remained confined to his inn, at the entrance of the town; which was little frequented and out of the way of the importunate and curious.

Exhausted with fatigue, he went to bed after having seen that his horse lacked nothing; but his sleep was broken. What he had seen since his departure from Moscow showed him the importance of his mission. The rising was an extremely serious one, and the treachery of Ogareff made it still more formidable. And when his eyes fell upon the letter bearing upon it the authority of the imperial seal—the letter which, no doubt, contained the remedy for so many evils, the safety of all this war-ravaged country—Michael Strogoff felt within himself a fierce desire to dash on across the steppe, to accomplish the distance which separated him from Irkutsk as the crow would fly it, to be an eagle that he might overtop all obstacles, to be a hurricane that he might sweep through the air at a hundred versts an hour, and to be at last face to face with the Grand Duke, and to exclaim: "Your highness, from his Majesty the Czar!"

On the next morning at six o'clock, Michael Strogoff started off again. Thanks to his extreme prudence this part of the journey was signalized by no incident whatever. At Oubinsk he gave his horse a whole night's rest, for he wished on the next day to accomplish the hundred versts which lie between Oubinsk and Ikoulskoe without halting. He started therefore at dawn; but unfortunately the Baraba proved more detestable than ever.

In fact, between Oubinsk and Kamakore the very heavy rains of some previous weeks were retained by this shallow depression as in a water-tight bowl. There was, for a long distance, no break in the succession of swamps, pools, and lakes. One of these lakes—large enough to warrant its geographical nomenclature—Tchang, Chinese in name, had to be coasted for more than twenty versts, and this with the greatest difficulty. Hence certain delays occurred, which all the impatience of Michael Strogoff could not avoid. He had been well advised in not taking a carriage at Kamsk, for his horse passed places which would have been impracticable for a conveyance on wheels.

In the evening, at nine o'clock, Michael Strogoff arrived at Ikoulskoe, and halted there over night. In this remote village of the Baraba news of the war was utterly wanting. From its situation, this part of the province, lying in the fork formed by the two Tartar columns which had bifurcated, one upon Omsk and the other upon Tomsk, had hitherto escaped the horrors of the invasion.

But the natural obstacles were now about to disappear, for, if he experienced no delay, Michael Strogoff should on the morrow be free of the Baraba and arrive at Kolyvan. There he would be within eighty miles of Tomsk. He would then be guided by circumstances, and very probably he would decide to go around Tomsk, which, if the news were true, was occupied by Feofar-Khan.

But if the small towns of Ikoulskoe and Karguinsk, which he passed on the next day, were comparatively quiet, owing to their position in the Baraba, was it not to be dreaded that, upon the right banks of the Obi, Michael Strogoff would have much more to fear from man? It was probable. However, should it become necessary, he would not hesitate to abandon the beaten path to Irkutsk. To journey then across the steppe he would, no doubt, run the risk of finding himself without supplies. There would be, in fact, no longer a well-marked road. Still, there must be no hesitation.
Finally, towards half past three in the afternoon, Michael Strogoff left the last depressions of the Baraba, and the dry and hard soil of Siberia rang out once more beneath his horse's hoofs.

He had left Moscow on the 15th of July. Therefore on this day, the 5th of August, including more than seventy hours lost on the banks of the Irtych, twenty days had gone by since his departure.

One thousand miles still separated him from Irkutsk.

CHAPTER XVI A FINAL EFFORT

MICHAEL'S fear of meeting the Tartars in the plains beyond the Baraba was by no means ungrounded. The fields, trodden down by horses' hoofs, afforded but too clear evidence that their hordes had passed that way; the same, indeed, might be said of these barbarians as of the Turks: "Where the Turk goes, no grass grows."

Michael saw at once that in traversing this country the greatest caution was necessary. Wreaths of smoke curling upwards on the horizon showed that huts and hamlets were still burning. Had these been fired by the advance guard, or had the Emir's army already advanced beyond the boundaries of the province? Was Feofar-Khan himself in the government of Yeniseisk? Michael could settle on no line of action until these questions were answered. Was the country so deserted that he could not discover a single Siberian to enlighten him?

Michael rode on for two versts without meeting a human being. He looked carefully for some house which had not been deserted. Every one was tenantless.

One hut, however, which he could just see between the trees, was still smoking. As he approached he perceived, at some yards from the ruins of the building, an old man surrounded by weeping children. A woman still young, evidently his daughter and the mother of the poor children, kneeling on the ground, was gazing on the scene of desolation. She had at her breast a baby but a few months old; shortly she would have not even that nourishment to give it. Ruin and desolation were all around!

Michael approached the old man.
"Will you answer me a few questions?" he asked.
"Speak," replied the old man.
"Have the Tartars passed this way?"
"Yes, for my house is in flames."
"Was it an army or a detachment?"
"An army, for, as far as eye can reach, our fields are laid waste."
"Commanded by the Emir?"
"By the Emir; for the Obi's waters are red."
"Has Feofar-Khan entered Tomsk?"
"He has."
"Do you know if his men have entered Kolyvan?"
"No; for Kolyvan does not yet burn."
"Thanks, friend. Can I aid you and yours?"
"No."
"Good-by."
"Farewell."

And Michael, having presented five and twenty roubles to the unfortunate woman, who had not even strength to thank him, put spurs to his horse once more.

One thing he knew; he must not pass through Tomsk. To go to Kolyvan, which the Tartars had not yet reached, was possible. Yes, that is what he must do; there he must prepare himself for another long stage. There was nothing for it but, having crossed the Obi, to take the Irkutsk road and avoid Tomsk.

This new route decided on, Michael must not delay an instant. Nor did he, but, putting his horse into a steady gallop, he took the road towards the left bank of the Obi, which was still forty versts distant. Would there be a ferry boat there, or should he, finding that the Tartars had destroyed all the boats, be obliged to swim across?

As to his horse, it was by this time pretty well worn out, and Michael intended to make it perform this stage only, and then to exchange it for a fresh one at Kolyvan. Kolyvan would be like a fresh starting point, for on leaving that town his journey would take a new form. So long as he traversed a devastated country the difficulties must be very great; but if, having avoided Tomsk, he could resume the road to Irkutsk across the province of Yeniseisk, which was not yet laid waste, he would finish his journey in a few days.

Night came on, bringing with it refreshing coolness after the heat of the day. At midnight the steppe was profoundly dark. The sound of the horses's hoofs alone was heard on the road, except when, every now and then, its master spoke a few encouraging words. In such darkness as this great care was necessary lest he should leave the
road, bordered by pools and streams, tributaries of the Obi. Michael therefore advanced as quickly as was consistent with safety. He trusted no less to the excellence of his eyes, which penetrated the gloom, than to the well-proved sagacity of his horse.

Just as Michael dismounted to discover the exact direction of the road, he heard a confused murmuring sound from the west. It was like the noise of horses' hoofs at some distance on the parched ground. Michael listened attentively, putting his ear to the ground.

"It is a detachment of cavalry coming by the road from Omsk," he said to himself. "They are marching very quickly, for the noise is increasing. Are they Russians or Tartars?"

Michael again listened. "Yes," said he, "they are at a sharp trot. My horse cannot outstrip them. If they are Russians I will join them; if Tartars I must avoid them. But how? Where can I hide in this steppe?"

He gave a look around, and, through the darkness, discovered a confused mass at a hundred paces before him on the left of the road. "There is a copse!" he exclaimed. "To take refuge there is to run the risk of being caught, if they are in search of me; but I have no choice."

In a few moments Michael, dragging his horse by the bridle, reached a little larch wood, through which the road lay. Beyond this it was destitute of trees, and wound among bogs and pools, separated by dwarfed bushes, whins, and heather. The ground on either side was quite impracticable, and the detachment must necessarily pass through the wood. They were pursuing the high road to Irkutsk. Plunging in about forty feet, he was stopped by a stream running under the brushwood. But the shadow was so deep that Michael ran no risk of being seen, unless the wood should be carefully searched. He therefore led his horse to the stream and fastened him to a tree, returning to the edge of the road to listen and ascertain with what sort of people he had to do.

Michael had scarcely taken up his position behind a group of larches when a confused light appeared, above which glared brighter lights wavering about in the shadow.

"Torches!" said he to himself. And he drew quickly back, gliding like a savage into the thickest underwood.

As they approached the wood the horses' pace was slackened. The horsemen were probably lighting up the road with the intention of examining every turn.

Michael feared this, and instinctively drew near to the bank of the stream, ready to plunge in if necessary.

Arrived at the top of the wood, the detachment halted. The horsemen dismounted. There were about fifty. A dozen of them carried torches, lighting up the road.

By watching their preparations Michael found to his joy that the detachment were not thinking of visiting the copse, but only bivouacking near, to rest their horses and allow the men to take some refreshment. The horses were soon unsaddled, and began to graze on the thick grass which carpeted the ground. The men meantime stretched themselves by the side of the road, and partook of the provisions they produced from their knapsacks.

Michael's self-possession had never deserted him, and creeping amongst the high grass he endeavored not only to examine the new-comers, but to hear what they said. It was a detachment from Omsk, composed of Usbeck horsemen, a race of the Mongolian type. These men, well built, above the medium height, rough, and wild-featured, wore on their heads the "talpak," or black sheep-skin cap, and on their feet yellow high-heeled boots with turned-up toes, like the shoes of the Middle Ages. Their tunics were close-fitting, and confined at the waist by a leathern belt braided with red. They were armed defensively with a shield, and offensively with a curved sword, and a flintlock musket slung at the saddle-bow. From their shoulders hung gay-colored cloaks.

The horses, which were feeding at liberty at the edge of the wood, were, like their masters, of the Usbeck race. These animals are rather smaller than the Turcomanian horses, but are possessed of remarkable strength, and know no other pace than the gallop.

This detachment was commanded by a "pendja-baschi"; that is to say, a commander of fifty men, having under him a "deh-baschi," or simple commander of ten men. These two officers wore helmets and half coats-of-mail; little trumpets fastened to their saddle-bows were the distinctive signs of their rank.

The pendja-baschi had been obliged to let his men rest, fatigued with a long stage. He and the second officer, smoking "beng," the leaf which forms the base of the "has-chisch," strolled up and down the wood, so that Michael Strogoff without being seen, could catch and understand their conversation, which was spoken in the Tartar language.

Michael's attention was singularly excited by their very first words. It was of him they were speaking.

"This courier cannot be much in advance of us," said the pendja-baschi; "and, on the other hand, it is absolutely impossible that he can have followed any other route than that of the Baraba."

"Who knows if he has left Omsk?" replied the deh-baschi. "Perhaps he is still hidden in the town."

"That is to be wished, certainly. Colonel Ogareff would have no fear then that the dispatches he bears should ever reach their destination."

"They say that he is a native, a Siberian," resumed the deh-baschi. "If so, he must be well acquainted with the
country, and it is possible that he has left the Irkutsk road, depending on rejoining it later."

"But then we should be in advance of him," answered the pendja-baschi; "for we left Omsk within an hour after
his departure, and have since followed the shortest road with all the speed of our horses. He has either remained in
Omsk, or we shall arrive at Tomsk before him, so as to cut him off; in either case he will not reach Irkutsk."

"A rugged woman, that old Siberian, who is evidently his mother," said the deh-baschi.

At this remark Michael's heart beat violently.

"Yes," answered the pendja-baschi. "She stuck to it well that the pretended merchant was not her son, but it was
too late. Colonel Ogareff was not to be taken in; and, as he said, he will know how to make the old witch speak
when the time comes."

These words were so many dagger-thrusts for Michael. He was known to be a courier of the Czar! A detachment
of horsemen on his track could not fail to cut him off. And, worst of all, his mother was in the hands of the Tartars,
and the cruel Ogareff had undertaken to make her speak when he wished!

Michael well knew that the brave Siberian would sacrifice her life for him. He had fancied that he could not hate
Ivan Ogareff more, yet a fresh tide of hate now rose in his heart. The wretch who had betrayed his country now
threatened to torture his mother.

The conversation between the two officers continued, and Michael understood that an engagement was imminent
in the neighborhood of Kolyvan, between the Muscovite troops coming from the north and the Tartars. A small
Russian force of two thousand men, reported to have reached the lower course of the Obi, were advancing by forced
marches towards Tomsk. If such was the case, this force, which would soon find itself engaged with the main body
of Feofar-Khan's army, would be inevitably overwhelmed, and the Irkutsk road would be in the entire possession
of the invaders.

As to himself, Michael learnt, by some words from the pendja-baschi, that a price was set on his head, and that
orders had been given to take him, dead or alive.

It was necessary, therefore, to get the start of the Usbeck horsemen on the Irkutsk road, and put the Obi between
himself and them. But to do that, he must escape before the camp was broken up.

His determination taken, Michael prepared to execute it.

Indeed, the halt would not be prolonged, and the pendja-baschi did not intend to give his men more than an
hour's rest, although their horses could not have been changed for fresh ones since Omsk, and must be as much
fatigued as that of Michael Strogoff.

There was not a moment to lose. It was within an hour of morning. It was needful to profit by the darkness to
leave the little wood and dash along the road; but although night favored it the success of such a flight appeared to
be almost impossible.

Not wishing to do anything at random, Michael took time for reflection, carefully weighing the chances so as to
take the best. From the situation of the place the result was this—that he could not escape through the back of the
wood, the stream which bordered it being not only deep, but very wide and muddy. Beneath this thick water was a
slimy bog, on which the foot could not rest. There was only one way open, the high-road. To endeavor to reach it by
creeping round the edge of the wood, without attracting attention, and then to gallop at headlong speed, required all
the remaining strength and energy of his noble steed. Too probably it would fall dead on reaching the banks of the
Obi, when, either by boat or by swimming, he must cross this important river. This was what Michael had before
him.

His energy and courage increased in sight of danger.

His life, his mission, his country, perhaps the safety of his mother, were at stake. He could not hesitate.

There was not a moment to be lost. Already there was a slight movement among the men of the detachment. A
few horsemen were strolling up and down the road in front of the wood. The rest were still lying at the foot of the
trees, but their horses were gradually penetrating towards the center of the wood.

Michael had at first thought of seizing one of these horses, but he recollected that, of course, they would be as
fatigued as his own. It was better to trust to his own brave steed, which had already rendered him such important
service. The good animal, hidden behind a thicket, had escaped the sight of the Usbecks. They, besides, had not
penetrated so far into the wood.

Michael crawled up to his horse through the grass, and found him lying down. He patted and spoke gently to
him, and managed to raise him without noise. Fortunately, the torches were entirely consumed, and now went out,
the darkness being still profound under shelter of the larches. After replacing the bit, Michael looked to his girths
and stirrups, and began to lead his horse quietly away. The intelligent animal followed his master without even
making the least neigh.

A few Usbeck horses raised their heads, and began to wander towards the edge of the wood. Michael held his
revolver in his hand, ready to blow out the brains of the first Tartar who should approach him. But happily the alarm
was not given, and he was able to gain the angle made by the wood where it joined the road.

To avoid being seen, Michael's intention was not to mount until after turning a corner some two hundred feet from the wood. Unfortunately, just at the moment that he was issuing from the wood, an Usbeck's horse, scenting him, neighed and began to trot along the road. His master ran to catch him, and seeing a shadowy form moving in the dim light, "Look out!" he shouted.

At the cry, all the men of the bivouac jumped up, and ran to seize their horses. Michael leaped on his steed, and galloped away. The two officers of the detachment urged on their men to follow.

Michael heard a report, and felt a ball pass through his tunic. Without turning his head, without replying, he spurred on, and, clearing the brushwood with a tremendous bound, he galloped at full speed toward the Obi.

The Usbecks' horses being unsaddled gave him a small start, but in less than two minutes he heard the tramp of several horses gradually gaining on him.

Day was now beginning to break, and objects at some distance were becoming visible. Michael turned his head, and perceived a horseman rapidly approaching him. It was the deh-baschi. Being better mounted, this officer had distanced his detachment.

Without drawing rein, Michael extended his revolver, and took a moment's aim. The Usbeck officer, hit in the breast, rolled on the ground.

But the other horsemen followed him closely, and without waiting to assist the deh-baschi, exciting each other by their shouts, digging their spurs into their horses' sides, they gradually diminished the distance between themselves and Michael.

For half an hour only was the latter able to keep out of range of the Tartars, but he well knew that his horse was becoming weaker, and dreaded every instant that he would stumble never to rise again.

It was now light, although the sun had not yet risen above the horizon. Two versts distant could be seen a pale line bordered by a few trees.

This was the Obi, which flows from the southwest to the northeast, the surface almost level with the ground, its bed being but the steppe itself.

Several times shots were fired at Michael, but without hitting him, and several times too he discharged his revolver on those of the soldiers who pressed him too closely. Each time an Usbeck rolled on the ground, midst cries of rage from his companions. But this pursuit could only terminate to Michael's disadvantage. His horse was almost exhausted. He managed to reach the bank of the river. The Usbeck detachment was now not more than fifty paces behind him.

The Obi was deserted--not a boat of any description which could take him over the water!

"Courage, my brave horse!" cried Michael. "Come! A last effort!" And he plunged into the river, which here was half a verst in width.

It would have been difficult to stand against the current--indeed, Michael's horse could get no footing. He must therefore swim across the river, although it was rapid as a torrent. Even to attempt it showed Michael's marvelous courage. The soldiers reached the bank, but hesitated to plunge in.

The pendja-baschi seized his musket and took aim at Michael, whom he could see in the middle of the stream. The shot was fired, and Michael's horse, struck in the side, was borne away by the current.

His master, speedily disentangling himself from his stirrups, struck out boldly for the shore. In the midst of a hailstorm of balls he managed to reach the opposite side, and disappeared in the rushes.

CHAPTER XVII THE RIVALS

MICHAEL was in comparative safety, though his situation was still terrible. Now that the faithful animal who had so bravely borne him had met his death in the waters of the river, how was he to continue his journey?

He was on foot, without provisions, in a country devastated by the invasion, overrun by the Emir's scouts, and still at a considerable distance from the place he was striving to reach. "By Heaven, I will get there!" he exclaimed, in reply to all the reasons for faltering. "God will protect our sacred Russia."

Michael was out of reach of the Usbeck horsemen. They had not dared to pursue him through the river.

Once more on solid ground Michael stopped to consider what he should do next. He wished to avoid Tomsk, now occupied by the Tartar troops. Nevertheless, he must reach some town, or at least a post-house, where he could procure a horse. A horse once found, he would throw himself out of the beaten track, and not again take to the Irkutsk road until in the neighborhood of Krasnoiarsk. From that place, if he were quick, he hoped to find the way still open, and he intended to go through the Lake Baikal provinces in a southeasterly direction.

Michael began by going eastward. By following the course of the Obi two versts further, he reached a picturesque little town lying on a small hill. A few churches, with Byzantine cupolas colored green and gold, stood
up against the gray sky. This is Kolyvan, where the officers and people employed at Kamsk and other towns take refuge during the summer from the unhealthy climate of the Baraba. According to the latest news obtained by the Czar's courier, Kolyvan could not be yet in the hands of the invaders. The Tartar troops, divided into two columns, had marched to the left on Omsk, to the right on Tomsk, neglecting the intermediate country.

Michael Strogoff's plan was simply this—to reach Kolyvan before the arrival of the Usbeck horsemen, who would ascend the other bank of the Obi to the ferry. There he would procure clothes and a horse, and resume the road to Irkutsk across the southern steppe.

It was now three o'clock in the morning. The neighborhood of Kolyvan was very still, and appeared to have been totally abandoned. The country population had evidently fled to the northwards, to the province of Yeniseisk, dreading the invasion, which they could not resist.

Michael was walking at a rapid pace towards Kolyvan when distant firing struck his ear. He stopped, and clearly distinguished the dull roar of artillery, and above it a crisp rattle which could not be mistaken.

"It is cannon and musketry!" said he. "The little Russian body is engaged with the Tartar army! Pray Heaven that I may arrive at Kolyvan before them!"

The firing became gradually louder, and soon to the left of Kolyvan a mist collected—not smoke, but those great white clouds produced by discharges of artillery.

The Usbeck horsemen stopped on the left of the Obi, to await the result of the battle. From them Michael had nothing to fear as he hastened towards the town.

In the meanwhile the firing increased, and became sensibly nearer. It was no longer a confused roar, but distinct reports. At the same time the smoke partially cleared, and it became evident that the combatants were rapidly moving southwards. It appeared that Kolyvan was to be attacked on the north side. But were the Russians defending it or the Tartars? It being impossible to decide this, Michael became greatly perplexed.

He was not more than half a verst from Kolyvan when he observed flames shooting up among the houses of the town, and the steeple of a church fell in the midst of clouds of smoke and fire. Was the struggle, then, in Kolyvan? Michael was compelled to think so. It was evident that Russians and Tartars were fighting in the streets of the town. Was this a time to seek refuge there? Would he not run a risk of being taken prisoner? Should he succeed in escaping from Kolyvan, as he had escaped from Omsk? He hesitated and stopped a moment. Would it not be better to try, even on foot, to reach some small town, and there procure a horse at any price? This was the only thing to be done; and Michael, leaving the Obi, went forward to the right of Kolyvan.

The firing had now increased in violence. Flames soon sprang up on the left of the town. Fire was devouring one entire quarter of Kolyvan.

Michael was running across the steppe endeavoring to gain the covert of some trees when a detachment of Tartar cavalry appeared on the right. He dared not continue in that direction. The horsemen advanced rapidly, and it would have been difficult to escape them.

Suddenly, in a thick clump of trees, he saw an isolated house, which it would be possible to reach before he was perceived. Michael had no choice but to run there, hide himself and ask or take something to recruit his strength, for he was exhausted with hunger and fatigue.

He accordingly ran on towards this house, still about half a verst distant. As he approached, he could see that it was a telegraph office. Two wires left it in westerly and easterly directions, and a third went towards Kolyvan.

It was to be supposed that under the circumstances this station was abandoned; but even if it was, Michael could take refuge there, and wait till nightfall, if necessary, to again set out across the steppe covered with Tartar scouts.

He ran up to the door and pushed it open.

A single person was in the room whence the telegraphic messages were dispatched. This was a clerk, calm, phlegmatic, indifferent to all that was passing outside. Faithful to his post, he waited behind his little wicket until the public claimed his services.

Michael ran up to him, and in a voice broken by fatigue, "What do you know?" he asked.

"Nothing," answered the clerk, smiling.

"Are the Russians and Tartars engaged?"

"They say so."

"But who are the victors?"

"I don't know."

Such calmness, such indifference, in the midst of these terrible events, was scarcely credible.

"And is not the wire cut?" said Michael.

"It is cut between Kolyvan and Krasnoiarsk, but it is still working between Kolyvan and the Russian frontier."

"For the government?"

"For the government, when it thinks proper. For the public, when they pay. Ten copecks a word, whenever you
like, sir!"

Michael was about to reply to this strange clerk that he had no message to send, that he only implored a little bread and water, when the door of the house was again thrown open.

Thinking that it was invaded by Tartars, Michael made ready to leap out of the window, when two men only entered the room who had nothing of the Tartar soldier about them. One of them held a dispatch, written in pencil, in his hand, and, passing the other, he hurried up to the wicket of the imperturbable clerk.

In these two men Michael recognized with astonishment, which everyone will understand, two personages of whom he was not thinking at all, and whom he had never expected to see again. They were the two reporters, Harry Blount and Alcide Jolivet, no longer traveling companions, but rivals, enemies, now that they were working on the field of battle.

They had left Ichim only a few hours after the departure of Michael Strogoff, and they had arrived at Kolyvan before him, by following the same road, in consequence of his losing three days on the banks of the Irtych. And now, after being both present at the engagement between the Russians and Tartars before the town, they had left just as the struggle broke out in the streets, and ran to the telegraph office, so as to send off their rival dispatches to Europe, and forestall each other in their report of events.

Michael stood aside in the shadow, and without being seen himself he could see and hear all that was going on. He would now hear interesting news, and would find out whether or not he could enter Kolyvan.

Blount, having distanced his companion, took possession of the wicket, whilst Alcide Jolivet, contrary to his usual habit, stamped with impatience.

"Ten copecks a word," said the clerk.
Blount deposited a pile of roubles on the shelf, whilst his rival looked on with a sort of stupefaction.
"Good," said the clerk. And with the greatest coolness in the world he began to telegraph the following dispatch:

"Daily Telegraph, London.
"From Kolyvan, Government of Omsk, Siberia, 6th August.
"Engagement between Russian and Tartar troops."

The reading was in a distinct voice, so that Michael heard all that the English correspondent was sending to his paper.

"Russians repulsed with great loss. Tartars entered Kolyvan to-day." These words ended the dispatch.
"My turn now," cried Alcide Jolivet, anxious to send off his dispatch, addressed to his cousin.
But that was not Blount's idea, who did not intend to give up the wicket, but have it in his power to send off the news just as the events occurred. He would therefore not make way for his companion.

"But you have finished!" exclaimed Jolivet.
"I have not finished," returned Harry Blount quietly.
And he proceeded to write some sentences, which he handed in to the clerk, who read out in his calm voice:

"John Gilpin was a citizen of credit and renown; a train-band captain eke was he of famous London town."

Harry Blount was telegraphing some verses learned in his childhood, in order to employ the time, and not give up his place to his rival. It would perhaps cost his paper some thousands of roubles, but it would be the first informed. France could wait.

Jolivet's fury may be imagined, though under any other circumstances he would have thought it fair warfare. He even endeavored to force the clerk to take his dispatch in preference to that of his rival.

"It is that gentleman's right," answered the clerk coolly, pointing to Blount, and smiling in the most amiable manner. And he continued faithfully to transmit to the Daily Telegraph the well-known verses of Cowper.

Whilst he was working Blount walked to the window and, his field glass to his eyes, watched all that was going on in the neighborhood of Kolyvan, so as to complete his information. In a few minutes he resumed his place at the wicket, and added to his telegram: ":Two churches are in flames. The fire appears to gain on the right. 'John Gilpin's spouse said to her dear, Though wedded we have been these twice ten tedious years, yet we no holiday have seen.'"

Alcide Jolivet would have liked to strangle the honorable correspondent of the Daily Telegraph.

He again interrupted the clerk, who, quite unmoved, merely replied: "It is his right, sir, it is his right--at ten copecks a word."

And he telegraphed the following news, just brought him by Blount: "Russian fugitives are escaping from the town. 'Away went Gilpin--who but he? His fame soon spread around: He carries weight! he rides a race! 'Tis for a thousand pound!" And Blount turned round with a quizzical look at his rival.

Alcide Jolivet fumed.

In the meanwhile Harry Blount had returned to the window, but this time his attention was diverted by the interest of the scene before him. Therefore, when the clerk had finished telegraphing the last lines dictated by Blount, Alcide Jolivet noiselessly took his place at the wicket, and, just as his rival had done, after quietly depositing
a respectable pile of roubles on the shelf, he delivered his dispatch, which the clerk read aloud: "Madeleine Jolivet, 10, Faubourg Montmartre, Paris.

"From Kolyvan, Government of Omsk, Siberia, 6th August.
"Fugitives are escaping from the town. Russians defeated. Fiercely pursued by the Tartar cavalry."
And as Harry Blount returned he heard Jolivet completing his telegram by singing in a mocking tone:
"Il est un petit homme, Tout habillé de gris, Dans Paris!"
Imitating his rival, Alcide Jolivet had used a merry refrain of Beranger.
"Hallo!" said Harry Blount.
"Just so," answered Jolivet.

In the meantime the situation at Kolyvan was alarming in the extreme. The battle was raging nearer, and the firing was incessant.

At that moment the telegraph office shook to its foundations. A shell had made a hole in the wall, and a cloud of dust filled the office.

Alcide was just finishing writing his lines; but to stop, dart on the shell, seize it in both hands, throw it out of the window, and return to the wicket, was only the affair of a moment.

Five seconds later the shell burst outside. Continuing with the greatest possible coolness, Alcide wrote: "A six-inch shell has just blown up the wall of the telegraph office. Expecting a few more of the same size."

Michael Strogoff had no doubt that the Russians were driven out of Kolyvan. His last resource was to set out across the southern steppe.

Just then renewed firing broke out close to the telegraph house, and a perfect shower of bullets smashed all the glass in the windows. Harry Blount fell to the ground wounded in the shoulder.

Jolivet even at such a moment, was about to add this postscript to his dispatch: "Harry Blount, correspondent of the Daily Telegraph, has fallen at my side struck by--" when the imperturbable clerk said calmly: "Sir, the wire has broken." And, leaving his wicket, he quietly took his hat, brushed it round with his sleeve, and, still smiling, disappeared through a little door which Michael had not before perceived.

The house was surrounded by Tartar soldiers, and neither Michael nor the reporters could effect their retreat.

Alcide Jolivet, his useless dispatch in his hand, had run to Blount, stretched on the ground, and had bravely lifted him on his shoulders, with the intention of flying with him. He was too late!

Both were prisoners; and, at the same time, Michael, taken unawares as he was about to leap from the window, fell into the hands of the Tartars!

END OF BOOK I

BOOK II

CHAPTER I A TARTAR CAMP

At a day's march from Kolyvan, several versts beyond the town of Diachinks, stretches a wide plain, planted here and there with great trees, principally pines and cedars. This part of the steppe is usually occupied during the warm season by Siberian shepherds, and their numerous flocks. But now it might have been searched in vain for one of its nomad inhabitants. Not that the plain was deserted. It presented a most animated appearance.

There stood the Tartar tents; there Feofar-Khan, the terrible Emir of Bokhara, was encamped; and there on the following day, the 7th of August, were brought the prisoners taken at Kolyvan after the annihilation of the Russian force, which had vainly attempted to oppose the progress of the invaders. Of the two thousand men who had engaged with the two columns of the enemy, the bases of which rested on Tomsk and Omsk, only a few hundred remained. Thus events were going badly, and the imperial government appeared to have lost its power beyond the frontiers of the Ural—for a time at least, for the Russians could not fail eventually to defeat the savage hordes of the invaders. But in the meantime the invasion had reached the center of Siberia, and it was spreading through the revolted country both to the eastern, and the western provinces. If the troops of the Amoor and the province of Takutsk did not arrive in time to occupy it, Irkutsk, the capital of Asiatic Russia, being insufficiently garrisoned, would fall into the hands of the Tartars, and the Grand Duke, brother of the Emperor, would be sacrificed to the vengeance of Ivan Ogareff.

What had become of Michael Strogoff? Had he broken down under the weight of so many trials? Did he consider himself conquered by the series of disasters which, since the adventure of Ichim, had increased in magnitude? Did he think his cause lost? that his mission had failed? that his orders could no longer be obeyed?

Michael was one of those men who never give in while life exists. He was yet alive; he still had the imperial
letter safe; his disguise had been undiscovered. He was included amongst the numerous prisoners whom the Tartars were dragging with them like cattle; but by approaching Tomsk he was at the same time drawing nearer to Irkutsk. Besides, he was still in front of Ivan Ogareff.

"I will get there!" he repeated to himself.

Since the affair of Kolyvan all the powers of his mind were concentrated on one object—to become free! How should he escape from the Emir's soldiers?

Feofar's camp presented a magnificent spectacle.

Numberless tents, of skin, felt, or silk, glistened in the rays of the sun. The lofty plumes which surmounted their conical tops waved amidst banners, flags, and pennons of every color. The richest of these tents belonged to the Seides and Khodjas, who are the principal personages of the khanat. A special pavilion, ornamented with a horse's tail issuing from a sheaf of red and white sticks artistically interlaced, indicated the high rank of these Tartar chiefs. Then in the distance rose several thousand of the Turcoman tents, called "karaoy," which had been carried on the backs of camels.

The camp contained at least a hundred and fifty thousand soldiers, as many foot as horse soldiers, collected under the name of Alamanes. Amongst them, and as the principal types of Turkestan, would have been directly remarked the Tadjiks, from their regular features, white skin, tall forms, and black eyes and hair; they formed the bulk of the Tartar army, and of them the khanats of Khokhand and Koundouge had furnished a contingent nearly equal to that of Bokhara. With the Tadjiks were mingled specimens of different races who either reside in Turkestan or whose native countries border on it. There were Usbecks, red-bearded, small in stature, similar to those who had pursued Michael. Here were Kirghiz, with flat faces like the Kalmucks, dressed in coats of mail: some carried the lance, bows, and arrows of Asiatic manufacture; some the saber, a matchlock gun, and the "tschakane," a short-handled ax, the wounds from which invariably prove fatal. There were Mongols—of middle height, with black hair plaited into pigtails, which hung down their back; round faces, swarthy complexions, lively deep-set eyes, scanty beards—dressed in blue nankeen trimmed with black plush, sword-belts of leather with silver buckles, coats gayly braided, and silk caps edged with fur and three ribbons fluttering behind. Brown-skinned Afghans, too, might have been seen. Arabs, having the primitive type of the beautiful Semitic races; and Turcomans, with eyes which looked as if they had lost the pupil,—all enrolled under the Emir's flag, the flag of incendiaries and devastators.

Among these free soldiers were a certain number of slave soldiers, principally Persians, commanded by officers of the same nation, and they were certainly not the least esteemed of Feofar-Khan's army.

If to this list are added the Jews, who acted as servants, their robes confined with a cord, and wearing on their heads instead of the turban, which is forbidden them, little caps of dark cloth; if with these groups are mingled some hundreds of "kalenders," a sort of religious mendicants, clothed in rags, covered by a leopard skin, some idea may be formed of the enormous agglomerations of different tribes included under the general denomination of the Tartar army.

Nothing could be more romantic than this picture, in delineating which the most skillful artist would have exhausted all the colors of his palette.

Feofar's tent overlooked the others. Draped in large folds of a brilliant silk looped with golden cords and tassels, surmounted by tall plumes which waved in the wind like fans, it occupied the center of a wide clearing, sheltered by a grove of magnificent birch and pine trees. Before this tent, on a japanned table inlaid with precious stones, was placed the sacred book of the Koran, its pages being of thin gold-leaf delicately engraved. Above floated the Tartar flag, quartered with the Emir's arms.

In a semicircle round the clearing stood the tents of the great functionaries of Bokhara. There resided the chief of the stables, who has the right to follow the Emir on horseback even into the court of his palace; the grand falconer; the "housch-begui," bearer of the royal seal; the "toptschi-baschi," grand master of the artillery; the "khodja," chief of the council, who receives the prince's kiss, and may present himself before him with his girdle untied; the "scheikh-oul-islam," chief of the Ulemas, representing the priests; the "cazi-askev," who, in the Emir's absence settles all disputes raised among the soldiers; and lastly, the chief of the astrologers, whose great business is to consult the stars every time the Khan thinks of changing his quarters.

When the prisoners were brought into the camp, the Emir was in his tent. He did not show himself. This was fortunate, no doubt. A sign, a word from him might have been the signal for some bloody execution. But he intrenched himself in that isolation which constitutes in part the majesty of Eastern kings. He who does not show himself is admired, and, above all, feared.

As to the prisoners, they were to be penned up in some enclosure, where, ill-treated, poorly fed, and exposed to all the inclemencies of the weather, they would await Feofar's pleasure.

The most docile and patient of them all was undoubtedly Michael Strogoff. He allowed himself to be led, for they were leading him where he wished to go, and under conditions of safety which free he could not have found on
the road from Kolyvan to Tomsk. To escape before reaching that town was to risk again falling into the hands of the scouts, who were scouring the steppe. The most eastern line occupied by the Tartar columns was not situated beyond the eighty-fifth meridian, which passes through Tomsk. This meridian once passed, Michael considered that he should be beyond the hostile zones, that he could traverse Genisci without danger, and gain Krasnoiarsk before Feofar-Khan had invaded the province.

"Once at Tomsk," he repeated to himself, to repress some feelings of impatience which he could not entirely master, "in a few minutes I should be beyond the outposts; and twelve hours gained on Feofar, twelve hours on Ogareff, that surely would be enough to give me a start of them to Irkutsk."

The thing that Michael dreaded more than everything else was the presence of Ivan Ogareff in the Tartar camp. Besides the danger of being recognized, he felt, by a sort of instinct, that this was the traitor whom it was especially necessary to precede. He understood, too, that the union of Ogareff's troops with those of Feofar would complete the invading army, and that the junction once effected, the army would march en masse on the capital of Eastern Siberia. All his apprehensions came from this quarter, and he dreaded every instant to hear some flourish of trumpets, announcing the arrival of the lieutenant of the Emir.

To this was added the thought of his mother, of Nadia,--the one a prisoner at Omsk; the other dragged on board the Irtych boats, and no doubt a captive, as Marfa Strogoff was. He could do nothing for them. Should he ever see them again? At this question, to which he dared not reply, his heart sank very low.

At the same time with Michael Strogoff and so many other prisoners Harry Blount and Alcide Jolivet had also been taken to the Tartar camp. Their former traveling companion, captured like them at the telegraph office, knew that they were penned up with him in the enclosure, guarded by numerous sentinels, but he did not wish to accost them. It mattered little to him, at this time especially, what they might think of him since the affair at Ichim. Besides, he desired to be alone, that he might act alone, if necessary. He therefore held himself aloof from his former acquaintances.

From the moment that Harry Blount had fallen by his side, Jolivet had not ceased his attentions to him. During the journey from Kolyvan to the camp--that is to say, for several hours--Blount, by leaning on his companion's arm, had been enabled to follow the rest of the prisoners. He tried to make known that he was a British subject; but it had no effect on the barbarians, who only replied by prods with a lance or sword. The correspondent of the Daily Telegraph was, therefore, obliged to submit to the common lot, resolving to protest later, and obtain satisfaction for such treatment. But the journey was not the less disagreeable to him, for his wound caused him much pain, and without Alcide Jolivet's assistance he might never have reached the camp.

Jolivet, whose practical philosophy never abandoned him, had physically and morally strengthened his companion by every means in his power. His first care, when they found themselves definitely established in the enclosure, was to examine Blount's wound. Having managed carefully to draw off his coat, he found that the shoulder had been only grazed by the shot.

"This is nothing," he said. "A mere scratch! After two or three dressings you will be all to rights."

"But these dressings?" asked Blount.

"I will make them for you myself."

"Then you are something of a doctor?"

"All Frenchmen are something of doctors."

And on this affirmation Alcide, tearing his handkerchief, made lint of one piece, bandages of the other, took some water from a well dug in the middle of the enclosure, bathed the wound, and skillfully placed the wet rag on Harry Blount's shoulder.

"I treat you with water," he said. "This liquid is the most efficacious sedative known for the treatment of wounds, and is the most employed now. Doctors have taken six thousand years to discover that! Yes, six thousand years in round numbers!"

"I thank you, M. Jolivet," answered Harry, stretching himself on a bed of dry leaves, which his companion had arranged for him in the shade of a birch tree.

"Bah! it's nothing! You would do as much for me."

"I am not quite so sure," said Blount candidly.

"Nonsense, stupid! All English are generous."

"Doubtless; but the French?"

"Well, the French--they are brutes, if you like! But what redeems them is that they are French. Say nothing more about that, or rather, say nothing more at all. Rest is absolutely necessary for you."

But Harry Blount had no wish to be silent. If the wound, in prudence, required rest, the correspondent of the Daily Telegraph was not a man to indulge himself.

"M. Jolivet," he asked, "do you think that our last dispatches have been able to pass the Russian frontier?"
"Why not?" answered Alcide. "By this time you may be sure that my beloved cousin knows all about the affair at Kolyvan."

"How many copies does your cousin work off of her dispatches?" asked Blount, for the first time putting his question direct to his companion.

"Well," answered Alcide, laughing, "my cousin is a very discreet person, who does not like to be talked about, and who would be in despair if she troubled the sleep of which you are in need."

"I don't wish to sleep," replied the Englishman. "What will your cousin think of the affairs of Russia?"

"That they seem for the time in a bad way. But, bah! the Muscovite government is powerful; it cannot be really uneasy at an invasion of barbarians."

"Too much ambition has lost the greatest empires," answered Blount, who was not exempt from a certain English jealousy with regard to Russian pretensions in Central Asia.

"Oh, do not let us talk politics," cried Jolivet. "It is forbidden by the faculty. Nothing can be worse for wounds in the shoulder--unless it was to put you to sleep."

"Let us, then, talk of what we ought to do," replied Blount. "M. Jolivet, I have no intention at all of remaining a prisoner to these Tartars for an indefinite time."

"Nor I, either, by Jove!"

"We will escape on the first opportunity?"

"Yes, if there is no other way of regaining our liberty."

"Do you know of any other?" asked Blount, looking at his companion.

"Certainly. We are not belligerents; we are neutral, and we will claim our freedom."

"From that brute of a Feofar-Khan?"

"No; he would not understand," answered Jolivet; "but from his lieutenant, Ivan Ogareff."

"He is a villain."

"No doubt; but the villain is a Russian. He knows that it does not do to trifle with the rights of men, and he has no interest to retain us; on the contrary. But to ask a favor of that gentleman does not quite suit my taste."

"But that gentleman is not in the camp, or at least I have not seen him here," observed Blount.

"He will come. He will not fail to do that. He must join the Emir. Siberia is cut in two now, and very certainly Feofar's army is only waiting for him to advance on Irkutsk."

"And once free, what shall we do?"

"Once free, we will continue our campaign, and follow the Tartars, until the time comes when we can make our way into the Russian camp. We must not give up the game. No, indeed; we have only just begun. You, friend, have already had the honor of being wounded in the service of the Daily Telegraph, whilst I--I have as yet suffered nothing in my cousin's service. Well, well! Good," murmured Alcide Jolivet; "there he is asleep. A few hours' sleep and a few cold water compresses are all that are required to set an Englishman on his legs again. These fellows are made of cast iron."

And whilst Harry Blount rested, Alcide watched near him, after having drawn out his note book, which he loaded with notes, determined besides to share them with his companion, for the greater satisfaction of the readers of the Daily Telegraph. Events had united them one with the other. They were no longer jealous of each other. So, then, the thing that Michael Strogoff dreaded above everything was the most lively desire of the two correspondents. Ivan Ogareff's arrival would evidently be of use to them. Blount and Jolivet's interest was, therefore, contrary to that of Michael. The latter well understood the situation, and it was one reason, added to many others, which prevented him from approaching his former traveling companions. He therefore managed so as not to be seen by them.

Four days passed thus without the state of things being in anywise altered. The prisoners heard no talk of the breaking up of the Tartar camp. They were strictly guarded. It would have been impossible for them to pass the cordon of foot and horse soldiers, which watched them night and day. As to the food which was given them it was barely sufficient. Twice in the twenty-four hours they were thrown a piece of the intestines of goats grilled on the coals, or a few bits of that cheese called "kroute," made of sour ewe's milk, and which, soaked in mare's milk, forms the Kirghiz dish, commonly called "koumyss." And this was all. It may be added that the weather had become detestable. There were considerable atmospheric commotions, bringing squalls mingled with rain. The unfortunate prisoners, destitute of shelter, had to bear all the inclemencies of the weather, nor was there the slightest alleviation to their misery. Several wounded women and children died, and the prisoners were themselves compelled to dig graves for the bodies of those whom their jailers would not even take the trouble to bury.

During this trying period Alcide Jolivet and Michael Strogoff worked hard, each in the portions of the enclosure in which they found themselves. Healthy and vigorous, they suffered less than so many others, and could better endure the hardships to which they were exposed. By their advice, and the assistance they rendered, they were of the greatest possible use to their suffering and despairing fellow-captives.
Was this state of things to last? Would Feofar-Khan, satisfied with his first success, wait some time before marching on Irkutsk? Such, it was to be feared, would be the case. But it was not so. The event so much wished for by Jolivet and Blount, so much dreaded by Michael, occurred on the morning of the 12th of August.

On that day the trumpets sounded, the drums beat, the cannon roared. A huge cloud of dust swept along the road from Kolyvan. Ivan Ogareff, followed by several thousand men, made his entry into the Tartar camp.

CHAPTER II CORRESPONDENTS IN TROUBLE

IVAN OGAREFF was bringing up the main body of the army of the Emir. The cavalry and infantry now under him had formed part of the column which had taken Omsk. Ogareff, not having been able to reduce the high town, in which, it must be remembered, the governor and garrison had sought refuge, had decided to pass on, not wishing to delay operations which ought to lead to the conquest of Eastern Siberia. He therefore left a garrison in Omsk, and, reinforcing himself en route with the conquerors of Kolyvan, joined Feofar's army.

Ivan Ogareff's soldiers halted at the outposts of the camp. They received no orders to bivouac. Their chief's plan, doubtless, was not to halt there, but to press on and reach Tomsk in the shortest possible time, it being an important town, naturally intended to become the center of future operations.

Besides his soldiers, Ogareff was bringing a convoy of Russian and Siberian prisoners, captured either at Omsk or Kolyvan. These unhappy creatures were not led to the enclosure--already too crowded--but were forced to remain at the outposts without shelter, almost without nourishment. What fate was Feofar-Khan reserving for these unfortunates? Would he imprison them in Tomsk, or would some bloody execution, familiar to the Tartar chiefs, remove them when they were found too inconvenient? This was the secret of the capricious Emir.

This army had not come from Omsk and Kolyvan without bringing in its train the usual crowd of beggars, freebooters, pedlars, and gypsies, which compose the rear-guard of an army on the march.

All these people lived on the country traversed, and left little of anything behind them. There was, therefore, a necessity for pushing forward, if only to secure provisions for the troops. The whole region between Ichim and the Obi, now completely devastated, no longer offered any resources. The Tartars left a desert behind them.

Conspicuous among the gypsies who had hastened from the western provinces was the Tsigane troop, which had accompanied Michael Strogoff as far as Perm. Sangarre was there. This fierce spy, the tool of Ivan Ogareff, had not deserted her master. Ogareff had traveled rapidly to Ichim, whilst Sangarre and her band had proceeded to Omsk by the southern part of the province.

It may be easily understood how useful this woman was to Ogareff. With her gypsy-band she could penetrate anywhere. Ivan Ogareff was kept acquainted with all that was going on in the very heart of the invaded provinces. There were a hundred eyes, a hundred ears, open in his service. Besides, he paid liberally for this espionage, from which he derived so much advantage.

Once Sangarre, being implicated in a very serious affair, had been saved by the Russian officer. She never forgot what she owed him, and had devoted herself to his service body and soul.

When Ivan Ogareff entered on the path of treason, he saw at once how he might turn this woman to account. Whatever order he might give her, Sangarre would execute it. An inexplicable instinct, more powerful still than that of gratitude, had urged her to make herself the slave of the traitor to whom she had been attached since the very beginning of his exile in Siberia.

Confidante and accomplice, Sangarre, without country, without family, had been delighted to put her vagabond life to the service of the invaders thrown by Ogareff on Siberia. To the wonderful cunning natural to her race she added a wild energy, which knew neither forgiveness nor pity. She was a savage worthy to share the wigwam of an Apache or the hut of an Andaman.

Since her arrival at Omsk, where she had rejoined him with her Tsiganes, Sangarre had not again left Ogareff. The circumstance that Michael and Marfa Strogoff had met was known to her. She knew and shared Ogareff's fears concerning the journey of a courier of the Czar. Having Marfa Strogoff in her power, she would have been the woman to torture her with all the refinement of a Redskin in order to wrest her secret from her. But the hour had not yet come in which Ogareff wished the old Siberian to speak. Sangarre had to wait, and she waited, without losing sight of her whom she was watching, observing her slightest gestures, her slightest words, endeavoring to catch the word "son" escaping from her lips, but as yet always baffled by Marfa's taciturnity.

At the first flourish of the trumpets several officers of high rank, followed by a brilliant escort of Usbeck horsemen, moved to the front of the camp to receive Ivan Ogareff. Arrived in his presence, they paid him the greatest respect, and invited him to accompany them to Feofar-Khan's tent.

Imperturbable as usual, Ogareff replied coldly to the deference paid to him. He was plainly dressed; but, from a sort of impudent bravado, he still wore the uniform of a Russian officer.
As he was about to enter the camp, Sangarre, passing among the officers approached and remained motionless before him. "Nothing?" asked Ogareff.

"Nothing."

"Have patience."

"Is the time approaching when you will force the old woman to speak?"

"It is approaching, Sangarre."

"When will the old woman speak?"

"When we reach Tomsk."

"And we shall be there--"

"In three days."

A strange gleam shot from Sangarre's great black eyes, and she retired with a calm step. Ogareff pressed his spurs into his horse's flanks, and, followed by his staff of Tartar officers, rode towards the Emir's tent.

Feofar-Khan was expecting his lieutenant. The council, composed of the bearer of the royal seal, the khodja, and some high officers, had taken their places in the tent. Ivan Ogareff dismounted and entered.

Feofar-Khan was a man of forty, tall, rather pale, of a fierce countenance, and evil eyes. A curly black beard flowed over his chest. With his war costume, coat of mail of gold and silver, cross-belt and scabbard glistening with precious stones, boots with golden spurs, helmet ornamented with an aigrette of brilliant diamonds, Feofar presented an aspect rather strange than imposing for a Tartar Sardana-palus, an undisputed sovereign, who directs at his pleasure the life and fortune of his subjects.

When Ivan Ogareff appeared, the great dignitaries remained seated on their gold-embroidered cushions; but Feofar rose from a rich divan which occupied the back part of the tent, the ground being hidden under the thick velvet-pile of a Bokharian carpet.

The Emir approached Ogareff and gave him a kiss, the meaning of which he could not mistake. This kiss made the lieutenant chief of the council, and placed him temporarily above the khodja.

Then Feofar spoke. "I have no need to question you," said he; "speak, Ivan. You will find here ears very ready to listen to you."

"Takhir," answered Ogareff, "this is what I have to make known to you." He spoke in the Tartar language, giving to his phrases the emphatic turn which distinguishes the languages of the Orientals. "Takhir, this is not the time for unnecessary words. What I have done at the head of your troops, you know. The lines of the Ichim and the Irtych are now in our power; and the Turcoman horsemen can bathe their horses in the now Tartar waters. The Kirghiz hordes rose at the voice of Feofar-Khan. You can now push your troops towards the east, and where the sun rises, or towards the west, where he sets."

"And if I march with the sun?" asked the Emir, without his countenance betraying any of his thoughts.

"To march with the sun," answered Ogareff, "is to throw yourself towards Europe; it is to conquer rapidly the Siberian provinces of Tobolsk as far as the Ural Mountains."

"And if I go to meet this luminary of the heavens?"

"It is to subdue to the Tartar dominion, with Irkutsk, the richest countries of Central Asia."

"But the armies of the Sultan of St. Petersburg?" said Feofar-Khan, designating the Emperor of Russia by this strange title.

"You have nothing to fear from them," replied Ivan Ogareff. "The invasion has been sudden; and before the Russian army can succor them, Irkutsk or Tobolsk will have fallen into your power. The Czar's troops have been overwhelmed at Kolyvan, as they will be everywhere where yours meet them."

"And what advice does your devotion to the Tartar cause suggest?" asked the Emir, after a few moments' silence.

"My advice," answered Ivan Ogareff quickly, "is to March to meet the sun. It is to give the grass of the eastern steppes to the Turcoman horses to consume. It is to take Irkutsk, the capital of the eastern provinces, and with it a hostage, the possession of whom is worth a whole country. In the place of the Czar, the Grand Duke his brother must fall into your hands."

This was the great result aimed at by Ivan Ogareff. To listen to him, one would have taken him for one of the cruel descendants of Stephan Razine, the celebrated pirate who ravaged Southern Russia in the eighteenth century. To seize the Grand Duke, murder him pitilessly, would fully satisfy his hatred. Besides, with the capture of Irkutsk, all Eastern Siberia would pass to the Tartars.

"It shall be thus, Ivan," replied Feofar.

"What are your orders, Takhsir?"

"To-day our headquarters shall be removed to Tomsk."

Ogareff bowed, and, followed by the houch-begui, he retired to execute the Emir's orders.

As he was about to mount his horse, to return to the outposts, a tumult broke out at some distance, in the part of
the camp reserved for the prisoners. Shouts were heard, and two or three shots fired. Perhaps it was an attempt at revolt or escape, which must be summarily suppressed.

Ivan Ogareff and the housch-begui walked forward and almost immediately two men, whom the soldiers had not been able to keep back appeared before them.

The housch-begui, without more information, made a sign which was an order for death, and the heads of the two prisoners would have rolled on the ground had not Ogareff uttered a few words which arrested the sword already raised aloft. The Russian had perceived that these prisoners were strangers, and he ordered them to be brought to him.

They were Harry Blount and Alcide jolivet.

On Ogareff's arrival in the camp, they had demanded to be conducted to his presence. The soldiers had refused. In consequence, a struggle, an attempt at flight, shots fired which happily missed the two correspondents, but their execution would not have been long delayed, if it had not been for the intervention of the Emir's lieutenant.

The latter observed the prisoners for some moments, they being absolutely unknown to him. They had been present at that scene in the post-house at Ichim, in which Michael Strogoff had been struck by Ogareff; but the brutal traveler had paid no attention to the persons then collected in the common room.

Blount and Jolivet, on the contrary, recognized him at once, and the latter said in a low voice, "Hullo! It seems that Colonel Ogareff and the rude personage of Ichim are one!" Then he added in his companion's ear, "Explain our affair, Blount. You will do me a service. This Russian colonel in the midst of a Tartar camp disgusts me; and although, thanks to him, my head is still on my shoulders, my eyes would exhibit my feelings were I to attempt to look him in the face."

So saying, Alcide Jolivet assumed a look of complete and haughty indifference.

Whether or not Ivan Ogareff perceived that the prisoner's attitude was insulting towards him, he did not let it appear. "Who are you, gentlemen?" he asked in Russian, in a cold tone, but free from its usual rudeness.

"Two correspondents of English and French newspapers," replied Blount laconically.

"You have, doubtless, papers which will establish your identity?"

"Here are letters which accredit us in Russia, from the English and French chancellor's office."

Ivan Ogareff took the letters which Blount held out, and read them attentively. "You ask," said he, "authorization to follow our military operations in Siberia?"

"We ask to be free, that is all," answered the English correspondent dryly.

"You are so, gentlemen," answered Ogareff; "I am curious to read your articles in the Daily Telegraph."

"Sir," replied Blount, with the most imperturbable coolness, "it is sixpence a number, including postage." And thereupon he returned to his companion, who appeared to approve completely of his replies.

Ivan Ogareff, without frowning, mounted his horse, and going to the head of his escort, soon disappeared in a cloud of dust.

"Well, Jolivet, what do you think of Colonel Ivan Ogareff, general-in-chief of the Tartar troops?" asked Blount.

"I think, my dear friend," replied Alcide, smiling, "that the housch-begui made a very graceful gesture when he gave the order for our heads to be cut off."

Whatever was the motive which led Ogareff to act thus in regard to the two correspondents, they were free and could rove at their pleasure over the scene of war. Their intention was not to leave it. The sort of antipathy which formerly they had entertained for each other had given place to a sincere friendship. Circumstances having brought them together, they no longer thought of separating. The petty questions of rivalry were forever extinguished. Harry Blount could never forget what he owed his companion, who, on the other hand, never tried to remind him of it. This friendship too assisted the reporting operations, and was thus to the advantage of their readers.

"And now," asked Blount, "what shall we do with our liberty?"

"Take advantage of it, of course," replied Alcide, "and go quietly to Tomsk to see what is going on there."

"Until the time--very near, I hope--when we may rejoin some Russian regiment?"

"As you say, my dear Blount, it won't do to Tartarise ourselves too much. The best side is that of the most civilized army, and it is evident that the people of Central Asia will have everything to lose and absolutely nothing to gain from this invasion, while the Russians will soon repulse them. It is only a matter of time."

The arrival of Ivan Ogareff, which had given Jolivet and Blount their liberty, was to Michael Strogoff, on the contrary, a serious danger. Should chance bring the Czar's courier into Ogareff's presence, the latter could not fail to recognize in him the traveler whom he had so brutally treated at the Ichim post-house, and although Michael had not replied to the insult as he would have done under any other circumstances, attention would be drawn to him, and at once the accomplishment of his plans would be rendered more difficult.

This was the unpleasant side of the business. A favorable result of his arrival, however, was the order which was given to raise the camp that very day, and remove the headquarters to Tomsk. This was the accomplishment of
Michael's most fervent desire. His intention, as has been said, was to reach Tomsk concealed amongst the other prisoners; that is to say, without any risk of falling into the hands of the scouts who swarmed about the approaches to this important town. However, in consequence of the arrival of Ivan Ogareff, he questioned whether it would not be better to give up his first plan and attempt to escape during the journey.

Michael would, no doubt, have kept to the latter plan had he not learnt that Feofar-Khan and Ogareff had already set out for the town with some thousands of horsemen. "I will wait, then," said he to himself; "at least, unless some exceptional opportunity for escape occurs. The adverse chances are numerous on this side of Tomsk, while beyond I shall in a few hours have passed the most advanced Tartar posts to the east. Still three days of patience, and may God aid me!"

It was indeed a journey of three days which the prisoners, under the guard of a numerous detachment of Tartars, were to make across the steppe. A hundred and fifty versts lay between the camp and the town—an easy march for the Emir's soldiers, who wanted for nothing, but a wretched journey for these people, enfeebled by privations. More than one corpse would show the road they had traversed.

It was two o'clock in the afternoon, on the 12th of August, under a hot sun and cloudless sky, that the toptschi-baschi gave the order to start.

Alcide and Blount, having bought horses, had already taken the road to Tomsk, where events were to reunite the principal personnages of this story.

Amongst the prisoners brought by Ivan Ogareff to the Tartar camp was an old woman, whose taciturnity seemed to keep her apart from all those who shared her fate. Not a murmur issued from her lips. She was like a statue of grief. This woman was more strictly guarded than anyone else, and, without her appearing to notice, was constantly watched by the Tsigane Sangarre. Notwithstanding her age she was compelled to follow the convoy of prisoners on foot, without any alleviation of her suffering.

However, a kind Providence had placed near her a courageous, kind-hearted being to comfort and assist her. Amongst her companions in misfortune a young girl, remarkable for beauty and taciturnity, seemed to have given herself the task of watching over her. No words had been exchanged between the two captives, but the girl was always at the old woman's side when help was useful. At first the mute assistance of the stranger was accepted with some mistrust. Gradually, however, the young girl's clear glance, her reserve, and the mysterious sympathy which draws together those who are in misfortune, thawed Marfa Strogoff's coldness.

Nadia--for it was she--was thus able, without knowing it, to render to the mother those attentions which she had herself received from the son. Her instinctive kindness had doubly inspired her. In devoting herself to her service, Nadia secured to her youth and beauty the protection afforded by the age of the old prisoner.

On the crowd of unhappy people, embittered by sufferings, this silent pair—one seeming to be the grandmother, the other the grand-daughter—imposed a sort of respect.

If Nadia had been less energetic, she would have succumbed to this double blow. The interruption to her journey, the death of Michael, made her both desperate and excited. Divided, perhaps forever, from her father, after so many happy efforts had brought her near him, and, to crown her grief, separated from the intrepid companion whom God seemed to have placed in her way to lead her. The image of Michael Strogoff, struck before her eyes with a lance and disappearing beneath the waters of the Irtych, never left her thoughts.

Could such a man have died thus? For whom was God reserving His miracles if this good man, whom a noble object was urging onwards, had been allowed to perish so miserably? Then anger would prevail over grief. The scene of the affront so strangely borne by her companion at the Ichim relay returned to her memory. Her blood boiled at the recollection.

"Who will avenge him who can no longer avenge himself?" she said.

And in her heart, she cried, "May it be I!" If before his death Michael had confided his secret to her, woman, aye girl though she was, she might have been able to carry to a successful conclusion the interrupted task of that brother whom God had so soon taken from her.

Absorbed in these thoughts, it can be understood how Nadia could remain insensible to the miseries even of her captivity. Thus chance had united her to Marfa Strogoff without her having the least suspicion of who she was. How could she imagine that this old woman, a prisoner like herself, was the mother of him, whom she only knew as the merchant Nicholas Korpanoff? And on the other hand, how could Marfa guess that a bond of gratitude connected this young stranger with her son?

The thing that first struck Nadia in Marfa Strogoff was the similarity in the way in which each bore her hard fate. This stoicismo of the old woman under the daily hardships, this contempt of bodily suffering, could only be caused by a moral grief equal to her own. So Nadia thought; and she was not mistaken. It was an instinctive sympathy for that
part of her misery which Marfa did not show which first drew Nadia towards her. This way of bearing her sorrow went to the proud heart of the young girl. She did not offer her services; she gave them. Marfa had neither to refuse nor accept them. In the difficult parts of the journey, the girl was there to support her. When the provisions were given out, the old woman would not have moved, but Nadia shared her small portion with her; and thus this painful journey was performed. Thanks to her companion, Marfa was able to follow the soldiers who guarded the prisoners without being fastened to a saddle-bow, as were many other unfortunate wretches, and thus dragged along this road of sorrow.

"May God reward you, my daughter, for what you have done for my old age!" said Marfa Strogoff once, and for some time these were the only words exchanged between the two unfortunate beings.

During these few days, which to them appeared like centuries, it would seem that the old woman and the girl would have been led to speak of their situation. But Marfa Strogoff, from a caution which may be easily understood, never spoke about herself except with the greatest brevity. She never made the smallest allusion to her son, nor to the unfortunate meeting.

Nadia also, if not completely silent, spoke little. However, one day her heart overflowed, and she told all the events which had occurred from her departure from Wladimir to the death of Nicholas Korpanoff.

All that her young companion told intensely interested the old Siberian. "Nicholas Korpanoff!" said she. "Tell me again about this Nicholas. I know only one man, one alone, in whom such conduct would not have astonished me. Nicholas Korpanoff! Was that really his name? Are you sure of it, my daughter?"

"Why should he have deceived me in this," replied Nadia, "when he deceived me in no other way?"

Moved, however, by a kind of presentiment, Marfa Strogoff put questions upon questions to Nadia.

"You told me he was fearless, my daughter. You have proved that he has been so?" asked she.

"Yes, fearless indeed!" replied Nadia.

"It was just what my son would have done," said Marfa to herself.

Then she resumed, "Did you not say that nothing stopped him, nor astonished him; that he was so gentle in his strength that you had a sister as well as a brother in him, and he watched over you like a mother?"

"Yes, yes," said Nadia. "Brother, sister, mother--he has been all to me!"

"And defended you like a lion?"

"A lion indeed!" replied Nadia. "A lion, a hero!"

"My son, my son!" thought the old Siberian. "But you said, however, that he bore a terrible insult at that post-house in Ichim?"

"He did bear it," answered Nadia, looking down.

"He bore it!" murmured Marfa, shuddering.

"Mother, mother," cried Nadia, "do not blame him! He had a secret. A secret of which God alone is as yet the judge!"

"And," said Marfa, raising her head and looking at Nadia as though she would read the depths of her heart, "in that hour of humiliation did you not despise this Nicholas Korpanoff?"

"I admired without understanding him," replied the girl. "I never felt him more worthy of respect."

The old woman was silent for a minute.

"Was he tall?" she asked.

"Very tall."

"And very handsome? Come, speak, my daughter."

"He was very handsome," replied Nadia, blushing.

"It was my son! I tell you it was my son!" exclaimed the old woman, embracing Nadia.

"Your son!" said Nadia amazed, "your son!"

"Come," said Marfa; "let us get to the bottom of this, my child. Your companion, your friend, your protector had a mother. Did he never speak to you of his mother?"

"Of his mother?" said Nadia. "He spoke to me of his mother as I spoke to him of my father--often, always. He adored her."

"Nadia, Nadia, you have just told me about my own son," said the old woman.

And she added impetuously, "Was he not going to see this mother, whom you say he loved, in Omsk?"

"No," answered Nadia, "no, he was not."

"Not!" cried Marfa. "You dare to tell me not!"

"I say so: but it remains to me to tell you that from motives which outweighed everything else, motives which I do not know, I understand that Nicholas Korpanoff had to traverse the country completely in secret. To him it was a question of life and death, and still more, a question of duty and honor."

"Duty, indeed, imperious duty," said the old Siberian, "of those who sacrifice everything, even the joy of giving
a kiss, perhaps the last, to his old mother. All that you do not know, Nadia--all that I did not know myself--I now
know. You have made me understand everything. But the light which you have thrown on the mysteries of my heart,
I cannot return on yours. Since my son has not told you his secret, I must keep it. Forgive me, Nadia; I can never
repay what you have done for me."

"Mother, I ask you nothing," replied Nadia.

All was thus explained to the old Siberian, all, even the conduct of her son with regard to herself in the inn at
Omsk. There was no doubt that the young girl's companion was Michael Strogoff, and that a secret mission in the
invaded country obliged him to conceal his quality of the Czar's courier.

"Ah, my brave boy!" thought Marfa. "No, I will not betray you, and tortures shall not wrest from me the avowal
that it was you whom I saw at Omsk."

Marfa could with a word have paid Nadia for all her devotion to her. She could have told her that her
companion, Nicholas Korpanoff, or rather Michael Strogoff, had not perished in the waters of the Irtych, since it was
some days after that incident that she had met him, that she had spoken to him.

But she restrained herself, she was silent, and contented herself with saying, "Hope, my child! Misfortune will
not overwhelm you. You will see your father again; I feel it; and perhaps he who gave you the name of sister is not
dead. God cannot have allowed your brave companion to perish. Hope, my child, hope! Do as I do. The mourning
which I wear is not yet for my son."

CHAPTER III BLOW FOR BLOW

SUCH were now the relative situations of Marfa Strogoff and Nadia. All was understood by the old Siberian,
and though the young girl was ignorant that her much-regretted companion still lived, she at least knew his
relationship to her whom she had made her mother; and she thanked God for having given her the joy of taking the
place of the son whom the prisoner had lost.

But what neither of them could know was that Michael, having been captured at Kolyvan, was in the same
convoy and was on his way to Tomsk with them.

The prisoners brought by Ivan Ogareff had been added to those already kept by the Emir in the Tartar camp.
These unfortunate people, consisting of Russians, Siberians, soldiers and civilians, numbered some thousands, and
formed a column which extended over several versts. Some among them being considered dangerous were
handcuffed and fastened to a long chain. There were, too, women and children, many of the latter suspended to the
pommels of the saddles, while the former were dragged mercilessly along the road on foot, or driven forward as if
they were animals. The horsemen compelled them to maintain a certain order, and there were no laggards with the
exception of those who fell never to rise again.

In consequence of this arrangement, Michael Strogoff, marching in the first ranks of those who had left the
Tartar camp--that is to say, among the Kolyvan prisoners--was unable to mingle with the prisoners who had arrived
after him from Omsk. He had therefore no suspicion that his mother and Nadia were present in the convoy, nor did
they suppose that he was among those in front. This journey from the camp to Tomsk, performed under the lashes
and spear-points of the soldiers, proved fatal to many, and terrible to all. The prisoners traveled across the steppe,
over a road made still more dusty by the passage of the Emir and his vanguard. Orders had been given to march
rapidly. The short halts were rare. The hundred miles under a burning sky seemed interminable, though they were
performed as rapidly as possible.

The country, which extends from the right of the Obi to the base of the spur detached from the Sayanok
Mountains, is very sterile. Only a few stunted and burnt-up shrubs here and there break the monotony of the
immense plain. There was no cultivation, for there was no water; and it was water that the prisoners, parched by
their painful march, most needed. To find a stream they must have diverged fifty versts eastward, to the very foot of
the mountains.

There flows the Tom, a little affluent of the Obi, which passes near Tomsk before losing itself in one of the great
northern arteries. There water would have been abundant, the steppe less arid, the heat less severe. But the strictest
orders had been given to the commanders of the convoy to reach Tomsk by the shortest way, for the Emir was much
afraid of being taken in the flank and cut off by some Russian column descending from the northern provinces.

It is useless to dwell upon the sufferings of the unhappy prisoners. Many hundreds fell on the steppe, where their
bodies would lie until winter, when the wolves would devour the remnants of their bones.

As Nadia helped the old Siberian, so in the same way did Michael render to his more feeble companions in
misfortune such services as his situation allowed. He encouraged some, supported others, going to and fro, until a
prick from a soldier's lance obliged him to resume the place which had been assigned him in the ranks.

Why did he not endeavor to escape?
The reason was that he had now quite determined not to venture until the steppe was safe for him. He was resolved in his idea of going as far as Tomsk "at the Emir's expense," and indeed he was right. As he observed the numerous detachments which scoured the plain on the convoy's flanks, now to the south, now to the north, it was evident that before he could have gone two versts he must have been recaptured. The Tartar horsemen swarmed—"it actually appeared as if they sprang from the earth—like insects which a thunderstorm brings to the surface of the ground. Flight under these conditions would have been extremely difficult, if not impossible. The soldiers of the escort displayed excessive vigilance, for they would have paid for the slightest carelessness with their heads.

At nightfall of the 15th of August, the convoy reached the little village of Zabediero, thirty versts from Tomsk.

The prisoners' first movement would have been to rush into the river, but they were not allowed to leave the ranks until the halt had been organized. Although the current of the Tom was just now like a torrent, it might have favored the flight of some bold or desperate man, and the strictest measures of vigilance were taken. Boats, requisitioned at Zabediero, were brought up to the Tom and formed a line of obstacles impossible to pass. As to the encampment on the outskirts of the village, it was guarded by a cordon of sentinels.

Michael Strogoff, who now naturally thought of escape, saw, after carefully surveying the situation, that under these conditions it was perfectly impossible; so, not wishing to compromise himself, he waited.

The prisoners were to encamp for the whole night on the banks of the Tom, for the Emir had put off the entrance of his troops into Tomsk. It had been decided that a military fete should mark the inauguration of the Tartar headquarters in this important city. Feofar-Khan already occupied the fortress, but the bulk of his army bivouacked under its walls, waiting until the time came for them to make a solemn entry.

Ivan Ogareff left the Emir at Tomsk, where both had arrived the evening before, and returned to the camp at Zabediero. From here he was to start the next day with the rear-guard of the Tartar army. A house had been arranged for him in which to pass the night. At sunrise horse and foot soldiers were to proceed to Tomsk, where the Emir wished to receive them with the pomp usual to Asiatic sovereigns. As soon as the halt was organized, the prisoners, worn out with their three days' journey, and suffering from burning thirst, could drink and take a little rest. The sun had already set, when Nadia, supporting Marfa Strogoff, reached the banks of the Tom. They had not till then been able to get through those who crowded the banks, but at last they came to drink in their turn.

The old woman bent over the clear stream, and Nadia, plunging in her hand, carried it to Marfa's lips. Then she refreshed herself. They found new life in these welcome waters. Suddenly Nadia started up; an involuntary cry escaped her.

Michael Strogoff was there, a few steps from her. It was he. The dying rays of the sun fell upon him.

At Nadia's cry Michael started. But he had sufficient command over himself not to utter a word by which he might have been compromised. And yet, when he saw Nadia, he also recognized his mother.

Feeling he could not long keep master of himself at this unexpected meeting, he covered his eyes with his hands and walked quickly away.

Nadia's impulse was to run after him, but the old Siberian murmured in her ear, "Stay, my daughter!"

"It is he!" replied Nadia, choking with emotion. "He lives, mother! It is he!"

"It is my son," answered Marfa, "it is Michael Strogoff, and you see that I do not make a step towards him! Imitate me, my daughter."

Michael had just experienced the most violent emotion which a man can feel. His mother and Nadia were there!

The two prisoners who were always together in his heart, God had brought them together in this common misfortune. Did Nadia know who he was? Yes, for he had seen Marfa's gesture, holding her back as she was about to rush towards him. Marfa, then, had had the good sense, and kept her secret.

During that night, Michael was twenty times on the point of looking for and joining his mother; but he knew that he must resist the longing he felt to take her in his arms, and once more press the hand of his young companion. The least imprudence might be fatal. He had besides sworn not to see his mother. Once at Tomsk, since he could not escape this very night, he would set off without having even embraced the two beings in whom all the happiness of his life was centered, and whom he should leave exposed to so many perils.

Michael hoped that this fresh meeting at the Zabediero camp would have no disastrous consequences either to his mother or to himself. But he did not know that part of this scene, although it passed so rapidly, had been observed by Sangarre, Ogareff's spy.

The Tsigane was there, a few paces off, on the bank, as usual, watching the old Siberian woman. She had not caught sight of Michael, for he disappeared before she had time to look around; but the mother's gesture as she kept back Nadia had not escaped her, and the look in Marfa's eyes told her all.

It was now beyond doubt that Marfa Strogoff's son, the Czar's courier, was at this moment in Zabediero, among Ivan Ogareff's prisoners. Sangarre did not know him, but she knew that he was there. She did not then attempt to discover him, for it would have been impossible in the dark and the immense crowd.
As for again watching Nadia and Marfa Strogoff, that was equally useless. It was evident that the two women would keep on their guard, and it would be impossible to overhear anything of a nature to compromise the courier of the Czar. The Tsigane's first thought was to tell Ivan Ogareff. She therefore immediately left the encampment. A quarter of an hour after, she reached Zabediero, and was shown into the house occupied by the Emir's lieutenant. Ogareff received the Tsigane directly.

"What have you to tell me, Sangarre?" he asked.
"Marfa Strogoff's son is in the encampment."
"A prisoner?"
"A prisoner."
"Ah!" exclaimed Ogareff, "I shall know--"
"You will know nothing, Ivan," replied Tsigane; "for you do not even know him by sight."
"But you know him; you have seen him, Sangarre?"
"I have not seen him; but his mother betrayed herself by a gesture, which told me everything."
"Are you not mistaken?"
"I am not mistaken."

"You know the importance which I attach to the apprehension of this courier," said Ivan Ogareff. "If the letter which he has brought from Moscow reaches Irkutsk, if it is given to the Grand Duke, the Grand Duke will be on his guard, and I shall not be able to get at him. I must have that letter at any price. Now you come to tell me that the bearer of this letter is in my power. I repeat, Sangarre, are you not mistaken?"

Ogareff spoke with great animation. His emotion showed the extreme importance he attached to the possession of this letter. Sangarre was not at all put out by the urgency with which Ogareff repeated his question. "I am not mistaken, Ivan," she said.

"But, Sangarre, there are thousands of prisoners; and you say that you do not know Michael Strogoff."
"No," answered the Tsigane, with a look of savage joy, "I do not know him; but his mother knows him. Ivan, we must make his mother speak."

"To-morrow she shall speak!" cried Ogareff. So saying, he extended his hand to the Tsigane, who kissed it; for there is nothing servile in this act of respect, it being usual among the Northern races.

Sangarre returned to the camp. She found out Nadia and Marfa Strogoff, and passed the night in watching them. Although worn out with fatigue, the old woman and the girl did not sleep. Their great anxiety kept them awake. Michael was living, but a prisoner. Did Ogareff know him, or would he not soon find him out? Nadia was occupied by the one thought that he whom she had thought dead still lived. But Marfa saw further into the future: and, although she did not care what became of herself, she had every reason to fear for her son.

Sangarre, under cover of the night, had crept near the two women, and remained there several hours listening. She heard nothing. From an instinctive feeling of prudence not a word was exchanged between Nadia and Marfa Strogoff. The next day, the 16th of August, about ten in the morning, trumpet-calls resounded throughout the encampment. The Tartar soldiers were almost immediately under arms.

Ivan Ogareff arrived, surrounded by a large staff of Tartar officers. His face was more clouded than usual, and his knitted brow gave signs of latent wrath which was waiting for an occasion to break forth.

Michael Strogoff, hidden in a group of prisoners, saw this man pass. He had a presentiment that some catastrophe was imminent: for Ivan Ogareff knew now that Marfa was the mother of Michael Strogoff.

Ogareff dismounted, and his escort cleared a large circle round him. Just then Sangarre approached him, and said, "I have no news."

Ivan Ogareff's only reply was to give an order to one of his officers. Then the ranks of prisoners were brutally hurried up by the soldiers. The unfortunate people, driven on with whips, or pushed on with lances, arranged themselves round the camp. A strong guard of soldiers drawn up behind, rendered escape impossible.

Silence then ensued, and, on a sign from Ivan Ogareff, Sangarre advanced towards the group, in the midst of which stood Marfa.

The old Siberian saw her, and knew what was going to happen. A scornful smile passed over her face. Then leaning towards Nadia, she said in a low tone, "You know me no longer, my daughter. Whatever may happen, and however hard this trial may be, not a word, not a sign. It concerns him, and not me."

At that moment Sangarre, having regarded her for an instant, put her hand on her shoulder.

"What do you want with me?" said Marfa.

"Come!" replied Sangarre, and pushing the old Siberian before her, she took her to Ivan Ogareff, in the middle of the cleared ground. Michael cast down his eyes that their angry flashings might not appear.

Marfa, standing before Ivan Ogareff, drew herself up, crossed her arms on her breast, and waited.

"You are Marfa Strogoff?" asked Ogareff.
"Yes," replied the old Siberian calmly.
"Do you retract what you said to me when, three days ago, I interrogated you at Omsk?"
"No!"
"Then you do not know that your son, Michael Strogoff, courier of the Czar, has passed through Omsk?"
"I do not know it."
"And the man in whom you thought you recognized your son, was not he your son?"
"He was not my son."
"And since then you have not seen him amongst the prisoners?"
"No."
"If he were pointed out, would you recognize him?"
"No."

On this reply, which showed such determined resolution, a murmur was heard amongst the crowd.
Ogareff could not restrain a threatening gesture.
"Listen," said he to Marfa, "your son is here, and you shall immediately point him out to me."
"No."

"All these men, taken at Omsk and Kolyvan, will defile before you; and if you do not show me Michael Strogoff, you shall receive as many blows of the knout as men shall have passed before you."

Ivan Ogareff saw that, whatever might be his threats, whatever might be the tortures to which he submitted her, the indomitable Siberian would not speak. To discover the courier of the Czar, he counted, then, not on her, but on Michael himself. He did not believe it possible that, when mother and son were in each other's presence, some involuntary movement would not betray him. Of course, had he wished to seize the imperial letter, he would simply have given orders to search all the prisoners; but Michael might have destroyed the letter, having learnt its contents; and if he were not recognized, if he were to reach Irkutsk, all Ivan Ogareff's plans would be baffled. It was thus not only the letter which the traitor must have, but the bearer himself.

Nadia had heard all, and she now knew who was Michael Strogoff, and why he had wished to cross, without being recognized, the invaded provinces of Siberia.

On an order from Ivan Ogareff the prisoners defiled, one by one, past Marfa, who remained immovable as a statue, and whose face expressed only perfect indifference.

Her son was among the last. When in his turn he passed before his mother, Nadia shut her eyes that she might not see him. Michael was to all appearance unmoved, but the palm of his hand bled under his nails, which were pressed into them.

Ivan Ogareff was baffled by mother and son.
Sangarre, close to him, said one word, "The knout!"
"Yes," cried Ogareff, who could no longer restrain himself; "the knout for this wretched old woman--the knout to the death!"

A Tartar soldier bearing this terrible instrument of torture approached Marfa. The knout is composed of a certain number of leathern thongs, at the end of which are attached pieces of twisted iron wire. It is reckoned that a sentence to one hundred and twenty blows of this whip is equivalent to a sentence of death.
Marfa knew it, but she knew also that no torture would make her speak. She was sacrificing her life.

Marfa, seized by two soldiers, was forced on her knees on the ground. Her dress torn off left her back bare. A saber was placed before her breast, at a few inches' distance only. Directly she bent beneath her suffering, her breast would be pierced by the sharp steel.

The Tartar drew himself up. He waited. "Begin!" said Ogareff. The whip whistled in the air.
But before it fell a powerful hand stopped the Tartar's arm. Michael was there. He had leapt forward at this horrible scene. If at the relay at Ichim he had restrained himself when Ogareff's whip had struck him, here before his mother, who was about to be struck, he could not do so. Ivan Ogareff had succeeded.
"Michael Strogoff!" cried he. Then advancing, "Ah, the man of Ichim?"
"Himself!" said Michael. And raising the knout he struck Ogareff a sharp blow across the face. "Blow for blow!"
said he.
"Well repaid!" cried a voice concealed by the tumult.
Twenty soldiers threw themselves on Michael, and in another instant he would have been slain.
But Ogareff, who on being struck had uttered a cry of rage and pain, stopped them. "This man is reserved for the Emir's judgment," said he. "Search him!"

The letter with the imperial arms was found in Michael's bosom; he had not had time to destroy it; it was handed to Ogareff.
The voice which had pronounced the words, "Well repaid!" was that of no other than Alcide Jolivet. "Par-dieu!"
said he to Blount, "they are rough, these people. Acknowledge that we owe our traveling companion a good turn. Korpanoff or Strogoff is worthy of it. Oh, that was fine retaliation for the little affair at Ichim."

"Yes, retaliation truly," replied Blount; "but Strogoff is a dead man. I suspect that, for his own interest at all events, it would have been better had he not possessed quite so lively a recollection of the event."

"And let his mother perish under the knout?"

"Do you think that either she or his sister will be a bit better off from this outbreak of his?"

"I do not know or think anything except that I should have done much the same in his position," replied Alcide. "What a scar the Colonel has received! Bah! one must boil over sometimes. We should have had water in our veins instead of blood had it been incumbent on us to be always and everywhere unmoved to wrath."

"A neat little incident for our journals," observed Blount, "if only Ivan Ogareff would let us know the contents of that letter."

Ivan Ogareff, when he had stanched the blood which was trickling down his face, had broken the seal. He read and re-read the letter deliberately, as if he was determined to discover everything it contained.

Then having ordered that Michael, carefully bound and guarded, should be carried on to Tomsk with the other prisoners, he took command of the troops at Zabediero, and, amid the deafening noise of drums and trumpets, he marched towards the town where the Emir awaited him.

CHAPTER IV THE TRIUMPHAL ENTRY

TOMSK, founded in 1604, nearly in the heart of the Siberian provinces, is one of the most important towns in Asiatic Russia. Tobolsk, situated above the sixtieth parallel; Irkutsk, built beyond the hundredth meridian--have seen Tomsk increase at their expense.

And yet Tomsk, as has been said, is not the capital of this important province. It is at Omsk that the Governor-General of the province and the official world reside. But Tomsk is the most considerable town of that territory. The country being rich, the town is so likewise, for it is in the center of fruitful mines. In the luxury of its houses, its arrangements, and its equipages, it might rival the greatest European capitals. It is a city of millionaires, enriched by the spade and pickax, and though it has not the honor of being the residence of the Czar's representative, it can boast of including in the first rank of its notables the chief of the merchants of the town, the principal grantees of the imperial government's mines.

But the millionaires were fled now, and except for the crouching poor, the town stood empty to the hordes of Feofar-Khan. At four o'clock the Emir made his entry into the square, greeted by a flourish of trumpets, the rolling sound of the big drums, salvoes of artillery and musketry.

Feofar mounted his favorite horse, which carried on its head an aigrette of diamonds. The Emir still wore his uniform. He was accompanied by a numerous staff, and beside him walked the Khans of Khokhand and Koundouge and the grand dignitaries of the Khanats.

At the same moment appeared on the terrace the chief of Feofar's wives, the queen, if this title may be given to the sultana of the states of Bokhara. But, queen or slave, this woman of Persian origin was wonderfully beautiful. Contrary to the Mahometan custom, and no doubt by some caprice of the Emir, she had her face uncovered. Her hair, divided into four plaits, fell over her dazzling white shoulders, scarcely concealed by a veil of silk worked in gold, which fell from the back of a cap studded with gems of the highest value. Under her blue-silk petticoat, fell the "zirdjameh" of silken gauze, and above the sash lay the "pirahn." But from the head to the little feet, such was the profusion of jewels--gold beads strung on silver threads, chaplets of turquoise, "firouzehs" from the celebrated mines of Elbourz, necklaces of cornelians, agates, emeralds, opals, and sapphires--that her dress seemed to be literally made of precious stones. The thousands of diamonds which sparkled on her neck, arms, hands, at her waist, and at her feet might have been valued at almost countless millions of roubles.

The Emir and the Khans dismounted, as did the dignitaries who escorted them. All entered a magnificent tent erected on the center of the first terrace. Before the tent, as usual, the Koran was laid.

Feofar's lieutenant did not make them wait, and before five o'clock the trumpets announced his arrival. Ivan Ogareff--the Scarred Cheek, as he was already nick-named--wearing the uniform of a Tartar officer, dismounted before the Emir's tent. He was accompanied by a party of soldiers from the camp at Zabediero, who ranged up at the sides of the square, in the middle of which a place for the sports was reserved. A large scar could be distinctly seen cut obliquely across the traitor's face.

Ogareff presented his principal officers to the Emir, who, without departing from the coldness which composed the main part of his dignity, received them in a way which satisfied them that they stood well in the good graces of their chief.

At least so thought Harry Blount and Alcide Jolivet, the two inseparables, now associated together in the chase
after news. After leaving Zabediero, they had proceeded rapidly to Tomsk. The plan they had agreed upon was to leave the Tartars as soon as possible, and to join a Russian regiment, and, if they could, to go with them to Irkutsk. All that they had seen of the invasion, its burnings, its pillages, its murders, had perfectly sickened them, and they longed to be among the ranks of the Siberian army. Jolivet had told his companion that he could not leave Tomsk without making a sketch of the triumphal entry of the Tartar troops, if it was only to satisfy his cousin's curiosity; but the same evening they both intended to take the road to Irkutsk, and being well mounted hoped to distance the Emir's scouts.

Alcide and Blount mingled therefore in the crowd, so as to lose no detail of a festival which ought to supply them with a hundred good lines for an article. They admired the magnificence of Feofar-Khan, his wives, his officers, his guards, and all the Eastern pomp, of which the ceremonies of Europe can give not the least idea. But they turned away with disgust when Ivan Ogareff presented himself before the Emir, and waited with some impatience for the amusements to begin.

"You see, my dear Blount," said Alcide, "we have come too soon, like honest citizens who like to get their money's worth. All this is before the curtain rises, it would have been better to arrive only for the ballet."

"What ballet?" asked Blount.

"The compulsory ballet, to be sure. But see, the curtain is going to rise." Alcide Jolivet spoke as if he had been at the Opera, and taking his glass from its case, he prepared, with the air of a connoisseur, "to examine the first act of Feofar's company."

A painful ceremony was to precede the sports. In fact, the triumph of the vanquisher could not be complete without the public humiliation of the vanquished. This was why several hundreds of prisoners were brought under the soldiers' whips. They were destined to march past Feofar-Khan and his allies before being crammed with their companions into the prisons in the town.

In the first ranks of these prisoners figured Michael Strogoff. As Ogareff had ordered, he was specially guarded by a file of soldiers. His mother and Nadia were there also.

The old Siberian, although energetic enough when her own safety was in question, was frightfully pale. She expected some terrible scene. It was not without reason that her son had been brought before the Emir. She therefore trembled for him. Ivan Ogareff was not a man to forgive having been struck in public by the knout, and his vengeance would be merciless. Some frightful punishment familiar to the barbarians of Central Asia would, no doubt, be inflicted on Michael Ogareff had protected him against the soldiers because he well knew what would happen by reserving him for the justice of the Emir.

The mother and son had not been able to speak together since the terrible scene in the camp at Zabediero. They had been pitilessly kept apart—a bitter aggravation of their misery, for it would have been some consolation to have been together during these days of captivity. Marfa longed to ask her son's pardon for the harm she had unintentionally done him, for she reproached herself with not having commanded her maternal feelings. If she had restrained herself in that post-house at Omsk, when she found herself face to face with him, Michael would have passed unrecognized, and all these misfortunes would have been avoided.

Michael, on his side, thought that if his mother was there, if Ogareff had brought her with him, it was to make her suffer with the sight of his own punishment, or perhaps some frightful death was reserved for her also.

As to Nadia, she only asked herself how she could save them both, how come to the aid of son and mother. As yet she could only wonder, but she felt instinctively that she must avoid drawing attention upon herself, that she must conceal herself, make herself insignificant. Perhaps she might at least gnaw through the meshes which imprisoned the lion. At any rate if any opportunity was given her she would seize upon it, and sacrifice herself, if need be, for the son of Marfa Strogoff.

In the meantime the greater part of the prisoners were passing before the Emir, and as they passed each was obliged to prostrate himself, with his forehead in the dust, in token of servitude. Slavery begins by humiliation. When the unfortunate people were too slow in bending, the rough guards threw them violently to the ground.

Alcide Jolivet and his companion could not witness such a sight without feeling indignant.

"It is cowardly--let us go," said Alcide.

"No," answered Blount; "we must see it all."

"See it all!--ah!" cried Alcide, suddenly, grasping his companion's arm.

"What is the matter with you?" asked the latter.

"Look, Blount; it is she!"

"What she?"

"The sister of our traveling companion--alone, and a prisoner! We must save her."

"Calm yourself," replied Blount coolly. "Any interference on our part in behalf of the young girl would be worse than useless."
Alcide Jolivet, who had been about to rush forward, stopped, and Nadia—who had not perceived them, her features being half hidden by her hair—passed in her turn before the Emir without attracting his attention.

However, after Nadia came Marfa Strogoff; and as she did not throw herself quickly in the dust, the guards brutally pushed her. She fell.

Her son struggled so violently that the soldiers who were guarding him could scarcely hold him back. But the old woman rose, and they were about to drag her on, when Ogareff interposed, saying, "Let that woman stay!"

As to Nadia, she happily regained the crowd of prisoners. Ivan Ogareff had taken no notice of her.

Michael was then led before the Emir, and there he remained standing, without casting down his eyes.

"Your forehead to the ground!" cried Ogareff.

"No!" answered Michael.

Two soldiers endeavored to make him bend, but they were themselves laid on the ground by a buffet from the young man's fist.

Ogareff approached Michael. "You shall die!" he said.

"I can die," answered Michael fiercely; "but your traitor's face, Ivan, will not the less carry forever the infamous brand of the knout."

At this reply Ivan Ogareff became perfectly livid.

"Who is this prisoner?" asked the Emir, in a tone of voice terrible from its very calmness.

"A Russian spy," answered Ogareff. In asserting that Michael was a spy he knew that the sentence pronounced against him would be terrible.

The Emir made a sign at which all the crowd bent low their heads. Then he pointed with his hand to the Koran, which was brought him. He opened the sacred book and placed his finger on one of its pages.

It was chance, or rather, according to the ideas of these Orientals, God Himself who was about to decide the fate of Michael Strogoff. The people of Central Asia give the name of "fal" to this practice. After having interpreted the sense of the verse touched by the judge's finger, they apply the sentence whatever it may be.

The Emir had let his finger rest on the page of the Koran. The chief of the Ulemas then approached, and read in a loud voice a verse which ended with these words, "And he will no more see the things of this earth."

"Russian spy!" exclaimed Feofar-Kahn in a voice trembling with fury, "you have come to see what is going on in the Tartar camp. Then look while you may."

CHAPTER V "LOOK WHILE YOU MAY!"

Michael was held before the Emir's throne, at the foot of the terrace, his hands bound behind his back. His mother overcome at last by mental and physical torture, had sunk to the ground, daring neither to look nor listen.

"Look while you may," exclaimed Feofar-Kahn, stretching his arm towards Michael in a threatening manner. Doubtless Ivan Ogareff, being well acquainted with Tartar customs, had taken in the full meaning of these words, for his lips curled for an instant in a cruel smile; he then took his place by Feofar-Khan.

A trumpet call was heard. This was the signal for the amusements to begin. "Here comes the ballet," said Alcide to Blount; "but, contrary to our customs, these barbarians give it before the drama."

Michael had been commanded to look at everything. He looked. A troop of dancers poured into the open space before the Emir's tent. Different Tartar instruments, the "doutare," a long-handled guitar, the "kobize," a kind of violoncello, the "tschibyzga," a long reed flute; wind instruments, tom-toms, tambourines, united with the deep voices of the singers, formed a strange harmony. Added to this were the strains of an aerial orchestra, composed of a dozen kites, which, fastened by strings to their centers, resounded in the breeze like Aeolian harps.

Then the dancers began. The performers were all of Persian origin; they were no longer slaves, but exercised their profession at liberty. Formerly they figured officially in the ceremonies at the court of Teheran, but since the accession of the reigning family, banished or treated with contempt, they had been compelled to seek their fortune elsewhere. They wore the national costume, and were adorned with a profusion of jewels. Little triangles of gold, studded with jewels, glittered in their ears. Circles of silver, marked with black, surrounded their necks and legs.

These performers gracefully executed various dances, sometimes alone, sometimes in groups. Their faces were uncovered, but from time to time they threw a light veil over their heads, and a gauze cloud passed over their bright eyes as smoke over a starry sky. Some of these Persians wore leathern belts embroidered with pearls, from which hung little triangular bags. From these bags, embroidered with golden filigree, they drew long narrow bands of scarlet silk, on which were braided verses of the Koran. These bands, which they held between them, formed a belt under which the other dancers darted; and, as they passed each verse, following the precept it contained, they either prostrated themselves on the earth or lightly bounded upwards, as though to take a place among the houris of Mohammed's heaven.
But what was remarkable, and what struck Alcide, was that the Persians appeared rather indolent than fiery. Their passion had deserted them, and, by the kind of dances as well as by their execution, they recalled rather the calm and self-possessed nauch girls of India than the impassioned dancers of Egypt.

When this was over, a stern voice was heard saying:
"Look while you may!"

The man who repeated the Emir's words—a tall spare Tartar—was he who carried out the sentences of Feofar-Khan against offenders. He had taken his place behind Michael, holding in his hand a broad curved saber, one of those Damascene blades which are forged by the celebrated armorers of Karschi or Hissar.

Behind him guards were carrying a tripod supporting a chafing-dish filled with live coals. No smoke arose from this, but a light vapor surrounded it, due to the incineration of a certain aromatic and resinous substance which he had thrown on the surface.

The Persians were succeeded by another party of dancers, whom Michael recognized. The journalists also appeared to recognize them, for Blount said to his companion, "These are the Tsiganes of Nijni-Novgorod."

"No doubt of it," cried Alcide. "Their eyes, I imagine, bring more money to these spies than their legs."

In putting them down as agents in the Emir's service, Alcide Jolivet was, by all accounts, not mistaken.

In the first rank of the Tsiganes, Sangarre appeared, superb in her strange and picturesque costume, which set off still further her remarkable beauty.

Sangarre did not dance, but she stood as a statue in the midst of the performers, whose style of dancing was a combination of that of all those countries through which their race had passed—Turkey, Bohemia, Egypt, Italy, and Spain. They were enlivened by the sound of cymbals, which clashed on their arms, and by the hollow sounds of the "daires"—a sort of tambourine played with the fingers.

Sangarre, holding one of those daires, which she played between her hands, encouraged this troupe of veritable corybantes. A young Tsigane, of about fifteen years of age, then advanced. He held in his hand a "doutare," strings of which he made to vibrate by a simple movement of the nails. He sung. During the singing of each couplet, of very peculiar rhythm, a dancer took her position by him and remained there immovable, listening to him, but each time that the burden came from the lips of the young singer, she resumed her dance, dinning in his ears with her daire, and deafening him with the clashing of her cymbals. Then, after the last chorus, the remainder surrounded the Tsigane in the windings of their dance.

At that moment a shower of gold fell from the hands of the Emir and his train, and from the hands of his officers of all ranks; to the noise which the pieces made as they struck the cymbals of the dancers, being added the last murmurs of the doutares and tambourines.

"Lavish as robbers," said Alcide in the ear of his companion. And in fact it was the result of plunder which was falling; for, with the Tartar tomans and sequins, rained also Russian ducats and roubles.

Then silence followed for an instant, and the voice of the executioner, who laid his hand on Michael's shoulder, once more pronounced the words, which this repetition rendered more and more sinister:
"Look while you may"

But this time Alcide observed that the executioner no longer held the saber bare in his hand.

Meanwhile the sun had sunk behind the horizon. A semi-obscurity began to envelop the plain. The mass of cedars and pines became blacker and blacker, and the waters of the Tom, totally obscured in the distance, mingled with the approaching shadows.

But at that instant several hundreds of slaves, bearing lighted torches, entered the square. Led by Sangarre, Tsiganes and Persians reappeared before the Emir's throne, and showed off, by the contrast, their dances of styles so different. The instruments of the Tartar orchestra sounded forth in harmony still more savage, accompanied by the guttural cries of the singers. The kites, which had fallen to the ground, once more winged their way into the sky, each bearing a parti-colored lantern, and under a fresher breeze their harps vibrated with intenser sound in the midst of the aerial illumination.

Then a squadron of Tartars, in their brilliant uniforms, mingled in the dances, whose wild fury was increasing rapidly, and then began a performance which produced a very strange effect. Soldiers came on the ground, armed with bare sabers and long pistols, and, as they executed dances, they made the air re-echo with the sudden detonations of their firearms, which immediately set going the rumbling of the tambourines, and grumblings of the daires, and the gnashing of doutares.

Their arms, covered with a colored powder of some metallic ingredient, after the Chinese fashion, threw long jets—red, green, and blue—so that the groups of dancers seemed to be in the midst of fireworks. In some respects, this performance recalled the military dance of the ancients, in the midst of naked swords; but this Tartar dance was rendered yet more fantastic by the colored fire, which wound, serpent-like, above the dancers, whose dresses seemed to be embroidered with fiery hems. It was like a kaleidoscope of sparks, whose infinite combinations varied at each
movement of the dancers.

Though it may be thought that a Parisian reporter would be perfectly hardened to any scenic effect, which our modern ideas have carried so far, yet Alcide Jolivet could not restrain a slight movement of the head, which at home, between the Boulevard Montmartre and La Madeleine would have said--"Very fair, very fair."

Then, suddenly, at a signal, all the lights of the fantasia were extinguished, the dances ceased, and the performers disappeared. The ceremony was over, and the torches alone lighted up the plateau, which a few instants before had been so brilliantly illuminated.

On a sign from the Emir, Michael was led into the middle of the square.

"Blount," said Alcide to his companion, "are you going to see the end of all this?"

"No, that I am not," replied Blount.

"The readers of the Daily Telegraph are, I hope, not very eager for the details of an execution a la mode Tartare?"

"No more than your cousin!"

"Poor fellow!" added Alcide, as he watched Michael. "That valiant soldier should have fallen on the field of battle!"

"Can we do nothing to save him?" said Blount.

"Nothing!"

The reporters recalled Michael's generous conduct towards them; they knew now through what trials he must have passed, ever obedient to his duty; and in the midst of these Tartars, to whom pity is unknown, they could do nothing for him. Having little desire to be present at the torture reserved for the unfortunate man, they returned to the town. An hour later, they were on the road to Irkutsk, for it was among the Russians that they intended to follow what Alcide called, by anticipation, "the campaign of revenge."

Meantime, Michael was standing ready, his eyes returning the Emir's haughty glance, while his countenance assumed an expression of intense scorn whenever he cast his looks on Ivan Ogareff. He was prepared to die, yet not a single sign of weakness escaped him.

The spectators, waiting around the square, as well as Feofar-Khan's body-guard, to whom this execution was only one of the attractions, were eagerly expecting it. Then, their curiosity satisfied, they would rush off to enjoy the pleasures of intoxication.

The Emir made a sign. Michael was thrust forward by his guards to the foot of the terrace, and Feofar said to him, "You came to see our goings out and comings in, Russian spy. You have seen for the last time. In an instant your eyes will be forever shut to the day."

Michael's fate was to be not death, but blindness; loss of sight, more terrible perhaps than loss of life. The unhappy man was condemned to be blinded.

However, on hearing the Emir's sentence Michael's heart did not grow faint. He remained unmoved, his eyes wide open, as though he wished to concentrate his whole life into one last look. To entreat pity from these savage men would be useless, besides, it would be unworthy of him. He did not even think of it. His thoughts were condensed on his mission, which had apparently so completely failed; on his mother, on Nadia, whom he should never more see! But he let no sign appear of the emotion he felt. Then, a feeling of vengeance to be accomplished came over him. "Ivan," said he, in a stern voice, "Ivan the Traitor, the last menace of my eyes shall be for you!"

Ivan Ogareff shrugged his shoulders.

But Michael was not to be looking at Ivan when his eyes were put out. Marfa Strogoff stood before him.

"My mother!" cried he. "Yes! yes! my last glance shall be for you, and not for this wretch! Stay there, before me! Now I see once more your well-beloved face! Now shall my eyes close as they rest upon it...!"

The old woman, without uttering a word, advanced.

"Take that woman away!" said Ivan.

Two soldiers were about to seize her, but she stepped back and remained standing a few paces from Michael.

The executioner appeared. This time, he held his saber bare in his hand, and this saber he had just drawn from the chafing-dish, where he had brought it to a white heat. Michael was going to be blinded in the Tartar fashion, with a hot blade passed before his eyes!

Michael did not attempt to resist. Nothing existed before his eyes but his mother, whom his eyes seemed to devour. All his life was in that last look.

Marfa Strogoff, her eyes open wide, her arms extended towards where he stood, was gazing at him. The incandescent blade passed before Michael's eyes.

A despairing cry was heard. His aged mother fell senseless to the ground. Michael Strogoff was blind.

His orders executed, the Emir retired with his train. There remained in the square only Ivan Ogareff and the torch bearers. Did the wretch intend to insult his victim yet further, and yet to give him a parting blow?
Ivan Ogareff slowly approached Michael, who, feeling him coming, drew himself up. Ivan drew from his pocket the Imperial letter, he opened it, and with supreme irony he held it up before the sightless eyes of the Czar's courier, saying, "Read, now, Michael Strogoff, read, and go and repeat at Irkutsk what you have read. The true Courier of the Czar is Ivan Ogareff."

This said, the traitor thrust the letter into his breast. Then, without looking round he left the square, followed by the torch-bearers.

Michael was left alone, at a few paces from his mother, lying lifeless, perhaps dead. He heard in the distance cries and songs, the varied noises of a wild debauch. Tomsk, illuminated, glittered and gleamed.

Michael listened. The square was silent and deserted. He went, grooping his way, towards the place where his mother had fallen. He found her with his hand, he bent over her, he put his face close to hers, he listened for the beating of her heart. Then he murmured a few words.

Did Marfa still live, and did she hear her son's words? Whether she did so or not, she made not the slightest movement. Michael kissed her forehead and her white locks. He then raised himself, and, grooping with his foot, trying to stretch out his hand to guide himself, he walked by degrees to the edge of the square.

Suddenly Nadia appeared. She walked straight to her companion. A knife in her hand cut the cords which bound Michael's arms. The blind man knew not who had freed him, for Nadia had not spoken a word.

But this done: "Brother!" said she.

"Nadia!" murmured Michael, "Nadia!"

"Come, brother," replied Nadia, "use my eyes whilst yours sleep. I will lead you to Irkutsk."

CHAPTER VI A FRIEND ON THE HIGHWAY

HALF an hour afterwards, Michael and Nadia had left Tomsk.

Many others of the prisoners were that night able to escape from the Tartars, for officers and soldiers, all more or less intoxicated, had unconsciously relaxed the vigilant guard which they had hitherto maintained. Nadia, after having been carried off with the other prisoners, had been able to escape and return to the square, at the moment when Michael was led before the Emir. There, mingling with the crowd, she had witnessed the terrible scene. Not a cry escaped her when the scorching blade passed before her companion's eyes. She kept, by her strength of will, mute and motionless. A providential inspiration bade her restrain herself and retain her liberty that she might lead Marfa's son to that goal which he had sworn to reach. Her heart for an instant ceased to beat when the aged Siberian woman fell senseless to the ground, but one thought restored her to her former energy. "I will be the blind man's dog," said she.

On Ogareff's departure, Nadia had concealed herself in the shade. She had waited till the crowd left the square. Michael, abandoned as a wretched being from whom nothing was to be feared, was alone. She saw him draw himself towards his mother, bend over her, kiss her forehead, then rise and grope his way in flight.

A few instants later, she and he, hand in hand, had descended the steep slope, when, after having followed the high banks of the Tom to the furthest extremity of the town, they happily found a breach in the inclosure.

The road to Irkutsk was the only one which penetrated towards the east. It could not be mistaken. It was possible that on the morrow, after some hours of carousal, the scouts of the Emir, once more scattering over the steppes, might cut off all communication. It was of the greatest importance therefore to get in advance of them. How could Nadia bear the fatigues of that night, from the 16th to the 17th of August? How could she have found strength for so long a stage? How could her feet, bleeding under that forced march, have carried her thither? It is almost incomprehensible. But it is none the less true that on the next morning, twelve hours after their departure from Tomsk, Michael and she reached the town of Semilowskoe, after a journey of thirty-five miles.

Michael had not uttered a single word. It was not Nadia who held his hand, it was he who held that of his companion during the whole of that night; but, thanks to that trembling little hand which guided him, he had walked at his ordinary pace.

Semilowskoe was almost entirely abandoned. The inhabitants had fled. Not more than two or three houses were still occupied. All that the town contained, useful or precious, had been carried off in wagons. However, Nadia was obliged to make a halt of a few hours. They both required food and rest.

The young girl led her companion to the extremity of the town. There they found an empty house, the door wide open. An old rickety wooden bench stood in the middle of the room, near the high stove which is to be found in all Siberian houses. They silently seated themselves.

Nadia gazed in her companion's face as she had never before gazed. There was more than gratitude, more than pity, in that look. Could Michael have seen her, he would have read in that sweet desolate gaze a world of devotion and tenderness.
The eyelids of the blind man, made red by the heated blade, fell half over his eyes. The pupils seemed to be singularly enlarged. The rich blue of the iris was darker than formerly. The eyelashes and eyebrows were partly burnt, but in appearance, at least, the old penetrating look appeared to have undergone no change. If he could no longer see, if his blindness was complete, it was because the sensibility of the retina and optic nerve was radically destroyed by the fierce heat of the steel.

Then Michael stretched out his hands.
"Are you there, Nadia?" he asked.
"Yes," replied the young girl; "I am close to you, and I will not go away from you, Michael."

At his name, pronounced by Nadia for the first time, a thrill passed through Michael's frame. He perceived that his companion knew all, who he was.
"Nadia," replied he, "we must separate!"
"We separate? How so, Michael?"
"I must not be an obstacle to your journey! Your father is waiting for you at Irkutsk! You must rejoin your father!"
"My father would curse me, Michael, were I to abandon you now, after all you have done for me!"
"Nadia, Nadia," replied Michael, "you should think only of your father!"
"Michael," replied Nadia, "you have more need of me than my father. Do you mean to give up going to Irkutsk?"
"Never!" cried Michael, in a tone which plainly showed that none of his energy was gone.
"But you have not the letter!"
"That letter of which Ivan Ogareff robbed me! Well! I shall manage without it, Nadia! They have treated me as a spy! I will act as a spy! I will go and repeat at Irkutsk all I have seen, all I have heard; I swear it by Heaven above! The traitor shall meet me one day face to face! But I must arrive at Irkutsk before him."
"And yet you speak of our separating, Michael?"
"Nadia, they have taken everything from me!"
"I have some roubles still, and my eyes! I can see for you, Michael; and I will lead you thither, where you could not go alone!"
"And how shall we go?"
"On foot."
"And how shall we live?"
"By begging."
"Let us start, Nadia."
"Come, Michael."

The two young people no longer kept the names "brother" and "sister." In their common misfortune, they felt still closer united. They left the house after an hour's repose. Nadia had procured in the town some morsels of "tchornekhleb," a sort of barley bread, and a little mead, called "meod" in Russia. This had cost her nothing, for she had already begun her plan of begging. The bread and mead had in some degree appeased Michael's hunger and thirst. Nadia gave him the lion's share of this scanty meal. He ate the pieces of bread his companion gave him, drank from the gourd she held to his lips.
"Are you eating, Nadia?" he asked several times.
"Yes, Michael," invariably replied the young girl, who contented herself with what her companion left.

Michael and Nadia quitted Semilowskoe, and once more set out on the laborious road to Irkutsk. The girl bore up in a marvelous way against fatigue. Had Michael seen her, perhaps he would not have had the courage to go on. But Nadia never complained, and Michael, hearing no sigh, walked at a speed he was unable to repress. And why? Did he still expect to keep before the Tartars? He was on foot, without money; he was blind, and if Nadia, his only guide, were to be separated from him, he could only lie down by the side of the road and there perish miserably. But if, on the other hand, by energetic perseverance he could reach Krasnoiarsk, all was perhaps not lost, since the governor, to whom he would make himself known, would not hesitate to give him the means of reaching Irkutsk.

Michael walked on, speaking little, absorbed in his own thoughts. He held Nadia's hand. The two were in incessant communication. It seemed to them that they had no need of words to exchange their thoughts. From time to time Michael said, "Speak to me, Nadia."
"Why should I, Michael? We are thinking together!" the young girl would reply, and contrived that her voice should not betray her extreme fatigue.

But sometimes, as if her heart had ceased to beat for an instant, her limbs tottered, her steps flagged, her arms fell to her sides, she dropped behind. Michael then stopped, he fixed his eyes on the poor girl, as though he would try to pierce the gloom which surrounded him; his breast heaved; then, supporting his companion more than before, he started on afresh.
However, amidst these continual miseries, a fortunate circumstance on that day occurred which it appeared likely would considerably ease their fatigue. They had been walking from Semilowskoe for two hours when Michael stopped.

"Is there no one on the road?"
"Not a single soul," replied Nadia.
"Do you not hear some noise behind us? If they are Tartars we must hide. Keep a good look-out!"
"Wait, Michael!" replied Nadia, going back a few steps to where the road turned to the right.
Michael Strogoff waited alone for a minute, listening attentively.
Nadia returned almost immediately and said, "It is a cart. A young man is leading it."
"Is he alone?"
"Alone."
Michael hesitated an instant. Should he hide? or should he, on the contrary, try to find a place in the vehicle, if not for himself, at least for her? For himself, he would be quite content to lay one hand on the cart, to push it if necessary, for his legs showed no sign of failing him; but he felt sure that Nadia, compelled to walk ever since they crossed the Obi, that is, for eight days, must be almost exhausted. He waited.

The cart was soon at the corner of the road. It was a very dilapidated vehicle, known in the country as a kibitka, just capable of holding three persons. Usually the kibitka is drawn by three horses, but this had but one, a beast with long hair and a very long tail. It was of the Mongol breed, known for strength and courage.

A young man was leading it, with a dog beside him. Nadia saw at once that the young man was Russian; his face was phlegmatic, but pleasant, and at once inspired confidence. He did not appear to be in the slightest hurry; he was not walking fast that he might spare his horse, and, to look at him, it would not have been believed that he was following a road which might at any instant be swarming with Tartars.

Nadia, holding Michael by the hand, made way for the vehicle. The kibitka stopped, and the driver smilingly looked at the young girl.

"And where are you going to in this fashion?" he asked, opening wide his great honest eyes.
At the sound of his voice, Michael said to himself that he had heard it before. And it was satisfactory to him to recognize the man for his brow at once cleared.
"Well, where are you going?" repeated the young man, addressing himself more directly to Michael.
"We are going to Irkutsk," he replied.
"Oh! little father, you do not know that there are still versts and versts between you and Irkutsk?"
"I know it."
"And you are going on foot?"
"On foot."
"You, well! but the young lady?"
"She is my sister," said Michael, who judged it prudent to give again this name to Nadia.
"Yes, your sister, little father! But, believe me, she will never be able to get to Irkutsk!"
"Friend," returned Michael, approaching him, "the Tartars have robbed us of everything, and I have not a copeck to offer you; but if you will take my sister with you, I will follow your cart on foot; I will run when necessary, I will not delay you an hour!"
"Brother," exclaimed Nadia, "I will not! I will not! Sir, my brother is blind!"
"Blind!" repeated the young man, much moved.
"The Tartars have burnt out his eyes!" replied Nadia, extending her hands, as if imploring pity.
"Burnt out his eyes! Oh! poor little father! I am going to Krasnoiarsk. Well, why should not you and your sister mount in the kibitka? By sitting a little close, it will hold us all three. Besides, my dog will not refuse to go on foot; only I don't go fast, I spare my horse."
"Friend, what is your name?" asked Michael.
"My name is Nicholas Pigassof."
"It is a name that I will never forget," said Michael.
"Well, jump up, little blind father. Your sister will be beside you, in the bottom of the cart; I sit in front to drive. There is plenty of good birch bark and straw in the bottom; it's like a nest. Serko, make room!"

The dog jumped down without more telling. He was an animal of the Siberian race, gray hair, of medium size, with an honest big head, just made to pat, and he, moreover, appeared to be much attached to his master.

In a moment more, Michael and Nadia were seated in the kibitka. Michael held out his hands as if to feel for those of Pigassof. "You wish to shake my hands!" said Nicholas. "There they are, little father! shake them as long as it will give you any pleasure."

The kibitka moved on; the horse, which Nicholas never touched with the whip, ambled along. Though Michael
did not gain any in speed, at least some fatigue was spared to Nadia.

Such was the exhaustion of the young girl, that, rocked by the monotonous movement of the kibitka, she soon fell into a sleep, its soundness proving her complete prostration. Michael and Nicholas laid her on the straw as comfortably as possible. The compassionate young man was greatly moved, and if a tear did not escape from Michael's eyes, it was because the red-hot iron had dried up the last!

"She is very pretty," said Nicholas.
"Yes," replied Michael.
"They try to be strong, little father, they are brave, but they are weak after all, these dear little things! Have you come from far,"
"Very far."
"Poor young people! It must have hurt you very much when they burnt your eyes!"
"Very much," answered Michael, turning towards Nicholas as if he could see him.
"Did you not weep?"
"Yes,"
"I should have wept too. To think that one could never again see those one loves. But they can see you, however; that's perhaps some consolation!"
"Yes, perhaps. Tell me, my friend," continued Michael, "have you never seen me anywhere before?"
"You, little father? No, never.
"The sound of your voice is not unknown to me."
"Why!" returned Nicholas, smiling, "he knows the sound of my voice! Perhaps you ask me that to find out where I come from. I come from Kolyvan."
"From Kolyvan?" repeated Michael, "Then it was there I met you; you were in the telegraph office?"
"That may be," replied Nicholas. "I was stationed there. I was the clerk in charge of the messages."
"And you stayed at your post up to the last moment?"
"Why, it's at that moment one ought to be there!"
"It was the day when an Englishman and a Frenchman were disputing, roubles in hand, for the place at your wicket, and the Englishman telegraphed some poetry."
"That is possible, but I do not remember it."
"What! you do not remember it?"
"I never read the dispatches I send. My duty being to forget them, the shortest way is not to know them."

This reply showed Nicholas Pigassof's character. In the meanwhile the kibitka pursued its way, at a pace which Michael longed to render more rapid. But Nicholas and his horse were accustomed to a pace which neither of them would like to alter. The horse went for two hours and rested one--so on, day and night. During the halts the horse grazed, the travelers ate in company with the faithful Serko. The kibitka was provisioned for at least twenty persons, and Nicholas generously placed his supplies at the disposal of his two guests, whom he believed to be brother and sister.

After a day's rest, Nadia recovered some strength. Nicholas took the best possible care of her. The journey was being made under tolerable circumstances, slowly certainly, but surely. It sometimes happened that during the night, Nicholas, although driving, fell asleep, and snored with a clearness which showed the calmness of his conscience. Perhaps then, by looking close, Michael's hand might have been seen feeling for the reins, and giving the horse a more rapid pace, to the great astonishment of Serko, who, however, said nothing. The trot was exchanged for the amble as soon as Nicholas awoke, but the kibitka had not the less gained some versts.

Thus they passed the river Ichimsk, the villages of Ichisnokoe, Berikylokoe, Kuskoe, the river Marunsk, the village of the same name, Bogostowskoe, and, lastly, the Ichoula, a little stream which divides Western from Eastern Siberia. The road now lay sometimes across wide moors, which extended as far as the eye could reach, sometimes through thick forests of firs, of which they thought they should never get to the end. Everywhere was a desert; the villages were almost entirely abandoned. The peasants had fled beyond the Yenisei, hoping that this wide river would perhaps stop the Tartars.

On the 22d of August, the kibitka entered the town of Atchinsk, two hundred and fifty miles from Tomsk. Eighty miles still lay between them and Krasnoiarsk.

No incident had marked the journey. For the six days during which they had been together, Nicholas, Michael, and Nadia had remained the same, the one in his unchange-able calm, the other two, uneasy, and thinking of the time when their companion would leave them.

Michael saw the country through which they traveled with the eyes of Nicholas and the young girl. In turns, they each described to him the scenes they passed. He knew whether he was in a forest or on a plain, whether a hut was on the steppe, or whether any Siberian was in sight. Nicholas was never silent, he loved to talk, and, from his
peculiar way of viewing things, his friends were amused by his conversation. One day, Michael asked him what sort of weather it was.

"Fine enough, little father," he answered, "but soon we shall feel the first winter frosts. Perhaps the Tartars will go into winter quarters during the bad season."

Michael Strogoff shook his head with a doubtful air.

"You do not think so, little father?" resumed Nicholas. "You think that they will march on to Irkutsk?"

"I fear so," replied Michael.

"Yes... you are right; they have with them a bad man, who will not let them loiter on the way. You have heard speak of Ivan Ogareff?"

"Yes."

"You know that it is not right to betray one's country!"

"No... it is not right..." answered Michael, who wished to remain unmoved.

"Little father," continued Nicholas, "it seems to me that you are not half indignant enough when Ivan Ogareff is spoken of. Your Russian heart ought to leap when his name is uttered."

"Believe me, my friend, I hate him more than you can ever hate him," said Michael.

"It is not possible," replied Nicholas; "no, it is not possible! When I think of Ivan Ogareff, of the harm which he is doing to our sacred Russia, I get into such a rage that if I could get hold of him--"

"If you could get hold of him, friend?"

"I think I should kill him."

"And I, I am sure of it," returned Michael quietly.

CHAPTER VII THE PASSAGE OF THE YENISEI

At nightfall, on the 25th of August, the kibitka came in sight of Krasnoiarsk. The journey from Tomsk had taken eight days. If it had not been accomplished as rapidly as it might, it was because Nicholas had slept little. Consequently, it was impossible to increase his horse's pace, though in other hands, the journey would not have taken sixty hours.

Happily, there was no longer any fear of Tartars. Not a scout had appeared on the road over which the kibitka had just traveled. This was strange enough, and evidently some serious cause had prevented the Emir's troops from marching without delay upon Irkutsk. Something had occurred. A new Russian corps, hastily raised in the government of Yeniseisk, had marched to Tomsk to endeavor to retake the town. But, being too weak to withstand the Emir's troops, now concentrated there, they had been forced to effect a retreat. Feofar-Khan, including his own soldiers, and those of the Khanats of Khokhand and Koun-douze, had now under his command two hundred and fifty thousand men, to which the Russian government could not as yet oppose a sufficient force. The invasion could not, therefore, be immediately stopped, and the whole Tartar army might at once march upon Irkutsk. The battle of Tomsk was on the 22nd of August, though this Michael did not know, but it explained why the vanguard of the Emir's army had not appeared at Krasnoiarsk by the 25th.

However, though Michael Strogoff could not know the events which had occurred since his departure, he at least knew that he was several days in advance of the Tartars, and that he need not despair of reaching before them the town of Irkutsk, still six hundred miles distant.

Besides, at Krasnoiarsk, of which the population is about twelve thousand souls, he depended upon obtaining some means of transport. Since Nicholas Pigassof was to stop in that town, it would be necessary to replace him by a guide, and to change the kibitka for another more rapid vehicle. Michael, after having addressed himself to the governor of the town, and established his identity and quality as Courier of the Czar—which would be easy—doubted not that he would be enabled to get to Irkutsk in the shortest possible time. He would thank the good Nicholas Pigassof, and set out immediately with Nadia, for he did not wish to leave her until he had placed her in her father's arms. Though Nicholas had resolved to stop at Krasnoiarsk, it was only as he said, "on condition of finding employment there." In fact, this model clerk, after having stayed to the last minute at his post in Kolyvan, was endeavoring to place himself again at the disposal of the government. "Why should I receive a salary which I have not earned?" he would say.

In the event of his services not being required at Krasnoiarsk, which it was expected would be still in telegraphic communication with Irkutsk, he proposed to go to Oudinsk, or even to the capital of Siberia itself. In the latter case, he would continue to travel with the brother and sister; and where would they find a surer guide, or a more devoted friend?

The kibitka was now only half a verst from Krasnoiarsk. The numerous wooden crosses which are erected at the approaches to the town, could be seen to the right and left of the road. It was seven in the evening; the outline of the
churches and of the houses built on the high bank of the Yenisei were clearly defined against the evening sky, and the waters of the river reflected them in the twilight.

"Where are we, sister?" asked Michael.

"Half a verst from the first houses," replied Nadia.

"Can the town be asleep?" observed Michael. "Not a sound strikes my ear."

"And I cannot see the slightest light, nor even smoke mounting into the air," added Nadia.

"What a queer town!" said Nicholas. "They make no noise in it, and go to bed uncommonly early!"

A presentiment of impending misfortune passed across Michael's heart. He had not said to Nadia that he had placed all his hopes on Krasnoiarsk, where he expected to find the means of safely finishing his journey. He much feared that his anticipations would again be disappointed.

But Nadia had guessed his thoughts, although she could not understand why her companion should be so anxious to reach Irkutsk, now that the Imperial letter was gone. She one day said something of the sort to him. "I have sworn to go to Irkutsk," he replied.

But to accomplish his mission, it was necessary that at Krasnoiarsk he should find some more rapid mode of locomotion. "Well, friend," said he to Nicholas, "why are we not going on?"

"Because I am afraid of waking up the inhabitants of the town with the noise of my carriage!" And with a light fleck of the whip, Nicholas put his horse in motion.

Ten minutes after they entered the High Street, Krasnoiarsk was deserted; there was no longer an Athenian in this "Northern Athens," as Madame de Bourboulon has called it. Not one of their dashing equipages swept through the wide, clean streets. Not a pedestrian enlivened the footpaths raised at the bases of the magnificent wooden houses, of monumental aspect! Not a Siberian belle, dressed in the last French fashion, promenaded the beautiful park, cleared in a forest of birch trees, which stretches away to the banks of the Yenisei! The great bell of the cathedral was dumb; the chimes of the churches were silent. Here was complete desolation. There was no longer a living being in this town, lately so lively!

The last telegram sent from the Czar's cabinet, before the rupture of the wire, had ordered the governor, the garrison, the inhabitants, whoever they might be, to leave Krasnoiarsk, to carry with them any articles of value, or which might be of use to the Tartars, and to take refuge at Irkutsk. The same injunction was given to all the villages of the province. It was the intention of the Muscovite government to lay the country desert before the invaders. No one thought for an instant of disputing these orders. They were executed, and this was the reason why not a single human being remained in Krasnoiarsk.

Michael Strogoff, Nadia, and Nicholas passed silently through the streets of the town. They felt half-stupefied. They themselves made the only sound to be heard in this dead city. Michael allowed nothing of what he felt to appear, but he inwardly raged against the bad luck which pursued him, his hopes being again disappointed.

"Alack, alack!" cried Nicholas, "I shall never get any employment in this desert!"

"Friend," said Nadia, "you must go on with us."

"I must indeed!" replied Nicholas. "The wire is no doubt still working between Oudinsk and Irkutsk, and there--Shall we start, little father?"

"Let us wait till to-morrow," answered Michael.

"You are right," said Nicholas. "We have the Yenisei to cross, and need light to see our way there!"

"To see!" murmured Nadia, thinking of her blind companion.

Nicholas heard her, and turning to Michael, "Forgive me, little father," said he. "Alas! night and day, it is true, are all the same to you!"

"Do not reproach yourself, friend," replied Michael, pressing his hand over his eyes. "With you for a guide I can still act. Take a few hours' repose. Nadia must rest too. To-morrow we will recommence our journey!"

Michael and his friends had not to search long for a place of rest. The first house, the door of which they pushed open, was empty, as well as all the others. Nothing could be found within but a few heaps of leaves. For want of better fodder the horse had to content himself with this scanty nourishment. The provisions of the kibitka were not yet exhausted, so each had a share. Then, after having knelt before a small picture of the Panaghia, hung on the wall, and still lighted up by a flickering lamp, Nicholas and the young girl slept, whilst Michael, over whom sleep had no influence, watched.

Before daybreak the next morning, the 26th of August, the horse was drawing the kibitka through the forests of birch trees towards the banks of the Yenisei. Michael was in much anxiety. How was he to cross the river, if, as was probable, all boats had been destroyed to retard the Tartars' march? He knew the Yenisei, its width was considerable, its currents strong. Ordinarily by means of boats specially built for the conveyance of travelers, carriages, and horses, the passage of the Yenisei takes about three hours, and then it is with extreme difficulty that the boats reach the opposite bank. Now, in the absence of any ferry, how was the kibitka to get from one bank to the other?
Day was breaking when the kibitka reached the left bank, where one of the wide alleys of the park ended. They were about a hundred feet above the Yenisei, and could therefore survey the whole of its wide course.

"Do you see a boat?" asked Michael, casting his eyes eagerly about from one side to the other, mechanically, no doubt, as if he could really see.

"It is scarcely light yet, brother," replied Nadia. "The fog is still thick, and we cannot see the water."

"But I hear it roaring," said Michael.

Indeed, from the fog issued a dull roaring sound. The waters being high rushed down with tumultuous violence. All three waited until the misty curtain should rise. The sun would not be long in dispersing the vapors.

"Well?" asked Michael.

"The fog is beginning to roll away, brother," replied Nadia, "and it will soon be clear."

"Then you do not see the surface of the water yet?"

"Not yet."

"Have patience, little father," said Nicholas. "All this will soon disappear. Look! here comes the breeze! It is driving away the fog. The trees on the opposite hills are already appearing. It is sweeping, flying away. The kindly rays of the sun have condensed all that mass of mist. Ah! how beautiful it is, my poor fellow, and how unfortunate that you cannot see such a lovely sight!"

"Do you see a boat?" asked Michael.

"I see nothing of the sort," answered Nicholas.

"Look well, friend, on this and the opposite bank, as far as your eye can reach. A raft, even a canoe?"

Nicholas and Nadia, grasping the bushes on the edge of the cliff, bent over the water. The view they thus obtained was extensive. At this place the Yenisei is not less than a mile in width, and forms two arms, of unequal size, through which the waters flow swiftly. Between these arms lie several islands, covered with alders, willows, and poplars, looking like verdant ships, anchored in the river. Beyond rise the high hills of the Eastern shore, crowned with forests, whose tops were then empurpled with light. The Yenisei stretched on either side as far as the eye could reach. The beautiful panorama lay before them for a distance of fifty versts.

But not a boat was to be seen. All had been taken away or destroyed, according to order. Unless the Tartars should bring with them materials for building a bridge of boats, their march towards Irkutsk would certainly be stopped for some time by this barrier, the Yenisei.

"I remember," said Michael, "that higher up, on the outskirts of Krasnoiarsk, there is a little quay. There the boats touch. Friend, let us go up the river, and see if some boat has not been forgotten on the bank."

Nadia seized Michael's hand and started off at a rapid pace in the direction indicated. If only a boat or a barge large enough to hold the kibitka could be found, or even one that would carry just themselves, Michael would not hesitate to attempt the passage! Twenty minutes after, all three had reached the little quay, with houses on each side quite down to the water's edge. It was like a village standing beyond the town of Krasnoiarsk.

But not a boat was on the shore, not a barge at the little wharf, nothing even of which a raft could be made large enough to carry three people. Michael questioned Nicholas, who made the discouraging reply that the crossing appeared to him absolutely impracticable.

"We shall cross!" answered Michael.

The search was continued. They examined the houses on the shore, abandoned like all the rest of Krasnoiarsk. They had merely to push open the doors and enter. The cottages were evidently those of poor people, and quite empty. Nicholas visited one, Nadia entered another, and even Michael went here and there and felt about, hoping to light upon some article that might be useful.

Nicholas and the girl had each fruitlessly rummaged these cottages and were about to give up the search, when they heard themselves called. Both ran to the bank and saw Michael standing on the threshold of a door.

"Come!" he exclaimed. Nicholas and Nadia went towards him and followed him into the cottage.

"What are these?" asked Michael, touching several objects piled up in a corner.

"They are leathern bottles," answered Nicholas.

"Are they full?"

"Yes, full of koumyss. We have found them very opportunely to renew our provisions!"

"Koumyss" is a drink made of mare's or camel's milk, and is very sustaining, and even intoxicating; so that Nicholas and his companions could not but congratulate themselves on the discovery.

"Save one," said Michael, "but empty the others."

"Directly, little father."

"These will help us to cross the Yenisei."

"And the raft?"

"Will be the kibitka itself, which is light enough to float. Besides, we will sustain it, as well as the horse, with
these bottles."

"Well thought of, little father," exclaimed Nicholas, "and by God's help we will get safely over... though perhaps
not in a straight line, for the current is very rapid!"

"What does that matter?" replied Michael. "Let us get across first, and we shall soon find out the road to Irkutsk
on the other side of the river."

"To work, then," said Nicholas, beginning to empty the bottles.

One full of koumyss was reserved, and the rest, with the air carefully fastened in, were used to form a floating
apparatus. Two bottles were fastened to the horse's sides to support it in the water. Two others were attached to the
shafts to keep them on a level with the body of the machine, thus transformed into a raft. This work was soon
finished.

"You will not be afraid, Nadia?" asked Michael.

"No, brother," answered the girl.

"And you, friend?"

"I?" cried Nicholas. "I am now going to have one of my dreams realized--that of sailing in a cart."

At the spot where they were now standing, the bank sloped, and was suitable for the launching of the kibitka.
The horse drew it into the water, and they were soon both floating. As to Serko, he was swimming bravely.

The three passengers, seated in the vehicle, had with due precaution taken off their shoes and stockings; but,
thanks to the bottles, the water did not even come over their ankles. Michael held the reins, and, according to
Nicholas's directions, guided the animal obliquely, but cautiously, so as not to exhaust him by struggling against the
current. So long as the kibitka went with the current all was easy, and in a few minutes it had passed the quays of
Krasnoiarsk. It drifted northwards, and it was soon evident that it would only reach the opposite bank far below the
town. But that mattered little. The crossing would have been made without great difficulty, even on this imperfect
apparatus, had the current been regular; but, unfortunately, there were whirlpools in numbers, and soon the kibitka,
notwithstanding all Michael's efforts, was irresistibly drawn into one of these.

There the danger was great. The kibitka no longer drifted, but spun rapidly round, inclining towards the center of
the eddy, like a rider in a circus. The horse could scarcely keep his head above water, and ran a great risk of being
suffocated. Serko had been obliged to take refuge in the carriage.

Michael knew what was happening. He felt himself drawn round in a gradually narrowing line, from which they
could not get free. How he longed to see, to be better able to avoid this peril, but that was no longer possible. Nadia
was silent, her hands clinging to the sides of the cart, which was inclining more and more towards the center of
depression.

And Nicholas, did he not understand the gravity of the situation? Was it with him phlegm or contempt of danger,
courage or indifference? Was his life valueless in his eyes, and, according to the Eastern expression, "an hotel for
five days," which, whether one is willing or not, must be left the sixth? At any rate, the smile on his rosy face never
faded for an instant.

The kibitka was thus in the whirlpool, and the horse was nearly exhausted, when, all at once, Michael, throwing
off such of his garments as might impede him, jumped into the water; then, seizing with a strong hand the bridle of
the terrified horse, he gave him such an impulse that he managed to struggle out of the circle, and getting again into
the current, the kibitka drifted along anew.

"Hurrah!" exclaimed Nicholas.

Two hours after leaving the wharf, the kibitka had crossed the widest arm of the river, and had landed on an
island more than six versts below the starting point.

There the horse drew the cart onto the bank, and an hour's rest was given to the courageous animal; then the
island having been crossed under the shade of its magnificent birches, the kibitka found itself on the shore of the
smaller arm of the Yenisei.

This passage was much easier; no whirlpools broke the course of the river in this second bed; but the current was
so rapid that the kibitka only reached the opposite side five versts below. They had drifted eleven versts in all.

These great Siberian rivers across which no bridges have as yet been thrown, are serious obstacles to the facility
of communication. All had been more or less unfortunate to Michael Strogoff. On the Irtych, the boat which carried
him and Nadia had been attacked by Tartars. On the Obi, after his horse had been struck by a bullet, he had only by
a miracle escaped from the horsemen who were pursuing him. In fact, this passage of the Yenisei had been
performed the least disastrously.

"That would not have been so amusing," exclaimed Nicholas, rubbing his hands, as they disembarked on the
right bank of the river, "if it had not been so difficult."

"That which has only been difficult to us, friend," answered Michael Strogoff, "will, perhaps, be impossible to
the Tartars."
CHAPTER VIII A HARE CROSSES THE ROAD

MICHAEL STROGOFF might at last hope that the road to Irkutsk was clear. He had distanced the Tartars, now detained at Tomsk, and when the Emir's soldiers should arrive at Krasnoiarsk they would find only a deserted town. There being no communication between the two banks of the Yenisei, a delay of some days would be caused until a bridge of boats could be established, and to accomplish this would be a difficult undertaking. For the first time since the encounter with Ivan Ogareff at Omsk, the courier of the Czar felt less uneasy, and began to hope that no fresh obstacle would delay his progress.

The road was good, for that part of it which extends between Krasnoiarsk and Irkutsk is considered the best in the whole journey; fewer jolts for travelers, large trees to shade them from the heat of the sun, sometimes forests of pines or cedars covering an extent of a hundred versts. It was no longer the wide steppe with limitless horizon; but the rich country was empty. Everywhere they came upon deserted villages. The Siberian peasantry had vanished. It was a desert, but a desert by order of the Czar.

The weather was fine, but the air, which cooled during the night, took some time to get warm again. Indeed it was now near September, and in this high region the days were sensibly shortening. Autumn here lasts but a very little while, although this part of Siberian territory is not situated above the fifty-fifth parallel, that of Edinburgh and Copenhagen. However, winter succeeds summer almost unexpectedly. These winters of Asiatic Russia may be said to be preocious, considering that during them the thermometer falls until the mercury is frozen nearly 42 degrees below zero, and that 20 degrees below zero is considered an unsupportable temperature.

The weather favored our travelers. It was neither stormy nor rainy. The health of Nadia and Michael was good, and since leaving Tomsk they had gradually recovered from their past fatigues.

As to Nicholas Pigassof, he had never been better in his life. To him this journey was a trip, an agreeable excursion in which he employed his enforced holiday.

"Decidedly," said he, "this is pleasanter than sitting twelve hours a day, perched on a stool, working the manipulator!"

Michael had managed to get Nicholas to make his horse quicken his pace. To obtain this result, he had confided to Nicholas that Nadia and he were on their way to join their father, exiled at Irkutsk, and that they were very anxious to get there. Certainly, it would not do to overwork the horse, for very probably they would not be able to exchange him for another; but by giving him frequent rests--every ten miles, for instance--forty miles in twenty-four hours could easily be accomplished. Besides, the animal was strong, and of a race calculated to endure great fatigue. He was in no want of rich pasturage along the road, the grass being thick and abundant. Therefore, it was possible to demand an increase of work from him.

Nicholas gave in to all these reasons. He was much moved at the situation of these two young people, going to share their father's exile. Nothing had ever appeared so touching to him. With what a smile he said to Nadia: "Divine goodness! what joy will Mr. Korpanoff feel, when his eyes behold you, when his arms open to receive you! If I go to Irkutsk--and that appears very probable now--will you permit me to be present at that interview! You will, will you not?" Then, striking his forehead: "But, I forgot, what grief too when he sees that his poor son is blind! Ah! everything is mingled in this world!"

However, the result of all this was the kibitka went faster, and, according to Michael's calculations, now made almost eight miles an hour.

After crossing the little river Biriousa, the kibitka reached Biriousensk on the morning of the 4th of September. There, very fortunately, for Nicholas saw that his provisions were becoming exhausted, he found in an oven a dozen "pogatchas," a kind of cake prepared with sheep's fat and a large supply of plain boiled rice. This increase was very opportune, for something would soon have been needed to replace the koumyss with which the kibitka had been stored at Krasnoiarsk.

After a halt, the journey was continued in the afternoon. The distance to Irkutsk was not now much over three hundred miles. There was not a sign of the Tartar vanguard. Michael Strogoff had some grounds for hoping that his journey would not be again delayed, and that in eight days, or at most ten, he would be in the presence of the Grand Duke.

On leaving Biriousinsk, a hare ran across the road, in front of the kibitka. "Ah!" exclaimed Nicholas. "What is the matter, friend?" asked Michael quickly, like a blind man whom the least sound arouses.

"Did you not see?" said Nicholas, whose bright face had become suddenly clouded. Then he added, "Ah! no! you could not see, and it's lucky for you, little father!"

"But I saw nothing," said Nadia.

"So much the better! So much the better! But I--I saw!"
"What was it then?" asked Michael.
"A hare crossing our road!" answered Nicholas.

In Russia, when a hare crosses the path, the popular belief is that it is the sign of approaching evil. Nicholas, superstitious like the greater number of Russians, stopped the kibitka.

Michael understood his companion's hesitation, without sharing his credulity, and endeavored to reassure him, "There is nothing to fear, friend," said he.

"Nothing for you, nor for her, I know, little father," answered Nicholas, "but for me!"

"It is my fate," he continued. And he put his horse in motion again. However, in spite of these forebodings the day passed without any accident.

At twelve o'clock the next day, the 6th of September, the kibitka halted in the village of Alsalevok, which was as deserted as the surrounding country. There, on a doorstep, Nadia found two of those strong-bladed knives used by Siberian hunters. She gave one to Michael, who concealed it among his clothes, and kept the other herself.

Nicholas had not recovered his usual spirits. The ill-omen had affected him more than could have been believed, and he who formerly was never half an hour without speaking, now fell into long reveries from which Nadia found it difficult to arouse him. The kibitka rolled swiftly along the road. Yes, swiftly! Nicholas no longer thought of being so careful of his horse, and was as anxious to arrive at his journey's end as Michael himself. Notwithstanding his fatalism, and though resigned, he would not believe himself in safety until within the walls of Irkutsk. Many Russians would have thought as he did, and more than one would have turned his horse and gone back again, after a hare had crossed his path.

Some observations made by him, the justice of which was proved by Nadia transmitting them to Michael, made them fear that their trials were not yet over. Though the land from Krasnoiarsk had been respected in its natural productions, its forests now bore trace of fire and steel; and it was evident that some large body of men had passed that way.

Twenty miles before Nijni-Oudinsk, the indications of recent devastation could not be mistaken, and it was impossible to attribute them to others than the Tartars. It was not only that the fields were trampled by horse's feet, and that trees were cut down. The few houses scattered along the road were not only empty, some had been partly demolished, others half burnt down. The marks of bullets could be seen on their walls.

Michael's anxiety may be imagined. He could no longer doubt that a party of Tartars had recently passed that way, and yet it was impossible that they could be the Emir's soldiers, for they could not have passed without being seen. But then, who were these new invaders, and by what out-of-the-way path across the steppe had they been able to join the highroad to Irkutsk? With what new enemies was the Czar's courier now to meet?

He did not communicate his apprehensions either to Nicholas or Nadia, not wishing to make them uneasy. Besides, he had resolved to continue his way, as long as no insurmountable obstacle stopped him. Later, he would see what it was best to do. During the ensuing day, the recent passage of a large body of foot and horse became more and more apparent. Smoke was seen above the horizon. The kibitka advanced cautiously. Several houses in deserted villages still burned, and could not have been set on fire more than four and twenty hours before.

At last, during the day, on the 8th of September, the kibitka stopped suddenly. The horse refused to advance. Serko barked furiously.

"What is the matter?" asked Michael.

"A corpse!" replied Nicholas, who had leapt out of the kibitka. The body was that of a moujik, horribly mutilated, and already cold. Nicholas crossed himself. Then, aided by Michael, he carried the body to the side of the road. He would have liked to give it decent burial, that the wild beasts of the steppe might not feast on the miserable remains, but Michael could not allow him the time.

"Come, friend, come!" he exclaimed, "we must not delay, even for an hour!" And the kibitka was driven on.

Besides, if Nicholas had wished to render the last duties to all the dead bodies they were now to meet with on the Siberian highroad, he would have had enough to do! As they approached Nijni-Oudinsk, they were found by twenties, stretched on the ground.

It was, however, necessary to follow this road until it was manifestly impossible to do so longer without falling into the hands of the invaders. The road they were following could not be abandoned, and yet the signs of devastation and ruin increased at every village they passed through. The blood of the victims was not yet dry. As to gaining information about what had occurred, that was impossible. There was not a living being left to tell the tale.

About four o'clock in the afternoon of this day, Nicholas caught sight of the tall steeples of the churches of Nijni-Oudinsk. Thick vapors, which could not have been clouds, were floating around them.

Nicholas and Nadia looked, and communicated the result of their observations to Michael. They must make up their minds what to do. If the town was abandoned, they could pass through without risk, but if, by some inexplicable maneuver, the Tartars occupied it, they must at every cost avoid the place.
"Advance cautiously," said Michael Strogoff, "but advance!"

A verst was soon traversed.

"Those are not clouds, that is smoke!" exclaimed Nadia. "Brother, they are burning the town!"

It was, indeed, only too plain. Flashes of light appeared in the midst of the vapor. It became thicker and thicker as it mounted upwards. But were they Tartars who had done this? They might be Russians, obeying the orders of the Grand Duke. Had the government of the Czar determined that from Krasnoiarsk, from the Yenisei, not a town, not a village should offer a refuge to the Emir's soldiers? What was Michael to do?

He was undecided. However, having weighed the pros and cons, he thought that whatever might be the difficulties of a journey across the steppe without a beaten path, he ought not to risk capture a second time by the Tartars. He was just proposing to Nicholas to leave the road, when a shot was heard on their right. A ball whistled, and the horse of the kibitka fell dead, shot through the head.

A dozen horsemen dashed forward, and the kibitka was surrounded. Before they knew where they were, Michael, Nadia, and Nicholas were prisoners, and were being dragged rapidly towards Nijni-Oudinsk.

Michael, in this second attack, had lost none of his presence of mind. Being unable to see his enemies, he had not thought of defending himself. Even had he possessed the use of his eyes, he would not have attempted it. The consequences would have been his death and that of his companions. But, though he could not see, he could listen and understand what was said.

From their language he found that these soldiers were Tartars, and from their words, that they preceded the invading army.

In short, what Michael learnt from the talk at the present moment, as well as from the scraps of conversation he overheard later, was this. These men were not under the direct orders of the Emir, who was now detained beyond the Yenisei. They made part of a third column chiefly composed of Tartars from the khanats of Khokland and Koondooz, with which Feofar's army was to affect a junction in the neighborhood of Irkutsk.

By Ogareff's advice, in order to assure the success of the invasion in the Eastern provinces, this column had skirted the base of the Altai Mountains. Pillaging and ravaging, it had reached the upper course of the Yenisei. There, guessing what had been done at Krasnoiarsk by order of the Czar, and to facilitate the passage of the river to the Emir's troops, this column had launched a flotilla of boats, which would enable Feofar to cross and resume the road to Irkutsk. Having done this, it had descended the valley of the Yenisei and struck the road on a level with Alsalevsk. From this little town began the frightful course of ruin which forms the chief part of Tartar warfare. Nijni-Oudinsk had shared the common fate, and the Tartars, to the number of fifty thousand, had now quitted it to take up a position before Irkutsk. Before long, they would be reinforced by the Emir's troops.

Such was the state of affairs at this date, most serious for this isolated part of Eastern Siberia, and for the comparatively few defenders of its capital.

It can be imagined with what thoughts Michael's mind was now occupied! Who could have been astonished had he, in his present situation, lost all hope and all courage? Nothing of the sort, however; his lips muttered no other words than these: "I will get there!"

Half an hour after the attack of the Tartar horsemen, Michael Strogoff, Nadia, and Nicholas entered Nijni-Oudinsk. The faithful dog followed them, though at a distance. They could not stay in the town, as it was in flames, and about to be left by the last of the marauders. The prisoners were therefore thrown on horses and hurried away; Nicholas resigned as usual, Nadia, her faith in Michael unshaken, and Michael himself, apparently indifferent, but ready to seize any opportunity of escaping.

The Tartars were not long in perceiving that one of their prisoners was blind, and their natural barbarity led them to make game of their unfortunate victim. They were traveling fast. Michael's horse, having no one to guide him, often started aside, and so made confusion among the ranks. This drew on his rider such abuse and brutality as wrung Nadia's heart, and filled Nicholas with indignation. But what could they do? They could not speak the Tartar language, and their assistance was mercilessly refused. Soon it occurred to these men, in a refinement of cruelty, to exchange the horse Michael was riding for one which was blind. The motive of the change was explained by a remark which Michael overheard, "Perhaps that Russian can see, after all!"

Michael was placed on this horse, and the reins ironically put into his hand. Then, by dint of lashing, throwing stones, and shouting, the animal was urged into a gallop. The horse, not being guided by his rider, blind as himself, sometimes ran into a tree, sometimes went quite off the road—in consequence, collisions and falls, which might have been extremely dangerous.

Michael did not complain. Not a murmur escaped him. When his horse fell, he waited until it got up. It was, indeed, soon assisted up, and the cruel fun continued. At sight of this wicked treatment, Nicholas could not contain himself; he endeavored to go to his friend's aid. He was prevented, and treated brutally.

This game would have been prolonged, to the Tartars' great amusement, had not a serious accident put an end to
it. On the 10th of September the blind horse ran away, and made straight for a pit, some thirty or forty feet deep, at
the side of the road.

Nicholas tried to go after him. He was held back. The horse, having no guide, fell with his rider to the bottom.
Nicholas and Nadia uttered a piercing cry! They believed that their unfortunate companion had been killed.
However, when they went to his assistance, it was found that Michael, having been able to throw himself out of
the saddle, was unhurt, but the miserable horse had two legs broken, and was quite useless. He was left there to die
without being put out of his suffering, and Michael, fastened to a Tartar's saddle, was obliged to follow the
detachment on foot.

Even now, not a protest, not a complaint! He marched with a rapid step, scarcely drawn by the cord which tied
him. He was still "the Man of Iron," of whom General Kissoff had spoken to the Czar!

The next day, the 11th of September, the detachment passed through the village of Chibarlinskoe. Here an
incident occurred which had serious consequences. It was nightfall. The Tartar horsemen, having halted, were more
or less intoxicated. They were about to start. Nadia, who till then, by a miracle, had been respectfully treated by the
soldiers, was insulted by one of them.

Michael could not see the insult, nor the insulter, but Nicholas saw for him. Then, quietly, without thinking,
without perhaps knowing what he was doing, Nicholas walked straight up to the man, and, before the latter could
make the least movement to stop him, had seized a pistol from his holster and discharged it full at his breast.
The officer in command of the detachment hastened up on hearing the report. The soldiers would have cut the
unfortunate Nicholas to pieces, but at a sign from their officer, he was bound instead, placed across a horse, and the
detachment galloped off.
The rope which fastened Michael, gnawed through by him, broke by the sudden start of the horse, and the half-
tipsy rider galloped on without perceiving that his prisoner had escaped.
Michael and Nadia found themselves alone on the road.

CHAPTER IX IN THE STEPPE

MICHAEL STROGOFF and Nadia were once more as free as they had been in the journey from Perm to the
banks of the Irtych. But how the conditions under which they traveled were altered! Then, a comfortable tarantass,
fresh horses, well-kept post-horses assured the rapidity of their journey. Now they were on foot; it was utterly
impossible to procure any other means of locomotion, they were without resources, not knowing how to obtain even
food, and they had still nearly three hundred miles to go! Moreover, Michael could now only see with Nadia's eyes.
As to the friend whom chance had given them, they had just lost him, and fearful might be his fate. Michael had
thrown himself down under the brushwood at the side of the road. Nadia stood beside him, waiting for the word
from him to continue the march.

It was ten o'clock. The sun had more than three hours before disappeared below the horizon. There was not a
house in sight. The last of the Tartars was lost in the distance. Michael and Nadia were quite alone.
"What will they do with our friend?" exclaimed the girl. "Poor Nicholas! Our meeting will have been fatal to
him!" Michael made no response.
"Michael," continued Nadia, "do you not know that he defended you when you were the Tartars' sport; that he
risked his life for me?"
Michael was still silent. Motionless, his face buried in his hands; of what was he thinking? Perhaps, although he
did not answer, he heard Nadia speak.
"Yes! he heard her, for when the young girl added, "Where shall I lead you, Michael?"
"To Irkutsk!" he replied.
"By the highroad?"
"Yes, Nadia."
Michael was still the same man who had sworn, whatever happened, to accomplish his object. To follow the
highroad, was certainly to go the shortest way. If the vanguard of Feofar-Khan's troops appeared, it would then be
time to strike across the country.
Nadia took Michael's hand, and they started.
The next morning, the 13th of September, twenty versts further, they made a short halt in the village of
Joulounov-skoe. It was burnt and deserted. All night Nadia had tried to see if the body of Nicholas had not been left
on the road, but it was in vain that she looked among the ruins, and searched among the dead. Was he reserved for
some cruel torture at Irkutske?
Nadia, exhausted with hunger, was fortunate enough to find in one of the houses a quantity of dried meat and
"soukharis," pieces of bread, which, dried by evaporation, preserve their nutritive qualities for an indefinite time.
Michael and the girl loaded themselves with as much as they could carry. They had thus a supply of food for several days, and as to water, there would be no want of that in a district rendered fertile by the numerous little affluents of the Angara.

They continued their journey. Michael walked with a firm step, and only slackened his pace for his companion's sake. Nadia, not wishing to retard him, obliged herself to walk. Happily, he could not see to what a miserable state fatigue had reduced her.

However, Michael guessed it. "You are quite done up, poor child," he said sometimes.

"No," she would reply.

"When you can no longer walk, I will carry you."

"Yes, Michael."

During this day they came to the little river Oka, but it was fordable, and they had no difficulty in crossing. The sky was cloudy and the temperature moderate. There was some fear that the rain might come on, which would much have increased their misery. A few showers fell, but they did not last.

They went on as before, hand in hand, speaking little, Nadia looking about on every side; twice a day they halted. Six hours of the night were given to sleep. In a few huts Nadia again found a little mutton; but, contrary to Michael's hopes, there was not a single beast of burden in the country; horses, camels—all had been either killed or carried off. They must still continue to plod on across this weary steppe on foot.

The third Tartar column, on its way to Irkutsk, had left plain traces: here a dead horse, there an abandoned cart. The bodies of unfortunate Siberians lay along the road, principally at the entrances to villages. Nadia, overcoming her repugnance, looked at all these corpses!

The chief danger lay, not before, but behind. The advance guard of the Emir's army, commanded by Ivan Ogareff, might at any moment appear. The boats sent down the lower Yenisei must by this time have reached Krasnoiarsk and been made use of. The road was therefore open to the invaders. No Russian force could be opposed to them between Krasnoiarsk and Lake Baikal, Michael therefore expected before long the appearance of the Tartar scouts.

At each halt, Nadia climbed some hill and looked anxiously to the Westward, but as yet no cloud of dust had signaled the approach of a troop of horse.

Then the march was resumed; and when Michael felt that he was dragging poor Nadia forward too rapidly, he went at a slower pace. They spoke little, and only of Nicholas. The young girl recalled all that this companion of a few days had done for them.

In answering, Michael tried to give Nadia some hope of which he did not feel a spark himself, for he well knew that the unfortunate fellow would not escape death.

One day Michael said to the girl, "You never speak to me of my mother, Nadia."

His mother! Nadia had never wished to do so. Why renew his grief? Was not the old Siberian dead? Had not her son given the last kiss to her corpse stretched on the plain of Tomsk?

"Speak to me of her, Nadia," said Michael. "Speak—-you will please me."

And then Nadia did what she had not done before. She told all that had passed between Marfa and herself since their meeting at Omsk, where they had seen each other for the first time. She said how an inexplicable instinct had led her towards the old prisoner without knowing who she was, and what encouragement she had received in return.

At that time Michael Strogoff had been to her but Nicholas Korpanoff.

"Whom I ought always to have been," replied Michael, his brow darkening.

Then later he added, "I have broken my oath, Nadia. I had sworn not to see my mother!"

"But you did not try to see her, Michael," replied Nadia. "Chance alone brought you into her presence."

"I had sworn, whatever might happen, not to betray myself."

"Michael, Michael! at sight of the lash raised upon Marfa, could you refrain? No! No oath could prevent a son from succoring his mother!"

"I have broken my oath, Nadia," returned Michael. "May God and the Father pardon me!"

"Michael," resumed the girl, "I have a question to ask you. Do not answer it if you think you ought not. Nothing from you would vex me!"

"Speak, Nadia."

"Why, now that the Czar's letter has been taken from you, are you so anxious to reach Irkutsk?"

Michael tightly pressed his companion's hand, but he did not answer.

"Did you know the contents of that letter before you left Moscow?"

"No, I did not know."

"Must I think, Michael, that the wish alone to place me in my father's hands draws you toward Irkutsk?"

"No, Nadia," replied Michael, gravely. "I should deceive you if I allowed you to believe that it was so. I go
where duty orders me to go. As to taking you to Irkutsk, is it not you, Nadia, who are now taking me there? Do I not see with your eyes; and is it not your hand that guides me? Have you not repaid a hundred-fold the help which I was able to give you at first? I do not know if fate will cease to go against us; but the day on which you thank me for having placed you in your father's hands, I in my turn will thank you for having led me to Irkutsk."

"Poor Michael!" answered Nadia, with emotion. "Do not speak so. That does not answer me. Michael, why, now, are you in such haste to reach Irkutsk?"

"Because I must be there before Ivan Ogareff," exclaimed Michael.

"Even now?"

"Even now, and I will be there, too!"

In uttering these words, Michael did not speak solely through hatred to the traitor. Nadia understood that her companion had not told, or could not tell, her all.

On the 15th of September, three days later, the two reached the village of Koutounskoe. The young girl suffered dreadfully. Her aching feet could scarcely support her; but she fought, she struggled, against her weariness, and her only thought was this: "Since he cannot see me, I will go on till I drop."

There were no obstacles on this part of the journey, no danger either since the departure of the Tartars, only much fatigue. For three days it continued thus. It was plain that the third invading column was advancing rapidly in the East; that could be seen by the ruins which they left after them--the cold cinders and the already decomposing corpses.

There was nothing to be seen in the West; the Emir's advance-guard had not yet appeared. Michael began to consider the various reasons which might have caused this delay. Was a sufficient force of Russians directly menacing Tomsk or Krasnoiarsk? Did the third column, isolated from the others, run a risk of being cut off? If this was the case, it would be easy for the Grand Duke to defend Irkutsk, and any time gained against an invasion was a step towards repulsing it. Michael sometimes let his thoughts run on these hopes, but he soon saw their improbability, and felt that the preservation of the Grand Duke depended alone on him.

Nadia dragged herself along. Whatever might be her moral energy, her physical strength would soon fail her. Michael knew it only too well. If he had not been blind, Nadia would have said to him, "Go, Michael, leave me in some hut! Reach Irkutsk! Accomplish your mission! See my father! Tell him where I am! Tell him that I wait for him, and you both will know where to find me! Start! I am not afraid! I will hide myself from the Tartars! I will take care of myself for him, for you! Go, Michael! I can go no farther!"

Many times Nadia was obliged to stop. Michael then took her in his strong arms and, having no longer to think of her fatigue, walked more rapidly and with his indefatigable step.

On the 18th of September, at ten in the evening, Kimiltiskeikoe was at last entered. From the top of a hill, Nadia saw in the horizon a long light line. It was the Dinka River. A few lightning flashes were reflected in the water; summer lightning, without thunder. Nadia led her companion through the ruined village. The cinders were quite cold. The last of the Tartars had passed through at least five or six days before.

Beyond the village, Nadia sank down on a stone bench. "Shall we make a halt?" asked Michael.

"It is night, Michael," answered Nadia. "Do you not want to rest a few hours?"

"I would rather have crossed the Dinka," replied Michael, "I should like to put that between us and the Emir's advance-guard. But you can scarcely drag yourself along, my poor Nadia!"

"Come, Michael," returned Nadia, seizing her companion's hand and drawing him forward.

Two or three verst's further the Dinka flowed across the Irkutsk road. The young girl wished to attempt this last effort asked by her companion. She found her way by the light from the flashes. They were then crossing a boundless desert, in the midst of which was lost the little river. Not a tree nor a hillock broke the flatness. Not a breath disturbed the atmosphere, whose calmness would allow the slightest sound to travel an immense distance.

Suddenly, Michael and Nadia stopped, as if their feet had been fast to the ground. The barking of a dog came across the steppe. "Do you hear?" said Nadia.

Then a mournful cry succeeded it--a despairing cry, like the last appeal of a human being about to die.

"Nicholas! Nicholas!" cried the girl, with a foreboding of evil. Michael, who was listening, shook his head.

"Come, Michael, come," said Nadia. And she who just now was dragging herself with difficulty along, suddenly recovered strength, under violent excitement.

"We have left the road," said Michael, feeling that he was treading no longer on powdery soil but on short grass.

"Yes, we must!" returned Nadia. "It was there, on the right, from which the cry came!"

In a few minutes they were not more than half a verst from the river. A second bark was heard, but, although more feeble, it was certainly nearer. Nadia stopped.

"Yes!" said Michael. "It is Serko barking!... He has followed his master!"

"Nicholas!" called the girl. Her cry was unanswered.
Michael listened. Nadia gazed over the plain illumined now and again with electric light, but she saw nothing. And yet a voice was again raised, this time murmuring in a plaintive tone, "Michael!"

Then a dog, all bloody, bounded up to Nadia.

It was Serko! Nicholas could not be far off! He alone could have murmured the name of Michael! Where was he? Nadia had no strength to call again. Michael, crawling on the ground, felt about with his hands.

Suddenly Serko uttered a fresh bark and darted towards a gigantic bird which had swooped down. It was a vulture. When Serko ran towards it, it rose, but returning struck at the dog. The latter leapt up at it. A blow from the formidable beak alighted on his head, and this time Serko fell back lifeless on the ground.

At the same moment a cry of horror escaped Nadia. "There... there!" she exclaimed.

A head issued from the ground! She had stumbled against it in the darkness.

Nadia fell on her knees beside it. Nicholas buried up to his neck, according to the atrocious Tartar custom, had been left in the steppe to die of thirst, and perhaps by the teeth of wolves or the beaks of birds of prey!

Frightful torture for the victim imprisoned in the ground--the earth pressed down so that he cannot move, his arms bound to his body like those of a corpse in its coffin! The miserable wretch, living in the mold of clay from which he is powerless to break out, can only long for the death which is so slow in coming!

There the Tartars had buried their prisoner three days before! For three days, Nicholas waited for the help which now came too late! The vultures had caught sight of the head on a level with the ground, and for some hours the dog had been defending his master against these ferocious birds!

Michael dug at the ground with his knife to release his friend! The eyes of Nicholas, which till then had been closed, opened.

He recognized Michael and Nadia. "Farewell, my friends!" he murmured. "I am glad to have seen you again! Pray for me!"

Michael continued to dig, though the ground, having been tightly rammed down, was as hard as stone, and he managed at last to get out the body of the unhappy man. He listened if his heart was still beating... It was still!

He wished to bury him, that he might not be left exposed; and the hole into which Nicholas had been placed when living, was enlarged, so that he might be laid in it--dead! The faithful Serko was laid by his master.

At that moment, a noise was heard on the road, about half a verst distant. Michael Strogoff listened. It was evidently a detachment of horse advancing towards the Dinka. "Nadia, Nadia!" he said in a low voice.

Nadia, who was kneeling in prayer, arose. "Look, look!" said he.

"The Tartars!" she whispered.

"They shall not prevent me from burying him!" said Michael. And he continued his work.

Soon, the body of Nicholas, the hands crossed on the breast, was laid in the grave. Michael and Nadia, kneeling, prayed a last time for the poor fellow, inoffensive and good, who had paid for his devotion towards them with his life.

"And now," said Michael, as he threw in the earth, "the wolves of the steppe will not devour him."

Then he shook his fist at the troop of horsemen who were passing. "Forward, Nadia!" he said.

Michael could not follow the road, now occupied by the Tartars. He must cross the steppe and turn to Irkutsk. He had not now to trouble himself about crossing the Dinka. Nadia could not move, but she could see for him. He took her in his arms and went on towards the southwest of the province.

A hundred and forty miles still remained to be traversed. How was the distance to be performed? Should they not succumb to such fatigue? On what were they to live on the way? By what superhuman energy were they to pass the slopes of the Sayansk Mountains? Neither he nor Nadia could answer this!

And yet, twelve days after, on the 2d of October, at six o'clock in the evening, a wide sheet of water lay at Michael Strogoff's feet. It was Lake Baikal.

CHAPTER X BAikal AND ANGARA

LAKE BAikal is situated seventeen hundred feet above the level of the sea. Its length is about six hundred miles, its breadth seventy. Its depth is not known. Madame de Bourboulon states that, according to the boatmen, it likes to be spoken of as "Madam Sea." If it is called "Sir Lake," it immediately lashes itself into fury. However, it is reported and believed by the Siberians that a Russian is never drowned in it.

This immense basin of fresh water, fed by more than three hundred rivers, is surrounded by magnificent volcanic mountains. It has no other outlet than the Angara, which after passing Irkutsk throws itself into the Yenisei, a little above the town of Yeniseisk. As to the mountains which encase it, they form a branch of the Toungouzes, and are derived from the vast system of the Altai.
In this territory, subject to peculiar climatical conditions, the autumn appears to be absorbed in the precocious winter. It was now the beginning of October. The sun set at five o'clock in the evening, and during the long nights the temperature fell to zero. The first snows, which would last till summer, already whitened the summits of the neighboring hills. During the Siberian winter this inland sea is frozen over to a thickness of several feet, and is crossed by the sleighs of caravans.

Either because there are people who are so wanting in politeness as to call it "Sir Lake," or for some more meteorological reason, Lake Baikal is subject to violent tempests. Its waves, short like those of all inland seas, are much feared by the rafts, prahms, and steamboats, which furrow it during the summer.

It was the southwest point of the lake which Michael had now reached, carrying Nadia, whose whole life, so to speak, was concentrated in her eyes. But what could these two expect, in this wild region, if it was not to die of exhaustion and famine? And yet, what remained of the long journey of four thousand miles for the Czar's courier to reach his end? Nothing but forty miles on the shore of the lake up to the mouth of the Angara, and sixty miles from the mouth of the Angara to Irkutsk; in all, a hundred miles, or three days' journey for a strong man, even on foot.

Could Michael Strogoff still be that man?

Heaven, no doubt, did not wish to put him to this trial. The fatality which had hitherto pursued his steps seemed for a time to spare him. This end of the Baikal, this part of the steppe, which he believed to be a desert, which it usually is, was not so now. About fifty people were collected at the angle formed by the end of the lake.

Nadia immediately caught sight of this group, when Michael, carrying her in his arms, issued from the mountain pass. The girl feared for a moment that it was a Tartar detachment, sent to beat the shores of the Baikal, in which case flight would have been impossible to them both. But Nadia was soon reassured.

"Russians!" she exclaimed. And with this last effort, her eyes closed and her head fell on Michael's breast.

But they had been seen, and some of these Russians, running to them, led the blind man and the girl to a little point at which was moored a raft.

The raft was just going to start. These Russians were fugitives of different conditions, whom the same interest had united at Lake Baikal. Driven back by the Tartar scouts, they hoped to obtain a refuge at Irkutsk, but not being able to get there by land, the invaders having occupied both banks of the Angara, they hoped to reach it by descending the river which flows through the town.

Their plan made Michael's heart leap; a last chance was before him, but he had strength to conceal this, wishing to keep his incognito more strictly than ever.

The fugitives' plan was very simple. A current in the lake runs along by the upper bank to the mouth of the Angara; this current they hoped to utilize, and with its assistance to reach the outlet of Lake Baikal. From this point to Irkutsk, the rapid waters of the river would bear them along at a rate of eight miles an hour. In a day and a half they might hope to be in sight of the town.

No kind of boat was to be found; they had been obliged to make one; a raft, or rather a float of wood, similar to those which usually are drifted down Siberian rivers, was constructed. A forest of firs, growing on the bank, had supplied the necessary materials; the trunks, fastened together with osiers, made a platform on which a hundred people could have easily found room.

On board this raft Michael and Nadia were taken. The girl had returned to herself; some food was given to her as well as to her companion. Then, lying on a bed of leaves, she soon fell into a deep sleep.

To those who questioned him, Michael Strogoff said nothing of what had taken place at Tomsk. He gave himself out as an inhabitant of Krasnoiarsk, who had not been able to get to Irkutsk before the Emir's troops arrived on the left bank of the Dinka, and he added that, very probably, the bulk of the Tartar forces had taken up a position before the Siberian capital.

There was not a moment to be lost; besides, the cold was becoming more and more severe. During the night the temperature fell below zero; ice was already forming on the surface of the Baikal. Although the raft managed to pass easily over the lake, it might not be so easy between the banks of the Angara, should pieces of ice be found to block up its course.

At eight in the evening the moorings were cast off, and the raft drifted in the current along the shore. It was steered by means of long poles, under the management of several muscular moujiks. An old Baikal boatman took command of the raft. He was a man of sixty-five, browned by the sun, and lake breezes. A thick white beard flowed over his chest; a fur cap covered his head; his aspect was grave and austere. His large great-coat, fastened in at the waist, reached down to his heels. This taciturn old fellow was seated in the stern, and issued his commands by gestures. Besides, the chief work consisted in keeping the raft in the current, which ran along the shore, without drifting out into the open.

It has been already said that Russians of all conditions had found a place on the raft. Indeed, to the poor moujiks, the women, old men, and children, were joined two or three pilgrims, surprised on their journey by the invasion; a
few monks, and a priest. The pilgrims carried a staff, a gourd hung at the belt, and they chanted psalms in a plaintive voice: one came from the Ukraine, another from the Yellow sea, and a third from the Finland provinces. This last, who was an aged man, carried at his waist a little padlocked collecting-box, as if it had been hung at a church door. Of all that he collected during his long and fatiguing pilgrimage, nothing was for himself; he did not even possess the key of the box, which would only be opened on his return.

The monks came from the North of the Empire. Three months before they had left the town of Archangel. They had visited the sacred islands near the coast of Carelia, the convent of Solovetsk, the convent of Troitsa, those of Saint Antony and Saint Theodosia, at Kiev, that of Kazan, as well as the church of the Old Believers, and they were now on their way to Irkutsk, wearing the robe, the cowl, and the clothes of serge.

As to the papa, or priest, he was a plain village pastor, one of the six hundred thousand popular pastors which the Russian Empire contains. He was clothed as miserably as the moujiks, not being above them in social position; in fact, laboring like a peasant on his plot of ground; baptis-ing, marrying, burying. He had been able to protect his wife and children from the brutality of the Tartars by sending them away into the Northern provinces. He himself had stayed in his parish up to the last moment; then he was obliged to fly, and, the Irkutsk road being stopped, had come to Lake Baikal.

These priests, grouped in the forward part of the raft, prayed at regular intervals, raising their voices in the silent night, and at the end of each sentence of their prayer, the "Slava Bogu," Glory to God! issued from their lips.

No incident took place during the night. Nadia remained in a sort of stupor, and Michael watched beside her; sleep only overtook him at long intervals, and even then his brain did not rest. At break of day, the raft, delayed by a strong breeze, which counteracted the course of the current, was still forty versts from the mouth of the Angara. It seemed probable that the fugitives could not reach it before three or four o'clock in the evening. This did not trouble them; on the contrary, for they would then descend the river during the night, and the darkness would also favor their entrance into Irkutsk.

The only anxiety exhibited at times by the old boatman was concerning the formation of ice on the surface of the water. The night had been excessively cold; pieces of ice could be seen drifting towards the West. Nothing was to be dreaded from these, since they could not drift into the Angara, having already passed the mouth; but pieces from the Eastern end of the lake might be drawn by the current between the banks of the river; this would cause difficulty, possibly delay, and perhaps even an insurmountable obstacle which would stop the raft.

Michael therefore took immense interest in ascertaining what was the state of the lake, and whether any large number of ice blocks appeared. Nadia being now awake, he questioned her often, and she gave him an account of all that was going on.

Whilst the blocks were thus drifting, curious phenomena were taking place on the surface of the Baikal. Magnificent jets, from springs of boiling water, shot up from some of those artesian wells which Nature has bored in the very bed of the lake. These jets rose to a great height and spread out in vapor, which was illuminated by the solar rays, and almost immediately condensed by the cold. This curious sight would have assuredly amazed a tourist traveling in peaceful times on this Siberian sea.

At four in the evening, the mouth of the Angara was signaled by the old boatman, between the high granite rocks of the shore. On the right bank could be seen the little port of Livenitchnaia, its church, and its few houses built on the bank. But the serious thing was that the ice blocks from the East were already drifting between the banks of the Angara, and consequently were descending towards Irkutsk. However, their number was not yet great enough to obstruct the course of the raft, nor the cold great enough to increase their number.

The raft arrived at the little port and there stopped. The old boatman wished to put into harbor for an hour, in order to make some repairs. The trunks threatened to separate, and it was important to fasten them more securely together to resist the rapid current of the Angara.

The old boatman did not expect to receive any fresh fugitives at Livenitchnaia, and yet, the moment the raft touched, two passengers, issuing from a deserted house, ran as fast as they could towards the beach.

Nadia seated on the raft, was abstractedly gazing at the shore. A cry was about to escape her. She seized Michael's hand, who at that moment raised his head.

"What is the matter, Nadia?" he asked.
"Our two traveling companions, Michael."
"The Frenchman and the Englishman whom we met in the defiles of the Ural?"
"Yes."

Michael started, for the strict incognito which he wished to keep ran a risk of being betrayed. Indeed, it was no longer as Nicholas Korpanoff that Jolivet and Blount would now see him, but as the true Michael Strogoff, Courier of the Czar. The two correspondents had already met him twice since their separation at the Ichim post-house—the first time at the Zabedierio camp, when he laid open Ivan Ogareff's face with the knout; the second time at Tomsk,
when he was condemned by the Emir. They therefore knew who he was and what depended on him.

Michael Strogoff rapidly made up his mind. "Nadia," said he, "when they step on board, ask them to come to me!"

It was, in fact, Blount and Jolivet, whom the course of events had brought to the port of Livenitchnaia, as it had brought Michael Strogoff. As we know, after having been present at the entry of the Tartars into Tomsk, they had departed before the savage execution which terminated the fete. They had therefore never suspected that their former traveling companion had not been put to death, but blinded by order of the Emir.

Having procured horses they had left Tomsk the same evening, with the fixed determination of henceforward dating their letters from the Russian camp of Eastern Siberia. They proceeded by forced marches towards Irkutsk. They hoped to distance Feofar-Khan, and would certainly have done so, had it not been for the unexpected apparition of the third column, come from the South, up the valley of the Yenisei. They had been cut off, as had been Michael, before being able even to reach the Dinka, and had been obliged to go back to Lake Baikal.

They had been in the place for three days in much perplexity, when the raft arrived. The fugitives' plan was explained to them. There was certainly a chance that they might be able to pass under cover of the night, and penetrate into Irkutsk. They resolved to make the attempt.

Alcide directly communicated with the old boatman, and asked a passage for himself and his companion, offering to pay anything he demanded, whatever it might be.

"No one pays here," replied the old man gravely; "every one risks his life, that is all!"

The two correspondents came on board, and Nadia saw them take their places in the forepart of the raft. Harry Blount was still the reserved Englishman, who had scarcely addressed a word to her during the whole passage over the Ural Mountains. Alcide Jolivet seemed to be rather more grave than usual, and it may be acknowledged that his gravity was justified by the circumstances.

Jolivet had, as has been said, taken his seat on the raft, when he felt a hand laid on his arm. Turning, he recognized Nadia, the sister of the man who was no longer Nicholas Korpanoff, but Michael Strogoff, Courier of the Czar. He was about to make an exclamation of surprise when he saw the young girl lay her finger on her lips.

"Come," said Nadia. And with a careless air, Alcide rose and followed her, making a sign to Blount to accompany him.

But if the surprise of the correspondents had been great at meeting Nadia on the raft it was boundless when they perceived Michael Strogoff, whom they had believed to be no longer living.

Michael had not moved at their approach. Jolivet turned towards the girl. "He does not see you, gentlemen," said Nadia. "The Tartars have burnt out his eyes! My poor brother is blind!"

A feeling of lively compassion exhibited itself on the faces of Blount and his companion. In a moment they were seated beside Michael, pressing his hand and waiting until he spoke to them.

"Gentlemen," said Michael, in a low voice, "you ought not to know who I am, nor what I am come to do in Siberia. I ask you to keep my secret. Will you promise me to do so?"

"On my honor," answered Jolivet.

"On my word as a gentleman," added Blount.

"Good, gentlemen."

"Can we be of any use to you?" asked Harry Blount. "Could we not help you to accomplish your task?"

"I prefer to act alone," replied Michael.

"But those blackguards have destroyed your sight," said Alcide.

"I have Nadia, and her eyes are enough for me!"

In half an hour the raft left the little port of Livenitchnaia, and entered the river. It was five in the evening and getting dusk. The night promised to be dark and very cold also, for the temperature was already below zero.

Alcide and Blount, though they had promised to keep Michael's secret, did not leave him. They talked in a low voice, and the blind man, adding what they told him to what he already knew, was able to form an exact idea of the state of things. It was certain that the Tartars had actually invested Irkutsk, and that the three columns had effected a junction. There was no doubt that the Emir and Ivan Ogareff were before the capital.

But why did the Czar's courier exhibit such haste to get there, now that the Imperial letter could no longer be given by him to the Grand Duke, and when he did not even know the contents of it? Alcide Jolivet and Blount could not understand it any more than Nadia had done.

No one spoke of the past, except when Jolivet thought it his duty to say to Michael, "We owe you some apology for not shaking hands with you when we separated at Ichim."

"No, you had reason to think me a coward!"

"At any rate," added the Frenchman, "you knouted the face of that villain finely, and he will carry the mark of it for a long time!"
"No, not a long time!" replied Michael quietly.

Half an hour after leaving Livenitchnaia, Blount and his companion were acquainted with the cruel trials through which Michael and his companion had successively passed. They could not but heartily admire his energy, which was only equaled by the young girl's devotion. Their opinion of Michael was exactly what the Czar had expressed at Moscow: "Indeed, this is a Man!"

The raft swiftly threaded its way among the blocks of ice which were carried along in the current of the Angara. A moving panorama was displayed on both sides of the river, and, by an optical illusion, it appeared as if it was the raft which was motionless before a succession of picturesque scenes. Here were high granite cliffs, there wild gorges, down which rushed a torrent; sometimes appeared a clearing with a still smoking village, then thick pine forests blazing. But though the Tartars had left their traces on all sides, they themselves were not to be seen as yet, for they were more especially massed at the approaches to Irkutsk.

All this time the pilgrims were repeating their prayers aloud, and the old boatman, shoving away the blocks of ice which pressed too near them, imperturbably steered the raft in the middle of the rapid current of the Angara.

CHAPTER XI BETWEEN TWO BANKS

By eight in the evening, the country, as the state of the sky had foretold, was enveloped in complete darkness. The moon being new had not yet risen. From the middle of the river the banks were invisible. The cliffs were confounded with the heavy, low-hanging clouds. At intervals a puff of wind came from the east, but it soon died away in the narrow valley of the Angara.

The darkness could not fail to favor in a considerable degree the plans of the fugitives. Indeed, although the Tartar outposts must have been drawn up on both banks, the raft had a good chance of passing unperceived. It was not likely either that the besiegers would have barred the river above Irkutsk, since they knew that the Russians could not expect any help from the south of the province. Besides this, before long Nature would herself establish a barrier, by cementing with frost the blocks of ice accumulated between the two banks.

Perfect silence now reigned on board the raft. The voices of the pilgrims were no longer heard. They still prayed, but their prayer was but a murmur, which could not reach as far as either bank. The fugitives lay flat on the platform, so that the raft was scarcely above the level of the water. The old boatman crouched down forward among his men, solely occupied in keeping off the ice blocks, a maneuver which was performed without noise.

The drifting of the ice was a favorable circumstance so long as it did not offer an insurmountable obstacle to the passage of the raft. If that object had been alone on the water, it would have run a risk of being seen, even in the darkness, but, as it was, it was confounded with these moving masses, of all shapes and sizes, and the tumult caused by the crashing of the blocks against each other concealed likewise any suspicious noises.

There was a sharp frost. The fugitives suffered cruelly, having no other shelter than a few branches of birch. They cowered down together, endeavoring to keep each other warm, the temperature being now ten degrees below freezing point. The wind, though slight, having passed over the snow-clad mountains of the east, pierced them through and through.

Michael and Nadia, lying in the afterpart of the raft, bore this increase of suffering without complaint. Jolivet and Blount, placed near them, stood these first assaults of the Siberian winter as well as they could. No one now spoke, even in a low voice. Their situation entirely absorbed them. At any moment an incident might occur, which they could not escape unscathed.

For a man who hoped soon to accomplish his mission, Michael was singularly calm. Even in the gravest conjunctures, his energy had never abandoned him. He already saw the moment when he would be at last allowed to think of his mother, of Nadia, of himself! He now only dreaded one final unhappy chance; this was, that the raft might be completely barred by ice before reaching Irkutsk. He thought but of this, determined beforehand, if necessary, to attempt some bold stroke.

Restored by a few hours' rest, Nadia had regained the physical energy which misery had sometimes overcome, although without ever having shaken her moral energy. She thought, too, that if Michael had to make any fresh effort to attain his end, she must be there to guide him. But in proportion as she drew nearer to Irkutsk, the image of her father rose more and more clearly before her mind. She saw him in the invested town, far from those he loved, but, as she never doubted, struggling against the invaders with all the spirit of his patriotism. In a few hours, if Heaven favored them, she would be in his arms, giving him her mother's last words, and nothing should ever separate them again. If the term of Wassili Fedor's exile should never come to an end, his daughter would remain exiled with him. Then, by a natural transition, she came back to him who would have enabled her to see her father once more, to that generous companion, that "brother," who, the Tartars driven back, would retake the road to Moscow, whom she would perhaps never meet again!
As to Alcide Jolivet and Harry Blount, they had one and the same thought, which was, that the situation was extremely dramatic, and that, well worked up, it would furnish a most deeply interesting article. The Englishman thought of the readers of the Daily Telegraph, and the Frenchman of those of his Cousin Madeleine. At heart, both were not without feeling some emotion.

"Well, so much the better!" thought Alcide Jolivet, "to move others, one must be moved one's self! I believe there is some celebrated verse on the subject, but hang me if I can recollect it!" And with his well-practiced eyes he endeavored to pierce the gloom of the river.

Every now and then a burst of light dispelling the darkness for a time, exhibited the banks under some fantastic aspect--either a forest on fire, or a still burning village. The Angara was occasionally illuminated from one bank to the other. The blocks of ice formed so many mirrors, which, reflecting the flames on every point and in every color, were whirled along by the caprice of the current. The raft passed unperceived in the midst of these floating masses.

The danger was not at these points.

But a peril of another nature menaced the fugitives. One that they could not foresee, and, above all, one that they could not avoid. Chance discovered it to Alcide Jolivet in this way:--Lying at the right side of the raft, he let his hand hang over into the water. Suddenly he was surprised by the impression made on it by the current. It seemed to be of a slimy consistency, as if it had been made of mineral oil. Alcide, aiding his touch by his sense of smell, could not be mistaken. It was really a layer of liquid naphtha, floating on the surface of the river!

Was the raft really floating on this substance, which is in the highest degree combustible? Where had this naphtha come from? Was it a natural phenomenon taking place on the surface of the Angara, or was it to serve as an engine of destruction, put in motion by the Tartars? Did they intend to carry conflagration into Irkutsk?

Such were the questions which Alcide asked himself, but he thought it best to make this incident known only to Harry Blount, and they both agreed in not alarming their companions by revealing to them this new danger.

It is known that the soil of Central Asia is like a sponge impregnated with liquid hydrogen. At the port of Bakou, on the Persian frontier, on the Caspian Sea, in Asia Minor, in China, on the Yuen-Kiang, in the Burman Empire, springs of mineral oil rise in thousands to the surface of the ground. It is an "oil country," similar to the one which bears this name in North America.

During certain religious festivals, principally at the port of Bakou, the natives, who are fire-worshipers, throw liquid naphtha on the surface of the sea, which buoyed it up, its density being inferior to that of water. Then at nightfall, a layer of mineral oil is thus spread over the Caspian, they light it, and exhibit the matchless spectacle of an ocean of fire undulating and breaking into waves under the breeze.

But what is only a sign of rejoicing at Bakou, might prove a fearful disaster on the waters of the Angara. Whether it was set on fire by malevolence or imprudence, in the twinkling of an eye a conflagration might spread beyond Irkutsk. On board the raft no imprudence was to be feared; but everything was to be dreaded from the conflagrations on both banks of the Angara, for should a lighted straw or even a spark blow into the water, it would inevitably set the whole current of naphtha in a blaze.

The apprehensions of Jolivet and Blount may be better understood than described. Would it not be prudent, in face of this new danger, to land on one of the banks and wait there? "At any rate," said Alcide, "whatever the danger may be, I know some one who will not land!"

He alluded to Michael Strogoff.

In the meantime, on glided the raft among the masses of ice which were gradually getting closer and closer together. Up till then, no Tartar detachment had been seen, which showed that the raft was not abreast of the outposts. At about ten o'clock, however, Harry Blount caught sight of a number of black objects moving on the ice blocks. Springing from one to the other, they rapidly approached.

"Tartars!" he thought. And creeping up to the old boatman, he pointed out to him the suspicious objects.

The old man looked attentively. "They are only wolves!" said he. "I like them better than Tartars. But we must defend ourselves, and without noise!"

The fugitives would indeed have to defend themselves against these ferocious beasts, whom hunger and cold had sent roaming through the province. They had smelt out the raft, and would soon attack it. The fugitives must struggle without using firearms, for they could not now be far from the Tartar posts. The women and children were collected in the middle of the raft, and the men, some armed with poles, others with their knives, stood prepared to repulse their assailants. They did not make a sound, but the howls of the wolves filled the air.

Michael did not wish to remain inactive. He lay down at the side attacked by the savage pack. He drew his knife, and every time that a wolf passed within his reach, his hand found out the way to plunge his weapon into its throat. Neither were Jolivet and Blount idle, but fought bravely with the brutes. Their companions gallantly seconded them. The battle was carried on in silence, although many of the fugitives received severe bites.

The struggle did not appear as if it would soon terminate. The pack was being continually reinforced from the
right bank of the Angara. "This will never be finished!" said Alcide, brandishing his dagger, red with blood.

In fact, half an hour after the commencement of the attack, the wolves were still coming in hundreds across the ice. The exhausted fugitives were getting weaker. The fight was going against them. At that moment, a group of ten huge wolves, raging with hunger, their eyes glowing in the darkness like red coals, sprang onto the raft. Jolivet and his companion threw themselves into the midst of the fierce beasts, and Michael was finding his way towards them, when a sudden change took place.

In a few moments the wolves had deserted not only the raft, but also the ice on the river. All the black bodies dispersed, and it was soon certain that they had in all haste regained the shore. Wolves, like other beasts of prey, require darkness for their proceedings, and at that moment a bright light illuminated the entire river.

It was the blaze of an immense fire. The whole of the small town of Poshkavsk was burning. The Tartars were indeed there, finishing their work. From this point, they occupied both banks beyond Irkutsk. The fugitives had by this time reached the dangerous part of their voyage, and they were still twenty miles from the capital.

It was now half past eleven. The raft continued to glide on amongst the ice, with which it was quite mingled, but gleams of light sometimes fell upon it. The fugitives stretched on the platform did not permit themselves to make a movement by which they might be betrayed.

The conflagration was going on with frightful rapidity. The houses, built of fir-wood, blazed like torches—a hundred and fifty flaming at once. With the crackling of the fire was mingled the yells of the Tartars. The old boatman, getting a foothold on a near piece of ice, managed to shove the raft towards the right bank, by doing which a distance of from three to four hundred feet divided it from the flames of Poshkavsk.

Nevertheless, the fugitives, lighted every now and then by the glare, would have been undoubtedly perceived had not the incendiaries been too much occupied in their work of destruction.

It may be imagined what were the apprehensions of Jolivet and Blount, when they thought of the combustible liquid on which the raft floated. Sparks flew in millions from the houses, which resembled so many glowing furnaces. They rose among the volumes of smoke to a height of five or six hundred feet. On the right bank, the trees and cliffs exposed to the fire looked as if they likewise were burning. A spark falling on the surface of the Angara would be sufficient to spread the flames along the current, and to carry disaster from one bank to the other. The result of this would be in a short time the destruction of the raft and of all those which it carried.

But, happily, the breeze did not blow from that side. It came from the east, and drove the flames towards the left. It was just possible that the fugitives would escape this danger. The blazing town was at last passed. Little by little the glare grew dimmer, the crackling became fainter, and the flames at last disappeared behind the high cliffs which arose at an abrupt turn of the river.

By this time it was nearly midnight. The deep gloom again threw its protecting shadows over the raft. The Tartars were there, going to and fro near the river. They could not be seen, but they could be heard. The fires of the outposts burned brightly.

In the meantime it had become necessary to steer more carefully among the blocks of ice. The old boatman stood up, and the mouchiks resumed their poles. They had plenty of work, the management of the raft becoming more and more difficult as the river was further obstructed.

Michael had crept forward; Jolivet followed; both listened to what the old boatman and his men were saying.
"Look out on the right!"
"There are blocks drifting on to us on the left!"
"Fend! fend off with your boat-hook!"
"Before an hour is past we shall be stopped!"
"If it is God's will!" answered the old man. "Against His will there is nothing to be done."
"You hear them," said Alcide.
"Yes," replied Michael, "but God is with us!"

The situation became more and more serious. Should the raft be stopped, not only would the fugitives not reach Irkutsk, but they would be obliged to leave their floating platform, for it would be very soon smashed to pieces in the ice. The osier ropes would break, the fir trunks torn asunder would drift under the hard crust, and the unhappy people would have no refuge but the ice blocks themselves. Then, when day came, they would be seen by the Tartars, and massacred without mercy!

Michael returned to the spot where Nadia was waiting for him. He approached the girl, took her hand, and put to her the invariable question: "Nadia, are you ready?" to which she replied as usual, "I am ready!"

For a few versts more the raft continued to drift amongst the floating ice. Should the river narrow, it would soon form an impassable barrier. Already they seemed to drift slower. Every moment they encountered severe shocks or were compelled to make detours; now, to avoid running foul of a block, there to enter a channel, of which it was necessary to take advantage. At length the stoppages became still more alarming. There were only a few more hours
of night. Could the fugitives not reach Irkutsk by five o'clock in the morning, they must lose all hope of ever getting there at all.

At half-past one, notwithstanding all efforts, the raft came up against a thick barrier and stuck fast. The ice, which was drifting down behind it, pressed it still closer, and kept it motionless, as though it had been stranded.

At this spot the Angara narrowed, it being half its usual breadth. This was the cause of the accumulation of ice, which became gradually soldered together, under the double influence of the increased pressure and of the cold. Five hundred feet beyond, the river widened again, and the blocks, gradually detaching themselves from the floe, continued to drift towards Irkutsk. It was probable that had the banks not narrowed, the barrier would not have formed. But the misfortune was irreparable, and the fugitives must give up all hope of attaining their object.

Had they possessed the tools usually employed by whalers to cut channels through the ice-fields—had they been able to get through to where the river widened—they might have been saved. But they had nothing which could make the least incision in the ice, hard as granite in the excessive frost. What were they to do?

At that moment several shots on the right bank startled the unhappy fugitives. A shower of balls fell on the raft. The devoted passengers had been seen. Immediately afterwards shots were heard fired from the left bank. The fugitives, taken between two fires, became the mark of the Tartar sharpshooters. Several were wounded, although in the darkness it was only by chance that they were hit.

"Come, Nadia," whispered Michael in the girl's ear.

Without making a single remark, "ready for anything," Nadia took Michael's hand.

"We must cross the barrier," he said in a low tone. "Guide me, but let no one see us leave the raft."

Nadia obeyed. Michael and she glided rapidly over the floe in the obscurity, only broken now and again by the flashes from the muskets. Nadia crept along in front of Michael. The shot fell around them like a tempest of hail, and pattered on the ice. Their hands were soon covered with blood from the sharp and rugged ice over which they clambered, but still on they went.

In ten minutes, the other side of the barrier was reached. There the waters of the Angara again flowed freely. Several pieces of ice, detached gradually from the floe, were swept along in the current down towards the town. Nadia guessed what Michael wished to attempt. One of the blocks was only held on by a narrow strip.

"Come," said Nadia. And the two crouched on the piece of ice, which their weight detached from the floe.

It began to drift. The river widened, the way was open. Michael and Nadia heard the shots, the cries of distress, the yells of the Tartars. Then, little by little, the sounds of agony and of ferocious joy grew faint in the distance.

"Our poor companions!" murmured Nadia.

For half an hour the current hurried along the block of ice which bore Michael and Nadia. They feared every moment that it would give way beneath them. Swept along in the middle of the current, it was unnecessary to give it an oblique direction until they drew near the quays of Irkutsk. Michael, his teeth tight set, his ear on the strain, did not utter a word. Never had he been so near his object. He felt that he was about to attain it!

Towards two in the morning a double row of lights glittered on the dark horizon in which were confounded the two banks of the Angara. On the right hand were the lights of Irkutsk; on the left, the fires of the Tartar camp.

Michael Strogoff was not more than half a verst from the town. "At last!" he murmured.

But suddenly Nadia uttered a cry.

At the cry Michael stood up on the ice, which was wavering. His hand was extended up the Angara. His face, on which a bluish light cast a peculiar hue, became almost fearful to look at, and then, as if his eyes had been opened to the bright blaze spreading across the river, "Ah!" he exclaimed, "then Heaven itself is against us!"

CHAPTER XII IRKUTSK

IRKUTSK, the capital of Eastern Siberia, is a populous town, containing, in ordinary times, thirty thousand inhabitants. On the right side of the Angara rises a hill, on which are built numerous churches, a lofty cathedral, and dwellings disposed in picturesque disorder.

Seen at a distance, from the top of the mountain which rises at about twenty versts off along the Siberian highroad, this town, with its cupolas, its bell-towers, its steeples slender as minarets, its domes like pot-bellied Chinese jars, presents something of an oriental aspect. But this similarity vanishes as the traveler enters.

The town, half Byzantine, half Chinese, becomes European as soon as he sees its macadamized roads, bordered with pavements, traversed by canals, planted with gigantic birches, its houses of brick and wood, some of which have several stories, the numerous equipages which drive along, not only tarantasses but broughams and coaches; lastly, its numerous inhabitants far advanced in civilization, to whom the latest Paris fashions are not unknown.

Being the refuge for all the Siberians of the province, Irkutsk was at this time very full. Stores of every kind had been collected in abundance. Irkutsk is the emporium of the innumerable kinds of merchandise which are exchanged
between China, Central Asia, and Europe. The authorities had therefore no fear with regard to admitting the peasants of the valley of the Angara, and leaving a desert between the invaders and the town.

Irkutsk is the residence of the governor-general of Eastern Siberia. Below him acts a civil governor, in whose hands is the administration of the province; a head of police, who has much to do in a town where exiles abound; and, lastly, a mayor, chief of the merchants, and a person of some importance, from his immense fortune and the influence which he exercises over the people.

The garrison of Irkutsk was at that time composed of an infantry regiment of Cossacks, consisting of two thousand men, and a body of police wearing helmets and blue uniforms laced with silver. Besides, as has been said, in consequence of the events which had occurred, the brother of the Czar had been shut up in the town since the beginning of the invasion.

A journey of political importance had taken the Grand Duke to these distant provinces of Central Asia. After passing through the principal Siberian cities, the Grand Duke, who traveled en militaire rather than en prince, without any parade, accompanied by his officers, and escorted by a regiment of Cossacks, arrived in the Trans-Baikalkine provinces. Nikolaevsk, the last Russian town situated on the shore of the Sea of Okhotsk, had been honored by a visit from him. Arrived on the confines of the immense Muscovite Empire, the Grand Duke was returning towards Irkutsk, from which place he intended to retake the road to Moscow, when, sudden as a thunder clap, came the news of the invasion.

He hastened to the capital, but only reached it just before communication with Russia had been interrupted. There was time to receive only a few telegrams from St. Petersburg and Moscow, and with difficulty to answer them before the wire was cut. Irkutsk was isolated from the rest of the world.

The Grand Duke had now only to prepare for resistance, and this he did with that determination and coolness of which, under other circumstances, he had given incontestable proofs. The news of the taking of Ichim, Omsk, and Tomsk, successively reached Irkutsk. It was necessary at any price to save the capital of Siberia. Reinforcements could not be expected for some time. The few troops scattered about in the provinces of Siberia could not arrive in sufficiently large numbers to arrest the progress of the Tartar columns. Since therefore it was impossible for Irkutsk to escape attack, the most important thing to be done was to put the town in a state to sustain a siege of some duration.

The preparations were begun on the day Tomsk fell into the hands of the Tartars. At the same time with this last news, the Grand Duke heard that the Emir of Bokhara and the allied Khans were directing the invasion in person, but what he did not know was, that the lieutenant of these barbarous chiefs was Ivan Ogareff, a Russian officer whom he had himself reduced to the ranks, but with whose person he was not acquainted.

First of all, as we have seen, the inhabitants of the province of Irkutsk were compelled to abandon the towns and villages. Those who did not take refuge in the capital had to retire beyond Lake Baikal, a district to which the invasion would probably not extend its ravages. The harvests of corn and fodder were collected and stored up in the town, and Irkutsk, the last bulwark of the Muscovite power in the Far East, was put in a condition to resist the enemy for a lengthened period.

Irkutsk, founded in 1611, is situated at the confluence of the Irkut and the Angara, on the right bank of the latter river. Two wooden draw-bridges, built on piles, connected the town with its suburbs on the left bank. On this side, defence was easy. The suburbs were abandoned, the bridges destroyed. The Angara being here very wide, it would not be possible to pass it under the fire of the besieged.

But the river might be crossed both above and below the town, and consequently, Irkutsk ran a risk of being attacked on its east side, on which there was no wall to protect it.

The whole population were immediately set to work on the fortifications. They labored day and night. The Grand Duke observed with satisfaction the zeal exhibited by the people in the work, whom ere long he would find equally courageous in the defense. Soldiers, merchants, exiles, peasants, all devoted themselves to the common safety. A week before the Tartars appeared on the Angara, earth-works had been raised. A fosse, flooded by the waters of the Angara, was dug between the scarp and counterscarp. The town could not now be taken by a coup de main. It must be invested and besieged.

The third Tartar column--the one which came up the valley of the Yenisei on the 24th of September--appeared in sight of Irkutsk. It immediately occupied the deserted suburbs, every building in which had been destroyed so as not to impede the fire of the Grand Duke's guns, unfortunately but few in number and of small caliber. The Tartar troops as they arrived organized a camp on the bank of the Angara, whilst waiting the arrival of the two other columns, commanded by the Emir and his allies.

The junction of these different bodies was effected on the 25th of September, in the Angara camp, and the whole of the invading army, except the garrisons left in the principal conquered towns, was concentrated under the command of Feofar-Khan.
The passage of the Angara in front of Irkutsk having been regarded by Ogareff as impracticable, a strong body of troops crossed, several versts up the river, by means of bridges formed with boats. The Grand Duke did not attempt to oppose the enemy in their passage. He could only impede, not prevent it, having no field-artillery at his disposal, and he therefore remained in Irkutsk.

The Tartars now occupied the right bank of the river; then, advancing towards the town, they burnt, in passing, the summer-house of the governor-general, and at last having entirely invested Irkutsk, took up their positions for the siege.

Ivan Ogareff, who was a clever engineer, was perfectly competent to direct a regular siege; but he did not possess the materials for operating rapidly. He was disappointed too in the chief object of all his efforts—the surprise of Irkutsk. Things had not turned out as he hoped. First, the march of the Tartar army was delayed by the battle of Tomsk; and secondly, the preparations for the defense were made far more rapidly than he had supposed possible; these two things had balked his plans. He was now under the necessity of instituting a regular siege of the town.

However, by his suggestion, the Emir twice attempted the capture of the place, at the cost of a large sacrifice of men. He threw soldiers on the earth-works which presented any weak point; but these two assaults were repulsed with the greatest courage. The Grand Duke and his officers did not spare themselves on this occasion. They appeared in person; they led the civil population to the ramparts. Citizens and peasants both did their duty.

At the second attack, the Tartars managed to force one of the gates. A fight took place at the head of Bolchaia Street, two versts long, on the banks of the Angara. But the Cossacks, the police, the citizens, united in so fierce a resistance that the Tartars were driven out.

Ivan Ogareff then thought of obtaining by stratagem what he could not gain by force. We have said that his plan was to penetrate into the town, make his way to the Grand Duke, gain his confidence, and, when the time came, give up the gates to the besiegers; and, that done, wreak his vengeance on the brother of the Czar. The Tsigane Sangarre, who had accompanied him to the Angara, urged him to put this plan in execution.

Indeed, it was necessary to act without delay. The Russian troops from the government of Yakutsk were advancing towards Irkutsk. They had concentrated along the upper course of the Lena. In six days they would arrive. Therefore, before six days had passed, Irkutsk must be betrayed. Ogareff hesitated no longer.

One evening, the 2d of October, a council of war was held in the grand saloon of the palace of the governor-general. This palace, standing at the end of Bolchaia Street, overlooked the river. From its windows could be seen the camp of the Tartars, and the invaders possessed guns of wider range, they would have rendered the palace uninhabitable.

The Grand Duke, General Voranzoff, the governor of the town, and the chief of the merchants, with several officers, had collected to determine upon various proposals.

"Gentlemen," said the Grand Duke, "you know our situation exactly. I have the firm hope that we shall be able to hold out until the arrival of the Yakutsk troops. We shall then be able to drive off these barbarian hordes, and it will not be my fault if they do not pay dearly for this invasion of the Muscovite territory."

"Your Highness knows that all the population of Irkutsk may be relied on," said General Voranzoff.

"Yes, general," replied the Grand Duke, "and I do justice to their patriotism. Thanks to God, they have not yet been subjected to the horrors of epidemic and famine, and I have reason to hope that they will escape them; but I cannot admire their courage on the ramparts enough. You hear my words, Sir Merchant, and I beg you to repeat such to them."

"I thank your Highness in the name of the town," answered the merchant chief. "May I ask you what is the most distant date when we may expect the relieving army?"

"Six days at most, sir," replied the Grand Duke. "A brave and clever messenger managed this morning to get into the town, and he told me that fifty thousand Russians under General Kisselef, are advancing by forced marches. Two days ago, they were on the banks of the Lena, at Kirensk, and now, neither frost nor snow will keep them back. Fifty thousand good men, taking the Tartars on the flank, will soon set us free."

"I will add," said the chief of the merchants, "that we shall be ready to execute your orders, any day that your Highness may command a sortie."

"Good, sir," replied the Grand Duke. "Wait till the heads of the relieving columns appear on the heights, and we will speedily crush these invaders."

Then turning to General Voranzoff, "To-morrow," said he, "we will visit the works on the right bank. Ice is drifting down the Angara, which will not be long in freezing, and in that case the Tartars might perhaps cross."

"Will your Highness allow me to make an observation?" said the chief of the merchants.

"Do so, sir."

"I have more than once seen the temperature fall to thirty and forty degrees below zero, and the Angara has still carried down drifting ice without entirely freezing. This is no doubt owing to the swiftness of its current. If therefore
the Tartars have no other means of crossing the river, I can assure your Highness that they will not enter Irkutsk in that way."

The governor-general confirmed this assertion.

"It is a fortunate circumstance," responded the Grand Duke. "Nevertheless, we must hold ourselves ready for any emergency."

He then, turning towards the head of the police, asked, "Have you nothing to say to me, sir?"

"I have your Highness," answered the head of police, "a petition which is addressed to you through me."

"Addressed by whom?"

"By the Siberian exiles, whom, as your Highness knows, are in the town to the number of five hundred."

The political exiles, distributed over the province, had been collected in Irkutsk, from the beginning of the invasion. They had obeyed the order to rally in the town, and leave the villages where they exercised their different professions, some doctors, some professors, either at the Gymnasium, or at the Japanese School, or at the School of Navigation. The Grand Duke, trusting like the Czar in their patriotism, had armed them, and they had thoroughly proved their bravery.

"What do the exiles ask?" said the Grand Duke.

"They ask the consent of your Highness," answered the head of police, "to their forming a special corps and being placed in the front of the first sortie."

"Yes," replied the Grand Duke with an emotion which he did not seek to hide, "these exiles are Russians, and it is their right to fight for their country!"

"I believe I may assure your Highness," said the governor-general, "you will have no better soldiers."

"But they must have a chief," said the Grand Duke, "who will he be?"

"They wish to recommend to your Highness," said the head of police, "one of their number, who has distinguished himself on several occasions."

"Is he a Russian?"

"Yes, a Russian from the Baltic provinces."

"His name?"

"Is Wassili Fedor."

This exile was Nadia's father. Wassili Fedor, as we have already said, followed his profession of a medical man in Irkutsk. He was clever and charitable, and also possessed the greatest courage and most sincere patriotism. All the time which he did not devote to the sick he employed in organizing the defense. It was he who had united his companions in exile in the common cause. The exiles, till then mingled with the population, had behaved in such a way as to draw on themselves the attention of the Grand Duke. In several sorties, they had paid with their blood their debt to holy Russia--holy as they believe, and adored by her children! Wassili Fedor had behaved heroically; his name had been mentioned several times, but he never asked either thanks or favors, and when the exiles of Irkutsk thought of forming themselves into a special corps, he was ignorant of their intention of choosing him for their captain.

When the head of police mentioned this name, the Grand Duke answered that it was not unknown to him.

"Indeed," remarked General Voranzoff, "Wassili Fedor is a man of worth and courage. His influence over his companions has always been very great."

"How long has he been at Irkutsk?" asked the Duke.

"For two years."

"And his conduct?"

"His conduct," answered the head of police, "is that of a man obedient to the special laws which govern him."

"General," said the Grand Duke, "General, be good enough to present him to me immediately."

The orders of the Grand Duke were obeyed, and before half an hour had passed, Fedor was introduced into his presence. He was a man over forty, tall, of a stern and sad countenance. One felt that his whole life was summed up in a single word--strife--he had striven and suffered. His features bore a marked resemblance to those of his daughter, Nadia Fedor.

This Tartar invasion had severely wounded him in his tenderest affections, and ruined the hope of the father, exiled eight thousand versts from his native town. A letter had apprised him of the death of his wife, and at the same time of the departure of his daughter, who had obtained from the government an authorization to join him at Irkutsk. Nadia must have left Riga on the 10th of July. The invasion had begun on the 15th of July; if at that time Nadia had passed the frontier, what could have become of her in the midst of the invaders? The anxiety of the unhappy father may be supposed when, from that time, he had no further news of his daughter.

Wassili Fedor entered the presence of the Grand Duke, bowed, and waited to be questioned.

"Wassili Fedor," said the Grand Duke, "your companions in exile have asked to be allowed to form a select
"They are not ignorant that in this corps they must make up their minds to be killed to the last man?"
"They are not ignorant of it," replied Fedor.
"They wish to have you for their captain."
"I, your Highness?"
"Do you consent to be placed at their head?"
"Yes, if it is for the good of Russia."
"Captain Fedor," said the Grand Duke, "you are no longer an exile."
"Thanks, your Highness, but can I command those who are so still?"
"They are so no longer!" The brother of the Czar had granted a pardon to all Fedor's companions in exile, now his companions in arms!

Wassili Fedor wrung, with emotion, the hand which the Grand Duke held out to him, and retired.
The latter, turned to his officers, "The Czar will not refuse to ratify that pardon," said he, smiling; "we need heroes to defend the capital of Siberia, and I have just made some."

This pardon, so generously accorded to the exiles of Irkutsk, was indeed an act of real justice and sound policy.

It was now night. Through the windows of the palace burned the fires of the Tartar camp, flickering beyond the Angara. Down the river drifted numerous blocks of ice, some of which stuck on the piles of the old bridges; others were swept along by the current with great rapidity. It was evident, as the merchant had observed, that it would be very difficult for the Angara to freeze all over. The defenders of Irkutsk had not to dread being attacked on that side. Ten o'clock had just struck. The Grand Duke was about to dismiss his officers and retire to his apartments, when a tumult was heard outside the palace.

Almost immediately the door was thrown open, an aide-de-camp appeared, and advanced rapidly towards the Grand Duke.
"Your Highness," said he, "a courier from the Czar!"

CHAPTER XIII THE CZAR'S COURIER

ALL the members of the council simultaneously started forward. A courier from the Czar arrived in Irkutsk! Had these officers for a moment considered the improbability of this fact, they would certainly not have credited what they heard.

The Grand Duke advanced quickly to his aide-de-camp. "This courier!" he exclaimed.

A man entered. He appeared exhausted with fatigue. He wore the dress of a Siberian peasant, worn into tatters, and exhibiting several shot-holes. A Muscovite cap was on his head. His face was disfigured by a recently-healed scar. The man had evidently had a long and painful journey; his shoes being in a state which showed that he had been obliged to make part of it on foot.

"His Highness the Grand Duke?" he asked.

The Grand Duke went up to him. "You are a courier from the Czar?" he asked.
"Yes, your Highness."
"You come?"
"From Moscow."
"You left Moscow?"
"On the 15th of July."
"Your name?"
"Michael Strogoff."

It was Ivan Ogareff. He had taken the designation of the man whom he believed that he had rendered powerless. Neither the Grand Duke nor anyone knew him in Irkutsk, and he had not even to disguise his features. As he was in a position to prove his pretended identity, no one could have any reason for doubting him. He came, therefore, sustained by his iron will, to hasten by treason and assassination the great object of the invasion.

After Ogareff had replied, the Grand Duke signed to all his officers to withdraw. He and the false Michael Strogoff remained alone in the saloon.

The Grand Duke looked at Ivan Ogareff for some moments with extreme attention. Then he said, "On the 15th of July you were at Moscow?"
"Yes, your Highness; and on the night of the 14th I saw His Majesty the Czar at the New Palace."
"Have you a letter from the Czar?"
"Here it is."

And Ivan Ogareff handed to the Grand Duke the Imperial letter, crumpled to almost microscopic size.
"Was the letter given you in this state?"
"No, your Highness, but I was obliged to tear the envelope, the better to hide it from the Emir's soldiers."

"Were you taken prisoner by the Tartars?"

"Yes, your Highness, I was their prisoner for several days," answered Ogareff. "That is the reason that, having left Moscow on the 15th of July, as the date of that letter shows, I only reached Irkutsk on the 2d of October, after traveling seventy-nine days."

The Grand Duke took the letter. He unfolded it and recognized the Czar's signature, preceded by the decisive formula, written by his brother's hand. There was no possible doubt of the authenticity of this letter, nor of the identity of the courier. Though Ogareff's countenance had at first inspired the Grand Duke with some distrust, he let nothing of it appear, and it soon vanished.

The Grand Duke remained for a few minutes without speaking. He read the letter slowly, so as to take in its meaning fully. "Michael Strogoff, do you know the contents of this letter?" he asked.

"Yes, your Highness. I might have been obliged to destroy it, to prevent its falling into the hands of the Tartars, and should such have been the case, I wished to be able to bring the contents of it to your Highness."

"You know that this letter enjoins us all to die, rather than give up the town?"

"I know it."

"You know also that it informs me of the movements of the troops which have combined to stop the invasion?"

"Yes, your Highness, but the movements have failed."

"What do you mean?"

"I mean that Ichim, Omsk, Tomsk, to speak only of the more important towns of the two Siberias, have been successively occupied by the soldiers of Feofar-Khan."

"But there has been fighting? Have not our Cossacks met the Tartars?"

"Several times, your Highness."

"And they were repulsed?"

"They were not in sufficient force to oppose the enemy."

"Where did the encounters take place?"

"At Kolyvan, at Tomsk." Until now, Ogareff had only spoken the truth, but, in the hope of troubling the defenders of Irkutsk by exaggerating the defeats, he added, "And a third time before Krasnoiarsk."

"And what of this last engagement?" asked the Grand Duke, through whose compressed lips the words could scarcely pass.

"It was more than an engagement, your Highness," answered Ogareff; "it was a battle."

"A battle?"

"Twenty thousand Russians, from the frontier provinces and the government of Tobolsk, engaged with a hundred and fifty thousand Tartars, and, notwithstanding their courage, were overwhelmed."

"You lie!" exclaimed the Grand Duke, endeavoring in vain to curb his passion.

"I speak the truth, your Highness," replied Ivan Ogareff coldly. "I was present at the battle of Krasnoiarsk, and it was there I was made prisoner!"

The Grand Duke grew calmer, and by a significant gesture he gave Ogareff to understand that he did not doubt his veracity. "What day did this battle of Krasnoiarsk take place?" he asked.

"On the 2d of September."

"And now all the Tartar troops are concentrated here?"

"All."

"And you estimate them?"

"At about four hundred thousand men."

Another exaggeration of Ogareff's in the estimate of the Tartar army, with the same object as before.

"And I must not expect any help from the West provinces?" asked the Grand Duke.

"None, your Highness, at any rate before the end of the winter."

"Well, hear this, Michael Strogoff. Though I must expect no help either from the East or from the West, even were these barbarians six hundred thousand strong, I will never give up Irkutsk!"

Ogareff's evil eye slightly contracted. The traitor thought to himself that the brother of the Czar did not reckon the result of treason.

The Grand Duke, who was of a nervous temperament, had great difficulty in keeping calm whilst hearing this disastrous news. He walked to and fro in the room, under the gaze of Ogareff, who eyed him as a victim reserved for vengeance. He stopped at the windows, he looked forth at the fires in the Tartar camp, he listened to the noise of the ice-blocks drifting down the Angara.

A quarter of an hour passed without his putting any more questions. Then taking up the letter, he re-read a passage and said, "You know that in this letter I am warned of a traitor, of whom I must beware?"
"Yes, your Highness."

"He will try to enter Irkutsk in disguise; gain my confidence, and betray the town to the Tartars."

"I know all that, your Highness, and I know also that Ivan Ogareff has sworn to revenge himself personally on the Czar's brother."

"Why?"

"It is said that the officer in question was condemned by the Grand Duke to a humiliating degradation."

"Yes, I remember. But it is a proof that the villain, who could afterwards serve against his country and head an invasion of barbarians, deserved it."

"His Majesty the Czar," said Ogareff, "was particularly anxious that you should be warned of the criminal projects of Ivan Ogareff against your person."

"Yes; of that the letter informs me."

"And His Majesty himself spoke to me of it, telling me I was above all things to beware of the traitor."

"Did you meet with him?"

"Yes, your Highness, after the battle of Krasnoiarsk. If he had only guessed that I was the bearer of a letter addressed to your Highness, in which his plans were revealed, I should not have got off so easily."

"No; you would have been lost!" replied the Grand Duke. "And how did you manage to escape?"

"By throwing myself into the Irtych."

"And how did you enter Irkutsk?"

"Under cover of a sortie, which was made this evening to repulse a Tartar detachment. I mingled with the defenders of the town, made myself known, and was immediately conducted before your Highness."

"Good, Michael Strogoff," answered the Grand Duke. "You have shown courage and zeal in your difficult mission. I will not forget you. Have you any favor to ask?"

"None; unless it is to be allowed to fight at the side of your Highness," replied Ogareff.

"So be it, Strogoff. I attach you from to-day to my person, and you shall be lodged in the palace."

"And if according to his intention, Ivan Ogareff should present himself to your Highness under a false name?"

"We will unmask him, thanks to you, who know him, and I will make him die under the knout. Go!"

Ogareff gave a military salute, not forgetting that he was a captain of the couriers of the Czar, and retired.

Ogareff had so far played his unworthy part with success. The Grand Duke's entire confidence had been accorded him. He could now betray it whenever it suited him. He would inhabit the very palace. He would be in the secret of all the operations for the defense of the town. He thus held the situation in his hand, as it were. No one in Irkutsk knew him, no one could snatch off his mask. He resolved therefore to set to work without delay.

Indeed, time pressed. The town must be captured before the arrival of the Russians from the North and East, and that was only a question of a few days. The Tartars once masters of Irkutsk, it would not be easy to take it again from them. At any rate, even if they were obliged to abandon it later, they would not do so before they had utterly destroyed it, and before the head of the Grand Duke had rolled at the feet of Feofar-Khan.

Ivan Ogareff, having every facility for seeing, observing, and acting, occupied himself the next day with visiting the ramparts. He was everywhere received with cordial congratulations from officers, soldiers, and citizens. To them this courier from the Czar was a link which connected them with the empire.

Ogareff recounted, with an assurance which never failed, numerous fictitious events of his journey. Then, with the cunning for which he was noted, without dwelling too much on it at first, he spoke of the gravity of the situation, exaggerating the success of the Tartars and the numbers of the barbarian forces, as he had when speaking to the Grand Duke. According to him, the expected succors would be insufficient, if ever they arrived at all, and it was to be feared that a battle fought under the walls of Irkutsk would be as fatal as the battles of Kolyvan, Tomsk, and Krasnoiarsk.

Ogareff was not too free in these insinuations. He wished to allow them to sink gradually into the minds of the defenders of Irkutsk. He pretended only to answer with reluctance when much pressed with questions. He always added that they must fight to the last man, and blow up the town rather than yield!

These false statements would have done more harm had it been possible; but the garrison and the population of Irkutsk were too patriotic to let themselves be moved. Of all the soldiers and citizens shut up in this town, isolated at the extremity of the Asiatic world, not one dreamed of even speaking of a capitulation. The contempt of the Russians for these barbarians was boundless.

No one suspected the odious part played by Ivan Ogareff; no one guessed that the pretended courier of the Czar was a traitor. It occurred very naturally that on his arrival in Irkutsk, a frequent intercourse was established between Ogareff and one of the bravest defenders of the town, Wassili Fedor. We know what anxiety this unhappy father suffered. If his daughter, Nadia Fedor, had left Russia on the date fixed by the last letter he had received from Riga, what had become of her? Was she still trying to cross the invaded provinces, or had she long since been taken
prisoner? The only alleviation to Wassili Fedor’s anxiety was when he could obtain an opportunity of engaging in battle with the Tartars—opportunities which came too seldom for his taste. The very evening the pretended courier arrived, Wassili Fedor went to the governor-general’s palace and, acquainting Ogareff with the circumstances under which his daughter must have left European Russia, told him all his uneasiness about her. Ogareff did not know Nadia, although he had met her at Ichim on the day she was there with Michael Strogoff; but then, he had not paid more attention to her than to the two reporters, who at the same time were in the post-house; he therefore could give Wassili Fedor no news of his daughter.

"But at what time," asked Ogareff, "must your daughter have left the Russian territory?"
"About the same time that you did," replied Fedor.
"I left Moscow on the 15th of July."
"Nadia must also have quitted Moscow at that time. Her letter told me so expressly."
"She was in Moscow on the 15th of July?"
"Yes, certainly, by that date."
"Then it was impossible for her--But no, I am mistaken--I was confusing dates. Unfortunately, it is too probable that your daughter must have passed the frontier, and you can only have one hope, that she stopped on learning the news of the Tartar invasion!"

The father’s head fell! He knew Nadia, and he knew too well that nothing would have prevented her from setting out. Ivan Ogareff had just committed gratuitously an act of real cruelty. With a word he might have reassured Fedor. Although Nadia had passed the frontier under circumstances with which we are acquainted, Fedor, by comparing the date on which his daughter would have been at Nijni-Novgorod, and the date of the proclamation which forbade anyone to leave it, would no doubt have concluded thus: that Nadia had not been exposed to the dangers of the invasion, and that she was still, in spite of herself, in the European territory of the Empire.

Ogareff obedient to his nature, a man who was never touched by the sufferings of others, might have said that word. He did not say it. Fedor retired with his heart broken. In that interview his last hope was crushed.

During the two following days, the 3rd and 4th of October, the Grand Duke often spoke to the pretended Michael Strogoff, and made him repeat all that he had heard in the Imperial Cabinet of the New Palace. Ogareff, prepared for all these questions, replied without the least hesitation. He intentionally did not conceal that the Czar’s government had been utterly surprised by the invasion, that the insurrection had been prepared in the greatest possible secrecy, that the Tartars were already masters of the line of the Obi when the news reached Moscow, and lastly, that none of the necessary preparations were completed in the Russian provinces for sending into Siberia the troops requisite for repulsing the invaders.

Ivan Ogareff, being entirely free in his movements, began to study Irkutsk, the state of its fortifications, their weak points, so as to profit subsequently by his observations, in the event of being prevented from consummating his act of treason. He examined particularly the Bolchaia Gate, the one he wished to deliver up.

Twice in the evening he came upon the glacis of this gate. He walked up and down, without fear of being discovered by the besiegers, whose nearest posts were at least a mile from the ramparts. He fancied that he was recognized by no one, till he caught sight of a shadow gliding along outside the earthworks. Sangarre had come at the risk of her life for the purpose of putting herself in communication with Ivan Ogareff.

For two days the besieged had enjoyed a tranquillity to which the Tartars had not accustomed them since the commencement of the investment. This was by Ogareff’s orders. Feofar-Khan’s lieutenant wished that all attempts to take the town by force should be suspended. He hoped the watchfulness of the besieged would relax. At any rate, several thousand Tartars were kept in readiness at the outposts, to attack the gate, deserted, as Ogareff anticipated that it would be, by its defenders, whenever he should summon the besiegers to the assault.

This he could not now delay in doing. All must be over by the time that the Russian troops should come in sight of Irkutsk. Ogareff’s arrangements were made, and on this evening a note fell from the top of the earthworks into Sangarre’s hands.

On the next day, that is to say during the hours of darkness from the 5th to the 6th of October, at two o’clock in the morning, Ivan Ogareff had resolved to deliver up Irkutsk.

CHAPTER XIV THE NIGHT OF THE FIFTH OF OCTOBER

IVAN OGAREFF’s plan had been contrived with the greatest care, and except for some unforeseen accident he believed that it must succeed. It was of importance that the Bolchaia Gate should be unguarded or only feebly held when he gave it up. The attention of the besieged was therefore to be drawn to another part of the town. A diversion was agreed upon with the Emir.

This diversion was to be effected both up and down the river, on the Irkutsk bank. The attack on these two points
was to be conducted in earnest, and at the same time a feigned attempt at crossing the Angara from the left bank was to be made. The Bolchaia Gate, would be probably deserted, so much the more because on this side the Tartar outposts having drawn back, would appear to have broken up.

It was the 5th of October. In four and twenty hours, the capital of Eastern Siberia would be in the hands of the Emir, and the Grand Duke in the power of Ivan Ogareff.

During the day, an unusual stir was going on in the Angara camp. From the windows of the palace important preparations on the opposite shore could be distinctly seen. Numerous Tartar detachments were converging towards the camp, and from hour to hour reinforced the Emir's troops. These movements, intended to deceive the besieged, were conducted in the most open manner possible before their eyes.

Ogareff had warned the Grand Duke that an attack was to be feared. He knew, he said, that an assault was to be made, both above and below the town, and he counselled the Duke to reinforce the two directly threatened points. Accordingly, after a council of war had been held in the palace, orders were issued to concentrate the defense on the bank of the Angara and at the two ends of the town, where the earthworks protected the river.

This was exactly what Ogareff wished. He did not expect that the Bolchaia Gate would be left entirely without defenders, but that there would only be a small number. Besides, Ogareff meant to give such importance to the diversion, that the Grand Duke would be obliged to oppose it with all his available forces. The traitor planned also to produce so frightful a catastrophe that terror must inevitably overwhelm the hearts of the besieged.

All day the garrison and population of Irkutsk were on the alert. The measures to repel an attack on the points hitherto unassailed had been taken. The Grand Duke and General Voranzoff visited the posts, strengthened by their orders. Wassili Fedor's corps occupied the North of the town, but with orders to throw themselves where the danger was greatest. The right bank of the Angara had been protected with the few guns possessed by the defenders. With these measures, taken in time, thanks to the advice so opportunely given by Ivan Ogareff, there was good reason to hope that the expected attack would be repulsed. In that case the Tartars, momentarily discouraged, would no doubt not make another attempt against the town for several days. Now the troops expected by the Grand Duke might arrive at any hour. The safety or the loss of Irkutsk hung only by a thread.

On this day, the sun which had risen at twenty minutes to six, set at forty minutes past five, having traced its diurnal arc for eleven hours above the horizon. The twilight would struggle with the night for another two hours. Then it would be intensely dark, for the sky was cloudy, and there would be no moon. This gloom would favor the plans of Ivan Ogareff.

For a few days already a sharp frost had given warning of the approaching rigor of the Siberian winter, and this evening it was especially severe. The Russians posted by the bank of the Angara, obliged to conceal their position, lighted no fires. They suffered cruelly from the low temperature. A few feet below them, the ice in large masses drifted down the current. All day these masses had been seen passing rapidly between the two banks.

This had been considered by the Grand Duke and his officers as fortunate. Should the channel of the Angara continue to be thus obstructed, the passage must be impracticable. The Tartars could use neither rafts nor boats. As to their crossing the river on the ice, that was not possible. The newly-frozen plain could not bear the weight of an assaulting column.

This circumstance, as it appeared favorable to the defenders of Irkutsk, Ogareff might have regretted. He did not do so, however. The traitor knew well that the Tartars would not try to pass the Angara, and that, on its side at least, their attempt was only a feint.

About ten in the evening, the state of the river sensibly improved, to the great surprise of the besieged and still more to their disadvantage. The passage till then impracticable, became all at once possible. The bed of the Angara was clear. The blocks of ice, which had for some days drifted past in large numbers, disappeared down the current, and five or six only now occupied the space between the banks. The Russian officers reported this change in the river to the Grand Duke. They suggested that it was probably caused by the circumstance that in some narrower part of the Angara, the blocks had accumulated so as to form a barrier.

We know this was the case. The passage of the Angara was thus open to the besiegers. There was great reason for the Russians to be on their guard.

Up to midnight nothing had occurred. On the Eastern side, beyond the Bolchaia Gate, all was quiet. Not a glimmer was seen in the dense forest, which appeared confounded on the horizon with the masses of clouds hanging low down in the sky. Lights flitting to and fro in the Angara camp, showed that a considerable movement was taking place. From a verst above and below the point where the scarp met the river's bank, came a dull murmur, proving that the Tartars were on foot, expecting some signal. An hour passed. Nothing new.

The bell of the Irkutsk cathedral was about to strike two o'clock in the morning, and not a movement amongst the besiegers had yet shown that they were about to commence the assault. The Grand Duke and his officers began to suspect that they had been mistaken. Had it really been the Tartars' plan to surprise the town? The preceding
nights had not been nearly so quiet—musketry rattling from the outposts, shells whistling through the air; and this time, nothing. The officers waited, ready to give their orders, according to circumstances.

We have said that Ogareff occupied a room in the palace. It was a large chamber on the ground floor, its windows opening on a side terrace. By taking a few steps along this terrace, a view of the river could be obtained.

Profound darkness reigned in the room. Ogareff stood by a window, awaiting the hour to act. The signal, of course, could come from him, alone. This signal once given, when the greater part of the defenders of Irkutsk would be summoned to the points openly attacked, his plan was to leave the palace and hurry to the Bolchaia Gate. If it was unguarded, he would open it; or at least he would direct the overwhelming mass of its assailants against the few defenders.

He now crouched in the shadow, like a wild beast ready to spring on its prey. A few minutes before two o'clock, the Grand Duke desired that Michael Strogoff—which was the only name they could give to Ivan Ogareff—should be brought to him. An aide-de-camp came to the room, the door of which was closed. He called.

Ogareff, motionless near the window, and invisible in the shade did not answer. The Grand Duke was therefore informed that the Czar's courier was not at that moment in the palace.

Two o'clock struck. Now was the time to cause the diversion agreed upon with the Tartars, waiting for the assault. Ivan Ogareff opened the window and stationed himself at the North angle of the side terrace.

Below him flowed the roaring waters of the Angara. Ogareff took a match from his pocket, struck it and lighted a small bunch of tow, impregnated with priming powder, which he threw into the river.

It was by the orders of Ivan Ogareff that the torrents of mineral oil had been thrown on the surface of the Angara! There are numerous naphtha springs above Irkutsk, on the right bank, between the suburb of Poskavsk and the town. Ogareff had resolved to employ this terrible means to carry fire into Irkutsk. He therefore took possession of the immense reservoirs which contained the combustible liquid. It was only necessary to demolish a piece of wall in order to allow it to flow out in a vast stream.

This had been done that night, a few hours previously, and this was the reason that the raft which carried the true Courier of the Czar, Nadia, and the fugitives, floated on a current of mineral oil. Through the breaches in these reservoirs of enormous dimensions rushed the naphtha in torrents, and, following the inclination of the ground, it spread over the surface of the river, where its density allowed it to float. This was the way Ivan Ogareff carried on warfare! Allied with Tartars, he acted like a Tartar, and against his own countrymen!

The tow had been thrown on the waters of the Angara. In an instant, with electrical rapidity, as if the current had been of alcohol, the whole river was in a blaze above and below the town. Columns of blue flames ran between the two banks. Volumes of vapor curled up above. The few pieces of ice which still drifted were seized by the burning liquid, and melted like wax on the top of a furnace, the evaporated water escaping in shrill hisses.

At the same moment, firing broke out on the North and South of the town. The enemy's batteries discharged their guns at random. Several thousand Tartars rushed to the assault of the earth-works. The houses on the bank, built of wood, took fire in every direction. A bright light dissipated the darkness of the night.

"At last!" said Ivan Ogareff.

He had good reason for congratulating himself. The diversion which he had planned was terrible. The defenders of Irkutsk found themselves between the attack of the Tartars and the fearful effects of fire. The bells rang, and all the able-bodied of the population ran, some towards the points attacked, and others towards the houses in the grasp of the flames, which it seemed too probable would ere long envelop the whole town.

The Gate of Bolchaia was nearly free. Only a very small guard had been left there. And by the traitor's suggestion, and in order that the event might be explained apart from him, as if by political hate, this small guard had been chosen from the little band of exiles.

Ogareff re-entered his room, now brilliantly lighted by the flames from the Angara; then he made ready to go out. But scarcely had he opened the door, when a woman rushed into the room, her clothes drenched, her hair in disorder.

"Sangarre!" exclaimed Ogareff, in the first moment of surprise, and not supposing that it could be any other woman than the gypsy.

It was not Sangarre; it was Nadia!

At the moment when, floating on the ice, the girl had uttered a cry on seeing the fire spreading along the current, Michael had seized her in his arms, and plunged with her into the river itself to seek a refuge in its depths from the flames. The block which bore them was not thirty fathoms from the first quay of Irkutsk.

Swimming beneath the water, Michael managed to get a footing with Nadia on the quay. Michael Strogoff had reached his journey's end! He was in Irkutsk!

"To the governor's palace!" said he to Nadia.

In less than ten minutes, they arrived at the entrance to the palace. Long tongues of flame from the Angara licked
its walls, but were powerless to set it on fire. Beyond the houses on the bank were in a blaze.

The palace being open to all, Michael and Nadia entered without difficulty. In the confusion, no one remarked them, although their garments were dripping. A crowd of officers coming for orders, and of soldiers running to execute them, filled the great hall on the ground floor. There, in a sudden eddy of the confused multitude, Michael and the young girl were separated from each other.

Nadia ran distracted through the passages, calling her companion, and asking to be taken to the Grand Duke. A door into a room flooded with light opened before her. She entered, and found herself suddenly face to face with the man whom she had met at Ichim, whom she had seen at Tomsk; face to face with the one whose villainous hand would an instant later betray the town!

"Ivan Ogareff!" she cried.

On hearing his name pronounced, the wretch started. His real name known, all his plans would be balked. There was but one thing to be done: to kill the person who had just uttered it. Ogareff darted at Nadia; but the girl, a knife in her hand, retreated against the wall, determined to defend herself.

"Ivan Ogareff!" again cried Nadia, knowing well that so detested a name would soon bring her help.

"Ah! Be silent!" hissed out the traitor between his clenched teeth.

"Ivan Ogareff!" exclaimed a third time the brave young girl, in a voice to which hate had added ten-fold strength.

Mad with fury, Ogareff, drawing a dagger from his belt, again rushed at Nadia and compelled her to retreat into a corner of the room. Her last hope appeared gone, when the villain, suddenly lifted by an irresistible force, was dashed to the ground.

"Michael!" cried Nadia.

It was Michael Strogoff. Michael had heard Nadia's call. Guided by her voice, he had just in time reached Ivan Ogareff's room, and entered by the open door.

"Fear nothing, Nadia," said he, placing himself between her and Ogareff.

"Ah!" cried the girl, "take care, brother! The traitor is armed! He can see!"

Ogareff rose, and, thinking he had an immeasurable advantage over the blind man leaped upon him. But with one hand, the blind man grasped the arm of his enemy, seized his weapon, and hurled him again to the ground.

Pale with rage and shame, Ogareff remembered that he wore a sword. He drew it and returned a second time to the charge. A blind man! Ogareff had only to deal with a blind man! He was more than a match for him!

Nadia, terrified at the danger which threatened her companion ran to the door calling for help!

"Close the door, Nadia!" said Michael. "Call no one, and leave me alone! The Czar's courier has nothing to fear to-day from this villain! Let him come on, if he dares! I am ready for him."

In the mean time, Ogareff, gathering himself together like a tiger about to spring, uttered not a word. The noise of his footsteps, his very breathing, he endeavored to conceal from the ear of the blind man. His object was to strike before his opponent was aware of his approach, to strike him with a deadly blow.

Nadia, terrified and at the same time confident, watched this terrible scene with involuntary admiration. Michael's calm bearing seemed to have inspired her. Michael's sole weapon was his Siberian knife. He did not see his adversary armed with a sword, it is true; but Heaven's support seemed to be afforded him. How, almost without stirring, did he always face the point of the sword?

Ivan Ogareff watched his strange adversary with visible anxiety. His superhuman calm had an effect upon him. In vain, appealing to his reason, did he tell himself that in so unequal a combat all the advantages were on his side. The immobility of the blind man froze him. He had settled on the place where he would strike his victim. He had fixed upon it! What, then, hindered him from putting an end to his blind antagonist?

At last, with a spring he drove his sword full at Michael's breast. An imperceptible movement of the blind man's knife turned aside the blow. Michael had not been touched, and coolly he awaited a second attack.

Cold drops stood on Ogareff's brow. He drew back a step, then again leaped forward. But as had the first, this second attempt failed. The knife had simply parried the blow from the traitor's useless sword.

Mad with rage and terror before this living statue, he gazed into the wide-open eyes of the blind man. Those eyes which seemed to pierce to the bottom of his soul, and yet which did not, could not, see--exercised a sort of dreadful fascination over him.

All at once, Ogareff uttered a cry. A sudden light flashed across his brain. "He sees!" he exclaimed, "he sees!" And like a wild beast trying to retreat into its den, step by step, terrified, he drew back to the end of the room.

Then the statue became animated, the blind man walked straight up to Ivan Ogareff, and placing himself right before him, "Yes, I see!" said he. "I see the mark of the knout which I gave you, traitor and coward! I see the place where I am about to strike you! Defend your life! It is a duel I deign to offer you! My knife against your sword!"

"He sees!" said Nadia. "Gracious Heaven, is it possible!"
Ogareff felt that he was lost. But mustering all his courage, he sprang forward on his impassible adversary. The two blades crossed, but at a touch from Michael's knife, wielded in the hand of the Siberian hunter, the sword flew in splinters, and the wretch, stabbed to the heart, fell lifeless on the ground.

At the same moment, the door was thrown open. The Grand Duke, accompanied by some of his officers, appeared on the threshold. The Grand Duke advanced. In the body lying on the ground, he recognized the man whom he believed to be the Czar's courier.

Then, in a threatening voice, "Who killed that man?" he asked.

"I," replied Michael.

One of the officers put a pistol to his temple, ready to fire.

"Your name?" asked the Grand Duke, before giving the order for his brains to be blown out.

"Your Highness," answered Michael, "ask me rather the name of the man who lies at your feet!"

"That man, I know him! He is a servant of my brother! He is the Czar's courier!"

"That man, your Highness, is not a courier of the Czar! He is Ivan Ogareff!"

"Ivan Ogareff!" exclaimed the Grand Duke.

"Yes, Ivan the Traitor!"

"But who are you, then?"

"Michael Strogoff!"

CHAPTER XV CONCLUSION

MICHAEL STROGOFF was not, had never been, blind. A purely human phenomenon, at the same time moral and physical, had neutralized the action of the incandescent blade which Feofar's executioner had passed before his eyes.

It may be remembered, that at the moment of the execution, Marfa Strogoff was present, stretching out her hands towards her son. Michael gazed at her as a son would gaze at his mother, when it is for the last time. The tears, which his pride in vain endeavored to subdue, welling up from his heart, gathered under his eyelids, and volatilizing on the cornea, had saved his sight. The vapor formed by his tears interposing between the glowing saber and his eyeballs, had been sufficient to annihilate the action of the heat. A similar effect is produced, when a workman smelter, after dipping his hand in vapor, can with impunity hold it over a stream of melted iron.

Michael had immediately understood the danger in which he would be placed should he make known his secret to anyone. He at once saw, on the other hand, that he might make use of his supposed blindness for the accomplishment of his designs. Because it was believed that he was blind, he would be allowed to go free. He must therefore be blind, blind to all, even to Nadia, blind everywhere, and not a gesture at any moment must let the truth be suspected. His resolution was taken. He must risk his life even to afford to all he might meet the proof of his want of sight. We know how perfectly he acted the part he had determined on.

His mother alone knew the truth, and he had whispered it to her in Tomsk itself, when bending over her in the dark he covered her with kisses.

When Ogareff had in his cruel irony held the Imperial letter before the eyes which he believed were destroyed, Michael had been able to read, and had read the letter which disclosed the odious plans of the traitor. This was the reason of the wonderful resolution he exhibited during the second part of his journey. This was the reason of his unalterable longing to reach Irkutsk, so as to perform his mission by word of mouth. He knew that the town would be betrayed! He knew that the life of the Grand Duke was threatened! The safety of the Czar's brother and of Siberia was in his hands.

This story was told in a few words to the Grand Duke, and Michael repeated also--and with what emotion!--the part Nadia had taken in these events.

"Who is this girl?" asked the Grand Duke.

"The daughter of the exile, Wassili Fedor," replied Michael.

"The daughter of Captain Fedor," said the Grand Duke, "has ceased to be the daughter of an exile. There are no longer exiles in Irkutsk."

Nadia, less strong in joy than she had been in grief, fell on her knees before the Grand Duke, who raised her with one hand, while he extended the other to Michael.

An hour after, Nadia was in her father's arms. Michael Strogoff, Nadia, and Wassili Fedor were united. This was the height of happiness to them all.

The Tartars had been repulsed in their double attack on the town. Wassili Fedor, with his little band, had driven back the first assailants who presented themselves at the Bolchaia Gate, expecting to find it open and which, by an instinctive feeling, often arising from sound judgment, he had determined to remain at and defend.
At the same time as the Tartars were driven back the besieged had mastered the fire. The liquid naphtha having rapidly burnt to the surface of the water, the flames did not go beyond the houses on the shore, and left the other quarters of the town uninjured. Before daybreak the troops of Feofar-Khan had retreated into their camp, leaving a large number of dead on and below the ramparts.

Among the dead was the gypsy Sangarre, who had vainly endeavored to join Ivan Ogareff.

For two days the besiegers attempted no fresh assault. They were discouraged by the death of Ogareff. This man was the mainspring of the invasion, and he alone, by his plots long since contrived, had had sufficient influence over the khans and their hordes to bring them to the conquest of Asiatic Russia.

However, the defenders of Irkutsk kept on their guard, and the investment still continued; but on the 7th of October, at daybreak, cannon boomed out from the heights around Irkutsk. It was the succoring army under the command of General Kisselef, and it was thus that he made known his welcome arrival to the Grand Duke.

The Tartars did not wait to be attacked. Not daring to run the risk of a battle under the walls of Irkutsk, they immediately broke up the Angara camp. Irkutsk was at last relieved.

With the first Russian soldiers, two of Michael's friends entered the city. They were the inseparable Blount and Jolivet. On gaining the right bank of the Angara by means of the icy barrier, they had escaped, as had the other fugitives, before the flames had reached their raft. This had been noted by Alcide Jolivet in his book in this way: "Ran a narrow chance of being finished up like a lemon in a bowl of punch!"

Their joy was great on finding Nadia and Michael safe and sound; above all, when they learnt that their brave companion was not blind. Harry Blount inscribed this observation: "Red-hot iron is insufficient in some cases to destroy the sensibility of the optic nerve."

Then the two correspondents, settled for a time in Irkutsk, busied themselves in putting the notes and impressions of their journey in order. Thence were sent to London and Paris two interesting articles relative to the Tartar invasion, and which--a rare thing--did not contradict each other even on the least important points.

The remainder of the campaign was unfortunate to the Emir and his allies. This invasion, futile as all which attack the Russian Colossus must be, was very fatal to them. They soon found themselves cut off by the Czar's troops, who retook in succession all the conquered towns. Besides this, the winter was terrible, and, decimated by the cold, only a small part of these hordes returned to the steppes of Tartary.

The Irkutsk road, by way of the Ural Mountains, was now open. The Grand Duke was anxious to return to Moscow, but he delayed his journey to be present at a touching ceremony, which took place a few days after the entry of the Russian troops.

Michael Strogoff sought Nadia, and in her father's presence said to her, "Nadia, my sister still, when you left Riga to come to Irkutsk, did you leave it with any other regret than that for your mother?"

"No," replied Nadia, "none of any sort whatever."

"Then, nothing of your heart remains there?"

"Nothing, brother."

"Then, Nadia," said Michael, "I think that God, in allowing us to meet, and to go through so many severe trials together, must have meant us to be united forever."

"Ah!" said Nadia, falling into Michael's arms. Then turning towards Wassili Fedor, "My father," said she, blushing.

"Nadia," said Captain Fedor, "it will be my joy to call you both my children!"

The marriage ceremony took place in Irkutsk cathedral.

Jolivet and Blount very naturally assisted at this marriage, of which they wished to give an account to their readers.

"And doesn't it make you wish to imitate them?" asked Alcide of his friend.

"Pooh!" said Blount. "Now if I had a cousin like you--"

"My cousin isn't to be married!" answered Alcide, laughing.

"So much the better," returned Blount, "for they speak of difficulties arising between London and Pekin. Have you no wish to go and see what is going on there?"

"By Jove, my dear Blount!" exclaimed Alcide Jolivet, "I was just going to make the same proposal to you."

And that was how the two inseparables set off for China.

A few days after the ceremony, Michael and Nadia Strogoff, accompanied by Wassili Fedor, took the route to Europe. The road so full of suffering when going, was a road of joy in returning. They traveled swiftly, in one of those sleighs which glide like an express train across the frozen steppes of Siberia.

However, when they reached the banks of the Dinka, just before Birskoe, they stopped for a while. Michael found the place where he had buried poor Nicholas. A cross was erected there, and Nadia prayed a last time on the grave of the humble and heroic friend, whom neither of them would ever forget.
At Omsk, old Marfa awaited them in the little house of the Strogoffs. She clasped passionately in her arms the
girl whom in her heart she had already a hundred times called "daughter." The brave old Siberian, on that day, had
the right to recognize her son and say she was proud of him.

After a few days passed at Omsk, Michael and Nadia entered Europe, and, Wassili Fedor settling down in St.
Petersburg, neither his son nor his daughter had any occasion to leave him, except to go and see their old mother.

The young courier was received by the Czar, who attached him specially to his own person, and gave him the
Cross of St. George. In the course of time, Michael Strogoff reached a high station in the Empire. But it is not the
history of his success, but the history of his trials, which deserves to be related.

OFF ON A COMET OR HECTOR SERVADAC
By Jules Verne

BOOK I.
CHAPTER I. A CHALLENGE
"Nothing, sir, can induce me to surrender my claim."
"I am sorry, count, but in such a matter your views cannot modify mine."
"But allow me to point out that my seniority unquestionably gives me a prior right."
"Mere seniority, I assert, in an affair of this kind, cannot possibly entitle you to any prior claim whatever."
"Then, captain, no alternative is left but for me to compel you to yield at the sword's point."
"As you please, count; but neither sword nor pistol can force me to forego my pretensions. Here is my card."
"And mine."

This rapid altercation was thus brought to an end by the formal interchange of the names of the disputants. On
one of the cards was inscribed:
_Captain Hector Servadac, Staff Officer, Mostaganem._

On the other was the title:
_Count Wassili Timascheff, On board the Schooner "Dobryna."_

It did not take long to arrange that seconds should be appointed, who would meet in Mostaganem at two o'clock
that day; and the captain and the count were on the point of parting from each other, with a salute of punctilious
courtesy, when Timascheff, as if struck by a sudden thought, said abruptly: "Perhaps it would be better, captain, not
to allow the real cause of this to transpire?"
"Far better," replied Servadac; "it is undesirable in every way for any names to be mentioned."
"In that case, however," continued the count, "it will be necessary to assign an ostensible pretext of some kind.
Shall we allege a musical dispute? a contention in which I feel bound to defend Wagner, while you are the zealous
champion of Rossini?"

"I am quite content," answered Servadac, with a smile; and with another low bow they parted.

The scene, as here depicted, took place upon the extremity of a little cape on the Algerian coast, between
Mostaganem and Tenes, about two miles from the mouth of the Shelif. The headland rose more than sixty feet above
the sea-level, and the azure waters of the Mediterranean, as they softly kissed the strand, were tinged with the
reddish hue of the ferriferous rocks that formed its base. It was the 31st of December. The noontide sun, which
usually illuminated the various projections of the coast with a dazzling brightness, was hidden by a dense mass of
cloud, and the fog, which for some unaccountable cause, had hung for the last two months over nearly every region
in the world, causing serious interruption to traffic between continent and continent, spread its dreary veil across
land and sea.

After taking leave of the staff-officer, Count Wassili Timascheff wended his way down to a small creek, and
took his seat in the stern of a light four-oar that had been awaiting his return; this was immediately pushed off from
shore, and was soon alongside a pleasure-yacht, that was lying to, not many cable lengths away.

At a sign from Servadac, an orderly, who had been standing at a respectful distance, led forward a magnificent
Arabian horse; the captain vaulted into the saddle, and followed by his attendant, well mounted as himself, started
off towards Mostaganem. It was half-past twelve when the two riders crossed the bridge that had been recently
erected over the Shelif, and a quarter of an hour later their steeds, flecked with foam, dashed through the Mascara
Gate, which was one of five entrances opened in the embattled wall that encircled the town.

At that date, Mostaganem contained about fifteen thousand inhabitants, three thousand of whom were French.
Besides being one of the principal district towns of the province of Oran, it was also a military station. Mostaganem
rejoiced in a well-sheltered harbor, which enabled her to utilize all the rich products of the Mina and the Lower
Shelif. It was the existence of so good a harbor amidst the exposed cliffs of this coast that had induced the owner of
the _Dobryna_ to winter in these parts, and for two months the Russian standard had been seen floating from her yard, whilst on her mast-head was hoisted the pennant of the French Yacht Club, with the distinctive letters M. C. W. T., the initials of Count Timascheff.

Having entered the town, Captain Servadac made his way towards Matmore, the military quarter, and was not long in finding two friends on whom he might rely—a major of the 2nd Fusileers, and a captain of the 8th Artillery. The two officers listened gravely enough to Servadac's request that they would act as his seconds in an affair of honor, but could not resist a smile on hearing that the dispute between him and the count had originated in a musical discussion. Surely, they suggested, the matter might be easily arranged; a few slight concessions on either side, and all might be amicably adjusted. But no representations on their part were of any avail. Hector Servadac was inflexible.

"No concession is possible," he replied, resolutely. "Rossini has been deeply injured, and I cannot suffer the injury to be unavenged. Wagner is a fool. I shall keep my word. I am quite firm."

"Be it so, then," replied one of the officers; "and after all, you know, a sword-cut need not be a very serious affair."

"Certainly not," rejoined Servadac; "and especially in my case, when I have not the slightest intention of being wounded at all."

Incredulous as they naturally were as to the assigned cause of the quarrel, Servadac's friends had no alternative but to accept his explanation, and without farther parley they started for the staff office, where, at two o'clock precisely, they were to meet the seconds of Count Timascheff. Two hours later they had returned. All the preliminaries had been arranged; the count, who like many Russians abroad was an aide-de-camp of the Czar, had of course proposed swords as the most appropriate weapons, and the duel was to take place on the following morning, the first of January, at nine o'clock, upon the cliff at a spot about a mile and a half from the mouth of the Shelif. With the assurance that they would not fail to keep their appointment with military punctuality, the two officers cordially wrung their friend's hand and retired to the Zulma Cafe for a game at piquet. Captain Servadac at once retraced his steps and left the town.

For the last fortnight Servadac had not been occupying his proper lodgings in the military quarters; having been appointed to make a local levy, he had been living in a gourbi, or native hut, on the Mostaganem coast, between four and five miles from the Shelif. His orderly was his sole companion, and by any other man than the captain the enforced exile would have been esteemed little short of a severe penance.

On his way to the gourbi, his mental occupation was a very laborious effort to put together what he was pleased to call a rondo, upon a model of versification all but obsolete. This rondo, it is unnecessary to conceal, was to be an ode addressed to a young widow by whom he had been captivated, and whom he was anxious to marry, and the tenor of his muse was intended to prove that when once a man has found an object in all respects worthy of his affections, he should love her "in all simplicity." Whether the aphorism were universally true was not very material to the gallant captain, whose sole ambition at present was to construct a roundelay of which this should be the prevailing sentiment. He indulged the fancy that he might succeed in producing a composition which would have a fine effect here in Algeria, where poetry in that form was all but unknown.

"I know well enough," he said repeatedly to himself, "what I want to say. I want to tell her that I love her sincerely, and wish to marry her; but, confound it! the words won't rhyme. Plague on it! Does nothing rhyme with 'simplicity'? Ah! I have it now:

'Lovers should, whoe'er they be, Love in all simplicity.'

But what next? how am I to go on? I say, Ben Zoof," he called aloud to his orderly, who was trotting silently close in his rear, "did you ever compose any poetry?"

"No, captain," answered the man promptly; "I have never made any verses, but I have seen them made fast enough at a booth during the fete of Montmartre."

"Can you remember them?"

"Remember them! to be sure I can. This is the way they began:

'Come in! come in! you'll not repent The entrance money you have spent; The wondrous mirror in this place Reveals your future sweetheart's face.'"

"Bosh!" cried Servadac in disgust; "your verses are detestable trash."

"As good as any others, captain, squeaked through a reed pipe."

"Hold your tongue, man," said Servadac peremptorily; "I have made another couplet.

'Lovers should, whoe'er they be, Love in all simplicity; Lover, loving honestly, Offer I myself to thee.'"

Beyond this, however, the captain's poetical genius was impotent to carry him; his farther efforts were unavailing, and when at six o'clock he reached the gourbi, the four lines still remained the limit of his composition.
CHAPTER II. CAPTAIN SERVADAC AND HIS ORDERLY

At the time of which I write, there might be seen in the registers of the Minister of War the following entry:

SERVADAC (_Hector_), born at St. Trelody in the district of Lesparre, department of the Gironde, July 19th, 18--.

_Property:_ 1200 francs in rentes.
_Service:_ Fourteen years, three months, and five days.
_Service:_ Two years at school at St. Cyr; two years at L’Ecole d’Application; two years in the 8th Regiment of the Line; two years in the 3rd Light Cavalry; seven years in Algeria.
_Campaigns:_ Soudan and Japan.
_Rank:_ Captain on the staff at Mostaganem.
_Decorations:_ Chevalier of the Legion of Honor, March 13th, 18--.

Hector Servadac was thirty years of age, an orphan without lineage and almost without means. Thirsting for glory rather than for gold, slightly scatter-brained, but warm-hearted, generous, and brave, he was eminently formed to be the protege of the god of battles.

For the first year and a half of his existence he had been the foster-child of the sturdy wife of a vine-dresser of Medoc—a lineal descendant of the heroes of ancient prowess; in a word, he was one of those individuals whom nature seems to have predestined for remarkable things, and around whose cradle have hovered the fairy godmothers of adventure and good luck.

In appearance Hector Servadac was quite the type of an officer; he was rather more than five feet six inches high, slim and graceful, with dark curling hair and mustaches, well-formed hands and feet, and a clear blue eye. He seemed born to please without being conscious of the power he possessed. It must be owned, and no one was more ready to confess it than himself, that his literary attainments were by no means of a high order. "We don't spin tops" is a favorite saying amongst artillery officers, indicating that they do not shirk their duty by frivolous pursuits; but it must be confessed that Servadac, being naturally idle, was very much given to 'spinning tops.' His good abilities, however, and his ready intelligence had carried him successfully through the curriculum of his early career. He was a good draughtsman, an excellent rider—having thoroughly mastered the successor to the famous "Uncle Tom" at the riding-school of St. Cyr—and in the records of his military service his name had several times been included in the order of the day.

The following episode may suffice, in a certain degree, to illustrate his character. Once, in action, he was leading a detachment of infantry through an intrenchment. They came to a place where the side-work of the trench had been so riddled by shell that a portion of it had actually fallen in, leaving an aperture quite unsheltered from the grape-shot that was pouring in thick and fast. The men hesitated. In an instant Servadac mounted the side-work, laid himself down in the gap, and thus filling up the breach by his own body, shouted, "March on!"

And through a storm of shot, not one of which touched the prostrate officer, the troop passed in safety.

Since leaving the military college, Servadac, with the exception of his two campaigns in the Soudan and Japan, had been always stationed in Algeria. He had now a staff appointment at Mostaganem, and had lately been entrusted with some topographical work on the coast between Tenes and the Shelif. It was a matter of little consequence to him that the gourbi, in which of necessity he was quartered, was uncomfortable and ill-contrived; he loved the open air, and the independence of his life suited him well. Sometimes he would wander on foot upon the sandy shore, and sometimes he would enjoy a ride along the summit of the cliff; altogether being in no hurry at all to bring his task to an end. His occupation, moreover, was not so engrossing but that he could find leisure for taking a short railway journey once or twice a week; so that he was ever and again putting in an appearance at the general's receptions at Oran, and at the fetes given by the governor at Algiers.

It was on one of these occasions that he had first met Madame de L----, the lady to whom he was desirous of dedicating the rondo, the first four lines of which had just seen the light. She was a colonel's widow, young and handsome, very reserved, not to say haughty in her manner, and either indifferent or impervious to the admiration which she inspired. Captain Servadac had not yet ventured to declare his attachment; of rivals he was well aware he had not a few, and amongst these not the least formidable was the Russian Count Timascheff. And although the young widow was all unconscious of the share she had in the matter, it was she, and she alone, who was the cause of the challenge just given and accepted by her two ardent admirers.

During his residence in the gourbi, Hector Servadac's sole companion was his orderly, Ben Zoof. Ben Zoof was devoted, body and soul, to his superior officer. His own personal ambition was so entirely absorbed in his master's welfare, that it is certain no offer of promotion—even had it been that of aide-de-camp to the Governor-General of Algiers—would have induced him to quit that master's service. His name might seem to imply that he was a native of Algeria; but such was by no means the case. His true name was Laurent; he was a native of Montmartre in Paris, and
how or why he had obtained his patronymic was one of those anomalies which the most sagacious of etymologists would find it hard to explain.

Born on the hill of Montmartre, between the Solferino tower and the mill of La Galette, Ben Zoof had ever possessed the most unreserved admiration for his birthplace; and to his eyes the heights and district of Montmartre represented an epitome of all the wonders of the world. In all his travels, and these had been not a few, he had never beheld scenery which could compete with that of his native home. No cathedral—not even Burgos itself—could vie with the church at Montmartre. Its race-course could well hold its own against that at Pentelique; its reservoir would throw the Mediterranean into the shade; its forests had flourished long before the invasion of the Celts; and its very mill produced no ordinary flour, but provided material for cakes of world-wide renown. To crown all, Montmartre boasted a mountain—a veritable mountain; envious tongues indeed might pronounce it little more than a hill; but Ben Zoof would have allowed himself to be hewn in pieces rather than admit that it was anything less than fifteen thousand feet in height.

Ben Zoof's most ambitious desire was to induce the captain to go with him and end his days in his much-loved home, and so incessantly were Servadac's ears besieged with descriptions of the unparalleled beauties and advantages of this eighteenth arrondissement of Paris, that he could scarcely hear the name of Montmartre without a conscious thrill of aversion. Ben Zoof, however, did not despair of ultimately converting the captain, and meanwhile had resolved never to leave him. When a private in the 8th Cavalry, he had been on the point of quitting the army at twenty-eight years of age, but unexpectedly he had been appointed orderly to Captain Servadac. Side by side they fought in two campaigns. Servadac had saved Ben Zoof's life in Japan; Ben Zoof had rendered his master a like service in the Soudan. The bond of union thus effected could never be severed; and although Ben Zoof's achievements had fairly earned him the right of retirement, he firmly declined all honors or any pension that might part him from his superior officer. Two stout arms, an iron constitution, a powerful frame, and an indomitable courage were all loyally devoted to his master's service, and fairly entitled him to his _soi-disant_ designation of "The Rampart of Montmartre." Unlike his master, he made no pretension to any gift of poetic power, but his inexhaustible memory made him a living encyclopaedia; and for his stock of anecdotes and trooper's tales he was matchless.

Thoroughly appreciating his servant's good qualities, Captain Servadac endured with imperturbable good humor those idiosyncrasies, which in a less faithful follower would have been intolerable, and from time to time he would drop a word of sympathy that served to deepen his subordinate's devotion.

On one occasion, when Ben Zoof had mounted his hobby-horse, and was indulging in high-flown praises about his beloved eighteenth arrondissement, the captain had remarked gravely, "Do you know, Ben Zoof, that Montmartre only requires a matter of some thirteen thousand feet to make it as high as Mont Blanc?"

Ben Zoof's eyes glistened with delight; and from that moment Hector Servadac and Montmartre held equal places in his affection.

CHAPTER III. INTERRUPTED EFFUSIONS

Composed of mud and loose stones, and covered with a thatch of turf and straw, known to the natives by the name of "driss," the gourbi, though a grade better than the tents of the nomad Arabs, was yet far inferior to any habitation built of brick or stone. It adjoined an old stone hostelry, previously occupied by a detachment of engineers, and which now afforded shelter for Ben Zoof and the two horses. It still contained a considerable number of tools, such as mattocks, shovels, and pick-axes.

Uncomfortable as was their temporary abode, Servadac and his attendant made no complaints; neither of them was dainty in the matter either of board or lodging. After dinner, leaving his orderly to stow away the remains of the repast in what he was pleased to term the "cupboard of his stomach." Captain Servadac turned out into the open air to smoke his pipe upon the edge of the cliff. The shades of night were drawing on. An hour previously, veiled in heavy clouds, the sun had sunk below the horizon that bounded the plain beyond the Shelif.

The sky presented a most singular appearance. Towards the north, although the darkness rendered it impossible to see beyond a quarter of a mile, the upper strata of the atmosphere were suffused with a rosy glare. No well-defined fringe of light, nor arch of luminous rays, betokened a display of aurora borealis, even had such a phenomenon been possible in these latitudes; and the most experienced meteorologist would have been puzzled to explain the cause of this striking illumination on this 31st of December, the last evening of the passing year.

But Captain Servadac was no meteorologist, and it is to be doubted whether, since leaving school, he had ever opened his "Course of Cosmography." Besides, he had other thoughts to occupy his mind. The prospects of the morrow offered serious matter for consideration. The captain was actuated by no personal animosity against the count; though rivals, the two men regarded each other with sincere respect; they had simply reached a crisis in
which one of them was _de trop_; which of them, fate must decide.

At eight o'clock, Captain Servadac re-entered the gourbi, the single apartment of which contained his bed, a small writing-table, and some trunks that served instead of cupboards. The orderly performed his culinary operations in the adjoining building, which he also used as a bed-room, and where, extended on what he called his "good oak mattress," he would sleep soundly as a dormouse for twelve hours at a stretch. Ben Zoof had not yet received his orders to retire, and ensconcing himself in a corner of the gourbi, he endeavored to doze—a task which the unusual agitation of his master rendered somewhat difficult. Captain Servadac was evidently in no hurry to betake himself to rest, but seating himself at his table, with a pair of compasses and a sheet of tracing-paper, he began to draw, with red and blue crayons, a variety of colored lines, which could hardly be supposed to have much connection with a topographical survey. In truth, his character of staff-officer was now entirely absorbed in that of Gascon poet. Whether he imagined that the compasses would bestow upon his verses the measure of a mathematical accuracy, or whether he fancied that the parti-colored lines would lend variety to his rhythm, it is impossible to determine; be that as it may, he was devoting all his energies to the compilation of his rondo, and supremely difficult he found the task.

"Hang it!" he ejaculated, "whatever induced me to choose this meter? It is as hard to find rhymes as to rally fugitive in a battle. But, by all the powers! it shan't be said that a French officer cannot cope with a piece of poetry. One battalion has fought—now for the rest!"

Perseverance had its reward. Presently two lines, one red, the other blue, appeared upon the paper, and the captain murmured:

"Words, mere words, cannot avail, Telling true heart's tender tale."

"What on earth ails my master?" muttered Ben Zoof; "for the last hour he has been as fidgety as a bird returning after its winter migration."

Servadac suddenly started from his seat, and as he paced the room with all the frenzy of poetic inspiration, read out:

"Empty words cannot convey All a lover's heart would say."

"Well, to be sure, he is at his everlasting verses again!" said Ben Zoof to himself, as he roused himself in his corner. "Impossible to sleep in such a noise;" and he gave vent to a loud groan.

"How now, Ben Zoof?" said the captain sharply. "What ails you?"

"Nothing, sir, only the nightmare."

"Curse the fellow, he has quite interrupted me!" ejaculated the captain. "Ben Zoof!" he called aloud.

"Here, sir!" was the prompt reply; and in an instant the orderly was upon his feet, standing in a military attitude, one hand to his forehead, the other closely pressed to his trouser-seam.

"Stay where you are! don't move an inch!" shouted Servadac; "I have just thought of the end of my rondo." And in a voice of inspiration, accompanying his words with dramatic gestures, Servadac began to declaim:

"Listen, lady, to my vows— O, consent to be my spouse; Constant ever I will be, Constant...."

No closing lines were uttered. All at once, with unutterable violence, the captain and his orderly were dashed, face downwards, to the ground.

CHAPTER IV. A CONVULSION OF NATURE

Whence came it that at that very moment the horizon underwent so strange and sudden a modification, that the eye of the most practiced mariner could not distinguish between sea and sky?

Whence came it that the billows raged and rose to a height hitherto unregistered in the records of science?

Whence came it that the elements united in one deafening crash; that the earth groaned as though the whole framework of the globe were ruptured; that the waters roared from their innermost depths; that the air shrieked with all the fury of a cyclone?

Whence came it that a radiance, intenser than the effulgence of the Northern Lights, overspread the firmament, and momentarily dimmed the splendor of the brightest stars?

Whence came it that the Mediterranean, one instant emptied of its waters, was the next flooded with a foaming surge?

Whence came it that in the space of a few seconds the moon's disc reached a magnitude as though it were but a tenth part of its ordinary distance from the earth?

Whence came it that a new blazing spheroid, hitherto unknown to astronomy, now appeared suddenly in the firmament, though it were but to lose itself immediately behind masses of accumulated cloud?

What phenomenon was this that had produced a cataclysm so tremendous in effect upon earth, sky, and sea?

Was it possible that a single human being could have survived the convulsion? and if so, could he explain its mystery?
CHAPTER V. A MYSTERIOUS SEA

Violent as the commotion had been, that portion of the Algerian coast which is bounded on the north by the Mediterranean, and on the west by the right bank of the Shelif, appeared to have suffered little change. It is true that indentations were perceptible in the fertile plain, and the surface of the sea was ruffled with an agitation that was quite unusual; but the rugged outline of the cliff was the same as heretofore, and the aspect of the entire scene appeared unaltered. The stone hostelry, with the exception of some deep clefts in its walls, had sustained little injury; but the gourbi, like a house of cards destroyed by an infant's breath, had completely subsided, and its two inmates lay motionless, buried under the sunken thatch.

It was two hours after the catastrophe that Captain Servadac regained consciousness; he had some trouble to collect his thoughts, and the first sounds that escaped his lips were the concluding words of the rondo which had had been so ruthlessly interrupted;

"Constant ever I will be, Constant...."

His next thought was to wonder what had happened; and in order to find an answer, he pushed aside the broken thatch, so that his head appeared above the _debris_. "The gourbi leveled to the ground!" he exclaimed, "surely a waterspout has passed along the coast."

He felt all over his body to perceive what injuries he had sustained, but not a sprain nor a scratch could he discover. "Where are you, Ben Zoof?" he shouted.

"Here, sir!" and with military promptitude a second head protruded from the rubbish.

"Have you any notion what has happened, Ben Zoof?"

"I've a notion, captain, that it's all up with us."

"Nonsense, Ben Zoof; it is nothing but a waterspout!"

"Very good, sir," was the philosophical reply, immediately followed by the query, "Any bones broken, sir?"

"None whatever," said the captain.

Both men were soon on their feet, and began to make a vigorous clearance of the ruins, beneath which they found that their arms, cooking utensils, and other property, had sustained little injury.

"By-the-by, what o'clock is it?" asked the captain.

"It must be eight o'clock, at least," said Ben Zoof, looking at the sun, which was a considerable height above the horizon. "It is almost time for us to start."

"To start! what for?"

"To keep your appointment with Count Timascheff."

"By Jove! I had forgotten all about it!" exclaimed Servadac. Then looking at his watch, he cried, "What are you thinking of, Ben Zoof? It is scarcely two o'clock."

"Two in the morning, or two in the afternoon?" asked Ben Zoof, again regarding the sun.

Servadac raised his watch to his ear. "It is going," said he; "but, by all the wines of Medoc, I am puzzled. Don't you see the sun is in the west? It must be near setting."

"Setting, captain! Why, it is rising finely, like a conscript at the sound of the reveille. It is considerably higher since we have been talking."

Incredible as it might appear, the fact was undeniable that the sun was rising over the Shelif from that quarter of the horizon behind which it usually sank for the latter portion of its daily round. They were utterly bewildered. Some mysterious phenomenon must not only have altered the position of the sun in the sidereal system, but must even have brought about an important modification of the earth's rotation on her axis.

Captain Servadac consoled himself with the prospect of reading an explanation of the mystery in next week's newspapers, and turned his attention to what was to him of more immediate importance. "Come, let us be off," said he to his orderly; "though heaven and earth be topsy-turvy, I must be at my post this morning."

"To do Count Timascheff the honor of running him through the body," added Ben Zoof.

If Servadac and his orderly had been less preoccupied, they would have noticed that a variety of other physical changes besides the apparent alteration in the movement of the sun had been evolved during the atmospheric disturbances of that New Year's night. As they descended the steep footpath leading from the cliff towards the Shelif, they were unconscious that their respiration became forced and rapid, like that of a mountaineer when he has reached an altitude where the air has become less charged with oxygen. They were also unconscious that their voices were thin and feeble; either they must themselves have become rather deaf, or it was evident that the air had become less capable of transmitting sound.

The weather, which on the previous evening had been very foggy, had entirely changed. The sky had assumed a singular tint, and was soon covered with lowering clouds that completely hid the sun. There were, indeed, all the
signs of a coming storm, but the vapor, on account of the insufficient condensation, failed to fall.

The sea appeared quite deserted, a most unusual circumstance along this coast, and not a sail nor a trail of smoke broke the gray monotony of water and sky. The limits of the horizon, too, had become much circumscribed. On land, as well as on sea, the remote distance had completely disappeared, and it seemed as though the globe had assumed a more decided convexity.

At the pace at which they were walking, it was very evident that the captain and his attendant would not take long to accomplish the three miles that lay between the gourbi and the place of rendezvous. They did not exchange a word, but each was conscious of an unusual buoyancy, which appeared to lift up their bodies and give as it were, wings to their feet. If Ben Zoof had expressed his sensations in words, he would have said that he felt "up to anything," and he had even forgotten to taste so much as a crust of bread, a lapse of memory of which the worthy soldier was rarely guilty.

As these thoughts were crossing his mind, a harsh bark was heard to the left of the footpath, and a jackal was seen emerging from a large grove of lentisks. Regarding the two wayfarers with manifest uneasiness, the beast took up its position at the foot of a rock, more than thirty feet in height. It belonged to an African species distinguished by a black spotted skin, and a black line down the front of the legs. At night-time, when they scour the country in herds, the creatures are somewhat formidable, but singly they are no more dangerous than a dog. Though by no means afraid of them, Ben Zoof had a particular aversion to jackals, perhaps because they had no place among the fauna of his beloved Montmartre. He accordingly began to make threatening gestures, when, to the unmitigated astonishment of himself and the captain, the animal darted forward, and in one single bound gained the summit of the rock.

"Good Heavens!" cried Ben Zoof, "that leap must have been thirty feet at least."

"True enough," replied the captain; "I never saw such a jump."

Meantime the jackal had seated itself upon its haunches, and was staring at the two men with an air of impudent defiance. This was too much for Ben Zoof's forbearance, and stooping down he caught up a huge stone, when to his surprise, he found that it was no heavier than a piece of petrified sponge. "Confound the brute!" he exclaimed, "I might as well throw a piece of bread at him. What accounts for its being as light as this?"

Nothing daunted, however, he hurled the stone into the air. It missed its aim; but the jackal, deeming it on the whole prudent to decamp, disappeared across the trees and hedges with a series of bounds, which could only be likened to those that might be made by an india-rubber kangaroo. Ben Zoof was sure that his own powers of propelling must equal those of a howitzer, for his stone, after a lengthened flight through the air, fell to the ground full five hundred paces the other side of the rock.

The orderly was now some yards ahead of his master, and had reached a ditch full of water, and about ten feet wide. With the intention of clearing it, he made a spring, when a loud cry burst from Servadac. "Ben Zoof, you idiot! What are you about? You will break your back!"

And well might he be alarmed, for Ben Zoof had sprung to a height of forty feet into the air. Fearful of the consequences that would attend the descent of his servant to _terra firma_, Servadac bounded forwards, to be on the other side of the ditch in time to break his fall. But the muscular effort that he made carried him in his turn to an altitude of thirty feet; in his ascent he passed Ben Zoof, who had already commenced his downward course; and then, obedient to the laws of gravitation, he descended with increasing rapidity, and alighted upon the earth without experiencing a shock greater than if he had merely made a bound of four or five feet high.

Ben Zoof burst into a roar of laughter. "Bravo!" he said, "we should make a good pair of clowns."

But the captain was inclined to take a more serious view of the matter. For a few seconds he stood lost in thought, then said solemnly, "Ben Zoof, I must be dreaming. Pinch me hard; I must be either asleep or mad."

"It is very certain that something has happened to us," said Ben Zoof. "I have occasionally dreamed that I was a swallow flying over the Montmartre, but I never experienced anything of this kind before; it must be peculiar to the coast of Algeria."

Servadac was stupefied; he felt instinctively that he was not dreaming, and yet was powerless to solve the mystery. He was not, however, the man to puzzle himself for long over any insoluble problem. "Come what may," he presently exclaimed, "we will make up our minds for the future to be surprised at nothing."

"Right, captain," replied Ben Zoof; "and, first of all, let us settle our little score with Count Timascheff."

Beyond the ditch lay a small piece of meadow land, about an acre in extent. A soft and delicious herbage carpeted the soil, whilst trees formed a charming framework to the whole. No spot could have been chosen more suitable for the meeting between the two adversaries.

Servadac cast a hasty glance round. No one was in sight. "We are the first on the field," he said.

"Not so sure of that, sir," said Ben Zoof.

"What do you mean?" asked Servadac, looking at his watch, which he had set as nearly as possible by the sun before leaving the gourbi; "it is not nine o'clock yet."
"Look up there, sir. I am much mistaken if that is not the sun;" and as Ben Zoof spoke, he pointed directly overhead to where a faint white disc was dimly visible through the haze of clouds.

"Nonsense!" exclaimed Servadac. "How can the sun be in the zenith, in the month of January, in lat. 39 degrees N.?

"Can't say, sir. I only know the sun is there; and at the rate he has been traveling, I would lay my cap to a dish of couscous that in less than three hours he will set."

Hector Servadac, mute and motionless, stood with folded arms. Presently he roused himself, and began to look about again. "What means all this?" he murmured. "Laws of gravity disturbed! Points of the compass reversed! The length of day reduced one half! Surely this will indefinitely postpone my meeting with the count. Something has happened; Ben Zoof and I cannot both be mad!"

The orderly, meantime, surveyed his master with the greatest equanimity; no phenomenon, however extraordinary, would have drawn from him a single exclamation of surprise. "Do you see anyone, Ben Zoof?" asked the captain, at last.

"No one, sir; the count has evidently been and gone." "But supposing that to be the case," persisted the captain, "my seconds would have waited, and not seeing me, would have come on towards the gourbi. I can only conclude that they have been unable to get here; and as for Count Timascheff--"

Meantime, with the agility of a monkey, Ben Zoof had clambered to the top of a eucalyptus, and from his lofty perch was surveying the country to the south, as well as towards both Tenes and Mostaganem. On descending, he informed the captain that the plain was deserted.

"We will make our way to the river, and get over into Mostaganem," said the captain.

The Shelif was not more than a mile and a half from the meadow, but no time was to be lost if the two men were to reach the town before nightfall. Though still hidden by heavy clouds, the sun was evidently declining fast; and what was equally inexplicable, it was not following the oblique curve that in these latitudes and at this time of year might be expected, but was sinking perpendicularly on to the horizon.

As he went along, Captain Servadac pondered deeply. Perchance some unheard-of phenomenon had modified the rotary motion of the globe; or perhaps the Algerian coast had been transported beyond the equator into the southern hemisphere. Yet the earth, with the exception of the alteration in its convexity, in this part of Africa at least, seemed to have undergone no change of any very great importance. As far as the eye could reach, the shore was, as it had ever been, a succession of cliffs, beach, and arid rocks, tinged with a red ferruginous hue. To the south—if south, in this inverted order of things, it might still be called—the face of the country also appeared unaltered, and some leagues away, the peaks of the Merdeyah mountains still retained their accustomed outline.

Presently a rift in the clouds gave passage to an oblique ray of light that clearly proved that the sun was setting in the east.

"Well, I am curious to know what they think of all this at Mostaganem," said the captain. "I wonder, too, what the Minister of War will say when he receives a telegram informing him that his African colony has become, not morally, but physically disorganized; that the cardinal points are at variance with ordinary rules, and that the sun in the month of January is shining down vertically upon our heads."

Ben Zoof, whose ideas of discipline were extremely rigid, at once suggested that the colony should be put under the surveillance of the police, that the cardinal points should be placed under restraint, and that the sun should be shot for breach of discipline.

Meantime, they were both advancing with the utmost speed. The decompression of the atmosphere made the specific gravity of their bodies extraordinarily light, and they ran like hares and leaped like chamois. Leaving the devious windings of the footpath, they went as a crow would fly across the country. Hedges, trees, and streams were cleared at a bound, and under these conditions Ben Zoof felt that he could have overstepped Montmartre at a single stride. The earth seemed as elastic as the springboard of an acrobat; they scarcely touched it with their feet, and their only fear was lest the height to which they were propelled would consume the time which they were saving by their short cut across the fields.
It was not long before their wild career brought them to the right bank of the Shelif. Here they were compelled to stop, for not only had the bridge completely disappeared, but the river itself no longer existed. Of the left bank there was not the slightest trace, and the right bank, which on the previous evening had bounded the yellow stream, as it murmured peacefully along the fertile plain, had now become the shore of a tumultuous ocean, its azure waters extending westwards as far as the eye could reach, and annihilating the tract of country which had hitherto formed the district of Mostaganem. The shore coincided exactly with what had been the right bank of the Shelif, and in a slightly curved line ran north and south, whilst the adjacent groves and meadows all retained their previous positions. But the river-bank had become the shore of an unknown sea.

Eager to throw some light upon the mystery, Servadac hurriedly made his way through the oleander bushes that overhung the shore, took up some water in the hollow of his hand, and carried it to his lips. "Salt as brine!" he exclaimed, as soon as he had tasted it. "The sea has undoubtedly swallowed up all the western part of Algeria."

"It will not last long, sir," said Ben Zoof. "It is, probably, only a severe flood."

The captain shook his head. "Worse than that, I fear, Ben Zoof," he replied with emotion. "It is a catastrophe that may have very serious consequences. What can have become of all my friends and fellow-officers?"

Ben Zoof was silent. Rarely had he seen his master so much agitated; and though himself inclined to receive these phenomena with philosophic indifference, his notions of military duty caused his countenance to reflect the captain's expression of amazement.

But there was little time for Servadac to examine the changes which a few hours had wrought. The sun had already reached the eastern horizon, and just as though it were crossing the ecliptic under the tropics, it sank like a cannon ball into the sea. Without any warning, day gave place to night, and earth, sea, and sky were immediately wrapped in profound obscurity.

CHAPTER VI. THE CAPTAIN MAKES AN EXPLORATION

Hector Servadac was not the man to remain long unnerved by any untoward event. It was part of his character to discover the why and the wherefore of everything that came under his observation, and he would have faced a cannon ball the more unflinchingly from understanding the dynamic force by which it was propelled. Such being his temperament, it may well be imagined that he was anxious not to remain long in ignorance of the cause of the phenomena which had been so startling in their consequences.

"We must inquire into this to-morrow," he exclaimed, as darkness fell suddenly upon him. Then, after a pause, he added: "That is to say, if there is to be a to-morrow; for if I were to be put to the torture, I could not tell what has become of the sun."

"May I ask, sir, what we are to do now?" put in Ben Zoof.

"Stay where we are for the present; and when daylight appears--if it ever does appear--we will explore the coast to the west and south, and return to the gourbi. If we can find out nothing else, we must at least discover where we are."

"Meanwhile, sir, may we go to sleep?"

"Certainly, if you like, and if you can."

Nothing loath to avail himself of his master's permission, Ben Zoof crouched down in an angle of the shore, threw his arms over his eyes, and very soon slept the sleep of the ignorant, which is often sounder than the sleep of the just. Overwhelmed by the questions that crowded upon his brain, Captain Servadac could only wander up and down the shore. Again and again he asked himself what the catastrophe could portend. Had the towns of Algiers, Oran, and Mostaganem escaped the inundation? Could he bring himself to believe that all the inhabitants, his friends, and comrades had perished; or was it not more probable that the Mediterranean had merely invaded the region of the mouth of the Shelif? But this supposition did not in the least explain the other physical disturbances. Another hypothesis that presented itself to his mind was that the African coast might have been suddenly transported to the equatorial zone. But although this might get over the difficulty of the altered altitude of the sun and the absence of twilight, yet it would neither account for the sun setting in the east, nor for the length of the day being reduced to six hours.

"We must wait till to-morrow," he repeated; adding, for he had become distrustful of the future, "that is to say, if to-morrow ever comes."

Although not very learned in astronomy, Servadac was acquainted with the position of the principal constellations. It was therefore a considerable disappointment to him that, in consequence of the heavy clouds, not a star was visible in the firmament. To have ascertained that the pole-star had become displaced would have been an undeniable proof that the earth was revolving on a new axis; but not a rift appeared in the lowering clouds, which seemed to threaten torrents of rain.
It happened that the moon was new on that very day; naturally, therefore, it would have set at the same time as the sun. What, then, was the captain's bewilderment when, after he had been walking for about an hour and a half, he noticed on the western horizon a strong glare that penetrated even the masses of the clouds.

"The moon in the west!" he cried aloud; but suddenly bethinking himself, he added: "But no, that cannot be the moon; unless she had shifted very much nearer the earth, she could never give a light as intense as this."

As he spoke the screen of vapor was illuminated to such a degree that the whole country was as it were bathed in twilight. "What can this be?" soliloquized the captain. "It cannot be the sun, for the sun set in the east only an hour and a half ago. Would that those clouds would disclose what enormous luminary lies behind them! What a fool I was not to have learnt more astronomy! Perhaps, after all, I am racking my brain over something that is quite in the ordinary course of nature."

But, reason as he might, the mysteries of the heavens still remained impenetrable. For about an hour some luminous body, its disc evidently of gigantic dimensions, shed its rays upon the upper strata of the clouds; then, marvelous to relate, instead of obeying the ordinary laws of celestial mechanism, and descending upon the opposite horizon, it seemed to retreat farther off, grew dimmer, and vanished.

The darkness that returned to the face of the earth was not more profound than the gloom which fell upon the captain's soul. Everything was incomprehensible. The simplest mechanical rules seemed falsified; the planets had defied the laws of gravitation; the motions of the celestial spheres were erroneous as those of a watch with a defective mainspring, and there was reason to fear that the sun would never again shed his radiance upon the earth.

But these last fears were groundless. In three hours' time, without any intervening twilight, the morning sun made its appearance in the west, and day once more had dawned. On consulting his watch, Servadac found that night had lasted precisely six hours. Ben Zoof, who was unaccustomed to so brief a period of repose, was still slumbering soundly.

"Come, wake up!" said Servadac, shaking him by the shoulder; "it is time to start."

"Time to start?" exclaimed Ben Zoof, rubbing his eyes. "I feel as if I had only just gone to sleep."

"You have slept all night, at any rate," replied the captain; "it has only been for six hours, but you must make it enough."

"Enough it shall be, sir," was the submissive rejoinder.

"And now," continued Servadac, "we will take the shortest way back to the gourbi, and see what our horses think about it all."

"They will think that they ought to be groomed," said the orderly.

"Very good; you may groom them and saddle them as quickly as you like. I want to know what has become of the rest of Algeria: if we cannot get round by the south to Mostaganem, we must go eastwards to Tenes."

And forthwith they started. Beginning to feel hungry, they had no hesitation in gathering figs, dates, and oranges from the plantations that formed a continuous rich and luxuriant orchard along their path. The district was quite deserted, and they had no reason to fear any legal penalty.

In an hour and a half they reached the gourbi. Everything was just as they had left it, and it was evident that no one had visited the place during their absence. All was desolate as the shore they had quitted.

The preparations for the expedition were brief and simple. Ben Zoof saddled the horses and filled his pouch with biscuits and game; water, he felt certain, could be obtained in abundance from the numerous affluents of the Shelif, which, although they had now become tributaries of the Mediterranean, still meandered through the plain. Captain Servadac mounted his horse Zephyr, and Ben Zoof simultaneously got astride his mare Galette, named after the mill of Montmartre. They galloped off in the direction of the Shelif, and were not long in discovering that the diminution in the pressure of the atmosphere had precisely the same effect upon their horses as it had had upon themselves. Their muscular strength seemed five times as great as hitherto; their hoofs scarcely touched the ground, and they seemed transformed from ordinary quadrupeds into veritable hippogriffs. Happily, Servadac and his orderly were fearless riders; they made no attempt to curb their steeds, but even urged them to still greater exertions. Twenty minutes sufficed to carry them over the four or five miles that intervened between the gourbi and the mouth of the Shelif; then, slackening their speed, they proceeded at a more leisurely pace to the southeast, along what had once been the right bank of the river, but which, although it still retained its former characteristics, was now the boundary of a sea, which extending farther than the limits of the horizon, must have swallowed up at least a large portion of the province of Oran. Captain Servadac knew the country well; he had at one time been engaged upon a trigonometrical survey of the district, and consequently had an accurate knowledge of its topography. His idea now was to draw up a report of his investigations: to whom that report should be delivered was a problem he had yet to solve.

During the four hours of daylight that still remained, the travelers rode about twenty-one miles from the river mouth. To their vast surprise, they did not meet a single human being. At nightfall they again encamped in a slight
bend of the shore, at a point which on the previous evening had faced the mouth of the Mina, one of the left-hand affluents of the Shelif, but now absorbed into the newly revealed ocean. Ben Zoof made the sleeping accommodation as comfortable as the circumstances would allow; the horses were clogged and turned out to feed upon the rich pasture that clothed the shore, and the night passed without special incident.

At sunrise on the following morning, the 2nd of January, the two men silently descended the mountain and remounted their horses. Before evening they had reached the foot of the Merdeyah Mountains, which, before the cataclysm, had formed the extremity of the chain of the Little Atlas. The ridge, however, had been violently ruptured, and now rose perpendicularly from the water.

On the following morning Servadac and Ben Zoof traversed one of the mountain gorges; and next, in order to make a more thorough acquaintance with the limits and condition of the section of Algerian territory of which they seemed to be left as the sole occupants, they dismounted, and proceeded on foot to the summit of one of the highest peaks. From this elevation they ascertained that from the base of the Merdeyah to the Mediterranean, a distance of about eighteen miles, a new coast line had come into existence; no land was visible in any direction; no isthmus existed to form a connecting link with the territory of Tenes, which had entirely disappeared. The result was that Captain Servadac was driven to the irresistible conclusion that the tract of land which he had been surveying was no longer formed by the natural bank of the Shelif, but consisting of an absolutely new coast-line. No land was in sight. Nothing could be seen of Orleansville, which ought to have been about six miles to the southwest; and Ben Zoof, who had mounted the highest point of view attainable, could distinguish sea, and nothing but sea, to the farthest horizon.

Quitting their encampment and riding on, the bewildered explorers kept close to the new shore. This, since it had ceased to be formed by the original river bank, had considerably altered its aspect. Frequent landslips occurred, and in many places deep chasms rifted the ground; great gaps furrowed the fields, and trees, half uprooted, overhung the water, remarkable by the fantastic distortions of their gnarled trunks, looking as though they had been chopped by a hatchet.

The sinuosities of the coast line, alternately gully and headland, had the effect of making a devious progress for the travelers, and at sunset, although they had accomplished more than twenty miles, they had only just arrived at the foot of the Merdeyah Mountains, which, before the cataclysm, had formed the extremity of the chain of the Little Atlas. The ridge, however, had been violently ruptured, and now rose perpendicularly from the water.

On the following morning Servadac and Ben Zoof traversed one of the mountain gorges; and next, in order to make a more thorough acquaintance with the limits and condition of the section of Algerian territory of which they seemed to be left as the sole occupants, they dismounted, and proceeded on foot to the summit of one of the highest peaks. From this elevation they ascertained that from the base of the Merdeyah to the Mediterranean, a distance of about eighteen miles, a new coast line had come into existence; no land was visible in any direction; no isthmus existed to form a connecting link with the territory of Tenes, which had entirely disappeared. The result was that Captain Servadac was driven to the irresistible conclusion that the tract of land which he had been surveying was no longer formed by the original river bank, but now absorbed into the newly revealed ocean. Ben Zoof made the sleeping accommodation as comfortable as the circumstances would allow; the horses were clogged and turned out to feed upon the rich pasture that clothed the shore, and the night passed without special incident.

At sunrise on the following morning, the 2nd of January, or what, according to the ordinary calendar, would have been the night of the 1st, the captain and his orderly remounted their horses, and during the six-hours' day accomplished a distance of forty-two miles. The right bank of the river still continued to be the margin of the land, and only in one spot had its integrity been impaired. This was about twelve miles from the Mina, and on the site of the annex or suburb of Surkelmittoo. Here a large portion of the bank had been swept away, and the hamlet, with its eight hundred inhabitants, had no doubt been swallowed up by the encroaching waters. It seemed, therefore, more than probable that a similar fate had overtaken the larger towns beyond the Shelif.

In the evening the explorers encamped, as previously, in a nook of the shore which here abruptly terminated their new domain, not far from where they might have expected to find the important village of Memounturroy; but of this, too, there was now no trace. "I had quite reckoned upon a supper and a bed at Orleansville to-night," said Servadac, as, full of despondency, he surveyed the waste of water.

"Quite impossible," replied Ben Zoof, "except you had gone by a boat. But cheer up, sir, cheer up; we will soon devise some means for getting across to Mostaganem."

"If, as I hope," rejoined the captain, "we are on a peninsula, we are more likely to get to Tenes; there we shall hear the news."

"Far more likely to carry the news ourselves," answered Ben Zoof, as he threw himself down for his night's rest.

Six hours later, only waiting for sunrise, Captain Servadac set himself in movement again to renew his investigations. At this spot the shore, that hitherto had been running in a southeasterly direction, turned abruptly to the north, being no longer formed by the natural bank of the Shelif, but consisting of an absolutely new coast-line. No land was in sight. Nothing could be seen of Orleansville, which ought to have been about six miles to the southwest; and Ben Zoof, who had mounted the highest point of view attainable, could distinguish sea, and nothing but sea, to the farthest horizon.

On the following morning Servadac and Ben Zoof traversed one of the mountain gorges; and next, in order to make a more thorough acquaintance with the limits and condition of the section of Algerian territory of which they seemed to be left as the sole occupants, they dismounted, and proceeded on foot to the summit of one of the highest peaks. From this elevation they ascertained that from the base of the Merdeyah to the Mediterranean, a distance of about eighteen miles, a new coast line had come into existence; no land was visible in any direction; no isthmus existed to form a connecting link with the territory of Tenes, which had entirely disappeared. The result was that Captain Servadac was driven to the irresistible conclusion that the tract of land which he had been surveying was not, as he had at first imagined, a peninsula; it was actually an island.

Strictly speaking, this island was quadrilateral, but the sides were so irregular that it was much more nearly a triangle, the comparison of the sides exhibiting these proportions: The section of the right bank of the Shelif, seventy-two miles; the southern boundary from the Shelif to the chain of the Little Atlas, twenty-one miles; from the Little Atlas to the Mediterranean, eighteen miles; and sixty miles of the shore of the Mediterranean itself, making in all an entire circumference of about 171 miles.

"What does it all mean?" exclaimed the captain, every hour growing more and more bewildered.

"The will of Providence, and we must submit," replied Ben Zoof, calm and undisturbed. With this reflection, the two men silently descended the mountain and remounted their horses. Before evening they had reached the Mediterranean. On their road they failed to discern a vestige of the little town of Montenotte; like Tenes, of which not so much as a ruined cottage was visible on the horizon, it seemed to be annihilated.

On the following day, the 6th of January, the two men made a forced march along the coast of the Mediterranean, which they found less altered than the captain had at first supposed; but four villages had entirely disappeared, and the headlands, unable to resist the shock of the convulsion, had been detached from the mainland.
The circuit of the island had been now completed, and the explorers, after a period of sixty hours, found themselves once more beside the ruins of their gourbi. Five days, or what, according to the established order of things, would have been two days and a half, had been occupied in tracing the boundaries of their new domain; and they had ascertained beyond a doubt that they were the sole human inhabitants left upon the island.

"Well, sir, here you are, Governor General of Algeria!" exclaimed Ben Zoof, as they reached the gourbi.

"With not a soul to govern," gloomily rejoined the captain.

"How so? Do you not reckon me?"

"Pshaw! Ben Zoof, what are you?"

"What am I? Why, I am the population."

The captain deigned no reply, but, muttering some expressions of regret for the fruitless trouble he had taken about his rondo, betook himself to rest.

CHAPTER VII. BEN ZOOF WATCHES IN VAIN

In a few minutes the governor general and his population were asleep. The gourbi being in ruins, they were obliged to put up with the best accommodation they could find in the adjacent erection. It must be owned that the captain's slumbers were by no means sound; he was agitated by the consciousness that he had hitherto been unable to account for his strange experiences by any reasonable theory. Though far from being advanced in the knowledge of natural philosophy, he had been instructed, to a certain degree, in its elementary principles; and, by an effort of memory, he managed to recall some general laws which he had almost forgotten. He could understand that an altered inclination of the earth's axis with regard to the ecliptic would introduce a change of position in the cardinal points, and bring about a displacement of the sea; but the hypothesis entirely failed to account, either for the shortening of the days, or for the diminution in the pressure of the atmosphere. He felt that his judgment was utterly baffled; his only remaining hope was that the chain of marvels was not yet complete, and that something farther might throw some light upon the mystery.

Ben Zoof's first care on the following morning was to provide a good breakfast. To use his own phrase, he was as hungry as the whole population of three million Algerians, of whom he was the representative, and he must have enough to eat. The catastrophe which had overwhelmed the country had left a dozen eggs uninjured, and upon these, with a good dish of his famous couscous, he hoped that he and his master might have a sufficiently substantial meal. The stove was ready for use, the copper skillet was as bright as hands could make it, and the beads of condensed steam upon the surface of a large stone al-caraza gave evidence that it was supplied with water. Ben Zoof at once lighted a fire, singing all the time, according to his wont, a snatch of an old military refrain.

Ever on the lookout for fresh phenomena, Captain Servadac watched the preparations with a curious eye. It struck him that perhaps the air, in its strangely modified condition, would fail to supply sufficient oxygen, and that the stove, in consequence, might not fulfill its function. But no; the fire was lighted just as usual, and fanned into vigor by Ben Zoof applying his mouth in lieu of bellows, and a bright flame started up from the midst of the twigs and coal. The skillet was duly set upon the stove, and Ben Zoof was prepared to wait awhile for the water to boil. Taking up the eggs, he was surprised to notice that they hardly weighed more than they would if they had been mere shells; but he was still more surprised when he saw that before the water had been two minutes over the fire it was at full boil.

"By jingo!" he exclaimed, "a precious hot fire!"

Servadac reflected. "It cannot be that the fire is hotter," he said, "the peculiarity must be in the water." And taking down a centigrade thermometer, which hung upon the wall, he plunged it into the skillet. Instead of 100 degrees, the instrument registered only 66 degrees.

"Take my advice, Ben Zoof," he said; "leave your eggs in the saucepan a good quarter of an hour."

"Boil them hard! That will never do," objected the orderly.

"You will not find them hard, my good fellow. Trust me, we shall be able to dip our sippets into the yolks easily enough."

The captain was quite right in his conjecture, that this new phenomenon was caused by a diminution in the pressure of the atmosphere. Water boiling at a temperature of 66 degrees was itself an evidence that the column of air above the earth's surface had become reduced by one-third of its altitude. The identical phenomenon would have occurred at the summit of a mountain 35,000 feet high; and had Servadac been in possession of a barometer, he would have immediately discovered the fact that only now for the first time, as the result of experiment, revealed itself to him--a fact, moreover, which accounted for the compression of the blood-vessels which both he and Ben Zoof had experienced, as well as for the attenuation of their voices and their accelerated breathing. "And yet," he argued with himself, "if our encampment has been projected to so great an elevation, how is it that the sea remains at
its proper level?"

Once again Hector Servadac, though capable of tracing consequences, felt himself totally at a loss to comprehend their cause; hence his agitation and bewilderment!

After their prolonged immersion in the boiling water, the eggs were found to be only just sufficiently cooked; the couscous was very much in the same condition; and Ben Zoof came to the conclusion that in future he must be careful to commence his culinary operations an hour earlier. He was rejoiced at last to help his master, who, in spite of his perplexed preoccupation, seemed to have a very fair appetite for breakfast.

"Well, captain?" said Ben Zoof presently, such being his ordinary way of opening conversation.

"Well, Ben Zoof?" was the captain's invariable response to his servant's formula.

"What are we to do now, sir?"

"We can only for the present wait patiently where we are. We are encamped upon an island, and therefore we can only be rescued by sea."

"But do you suppose that any of our friends are still alive?" asked Ben Zoof.

"Oh, I think we must indulge the hope that this catastrophe has not extended far. We must trust that it has limited its mischief to some small portion of the Algerian coast, and that our friends are all alive and well. No doubt the governor general will be anxious to investigate the full extent of the damage, and will send a vessel from Algiers to explore. It is not likely that we shall be forgotten. What, then, you have to do, Ben Zoof, is to keep a sharp lookout, and to be ready, in case a vessel should appear, to make signals at once."

"But if no vessel should appear!" sighed the orderly.

"Then we must build a boat, and go in search of those who do not come in search of us."

"Very good. But what sort of a sailor are you?"

"Everyone can be a sailor when he must," said Servadac calmly.

Ben Zoof said no more. For several succeeding days he scanned the horizon uninterruptedly with his telescope. His watching was in vain. No ship appeared upon the desert sea. "By the name of a Kabyle!" he broke out impatiently, "his Excellency is grossly negligent!"

Although the days and nights had become reduced from twenty-four hours to twelve, Captain Servadac would not accept the new condition of things, but resolved to adhere to the computations of the old calendar. Notwithstanding, therefore, that the sun had risen and set twelve times since the commencement of the new year, he persisted in calling the following day the 6th of January. His watch enabled him to keep an accurate account of the passing hours.

In the course of his life, Ben Zoof had read a few books. After pondering one day, he said: "It seems to me, captain, that you have turned into Robinson Crusoe, and that I am your man Friday. I hope I have not become a negro."

"No," replied the captain. "Your complexion isn't the fairest in the world, but you are not black yet."

"Well, I had much sooner be a white Friday than a black one," rejoined Ben Zoof.

Still no ship appeared; and Captain Servadac, after the example of all previous Crusoes, began to consider it advisable to investigate the resources of his domain. The new territory of which he had become the monarch he named Gourbi Island. It had a superficial area of about nine hundred square miles. Bullocks, cows, goats, and sheep existed in considerable numbers; and as there seemed already to be an abundance of game, it was hardly likely that a future supply would fail them. The condition of the cereals was such as to promise a fine ingathering of wheat, maize, and rice; so that for the governor and his population, with their two horses, not only was there ample provision, but even if other human inhabitants besides themselves should yet be discovered, there was not the remotest prospect of any of them perishing by starvation.

From the 6th to the 13th of January the rain came down in torrents; and, what was quite an unusual occurrence at this season of the year, several heavy storms broke over the island. In spite, however, of the continual downfall, the heavens still remained veiled in cloud. Servadac, moreover, did not fail to observe that for the season the temperature was unusually high; and, as a matter still more surprising, that it kept steadily increasing, as though the earth were gradually and continuously approximating to the sun. In proportion to the rise of temperature, the light also assumed greater intensity; and if it had not been for the screen of vapor interposed between the sky and the island, the irradiation which would have illumined all terrestrial objects would have been vivid beyond all precedent.

But neither sun, moon, nor star ever appeared; and Servadac's irritation and annoyance at being unable to identify any one point of the firmament may be more readily imagined than described. On one occasion Ben Zoof endeavored to mitigate his master's impatience by exhorting him to assume the resignation, even if he did not feel the indifference, which he himself experienced; but his advice was received with so angry a rebuff that he retired in all haste, abashed, to résumé his watchman's duty, which he performed with exemplary perseverance. Day and night, with the shortest possible intervals of rest, despite wind, rain, and storm, he mounted guard upon the cliff--but all in
vain. Not a speck appeared upon the desolate horizon. To say the truth, no vessel could have stood against the weather. The hurricane raged with tremendous fury, and the waves rose to a height that seemed to defy calculation. Never, even in the second era of creation, when, under the influence of internal heat, the waters rose in vapor to descend in deluge back upon the world, could meteorological phenomena have been developed with more impressive intensity.

But by the night of the 13th the tempest appeared to have spent its fury; the wind dropped; the rain ceased as if by a spell; and Servadac, who for the last six days had confined himself to the shelter of his roof, hastened to join Ben Zoof at his post upon the cliff. Now, he thought, there might be a chance of solving his perplexity; perhaps now the huge disc, of which he had had an imperfect glimpse on the night of the 31st of December, might again reveal itself; at any rate, he hoped for an opportunity of observing the constellations in a clear firmament above.

The night was magnificent. Not a cloud dimmed the luster of the stars, which spangled the heavens in surpassing brilliancy, and several nebulae which hitherto no astronomer had been able to discern without the aid of a telescope were clearly visible to the naked eye.

By a natural impulse, Servadac's first thought was to observe the position of the pole-star. It was in sight, but so near to the horizon as to suggest the utter impossibility of its being any longer the central pivot of the sidereal system; it occupied a position through which it was out of the question that the axis of the earth indefinitely prolonged could ever pass. In his impression he was more thoroughly confirmed when, an hour later, he noticed that the star had approached still nearer the horizon, as though it had belonged to one of the zodiacal constellations.

The pole-star being manifestly thus displaced, it remained to be discovered whether any other of the celestial bodies had become a fixed center around which the constellations made their apparent daily revolutions. To the solution of this problem Servadac applied himself with the most thoughtful diligence. After patient observation, he satisfied himself that the required conditions were answered by a certain star that was stationary not far from the horizon. This was Vega, in the constellation Lyra, a star which, according to the precession of the equinoxes, will take the place of our pole-star 12,000 years hence. The most daring imagination could not suppose that a period of 12,000 years had been crowded into the space of a fortnight; and therefore the captain came, as to an easier conclusion, to the opinion that the earth's axis had been suddenly and immensely shifted; and from the fact that the axis, if produced, would pass through a point so little removed above the horizon, he deduced the inference that the Mediterranean must have been transported to the equator.

Lost in bewildering maze of thought, he gazed long and intently upon the heavens. His eyes wandered from where the tail of the Great Bear, now a zodiacal constellation, was scarcely visible above the waters, to where the stars of the southern hemisphere were just breaking on his view. A cry from Ben Zoof recalled him to himself.

"The moon!" shouted the orderly, as though overjoyed at once again beholding what the poet has called:

"The kind companion of terrestrial night;"

and he pointed to a disc that was rising at a spot precisely opposite the place where they would have expected to see the sun. "The moon!" again he cried.

But Captain Servadac could not altogether enter into his servant's enthusiasm. If this were actually the moon, her distance from the earth must have been increased by some millions of miles. He was rather disposed to suspect that it was not the earth's satellite at all, but some planet with its apparent magnitude greatly enlarged by its approximation to the earth. Taking up the powerful field-glass which he was accustomed to use in his surveying operations, he proceeded to investigate more carefully the luminous orb. But he failed to trace any of the lineaments, supposed to resemble a human face, that mark the lunar surface; he failed to decipher any indications of hill and plain; nor could he make out the aureole of light which emanates from what astronomers have designated Mount Tycho. "It is not the moon," he said slowly.

"Not the moon?" cried Ben Zoof. "Why not?"

"It is not the moon," again affirmed the captain.

"Why not?" repeated Ben Zoof, unwilling to renounce his first impression.

"Because there is a small satellite in attendance." And the captain drew his servant's attention to a bright speck, apparently about the size of one of Jupiter's satellites seen through a moderate telescope, that was clearly visible just within the focus of his glass.

Here, then, was a fresh mystery. The orbit of this planet was assuredly interior to the orbit of the earth, because it accompanied the sun in its apparent motion; yet it was neither Mercury nor Venus, because neither one nor the other of these has any satellite at all.

The captain stamped and stamped again with mingled vexation, agitation, and bewilderment. "Confound it!" he cried, "if this is neither Venus nor Mercury, it must be the moon; but if it is the moon, whence, in the name of all the gods, has she picked up another moon for herself?"

The captain was in dire perplexity.
CHAPTER VIII. VENUS IN PERILOUS PROXIMITY

The light of the returning sun soon extinguished the glory of the stars, and rendered it necessary for the captain to postpone his observations. He had sought in vain for further trace of the huge disc that had so excited his wonder on the 1st, and it seemed most probable that, in its irregular orbit, it had been carried beyond the range of vision.

The weather was still superb. The wind, after veering to the west, had sunk to a perfect calm. Pursuing its inverted course, the sun rose and set with undeviating regularity; and the days and nights were still divided into periods of precisely six hours each—a sure proof that the sun remained close to the new equator which manifestly passed through Gourbi Island.

Meanwhile the temperature was steadily increasing. The captain kept his thermometer close at hand where he could repeatedly consult it, and on the 15th he found that it registered 50 degrees centigrade in the shade.

No attempt had been made to rebuild the 'gourbi', but the captain and Ben Zoof managed to make up quarters sufficiently comfortable in the principal apartment of the adjoining structure, where the stone walls, that at first afforded a refuge from the torrents of rain, now formed an equally acceptable shelter from the burning sun. The heat was becoming insufferable, surpassing the heat of Senegal and other equatorial regions; not a cloud ever tempered the intensity of the solar rays; and unless some modification ensued, it seemed inevitable that all vegetation should become scorched and burnt off from the face of the island.

In spite, however, of the profuse perspirations from which he suffered, Ben Zoof, constant to his principles, expressed no surprise at the unwonted heat. No remonstrances from his master could induce him to abandon his watch from the cliff. To withstand the vertical beams of that noontide sun would seem to require a skin of brass and a brain of adamant; but yet, hour after hour, he would remain conscientiously scanning the surface of the Mediterranean, which, calm and deserted, lay outstretched before him. On one occasion, Servadac, in reference to his orderly's indomitable perseverance, happened to remark that he thought he must have been born in the heart of equatorial Africa; to which Ben Zoof replied, with the utmost dignity, that he was born at Montmartre, which was all the same. The worthy fellow was unwilling to own that, even in the matter of heat, the tropics could in any way surpass his own much-loved home.

This unprecedented temperature very soon began to take effect upon the products of the soil. The sap rose rapidly in the trees, so that in the course of a few days buds, leaves, flowers, and fruit had come to full maturity. It was the same with the cereals; wheat and maize sprouted and ripened as if by magic, and for a while a rank and luxuriant pasturage clothed the meadows. Summer and autumn seemed blended into one. If Captain Servadac had been more deeply versed in astronomy, he would perhaps have been able to bring to bear his knowledge that if the axis of the earth, as everything seemed to indicate, now formed a right angle with the plane of the ecliptic, her various seasons, like those of the planet Jupiter, would become limited to certain zones, in which they would remain invariable. But even if he had understood the _rationale_ of the change, the convulsion that had brought it about would have been as much a mystery as ever.

The precocity of vegetation caused some embarrassment. The time for the corn and fruit harvest had fallen simultaneously with that of the haymaking; and as the extreme heat precluded any prolonged exertions, it was evident "the population" of the island would find it difficult to provide the necessary amount of labor. Not that the prospect gave them much concern: the provisions of the 'gourbi' were still far from exhausted, and now that the roughness of the weather had so happily subsided, they had every encouragement to hope that a ship of some sort would soon appear. Not only was that part of the Mediterranean systematically frequented by the government steamers that watched the coast, but vessels of all nations were constantly cruising off the shore.

In spite, however, of all their sanguine speculations, no ship appeared. Ben Zoof admitted the necessity of extemporizing a kind of parasol for himself, otherwise he must literally have been roasted to death upon the exposed summit of the cliff.

Meanwhile, Servadac was doing his utmost—it must be acknowledged, with indifferent success—to recall the lessons of his school-days. He would plunge into the wildest speculations in his endeavors to unravel the difficulties of the new situation, and struggled into a kind of conviction that if there had been a change of manner in the earth's rotation on her axis, there would be a corresponding change in her revolution round the sun, which would involve the consequence of the length of the year being either diminished or increased.

Independently of the increased and increasing heat, there was another very conclusive demonstration that the earth had thus suddenly approximated towards the sun. The diameter of the solar disc was now exactly twice what it ordinarily looks to the naked eye; in fact, it was precisely such as it would appear to an observer on the surface of the planet Venus. The most obvious inference would therefore be that the earth's distance from the sun had been diminished from 91,000,000 to 66,000,000 miles. If the just equilibrium of the earth had thus been destroyed, and
should this diminution of distance still continue, would there not be reason to fear that the terrestrial world would be carried onwards to actual contact with the sun, which must result in its total annihilation?

The continuance of the splendid weather afforded Servadac every facility for observing the heavens. Night after night, constellations in their beauty lay stretched before his eyes—an alphabet which, to his mortification, not to say his rage, he was unable to decipher. In the apparent dimensions of the fixed stars, in their distance, in their relative position with regard to each other, he could observe no change. Although it is established that our sun is approaching the constellation of Hercules at the rate of more than 126,000,000 miles a year, and although Arcturus is traveling through space at the rate of fifty-four miles a second—three times faster than the earth goes round the sun,—yet such is the remoteness of those stars that no appreciable change is evident to the senses. The fixed stars taught him nothing.

Far otherwise was it with the planets. The orbits of Venus and Mercury are within the orbit of the earth, Venus rotating at an average distance of 66,130,000 miles from the sun, and Mercury at that of 35,393,000. After pondering long, and as profoundly as he could, upon these figures, Captain Servadac came to the conclusion that, as the earth was now receiving about double the amount of light and heat that it had been receiving before the catastrophe, it was receiving about the same as the planet Venus; he was driven, therefore, to the estimate of the measure in which the earth must have approximated to the sun, a deduction in which he was confirmed when the opportunity came for him to observe Venus herself in the splendid proportions that she now assumed.

That magnificent planet which—as Phosphorus or Lucifer, Hesperus or Vesper, the evening star, the morning star, or the shepherd's star—has never failed to attract the rapturous admiration of the most indifferent observers, here revealed herself with unprecedented glory, exhibiting all the phases of a lustrous moon in miniature. Various indentations in the outline of its crescent showed that the solar beams were refracted into regions of its surface where the sun had already set, and proved, beyond a doubt, that the planet had an atmosphere of her own; and certain luminous points projecting from the crescent as plainly marked the existence of mountains. As the result of Servadac's computations, he formed the opinion that Venus could hardly be at a greater distance than 6,000,000 miles from the earth.

"And a very safe distance, too," said Ben Zoof, when his master told him the conclusion at which he had arrived.

"All very well for two armies, but for a couple of planets not quite so safe, perhaps, as you may imagine. It is my impression that it is more than likely we may run foul of Venus," said the captain.

"Plenty of air and water there, sir?" inquired the orderly.

"Yes; as far as I can tell, plenty," replied Servadac.

"Then why shouldn't we go and visit Venus?"

Servadac did his best to explain that as the two planets were of about equal volume, and were traveling with great velocity in opposite directions, any collision between them must be attended with the most disastrous consequences to one or both of them. But Ben Zoof failed to see that, even at the worst, the catastrophe could be much more serious than the collision of two railway trains.

The captain became exasperated. "You idiot!" he angrily exclaimed; "cannot you understand that the planets are traveling a thousand times faster than the fastest express, and that if they meet, either one or the other must be destroyed? What would become of your darling Montmartre then?"

The captain had touched a tender chord. For a moment Ben Zoof stood with clenched teeth and contracted muscles; then, in a voice of real concern, he inquired whether anything could be done to avert the calamity.

"Nothing whatever; so you may go about your own business," was the captain's brusque rejoinder.

All discomfited and bewildered, Ben Zoof retired without a word.

During the ensuing days the distance between the two planets continued to decrease, and it became more and more obvious that the earth, on her new orbit, was about to cross the orbit of Venus. Throughout this time the earth had been making a perceptible approach towards Mercury, and that planet—which is rarely visible to the naked eye, and then only at what are termed the periods of its greatest eastern and western elongations—now appeared in all its splendor. It amply justified the epithet of "sparkling" which the ancients were accustomed to confer upon it, and then only at what are termed the periods of its greatest eastern and western elongations—now appeared in all its splendor. It amply justified the epithet of "sparkling" which the ancients were accustomed to confer upon it, and could scarcely fail to awaken a new interest. The periodic recurrence of its phases; its reflection of the sun's rays, shedding upon it a light and a heat seven times greater than that received by the earth; its glacial and its torrid zones, which, on account of the great inclination of the axis, are scarcely separable; its equatorial bands; its mountains eleven miles high;—were all subjects of observation worthy of the most studious regard.

But no danger was to be apprehended from Mercury; with Venus only did collision appear imminent. By the 18th of January the distance between that planet and the earth had become reduced to between two and three millions of miles, and the intensity of its light cast heavy shadows from all terrestrial objects. It might be observed to turn upon its own axis in twenty-three hours twenty-one minutes—an evidence, from the unaltered duration of its days, that the planet had not shared in the disturbance. On its disc the clouds formed from its atmospheric vapor
were plainly perceptible, as also were the seven spots, which, according to Bianchini, are a chain of seas. It was now visible in broad daylight. Buonaparte, when under the Directory, once had his attention called to Venus at noon, and immediately hailed it joyfully, recognizing it as his own peculiar star in the ascendant. Captain Servadac, it may well be imagined, did not experience the same gratifying emotion.

On the 20th, the distance between the two bodies had again sensibly diminished. The captain had ceased to be surprised that no vessel had been sent to rescue himself and his companion from their strange imprisonment; the governor general and the minister of war were doubtless far differently occupied, and their interests far otherwise engrossed. What sensational articles, he thought, must now be teeming to the newspapers! What crowds must be flocking to the churches! The end of the world approaching! the great climax close at hand! Two days more, and the earth, shivered into a myriad atoms, would be lost in boundless space!

These dire forebodings, however, were not destined to be realized. Gradually the distance between the two planets began to increase; the planes of their orbits did not coincide, and accordingly the dreaded catastrophe did not ensue. By the 25th, Venus was sufficiently remote to preclude any further fear of collision. Ben Zoof gave a sigh of relief when the captain communicated the glad intelligence.

Their proximity to Venus had been close enough to demonstrate that beyond a doubt that planet has no moon or satellite such as Cassini, Short, Montaigne of Limoges, Montbarron, and some other astronomers have imagined to exist. "Had there been such a satellite," said Servadac, "we might have captured it in passing. But what can be the meaning," he added seriously, "of all this displacement of the heavenly bodies?"

"What is that great building at Paris, captain, with a top like a cap?" asked Ben Zoof.

"Do you mean the Observatory?"

"Yes, the Observatory. Are there not people living in the Observatory who could explain all this?"

"Very likely; but what of that?"

"Let us be philosophers, and wait patiently until we can hear their explanation."

Servadac smiled. "Do you know what it is to be a philosopher, Ben Zoof?" he asked.

"I am a soldier, sir," was the servant's prompt rejoinder, "and I have learnt to know that 'what can't be cured must be endured.'"

The captain made no reply, but for a time, at least, he desisted from puzzling himself over matters which he felt he was utterly incompetent to explain. But an event soon afterwards occurred which awakened his keenest interest.

About nine o'clock on the morning of the 27th, Ben Zoof walked deliberately into his master's apartment, and, in reply to a question as to what he wanted, announced with the utmost composure that a ship was in sight.

"A ship!" exclaimed Servadac, keeping his eye unmoved at his telescope.

"Impossible, sir!" rejoined Ben Zoof; "there are no signs of smoke."

"The _Dobryna_!" exclaimed Servadac, keeping his eye unmoved at his telescope.

"Impossible, sir!" rejoined Ben Zoof; "there are no signs of smoke."

"The _Dobryna_!" repeated the captain, positively. "She is under sail; but she is Count Timascheff's yacht."

He was right. If the count were on board, a strange fatality was bringing him to the presence of his rival. But no longer now could Servadac regard him in the light of an adversary; circumstances had changed, and all animosity was absorbed in the eagerness with which he hailed the prospect of obtaining some information about the recent startling and inexplicable events. During the twenty-seven days that she had been absent, the _Dobryna_, he conjectured, would have explored the Mediterranean, would very probably have visited Spain, France, or Italy, and accordingly would convey to Gourbi Island some intelligence from one or other of those countries. He reckoned, therefore, not only upon ascertaining the extent of the late catastrophe, but upon learning its cause. Count Timascheff was, no doubt, magnanimously coming to the rescue of himself and his orderly.

The wind being adverse, the _Dobryna_ did not make very rapid progress; but as the weather, in spite of a few clouds, remained calm, and the sea was quite smooth, she was enabled to hold a steady course. It seemed unaccountable that she should not use her engine, as whoever was on board, would be naturally impatient to
reconnoiter the new island, which must just have come within their view. The probability that suggested itself was
that the schooner's fuel was exhausted.

Servadac took it for granted that the _Dobryna_ was endeavoring to put in. It occurred to him, however, that the
count, on discovering an island where he had expected to find the mainland of Africa, would not unlikely be at a loss
for a place of anchorage. The yacht was evidently making her way in the direction of the former mouth of the Shelif,
and the captain was struck with the idea that he would do well to investigate whether there was any suitable mooring
towards which he might signal her. Zephyr and Galette were soon saddled, and in twenty minutes had carried their
riders to the western extremity of the island, where they both dismounted and began to explore the coast.

They were not long in ascertaining that on the farther side of the point there was a small well-sheltered creek of
sufficient depth to accommodate a vessel of moderate tonnage. A narrow channel formed a passage through the
ridge of rocks that protected it from the open sea, and which, even in the roughest weather, would ensure the
calmness of its waters.

Whilst examining the rocky shore, the captain observed, to his great surprise, long and well-defined rows of
seaweed, which undoubtedly betokened that there had been a very considerable ebb and flow of the waters—a thing
unknown in the Mediterranean, where there is scarcely any perceptible tide. What, however, seemed most
remarkable, was the manifest evidence that ever since the highest flood (which was caused, in all probability, by the
proximity of the body of which the huge disc had been so conspicuous on the night of the 31st of December) the
phenomenon had been gradually lessening, and in fact was now reduced to the normal limits which had
characterized it before the convulsion.

Without doing more than note the circumstance, Servadac turned his entire attention to the _Dobryna_, which,
now little more than a mile from shore, could not fail to see and understand his signals. Slightly changing her course,
she first struck her mainsail, and, in order to facilitate the movements of her helmsman, soon carried nothing but her
two topsails, brigantine and jib. After rounding the peak, she steered direct for the channel to which Servadac by his
gestures was pointing her, and was not long in entering the creek. As soon as the anchor, imbedded in the sandy
bottom, had made good its hold, a boat was lowered. In a few minutes more Count Timascheff had landed on the
island. Captain Servadac hastened towards him.

"First of all, count," he exclaimed impetuously, "before we speak one other word, tell me what has happened."
The count, whose imperturbable composure presented a singular contrast to the French officer's enthusiastic
vivacity, made a stiff bow, and in his Russian accent replied: "First of all, permit me to express my surprise at seeing
you here. I left you on a continent, and here I have the honor of finding you on an island."

"I assure you, count, I have never left the place."

"I am quite aware of it. Captain Servadac, and I now beg to offer you my sincere apologies for failing to keep
my appointment with you."

"Never mind, now," interposed the captain; "we will talk of that by-and-by. First, tell me what has happened."

"The very question I was about to put to you, Captain Servadac."

"Do you mean to say you know nothing of the cause, and can tell me nothing of the extent, of the catastrophe
which has transformed this part of Africa into an island?"

"Nothing more than you know yourself."

"But surely, Count Timascheff, you can inform me whether upon the northern shore of the Mediterranean—"

"Are you certain that this is the Mediterranean?" asked the count significantly, and added, "I have discovered no
sign of land."

The captain stared in silent bewilderment. For some moments he seemed perfectly stupefied; then, recovering
himself, he began to overwhelm the count with a torrent of questions. Had he noticed, ever since the 1st of January,
that the sun had risen in the west? Had he noticed that the days had been only six hours long, and that the weight of
the atmosphere was so much diminished? Had he observed that the moon had quite disappeared, and that the earth
had been in imminent hazard of running foul of the planet Venus? Was he aware, in short, that the entire motions of
the terrestrial sphere had undergone a complete modification? To all these inquiries, the count responded in the
affirmative. He was acquainted with everything that had transpired; but, to Servadac's increasing astonishment, he
could throw no light upon the cause of any of the phenomena.

"On the night of the 31st of December," he said, "I was proceeding by sea to our appointed place of meeting,
when my yacht was suddenly caught on the crest of an enormous wave, and carried to a height which it is beyond
my power to estimate. Some mysterious force seemed to have brought about a convulsion of the elements. Our
engine was damaged, nay disabled, and we drifted entirely at the mercy of the terrible hurricane that raged during
the succeeding days. That the _Dobryna_ escaped at all is little less than a miracle, and I can only attribute her safety
to the fact that she occupied the center of the vast cyclone, and consequently did not experience much change of
position."
He paused, and added: "Your island is the first land we have seen."
"Then let us put out to sea at once and ascertain the extent of the disaster," cried the captain, eagerly. "You will take me on board, count, will you not?"
"My yacht is at your service, sir, even should you require to make a tour round the world."
"A tour round the Mediterranean will suffice for the present, I think," said the captain, smiling.
The count shook his head.
"I am not sure," said he, "but what the tour of the Mediterranean will prove to be the tour of the world."
Servadac made no reply, but for a time remained silent and absorbed in thought.
After the silence was broken, they consulted as to what course was best to pursue; and the plan they proposed was, in the first place, to discover how much of the African coast still remained, and to carry on the tidings of their own experiences to Algiers; or, in the event of the southern shore having actually disappeared, they would make their way northwards and put themselves in communication with the population on the river banks of Europe.
Before starting, it was indispensable that the engine of the _Dobryna_ should be repaired: to sail under canvas only would in contrary winds and rough seas be both tedious and difficult. The stock of coal on board was adequate for two months' consumption; but as it would at the expiration of that time be exhausted, it was obviously the part of prudence to employ it in reaching a port where fuel could be replenished.
The damage sustained by the engine proved to be not very serious; and in three days after her arrival the _Dobryna_ was again ready to put to sea.
Servadac employed the interval in making the count acquainted with all he knew about his small domain. They made an entire circuit of the island, and both agreed that it must be beyond the limits of that circumscribed territory that they must seek an explanation of what had so strangely transpired.
It was on the last day of January that the repairs of the schooner were completed. A slight diminution in the excessively high temperature which had prevailed for the last few weeks, was the only apparent change in the general order of things; but whether this was to be attributed to any alteration in the earth's orbit was a question which would still require several days to decide. The weather remained fine, and although a few clouds had accumulated, and might have caused a trifling fall of the barometer, they were not sufficiently threatening to delay the departure of the _Dobryna_.
Doubts now arose, and some discussion followed, whether or not it was desirable for Ben Zoof to accompany his master. There were various reasons why he should be left behind, not the least important being that the schooner had no accommodation for horses, and the orderly would have found it hard to part with Zephyr, and much more with his own favorite Galette; besides, it was advisable that there should be some one left to receive any strangers that might possibly arrive, as well as to keep an eye upon the herds of cattle which, in the dubious prospect before them, might prove to be the sole resource of the survivors of the catastrophe. Altogether, taking into consideration that the brave fellow would incur no personal risk by remaining upon the island, the captain was induced with much reluctance to forego the attendance of his servant, hoping very shortly to return and to restore him to his country, when he had ascertained the reason of the mysteries in which they were enveloped.
On the 31st, then, Ben Zoof was "invested with governor's powers," and took an affecting leave of his master, begging him, if chance should carry him near Montmartre, to ascertain whether the beloved "mountain" had been left unmoved.
Farewells over, the _Dobryna_ was carefully steered through the creek, and was soon upon the open sea.

CHAPTER X. A SEARCH FOR ALGERIA

The _Dobryna_, a strong craft of 200 tons burden, had been built in the famous shipbuilding yards in the Isle of Wight. Her sea going qualities were excellent, and would have amply sufficed for a circumnavigation of the globe. Count Timascheff was himself no sailor, but had the greatest confidence in leaving the command of his yacht in the hands of Lieutenant Procope, a man of about thirty years of age, and an excellent seaman. Born on the count's estates, the son of a serf who had been emancipated long before the famous edict of the Emperor Alexander, Procope was sincerely attached, by a tie of gratitude as well as of duty and affection, to his patron's service. After an apprenticeship on a merchant ship he had entered the imperial navy, and had already reached the rank of lieutenant when the count appointed him to the charge of his own private yacht, in which he was accustomed to spend by far the greater part of his time, throughout the winter generally cruising in the Mediterranean, whilst in the summer he visited more northern waters.
The ship could not have been in better hands. The lieutenant was well informed in many matters outside the pale of his profession, and his attainments were alike creditable to himself and to the liberal friend who had given him his education. He had an excellent crew, consisting of Tiglew the engineer, four sailors named Niegoch, Tolstoy, Etkef,
and Panofka, and Mochel the cook. These men, without exception, were all sons of the count's tenants, and so
tenaciously, even out at sea, did they cling to their old traditions, that it mattered little to them what physical
disorganization ensued, so long as they felt they were sharing the experiences of their lord and master. The late
astounding events, however, had rendered Procope manifestly uneasy, and not the less so from his consciousness
that the count secretly partook of his own anxiety.

Steam up and canvas spread, the schooner started eastwards. With a favorable wind she would certainly have
made eleven knots an hour had not the high waves somewhat impeded her progress. Although only a moderate
breeze was blowing, the sea was rough, a circumstance to be accounted for only by the diminution in the force of the
earth's attraction rendering the liquid particles so buoyant, that by the mere effect of oscillation they were carried to
a height that was quite unprecedented. M. Arago has fixed twenty-five or twenty-six feet as the maximum elevation
ever attained by the highest waves, and his astonishment would have been very great to see them rising fifty or even
sixty feet. Nor did these waves in the usual way partially unfurl themselves and rebound against the sides of the
vessel; they might rather be described as long undulations carrying the schooner (its weight diminished from the
same cause as that of the water) alternately to such heights and depths, that if Captain Servadac had been subject to
seasickness he must have found himself in sorry plight. As the pitching, however, was the result of a long uniform
swell, the yacht did not labor much harder than she would against the ordinary short strong waves of the
Mediterranean; the main inconvenience that was experienced was the diminution in her proper rate of speed.

For a few miles she followed the line hitherto presumably occupied by the coast of Algeria; but no land appeared
to the south. The changed positions of the planets rendered them of no avail for purposes of nautical observation, nor
could Lieutenant Procope calculate his latitude and longitude by the altitude of the sun, as his reckonings would be
useless when applied to charts that had been constructed for the old order of things; but nevertheless, by means of the
log, which gave him the rate of progress, and by the compass which indicated the direction in which they were
sailing, he was able to form an estimate of his position that was sufficiently free from error for his immediate need.

Happily the recent phenomena had no effect upon the compass; the magnetic needle, which in these regions had
pointed about 22 degrees from the north pole, had never deviated in the least—a proof that, although east and west
had apparently changed places, north and south continued to retain their normal position as cardinal points. The log
and the compass, therefore, were able to be called upon to do the work of the sextant, which had become utterly
useless.

On the first morning of the cruise Lieutenant Procope, who, like most Russians, spoke French fluently, was
explaining these peculiarities to Captain Servadac; the count was present, and the conversation perpetually recurred,
as naturally it would, to the phenomena which remained so inexplicable to them all.

"It is very evident," said the lieutenant, "that ever since the 1st of January the earth has been moving in a new
orbit, and from some unknown cause has drawn nearer to the sun."

"No doubt about that," said Servadac; "and I suppose that, having crossed the orbit of Venus, we have a good
chance of running into the orbit of Mercury."

"And finish up by a collision with the sun!" added the count.

"There is no fear of that, sir. The earth has undoubtedly entered upon a new orbit, but she is not incurring any
probable risk of being precipitated onto the sun."

"Can you satisfy us of that?" asked the count.

"I can, sir. I can give you a proof which I think you will own is conclusive. If, as you suppose, the earth is being
drawn on so as to be precipitated against the sun, the great center of attraction of our system, it could only be
because the centrifugal and centripetal forces that cause the planets to rotate in their several orbits had been entirely
suspended: in that case, indeed, the earth would rush onwards towards the sun, and in sixty-four days and a half the
catastrophe you dread would inevitably happen."

"And what demonstration do you offer," asked Servadac eagerly, "that it will not happen?"

"Simply this, captain: that since the earth entered her new orbit half the sixty-four days has already elapsed, and
yet it is only just recently that she has crossed the orbit of Venus, hardly one-third of the distance to be traversed to
reach the sun."

The lieutenant paused to allow time for reflection, and added: "Moreover, I have every reason to believe that we
are not so near the sun as we have been. The temperature has been gradually diminishing; the heat upon Gourbi
Island is not greater now than we might ordinarily expect to find in Algeria. At the same time, we have the problem
still unsolved that the Mediterranean has evidently been transported to the equatorial zone."

Both the count and the captain expressed themselves reassured by his representations, and observed that they
must now do all in their power to discover what had become of the vast continent of Africa, of which, they were
hitherto failing so completely to find a vestige.

Twenty-four hours after leaving the island, the _Dobryna_ had passed over the sites where Tenes, Cherchil,
Koleah, and Sidi-Feruch once had been, but of these towns not one appeared within range of the telescope. Ocean reigned supreme. Lieutenant Procope was absolutely certain that he had not mistaken his direction; the compass showed that the wind had never shifted from the west, and this, with the rate of speed as estimated by the log, combined to assure him that at this date, the 2d of February, the schooner was in lat. 36 degrees 49 min N. and long. 3 degrees 25 min E., the very spot which ought to have been occupied by the Algerian capital. But Algiers, like all the other coast-towns, had apparently been absorbed into the bowels of the earth.

Captain Servadac, with clenched teeth and knitted brow, stood sternly, almost fiercely, regarding the boundless waste of water. His pulse beat fast as he recalled the friends and comrades with whom he had spent the last few years in that vanished city. All the images of his past life floated upon his memory; his thoughts sped away to his native France, only to return again to wonder whether the depths of ocean would reveal any traces of the Algerian metropolis.

"Is it not impossible," he murmured aloud, "that any city should disappear so completely? Would not the loftiest eminences of the city at least be visible? Surely some portion of the Casbah must still rise above the waves? The imperial fort, too, was built upon an elevation of 750 feet; it is incredible that it should be so totally submerged. Unless some vestiges of these are found, I shall begin to suspect that the whole of Africa has been swallowed in some vast abyss."

Another circumstance was most remarkable. Not a material object of any kind was to be noticed floating on the surface of the water; not one branch of a tree had been seen drifting by, nor one spar belonging to one of the numerous vessels that a month previously had been moored in the magnificent bay which stretched twelve miles across from Cape Matafuz to Point Pexade. Perhaps the depths might disclose what the surface failed to reveal, and Count Timascheff, anxious that Servadac should have every facility afforded him for solving his doubts, called for the sounding-line. Forthwith, the lead was greased and lowered. To the surprise of all, and especially of Lieutenant Procope, the line indicated a bottom at a nearly uniform depth of from four to five fathoms; and although the sounding was persevered with continuously for more than two hours over a considerable area, the differences of level were insignificant, not corresponding in any degree to what would be expected over the site of a city that had been terraced like the seats of an amphitheater. Astounding as it seemed, what alternative was left but to suppose that the Algerian capital had been completely leveled by the flood?

The sea-bottom was composed of neither rock, mud, sand, nor shells; the sounding-lead brought up nothing but a kind of metallic dust, which glittered with a strange iridescence, and the nature of which it was impossible to determine, as it was totally unlike what had ever been known to be raised from the bed of the Mediterranean.

"You must see, lieutenant, I should think, that we are not so near the coast of Algeria as you imagined."

The lieutenant shook his head. After pondering awhile, he said: "If we were farther away I should expect to find a depth of two or three hundred fathoms instead of five fathoms. Five fathoms! I confess I am puzzled."

For the next thirty-six hours, until the 4th of February, the sea was examined and explored with the most unflagging perseverance. Its depth remained invariable, still four, or at most five, fathoms; and although its bottom was assiduously dredged, it was only to prove it barren of marine production of any type.

The yacht made its way to lat. 36 degrees, and by reference to the charts it was tolerably certain that she was cruising over the site of the Sahel, the ridge that had separated the rich plain of the Mitidja from the sea, and of which the highest peak, Mount Boujereah, had reached an altitude of 1,200 feet; but even this peak, which might have been expected to emerge like an islet above the surface of the sea, was nowhere to be traced. Nothing was to be done but to put about, and return in disappointment towards the north.

Thus the _Dobryna_ regained the waters of the Mediterranean without discovering a trace of the missing province of Algeria.

CHAPTER XI. AN ISLAND TOMB

No longer, then, could there be any doubt as to the annihilation of a considerable portion of the colony. Not merely had there been a submersion of the land, but the impression was more and more confirmed that the very bowels of the earth must have yawned and closed again upon a large territory. Of the rocky substratum of the province it became more evident than ever that not a trace remained, and a new soil of unknown formation had certainly taken the place of the old sandy sea-bottom. As it altogether transcended the powers of those on board to elucidate the origin of this catastrophe, it was felt to be incumbent on them at least to ascertain its extent.

After a long and somewhat wavering discussion, it was at length decided that the schooner should take advantage of the favorable wind and weather, and proceed at first towards the east, thus following the outline of what had formerly represented the coast of Africa, until that coast had been lost in boundless sea.

Not a vestige of it all remained; from Cape Matafuz to Tunis it had all gone, as though it had never been. The
maritime town of Dellis, built like Algiers, amphitheater-wise, had totally disappeared; the highest points were quite
invisible; not a trace on the horizon was left of the Jurjura chain, the topmost point of which was known to have an
altitude of more than 7,000 feet.

Unsparing of her fuel, the _Dobryna_ made her way at full steam towards Cape Blanc. Neither Cape Negro nor
Cape Serrat was to be seen. The town of Bizerta, once charming in its oriental beauty, had vanished utterly; its
marabouts, or temple-tombs, shaded by magnificent palms that fringed the gulf, which by reason of its narrow
mouth had the semblance of a lake, all had disappeared, giving place to a vast waste of sea, the transparent waves of
which, as still demonstrated by the sounding-line, had ever the same uniform and arid bottom.

In the course of the day the schooner rounded the point where, five weeks previously, Cape Blanc had been so
conspicuous an object, and she was now stemming the waters of what once had been the Bay of Tunis. But bay there
was none, and the town from which it had derived its name, with the Arsenal, the Goletta, and the two peaks of Bou-
Kournein, had all vanished from the view. Cape Bon, too, the most northern promontory of Africa and the point of
the continent nearest to the island of Sicily, had been included in the general devastation.

Before the occurrence of the recent prodigy, the bottom of the Mediterranean just at this point had formed a
sudden ridge across the Straits of Libya. The sides of the ridge had shelved to so great an extent that, while the depth
of water on the summit had been little more than eleven fathoms, that on either hand of the elevation was little short
of a hundred fathoms. A formation such as this plainly indicated that at some remote epoch Cape Bon had been
connected with Cape Furina, the extremity of Sicily, in the same manner as Ceuta has doubtless been connected with
Gibraltar.

Lieutenant Procope was too well acquainted with the Mediterranean to be unaware of this peculiarity, and would
not lose the opportunity of ascertaining whether the submarine ridge still existed, or whether the sea-bottom between
Sicily and Africa had undergone any modification.

Both Timascheff and Servadac were much interested in watching the operations. At a sign from the lieutenant, a
sailor who was stationed at the foot of the fore-shrouds dropped the sounding-lead into the water, and in reply to
Procope's inquiries, reported--"Five fathoms and a flat bottom."

The next aim was to determine the amount of depression on either side of the ridge, and for this purpose the
_Dobryna_ was shifted for a distance of half a mile both to the right and left, and the soundings taken at each
station. "Five fathoms and a flat bottom," was the unvaried announcement after each operation. Not only, therefore,
was it evident that the submerged chain between Cape Bon and Cape Furina no longer existed, but it was equally
clear that the convulsion had caused a general leveling of the sea-bottom, and that the soil, degenerated, as it has
been said, into a metallic dust of unrecognized composition, bore no trace of the sponges, sea-anemones, star-fish,
sea-nettles, hydrophytes, and shells with which the submarine rocks of the Mediterranean had hitherto been
prodigally clothed.

The _Dobryna_ now put about and resumed her explorations in a southerly direction. It remained, however, as
remarkable as ever how completely throughout the voyage the sea continued to be deserted; all expectations of
hailing a vessel bearing news from Europe were entirely falsified, so that more and more each member of the crew
began to be conscious of his isolation, and to believe that the schooner, like a second Noah's ark, carried the sole
survivors of a calamity that had overwhelmed the earth.

On the 9th of February the _Dobryna_ passed over the site of the city of Dido, the ancient Byrsa--a Carthage,
however, which was now more completely destroyed than ever Punic Carthage had been destroyed by Scipio
Africanus or Roman Carthage by Hassan the Saracen.

In the evening, as the sun was sinking below the eastern horizon, Captain Servadac was lounging moodily
against the taffrail. From the heaven above, where stars kept peeping fitfully from behind the moving clouds, his eye
wandered mechanically to the waters below, where the long waves were rising and falling with the evening breeze.

All at once, his attention was arrested by a luminous speck straight ahead on the southern horizon. At first,
imagining that he was the victim of some spectral illusion, he observed it with silent attention; but when, after some
minutes, he became convinced that what he saw was actually a distant light, he appealed to one of the sailors, by
whom his impression was fully corroborated. The intelligence was immediately imparted to Count Timascheff and the
lieutenant.

"Is it land, do you suppose?" inquired Servadac, eagerly.
"I should be more inclined to think it is a light on board some ship," replied the count.
"Whatever it is, in another hour we shall know all about it," said Servadac.
"No, captain," interposed Lieutenant Procope; "we shall know nothing until to-morrow."
"What! not bear down upon it at once?" asked the count in surprise.
"No, sir; I should much rather lay to and wait till daylight. If we are really near land, I should be afraid to
approach it in the dark."
The count expressed his approval of the lieutenant's caution, and thereupon all sail was shortened so as to keep
the _Dobryna_ from making any considerable progress all through the hours of night. Few as those hours were, they
seemed to those on board as if their end would never come. Fearful lest the faint glimmer should at any moment
cease to be visible, Hector Servadac did not quit his post upon the deck; but the light continued unchanged. It shone
with about the same degree of luster as a star of the second magnitude, and from the fact of its remaining stationary,
Procope became more and more convinced that it was on land and did not belong to a passing vessel.

At sunrise every telescope was pointed with keenest interest towards the center of attraction. The light, of
course, had ceased to be visible, but in the direction where it had been seen, and at a distance of about ten miles,
there was the distinct outline of a solitary island of very small extent; rather, as the count observed, it had the
appearance of being the projecting summit of a mountain all but submerged. Whatever it was, it was agreed that its
true character must be ascertained, not only to gratify their own curiosity, but for the benefit of all future navigators.
The schooner accordingly was steered directly towards it, and in less than an hour had cast anchor within a few
cables' lengths of the shore.

The little island proved to be nothing more than an arid rock rising abruptly about forty feet above the water. It
had no outlying reefs, a circumstance that seemed to suggest the probability that in the recent convulsion it had sunk
gradually, until it had reached its present position of equilibrium.

Without removing his eye from his telescope, Servadac exclaimed: "There is a habitation on the place; I can see
an erection of some kind quite distinctly. Who can tell whether we shall not come across a human being?"

Lieutenant Procope looked doubtful. The island had all the appearance of being deserted, nor did a cannon-shot
fired from the schooner have the effect of bringing any resident to the shore. Nevertheless, it was undeniable that
there was a stone building situated on the top of the rock, and that this building had much the character of an
Arabian mosque.

The boat was lowered and manned by the four sailors; Servadac, Timascheff and Procope were quickly rowed
ashore, and lost no time in commencing their ascent of the steep acclivity. Upon reaching the summit, they found
their progress arrested by a kind of wall, or rampart of singular construction, its materials consisting mainly of vases,
fragments of columns, carved bas-reliefs, statues, and portions of broken stelae, all piled promiscuously together
without any pretense to artistic arrangement. They made their way into the enclosure, and finding an open door, they
passed through and soon came to a second door, also open, which admitted them to the interior of the mosque,
consisting of a single chamber, the walls of which were ornamented in the Arabian style by sculptures of indifferent
execution. In the center was a tomb of the very simplest kind, and above the tomb was suspended a large silver lamp
with a capacious reservoir of oil, in which floated a long lighted wick, the flame of which was evidently the light
that had attracted Servadac's attention on the previous night.

"Must there not have been a custodian of the shrine?" they mutually asked; but if such there had ever been, he
must, they concluded, either have fled or have perished on that eventful night. Not a soul was there in charge, and
the sole living occupants were a flock of wild cormorants which, startled at the entrance of the intruders, rose on
wing, and took a rapid flight towards the south.

An old French prayer-book was lying on the corner of the tomb; the volume was open, and the page exposed to
view was that which contained the office for the celebration of the 25th of August. A sudden revelation dashed
across Servadac's mind. The solemn isolation of the island tomb, the open breviary, the ritual of the ancient
anniversary, all combined to apprise him of the sanctity of the spot upon which he stood.

"The tomb of St. Louis!" he exclaimed, and his companions involuntarily followed his example, and made a
reverential obeisance to the venerated monument.

It was, in truth, the very spot on which tradition asserts that the canonized monarch came to die, a spot to which
for six centuries and more his countrymen had paid the homage of a pious regard. The lamp that had been kindled at
the memorial shrine of a saint was now in all probability the only beacon that threw a light across the waters of the
Mediterranean, and even this ere long must itself expire.

There was nothing more to explore. The three together quitted the mosque, and descended the rock to the shore,
whence their boat re-conveyed them to the schooner, which was soon again on her southward voyage; and it was not
long before the tomb of St. Louis, the only spot that had survived the mysterious shock, was lost to view.

CHAPTER XII. AT THE MERCY OF THE WINDS

As the affrighted cormorants had winged their flight towards the south, there sprang up a sanguine hope on
board the schooner that land might be discovered in that direction. Thither, accordingly, it was determined to
proceed, and in a few hours after quitting the island of the tomb, the _Dobryna_ was traversing the shallow waters
that now covered the peninsula of Dakhul, which had separated the Bay of Tunis from the Gulf of Hammamet. For
two days she continued an undeviating course, and after a futile search for the coast of Tunis, reached the latitude of 34 degrees.

Here, on the 11th of February, there suddenly arose the cry of "Land!" and in the extreme horizon, right ahead, where land had never been before, it was true enough that a shore was distinctly to be seen. What could it be? It could not be the coast of Tripoli; for not only would that low-lying shore be quite invisible at such a distance, but it was certain, moreover, that it lay two degrees at least still further south. It was soon observed that this newly discovered land was of very irregular elevation, that it extended due east and west across the horizon, thus dividing the gulf into two separate sections and completely concealing the island of Jerba, which must lie behind. Its position was duly traced on the _Dobryna_'s chart.

"How strange," exclaimed Hector Servadac, "that after sailing all this time over sea where we expected to find land, we have at last come upon land where we thought to find sea!"

"Strange, indeed," replied Lieutenant Procope; "and what appears to me almost as remarkable is that we have never once caught sight either of one of the Maltese tartans or one of the Levantine xebecs that traffic so regularly on the Mediterranean."

"Eastwards or westwards," asked the count--"which shall be our course? All farther progress to the south is checked."

"Westwards, by all means," replied Servadac quickly. "I am longing to know whether anything of Algeria is left beyond the Shelif; besides, as we pass Gourbi Island we might take Ben Zoof on board, and then make away for Gibraltar, where we should be sure to learn something, at least, of European news."

With his usual air of stately courtesy, Count Timascheff begged the captain to consider the yacht at his own disposal, and desired him to give the lieutenant instructions accordingly.

Lieutenant Procope, however, hesitated, and after revolving matters for a few moments in his mind, pointed out that as the wind was blowing directly from the west, and seemed likely to increase, if they went to the west in the teeth of the weather, the schooner would be reduced to the use of her engine only, and would have much difficulty in making any headway; on the other hand, by taking an eastward course, not only would they have the advantage of the wind, but, under steam and canvas, might hope in a few days to be off the coast of Egypt, and from Alexandria or some other port they would have the same opportunity of getting tidings from Europe as they would at Gibraltar.

Intensely anxious as he was to revisit the province of Oran, and eager, too, to satisfy himself of the welfare of his faithful Ben Zoof, Servadac could not but own the reasonableness of the lieutenant's objections, and yielded to the proposal that the eastward course should be adopted. The wind gave signs only too threatening of the breeze rising to a gale; but, fortunately, the waves did not culminate in breakers, but rather in a long swell which ran in the same direction as the vessel.

During the last fortnight the high temperature had been gradually diminishing, until it now reached an average of 20 degrees Cent. (or 68 degrees Fahr.), and sometimes descended as low as 15 degrees. That this diminution was to be attributed to the change in the earth's orbit was a question that admitted of little doubt. After approaching so near to the sun as to cross the orbit of Venus, the earth must now have receded so far from the sun that its normal distance of ninety-one millions of miles was greatly increased, and the probability was great that it was approximating to the orbit of Mars, that planet which in its physical constitution most nearly resembles our own. Nor was this supposition suggested merely by the lowering of the temperature; it was strongly corroborated by the reduction of the apparent diameter of the sun's disc to the precise dimensions which it would assume to an observer actually stationed on the surface of Mars. The necessary inference that seemed to follow from these phenomena was that the earth had been projected into a new orbit, which had the form of a very elongated ellipse.

Very slight, however, in comparison was the regard which these astronomical wonders attracted on board the _Dobryna_. All interest there was too much absorbed in terrestrial matters, and in ascertaining what changes had taken place in the configuration of the earth itself, to permit much attention to be paid to its erratic movements through space.

The schooner kept bravely on her way, but well out to sea, at a distance of two miles from land. There was good need of this precaution, for so precipitous was the shore that a vessel driven upon it must inevitably have gone to pieces; it did not offer a single harbor of refuge, but, smooth and perpendicular as the walls of a fortress, it rose to a height of two hundred, and occasionally of three hundred feet. The waves dashed violently against its base. Upon the general substratum rested a massive conglomerate, the crystallizations of which rose like a forest of gigantic pyramids and obelisks.

But what struck the explorers more than anything was the appearance of singular newness that pervaded the whole of the region. It all seemed so recent in its formation that the atmosphere had had no opportunity of producing its wonted effect in softening the hardness of its lines, in rounding the sharpness of its angles, or in modifying the color of its surface; its outline was clearly marked against the sky, and its substance, smooth and polished as though
fresh from a founder's mold, glittered with the metallic brilliancy that is characteristic of pyrites. It seemed impossible to come to any other conclusion but that the land before them, continent or island, had been upheaved by subterranean forces above the surface of the sea, and that it was mainly composed of the same metallic element as had characterized the dust so frequently uplifted from the bottom.

The extreme nakedness of the entire tract was likewise very extraordinary. Elsewhere, in various quarters of the globe, there may be sterile rocks, but there are none so adamant as to be altogether unfurrowed by the filaments engendered in the moist residuum of the condensed vapor; elsewhere there may be barren steeps, but none so rigid as not to afford some hold to vegetation, however low and elementary may be its type; but here all was bare, and blank, and desolate—not a symptom of vitality was visible.

Such being the condition of the adjacent land, it could hardly be a matter of surprise that all the sea-birds, the albatross, the gull, the sea-mew, sought continual refuge on the schooner; day and night they perched fearlessly upon the yards, the report of a gun failing to dislodge them, and when food of any sort was thrown upon the deck, they would dart down and fight with eager voracity for the prize. Their extreme avidity was recognized as a proof that any land where they could obtain a sustenance must be far remote.

Onwards thus for several days the _Dobryna_ followed the contour of the inhospitable coast, of which the features would occasionally change, sometimes for two or three miles assuming the form of a simple arris, sharply defined as though cut by a chisel, when suddenly the prismatic lamellae soaring in rugged confusion would again recur; but all along there was the same absence of beach or tract of sand to mark its base, neither were there any of those shoals of rock that are ordinarily found in shallow water. At rare intervals there were some narrow fissures, but not a creek available for a ship to enter to replenish its supply of water; and the wide roadsteads were unprotected and exposed to well-nigh every point of the compass.

But after sailing two hundred and forty miles, the progress of the _Dobryna_ was suddenly arrested. Lieutenant Procope, who had sedulously inserted the outline of the newly revealed shore upon the maps, announced that it had ceased to run east and west, and had taken a turn due north, thus forming a barrier to their continuing their previous direction. It was, of course, impossible to conjecture how far this barrier extended; it coincided pretty nearly with the fourteenth meridian of east longitude; and if it reached, as probably it did, beyond Sicily to Italy, it was certain that the vast basin of the Mediterranean, which had washed the shores alike of Europe, Asia, and Africa, must have been reduced to about half its original area.

It was resolved to proceed upon the same plan as heretofore, following the boundary of the land at a safe distance. Accordingly, the head of the _Dobryna_ was pointed north, making straight, as it was presumed, for the south of Europe. A hundred miles, or somewhat over, in that direction, and it was to be anticipated she would come in sight of Malta, if only that ancient island, the heritage in succession of Phoenicians, Carthaginians, Sicilians, Romans, Vandals, Greeks, Arabians, and the knights of Rhodes, should still be undestroyed.

But Malta, too, was gone; and when, upon the 14th, the sounding-line was dropped upon its site, it was only with the same result so oftentimes obtained before.

"The devastation is not limited to Africa," observed the count.

"Assuredly not," assented the lieutenant; adding, "and I confess I am almost in despair whether we shall ever ascertain its limits. To what quarter of Europe, if Europe still exists, do you propose that I should now direct your course?"

"To Sicily, Italy, France!" ejaculated Servadac, eagerly,—"anywhere where we can learn the truth of what has befallen us."

"How if we are the sole survivors?" said the count, gravely.

Hector Servadac was silent; his own secret presentiment so thoroughly coincided with the doubts expressed by the count, that he refrained from saying another word.

The coast, without deviation, still tended towards the north. No alternative, therefore, remained than to take a westerly course and to attempt to reach the northern shores of the Mediterranean. On the 16th the _Dobryna_ essayed to start upon her altered way, but it seemed as if the elements had conspired to obstruct her progress. A furious tempest arose; the wind beat dead in the direction of the coast, and the danger incurred by a vessel of a tonnage so light was necessarily very great.

Lieutenant Procope was extremely uneasy. He took in all sail, struck his topmasts, and resolved to rely entirely on his engine. But the peril seemed only to increase. Enormous waves caught the schooner and carried her up to their crests, whence again she was plunged deep into the abysses that they left. The screw failed to keep its hold upon the water, but continually revolved with useless speed in the vacant air; and thus, although the steam was forced on to the extremest limit consistent with safety, the vessel held her way with the utmost difficulty, and recoiled before the hurricane.

Still, not a single resort for refuge did the inaccessible shore present. Again and again the lieutenant asked
himself what would become of him and his comrades, even if they should survive the peril of shipwreck, and gain a footing upon the cliff. What resources could they expect to find upon that scene of desolation? What hope could they entertain that any portion of the old continent still existed beyond that dreary barrier?

It was a trying time, but throughout it all the crew behaved with the greatest courage and composure; confident in the skill of their commander, and in the stability of their ship, they performed their duties with steadiness and unquestioning obedience.

But neither skill, nor courage, nor obedience could avail; all was in vain. Despite the strain put upon her engine, the schooner, bare of canvas (for not even the smallest stay-sail could have withstood the violence of the storm), was drifting with terrific speed towards the menacing precipices, which were only a few short miles to leeward. Fully alive to the hopelessness of their situation, the crew were all on deck.

"All over with us, sir!" said Procope to the count. "I have done everything that man could do; but our case is desperate. Nothing short of a miracle can save us now. Within an hour we must go to pieces upon yonder rocks."

"Let us, then, commend ourselves to the providence of Him to Whom nothing is impossible," replied the count, in a calm, clear voice that could be distinctly heard by all; and as he spoke, he reverently uncovered, an example in which he was followed by all the rest.

The destruction of the vessel seeming thus inevitable, Lieutenant Procope took the best measures he could to insure a few days' supply of food for any who might escape ashore. He ordered several cases of provisions and kegs of water to be brought on deck, and saw that they were securely lashed to some empty barrels, to make them float after the ship had gone down.

Less and less grew the distance from the shore, but no creek, no inlet, could be discerned in the towering wall of cliff, which seemed about to topple over and involve them in annihilation. Except a change of wind or, as Procope observed, a supernatural rifting of the rock, nothing could bring deliverance now. But the wind did not veer, and in a few minutes more the schooner was hardly three cables' distance from the fatal land. All were aware that their last moment had arrived. Servadac and the count grasped each other's hands for a long farewell; and, tossed by the tremendous waves, the schooner was on the very point of being hurled upon the cliff, when a ringing shout was heard. "Quick, boys, quick! Hoist the jib, and right the tiller!"

Sudden and startling as the unexpected orders were, they were executed as if by magic.

The lieutenant, who had shouted from the bow, rushed astern and took the helm, and before anyone had time to speculate upon the object of his maneuvers, he shouted again, "Look out! sharp! watch the sheets!"

An involuntary cry broke forth from all on board. But it was no cry of terror. Right ahead was a narrow opening in the solid rock; it was hardly forty feet wide. Whether it was a passage or no, it mattered little; it was at least a refuge; and, driven by wind and wave, the _Dobryna_, under the dexterous guidance of the lieutenant, dashed in between its perpendicular walls.

Had she not immured herself in a perpetual prison?

CHAPTER XIII. A ROYAL SALUTE

"Then I take your bishop, major," said Colonel Murphy, as he made a move that he had taken since the previous evening to consider.

"I was afraid you would," replied Major Oliphant, looking intently at the chess-board.

Such was the way in which a long silence was broken on the morning of the 17th of February by the old calendar.

Another day elapsed before another move was made. It was a protracted game; it had, in fact, already lasted some months--the players being so deliberate, and so fearful of taking a step without the most mature consideration, that even now they were only making the twentieth move.

Both of them, moreover, were rigid disciples of the renowned Philidor, who pronounces that to play the pawns well is "the soul of chess"; and, accordingly, not one pawn had been sacrificed without a most vigorous defense.

The men who were thus beguiling their leisure were two officers in the British army--Colonel Heneage Finch Murphy and Major Sir John Temple Oliphant. Remarkably similar in personal appearance, they were hardly less so in personal character. Both of them were about forty years of age; both of them were tall and fair, with bushy whiskers and mustaches; both of them were phlegmatic in temperament, and both much addicted to the wearing of their uniforms. They were proud of their nationality, and exhibited a manifest dislike, verging upon contempt, of everything foreign. Probably they would have felt no surprise if they had been told that Anglo-Saxons were fashioned out of some specific clay, the properties of which surpassed the investigation of chemical analysis. Without any intentional disparagement they might, in a certain way, be compared to two scarecrows which, though perfectly harmless in themselves, inspire some measure of respect, and are excellently adapted to protect the
territory intrusted to their guardianship.

English-like, the two officers had made themselves thoroughly at home in the station abroad in which it had been their lot to be quartered. The faculty of colonization seems to be indigenous to the native character; once let an Englishman plant his national standard on the surface of the moon, and it would not be long before a colony was established round it.

The officers had a servant, named Kirke, and a company of ten soldiers of the line. This party of thirteen men were apparently the sole survivors of an overwhelming catastrophe, which on the 1st of January had transformed an enormous rock, garrisoned with well-nigh two thousand troops, into an insignificant island far out to sea. But although the transformation had been so marvelous, it cannot be said that either Colonel Murphy or Major Oliphant had made much demonstration of astonishment.

"This is all very peculiar, Sir John," observed the colonel.

"Yes, colonel; very peculiar," replied the major.

"England will be sure to send for us," said one officer.

"No doubt she will," answered the other.

Accordingly, they came to the mutual resolution that they would "stick to their post."

To say the truth, it would have been a difficult matter for the gallant officers to do otherwise; they had but one small boat; therefore, it was well that they made a virtue of necessity, and resigned themselves to patient expectation of the British ship which, in due time, would bring relief.

They had no fear of starvation. Their island was mined with subterranean stores, more than ample for thirteen men--nay, for thirteen Englishmen--for the next five years at least. Preserved meat, ale, brandy--all were in abundance; consequently, as the men expressed it, they were in this respect "all right."

Of course, the physical changes that had taken place had attracted the notice both of officers and men. But the reversed position of east and west, the diminution of the force of gravity, the altered rotation of the earth, and her projection upon a new orbit, were all things that gave them little concern and no uneasiness; and when the colonel and the major had replaced the pieces on the board which had been disturbed by the convulsion, any surprise they might have felt at the chess-men losing some portion of their weight was quite forgotten in the satisfaction of seeing them retain their equilibrium.

One phenomenon, however, did not fail to make its due impression upon the men; this was the diminution in the length of day and night. Three days after the catastrophe, Corporal Pim, on behalf of himself and his comrades, solicited a formal interview with the officers. The request having been granted, Pim, with the nine soldiers, all punctiliously wearing the regimental tunic of scarlet and trousers of invisible green, presented themselves at the door of the colonel's room, where he and his brother-officer were continuing their game. Raising his hand respectfully to his cap, which he wore poised jauntily over his right ear, and scarcely held on by the strap below his under lip, the corporal waited permission to speak.

After a lingering survey of the chess-board, the colonel slowly lifted his eyes, and said with official dignity, "Well, men, what is it?"

"First of all, sir," replied the corporal, "we want to speak to you about our pay, and then we wish to have a word with the major about our rations."

"Say on, then," said Colonel Murphy. "What is it about your pay?"

"Just this, sir; as the days are only half as long as they were, we should like to know whether our pay is to be diminished in proportion."

The colonel was taken somewhat aback, and did not reply immediately, though by some significant nods towards the major, he indicated that he thought the question very reasonable. After a few moments' reflection, he replied, "It must, I think, be allowed that your pay was calculated from sunrise to sunrise; there was no specification of what the interval should be. Your pay will continue as before. England can afford it."

A buzz of approval burst involuntarily from all the men, but military discipline and the respect due to their officers kept them in check from any boisterous demonstration of their satisfaction.

"And now, corporal, what is your business with me?" asked Major Oliphant.

"We want to know whether, as the days are only six hours long, we are to have but two meals instead of four?"

The officers looked at each other, and by their glances agreed that the corporal was a man of sound common sense.

"Eccentricities of nature," said the major, "cannot interfere with military regulations. It is true that there will be but an interval of an hour and a half between them, but the rule stands good--four meals a day. England is too rich to grudge her soldiers any of her soldiers' due. Yes; four meals a day."

"Hurrah!" shouted the soldiers, unable this time to keep their delight within the bounds of military decorum; and, turning to the right-about, they marched away, leaving the officers to renew the all-absorbing game.
However confident everyone upon the island might profess to be that succor would be sent them from their native land—for Britain never abandons any of her sons—it could not be disguised that that succor was somewhat tardy in making its appearance. Many and various were the conjectures to account for the delay. Perhaps England was engrossed with domestic matters, or perhaps she was absorbed in diplomatic difficulties; or perchance, more likely than all, Northern Europe had received no tidings of the convulsion that had shattered the south. The whole party thronged remarkably well upon the liberal provisions of the commissariat department, and if the officers failed to show the same tendency to _embonpoint_ which was fast becoming characteristic of the men, it was only because they deemed it due to their rank to curtail any indulgences which might compromise the fit of their uniform.

On the whole, time passed indifferently well. An Englishman rarely suffers from _ennui_, and then only in his own country, when required to conform to what he calls "the humbug of society"; and the two officers, with their similar tastes, ideas, and dispositions, got on together admirably. It is not to be questioned that they were deeply affected by a sense of regret for their lost comrades, and astounded beyond measure at finding themselves the sole survivors of a garrison of 1,895 men, but with true British pluck and self-control, they had done nothing more than draw up a report that 1,882 names were missing from the muster-roll.

The island itself, the sole surviving fragment of an enormous pile of rock that had reared itself some 1,600 feet above the sea, was not, strictly speaking, the only land that was visible; for about twelve miles to the south there was another island, apparently the very counterpart of what was now occupied by the Englishmen. It was only natural that this should awaken some interest even in the most imperturbable minds, and there was no doubt that the two officers, during one of the rare intervals when they were not absorbed in their game, had decided that it would be desirable at least to ascertain whether the island was deserted, or whether it might not be occupied by some others, like themselves, survivors from the general catastrophe. Certain it is that one morning, when the weather was bright and calm, they had embarked alone in the little boat, and been absent for seven or eight hours. Not even to Corporal Pim did they communicate the object of their excursion, nor say one syllable as to its result, and it could only be inferred from their manner that they were quite satisfied with what they had seen; and very shortly afterwards Major Oliphant was observed to draw up a lengthy document, which was no sooner finished than it was formally signed and sealed with the seal of the 33rd Regiment. It was directed:

>To the First Lord of the Admiralty, London,

and kept in readiness for transmission by the first ship that should hail in sight. But time elapsed, and here was the 18th of February without an opportunity having been afforded for any communication with the British Government.

At breakfast that morning, the colonel observed to the major that he was under the most decided impression that the 18th of February was a royal anniversary; and he went on to say that, although he had received no definite instructions on the subject, he did not think that the peculiar circumstances under which they found themselves should prevent them from giving the day its due military honors.

The major quite concurred; and it was mutually agreed that the occasion must be honored by a bumper of port, and by a royal salute. Corporal Pim must be sent for. The corporal soon made his appearance, smacking his lips, having, by a ready intuition, found a pretext for a double morning ration of spirits.

"The 18th of February, you know, Pim," said the colonel; "we must have a salute of twenty-one guns."

"Very good," replied Pim, a man of few words.

"And take care that your fellows don't get their arms and legs blown off," added the officer.

"Very good, sir," said the corporal; and he made his salute and withdrew.

Of all the bombs, howitzers, and various species of artillery with which the fortress had been crowded, one solitary piece remained. This was a cumbersome muzzle-loader of 9-inch caliber, and, in default of the smaller ordnance generally employed for the purpose, had to be brought into requisition for the royal salute.

A sufficient number of charges having been provided, the corporal brought his men to the reduct, whence the gun's mouth projected over a sloping embrasure. The two officers, in cocked hats and full staff uniform, attended to take charge of the proceedings. The gun was maneuvered in strict accordance with the rules of "The Artillerist's Manual," and the firing commenced.

Not unmindful of the warning he had received, the corporal was most careful between each discharge to see that every vestige of fire was extinguished, so as to prevent an untimely explosion while the men were reloading; and accidents, such as so frequently mar public rejoicings, were all happily avoided.

Much to the chagrin of both Colonel Murphy and Major Oliphant, the effect of the salute fell altogether short of their anticipations. The weight of the atmosphere was so reduced that there was comparatively little resistance to the explosive force of the gases, liberated at the cannon's mouth, and there was consequently none of the reverberation, like rolling thunder, that ordinarily follows the discharge of heavy artillery.

Twenty times had the gun been fired, and it was on the point of being loaded for the last time, when the colonel...
laid his hand upon the arm of the man who had the ramrod. "Stop!" he said; "we will have a ball this time. Let us put the range of the piece to the test."

"A good idea!" replied the major. "Corporal, you hear the orders."

In quick time an artillery-wagon was on the spot, and the men lifted out a full-sized shot, weighing 200 lbs., which, under ordinary circumstances, the cannon would carry about four miles. It was proposed, by means of telescopes, to note the place where the ball first touched the water, and thus to obtain an approximation sufficiently accurate as to the true range.

Having been duly charged with powder and ball, the gun was raised to an angle of something under 45 degrees, so as to allow proper development to the curve that the projectile would make, and, at a signal from the major, the light was applied to the priming.

"Heavens!" "By all that's good!" exclaimed both officers in one breath, as, standing open-mouthed, they hardly knew whether they were to believe the evidence of their own senses. "Is it possible?"

The diminution of the force of attraction at the earth's surface was so considerable that the ball had sped beyond the horizon.

"Incredible!" ejaculated the colonel.
"Incredible!" echoed the major.
"Six miles at least!" observed the one.
"Ay, more than that!" replied the other.

Awhile, they gazed at the sea and at each other in mute amazement. But in the midst of their perplexity, what sound was that which startled them? Was it mere fancy? Was it the reverberation of the cannon still booming in their ears? Or was it not truly the report of another and a distant gun in answer to their own? Attentively and eagerly they listened. Twice, thrice did the sound repeat itself. It was quite distinct. There could be no mistake.

"I told you so," cried the colonel, triumphantly. "I knew our country would not forsake us; it is an English ship, no doubt."

In half an hour two masts were visible above the horizon. "See! Was I not right? Our country was sure to send to our relief. Here is the ship."

"Yes," replied the major; "she responded to our gun."
"It is to be hoped," muttered the corporal, "that our ball has done her no damage."

Before long the hull was full in sight. A long trail of smoke betokened her to be a steamer; and very soon, by the aid of the glass, it could be ascertained that she was a schooner-yacht, and making straight for the island. A flag at her mast-head fluttered in the breeze, and towards this the two officers, with the keenest attention, respectively adjusted their focus.

Simultaneously the two telescopes were lowered. The colonel and the major stared at each other in blank astonishment. "Russian!" they gasped.

And true it was that the flag that floated at the head of yonder mast was the blue cross of Russia.

CHAPTER XIV. SENSITIVE NATIONALITY

When the schooner had approached the island, the Englishmen were able to make out the name "Dobryna_" painted on the aft-board. A sinuous irregularity of the coast had formed a kind of cove, which, though hardly spacious enough for a few fishing-smacks, would afford the yacht a temporary anchorage, so long as the wind did not blow violently from either west or south. Into this cove the _Dobryna_ was duly signaled, and as soon as she was safely moored, she lowered her four-oar, and Count Timascheff and Captain Servadac made their way at once to land.

Colonel Heneage Finch Murphy and Major Sir John Temple Oliphant stood, grave and prim, formally awaiting the arrival of their visitors. Captain Servadac, with the uncontrolled vivacity natural to a Frenchman, was the first to speak.

"A joyful sight, gentlemen!" he exclaimed. "It will give us unbounded pleasure to shake hands again with some of our fellow-creatures. You, no doubt, have escaped the same disaster as ourselves."

But the English officers, neither by word nor gesture, made the slightest acknowledgment of this familiar greeting.

"What news can you give us of France, England, or Russia?" continued Servadac, perfectly unconscious of the stolid rigidity with which his advances were received. "We are anxious to hear anything you can tell us. Have you had communications with Europe? Have you--"

"To whom have we the honor of speaking?" at last interposed Colonel Murphy, in the coldest and most measured tone, and drawing himself up to his full height.
"Ah! how stupid! I forgot," said Servadac, with the slightest possible shrug of the shoulders; "we have not been introduced."

Then, with a wave of his hand towards his companion, who meanwhile had exhibited a reserve hardly less than that of the British officers, he said:

"Allow me to introduce you to Count Wassili Timascheff."

"Major Sir John Temple Oliphant," replied the colonel.

The Russian and the Englishman mutually exchanged the stiffest of bows.

"I have the pleasure of introducing Captain Servadac," said the count in his turn.

"And this is Colonel Heneage Finch Murphy," was the major's grave rejoinder.

More bows were interchanged and the ceremony brought to its due conclusion. It need hardly be said that the conversation had been carried on in French, a language which is generally known both by Russians and Englishmen—a circumstance that is probably in some measure to be accounted for by the refusal of Frenchmen to learn either Russian or English.

The formal preliminaries of etiquette being thus complete, there was no longer any obstacle to a freer intercourse. The colonel, signing to his guests to follow, led the way to the apartment occupied jointly by himself and the major, which, although only a kind of casemate hollowed in the rock, nevertheless wore a general air of comfort. Major Oliphant accompanied them, and all four having taken their seats, the conversation was commenced.

Irritated and disgusted at all the cold formalities, Hector Servadac resolved to leave all the talking to the count; and he, quite aware that the Englishmen would adhere to the fiction that they could be supposed to know nothing that had transpired previous to the introduction felt himself obliged to recapitulate matters from the very beginning.

"You must be aware, gentlemen," began the count, "that a most singular catastrophe occurred on the 1st of January last. Its cause, its limits we have utterly failed to discover, but from the appearance of the island on which we find you here, you have evidently experienced its devastating consequences."

The Englishmen, in silence, bowed assent.

"Captain Servadac, who accompanies me," continued the count, "has been most severely tried by the disaster. Engaged as he was in an important mission as a staff-officer in Algeria—"

"A French colony, I believe," interposed Major Oliphant, half shutting his eyes with an expression of supreme indifference.

Servadac was on the point of making some cutting retort, but Count Timascheff, without allowing the interruption to be noticed, calmly continued his narrative:

"It was near the mouth of the Shelif that a portion of Africa, on that eventful night, was transformed into an island which alone survived; the rest of the vast continent disappeared as completely as if it had never been."

The announcement seemed by no means startling to the phlegmatic colonel.

"Indeed!" was all he said.

"And where were you?" asked Major Oliphant.

"I was out at sea, cruising in my yacht; hard by; and I look upon it as a miracle, and nothing less, that I and my crew escaped with our lives."

"I congratulate you on your luck," replied the major.

The count resumed: "It was about a month after the great disruption that I was sailing—my engine having sustained some damage in the shock—along the Algerian coast, and had the pleasure of meeting with my previous acquaintance, Captain Servadac, who was resident upon the island with his orderly, Ben Zoof."

"Ben who?" inquired the major.

"Zoof! Ben Zoof!" ejaculated Servadac, who could scarcely shout loud enough to relieve his pent-up feelings.

Ignoring this ebullition of the captain's spleen, the count went on to say: "Captain Servadac was naturally most anxious to get what news he could. Accordingly, he left his servant on the island in charge of his horses, and came on board the _Dobryna_ with me. We were quite at a loss to know where we should steer, but decided to direct our course to what previously had been the east, in order that we might, if possible, discover the colony of Algeria; but of Algeria not a trace remained."

The colonel curled his lips, insinuating only too plainly that to him it was by no means surprising that a French colony should be wanting in the element of stability. Servadac observed the supercilious look, and half rose to his feet, but, smothering his resentment, took his seat again without speaking.

"The devastation, gentlemen," said the count, who persistently refused to recognize the Frenchman's irritation, "everywhere was terrible and complete. Not only was Algeria lost, but there was no trace of Tunis, except one solitary rock, which was crowned by an ancient tomb of one of the kings of France—"

"Louis the Ninth, I presume," observed the colonel.

"Saint Louis," blurted out Servadac, savagely.
Colonel Murphy slightly smiled.

Proof against all interruption, Count Timascheff, as if he had not heard it, went on without pausing. He related how the schooner had pushed her way onwards to the south, and had reached the Gulf of Cabes; and how she had ascertained for certain that the Sahara Sea had no longer an existence.

The smile of disdain again crossed the colonel's face; he could not conceal his opinion that such a destiny for the work of a Frenchman could be no matter of surprise.

"Our next discovery," continued the count, "was that a new coast had been upheaved right along in front of the coast of Tripoli, the geological formation of which was altogether strange, and which extended to the north as far as the proper place of Malta."

"And Malta," cried Servadac, unable to control himself any longer; "Malta--town, forts, soldiers, governor, and all--has vanished just like Algeria."

For a moment a cloud rested upon the colonel's brow, only to give place to an expression of decided incredulity.

"The statement seems highly incredible," he said.

"Incredible?" repeated Servadac. "Why is it that you doubt my word?"

The captain's rising wrath did not prevent the colonel from replying coolly, "Because Malta belongs to England."

"I can't help that," answered Servadac, sharply; "it has gone just as utterly as if it had belonged to China."

Colonel Murphy turned deliberately away from Servadac, and appealed to the count: "Do you not think you may have made some error, count, in reckoning the bearings of your yacht?"

"No, colonel, I am quite certain of my reckonings; and not only can I testify that Malta has disappeared, but I can affirm that a large section of the Mediterranean has been closed in by a new continent. After the most anxious investigation, we could discover only one narrow opening in all the coast, and it is by following that little channel that we have made our way hither. England, I fear, has suffered grievously by the late catastrophe. Not only has Malta been entirely lost, but of the Ionian Islands that were under England's protection, there seems to be but little left."

"Ay, you may depend upon it," said Servadac, breaking in upon the conversation petulantly, "your grand resident lord high commissioner has not much to congratulate himself about in the condition of Corfu."

The Englishmen were mystified.

"Corfu, did you say?" asked Major Oliphant.

"Yes, Corfu; I said Corfu," replied Servadac, with a sort of malicious triumph.

The officers were speechless with astonishment.

The silence of bewilderment was broken at length by Count Timascheff making inquiry whether nothing had been heard from England, either by telegraph or by any passing ship.

"No," said the colonel; "not a ship has passed; and the cable is broken."

"But do not the Italian telegraphs assist you?" continued the count.

"Italian! I do not comprehend you. You must mean the Spanish, surely."

"How?" demanded Timascheff.

"Confound it!" cried the impatient Servadac. "What matters whether it be Spanish or Italian? Tell us, have you had no communication at all from Europe?--no news of any sort from London?"

"Hitherto, none whatever," replied the colonel; adding with a stately emphasis, "but we shall be sure to have tidings from England before long."

"Whether England is still in existence or not, I suppose," said Servadac, in a tone of irony. The Englishmen started simultaneously to their feet.

"England in existence?" the colonel cried. "England! Ten times more probable that France--"

"France!" shouted Servadac in a passion. "France is not an island that can be submerged; France is an integral portion of a solid continent. France, at least, is safe."

A scene appeared inevitable, and Count Timascheff's efforts to conciliate the excited parties were of small avail.

"You are at home here," said Servadac, with as much calmness as he could command; "it will be advisable, I think, for this discussion to be carried on in the open air." And hurriedly he left the room. Followed immediately by the others, he led the way to a level piece of ground, which he considered he might fairly claim as neutral territory.

"Now, gentlemen," he began haughtily, "permit me to represent that, in spite of any loss France may have sustained in the fate of Algeria, France is ready to answer any provocation that affects her honor. Here I am the representative of my country, and here, on neutral ground--"

"Neutral ground?" objected Colonel Murphy; "I beg your pardon. This, Captain Servadac, is English territory. Do you not see the English flag?" and, as he spoke, he pointed with national pride to the British standard floating over the top of the island.

"Pshaw!" cried Servadac, with a contemptuous sneer; "that flag, you know, has been hoisted but a few short
weeks."
"That flag has floated where it is for ages," asserted the colonel.
"An imposture!" shouted Servadac, as he stamped with rage.
Recovering his composure in a degree, he continued: "Can you suppose that I am not aware that this island on which we find you is what remains of the Ionian representative republic, over which you English exercise the right of protection, but have no claim of government?"

The colonel and the major looked at each other in amazement.

Although Count Timascheff secretly sympathized with Servadac, he had carefully refrained from taking part in the dispute; but he was on the point of interfering, when the colonel, in a greatly subdued tone, begged to be allowed to speak.

"I begin to apprehend," he said, "that you must be laboring under some strange mistake. There is no room for questioning that the territory here is England's--England's by right of conquest; ceded to England by the Treaty of Utrecht. Three times, indeed--in 1727, 1779, and 1792--France and Spain have disputed our title, but always to no purpose. You are, I assure you, at the present moment, as much on English soil as if you were in London, in the middle of Trafalgar Square."

It was now the turn of the captain and the count to look surprised. "Are we not, then, in Corfu?" they asked.
"You are at Gibraltar," replied the colonel.

Gibraltar! The word fell like a thunderclap upon their ears. Gibraltar! the western extremity of the Mediterranean! Why, had they not been sailing persistently to the east? Could they be wrong in imagining that they had reached the Ionian Islands? What new mystery was this?

Count Timascheff was about to proceed with a more rigorous investigation, when the attention of all was arrested by a loud outcry. Turning round, they saw that the crew of the _Dobryna_ was in hot dispute with the English soldiers. A general altercation had arisen from a disagreement between the sailor Panofka and Corporal Pim. It had transpired that the cannon-ball fired in experiment from the island had not only damaged one of the spars of the schooner, but had broken Panofka's pipe, and, moreover, had just grazed his nose, which, for a Russian's, was unusually long. The discussion over this mishap led to mutual recriminations, till the sailors had almost come to blows with the garrison.

Servadac was just in the mood to take Panofka's part, which drew from Major Oliphant the remark that England could not be held responsible for any accidental injury done by her cannon, and if the Russian's long nose came in the way of the ball, the Russian must submit to the mischance.

This was too much for Count Timascheff, and having poured out a torrent of angry invective against the English officers, he ordered his crew to embark immediately.

"We shall meet again," said Servadac, as they pushed off from shore.
"Whenever you please," was the cool reply.

The geographical mystery haunted the minds of both the count and the captain, and they felt they could never rest till they had ascertained what had become of their respective countries. They were glad to be on board again, that they might résumé their voyage of investigation, and in two hours were out of sight of the sole remaining fragment of Gibraltar.

CHAPTER XV. AN ENIGMA FROM THE SEA

Lieutenant Procope had been left on board in charge of the _Dobryna_, and on resuming the voyage it was a task of some difficulty to make him understand the fact that had just come to light. Some hours were spent in discussion and in attempting to penetrate the mysteries of the situation.

There were certain things of which they were perfectly certain. They could be under no misapprehension as to the distance they had positively sailed from Gourbi Island towards the east before their further progress was arrested by the unknown shore; as nearly as possible that was fifteen degrees; the length of the narrow strait by which they had made their way across that land to regain the open sea was about three miles and a half; thence onward to the island, which they had been assured, on evidence that they could not disbelieve, to be upon the site of Gibraltar, was four degrees; while from Gibraltar to Gourbi Island was seven degrees or but little more. What was it altogether? Was it not less than thirty degrees? In that latitude, the degree of longitude represents eight and forty miles. What, then, did it all amount to? Indubitably, to less than 1,400 miles. So brief a voyage would bring the _Dobryna_ once again to her starting-point, or, in other words, would enable her to complete the circumnavigation of the globe. How changed the condition of things! Previously, to sail from Malta to Gibraltar by an eastward course would have involved the passage of the Suez Canal, the Red Sea, the Indian Ocean, the Pacific, the Atlantic; but what had happened now? Why, Gibraltar had been reached as if it had been just at Corfu, and some three hundred and thirty
degrees of the earth's circuit had vanished utterly.

After allowing for a certain margin of miscalculation, the main fact remained undeniable; and the necessary
inference that Lieutenant Procope drew from the round of the earth being completed in 1,400 miles, was that the
earth's diameter had been reduced by about fifteen sixteenths of its length.

"If that be so," observed the count, "it accounts for some of the strange phenomena we witness. If our world has
come to be so insignificant a spheroid, not only has its gravity diminished, but its rotary speed has been accelerated;
and this affords an adequate explanation of our days and nights being thus curtailed. But how about the new orbit in
which we are moving?"

He paused and pondered, and then looked at Procope as though awaiting from him some further elucidation of
the difficulty. The lieutenant hesitated. When, in a few moments, he began to speak, Servadac smiled intelligently,
anticipating the answer he was about to hear.

"My conjecture is," said Procope, "that a fragment of considerable magnitude has been detached from the earth;
that it has carried with it an envelope of the earth's atmosphere, and that it is now traveling through the solar system
in an orbit that does not correspond at all with the proper orbit of the earth."

The hypothesis was plausible; but what a multitude of bewildering speculations it entailed! If, in truth, a certain
mass had been broken off from the terrestrial sphere, whither would it wend its way? What would be the measure of
the eccentricity of its path? What would be its period round the sun? Might it not, like a comet, be carried away into
the vast infinity of space? or, on the other hand, might it not be attracted to the great central source of light and heat,
and be absorbed in it? Did its orbit correspond with the orbit of the ecliptic? and was there no chance of its ever
uniting again with the globe, from which it had been torn off by so sudden and violent a disruption?

A thoughtful silence fell upon them all, which Servadac was the first to break. "Lieutenant," he said, "your
explanation is ingenious, and accounts for many appearances; but it seems to me that in one point it fails."

"How so?" replied Procope. "To my mind the theory meets all objections."

"I think not," Servadac answered. "In one point, at least, it appears to me to break down completely."

"What is that?" asked the lieutenant.

"Stop a moment," said the captain. "Let us see that we understand each other right. Unless I mistake you, your
hypothesis is that a fragment of the earth, comprising the Mediterranean and its shores from Gibraltar to Malta, has
been developed into a new asteroid, which is started on an independent orbit in the solar regions. Is not that your
meaning?"

"Precisely so," the lieutenant acquiesced.

"Well, then," continued Servadac, "it seems to me to be at fault in this respect: it fails, and fails completely, to
account for the geological character of the land that we have found now encompassing this sea. Why, if the new land
is a fragment of the old--why does it not retain its old formation? What has become of the granite and the calcareous
deposits? How is it that these should all be changed into a mineral concrete with which we have no acquaintance?"

No doubt, it was a serious objection; for, however likely it might be that a mass of the earth on being detached
would be eccentric in its movements, there was no probable reason to be alleged why the material of its substance
should undergo so complete a change. There was nothing to account for the fertile shores, rich in vegetation, being
transformed into rocks arid and barren beyond precedent.

The lieutenant felt the difficulty, and owned himself unprepared to give at once an adequate solution; nevertheless,
he declined to renounce his theory. He asserted that the arguments in favor of it carried conviction to
his mind, and that he entertained no doubt but that, in the course of time, all apparently antagonistic circumstances
would be explained so as to become consistent with the view he took. He was careful, however, to make it
understood that with respect to the original cause of the disruption he had no theory to offer; and although he knew
what expansion might be the result of subterranean forces, he did not venture to say that he considered it sufficient
to produce so tremendous an effect. The origin of the catastrophe was a problem still to be solved.

"Ah! well," said Servadac, "I don't know that it matters much where our new little planet comes from, or what it
is made of, if only it carries France along with it."

"And Russia," added the count.

"And Russia, of course," said Servadac, with a polite bow.

There was, however, not much room for this sanguine expectation, for if a new asteroid had thus been brought
into existence, it must be a sphere of extremely limited dimensions, and there could be little chance that it embraced
more than the merest fraction of either France or Russia. As to England, the total cessation of all telegraphic
communication between her shores and Gibraltar was a virtual proof that England was beyond its compass.

And what was the true measurement of the new little world? At Gourbi Island the days and nights were of equal
length, and this seemed to indicate that it was situated on the equator; hence the distance by which the two poles
stood apart would be half what had been reckoned would be the distance completed by the _Dobryna_ in her circuit.
That distance had been already estimated to be something under 1,400 miles, so that the Arctic Pole of their recently fashioned world must be about 350 miles to the north, and the Antarctic about 350 miles to the south of the island. Compare these calculations with the map, and it is at once apparent that the northernmost limit barely touched the coast of Provence, while the southernmost reached to about lat. 20 degrees N., and fell in the heart of the desert. The practical test of these conclusions would be made by future investigation, but meanwhile the fact appeared very much to strengthen the presumption that, if Lieutenant Procope had not arrived at the whole truth, he had made a considerable advance towards it.

The weather, ever since the storm that had driven the _Dobryna_ into the creek, had been magnificent. The wind continued favorable, and now under both steam and canvas, she made a rapid progress towards the north, a direction in which she was free to go in consequence of the total disappearance of the Spanish coast, from Gibraltar right away to Alicante. Malaga, Almeria, Cape Gata, Cartagena. Cape Palos—all were gone. The sea was rolling over the southern extent of the peninsula, so that the yacht advanced to the latitude of Seville before it sighted any land at all, and then, not shores such as the shores of Andalusia, but a bluff and precipitous cliff, in its geological features resembling exactly the stern and barren rock that she had coasted beyond the site of Malta. Here the sea made a decided indentation on the coast; it ran up in an acute-angled triangle till its apex coincided with the very spot upon which Madrid had stood. But as hitherto the sea had encroached upon the land, the land in its turn now encroached upon the sea; for a frowning headland stood out far into the basin of the Mediterranean, and formed a promontory stretching out beyond the proper places of the Balearic Isles. Curiosity was all alive. There was the intensest interest awakened to determine whether no vestige could be traced of Majorca, Minorca, or any of the group, and it was during a deviation from the direct course for the purpose of a more thorough scrutiny, that one of the sailors raised a thrill of general excitement by shouting, "A bottle in the sea!"

Here, then, at length was a communication from the outer world. Surely now they would find a document which would throw some light upon all the mysteries that had happened? Had not the day now dawned that should set their speculations all at rest?

It was the morning of the 21st of February. The count, the captain, the lieutenant, everybody hurried to the forecastle; the schooner was dexterously put about, and all was eager impatience until the supposed bottle was hauled on deck.

It was not, however, a bottle; it proved to be a round leather telescope-case, about a foot long, and the first thing to do before investigating its contents was to make a careful examination of its exterior. The lid was fastened on by wax, and so securely that it would take a long immersion before any water could penetrate; there was no maker's name to be deciphered; but impressed very plainly with a seal on the wax were the two initials "P. R."

When the scrutiny of the outside was finished, the wax was removed and the cover opened, and the lieutenant drew out a slip of ruled paper, evidently torn from a common note-book. The paper had an inscription written in four lines, which were remarkable for the profusion of notes of admiration and interrogation with which they were interspersed:

"Gallia??? _Ab sole_, au 15 fev. 59,000,000 l.! Chemin parcouru de janv. a fev. 82,000,000 l.!! _Va bene! All right!!_ Parfait!!"

There was a general sigh of disappointment. They turned the paper over and over, and handed it from one to another. "What does it all mean?" exclaimed the count.

"Something mysterious here!" said Servadac. "But yet," he continued, after a pause, "one thing is tolerably certain: on the 15th, six days ago, someone was alive to write it."

"Yes; I presume there is no reason to doubt the accuracy of the date," assented the count.

To these general observations Captain Servadac objected that he thought it unlikely that any one on board a ship would use a telescope-case for this purpose, but would be sure to use a bottle as being more secure; and, accordingly, he should rather be inclined to believe that the message had been set afloat by some _savant_ left alone, perchance, upon some isolated coast.

"But, however interesting it might be," observed the count, "to know the author of the lines, to us it is of far greater moment to ascertain their meaning."

And taking up the paper again, he said, "Perhaps we might analyze it word by word, and from its detached parts gather some clue to its sense as a whole."

"What can be the meaning of all that cluster of interrogations after Gallia?" asked Servadac.

Lieutenant Procope, who had hitherto not spoken, now broke his silence by saying, "I beg, gentlemen, to submit
my opinion that this document goes very far to confirm my hypothesis that a fragment of the earth has been precipitated into space."

Captain Servadac hesitated, and then replied, "Even if it does, I do not see how it accounts in the least for the geological character of the new asteroid."

"But will you allow me for one minute to take my supposition for granted?" said Procope. "If a new little planet has been formed, as I imagine, by disintegration from the old, I should conjecture that Gallia is the name assigned to it by the writer of this paper. The very notes of interrogation are significant that he was in doubt what he should write."

"You would presume that he was a Frenchman?" asked the count.

"I should think so," replied the lieutenant.

"Not much doubt about that," said Servadac; "it is all in French, except a few scattered words of English, Latin, and Italian, inserted to attract attention. He could not tell into whose hands the message would fall first."

"Well, then," said Count Timascheff, "we seem to have found a name for the new world we occupy."

"But what I was going especially to observe," continued the lieutenant, "is that the distance, 59,000,000 leagues, represents precisely the distance we ourselves were from the sun on the 15th. It was on that day we crossed the orbit of Mars."

"Yes, true," assented the others.

"And the next line," said the lieutenant, after reading it aloud, "apparently registers the distance traversed by Gallia, the new little planet, in her own orbit. Her speed, of course, we know by Kepler's laws, would vary according to her distance from the sun, and if she were—as I conjecture from the temperature at that date—on the 15th of January at her perihelion, she would be traveling twice as fast as the earth, which moves at the rate of between 50,000 and 60,000 miles an hour."

"You think, then," said Servadac, with a smile, "you have determined the perihelion of our orbit; but how about the aphelion? Can you form a judgment as to what distance we are likely to be carried?"

"You are asking too much," remonstrated the count.

"I confess," said the lieutenant, "that just at present I am not able to clear away the uncertainty of the future; but I feel confident that by careful observation at various points we shall arrive at conclusions which not only will determine our path, but perhaps may clear up the mystery about our geological structure."

"Allow me to ask," said Count Timascheff, "whether such a new asteroid would not be subject to ordinary mechanical laws, and whether, once started, it would not have an orbit that must be immutable?"

"Decidedly it would, so long as it was undisturbed by the attraction of some considerable body; but we must recollect that, compared to the great planets, Gallia must be almost infinitesimally small, and so might be attracted by a force that is irresistible."

"Altogether, then," said Servadac, "we seem to have settled it to our entire satisfaction that we must be the population of a young little world called Gallia. Perhaps some day we may have the honor of being registered among the minor planets."

"No chance of that," quickly rejoined Lieutenant Procope. "Those minor planets all are known to rotate in a narrow zone between the orbits of Mars and Jupiter; in their perihelia they cannot approximate the sun as we have done; we shall not be classed with them."

"Our lack of instruments," said the count, "is much to be deplored; it baffles our investigations in every way."

"Ah, never mind! Keep up your courage, count!" said Servadac, cheerily.

And Lieutenant Procope renewed his assurances that he entertained good hopes that every perplexity would soon be solved.

"I suppose," remarked the count, "that we cannot attribute much importance to the last line: _'Va bene! All right!!_ Parfait!!!!"

The captain answered, "At least, it shows that whoever wrote it had no murmuring or complaint to make, but was quite content with the new order of things."

CHAPTER XVI. THE RESIDUUM OF A CONTINENT

Almost unconsciously, the voyagers in the _Dobryna_ fell into the habit of using Gallia as the name of the new world in which they became aware they must be making an extraordinary excursion through the realms of space. Nothing, however, was allowed to divert them from their ostensible object of making a survey of the coast of the Mediterranean, and accordingly they persevered in following that singular boundary which had revealed itself to their extreme astonishment.

Having rounded the great promontory that had barred her farther progress to the north, the schooner skirted its
upper edge. A few more leagues and they ought to be abreast of the shores of France. Yes, of France.

But who shall describe the feelings of Hector Servadac when, instead of the charming outline of his native land, he beheld nothing but a solid boundary of savage rock? Who shall paint the look of consternation with which he gazed upon the stony rampart—rising perpendicularly for a thousand feet—that had replaced the shores of the smiling south? Who shall reveal the burning anxiety with which he throbbed to see beyond that cruel wall?

But there seemed no hope. Onwards and onwards the yacht made her way, and still no sign of France. It might have been supposed that Servadac's previous experiences would have prepared him for the discovery that the catastrophe which had overwhelmed other sites had brought destruction to his own country as well. But he had failed to realize how it might extend to France; and when now he was obliged with his own eyes to witness the waves of ocean rolling over what once had been the lovely shores of Provence, he was well-nigh frantic with desperation.

"Am I to believe that Gourbi Island, that little shred of Algeria, constitutes all that is left of our glorious France? No, no; it cannot be. Not yet have we reached the pole of our new world. There is—there must be—something more behind that frowning rock. Oh, that for a moment we could scale its towering height and look beyond! By Heaven, I adjure you, let us disembark, and mount the summit and explore! France lies beyond."

Disembarkation, however, was an utter impossibility. There was no semblance of a creek in which the Dobryna could find an anchorage. There was no outlying ridge on which a footing could be gained. The precipice was perpendicular as a wall, its topmost height crowned with the same conglomerate of crystallized lamellae that had all along been so pronounced a feature.

With her steam at high pressure, the yacht made rapid progress towards the east. The weather remained perfectly fine, the temperature became gradually cooler, so that there was little prospect of vapors accumulating in the atmosphere; and nothing more than a few cirri, almost transparent, veiled here and there the clear azure of the sky. Throughout the day the pale rays of the sun, apparently lessened in its magnitude, cast only faint and somewhat uncertain shadows; but at night the stars shone with surpassing brilliancy. Of the planets, some, it was observed, seemed to be fading away in remote distance. This was the case with Mars, Venus, and that unknown orb which was moving in the orbit of the minor planets; but Jupiter, on the other hand, had assumed splendid proportions; Saturn was superb in its luster, and Uranus, which hitherto had been imperceptible without a telescope was pointed out by Lieutenant Procope, plainly visible to the naked eye. The inference was irresistible that Gallia was receding from the sun, and traveling far away across the planetary regions.

On the 24th of February, after following the sinuous course of what before the date of the convulsion had been the coast line of the department of Var, and after a fruitless search for Hyeres, the peninsula of St. Tropez, the Lerius Islands, and the gulfs of Cannes and Jouar, the Dobryna arrived upon the site of the Cape of Antibes.

Here, quite unexpectedly, the explorers made the discovery that the massive wall of cliff had been rent from the top to the bottom by a narrow rift, like the dry bed of a mountain torrent, and at the base of the opening, level with the sea, was a little strand upon which there was just space enough for their boat to be hauled up.

"Joy! joy!" shouted Servadac, half beside himself with ecstasy; "we can land at last!"

Count Timascheff and the lieutenant were scarcely less impatient than the captain, and little needed his urgent and repeated solicitations: "Come on! Quick! Come on! no time to lose!"

It was half-past seven in the morning, when they set their foot upon this untried land. The bit of strand was only a few square yards in area, quite a narrow strip. Upon it might have been recognized some fragments of that agglutination of yellow limestone which is characteristic of the coast of Provence. But the whole party was far too eager to wait and examine these remnants of the ancient shore; they hurried on to scale the heights.

The narrow ravine was not only perfectly dry, but manifestly had never been the bed of any mountain torrent. The rocks that rested at the bottom—just as those which formed its sides—were of the same lamellae formation as the entire coast, and had not hitherto been subject to the disaggregation which the lapse of time never fails to work. A skilled geologist would probably have been able to assign them their proper scientific classification, but neither Servadac, Timascheff, nor the lieutenant could pretend to any acquaintance with their specific character.

Although, however, the bottom of the chasm had never as yet been the channel of a stream, indications were not wanting that at some future time it would be the natural outlet of accumulated waters; for already, in many places, thin layers of snow were glittering upon the surface of the fractured rocks, and the higher the elevation that was gained, the more these layers were found to increase in area and in depth.

"Here is a trace of fresh water, the first that Gallia has exhibited," said the count to his companions, as they toiled up the precipitous path.

"And probably," replied the lieutenant, "as we ascend we shall find not only snow but ice. We must suppose this Gallia of ours to be a sphere, and if it is so, we must now be very close to her Arctic regions; it is true that her axis is not so much inclined as to prolong day and night as at the poles of the earth, but the rays of the sun must reach us
here only very obliquely, and the cold, in all likelihood, will be intense."

"So cold, do you think," asked Servadac, "that animal life must be extinct?"

"I do not say that, captain," answered the lieutenant; "for, however far our little world may be removed from the
sun, I do not see why its temperature should fall below what prevails in those outlying regions beyond our system
where sky and air are not." "And what temperature may that be?" inquired the captain with a shudder.

"Fourier estimates that even in those vast unfathomable tracts, the temperature never descends lower than 60
degrees," said Procope.

"Sixty! Sixty degrees below zero!" cried the count. "Why, there's not a Russian could endure it!"

"I beg your pardon, count. It is placed on record that the English _have_ survived it, or something quite
approximate, upon their Arctic expeditions. When Captain Parry was on Melville Island, he knew the thermometer
to fall to 56 degrees," said Procope.

As the explorers advanced, they seemed glad to pause from time to time, that they might recover their breath; for
the air, becoming more and more rarefied, made respiration somewhat difficult and the ascent fatiguing. Before they
had reached an altitude of 600 feet they noticed a sensible diminution of the temperature; but neither cold nor fatigue
deterred them, and they were resolved to persevere. Fortunately, the deep striae or furrows in the surface of the rocks
that made the bottom of the ravine in some degree facilitated their progress, but it was not until they had been toiling
up for two hours more that they succeeded in reaching the summit of the cliff.

Eagerly and anxiously did they look around. To the south there was nothing but the sea they had traversed; to the
north, nothing but one drear, inhospitable stretch.

Servadac could not suppress a cry of dismay. Where was his beloved France? Had he gained this arduous height
only to behold the rocks carpeted with ice and snow, and reaching interminably to the far-off horizon? His heart
sank within him.

The whole region appeared to consist of nothing but the same strange, uniform mineral conglomerate,
crystallized into regular hexagonal prisms. But whatever was its geological character, it was only too evident that it
had entirely replaced the former soil, so that not a vestige of the old continent of Europe could be discerned. The
lovely scenery of Provence, with the grace of its rich and undulating landscape; its gardens of citrons and oranges
rising tier upon tier from the deep red soil—all, all had vanished. Of the vegetable kingdom, there was not a single
representative; the most meager of Arctic plants, the most insignificant of lichens, could obtain no hold upon that
stony waste. Nor did the animal world assert the feeblest sway. The mineral kingdom reigned supreme.

Captain Servadac's deep dejection was in strange contrast to his general hilarity. Silent and tearful, he stood upon
an ice-bound rock, straining his eyes across the boundless vista of the mysterious territory. "It cannot be!" he
exclaimed. "We must somehow have mistaken our bearings. True, we have encountered this barrier; but France is
there beyond! Yes, France is _there!_ Come, count, come! By all that's pitiful, I entreat you, come and explore the
farthest verge of the ice-bound track!"

He pushed onwards along the rugged surface of the rock, but had not proceeded far before he came to a sudden
pause. His foot had come in contact with something hard beneath the snow, and, stooping down, he picked up a little
block of stony substance, which the first glance revealed to be of a geological character altogether alien to the
universal rocks around. It proved to be a fragment of dis-colored marble, on which several letters were inscribed, of
which the only part at all decipherable was the syllable "Vil."

"Vil--Villa!" he cried out, in his excitement dropping the marble, which was broken into atoms by the fall.

What else could this fragment be but the sole surviving remnant of some sumptuous mansion that once had stood
on this unrivaled site? Was it not the residue of some edifice that had crowned the luxuriant headland of Antibes,
overlooking Nice, and commanding the gorgeous panorama that embraced the Maritime Alps and reached beyond
Monaco and Mentone to the Italian height of Bordighera? And did it not give in its sad and too convincing
testimony that Antibes itself had been involved in the great destruction? Servadac gazed upon the shattered marble,
pensive and disheartened.

Count Timascheff laid his hand kindly on the captain's shoulder, and said, "My friend, do you not remember the
motto of the old Hope family?"

He shook his head mournfully.

"_Orbe fracto, spes illoesa_," continued the count—"Though the world be shattered, hope is unimpaired."

Servadac smiled faintly, and replied that he felt rather compelled to take up the despairing cry of Dante, "All
hope abandon, ye who enter here."

"Nay, not so," answered the count; "for the present at least, let our maxim be _Nil desperandum!_"

CHAPTER XVII. A SECOND ENIGMA
Upon re-embarking, the bewildered explorers began to discuss the question whether it would not now be desirable to make their way back to Gourbi Island, which was apparently the only spot in their new world from which they could hope to derive their future sustenance. Captain Servadac tried to console himself with the reflection that Gourbi Island was, after all, a fragment of a French colony, and as such almost like a bit of his dear France; and the plan of returning thither was on the point of being adopted, when Lieutenant Procope remarked that they ought to remember that they had not hitherto made an entire circuit of the new shores of the sea on which they were sailing.

"We have," he said, "neither investigated the northern shore from the site of Cape Antibes to the strait that brought us to Gibraltar, nor have we followed the southern shore that stretches from the strait to the Gulf of Cabis. It is the old coast, and not the new, that we have been tracing; as yet, we cannot say positively that there is no outlet to the south; as yet, we cannot assert that no oasis of the African desert has escaped the catastrophe. Perhaps, even here in the north, we may find that Italy and Sicily and the larger islands of the Mediterranean may still maintain their existence."

"I entirely concur with you," said Count Timascheff. "I quite think we ought to make our survey of the confines of this new basin as complete as possible before we withdraw."

Servadac, although he acknowledged the justness of these observations, could not help pleading that the explorations might be deferred until after a visit had been paid to Gourbi Island.

"Depend upon it, captain, you are mistaken," replied the lieutenant; "the right thing to do is to use the _Dobryna_ while she is available."

"Available! What do you mean?" asked the count, somewhat taken by surprise.

"I mean," said Procope, "that the farther this Gallia of ours recedes from the sun, the lower the temperature will fall. It is likely enough, I think, that before long the sea will be frozen over, and navigation will be impossible. Already you have learned something of the difficulties of traversing a field of ice, and I am sure, therefore, you will acquiesce in my wish to continue our explorations while the water is still open."

"No doubt you are right, lieutenant," said the count. "We will continue our search while we can for some remaining fragment of Europe. Who shall tell whether we may not meet with some more survivors from the catastrophe, to whom it might be in our power to afford assistance, before we go into our winter quarters?"

Generous and altogether unselfish as this sentiment really was, it was obviously to the general interest that they should become acquainted, and if possible establish friendly relations, with any human inhabitant who might be sharing their own strange destiny in being rolled away upon a new planet into the infinitude of space. All difference of race, all distinction of nationality, must be merged into the one thought that, few as they were, they were the sole surviving representatives of a world which it seemed exceedingly improbable that they would ever see again; and common sense dictated that they were bound to direct all their energies to insure that their asteroid should at least have a united and sympathizing population.

It was on the 25th of February that the yacht left the little creek in which she had taken refuge, and setting off at full steam eastwards, she continued her way along the northern shore. A brisk breeze tended to increase the keenness of the atmosphere, the thermometer being, on an average, about two degrees below zero. Salt water freezes only at a lower temperature than fresh; the course of the _Dobryna_ was therefore unimpeded by ice, but it could not be concealed that there was the greatest necessity to maintain the utmost possible speed.

The nights continued lovely; the chilled condition of the atmosphere prevented the formation of clouds; the constellations gleamed forth with unsullied luster; and, much as Lieutenant Procope, from nautical considerations, might regret the absence of the moon, he could not do otherwise than own that the magnificent nights of Gallia were such as must awaken the enthusiasm of an astronomer. And, as if to compensate for the loss of the moonlight, the heavens were illuminated by a superb shower of falling stars, far exceeding, both in number and in brilliancy, the phenomena which are commonly distinguished as the August and November meteors; in fact, Gallia was passing through that meteoric ring which is known to lie exterior to the earth's orbit, but almost concentric with it. The rocky coast, its metallic surface reflecting the glow of the dazzling luminaries, appeared literally stippled with light, whilst the sea, as though spattered with burning hailstones, shone with a phosphorescence that was perfectly splendid. So great, however, was the speed at which Gallia was receding from the sun, that this meteoric storm lasted scarcely more than four and twenty hours.

Next day the direct progress of the _Dobryna_ was arrested by a long projection of land, which obliged her to turn southwards, until she reached what formerly would have been the southern extremity of Corsica. Of this, however, there was now no trace; the Strait of Bonifacio had been replaced by a vast expanse of water, which had at first all the appearance of being utterly desert; but on the following morning the explorers unexpectedly sighted a little island, which, unless it should prove, as was only too likely, to be of recent origin they concluded, from its situation, must be a portion of the northernmost territory of Sardinia.
The _Dobryna_ approached the land as nearly as was prudent, the boat was lowered, and in a few minutes the count and Servadac had landed upon the islet, which was a mere plot of meadow land, not much more than two acres in extent, dotted here and there with a few myrtle-bushes and lentisks, interspersed with some ancient olives. Having ascertained, as they imagined, that the spot was devoid of living creature, they were on the point of returning to their boat, when their attention was arrested by a faint bleating, and immediately afterwards a solitary she-goat came bounding towards the shore. The creature had dark, almost black hair, and small curled horns, and was a specimen of that domestic breed which, with considerable justice, has gained for itself the title of "the poor man's cow." So far from being alarmed at the presence of strangers, the goat ran nimbly towards them, and then, by its movements and plaintive cries, seemed to be enticing them to follow it.

"Come," said Servadac; "let us see where it will lead us; it is more than probable it is not alone."

The count agreed; and the animal, as if comprehending what was said, trotted on gently for about a hundred paces, and stopped in front of a kind of cave or burrow that was half concealed by a grove of lentisks. Here a little girl, seven or eight years of age, with rich brown hair and lustrous dark eyes, beautiful as one of Murillo's angels, was peeping shyly through the branches. Apparently discovering nothing in the aspect of the strangers to excite her apprehensions, the child suddenly gained confidence, darted forwards with outstretched hands, and in a voice, soft and melodious as the language which she spoke, said in Italian:

"I like you; you will not hurt me, will you?"

"Hurt you, my child?" answered Servadac. "No, indeed; we will be your friends; we will take care of you."

And after a few moments' scrutiny of the pretty maiden, he added:

"Tell us your name, little one."

"Nina!" was the child's reply.

"Well, then, Nina, can you tell us where we are?"

"At Madalena, I think," said the little girl; "at least, I know I was there when that dreadful shock came and altered everything."

The count knew that Madalena was close to Caprera, to the north of Sardinia, which had entirely disappeared in the disaster. By dint of a series of questions, he gained from the child a very intelligent account of her experiences. She told him that she had no parents, and had been employed in taking care of a flock of goats belonging to one of the landowners, when one day, all of a sudden, everything around her, except this little piece of land, had been swallowed up, and that she and Marzy, her pet goat, had been left quite alone. She went on to say that at first she had been very frightened; but when she found that the earth did not shake any more, she had thanked the great God, and had soon made herself very happy living with Marzy. She had enough food, she said, and had been waiting for a boat to fetch her, and now a boat had come and she was quite ready to go away; only they must let her goat go with her: they would both like so much to get back to the old farm.

"Here, at least, is one nice little inhabitant of Gallia," said Captain Servadac, as he caressed the child and conducted her to the boat.

Half an hour later, both Nina and Marzy were safely quartered on board the yacht. It is needless to say that they received the heartiest of welcomes. The Russian sailors, ever superstitious, seemed almost to regard the coming of the child as the appearance of an angel; and, incredible as it may seem, more than one of them wondered whether she had wings, and amongst themselves they commonly referred to her as "the little Madonna."

Soon out of sight of Madalena, the _Dobryna_ for some hours held a southeasterly course along the shore, which here was fifty leagues in advance of the former coast-line of Italy, demonstrating that a new continent must have been formed, substituted as it were for the old peninsula, of which not a vestige could be identified. At a latitude corresponding with the latitude of Rome, the sea took the form of a deep gulf, extending back far beyond the site of the Eternal City; the coast making a wide sweep round to the former position of Calabria, and jutting far beyond the outline of "the boot," which Italy resembles. But the beacon of Messina was not to be discerned; no trace, indeed, survived of any portion of Sicily; the very peak of Etna, 11,000 feet as it had reared itself above the level of the sea, had vanished utterly.

Another sixty leagues to the south, and the _Dobryna_ sighted the entrance of the strait which had afforded her so providential a refuge from the tempest, and had conducted her to the fragmentary relic of Gibraltar. Hence to the Gulf of Cabes had been already explored, and as it was universally allowed that it was unnecessary to renew the search in that direction, the lieutenant started off in a transverse course, towards a point hitherto uninvestigated. That point was reached on the 3rd of March, and thence the coast was continuously followed, as it led through what had been Tunis, across the province of Constantine, away to the oasis of Ziban; where, taking a sharp turn, it first reached a latitude of 32 degrees, and then returned again, thus forming a sort of irregular gulf, enclosed by the same unvarying border of mineral concrete. This colossal boundary then stretched away for nearly 150 leagues over the Sahara desert, and, extending to the south of Gourbi Island, occupied what, if Morocco had still existed, would have
been its natural frontier.

Adapting her course to these deviations of the coastline, the _Dobryna_ was steering northwards, and had barely reached the limit of the bay, when the attention of all on board was arrested by the phenomenon of a volcano, at least 3,000 feet high, its crater crowned with smoke, which occasionally was streaked by tongues of flame.

"A burning mountain!" they exclaimed.

"Gallia, then, has some internal heat," said Servadac.

"And why not, captain?" rejoined the lieutenant. "If our asteroid has carried with it a portion of the old earth's atmosphere, why should it not likewise retain something of its central fire?"

"Ah, well!" said the captain, shrugging his shoulders, "I dare say there is caloric enough in our little world to supply the wants of its population."

Count Timasheff interrupted the silence that followed this conversation by saying, "And now, gentlemen, as our course has brought us on our way once more towards Gibraltar, what do you say to our renewing our acquaintance with the Englishmen? They will be interested in the result of our voyage."

"For my part," said Servadac, "I have no desire that way. They know where to find Gourbi Island; they can betake themselves thither just when they please. They have plenty of provisions. If the water freezes, 120 leagues is no very great distance. The reception they gave us was not so cordial that we need put ourselves out of the way to repeat our visit."

"What you say is too true," replied the count. "I hope we shall show them better manners when they condescend to visit us."

"Ay," said Servadac, "we must remember that we are all one people now; no longer Russian, French, or English. Nationality is extinct."

"I am sadly afraid, however," continued the count, "that an Englishman will be an Englishman ever." 

"Yes," said the captain, "that is always their failing."

And thus all further thought of making their way again to the little garrison of Gibraltar was abandoned.

But even if their spirit of courtesy had disposed them to renew their acquaintance with the British officers, there were two circumstances that just then would have rendered such a proposal very unadvisable. In the first place, Lieutenant Procope was convinced that it could not be much longer now before the sea would be entirely frozen; and, besides this, the consumption of their coal, through the speed they had maintained, had been so great that there was only too much reason to fear that fuel would fail them. Anyhow, the strictest economy was necessary, and it was accordingly resolved that the voyage should not be much prolonged. Beyond the volcanic peak, moreover, the waters seemed to expand into a boundless ocean, and it might be a thing full of risk to be frozen up while the yacht was so inadequately provisioned. Taking all these things into account, it was agreed that further investigations should be deferred to a more favorable season, and that, without delay, the _Dobryna_ should return to Gourbi Island.

This decision was especially welcome to Hector Servadac, who, throughout the whole of the last five weeks, had been agitated by much anxious thought on account of the faithful servant he had left behind.

The transit from the volcano to the island was not long, and was marked by only one noticeable incident. This was the finding of a second mysterious document, in character precisely similar to what they had found before. The writer of it was evidently engaged upon a calculation, probably continued from day to day, as to the motions of the planet Gallia upon its orbit, and committing the results of his reckonings to the waves as the channel of communication.

Instead of being enclosed in a telescope-case, it was this time secured in a preserved-meat tin, hermetically sealed, and stamped with the same initials on the wax that fastened it. The greatest care was used in opening it, and it was found to contain the following message:

"Gallia Ab sole, au 1 mars, dist. 78,000,000 l.! Chemin parcouru de fev. a mars: 59,000,000 1.! _Va bene! All right! Nil desperandum!_ 

"Enchante!"

"Another enigma!" exclaimed Servadac; "and still no intelligible signature, and no address. No clearing up of the mystery!"

"I have no doubt, in my own mind," said the count, "that it is one of a series. It seems to me probable that they are being sent broadcast upon the sea."

"I wonder where the hare-brained _savant_ that writes them can be living?" observed Servadac.

"Very likely he may have met with the fate of AESop's abstracted astronomer, who found himself at the bottom of a well."

"Ay; but where _is_ that well?" demanded the captain.

This was a question which the count was incapable of settling; and they could only speculate afresh as to
whether the author of the riddles was dwelling upon some solitary island, or, like themselves, was navigating the waters of the new Mediterranean. But they could detect nothing to guide them to a definite decision.

After thoughtfully regarding the document for some time, Lieutenant Procope proceeded to observe that he believed the paper might be considered as genuine, and accordingly, taking its statements as reliable, he deduced two important conclusions: first, that whereas, in the month of January, the distance traveled by the planet (hypothetically called Gallia) had been recorded as 82,000,000 leagues, the distance traveled in February was only 59,000,000 leagues—a difference of 23,000,000 leagues in one month; secondly, that the distance of the planet from the sun, which on the 15th of February had been 59,000,000 leagues, was on the 1st of March 78,000,000 leagues—an increase of 19,000,000 leagues in a fortnight. Thus, in proportion as Gallia receded from the sun, so did the rate of speed diminish by which she traveled along her orbit; facts to be observed in perfect conformity with the known laws of celestial mechanism.

"And your inference?" asked the count.

"My inference," replied the lieutenant, "is a confirmation of my surmise that we are following an orbit decidedly elliptical, although we have not yet the material to determine its eccentricity."

"As the writer adheres to the appellation of Gallia, do you not think," asked the count, "that we might call these new waters the Gallian Sea?"

"There can be no reason to the contrary, count," replied the lieutenant; "and as such I will insert it upon my new chart."

"Our friend," said Servadac, "seems to be more and more gratified with the condition of things; not only has he adopted our motto, '_Nil desperandum!_' but see how enthusiastically he has wound up with his '_Enchante!_'"

The conversation dropped.

A few hours later the man on watch announced that Gourbi Island was in sight.

CHAPTER XVIII. AN UNEXPECTED POPULATION

The _Dobryna_ was now back again at the island. Her cruise had lasted from the 31st of January to the 5th of March, a period of thirty-five days (for it was leap year), corresponding to seventy days as accomplished by the new little world.

Many a time during his absence Hector Servadac had wondered how his present vicissitudes would end, and he had felt some misgivings as to whether he should ever again set foot upon the island, and see his faithful orderly, so that it was not without emotion that he had approached the coast of the sole remaining fragment of Algerian soil. But his apprehensions were groundless; Gourbi Island was just as he had left it, with nothing unusual in its aspect, except that a very peculiar cloud was hovering over it, at an altitude of little more than a hundred feet. As the yacht approached the shore, this cloud appeared to rise and fall as if acted upon by some invisible agency, and the captain, after watching it carefully, perceived that it was not an accumulation of vapors at all, but a dense mass of birds packed as closely together as a swarm of herrings, and uttering deafening and discordant cries, amidst which from time to time the noise of the report of a gun could be plainly distinguished.

The _Dobryna_ signalized her arrival by firing her cannon, and dropped anchor in the little port of the Shelif. Almost within a minute Ben Zoof was seen running, gun in hand, towards the shore; he cleared the last ridge of rocks at a single bound, and then suddenly halted. For a few seconds he stood motionless, his eyes fixed, as if obeying the instructions of a drill sergeant, on a point some fifteen yards distant, his whole attitude indicating submission and respect; but the sight of the captain, who was landing, was too much for his equanimity, and darting forward, he seized his master's hand and covered it with kisses. Instead, however, of uttering any expressions of welcome or rejoicing at the captain's return, Ben Zoof broke out into the most vehement ejaculations.

"Thieves, captain! beastly thieves! Bedouins! pirates! devils!"

"Why, Ben Zoof, what's the matter?" said Servadac soothingly.

"They are thieves! downright, desperate thieves! those infernal birds! That's what's the matter. It is a good thing you have come. Here have I for a whole month been spending my powder and shot upon them, and the more I kill them, the worse they get; and yet, if I were to leave them alone, we should not have a grain of corn upon the island."

It was soon evident that the orderly had only too much cause for alarm. The crops had ripened rapidly during the excessive heat of January, when the orbit of Gallia was being traversed at its perihelion, and were now exposed to the depredations of many thousands of birds; and although a goodly number of stacks attested the industry of Ben Zoof during the time of the _Dobryna_'s voyage, it was only too apparent that the portion of the harvest that remained ungathered was liable to the most imminent risk of being utterly devoured. It was, perhaps, only natural that this clustered mass of birds, as representing the whole of the feathered tribe upon the surface of Gallia, should resort to Gourbi Island, of which the meadows seemed to be the only spot from which they could get sustenance at
all; but as this sustenance would be obtained at the expense, and probably to the serious detriment, of the human population, it was absolutely necessary that every possible resistance should be made to the devastation that was threatened.

Once satisfied that Servadac and his friends would cooperate with him in the raid upon "the thieves," Ben Zoof became calm and content, and began to make various inquiries. "And what has become," he said, "of all our old comrades in Africa?"

"As far as I can tell you," answered the captain, "they are all in Africa still; only Africa isn't by any means where we expected to find it."

"And France? Montmartre?" continued Ben Zoof eagerly. Here was the cry of the poor fellow's heart.

As briefly as he could, Servadac endeavored to explain the true condition of things; he tried to communicate the fact that Paris, France, Europe, nay, the whole world was more than eighty millions of leagues away from Gourbi Island; as gently and cautiously as he could he expressed his fear that they might never see Europe, France, Paris, Montmartre again.

"No, no, sir!" protested Ben Zoof emphatically; "that is all nonsense. It is altogether out of the question to suppose that we are not to see Montmartre again." And the orderly shook his head resolutely, with the air of a man determined, in spite of argument, to adhere to his own opinion.

"Very good, my brave fellow," replied Servadac, "hope on, hope while you may. The message has come to us over the sea, 'Never despair'; but one thing, nevertheless, is certain; we must forthwith commence arrangements for making this island our permanent home."

Captain Servadac now led the way to the gourbi, which, by his servant's exertions, had been entirely rebuilt; and here he did the honors of his modest establishment to his two guests, the count and the lieutenant, and gave a welcome, too, to little Nina, who had accompanied them on shore, and between whom and Ben Zoof the most friendly relations had already been established.

The adjacent building continued in good preservation, and Captain Servadac's satisfaction was very great in finding the two horses, Zephyr and Galette, comfortably housed there and in good condition.

After the enjoyment of some refreshment, the party proceeded to a general consultation as to what steps must be taken for their future welfare. The most pressing matter that came before them was the consideration of the means to be adopted to enable the inhabitants of Gallia to survive the terrible cold, which, in their ignorance of the true eccentricity of their orbit, might, for aught they knew, last for an almost indefinite period. Fuel was far from abundant; of coal there was none; trees and shrubs were few in number, and to cut them down in prospect of the cold seemed a very questionable policy; but there was no doubt some expedient must be devised to prevent disaster, and that without delay.

The victualing of the little colony offered no immediate difficulty. Water was abundant, and the cisterns could hardly fail to be replenished by the numerous streams that meandered along the plains; moreover, the Gallian Sea would ere long be frozen over, and the melted ice (water in its congealed state being divested of every particle of salt) would afford a supply of drink that could not be exhausted. The crops that were now ready for the harvest, and the flocks and herds scattered over the island, would form an ample reserve. There was little doubt that throughout the winter the soil would remain unproductive, and no fresh fodder for domestic animals could then be obtained; it would therefore be necessary, if the exact duration of Gallia's year should ever be calculated, to proportion the number of animals to be reserved to the real length of the winter.

The next thing requisite was to arrive at a true estimate of the number of the population. Without including the thirteen Englishmen at Gibraltar, about whom he was not particularly disposed to give himself much concern at present, Servadac put down the names of the eight Russians, the two Frenchman, and the little Italian girl, eleven in all, as the entire list of the inhabitants of Gourbi Island.

"Oh, pardon me," interposed Ben Zoof, "you are mistaking the state of the case altogether. You will be surprised to learn that the total of people on the island is double that. It is twenty-two."

"Twenty-two!" exclaimed the captain; "twenty-two people on this island? What do you mean?"

"The opportunity has not occurred," answered Ben Zoof, "for me to tell you before, but I have had company."

"Explain yourself, Ben Zoof," said Servadac. "What company have you had?"

"You could not suppose," replied the orderly, "that my own unassisted hands could have accomplished all that harvest work that you see has been done."

"I confess," said Lieutenant Procope, "we do not seem to have noticed that."

"Well, then," said Ben Zoof, "if you will be good enough to come with me for about a mile, I shall be able to show you my companions. But we must take our guns."

"Why take our guns?" asked Servadac. "I hope we are not going to fight."

"No, not with men," said Ben Zoof; "but it does not answer to throw a chance away for giving battle to those
thieves of birds."

Leaving little Nina and her goat in the gourbi, Servadac, Count Timascheff, and the lieutenant, greatly mystified, took up their guns and followed the orderly. All along their way they made unsparing slaughter of the birds that hovered over and around them. Nearly every species of the feathered tribe seemed to have its representative in that living cloud. There were wild ducks in thousands; snipe, larks, rooks, and swallows; a countless variety of sea-birds—widgeons, gulls, and seagulls; beside a quantity of game—quails, partridges, and woodcocks. The sportsmen did their best; every shot told; and the depredators fell by dozens on either hand.

Instead of following the northern shore of the island, Ben Zoof cut obliquely across the plain. Making their progress with the unwonted rapidity which was attributable to their specific lightness, Servadac and his companions soon found themselves near a grove of sycamores and eucalyptus massed in picturesque confusion at the base of a little hill. Here they halted.

"Ah! the vagabonds! the rascals! the thieves!" suddenly exclaimed Ben Zoof, stamping his foot with rage.

"How now? Are your friends the birds at their pranks again?" asked the captain.

"No, I don't mean the birds: I mean those lazy beggars that are shirking their work. Look here; look there!" And as Ben Zoof spoke, he pointed to some scythes, and sickles, and other implements of husbandry that had been left upon the ground.

"What is it you mean?" asked Servadac, getting somewhat impatient.

"Hush, hush! listen!" was all Ben Zoof's reply; and he raised his finger as if in warning.

Listening attentively, Servadac and his associates could distinctly recognize a human voice, accompanied by the notes of a guitar and by the measured click of castanets.

"Spaniards!" said Servadac.

"No mistake about that, sir," replied Ben Zoof; "a Spaniard would rattle his castanets at the cannon's mouth."

"But what is the meaning of it all?" asked the captain, more puzzled than before.

"Hark!" said Ben Zoof; "it is the old man's turn."

And then a voice, at once gruff and harsh, was heard vociferating, "My money! my money! when will you pay me my money? Pay me what you owe me, you miserable majos."

Meanwhile the song continued:

"_Tu sandunga y cigarro, Y una cana de Jerez, Mi jamelgo y un trabuco, Que mas gloria puede haver?_"

Servadac's knowledge of Gascon enabled him partially to comprehend the rollicking tenor of the Spanish patriotic air, but his attention was again arrested by the voice of the old man growling savagely, "Pay me you shall; yes, by the God of Abraham, you shall pay me."

"A Jew!" exclaimed Servadac.

"Ay, sir, a German Jew," said Ben Zoof.

The party was on the point of entering the thicket, when a singular spectacle made them pause. A group of Spaniards had just begun dancing their national fandango, and the extraordinary lightness which had become the physical property of every object in the new planet made the dancers bound to a height of thirty feet or more into the air, considerably above the tops of the trees. What followed was irresistibly comic. Four sturdy majos had dragged along with them an old man incapable of resistance, and compelled him, _nolens volens_, to join in the dance; and as they all kept appearing and disappearing above the bank of foliage, their grotesque attitudes, combined with the pitiable countenance of their helpless victim, could not do otherwise than recall most forcibly the story of Sancho Panza tossed in a blanket by the merry drapers of Segovia.

Servadac, the count, Procope, and Ben Zoof now proceeded to make their way through the thicket until they came to a little glade, where two men were stretched idly on the grass, one of them playing the guitar, and the other a pair of castanets; both were exploding with laughter, as they urged the performers to greater and yet greater exertions in the dance. At the sight of strangers they paused in their music, and simultaneously the dancers, with their victim, alighted gently on the sward.

Breathless and half exhausted as was the Jew, he rushed with an effort towards Servadac, and exclaimed in French, marked by a strong Teutonic accent, "Oh, my lord governor, help me, help! These rascals defraud me of my rights; they rob me; but, in the name of the God of Israel, I ask you to see justice done!"

The captain glanced inquiringly towards Ben Zoof, and the orderly, by a significant nod, made his master understand that he was to play the part that was implied by the title. He took the cue, and promptly ordered the Jew to hold his tongue at once. The man bowed his head in servile submission, and folded his hands upon his breast.

Servadac surveyed him leisurely. He was a man of about fifty, but from his appearance might well have been taken for at least ten years older. Small and skinny, with eyes bright and cunning, a hooked nose, a short yellow beard, unkempt hair, huge feet, and long bony hands, he presented all the typical characteristics of the German Jew, the heartless, wily usurer, the hardened miser and skinflint. As iron is attracted by the magnet, so was this Shylock
attracted by the sight of gold, nor would he have hesitated to draw the life-blood of his creditors, if by such means he could secure his claims.

His name was Isaac Hakkabut, and he was a native of Cologne. Nearly the whole of his time, however, he informed Captain Servadac, had been spent upon the sea, his real business being that of a merchant trading at all the ports of the Mediterranean. A tartan, a small vessel of two hundred tons burden, conveyed his entire stock of merchandise, and, to say the truth, was a sort of floating emporium, conveying nearly every possible article of commerce, from a lucifer match to the radiant fabrics of Frankfort and Epinal. Without wife or children, and having no settled home, Isaac Hakkabut lived almost entirely on board the _Hansa_, as he had named his tartan; and engaging a mate, with a crew of three men, as being adequate to work so light a craft, he cruised along the coasts of Algeria, Tunis, Egypt, Turkey, and Greece, visiting, moreover, most of the harbors of the Levant. Careful to be always well supplied with the products in most general demand—coffee, sugar, rice, tobacco, cotton stuffs, and gunpowder—and being at all times ready to barter, and prepared to deal in secondhand wares, he had contrived to amass considerable wealth.

On the eventful night of the 1st of January the _Hansa_ had been at Ceuta, the point on the coast of Morocco exactly opposite Gibraltar. The mate and three sailors had all gone on shore, and, in common with many of their fellow-creatures, had entirely disappeared; but the most projecting rock of Ceuta had been undisturbed by the general catastrophe, and half a score of Spaniards, who had happened to be upon it, had escaped with their lives. They were all Andalusian majos, agricultural laborers, and naturally as careless and apathetic as men of their class usually are, but they could not help being very considerably embarrassed when they discovered that they were left in solitude upon a detached and isolated rock. They took what mutual counsel they could, but became only more and more perplexed. One of them was named Negrete, and he, as having traveled somewhat more than the rest, was tacitly recognized as a sort of leader; but although he was by far the most enlightened of them all, he was quite incapable of forming the least conception of the nature of what had occurred. The one thing upon which they could not fail to be conscious was that they had no prospect of obtaining provisions, and consequently their first business was to devise a scheme for getting away from their present abode. The Spaniards would not have had the slightest hesitation in summarily taking possession of her, but their utter ignorance of seamanship made them reluctantly come to the conclusion that the more prudent policy was to make terms with the owner.

And now came a singular part of the story. Negrete and his companions had meanwhile received a visit from two English officers from Gibraltar. What passed between them the Jew did not know; he only knew that, immediately after the conclusion of the interview, Negrete came to him and ordered him to set sail at once for the nearest point of Morocco. The Jew, afraid to disobey, but with his eye ever upon the main chance, stipulated that at the end of their voyage the Spaniards should pay for their passage—terms to which, as they would to any other, they did not demur, knowing that they had not the slightest intention of giving him a single real.

The _Hansa_ had weighed anchor on the 3rd of February. The wind blew from the west, and consequently the working of the tartan was easy enough. The unpracticed sailors had only to hoist their sails and, though they were quite unconscious of the fact, the breeze carried them to the only spot upon the little world they occupied which could afford them a refuge.

Thus it fell out that one morning Ben Zoof, from his lookout on Gourbi Island, saw a ship, not the _Dobryna_, appear upon the horizon, and make quietly down towards what had formerly been the right bank of the Shelf.

Such was Ben Zoof's version of what had occurred, as he had gathered it from the new-comers. He wound up his recital by remarking that the cargo of the _Hansa_ would be of immense service to them; he expected, indeed, that Isaac Hakkabut would be difficult to manage, but considered there could be no harm in appropriating the goods for the common welfare, since there could be no opportunity now for selling them.

Ben Zoof added, "And as to the difficulties between the Jew and his passengers, I told him that the governor general was absent on a tour of inspection, and that he would see everything equitably settled."

Smiling at his orderly's tactics, Servadac turned to Hakkabut, and told him that he would take care that his claims should be duly investigated and all proper demands should be paid. The man appeared satisfied, and, for the time at least, desisted from his complaints and importunities.

When the Jew had retired, Count Timascheff asked, "But how in the world can you ever make those fellows pay anything?"

"They have lots of money," said Ben Zoof.

"Not likely," replied the count; "when did you ever know Spaniards like them to have lots of money?"

"But I have seen it myself," said Ben Zoof; "and it is English money."

"English money!" echoed Servadac; and his mind again reverted to the excursion made by the colonel and the major from Gibraltar, about which they had been so reticent. "We must inquire more about this," he said.
Then, addressing Count Timascheff, he added, "Altogether, I think the countries of Europe are fairly represented by the population of Gallia."

"True, captain," answered the count; "we have only a fragment of a world, but it contains natives of France, Russia, Italy, Spain, and England. Even Germany may be said to have a representative in the person of this miserable Jew."

"And even in him," said Servadac, "perhaps we shall not find so indifferent a representative as we at present imagine."

CHAPTER XIX. GALLIA'S GOVERNOR GENERAL

The Spaniards who had arrived on board the _Hansa_ consisted of nine men and a lad of twelve years of age, named Pablo. They all received Captain Servadac, whom Ben Zoof introduced as the governor general, with due respect, and returned quickly to their separate tasks. The captain and his friends, followed at some distance by the eager Jew, soon left the glade and directed their steps towards the coast where the _Hansa_ was moored.

As they went they discussed their situation. As far as they had ascertained, except Gourbi Island, the sole surviving fragments of the Old World were four small islands: the bit of Gibraltar occupied by the Englishmen; Ceuta, which had just been left by the Spaniards; Madalena, where they had picked up the little Italian girl; and the site of the tomb of Saint Louis on the coast of Tunis. Around these there was stretched out the full extent of the Gallian Sea, which apparently comprised about one-half of the Mediterranean, the whole being encompassed by a barrier like a framework of precipitous cliffs, of an origin and a substance alike unknown.

Of all these spots only two were known to be inhabited: Gibraltar, where the thirteen Englishmen were amply provisioned for some years to come, and their own Gourbi Island. Here there was a population of twenty-two, who would all have to subsist upon the natural products of the soil. It was indeed not to be forgotten that, perchance, upon some remote and undiscovered isle there might be the solitary writer of the mysterious papers which they had found, and if so, that would raise the census of their new asteroid to an aggregate of thirty-six.

Even upon the supposition that at some future date the whole population should be compelled to unite and find a residence upon Gourbi Island, there did not appear any reason to question but that eight hundred acres of rich soil, under good management, would yield them all an ample sustenance. The only critical matter was how long the cold season would last; every hope depended upon the land again becoming productive; at present, it seemed impossible to determine, even if Gallia's orbit were really elliptic, when she would reach her aHELium, and it was consequently necessary that the Gallians for the time being should reckon on nothing beyond their actual and present resources.

These resources were, first, the provisions of the _Dobryna_, consisting of preserved meat, sugar, wine, brandy, and other stores sufficient for about two months; secondly, the valuable cargo of the _Hansa_, which, sooner or later, the owner, whether he would or not, must be compelled to surrender for the common benefit; and lastly, the produce of the island, animal and vegetable, which with proper economy might be made to last for a considerable period.

In the course of the conversation, Count Timascheff took an opportunity of saying that, as Captain Servadac had already been presented to the Spaniards as governor of the island, he thought it advisable that he should really assume that position.

"Every body of men," he observed, "must have a head, and you, as a Frenchman, should, I think, take the command of this fragment of a French colony. My men, I can answer for it, are quite prepared to recognize you as their superior officer."

"Most unhesitatingly," replied Servadac, "I accept the post with all its responsibilities. We understand each other so well that I feel sure we shall try and work together for the common good; and even if it be our fate never again to behold our fellow creatures, I have no misgivings but that we shall be able to cope with whatever difficulties may be before us."

As he spoke, he held out his hand. The count took it, at the same time making a slight bow. It was the first time since their meeting that the two men had shaken hands; on the other hand, not a single word about their former rivalry had ever escaped their lips; perhaps that was all forgotten now.

The silence of a few moments was broken by Servadac saying, "Do you not think we ought to explain our situation to the Spaniards?"

"No, no, your Excellency," burst in Ben Zoof, emphatically; "the fellows are chicken-hearted enough already; only tell them what has happened, and in sheer despondency they will not do another stroke of work."

"Besides," said Lieutenant Procope, who took very much the same view as the orderly, "they are so miserably ignorant they would be sure to misunderstand you."

"Understand or misunderstand," replied Servadac, "I do not think it matters. They would not care. They are all
fatalists. Only give them a guitar and their castanets, and they will soon forget all care and anxiety. For my own part, I must adhere to my belief that it will be advisable to tell them everything. Have you any opinion to offer, count?"

"My own opinion, captain, coincides entirely with yours. I have followed the plan of explaining all I could to my men on board the _Dobrynya_, and no inconvenience has arisen."

"Well, then, so let it be," said the captain; adding, "It is not likely that these Spaniards are so ignorant as not to have noticed the change in the length of the days; neither can they be unaware of the physical changes that have transpired. They shall certainly be told that we are being carried away into unknown regions of space, and that this island is nearly all that remains of the Old World."

"Ha! ha!" laughed Ben Zoof, aloud; "it will be fine sport to watch the old Jew's face, when he is made to comprehend that he is flying away millions and millions of leagues from all his debtors."

Isaac Hakkabut was about fifty yards behind, and was consequently unable to overhear the conversation. He went shambling along, half whimpering and not unfrequently invoking the God of Israel; but every now and then a cunning light gleamed from his eyes, and his lips became compressed with a grim significance.

None of the recent phenomena had escaped his notice, and more than once he had attempted to entice Ben Zoof into conversation upon the subject; but the orderly made no secret of his antipathy to him, and generally replied to his advances either by satire or by banter. He told him that he had everything to gain under the new system of nights and days, for, instead of living the Jew's ordinary life of a century, he would reach to the age of two centuries; and he congratulated him upon the circumstance of things having become so light, because it would prevent him feeling the burden of his years. At another time he would declare that, to an old usurer like him, it could not matter in the least what had become of the moon, as he could not possibly have advanced any money upon her. And when Isaac, undaunted by his jeers, persevered in besetting him with questions, he tried to silence him by saying, "Only wait till the governor general comes; he is a shrewd fellow, and will tell you all about it."

"But will he protect my property?" poor Isaac would ask tremulously.

"To be sure he will! He would confiscate it all rather than that you should be robbed of it."

With this Job's comfort the Jew had been obliged to content himself as best he could, and to await the promised arrival of the governor.

When Servadac and his companions reached the shore, they found that the _Hansa_ had anchored in an exposed bay, protected but barely by a few projecting rocks, and in such a position that a gale rising from the west would inevitably drive her on to the land, where she must be dashed in pieces. It would be the height of folly to leave her in her present moorings; without loss of time she must be brought round to the mouth of the Shelif, in immediate proximity to the Russian yacht.

The consciousness that his tartan was the subject of discussion made the Jew give way to such vehement ejaculations of anxiety, that Servadac turned round and peremptorily ordered him to desist from his clamor. Leaving the old man under the surveillance of the count and Ben Zoof, the captain and the lieutenant stepped into a small boat and were soon alongside the floating emporium.

A very short inspection sufficed to make them aware that both the tartan and her cargo were in a perfect state of preservation. In the hold were sugar-loaves by hundreds, chests of tea, bags of coffee, hogsheads of tobacco, pipes of wine, casks of brandy, barrels of dried herrings, bales of cotton, clothing of every kind, shoes of all sizes, caps of various shape, tools, household utensils, china and earthenware, reams of paper, bottles of ink, boxes of lucifer matches, blocks of salt, bags of pepper and spices, a stock of huge Dutch cheeses, and a collection of almanacs and miscellaneous literature. At a rough guess the value could not be much under pounds 5,000 sterling. A new cargo had been taken in only a few days before the catastrophe, and it had been Isaac Hakkabut's intention to cruise from Ceuta to Tripoli, calling wherever he had reason to believe there was likely to be a market for any of his commodities.

"A fine haul, lieutenant," said the captain.

"Yes, indeed," said the lieutenant; "but what if the owner refuses to part with it?"

"No fear; no fear," replied the captain. "As soon as ever the old rascal finds that there are no more Arabs or Algerians for him to fleece, he will be ready enough to transact a little business with us. We will pay him by bills of acceptance on some of his old friends in the Old World."

"But why should he want any payment?" inquired the lieutenant. "Under the circumstances, he must know that you have a right to make a requisition of his goods."

"No, no," quickly rejoined Servadac; "we will not do that. Just because the fellow is a German we shall not be justified in treating him in German fashion. We will transact our business in a business way. Only let him once realize that he is on a new globe, with no prospect of getting back to the old one, and he will be ready enough to come to terms with us."

"Perhaps you are right," replied the lieutenant; "I hope you are. But anyhow, it will not do to leave the tartan
here; not only would she be in danger in the event of a storm, but it is very questionable whether she could resist the pressure of the ice, if the water were to freeze."

"Quite true, Procope; and accordingly I give you the commission to see that your crew bring her round to the Shelif as soon as may be."

"To-morrow morning it shall be done," answered the lieutenant, promptly.

Upon returning to the shore, it was arranged that the whole of the little colony should forthwith assemble at the gourbi. The Spaniards were summoned and Isaac, although he could only with reluctance take his wistful gaze from his tartan, obeyed the governor's orders to follow.

An hour later and the entire population of twenty-two had met in the chamber adjoining the gourbi. Young Pablo made his first acquaintance with little Nina, and the child seemed highly delighted to find a companion so nearly of her own age. Leaving the children to entertain each other, Captain Servadac began his address.

Before entering upon further explanation, he said that he counted upon the cordial co-operation of them all for the common welfare.

Negrete interrupted him by declaring that no promises or pledges could be given until he and his countrymen knew how soon they could be sent back to Spain.

"To Spain, do you say?" asked Servadac.

"To Spain!" echoed Isaac Hakkabut, with a hideous yell. "Do they expect to go back to Spain till they have paid their debts? Your Excellency, they owe me twenty reals apiece for their passage here; they owe me two hundred reals. Are they to be allowed...?"

"Silence, Mordecai, you fool!" shouted Ben Zoof, who was accustomed to call the Jew by any Hebrew name that came uppermost to his memory. "Silence!"

Servadac was disposed to appease the old man's anxiety by promising to see that justice was ultimately done; but, in a fever of frantic excitement, he went on to implore that he might have the loan of a few sailors to carry his ship to Algiers.

"I will pay you honestly; I will pay you _well_," he cried; but his ingrained propensity for making a good bargain prompted him to add, "provided you do not overcharge me."

Ben Zoof was about again to interpose some angry exclamation; but Servadac checked him, and continued in Spanish: "Listen to me, my friends. Something very strange has happened. A most wonderful event has cut us off from Spain, from France, from Italy, from every country of Europe. In fact, we have left the Old World entirely. Of the whole earth, nothing remains except this island on which you are now taking refuge. The old globe is far, far away. Our present abode is but an insignificant fragment that is left. I dare not tell you that there is any chance of your ever again seeing your country or your homes."

He paused. The Spaniards evidently had no conception of his meaning.

Negrete begged him to tell them all again. He repeated all that he had said, and by introducing some illustrations from familiar things, he succeeded to a certain extent in conveying some faint idea of the convulsion that had happened. The event was precisely what he had foretold. The communication was received by all alike with the most supreme indifference.

Hakkabut did not say a word. He had listened with manifest attention, his lips twitching now and then as if suppressing a smile. Servadac turned to him, and asked whether he was still disposed to put out to sea and make for Algiers.

The Jew gave a broad grin, which, however, he was careful to conceal from the Spaniards. "Your Excellency jests," he said in French; and turning to Count Timascheff, he added in Russian: "The governor has made up a wonderful tale."

The count turned his back in disgust, while the Jew sidled up to little Nina and muttered in Italian. "A lot of lies, pretty one; a lot of lies!"

"Confound the knave!" exclaimed Ben Zoof; "he gabbles every tongue under the sun!"

"Yes," said Servadac; "but whether he speaks French, Russian, Spanish, German, or Italian, he is neither more nor less than a Jew."

CHAPTER XX. A LIGHT ON THE HORIZON

On the following day, without giving himself any further concern about the Jew's incredulity, the captain gave orders for the _Hansa_ to be shifted round to the harbor of the Shelif. Hakkabut raised no objection, not only because he was aware that the move insured the immediate safety of his tartan, but because he was secretly entertaining the hope that he might entice away two or three of the _Dobryna's_ crew and make his escape to Algiers or some other port.
Operations now commenced for preparing proper winter quarters. Spaniards and Russians alike joined heartily in the work, the diminution of atmospheric pressure and of the force of attraction contributing such an increase to their muscular force as materially facilitated all their labors.

The first business was to accommodate the building adjacent to the gourbi to the wants of the little colony. Here for the present the Spaniards were lodged, the Russians retaining their berths upon the yacht, while the Jew was permitted to pass his nights upon the _Hansa_. This arrangement, however, could be only temporary. The time could not be far distant when ships' sides and ordinary walls would fail to give an adequate protection from the severity of the cold that must be expected; the stock of fuel was too limited to keep up a permanent supply of heat in their present quarters, and consequently they must be driven to seek some other refuge, the internal temperature of which would at least be bearable.

The plan that seemed to commend itself most to their consideration was, that they should dig out for themselves some subterraneous pits similar to "silos," such as are used as receptacles for grain. They presumed that when the surface of Gallia should be covered by a thick layer of ice, which is a bad conductor of heat, a sufficient amount of warmth for animal vitality might still be retained in excavations of this kind. After a long consultation they failed to devise any better expedient, and were forced to resign themselves to this species of troglodyte existence.

In one respect they congratulated themselves that they should be better off than many of the whalers in the polar seas, for as it is impossible to get below the surface of a frozen ocean, these adventurers have to seek refuge in huts of wood and snow erected on their ships, which at best can give but slight protection from extreme cold; but here, with a solid subsoil, the Gallians might hope to dig down a hundred feet or so and secure for themselves a shelter that would enable them to brave the hardest severity of climate.

The order, then, was at once given. The work was commenced. A stock of shovels, mattocks, and pick-axes was brought from the gourbi, and with Ben Zoof as overseer, both Spanish majos and Russian sailors set to work with a will.

It was not long, however, before a discovery, more unexpected than agreeable, suddenly arrested their labors. The spot chosen for the excavation was a little to the right of the gourbi, on a slight elevation of the soil. For the first day everything went on prosperously enough; but at a depth of eight feet below the surface, the navvies came in contact with a hard surface, upon which all their tools failed to make the slightest impression. Servadac and the count were at once apprised of the fact, and had little difficulty in recognizing the substance that had revealed itself as the very same which composed the shores as well as the subsoil of the Gallian sea. It evidently formed the universal substructure of the new asteroid. Means for hollowing it failed them utterly. Harder and more resisting than granite, it could not be blasted by ordinary powder; dynamite alone could suffice to rend it.

The disappointment was very great. Unless some means of protection were speedily devised, death seemed to be staring them in the face. Were the figures in the mysterious documents correct? If so, Gallia must now be a hundred millions of leagues from the sun, nearly three times the distance of the earth at the remotest section of her orbit. The intensity of the solar light and heat, too, was very seriously diminishing, although Gourbi Island (being on the equator of an orb which had its axes always perpendicular to the plane in which it revolved) enjoyed a position that gave it a permanent summer. But no advantage of this kind could compensate for the remoteness of the sun. The temperature fell steadily; already, to the discomfiture of the little Italian girl, nurtured in sunshine, ice was beginning to form in the crevices of the rocks, and manifestly the time was impending when the sea itself would freeze.

Some shelter must be found before the temperature should fall to 60 degrees below zero. Otherwise death seemed to be inevitable. Hitherto, for the last few days, the thermometer had been registering an average of about 6 degrees below zero, and it had become matter of experience that the stove, although replenished with all the wood that was available, was altogether inadequate to effect any sensible mitigation of the severity of the cold. Nor could any amount of fuel be enough. It was certain that ere long the very mercury and spirit in the thermometers would be congealed. Some other resort must assuredly be soon found, or they must perish. That was clear.

The idea of betaking themselves to the _Dobryna_ and _Hansa_ could not for a moment be seriously entertained; not only did the structure of the vessels make them utterly insufficient to give substantial shelter, but they were totally unfit to be trusted as to their stability when exposed to the enormous pressure of the accumulated ice.

Neither Servadac, nor the count, nor Lieutenant Procope were men to be easily disheartened, but it could not be concealed that they felt themselves in circumstances by which they were equally harassed and perplexed. The sole expedient that their united counsel could suggest was to obtain a refuge below ground, and that was denied them by the strange and impenetrable substratum of the soil; yet hour by hour the sun's disc was lessening in its dimensions, and although at midday some faint radiance and glow were to be distinguished, during the night the painfulness of the cold was becoming almost intolerable.

Mounted upon Zephyr and Galette, the captain and the count scoured the island in search of some available retreat. Scarcely a yard of ground was left unexplored, the horses clearing every obstacle as if they were, like...
Pegasus, furnished with wings. But all in vain. Soundings were made again and again, but invariably with the same result; the rock, hard as adamant, never failed to reveal itself within a few feet of the surface of the ground.

The excavation of any silo being thus manifestly hopeless, there seemed nothing to be done except to try and render the buildings alongside the gourbi impervious to frost. To contribute to the supply of fuel, orders were given to collect every scrap of wood, dry or green, that the island produced; and this involved the necessity of felling the numerous trees that were scattered over the plain. But toil as they might at the accumulation of firewood, Captain Servadac and his companions could not resist the conviction that the consumption of a very short period would exhaust the total stock. And what would happen then?

Studious if possible to conceal his real misgivings, and anxious that the rest of the party should be affected as little as might be by his own uneasiness, Servadac would wander alone about the island, racking his brain for an idea that would point the way out of the serious difficulty. But still all in vain.

One day he suddenly came upon Ben Zoof, and asked him whether he had no plan to propose. The orderly shook his head, but after a few moments' pondering, said: "Ah! master, if only we were at Montmartre, we would get shelter in the charming stone-quarries."

"Idiot!" replied the captain, angrily, "if we were at Montmartre, you don't suppose that we should need to live in stone-quarries?"

But the means of preservation which human ingenuity had failed to secure were at hand from the felicitous provision of Nature herself. It was on the 10th of March that the captain and Lieutenant Procope started off once more to investigate the northwest corner of the island; on their way their conversation naturally was engrossed by the subject of the dire necessities which only too manifestly were awaiting them. A discussion more than usually animated arose between them, for the two men were not altogether of the same mind as to the measures that ought to be adopted in order to open the fairest chance of avoiding a fatal climax to their exposure; the captain persisted that an entirely new abode must be sought, while the lieutenant was equally bent upon devising a method of some sort by which their present quarters might be rendered sufficiently warm. All at once, in the very heat of his argument, Procope paused; he passed his hand across his eyes, as if to dispel a mist, and stood, with a fixed gaze centered on a point towards the south. "What is that?" he said, with a kind of hesitation. "No, I am not mistaken," he added; "it is a light on the horizon."

"A light!" exclaimed Servadac; "show me where."

"Look there!" answered the lieutenant, and he kept pointing steadily in its direction, until Servadac also distinctly saw the bright speck in the distance.

It increased in clearness in the gathering shades of evening. "Can it be a ship?" asked the captain.

"If so, it must be in flames; otherwise we should not be able to see it so far off," replied Procope.

"It does not move," said Servadac; "and unless I am greatly deceived, I can hear a kind of reverberation in the air."

For some seconds the two men stood straining eyes and ears in rapt attention. Suddenly an idea struck Servadac's mind. "The volcano!" he cried; "may it not be the volcano that we saw, whilst we were on board the _Dobryna?_"

The lieutenant agreed that it was very probable.

"Heaven be praised!" ejaculated the captain, and he went on in the tones of a keen excitement: "Nature has provided us with our winter quarters; the stream of burning lava that is flowing there is the gift of a bounteous Providence; it will provide us all the warmth we need. No time to lose! To-morrow, my dear Procope, to-morrow we will explore it all; no doubt the life, the heat we want is reserved for us in the heart and bowels of our own Gallia!

Whilst the captain was indulging in his expressions of enthusiasm, Procope was endeavoring to collect his thoughts. Distinctly he remembered the long promontory which had barred the _Dobryna's_ progress while coasting the southern confines of the sea, and which had obliged her to ascend northwards as far as the former latitude of Oran; he remembered also that at the extremity of the promontory there was a rocky headland crowned with smoke; and now he was convinced that he was right in identifying the position, and in believing that the smoke had given place to an eruption of flame.

When Servadac gave him a chance of speaking, he said, "The more I consider it, captain, the more I am satisfied that your conjecture is correct. Beyond a doubt, what we see is the volcano, and to-morrow we will not fail to visit it."

On returning to the gourbi, they communicated their discovery to Count Timascheff only, deeming any further publication of it to be premature. The count at once placed his yacht at their disposal, and expressed his intention of accompanying them.

"The yacht, I think," said Procope, "had better remain where she is; the weather is beautifully calm, and the steam-launch will answer our purpose better; at any rate, it will convey us much closer to shore than the schooner."

The count replied that the lieutenant was by all means to use his own discretion, and they all retired for the night.
Like many other modern pleasure-yachts, the _Dobryna_, in addition to her four-oar, was fitted with a fast-going little steam-launch, its screw being propelled, on the Oriolle system, by means of a boiler, small but very effective. Early next morning, this handy little craft was sufficiently freighted with coal (of which there was still about ten tons on board the _Dobryna_), and manned by nobody except the captain, the count, and the lieutenant, left the harbor of the Shelif, much to the bewilderment of Ben Zoof, who had not yet been admitted into the secret. The orderly, however, consoled himself with the reflection that he had been temporarily invested with the full powers of governor general, an office of which he was not a little proud.

The eighteen miles between the island and the headland were made in something less than three hours. The volcanic eruption was manifestly very considerable, the entire summit of the promontory being enveloped in flames. To produce so large a combustion either the oxygen of Gallia's atmosphere had been brought into contact with the explosive gases contained beneath her soil, or perhaps, still more probable, the volcano, like those in the moon, was fed by an internal supply of oxygen of her own.

It took more than half an hour to settle on a suitable landing-place. At length, a small semi-circular creek was discovered among the rocks, which appeared advantageous, because, if circumstances should so require, it would form a safe anchorage for both the _Dobryna_ and the _Hansa_.

The launch securely moored, the passengers landed on the side of the promontory opposite to that on which a torrent of burning lava was descending to the sea. With much satisfaction they experienced, as they approached the mountain, a sensible difference in the temperature, and their spirits could not do otherwise than rise at the prospect of having their hopes confirmed, that a deliverance from the threatened calamity had so opportunely been found. On they went, up the steep acclivity, scrambling over its rugged projections, scaling the irregularities of its gigantic strata, bounding from point to point with the agility of chamois, but never alighting on anything except on the accumulation of the same hexagonal prisms with which they had now become so familiar.

Their exertions were happily rewarded. Behind a huge pyramidal rock they found a hole in the mountain-side, like the mouth of a great tunnel. Climbing up to this orifice, which was more than sixty feet above the level of the sea, they ascertained that it opened into a long dark gallery. They entered and groped their way cautiously along the sides. A continuous rumbling, that increased as they advanced, made them aware that they must be approaching the central funnel of the volcano; their only fear was lest some insuperable wall of rock should suddenly bar their further progress.

Servadac was some distance ahead.

"Come on!" he cried cheerily, his voice ringing through the darkness, "come on! Our fire is lighted! no stint of fuel! Nature provides that! Let us make haste and warm ourselves!"

Inspired by his confidence, the count and the lieutenant advanced bravely along the unseen and winding path. The temperature was now at least fifteen degrees above zero, and the walls of the gallery were beginning to feel quite warm to the touch, an indication, not to be overlooked, that the substance of which the rock was composed was metallic in its nature, and capable of conducting heat.

"Follow me!" shouted Servadac again; "we shall soon find a regular stove!"

Onwards they made their way, until at last a sharp turn brought them into a sudden flood of light. The tunnel had opened into a vast cavern, and the gloom was exchanged for an illumination that was perfectly dazzling. Although the temperature was high, it was not in any way intolerable.

One glance was sufficient to satisfy the explorers that the grateful light and heat of this huge excavation were to be attributed to a torrent of lava that was rolling downwards to the sea, completely subtending the aperture of the cave. Not inaptly might the scene be compared to the celebrated Grotto of the Winds at the rear of the central fall of Niagara, only with the exception that here, instead of a curtain of rushing water, it was a curtain of roaring flame that hung before the cavern's mouth.

"Heaven be praised!" cried Servadac, with glad emotion; "here is all that we hoped for, and more besides!"

CHAPTER XXI. WINTER QUARTERS

The habitation that had now revealed itself, well lighted and thoroughly warm, was indeed marvelous. Not only would it afford ample accommodation for Hector Servadac and "his subjects," as Ben Zoof delighted to call them, but it would provide shelter for the two horses, and for a considerable number of domestic animals.

This enormous cavern was neither more or less than the common junction of nearly twenty tunnels (similar to that which had been traversed by the explorers), forming ramifications in the solid rock, and the pores, as it were, by which the internal heat exuded from the heart of the mountain. Here, as long as the volcano retained its activity, every living creature on the new asteroid might brave the most rigorous of climates; and as Count Timascheff justly remarked, since it was the only burning mountain they had sighted, it was most probably the sole outlet for Gallia's
subterranean fires, and consequently the eruption might continue unchanged for ages to come.

But not a day, not an hour, was to be lost now. The steam-launch returned to Gourbi Island, and preparations were forthwith taken in hand for conveying man and beast, corn and fodder, across to the volcanic headland. Loud and hearty were the acclamations of the little colony, especially of the Spaniards, and great was the relief of Nina, when Servadac announced to them the discovery of their future domicile; and with requickened energies they labored hard at packing, anxious to reach their genial winter quarters without delay.

For three successive days the _Dobryna_, laden to her very gunwale, made a transit to and fro. Ben Zoof was left upon the island to superintend the stowage of the freight, whilst Servadac found abundant occupation in overlooking its disposal within the recesses of the mountain. First of all, the large store of corn and fodder, the produce of the recent harvest, was landed and deposited in one of the vaults; then, on the 15th, about fifty head of live cattle--bullocks, cows, sheep, and pigs--were conveyed to their rocky stalls. These were saved for the sake of preserving the several breeds, the bulk of the island cattle being slaughtered, as the extreme severity of the climate insured all meat remaining fresh for almost an indefinite period. The winter which they were expecting would probably be of unprecedented length; it was quite likely that it would exceed the six months' duration by which many arctic explorers have been tried; but the population of Gallia had no anxiety in the matter of provisions--their stock was far more than adequate; while as for drink, as long as they were satisfied with pure water, a frozen sea would afford them an inexhaustible reservoir.

The need for haste in forwarding their preparations became more and more manifest; the sea threatened to be unnavigable very soon, as ice was already forming which the noonday sun was unable to melt. And if haste were necessary, so also were care, ingenuity, and forethought. It was indispensable that the space at their command should be properly utilized, and yet that the several portions of the store should all be readily accessible.

On further investigation an unexpected number of galleries was discovered, so that, in fact, the interior of the mountain was like a vast bee-hive perforated with innumerable cells; and in compliment to the little Italian it was unanimously voted by the colony that their new home should be called "Nina's Hive."

The first care of Captain Servadac was to ascertain how he could make the best possible use of the heat which nature had provided for them so opportunely and with so lavish a hand. By opening fresh vents in the solid rock (which by the action of the heat was here capable of fissure) the stream of burning lava was diverted into several new channels, where it could be available for daily use; and thus Mochel, the _Dobryna'_s cook, was furnished with an admirable kitchen, provided with a permanent stove, where he was duly installed with all his culinary apparatus.

"What a saving of expense it would be," exclaimed Ben Zoof, "if every household could be furnished with its own private volcano!"

The large cavern at the general junction of the galleries was fitted up as a drawing-room, and arranged with all the best furniture both of the gourbi and of the cabin of the _Dobryna_. Hither was also brought the schooner's library, containing a good variety of French and Russian books; lamps were suspended over the different tables; and the walls of the apartment were tapestried with the sails and adorned with the flags belonging to the yacht. The curtain of fire extending over the opening of the cavern provided it, as already stated, with light and heat.

The torrent of lava fell into a small rock-bound basin that had no apparent communication with the sea, and was evidently the aperture of a deep abyss, of which the waters, heated by the descent of the eruptive matter, would no doubt retain their liquid condition long after the Gallian Sea had become a sheet of ice.

A small excavation to the left of the common hall was allotted for the special use of Servadac and the count; another on the right was appropriated to the lieutenant and Ben Zoof; whilst a third recess, immediately at the back, made a convenient little chamber for Nina. The Spaniards and the Russian sailors took up their sleeping-quarters in the adjacent galleries, and found the temperature quite comfortable.

Such were the internal arrangements of Nina's Hive, the refuge where the little colony were full of hope that they would be able to brave the rigors of the stern winter-time that lay before them—a winter-time during which Gallia might possibly be projected even to the orbit of Jupiter, where the temperature would not exceed one twenty-fifth of the normal winter temperature of the earth.

The only discontented spirit was Isaac Hakkabut. Throughout all the preparations which roused even the Spaniards to activity, the Jew, still incredulous and deaf to every representation of the true state of things, insisted upon remaining in the creek at Gourbi Island; nothing could induce him to leave his tartan, where, like a miser, he would keep guard over his precious cargo, ever grumbling and growling, but with his weather-eye open in the hope of catching sight of some passing sail. It must be owned that the whole party were far from sorry to be relieved of his presence; his uncomely figure and repulsive countenance was a perpetual bugbear. He had given out in plain terms that he did not intend to part with any of his property, except for current money, and Servadac, equally resolute, had strictly forbidden any purchases to be made, hoping to wear out the rascal's obstinacy.

Hakkabut persistently refused to credit the real situation; he could not absolutely deny that some portions of the
terrestrial globe had undergone a certain degree of modification, but nothing could bring him to believe that he was not, sooner or later, to résumé his old line of business in the Mediterranean. With his wonted distrust of all with whom he came in contact, he regarded every argument that was urged upon him only as evidence of a plot that had been devised to deprive him of his goods. Repudiating, as he did utterly, the hypothesis that a fragment had become detached from the earth, he scanned the horizon for hours together with an old telescope, the case of which had been patched up till it looked like a rusty stove-pipe, hoping to descry the passing trader with which he might effect some bartering upon advantageous terms.

At first he professed to regard the proposed removal into winter-quarters as an attempt to impose upon his credulity; but the frequent voyages made by the _Dobryna_ to the south, and the repeated consignments of corn and cattle, soon served to make him aware that Captain Servadac and his companions were really contemplating a departure from Gourbi Island.

The movement set him thinking. What, he began to ask himself--what if all that was told him was true? What if this sea was no longer the Mediterranean? What if he should never again behold his German fatherland? What if his marts for business were gone for ever? A vague idea of ruin began to take possession of his mind: he must yield to necessity; he must do the best he could. As the result of his cogitations, he occasionally left his tartan and made a visit to the shore. At length he endeavored to mingle with the busy group, who were hurrying on their preparations; but his advances were only met by jeers and scorn, and, ridiculed by all the rest, he was fain to turn his attention to Ben Zoof, to whom he offered a few pinches of tobacco.

"No, old Zebulon," said Ben Zoof, steadily refusing the gift, "it is against orders to take anything from you. Keep your cargo to yourself; eat and drink it all if you can; we are not to touch it."

Finding the subordinates incorruptible, Isaac determined to go to the fountain-head. He addressed himself to Servadac, and begged him to tell him the whole truth, piteously adding that surely it was unworthy of a French officer to deceive a poor old man like himself.

"Tell you the truth, man!" cried Servadac. "Confound it, I have told you the truth twenty times. Once for all, I tell you now, you have left yourself barely time enough to make your escape to yonder mountain."

"God and Mahomet have mercy on me!" muttered the Jew, whose creed frequently assumed a very ambiguous character.

"I will tell you what," continued the captain--"you shall have a few men to work the _Hansa_ across, if you like."

"But I want to go to Algiers," whimpered Hakkabut.

"How often am I to tell you that Algiers is no longer in existence? Only say yes or no--are you coming with us into winter-quarters?"

"God of Israel! what is to become of all my property?"

"But, mind you," continued the captain, not heeding the interruption, "if you do not choose voluntarily to come with us, I shall have the _Hansa_ by my orders, removed to a place of safety. I am not going to let your cursed obstinacy incur the risk of losing your cargo altogether."

"Merciful Heaven! I shall be ruined!" moaned Isaac, in despair.

"You are going the right way to ruin yourself, and it would serve you right to leave you to your own devices. But be off! I have no more to say."

And, turning contemptuously on his heel, Servadac left the old man vociferating bitterly, and with uplifted hands protesting vehemently against the rapacity of the Gentiles.

By the 20th all preliminary arrangements were complete, and everything ready for a final departure from the island. The thermometer stood on an average at 8 degrees below zero, and the water in the cistern was completely frozen. It was determined, therefore, for the colony to embark on the following day, and take up their residence in Nina's Hive.

A final consultation was held about the _Hansa_. Lieutenant Procope pronounced his decided conviction that it would be impossible for the tartan to resist the pressure of the ice in the harbor of the Shelif, and that there would be far more safety in the proximity of the volcano. It was agreed on all hands that the vessel must be shifted; and accordingly orders were given, four Russian sailors were sent on board, and only a few minutes elapsed after the _Dobryna_ had weighed anchor, before the great lateen sail of the tartan was unfurled, and the "shop-ship," as Ben Zoof delighted to call it, was also on her way to the southward.

Long and loud were the lamentations of the Jew. He kept exclaiming that he had given no orders, that he was being moved against his will, that he had asked for no assistance, and needed none; but it required no very keen discrimination to observe that all along there was a lurking gleam of satisfaction in his little gray eyes, and when, a few hours later, he found himself securely anchored, and his property in a place of safety, he quite chuckled with glee.

"God of Israel!" he said in an undertone, "they have made no charge; the idiots have piloted me here for
nothing."

For nothing! His whole nature exulted in the consciousness that he was enjoying a service that had been rendered gratuitously.

Destitute of human inhabitants, Gourbi Island was now left to the tenancy of such birds and beasts as had escaped the recent promiscuous slaughter. Birds, indeed, that had migrated in search of warmer shores, had returned, proving that this fragment of the French colony was the only shred of land that could yield them any sustenance; but their life must necessarily be short. It was utterly impossible that they could survive the cold that would soon ensue.

The colony took possession of their new abode with but few formalities. Everyone, however, approved of all the internal arrangements of Nina's Hive, and were profuse in their expressions of satisfaction at finding themselves located in such comfortable quarters. The only malcontent was Hakkabut; he had no share in the general enthusiasm, refused even to enter or inspect any of the galleries, and insisted on remaining on board his tartan.

"He is afraid," said Ben Zoof, "that he will have to pay for his lodgings. But wait a bit; we shall see how he stands the cold out there; the frost, no doubt, will drive the old fox out of his hole."

Towards evening the pots were set boiling, and a bountiful supper, to which all were invited, was spread in the central hall. The stores of the _Dobryna_ contained some excellent wine, some of which was broached to do honor to the occasion. The health of the governor general was drunk, as well as the toast "Success to his council," to which Ben Zoof was called upon to return thanks. The entertainment passed off merrily. The Spaniards were in the best of spirits; one of them played the guitar, another the castanets, and the rest joined in a ringing chorus. Ben Zoof contributed the famous Zouave refrain, well known throughout the French army, but rarely performed in finer style than by this _virtuoso:_

"Misti goth dar dar tire lyre! Flic! floc! flac! lirette, lira! Far la rira, Tour tala rire, Tour la Ribaud, Ricandeau, Sans repos, repit, repit, repos, ris pot, ripette! Si vous attrapez mon refrain, Fameux vous etes."

The concert was succeeded by a ball, unquestionably the first that had ever taken place in Gallia. The Russian sailors exhibited some of their national dances, which gained considerable applause, even although they followed upon the marvelous fandangos of the Spaniards. Ben Zoof, in his turn, danced a _pas seul_ (often performed in the Elysee Montmartre) with an elegance and vigor that earned many compliments from Negrete.

It was nine o'clock before the festivities came to an end, and by that time the company, heated by the high temperature of the hall, and by their own exertions, felt the want of a little fresh air. Accordingly the greater portion of the party, escorted by Ben Zoof, made their way into one of the adjacent galleries that led to the shore. Servadac, with the count and lieutenant, did not follow immediately; but shortly afterwards they proceeded to join them, when on their way they were startled by loud cries from those in advance.

Their first impression was that they were cries of distress, and they were greatly relieved to find that they were shouts of delight, which the dryness and purity of the atmosphere caused to re-echo like a volley of musketry.

Reaching the mouth of the gallery, they found the entire group pointing with eager interest to the sky.

"Well, Ben Zoof," asked the captain, "what's the matter now?"

"Oh, your Excellency," ejaculated the orderly, "look there! look there! The moon! the moon's come back!"

And, sure enough, what was apparently the moon was rising above the mists of evening.

CHAPTER XXII. A FROZEN OCEAN

The moon! She had disappeared for weeks; was she now returning? Had she been faithless to the earth? and had she now approached to be a satellite of the new-born world?

"Impossible!" said Lieutenant Procope; "the earth is millions and millions of leagues away, and it is not probable that the moon has ceased to revolve about her."

"Why not?" remonstrated Servadac. "It would not be more strange than the other phenomena which we have lately witnessed. Why should not the moon have fallen within the limits of Gallia's attraction, and become her satellite?"

"Upon that supposition," put in the count, "I should think that it would be altogether unlikely that three months would elapse without our seeing her."

"Quite incredible!" continued Procope. "And there is another thing which totally disproves the captain's hypothesis; the magnitude of Gallia is far too insignificant for her power of attraction to carry off the moon."

"But," persisted Servadac, "why should not the same convulsion that tore us away from the earth have torn away the moon as well? After wandering about as she would for a while in the solar regions, I do not see why she should not have attached herself to us."

The lieutenant repeated his conviction that it was not likely.

"But why not?" again asked Servadac impetuously.
"Because, I tell you, the mass of Gallia is so inferior to that of the moon, that Gallia would become the moon's satellite; the moon could not possibly become hers."

"Assuming, however," continued Servadac, "such to be the case--"

"I am afraid," said the lieutenant, interrupting him, "that I cannot assume anything of the sort even for a moment."

Servadac smiled good-humorously.

"I confess you seem to have the best of the argument, and if Gallia had become a satellite of the moon, it would not have taken three months to catch sight of her. I suppose you are right."

While this discussion had been going on, the satellite, or whatever it might be, had been rising steadily above the horizon, and had reached a position favorable for observation. Telescopes were brought, and it was very soon ascertained, beyond a question, that the new luminary was not the well-known Phoebe of terrestrial nights; it had no feature in common with the moon. Although it was apparently much nearer to Gallia than the moon to the earth, its superfluities was hardly one-tenth as large, and so feebly did it reflect the light of the remote sun, that it scarcely emitted radiance enough to extinguish the dim luster of stars of the eighth magnitude. Like the sun, it had risen in the west, and was now at its full. To mistake its identity with the moon was absolutely impossible; not even Servadac could discover a trace of the seas, chasms, craters, and mountains which have been so minutely delineated in lunar charts, and it could not be denied that any transient hope that had been excited as to their once again being about to enjoy the peaceful smiles of "the queen of night" must all be resigned.

Count Timascheff finally suggested, though somewhat doubtfully, the question of the probability that Gallia, in her course across the zone of the minor planets, had carried off one of them; but whether it was one of the 169 asteroids already included in the astronomical catalogues, or one previously unknown, he did not presume to determine. The idea to a certain extent was plausible, inasmuch as it has been ascertained that several of the telescopic planets are of such small dimensions that a good walker might make a circuit of them in four and twenty hours; consequently Gallia, being of superior volume, might be supposed capable of exercising a power of attraction upon any of these miniature microcosms.

The first night in Nina's Hive passed without special incident; and next morning a regular scheme of life was definitely laid down. "My lord governor," as Ben Zoot until he was peremptorily forbidden delighted to call Servadac, had a wholesome dread of idleness and its consequences, and insisted upon each member of the party undertaking some special duty to fulfill. There was plenty to do. The domestic animals required a great deal of attention; a supply of food had to be secured and preserved; fishing had to be carried on while the condition of the sea would allow it; and in several places the galleries had to be further excavated to render them more available for use. Occupation, then, need never be wanting, and the daily round of labor could go on in orderly routine.

A perfect concord ruled the little colony. The Russians and Spaniards amalgamated well, and both did their best to pick up various scraps of French, which was considered the official language of the place. Servadac himself undertook the tuition of Pablo and Nina, Ben Zoot being their companion in play-hours, when he entertained them with enchanting stories in the best Parisian French, about "a lovely city at the foot of a mountain," where he always promised one day to take them.

The end of March came, but the cold was not intense to such a degree as to confine any of the party to the interior of their resort; several excursions were made along the shore, and for a radius of three or four miles the adjacent district was carefully explored. Investigation, however, always ended in the same result; turn their course in whatever direction they would, they found that the country retained everywhere its desert character, rocky, barren, and without a trace of vegetation. Here and there a slight layer of snow, or a thin coating of ice arising from atmospheric condensation indicated the existence of superficial moisture, but it would require a period indefinitely long, exceeding human reckoning, before that moisture could collect into a stream and roll downwards over the stony strata to the sea. It seemed at present out of their power to determine whether the land upon which they were so happily settled was an island or a continent, and till the cold was abated they feared to undertake any lengthened expedition to ascertain the actual extent of the strange concrete of metallic crystallization.

By ascending one day to the summit of the volcano, Captain Servadac and the count succeeded in getting a general idea of the aspect of the country. The mountain itself was an enormous block rising symmetrically to a height of nearly 3,000 feet above the level of the sea, in the form of a truncated cone, of which the topmost section was crowned by a wreath of smoke issuing continuously from the mouth of a narrow crater.

Under the old condition of terrestrial things, the ascent of this steep acclivity would have been attended with much fatigue, but as the effect of the altered condition of the law of gravity, the travelers performed perpetual prodigies in the way of agility, and in little over an hour reached the edge of the crater, without more sense of exertion than if they had traversed a couple of miles on level ground. Gallia had its drawbacks, but it had some compensating advantages.
Telescopes in hand, the explorers from the summit scanned the surrounding view. Their anticipations had already realized what they saw. Just as they expected, on the north, east, and west lay the Gallian Sea, smooth and motionless as a sheet of glass, the cold having, as it were, congealed the atmosphere so that there was not a breath of wind. Towards the south there seemed no limit to the land, and the volcano formed the apex of a triangle, of which the base was beyond the reach of vision. Viewed even from this height, whence distance would do much to soften the general asperity, the surface nevertheless seemed to be bristling with its myriads of hexagonal lamellae, and to present difficulties which, to an ordinary pedestrian, would be insurmountable.

"Oh for some wings, or else a balloon!" cried Servadac, as he gazed around him; and then, looking down to the rock upon which they were standing, he added, "We seem to have been transplanted to a soil strange enough in its chemical character to bewilder the _savants_ at a museum."

"And do you observe, captain," asked the count, "how the convexity of our little world curtails our view? See, how circumscribed is the horizon!"

Servadac replied that he had noticed the same circumstance from the top of the cliffs of Gourbi Island.

"Yes," said the count; "it becomes more and more obvious that ours is a very tiny world, and that Gourbi Island is the sole productive spot upon its surface. We have had a short summer, and who knows whether we are not entering upon a winter that may last for years, perhaps for centuries?"

"But we must not mind, count," said Servadac, smiling. "We have agreed, you know, that, come what may, we are to be philosophers."

"Ay, true, my friend," rejoined the count; "we must be philosophers and something more; we must be grateful to the good Protector who has hitherto befriended us, and we must trust His mercy to the end."

For a few moments they both stood in silence, and contemplated land and sea; then, having given a last glance over the dreary panorama, they prepared to wend their way down the mountain. Before, however, they commenced their descent, they resolved to make a closer examination of the crater. They were particularly struck by what seemed to them almost the mysterious calmness with which the eruption was effected. There was none of the wild disorder and deafening tumult that usually accompany the discharge of volcanic matter, but the heated lava, rising with a uniform gentleness, quietly overran the limits of the crater, like the flow of water from the bosom of a peaceful lake. Instead of a boiler exposed to the action of an angry fire, the crater rather resembled a brimming basin, of which the contents were noiselessly escaping. Nor were there any igneous stones or red-hot cinders mingled with the smoke that crowned the summit; a circumstance that quite accorded with the absence of the pumice-stones, obsidians, and other minerals of volcanic origin with which the base of a burning mountain is generally strewn.

Captain Servadac was of opinion that this peculiarity augured favorably for the continuance of the eruption. Extreme violence in physical, as well as in moral nature, is never of long duration. The most terrible storms, like the most violent fits of passion, are not lasting; but here the calm flow of the liquid fire appeared to be supplied from a source that was inexhaustible, in the same way as the waters of Niagara, gliding on steadily to their final plunge, would defy all effort to arrest their course.

Before the evening of this day closed in, a most important change was effected in the condition of the Gallian Sea by the intervention of human agency. Notwithstanding the increasing cold, the sea, unruffled as it was by a breath of wind, still retained its liquid state. It is an established fact that water, under this condition of absolute stillness, will remain uncongealed at a temperature several degrees below zero, whilst experiment, at the same time, shows that a very slight shock will often be sufficient to convert it into solid ice. It had occurred to Servadac that if some communication could be opened with Gourbi Island, there would be a fine scope for hunting expeditions. Having this ultimate object in view, he assembled his little colony upon a projecting rock at the extremity of the promontory, and having called Nina and Pablo out to him in front, he said: "Now, Nina, do you think you could throw something into the sea?"

"I think I could," replied the child, "but I am sure that Pablo would throw it a great deal further than I can."

"Never mind, you shall try first."

Putting a fragment of ice into Nina's hand, he addressed himself to Pablo:

"Look out, Pablo; you shall see what a nice little fairy Nina is! Throw, Nina, throw, as hard as you can."

Nina balanced the piece of ice two or three times in her hand, and threw it forward with all her strength.

A sudden thrill seemed to vibrate across the motionless waters to the distant horizon, and the Gallian Sea had become a solid sheet of ice!

CHAPTER XXIII. A CARRIER-PIGEON

When, three hours after sunset, on the 23d of March, the Gallian moon rose upon the western horizon, it was
observed that she had entered upon her last quarter. She had taken only four days to pass from syzygy to quadrature, and it was consequently evident that she would be visible for little more than a week at a time, and that her luna
tion would be accomplished within sixteen days. The lunar months, like the solar days, had been diminished by one-half. Three days later the moon was in conjunction with the sun, and was consequently lost to view; Ben Zoof, as the first observer of the satellite, was extremely interested in its movements, and wondered whether it would ever reappear.

On the 26th, under an atmosphere perfectly clear and dry, the thermometer fell to 12 degrees F. below zero. Of the present distance of Gallia from the sun, and the number of leagues she had traversed since the receipt of the last mysterious document, there were no means of judging; the extent of diminution in the apparent disc of the sun did not afford sufficient basis even for an approximate calculation; and Captain Servadac was perpetually regretting that they could receive no further tidings from the anonymous correspondent, whom he persisted in regarding as a fellow-countryman.

The solidity of the ice was perfect; the utter stillness of the air at the time when the final congelation of the waters had taken place had resulted in the formation of a surface that for smoothness would rival a skating-rink; without a crack or flaw it extended far beyond the range of vision.

The contrast to the ordinary aspect of polar seas was very remarkable. There, the ice-fields are an agglomeration of hummocks and icebergs, massed in wild confusion, often towering higher than the masts of the largest whalers, and from the instability of their foundations liable to an instantaneous loss of equilibrium; a breath of wind, a slight modification of the temperature, not unfrequently serving to bring about a series of changes outrivaling the most elaborate transformation scenes of a pantomime. Here, on the contrary, the vast white plain was level as the desert of Sahara or the Russian steppes; the waters of the Gallian Sea were imprisoned beneath the solid sheet, which became continually stouter in the increasing cold.

Accustomed to the uneven crystallizations of their own frozen seas, the Russians could not be otherwise than delighted with the polished surface that afforded them such excellent opportunity for enjoying their favorite pastime of skating. A supply of skates, found hidden away amongst the _Dobryna's_ stores, was speedily brought into use. The Russians undertook the instruction of the Spaniards, and at the end of a few days, during which the temperature was only endurable through the absence of wind, there was not a Gallian who could not skate tolerably well, while many of them could describe figures involving the most complicated curves. Nina and Pablo earned loud applause by their rapid proficiency; Captain Servadac, an adept in athletics, almost outvied his instructor, the count; and Ben Zoof, who had upon some rare occasions skated upon the Lake of Montmartre (in his eyes, of course, a sea), performed prodigies in the art.

This exercise was not only healthful in itself, but it was acknowledged that, in case of necessity, it might become a very useful means of locomotion. As Captain Servadac remarked, it was almost a substitute for railways, and as if to illustrate this proposition, Lieutenant Procope, perhaps the greatest expert in the party, accomplished the twenty miles to Gourbi Island and back in considerably less than four hours.

The temperature, meanwhile, continued to decrease, and the average reading of the thermometer was about 16 degrees F. below zero; the light also diminished in proportion, and all objects appeared to be enveloped in a half-defined shadow, as though the sun were undergoing a perpetual eclipse. It was not surprising that the effect of this continuously overhanging gloom should be to induce a frequent depression of spirits amongst the majority of the little population, exiles as they were from their mother earth, and not unlikely, as it seemed, to be swept far away into the regions of another planetary sphere. Probably Count Timascheff, Captain Servadac, and Lieutenant Procope were the only members of the community who could bring any scientific judgment to bear upon the uncertainty that was before them, but a general sense of the strangeness of their situation could not fail at times to weigh heavily upon the minds of all. Under these circumstances it was very necessary to counteract the tendency to despond by continual diversion; and the recreation of skating thus opportunely provided, seemed just the thing to arouse the flagging spirits, and to restore a wholesome excitement.

With dogged obstinacy, Isaac Hakkabut refused to take any share either in the labors or the amusements of the colony. In spite of the cold, he had not been seen since the day of his arrival from Gourbi Island. Captain Servadac had strictly forbidden any communication with him; and the smoke that rose from the cabin chimney of the _Hansa_ was the sole indication of the proprietor being still on board. There was nothing to prevent him, if he chose, from partaking gratuitously of the volcanic light and heat which were being enjoyed by all besides; but rather than abandon his close and personal oversight of his precious cargo, he preferred to sacrifice his own slender stock of fuel.

Both the schooner and the tartan had been carefully moored in the way that seemed to promise best for withstanding the rigor of the winter. After seeing the vessels made secure in the frozen creek. Lieutenant Procope, following the example of many Arctic explorers, had the precaution to have the ice beveled away from the keels, so that there should be no risk of the ships' sides being crushed by the increasing pressure; he hoped that they would
follow any rise in the level of the ice-field, and when the thaw should come, that they would easily regain their proper water-line.

On his last visit to Gourbi Island, the lieutenant had ascertained that north, east, and west, far as the eye could reach, the Gallian Sea had become one uniform sheet of ice. One spot alone refused to freeze; this was the pool immediately below the central cavern, the receptacle for the stream of burning lava. It was entirely enclosed by rocks, and if ever a few icicles were formed there by the action of the cold, they were very soon melted by the fiery shower. Hissing and spluttering as the hot lava came in contact with it, the water was in a continual state of ebullition, and the fish that abounded in its depths defied the angler’s craft; they were, as Ben Zoof remarked, "too much boiled to bite."

At the beginning of April the weather changed. The sky became overcast, but there was no rise in the temperature. Unlike the polar winters of the earth, which ordinarily are affected by atmospheric influence, and liable to slight intermissions of their severity at various shiftings of the wind, Gallia’s winter was caused by her immense distance from the source of all light and heat, and the cold was consequently destined to go on steadily increasing until it reached the limit ascertained by Fourier to be the normal temperature of the realms of space.

With the over-clouding of the heavens there arose a violent tempest; but although the wind raged with an almost inconceivable fury, it was unaccompanied by either snow or rain. Its effect upon the burning curtain that covered the aperture of the central hall was very remarkable. So far from there being any likelihood of the fire being extinguished by the vehemence of the current of air, the hurricane seemed rather to act as a ventilator, which fanned the flame into greater activity, and the utmost care was necessary to avoid being burnt by the fragments of lava that were drifted into the interior of the grotto. More than once the curtain itself was rifted entirely asunder, but only to close up again immediately after allowing a momentary draught of cold air to penetrate the hall in a way that was refreshing and rather advantageous than otherwise.

On the 4th of April, after an absence of about four days, the new satellite, to Ben Zoof’s great satisfaction, made its reappearance in a crescent form, a circumstance that seemed to justify the anticipation that henceforward it would continue to make a periodic revolution every fortnight.

The crust of ice and snow was far too stout for the beaks of the strongest birds to penetrate, and accordingly large swarms had left the island, and, following the human population, had taken refuge on the volcanic promontory; not that there the barren shore had anything in the way of nourishment to offer them, but their instinct impelled them to haunt now the very habitations which formerly they would have shunned. Scraps of food were thrown to them from the galleries; these were speedily devoured, but were altogether inadequate in quantity to meet the demand. At length, emboldened by hunger, several hundred birds ventured through the tunnel, and took up their quarters actually in Nina’s Hive. Congregating in the large hall, the half-famished creatures did not hesitate to snatch bread, meat, or food of any description from the hands of the residents as they sat at table, and soon became such an intolerable nuisance that it formed one of the daily diversions to hunt them down; but although they were vigorously attacked by stones and sticks, and even occasionally by shot, it was with some difficulty that their number could be sensibly reduced.

By a systematic course of warfare the bulk of the birds were all expelled, with the exception of about a hundred, which began to build in the crevices of the rocks. These were left in quiet possession of their quarters, as not only was it deemed advisable to perpetuate the various breeds, but it was found that these birds acted as a kind of police, never failing either to chase away or to kill any others of their species who infringed upon what they appeared to regard as their own special privilege in intruding within the limits of their domain.

On the 15th loud cries were suddenly heard issuing from the mouth of the principal gallery.

"Help, help! I shall be killed!"

Pablo in a moment recognized the voice as Nina’s. Outrunning even Ben Zoof he hurried to the assistance of his little playmate, and discovered that she was being attacked by half a dozen great sea-gulls, and only after receiving some severe blows from their beaks could he succeed by means of a stout cudgel in driving them away.

"Tell me, Nina, what is this?" he asked as soon as the tumult had subsided.

The child pointed to a bird which she was caressing tenderly in her bosom.

"A pigeon!" exclaimed Ben Zoof, who had reached the scene of commotion, adding:

"A carrier-pigeon! And by all the saints of Montmartre, there is a little bag attached to its neck!"

He took the bird, and rushing into the hall placed it in Servadac’s hands.

"Another message, no doubt," cried the captain, "from our unknown friend. Let us hope that this time he has given us his name and address."

All crowded round, eager to hear the news. In the struggle with the gulls the bag had been partially torn open, but still contained the following dispatch:

"Gallia!"
Chemin parcouru du 1er Mars au 1er Avril: 39,000,000 l.!
Distance du soleil: 110,000,000 l.!
Capte Nerina en passant.
Vivres vont manquer et...

The rest of the document had been so damaged by the beaks of the gulls that it was illegible. Servadac was wild with vexation. He felt more and more convinced that the writer was a Frenchman, and that the last line indicated that he was in distress from scarcity of food. The very thought of a fellow-countryman in peril of starvation drove him well-nigh to distraction, and it was in vain that search was made everywhere near the scene of conflict in hopes of finding the missing scrap that might bear a signature or address.

Suddenly little Nina, who had again taken possession of the pigeon, and was hugging it to her breast, said:
"Look here, Ben Zoof!"
And as she spoke she pointed to the left wing of the bird. The wing bore the faint impress of a postage-stamp, and the one word: "FORMENTERA."

CHAPTER XXIV. A SLEDGE-RIDE

Formentera was at once recognized by Servadac and the count as the name of one of the smallest of the Balearic Islands. It was more than probable that the unknown writer had thence sent out the mysterious documents, and from the message just come to hand by the carrier-pigeon, it appeared all but certain that at the beginning of April, a fortnight back, he had still been there. In one important particular the present communication differed from those that had preceded it: it was written entirely in French, and exhibited none of the ecstatic exclamations in other languages that had been remarkable in the two former papers. The concluding line, with its intimation of failing provisions, amounted almost to an appeal for help. Captain Servadac briefly drew attention to these points, and concluded by saying, "My friends, we must, without delay, hasten to the assistance of this unfortunate man."

"For my part," said the count, "I am quite ready to accompany you; it is not unlikely that he is not alone in his distress."

Lieutenant Procope expressed much surprise. "We must have passed close to Formentera," he said, "when we explored the site of the Balearic Isles; this fragment must be very small; it must be smaller than the remaining splinter of Gibraltar or Ceuta; otherwise, surely it would never have escaped our observation."

"However small it may be," replied Servadac, "we must find it. How far off do you suppose it is?"

"It must be a hundred and twenty leagues away," said the lieutenant, thoughtfully; "and I do not quite understand how you would propose to get there."

"Why, on skates of course; no difficulty in that, I should imagine," answered Servadac, and he appealed to the count for confirmation of his opinion.

The count assented, but Procope looked doubtful.

"Your enterprise is generous," he said, "and I should be most unwilling to throw any unnecessary obstacle in the way of its execution; but, pardon me, if I submit to you a few considerations which to my mind are very important. First of all, the thermometer is already down to 22 degrees below zero, and the keen wind from the south is making the temperature absolutely unendurable; in the second place, supposing you travel at the rate of twenty leagues a day, you would be exposed for at least six consecutive days; and thirdly, your expedition will be of small avail unless you convey provisions not only for yourselves, but for those whom you hope to relieve."

"We can carry our own provisions on our backs in knapsacks," interposed Servadac, quickly, unwilling to recognize any difficulty in the way.

"Granted that you can," answered the lieutenant, quietly; "but where, on this level ice-field, will you find shelter in your periods of rest? You must perish with cold; you will not have the chance of digging out ice-huts like the Esquimaux."

"As to rest," said Servadac, "we shall take none; we shall keep on our way continuously; by traveling day and night without intermission, we shall not be more than three days in reaching Formentera."

"Believe me," persisted the lieutenant, calmly, "your enthusiasm is carrying you too far; the feat you propose is impossible; but even conceding the possibility of your success in reaching your destination, what service do you imagine that you, half-starved and half-frozen yourself, could render to those who are already perishing by want and exposure? you would only bring them away to die."

The obvious and dispassionate reasoning of the lieutenant could not fail to impress the minds of those who listened to him; the impracticability of the journey became more and more apparent; unprotected on that drear expanse, any traveler must assuredly succumb to the snow-drifts that were continually being whirled across it. But Hector Servadac, animated by the generous desire of rescuing a suffering fellow-creature, could scarcely be brought
within the bounds of common sense. Against his better judgment he was still bent upon the expedition, and Ben Zoof declared himself ready to accompany his master in the event of Count Timascheff hesitating to encounter the peril which the undertaking involved. But the count entirely repudiated all idea of shrinking from what, quite as much as the captain, he regarded as a sacred duty, and turning to Lieutenant Procope, told him that unless some better plan could be devised, he was prepared to start off at once and make the attempt to skate across to Formentera. The lieutenant, who was lost in thought, made no immediate reply.

"I wish we had a sledge," said Ben Zoof.

"I dare say that a sledge of some sort could be contrived," said the count; "but then we should have no dogs or reindeers to draw it."

"Why not rough-shoe the two horses?"

"They would never be able to endure the cold," objected the count.

"Never mind," said Servadac, "let us get our sledge and put them to the test. Something must be done!"

"I think," said Lieutenant Procope, breaking his thoughtful silence, "that I can tell you of a sledge already provided for your hand, and I can suggest a motive power surer and swifter than horses."

"What do you mean?" was the eager inquiry.

"I mean the _Dobryna_’s yawl," answered the lieutenant; "and I have no doubt that the wind would carry her rapidly along the ice."

The idea seemed admirable. Lieutenant Procope was well aware to what marvelous perfection the Americans had brought their sail-sledges, and had heard how in the vast prairies of the United States they had been known to outvie the speed of an express train, occasionally attaining a rate of more than a hundred miles an hour. The wind was still blowing hard from the south, and assuming that the yawl could be propelled with a velocity of about fifteen or at least twelve leagues an hour, he reckoned that it was quite possible to reach Formentera within twelve hours, that is to say, in a single day between the intervals of sunrise and sunrise.

The yawl was about twelve feet long, and capable of holding five or six people. The addition of a couple of iron runners would be all that was requisite to convert it into an excellent sledge, which, if a sail were hoisted, might be deemed certain to make a rapid progress over the smooth surface of the ice. For the protection of the passengers it was proposed to erect a kind of wooden roof lined with strong cloth; beneath this could be packed a supply of provisions, some warm furs, some cordials, and a portable stove to be heated by spirits of wine.

For the outward journey the wind was as favorable as could be desired; but it was to be apprehended that, unless the direction of the wind should change, the return would be a matter of some difficulty; a system of tacking might be carried out to a certain degree, but it was not likely that the yawl would answer her helm in any way corresponding to what would occur in the open sea. Captain Servadac, however, would not listen to any representation of probable difficulties; the future, he said, must provide for itself.

The engineer and several of the sailors set vigorously to work, and before the close of the day the yawl was furnished with a pair of stout iron runners, curved upwards in front, and fitted with a metal scull designed to assist in maintaining the directness of her course; the roof was put on, and beneath it were stored the provisions, the wraps, and the cooking utensils.

A strong desire was expressed by Lieutenant Procope that he should be allowed to accompany Captain Servadac instead of Count Timascheff. It was unadvisable for all three of them to go, as, in case of there being several persons to be rescued, the space at their command would be quite inadequate. The lieutenant urged that he was the most experienced seaman, and as such was best qualified to take command of the sledge and the management of the sails; and as it was not to be expected that Servadac would resign his intention of going in person to relieve his fellow-countryman, Procope submitted his own wishes to the count. The count was himself very anxious to have his share in the philanthropic enterprise, and demurred considerably to the proposal; he yielded, however, after a time, to Servadac’s representations that in the event of the expedition proving disastrous, the little colony would need his services alike as governor and protector, and overcoming his reluctance to be left out of the perilous adventure, was prevailed upon to remain behind for the general good of the community at Nina’s Hive.

At sunrise on the following morning, the 16th of April, Captain Servadac and the lieutenant took their places in the yawl. The thermometer was more than 20 degrees below zero, and it was with deep emotion that their companions beheld them thus embarking upon the vast white plain. Ben Zoof’s heart was too full for words; Count Timascheff could not forbear pressing his two brave friends to his bosom; the Spaniards and the Russian sailors crowded round for a farewell shake of the hand, and little Nina, her great eyes flooded with tears, held up her face for a parting kiss. The sad scene was not permitted to be long. The sail was quickly hoisted, and the sledge, just as if it had expanded a huge white wing, was in a little while carried far away beyond the horizon.

Light and unimpeded, the yawl scudded on with incredible speed. Two sails, a brigantine and a jib, were arranged to catch the wind to the greatest advantage, and the travelers estimated that their progress would be little
under the rate of twelve leagues an hour. The motion of their novel vehicle was singularly gentle, the oscillation being less than that of an ordinary railway-carriage, while the diminished force of gravity contributed to the swiftness. Except that the clouds of ice-dust raised by the metal runners were an evidence that they had not actually left the level surface of the ice, the captain and lieutenant might again and again have imagined that they were being conveyed through the air in a balloon.

Lieutenant Procope, with his head all muffled up for fear of frost-bite, took an occasional peep through an aperture that had been intentionally left in the roof, and by the help of a compass, maintained a proper and straight course for Formentera. Nothing could be more dejected than the aspect of that frozen sea; not a single living creature relieved the solitude; both the travelers, Procope from a scientific point of view, Servadac from an aesthetic, were alike impressed by the solemnity of the scene, and where the lengthened shadow of the sail cast upon the ice by the oblique rays of the setting sun had disappeared, and day had given place to night, the two men, drawn together as by an involuntary impulse, mutually held each other's hands in silence.

There had been a new moon on the previous evening; but, in the absence of moonlight, the constellations shone with remarkable brilliancy. The new pole-star close upon the horizon was resplendent, and even had Lieutenant Procope been destitute of a compass, he would have had no difficulty in holding his course by the guidance of that alone. However great was the distance that separated Gallia from the sun, it was after all manifestly insignificant in comparison with the remoteness of the nearest of the fixed stars.

Observing that Servadac was completely absorbed in his own thoughts, Lieutenant Procope had leisure to contemplate some of the present perplexing problems, and to ponder over the true astronomical position. The last of the three mysterious documents had represented that Gallia, in conformity with Kepler's second law, had traveled along her orbit during the month of March twenty millions of leagues less than she had done in the previous month; yet, in the same time, her distance from the sun had nevertheless been increased by thirty-two millions of leagues. She was now, therefore, in the center of the zone of telescopic planets that revolve between the orbits of Mars and Jupiter, and had captured for herself a satellite which, according to the document, was Nerina, one of the asteroids most recently identified. If thus, then, it was within the power of the unknown writer to estimate with such apparent certainty Gallia's exact position, was it not likely that his mathematical calculations would enable him to arrive at some definite conclusion as to the date at which she would begin again to approach the sun? Nay, was it not to be expected that he had already estimated, with sufficient approximation to truth, what was to be the true length of the Gallian year?

So intently had they each separately been following their own train of thought, that daylight reappeared almost before the travelers were aware of it. On consulting their instruments, they found that they must have traveled close upon a hundred leagues since they started, and they resolved to slacken their speed. The sails were accordingly taken in a little, and in spite of the intensity of the cold, the explorers ventured out of their shelter, in order that they might reconnoiter the plain, which was apparently as boundless as ever. It was completely desert; not so much as a single aperture that had been intentionally left in the roof, and by the help of a compass, maintained a proper and straight course for Formentera. Nothing could be more dejected than the aspect of that frozen sea; not a single living creature relieved the solitude; both the travelers, Procope from a scientific point of view, Servadac from an aesthetic, were alike impressed by the solemnity of the scene, and where the lengthened shadow of the sail cast upon the ice by the oblique rays of the setting sun had disappeared, and day had given place to night, the two men, drawn together as by an involuntary impulse, mutually held each other's hands in silence.

In an instant the lieutenant had seized his telescope.

"I see what you mean," said he; "it is a pylone that has been used for some geodesic survey."

"Most likely," replied Procope. "I have taken the same course as I should have done at sea, and I have kept some distance to windward of the island; we can bear straight down upon it whenever we like."

"Bear down then, now; and as quickly as you can."

The yawl was at once put with her head to the northeast and Captain Servadac, in defiance of the icy blast, remained standing at the bow, his gaze fixed on the horizon.

All at once his eye brightened.

"Look! look!" he exclaimed, pointing to a faint outline that broke the monotony of the circle that divided the plain from the sky.

In an instant the lieutenant had seized his telescope.

"I see what you mean," said he; "it is a pylone that has been used for some geodesic survey."

The next moment the sail was filled, and the yawl was bearing down upon the object with inconceivable swiftness, both Captain Servadac and the lieutenant too excited to utter a word. Mile after mile the distance rapidly grew less, and as they drew nearer the pylone they could see that it was erected on a low mass of rocks that was the sole interruption to the dull level of the field of ice. No wreath of smoke rose above the little island; it was manifestly impossible, they conceived, that any human being could there have survived the cold; the sad presentiment forced itself upon their minds that it was a mere cairn to which they had been hurrying.

Ten minutes later, and they were so near the rock that the lieutenant took in his sail, convinced that the impetus already attained would be sufficient to carry him to the land. Servadac's heart bounded as he caught sight of a fragment of blue canvas fluttering in the wind from the top of the pylone: it was all that now remained of the French national standard. At the foot of the pylone stood a miserable shed, its shutters tightly closed. No other habitation
was to be seen; the entire island was less than a quarter of a mile in circumference; and the conclusion was irresistible that it was the sole surviving remnant of Formentera, once a member of the Balearic Archipelago.

To leap on shore, to clamber over the slippery stones, and to reach the cabin was but the work of a few moments. The worm-eaten door was bolted on the inside. Servadac began to knock with all his might. No answer. Neither shouting nor knocking could draw forth a reply.

"Let us force it open, Procopel!" he said.

The two men put their shoulders to the door, which soon yielded to their vigorous efforts, and they found themselves inside the shed, and in almost total darkness. By opening a shutter they admitted what daylight they could. At first sight the wretched place seemed to be deserted; the little grate contained the ashes of a fire long since extinguished; all looked black and desolate. Another instant's investigation, however, revealed a bed in the extreme corner, and extended on the bed a human form.

"Dead!" sighed Servadac; "dead of cold and hunger!"

Lieutenant Procope bent down and anxiously contemplated the body.

"No; he is alive!" he said, and drawing a small flask from his pocket he poured a few drops of brandy between the lips of the senseless man.

There was a faint sigh, followed by a feeble voice, which uttered the one word, "Gallia?"

"Yes, yes! Gallia!" echoed Servadac, eagerly.

"My comet, my comet!" said the voice, so low as to be almost inaudible, and the unfortunate man relapsed again into unconsciousness.

"Where have I seen this man?" thought Servadac to himself; "his face is strangely familiar to me."

But it was no time for deliberation. Not a moment was to be lost in getting the unconscious astronomer away from his desolate quarters. He was soon conveyed to the yawl; his books, his scanty wardrobe, his papers, his instruments, and the blackboard which had served for his calculations, were quickly collected; the wind, by a fortuitous Providence, had shifted into a favorable quarter; they set their sail with all speed, and ere long were on their journey back from Formentera.

Thirty-six hours later, the brave travelers were greeted by the acclamations of their fellow-colonists, who had been most anxiously awaiting their reappearance, and the still senseless _savant_, who had neither opened his eyes nor spoken a word throughout the journey, was safely deposited in the warmth and security of the great hall of Nina's Hive.

END OF FIRST BOOK

BOOK II.

CHAPTER I. THE ASTRONOMER

By the return of the expedition, conveying its contribution from Formentera, the known population of Gallia was raised to a total of thirty-six.

On learning the details of his friends' discoveries, Count Timascheff did not hesitate in believing that the exhausted individual who was lying before him was the author alike of the two unsigned documents picked up at sea, and of the third statement so recently brought to hand by the carrier-pigeon. Manifestly, he had arrived at some knowledge of Gallia's movements: he had estimated her distance from the sun; he had calculated the diminution of her tangential speed; but there was nothing to show that he had arrived at the conclusions which were of the most paramount interest to them all. Had he ascertained the true character of her orbit? had he established any data from which it would be possible to reckon what time must elapse before she would again approach the earth?

The only intelligible words which the astronomer had uttered had been, "My comet!"

To what could the exclamation refer? Was it to be conjectured that a fragment of the earth had been chipped off by the collision of a comet? and if so, was it implied that the name of the comet itself was Gallia, and were they mistaken in supposing that such was the name given by the _savant_ to the little world that had been so suddenly launched into space? Again and again they discussed these questions; but no satisfactory answer could be found. The only man who was able to throw any light upon the subject was lying amongst them in an unconscious and half-dying condition.

Apart from motives of humanity, motives of self-interest made it a matter of the deepest concern to restore animation to that senseless form. Ben Zoof, after making the encouraging remark that _savants_ have as many lives as a cat, proceeded, with Negrete's assistance, to give the body such a vigorous rubbing as would have threatened serious injury to any ordinary mortal, whilst they administered cordials and restoratives from the _Dobryna's_ medical stores powerful enough, one might think, to rouse the very dead.

Meanwhile the captain was racking his brain in his exertions to recall what were the circumstances of his
previous acquaintance with the Frenchman upon whose features he was gazing; he only grew more and more convinced that he had once been familiar with them. Perhaps it was not altogether surprising that he had almost forgotten him; he had never seen him since the days of his youth, that time of life which, with a certain show of justice, has been termed the age of ingratitude; for, in point of fact, the astronomer was none other than Professor Palmyrin Rosette, Servadac's old science-master at the Lycee Charlemagne.

After completing his year of elementary studies, Hector Servadac had entered the school at Saint Cyr, and from that time he and his former tutor had never met, so that naturally they would well-nigh pass from each other's recollection. One thing, however, on the other hand, might conduce to a mutual and permanent impression on their memories; during the year at the Lycee, young Servadac, never of a very studious turn of mind, had contrived, as the ringleader of a set of like caliber as himself, to lead the poor professor a life of perpetual torment. On the discovery of each delinquency he would fume and rage in a manner that was a source of unbounded delight to his audience.

Two years after Servadac left the Lycee, Professor Rosette had thrown up all educational employment in order that he might devote himself entirely to the study of astronomy. He endeavored to obtain a post at the Observatory, but his ungenial character was so well known in scientific circles that he failed in his application; however, having some small private means, he determined on his own account to carry on his researches without any official salary. He had really considerable genius for the science that he had adopted; besides discovering three of the latest of the telescopic planets, he had worked out the elements of the three hundred and twenty-fifth comet in the catalogue; but his chief delight was to criticize the publications of other astronomers, and he was never better pleased than when he detected a flaw in their reckonings.

When Ben Zoof and Negrete had extricated their patient from the envelope of furs in which he had been wrapped by Servadac and the lieutenant, they found themselves face to face with a shrivelled little man, about five feet two inches high, with a round bald head, smooth and shiny as an ostrich's egg, no beard unless the unshorn growth of a week could be so described, and a long hooked nose that supported a huge pair of spectacles such as with many near-sighted people seems to have become a part of their individuality. His nervous system was remarkably developed, and his body might not inaptly be compared to one of the Rhumkorff's bobbins of which the thread, several hundred yards in length, is permeated throughout by electric fluid. But whatever he was, his life, if possible, must be preserved. When he had been partially divested of his clothing, his heart was found to be still beating, though very feebly. Asserting that while there was life there was hope, Ben Zoof recommenced his friction with more vigor than ever.

When the rubbing had been continued without a moment's intermission for the best part of half an hour, the astronomer heaved a faint sigh, which ere long was followed by another and another. He half opened his eyes, closed them again, then opened them completely, but without exhibiting any consciousness whatever of his situation. A few words seemed to escape his lips, but they were quite unintelligible. Presently he raised his right hand to his forehead as though instinctively feeling for something that was missing; then, all of a sudden, his features became contracted, his face flushed with apparent irritation, and he exclaimed fretfully, "My spectacles!--where are my spectacles?"

In order to facilitate his operations, Ben Zoof had removed the spectacles in spite of the tenacity with which they seemed to adhere to the temples of his patient; but he now rapidly brought them back and readjusted them as best he could to what seemed to be their natural position on the aquiline nose. The professor heaved a long sigh of relief, and once more closed his eyes.

Before long the astronomer roused himself a little more, and glanced inquiringly about him, but soon relapsed into his comatose condition. When next he opened his eyes, Captain Servadac happened to be bending down closely over him, examining his features with curious scrutiny. The old man darted an angry look at him through the spectacles, and said sharply, "Servadac, five hundred lines to-morrow!"

It was an echo of days of old. The words were few, but they were enough to recall the identity which Servadac was trying to make out.

"Is it possible?" he exclaimed. "Here is my old tutor, Mr. Rosette, in very flesh and blood."

"Can't say much for the flesh," muttered Ben Zoof.

The old man had again fallen back into a torpid slumber. Ben Zoof continued, "His sleep is getting more composed. Let him alone; he will come round yet. Haven't I heard of men more dried up than he is, being brought all the way from Egypt in cases covered with pictures?"

"You idiot!--those were mummies; they had been dead for ages."

Ben Zoof did not answer a word. He went on preparing a warm bed, into which he managed to remove his patient, who soon fell into a calm and natural sleep.

Too impatient to await the awakening of the astronomer and to hear what representations he had to make, Servadac, the count, and the lieutenant, constituting themselves what might be designated "the Academy of
Sciences" of the colony, spent the whole of the remainder of the day in starting and discussing the wildest conjectures about their situation. The hypothesis, to which they had now accustomed themselves for so long, that a new asteroid had been formed by a fracture of the earth's surface, seemed to fall to the ground when they found that Professor Palmyrin Rosette had associated the name of Gallia, not with their present home, but with what he called "my comet"; and that theory being abandoned, they were driven to make the most improbable speculations to replace it.

Alluding to Rosette, Servadac took care to inform his companions that, although the professor was always eccentric, and at times very irascible, yet he was really exceedingly good-hearted; his bark was worse than his bite; and if suffered to take their course without observation, his outbreaks of ill-temper seldom lasted long.

"We will certainly do our best to get on with him," said the count. "He is no doubt the author of the papers, and we must hope that he will be able to give us some valuable information."

"Beyond a question the documents have originated with him," assented the lieutenant. "Gallia was the word written at the top of every one of them, and Gallia was the first word uttered by him in our hearing."

The astronomer slept on. Meanwhile, the three together had no hesitation in examining his papers, and scrutinizing the figures on his extemporized blackboard. The handwriting corresponded with that of the papers already received; the blackboard was covered with algebraical symbols traced in chalk, which they were careful not to obliterate; and the papers, which consisted for the most part of detached scraps, presented a perfect wilderness of geometrical figures, conic sections of every variety being repeated in countless profusion.

Lieutenant Procope pointed out that these curves evidently had reference to the orbits of comets, which are variously parabolic, hyperbolic, or elliptic. If either of the first two, the comet, after once appearing within the range of terrestrial vision, would vanish forever in the outlying regions of space; if the last, it would be sure, sooner or later, after some periodic interval, to return.

From the _prima facie_ appearance of his papers, then, it seemed probable that the astronomer, during his sojourn at Formentera, had been devoting himself to the study of cometary orbits; and as calculations of this kind are ordinarily based upon the assumption that the orbit is a parabola, it was not unlikely that he had been endeavoring to trace the path of some particular comet.

"I wonder whether these calculations were made before or after the 1st of January; it makes all the difference," said Lieutenant Procope.

"We must bide our time and hear," replied the count.

Servadac paced restlessly up and down. "I would give a month of my life," he cried, impetuously, "for every hour that the old fellow goes sleeping on."

"You might be making a bad bargain," said Procope, smiling. "Perhaps after all the comet has had nothing to do with the convulsion that we have experienced."

"Nonsense!" exclaimed the captain; "I know better than that, and so do you. Is it not as clear as daylight that the earth and this comet have been in collision, and the result has been that our little world has been split off and sent flying far into space?"

Count Timascheff and the lieutenant looked at each other in silence. "I do not deny your theory," said Procope after a while. "If it be correct, I suppose we must conclude that the enormous disc we observed on the night of the catastrophe was the comet itself; and the velocity with which it was traveling must have been so great that it was hardly arrested at all by the attraction of the earth."

"Plausible enough," answered Count Timascheff; "and it is to this comet that our scientific friend here has given the name of Gallia."

It still remained a puzzle to them all why the astronomer should apparently be interested in the comet so much more than in the new little world in which their strange lot was cast.

"Can you explain this?" asked the count.

"There is no accounting for the freaks of philosophers, you know," said Servadac; "and have I not told you that this philosopher in particular is one of the most eccentric beings in creation?"

"Besides," added the lieutenant, "it is exceedingly likely that his observations had been going on for some considerable period before the convulsion happened."

Thus, the general conclusion arrived at by the Gallian Academy of Science was this: That on the night of the 31st of December, a comet, crossing the ecliptic, had come into collision with the earth, and that the violence of the shock had separated a huge fragment from the globe, which fragment from that date had been traversing the remote inter-planetary regions. Palmyrin Rosette would doubtless confirm their solution of the phenomenon.

CHAPTER II. A REVELATION
To the general population of the colony the arrival of the stranger was a matter of small interest. The Spaniards were naturally too indolent to be affected in any way by an incident that concerned themselves so remotely; while the Russians felt themselves simply reliant on their master, and as long as they were with him were careless as to where or how they spent their days. Everything went on with them in an accustomed routine; and they lay down night after night, and awoke to their avocations morning after morning, just as if nothing extraordinary had occurred.

All night long Ben Zoof would not leave the professor's bedside. He had constituted himself sick nurse, and considered his reputation at stake if he failed to set his patient on his feet again. He watched every movement, listened to every breath, and never failed to administer the strongest cordials upon the slightest pretext. Even in his sleep Rosette's irritable nature revealed itself. Ever and again, sometimes in a tone of uneasiness, and sometimes with the expression of positive anger, the name of Gallia escaped his lips, as though he were dreaming that his claim to the discovery of the comet was being contested or denied; but although his attendant was on the alert to gather all he could, he was able to catch nothing in the incoherent sentences that served to throw any real light upon the problem that they were all eager to solve.

When the sun reappeared on the western horizon the professor was still sound asleep; and Ben Zoof, who was especially anxious that the repose which promised to be so beneficial should not be disturbed, felt considerable annoyance at hearing a loud knocking, evidently of some blunt heavy instrument against a door that had been placed at the entrance of the gallery, more for the purpose of retaining internal warmth than for guarding against intrusion from without.

"Confound it!" said Ben Zoof. "I must put a stop to this;" and he made his way towards the door.
"Who's there?" he cried, in no very amiable tone.
"I." replied the quavering voice.
"Who are you?"
"Isaac Hakkabut. Let me in; do, please, let me in."
"Oh, it is you, old Ashtaroth, is it? What do you want? Can't you get anybody to buy your stuffs?"
"Nobody will pay me a proper price."
"Well, old Shimei, you won't find a customer here. You had better be off."
"No; but do, please--do, please, let me in," supplicated the Jew. "I want to speak to his Excellency, the governor."
"The governor is in bed, and asleep."
"I can wait until he awakes."
"Then wait where you are."

And with this inhospitable rejoinder the orderly was about to return to his place at the side of his patient, when Servadac, who had been roused by the sound of voices, called out, "What's the matter, Ben Zoof?"
"Oh, nothing, sir; only that hound of a Hakkabut says he wants to speak to you."
"Let him in, then."

Ben Zoof hesitated.
"Let him in, I say," repeated the captain, peremptorily.
However reluctantly, Ben Zoof obeyed. The door was unfastened, and Isaac Hakkabut, enveloped in an old overcoat, shuffled into the gallery. In a few moments Servadac approached, and the Jew began to overwhelm him with the most obsequious epithets. Without vouchsafing any reply, the captain beckoned to the old man to follow him, and leading the way to the central hall, stopped, and turning so as to look him steadily in the face, said, "Now is your opportunity. Tell me what you want."

"Oh, my lord, my lord," whined Isaac, "you must have some news to tell me."
"News? What do you mean?"
"From my little tartan yonder, I saw the yawl go out from the rock here on a journey, and I saw it come back, and it brought a stranger; and I thought--I thought--I thought--"
"Well, you thought--what did you think?"
"Why, that perhaps the stranger had come from the northern shores of the Mediterranean, and that I might ask him--"

He paused again, and gave a glance at the captain.
"Ask him what? Speak out, man?"
"Ask him if he brings any tidings of Europe," Hakkabut blurted out at last.

Servadac shrugged his shoulders in contempt and turned away. Here was a man who had been resident three months in Gallia, a living witness of all the abnormal phenomena that had occurred, and yet refusing to believe that his hope of making good bargains with European traders was at an end. Surely nothing, thought the captain, will convince the old rascal now; and he moved off in disgust. The orderly, however, who had listened with much
amusement, was by no means disinclined for the conversation to be continued. "Are you satisfied, old Ezekiel?" he asked.

"Isn't it so? Am I not right? Didn't a stranger arrive here last night?" inquired the Jew.

"Yes, quite true."

"Where from?"

"From the Balearic Isles."

"The Balearic Isles?" echoed Isaac.

"Yes."

"Fine quarters for trade! Hardly twenty leagues from Spain! He must have brought news from Europe!"

"Well, old Manasseh, what if he has?"

"I should like to see him."

"Can't be."

The Jew sidled close up to Ben Zoof, and laying his hand on his arm, said in a low and insinuating tone, "I am poor, you know; but I would give you a few reals if you would let me talk to this stranger."

But as if he thought he was making too liberal an offer, he added, "Only it must be at once."

"He is too tired; he is worn out; he is fast asleep," answered Ben Zoof.

"But I would pay you to wake him."

The captain had overheard the tenor of the conversation, and interposed sternly, "Hakkabut! if you make the least attempt to disturb our visitor, I shall have you turned outside that door immediately."

"No offense, my lord, I hope," stammered out the Jew. "I only meant--"

"Silence!" shouted Servadac. The old man hung his head, abashed.

"I will tell you what," said Servadac after a brief interval; "I will give you leave to hear what this stranger has to tell as soon as he is able to tell us anything; at present we have not heard a word from his lips."

The Jew looked perplexed.

"Yes," said Servadac; "when we hear his story, you shall hear it too."

"And I hope it will be to your liking, old Ezekiel!" added Ben Zoof in a voice of irony.

They had none of them long to wait, for within a few minutes Rosette's peevish voice was heard calling, "Joseph! Joseph!"

The professor did not open his eyes, and appeared to be slumbering on, but very shortly afterwards called out again, "Joseph! Confound the fellow! where is he?" It was evident that he was half dreaming about a former servant now far away on the ancient globe. "Where's my blackboard, Joseph?"

"Quite safe, sir," answered Ben Zoof, quickly.

Rosette unclosed his eyes and fixed them full upon the orderly's face. "Are you Joseph?" he asked.

"At your service, sir," replied Ben Zoof with imperturbable gravity.

"Then get me my coffee, and be quick about it."

Ben Zoof left to go into the kitchen, and Servadac approached the professor in order to assist him in rising to a sitting posture.

"Do you recognize your quondam pupil, professor?" he asked.

"Ah, yes, yes; you are Servadac," replied Rosette. "It is twelve years or more since I saw you; I hope you have improved."

"Quite a reformed character, sir, I assure you," said Servadac, smiling.

"Well, that's as it should be; that's right," said the astronomer with fussy importance. "But let me have my coffee," he added impatiently; "I cannot collect my thoughts without my coffee."

Fortunately, Ben Zoof appeared with a great cup, hot and strong. After draining it with much apparent relish, the professor got out of bed, walked into the common hall, round which he glanced with a pre-occupied air, and proceeded to seat himself in an armchair, the most comfortable which the cabin of the _Dobryna_ had supplied. Then, in a voice full of satisfaction, and that involuntarily recalled the exclamations of delight that had wound up the two first of the mysterious documents that had been received, he burst out, "Well, gentlemen, what do you think of Gallia?"

There was no time for anyone to make a reply before Isaac Hakkabut had darted forward.

"By the God--"

"Who is that?" asked the startled professor; and he frowned, and made a gesture of repugnance.

Regardless of the efforts that were made to silence him, the Jew continued, "By the God of Abraham, I beseech you, give me some tidings of Europe!"

"Europe?" shouted the professor, springing from his seat as if he were electrified; "what does the man want with Europe?"
"I want to get there!" screeched the Jew; and in spite of every exertion to get him away, he clung most tenaciously to the professor's chair, and again and again implored for news of Europe.

Rosette made no immediate reply. After a moment or two's reflection, he turned to Servadac and asked him whether it was not the middle of April.

"It is the twentieth," answered the captain.

"Then to-day," said the astronomer, speaking with the greatest deliberation--"to-day we are just three millions of leagues away from Europe."

The Jew was utterly crestfallen.

"You seem here," continued the professor, "to be very ignorant of the state of things."

"How far we are ignorant," rejoined Servadac, "I cannot tell. But I will tell you all that we do know, and all that we have surmised." And as briefly as he could, he related all that had happened since the memorable night of the thirty-first of December; how they had experienced the shock; how the _Dobryna_ had made her voyage; how they had discovered nothing except the fragments of the old continent at Tunis, Sardinia, Gibraltar, and now at Formentera; how at intervals the three anonymous documents had been received; and, finally, how the settlement at Gourbi Island had been abandoned for their present quarters at Nina's Hive.

The astronomer had hardly patience to hear him to the end. "And what do you say is your surmise as to your present position?" he asked.

"Our supposition," the captain replied, "is this. We imagine that we are on a considerable fragment of the terrestrial globe that has been detached by collision with a planet to which you appear to have given the name of Gallia."

"Better than that!" cried Rosette, starting to his feet with excitement.

"How? Why? What do you mean?" cried the voices of the listeners.

"You are correct to a certain degree," continued the professor. "It is quite true that at 47° 35.6" after two o'clock on the morning of the first of January there was a collision; my comet grazed the earth; and the bits of the earth which you have named were carried clean away."

They were all fairly bewildered.

"Where, then," cried Servadac eagerly, "where are we?"

"You are on my comet, on Gallia itself!"

And the professor gazed around him with a perfect air of triumph.

CHAPTER III. THE PROFESSOR'S EXPERIENCES

"Yes, my comet!" repeated the professor, and from time to time he knitted his brows, and looked around him with a defiant air, as though he could not get rid of the impression that someone was laying an unwarranted claim to its proprietorship, or that the individuals before him were intruders upon his own proper domain.

But for a considerable while, Servadac, the count, and the lieutenant remained silent and sunk in thought. Here then, at last, was the unriddling of the enigma they had been so long endeavoring to solve; both the hypotheses they had formed in succession had now to give way before the announcement of the real truth. The first supposition, that the rotatory axis of the earth had been subject to some accidental modification, and the conjecture that replaced it, namely, that a certain portion of the terrestrial sphere had been splintered off and carried into space, had both now to yield to the representation that the earth had been grazed by an unknown comet, which had caught up some scattered fragments from its surface, and was bearing them far away into sidereal regions. Unfolded lay the past and the present before them; but this only served to awaken a keener interest about the future. Could the professor throw any light upon that? they longed to inquire, but did not yet venture to ask him.

Meanwhile Rosette assumed a pompous professional air, and appeared to be waiting for the entire party to be ceremoniously introduced to him. Nothing unwilling to humor the vanity of the eccentric little man, Servadac proceeded to go through the expected formalities.

"Allow me to present to you my excellent friend, the Count Timascheff," he said.

"You are very welcome," said Rosette, bowing to the count with a smile of condescension.

"Although I am not precisely a voluntary resident on your comet, Mr. Professor, I beg to acknowledge your courteous reception," gravely responded Timascheff.

Servadac could not quite conceal his amusement at the count's irony, but continued, "This is Lieutenant Procope, the officer in command of the _Dobryna_."

The professor bowed again in frigid dignity.

"His yacht has conveyed us right round Gallia," added the captain.

"Round Gallia?" eagerly exclaimed the professor.
"Yes, entirely round it," answered Servadac, and without allowing time for reply, proceeded, "And this is my orderly, Ben Zoof."

"Aide-de-camp to his Excellency the Governor of Gallia," interposed Ben Zoof himself, anxious to maintain his master's honor as well as his own.

Rosette scarcely bent his head.

The rest of the population of the Hive were all presented in succession: the Russian sailors, the Spaniards, young Pablo, and little Nina, on whom the professor, evidently no lover of children, glared fiercely through his formidable spectacles. Isaac Hakkabut, after his introduction, begged to be allowed to ask one question.

"How soon may we hope to get back?" he inquired.

"Get back!" rejoined Rosette, sharply; "who talks of getting back? We have hardly started yet."

Seeing that the professor was inclined to get angry, Captain Servadac adroitly gave a new turn to the conversation by asking him whether he would gratify them by relating his own recent experiences. The astronomer seemed pleased with the proposal, and at once commenced a verbose and somewhat circumlocutory address, of which the following summary presents the main features.

The French Government, being desirous of verifying the measurement already made of the arc of the meridian of Paris, appointed a scientific commission for that purpose. From that commission the name of Palmyrin Rosette was omitted, apparently for no other reason than his personal unpopularity. Furious at the slight, the professor resolved to set to work independently on his own account, and declaring that there were inaccuracies in the previous geodesic operations, he determined to re-examine the results of the last triangulation which had united Formentera to the Spanish coast by a triangle, one of the sides of which measured over a hundred miles, the very operation which had already been so successfully accomplished by Arago and Biot.

Accordingly, leaving Paris for the Balearic Isles, he placed his observatory on the highest point of Formentera, and accompanied as he was only by his servant, Joseph, led the life of a recluse. He secured the services of a former assistant, and dispatched him to a high peak on the coast of Spain, where he had to superintend a reverberator, which, with the aid of a glass, could be seen from Formentera. A few books and instruments, and two months' victuals, was all the baggage he took with him, except an excellent astronomical telescope, which was, indeed, almost part and parcel of himself, and with which he assiduously scanned the heavens, in the sanguine anticipation of making some discovery which would immortalize his name.

The task he had undertaken demanded the utmost patience. Night after night, in order to fix the apex of his triangle, he had to linger on the watch for the assistant's signal-light, but he did not forget that his predecessors, Arago and Biot, had had to wait sixty-one days for a similar purpose. What retarded the work was the dense fog which, it has been already mentioned, at that time enveloped not only that part of Europe, but almost the entire world.

Never failing to turn to the best advantage the few intervals when the mist lifted a little, the astronomer would at the same time cast an inquiring glance at the firmament, as he was greatly interested in the revision of the chart of the heavens, in the region contiguous to the constellation Gemini.

To the naked eye this constellation consists of only six stars, but through a telescope ten inches in diameter, as many as six thousand are visible. Rosette, however, did not possess a reflector of this magnitude, and was obliged to content himself with the good but comparatively small instrument he had.

On one of these occasions, whilst carefully gauging the recesses of Gemini, he espied a bright speck which was unregistered in the chart, and which at first he took for a small star that had escaped being entered in the catalogue.

But the observation of a few separate nights soon made it manifest that the star was rapidly changing its position with regard to the adjacent stars, and the astronomer's heart began to leap at the thought that the renown of the discovery of a new planet would be associated with his name.

Redoubling his attention, he soon satisfied himself that what he saw was not a planet; the rapidity of its displacement rather forced him to the conjecture that it must be a comet, and this opinion was soon strengthened by the appearance of a coma, and subsequently confirmed, as the body approached the sun, by the development of a tail.

A comet! The discovery was fatal to all further progress in the triangulation. However conscientiously the assistant on the Spanish coast might look to the kindling of the beacon, Rosette had no glances to spare for that direction; he had no eyes except for the one object of his notice, no thoughts apart from that one quarter of the firmament.

A comet! No time must be lost in calculating its elements.

Now, in order to calculate the elements of a comet, it is always deemed the safest mode of procedure to assume the orbit to be a parabola. Ordinarily, comets are conspicuous at their perihelia, as being their shortest distances from the sun, which is the focus of their orbit, and inasmuch as a parabola is but an ellipse with its axis indefinitely
produced, for some short portion of its pathway the orbit may be indifferently considered either one or the other; but
in this particular case the professor was right in adopting the supposition of its being parabolic.

Just as in a circle, it is necessary to know three points to determine the circumference; so in ascertaining the
elements of a comet, three different positions must be observed before what astronomers call its "ephemeris" can be
established.

But Professor Rosette did not content himself with three positions; taking advantage of every rift in the fog he
made ten, twenty, thirty observations both in right ascension and in declination, and succeeded in working out with
the most minute accuracy the five elements of the comet which was evidently advancing with astounding rapidity
towards the earth.

These elements were:
1. The inclination of the plane of the cometary orbit to the plane of the ecliptic, an angle which is generally
    considerable, but in this case the planes were proved to coincide.
2. The position of the ascending node, or the point where the comet crossed the terrestrial orbit.
   These two elements being obtained, the position in space of the comet's orbit was determined.
3. The direction of the axis major of the orbit, which was found by calculating the longitude of the comet's
    perihelion.
4. The perihelion distance from the sun, which settled the precise form of the parabola.
5. The motion of the comet, as being retrograde, or, unlike the planets, from east to west.

Rosette thus found himself able to calculate the date at which the comet would reach its perihelion, and,
overjoyed at his discovery, without thinking of calling it Palmyra or Rosette, after his own name, he resolved that it
should be known as Gallia.

His next business was to draw up a formal report. Not only did he at once recognize that a collision with the
earth was possible, but he soon foresaw that it was inevitable, and that it must happen on the night of the 31st of
December; moreover, as the bodies were moving in opposite directions, the shock could hardly fail to be violent.

To say that he was elated at the prospect was far below the truth; his delight amounted almost to delirium.
Anyone else would have hurried from the solitude of Formentera in sheer fright; but, without communicating a word
of his startling discovery, he remained resolutely at his post. From occasional newspapers which he had received, he
had learnt that fogs, dense as ever, continued to envelop both hemispheres, so that he was assured that the existence
of the comet was utterly unknown elsewhere; and the ignorance of the world as to the peril that threatened it averted
the panic that would have followed the publication of the facts, and left the philosopher of Formentera in sole
possession of the great secret. He clung to his post with the greater persistency, because his calculations had led him
to the conclusion that the comet would strike the earth somewhere to the south of Algeria, and as it had a solid
nucleus, he felt sure that, as he expressed it, the effect would be "unique," and he was anxious to be in the vicinity.

The shock came, and with it the results already recorded. Palmyrin Rosette was suddenly separated from his
servant Joseph, and when, after a long period of unconsciousness, he came to himself, he found that he was the
solitary occupant of the only fragment that survived of the Balearic Archipelago.

Such was the substance of the narrative which the professor gave with sundry repetitions and digressions; while
he was giving it, he frequently paused and frowned as if irritated in a way that seemed by no means justified by the
patient and good-humored demeanor of his audience.

"But now, gentlemen," added the professor, "I must tell you something more. Important changes have resulted
from the collision; the cardinal points have been displaced; gravity has been diminished: not that I ever supposed for
a minute, as you did, that I was still upon the earth. No! the earth, attended by her moon, continued to rotate along
her proper orbit. But we, gentlemen, have nothing to complain of; our destiny might have been far worse; we might
all have been crushed to death, or the comet might have remained in adhesion to the earth; and in neither of these
cases should we have had the satisfaction of making this marvelous excursion through untraversed solar regions. No,
gentlemen, I repeat it, we have nothing to regret."

And as the professor spoke, he seemed to kindle with the emotion of such supreme contentment that no one had
the heart to gainsay his assertion. Ben Zoof alone ventured an unlucky remark to the effect that if the comet had
happened to strike against Montmartre, instead of a bit of Africa, it would have met with some resistance.

"Pshaw!" said Rosette, disdainfully. "A mole-hill like Montmartre would have been ground to powder in a
moment."

"Mole-hill!" exclaimed Ben Zoof, stung to the quick. "I can tell you it would have caught up your bit of a comet
and worn it like a feather in a cap."

The professor looked angry, and Servadac having imposed silence upon his orderly, explained the worthy
soldier's sensitiveness on all that concerned Montmartre. Always obedient to his master, Ben Zoof held his tongue;
but he felt that he could never forgive the slight that had been cast upon his beloved home.
It was now all-important to learn whether the astronomer had been able to continue his observations, and whether he had learned sufficient of Gallia's path through space to make him competent to determine, at least approximately, the period of its revolution round the sun. With as much tact and caution as he could, Lieutenant Procope endeavored to intimate the general desire for some information on this point.

"Before the shock, sir," answered the professor, "I had conclusively demonstrated the path of the comet; but, in consequence of the modifications which that shock has entailed upon my comet's orbit, I have been compelled entirely to recommence my calculations."

The lieutenant looked disappointed.

"Although the orbit of the earth was unaltered," continued the professor, "the result of the collision was the projection of the comet into a new orbit altogether."

"And may I ask," said Procope, deferentially, "whether you have got the elements of the fresh orbit?"

"Yes."

"Then perhaps you know--"

"I know this, sir, that at 47 minutes 35.6 seconds after two o'clock on the morning of the 1st of January last, Gallia, in passing its ascending node, came in contact with the earth; that on the 10th of January it crossed the orbit of Venus; that it reached its perihelion on the 15th; that it re-crossed the orbit of Venus; that on the 1st of February it passed its descending node; on the 13th crossed the orbit of Mars; entered the zone of the telescopic planets on the 10th of March, and, attracting Nerina, carried it off as a satellite."

Servadac interposed:

"We are already acquainted with well-nigh all these extraordinary facts; many of them, moreover, we have learned from documents which we have picked up, and which, although unsigned, we cannot entertain a doubt have originated with you."

Professor Rosette drew himself up proudly and said: "Of course, they originated with me. I sent them off by hundreds. From whom else could they come?"

"From no one but yourself, certainly," rejoined the count, with grave politeness.

Hitherto the conversation had thrown no light upon the future movements of Gallia, and Rosette was disposed apparently to evade, or at least to postpone, the subject. When, therefore, Lieutenant Procope was about to press his inquiries in a more categorical form, Servadac, thinking it advisable not prematurely to press the little _savant_ too far, interrupted him by asking the professor how he accounted for the earth having suffered so little from such a formidable concussion.

"I account for it in this way," answered Rosette: "the earth was traveling at the rate of 28,000 leagues an hour, and Gallia at the rate of 57,000 leagues an hour, therefore the result was the same as though a train rushing along at a speed of about 86,000 leagues an hour had suddenly encountered some obstacle. The nucleus of the comet, being excessively hard, has done exactly what a ball would do fired with that velocity close to a pane of glass. It has crossed the earth without cracking it."

"It is possible you may be right," said Servadac, thoughtfully.

"Right! of course I am right!" replied the snappish professor. Soon, however, recovering his equanimity, he continued: "It is fortunate that the earth was only touched obliquely; if the comet had impinged perpendicularly, it must have plowed its way deep below the surface, and the disasters it might have caused are beyond reckoning. Perhaps," he added, with a smile, "even Montmartre might not have survived the calamity."

"Sir!" shouted Ben Zoof, quite unable to bear the unprovoked attack.

"Quiet, Ben Zoof!" said Servadac sternly.

Fortunately for the sake of peace, Isaac Hakkabut, who at length was beginning to realize something of the true condition of things, came forward at this moment, and in a voice trembling with eagerness, implored the professor to tell him when they would all be back again upon the earth.

"Are you in a great hurry?" asked the professor coolly.

The Jew was about to speak again, when Captain Servadac interposed: "Allow me to say that, in somewhat more scientific terms, I was about to ask you the same question. Did I not understand you to say that, as the consequence of the collision, the character of the comet's orbit has been changed?"

"You did, sir."

"Did you imply that the orbit has ceased to be a parabola?"

"Just so."

"Is it then a hyperbola? and are we to be carried on far and away into remote distance, and never, never to return?"

"I did not say an hyperbola."

"And is it not?"
"It is not."
"Then it must be an ellipse?"
"Yes."
"And does its plane coincide with the plane of the earth?"
"Yes."
"Then it must be a periodic comet?"
"It is."
Servadac involuntarily raised a ringing shout of joy that echoed again along the gallery.
"Yes," continued the professor, "Gallia is a periodic comet, and allowing for the perturbations to which it is liable from the attraction of Mars and Jupiter and Saturn, it will return to the earth again in two years precisely."
"You mean that in two years after the first shock, Gallia will meet the earth at the same point as they met before?" said Lieutenant Procope.
"I am afraid so," said Rosette.
"Why afraid?"
"Because we are doing exceedingly well as we are." The professor stamped his foot upon the ground, by way of emphasis, and added, "If I had my will, Gallia should never return to the earth again!"

CHAPTER IV. A REVISED CALENDAR

All previous hypotheses, then, were now forgotten in the presence of the one great fact that Gallia was a comet and gravitating through remote solar regions. Captain Servadac became aware that the huge disc that had been looming through the clouds after the shock was the form of the retreating earth, to the proximity of which the one high tide they had experienced was also to be attributed.

As to the fulfillment of the professor's prediction of an ultimate return to the terrestrial sphere, that was a point on which it must be owned that the captain, after the first flush of his excitement was over, was not without many misgivings.

The next day or two were spent in providing for the accommodation of the new comer. Fortunately his desires were very moderate; he seemed to live among the stars, and as long as he was well provided with coffee, he cared little for luxuries, and paid little or no regard to the ingenuity with which all the internal arrangements of Nina's Hive had been devised. Anxious to show all proper respect to his former tutor, Servadac proposed to leave the most comfortable apartment of the place at his disposal; but the professor resolutely declined to occupy it, saying that what he required was a small chamber, no matter how small, provided that it was elevated and secluded, which he could use as an observatory and where he might prosecute his studies without disturbance. A general search was instituted, and before long they were lucky enough to find, about a hundred feet above the central grotto, a small recess or reduct hollowed, as it were, in the mountain side, which would exactly answer their purpose. It contained room enough for a bed, a table, an arm-chair, a chest of drawers, and, what was of still more consequence, for the indispensable telescope. One small stream of lava, an off-shoot of the great torrent, sufficed to warm the apartment enough.

In these retired quarters the astronomer took up his abode. It was on all hands acknowledged to be advisable to let him go on entirely in his own way. His meals were taken to him at stated intervals; he slept but little; carried on his calculations by day, his observations by night, and very rarely made his appearance amongst the rest of the little community.

The cold now became very intense, the thermometer registering 30 degrees F. below zero. The mercury, however, never exhibited any of those fluctuations that are ever and again to be observed in variable climates, but continued slowly and steadily to fall, and in all probability would continue to do so until it reached the normal temperature of the regions of outlying space.

This steady sinking of the mercury was accompanied by a complete stillness of the atmosphere; the very air seemed to be congealed; no particle of it stirred; from zenith to horizon there was never a cloud; neither were there any of the damp mists or dry fogs which so often extend over the polar regions of the earth; the sky was always clear; the sun shone by day and the stars by night without causing any perceptible difference in the temperature.

These peculiar conditions rendered the cold endurable even in the open air. The cause of so many of the diseases that prove fatal to Arctic explorers resides in the cutting winds, unwholesome fogs, or terrible snow drifts, which, by drying up, relaxing, or otherwise affecting the lungs, make them incapable of fulfilling their proper functions. But during periods of calm weather, when the air has been absolutely still, many polar navigators, well-clothed and properly fed, have been known to withstand a temperature when the thermometer has fallen to 60 degrees below zero. It was the experience of Parry upon Melville Island, of Kane beyond latitude 81 degrees north, and of Hall and
the crew of the _Polaris_, that, however intense the cold, in the absence of the wind they could always brave its rigor.

Notwithstanding, then, the extreme lowness of the temperature, the little population found that they were able to move about in the open air with perfect immunity. The governor general made it his special care to see that his people were all well fed and warmly clad. Food was both wholesome and abundant, and besides the furs brought from the _Dobryna's_ stores, fresh skins could very easily be procured and made up into wearing apparel. A daily course of out-door exercise was enforced upon everyone; not even Pablo and Nina were exempted from the general rule; the two children, muffled up in furs, looking like little Esquimeaux, skated along together, Pablo ever at his companion's side, ready to give her a helping hand whenever she was weary with her exertions.

After his interview with the newly arrived astronomer, Isaac Hakkabut slunk back again to his tartan. A change had come over his ideas; he could no longer resist the conviction that he was indeed millions and millions of miles away from the earth, where he had carried on so varied and remunerative a traffic. It might be imagined that this realization of his true position would have led him to a better mind, and that, in some degree at least, he would have been induced to regard the few fellow-creatures with whom his lot had been so strangely cast, otherwise than as mere instruments to be turned to his own personal and pecuniary advantage; but no--the desire of gain was too thoroughly ingrained into his hard nature ever to be eradicated, and secure in his knowledge that he was under the protection of a French officer, who, except under the most urgent necessity, would not permit him to be molested in retaining his property, he determined to wait for some emergency to arise which should enable him to use his present situation for his own profit.

On the one hand, the Jew took it into account that although the chances of returning to the earth might be remote, yet from what he had heard from the professor he could not believe that they were improbable; on the other, he knew that a considerable sum of money, in English and Russian coinage, was in the possession of various members of the little colony, and this, although valueless now, would be worth as much as ever if the proper condition of things should be restored; accordingly, he set his heart on getting all the monetary wealth of Gallia into his possession, and to do this he must sell his goods. But he would not sell them yet; there might come a time when for many articles the supply would not be equal to the demand; that would be the time for him; by waiting he reckoned he should be able to transact some lucrative business.

Such in his solitude were old Isaac's cogitations, whilst the universal population of Nina's Hive were congratulating themselves upon being rid of his odious presence.

As already stated in the message brought by the carrier pigeon, the distance traveled by Gallia in April was 39,000,000 leagues, and at the end of the month she was 110,000,000 leagues from the sun. A diagram representing the elliptical orbit of the planet, accompanied by an ephemeris made out in minute detail, had been drawn out by the professor. The curve was divided into twenty-four sections of unequal length, representing respectively the distance described in the twenty-four months of the Gallian year, the twelve former divisions, according to Kepler's law, gradually diminishing in length as they approached the point denoting the aphelion and increasing as they neared the perihelion.

It was on the 12th of May that Rosette exhibited this result of his labors to Servadac, the count, and the lieutenant, who visited his apartment and naturally examined the drawing with the keenest interest. Gallia's path, extending beyond the orbit of Jupiter, lay clearly defined before their eyes, the progress along the orbit and the solar distances being inserted for each month separately. Nothing could look plainer, and if the professor's calculations were correct (a point upon which they dared not, if they would, express the semblance of a doubt), Gallia would accomplish her revolution in precisely two years, and would meet the earth, which would in the same period of time have completed two annual revolutions, in the very same spot as before. What would be the consequences of a second collision they scarcely ventured to think.

Without lifting his eye from the diagram, which he was still carefully scrutinizing, Servadac said, "I see that during the month of May, Gallia will only travel 30,400,000 leagues, and that this will leave her about 140,000,000 leagues distant from the sun."

"Just so," replied the professor.

"Then we have already passed the zone of the telescopic planets, have we not?" asked the count.

"Can you not use your eyes?" said the professor, testily. "If you will look you will see the zone marked clearly enough upon the map."

Without noticing the interruption, Servadac continued his own remarks, "The comet then, I see, is to reach its aphelion on the 15th of January, exactly a twelvemonth after passing its perihelion."

"A twelvemonth! Not a Gallian twelvemonth?" exclaimed Rosette.

Servadac looked bewildered. Lieutenant Procope could not suppress a smile.

"What are you laughing at?" demanded the professor, turning round upon him angrily.
"Nothing, sir; only it amuses me to see how you want to revise the terrestrial calendar."
"I want to be logical, that's all."
"By all manner of means, my dear professor, let us be logical."
"Well, then, listen to me," resumed the professor, stiffly. "I presume you are taking it for granted that the Gallian year--by which I mean the time in which Gallia makes one revolution round the sun--is equal in length to two terrestrial years."
They signified their assent.
"And that year, like every other year, ought to be divided into twelve months."
"Yes, certainly, if you wish it," said the captain, acquiescing.
"If I wish it!" exclaimed Rosette. "Nothing of the sort! Of course a year must have twelve months!"
"Of course," said the captain.
"And how many days will make a month?" asked the professor.
"I suppose sixty or sixty-two, as the case may be. The days now are only half as long as they used to be," answered the captain.
"Servadac, don't be thoughtless!" cried Rosette, with all the petulant impatience of the old pedagogue. "If the days are only half as long as they were, sixty of them cannot make up a twelfth part of Gallia's year--cannot be a month."
"I suppose not," replied the confused captain.
"Do you not see, then," continued the astronomer, "that if a Gallian month is twice as long as a terrestrial month, and a Gallian day is only half as long as a terrestrial day, there must be a hundred and twenty days in every month?"
"No doubt you are right, professor," said Count Timascheff; "but do you not think that the use of a new calendar such as this would practically be very troublesome?"
"Not at all! not at all! I do not intend to use any other," was the professor's bluff reply.
After pondering for a few moments, the captain spoke again. "According, then, to this new calendar, it isn't the middle of May at all; it must now be some time in March."
"Yes," said the professor, "to-day is the 26th of March. It is the 266th day of the Gallian year. It corresponds with the 133d day of the terrestrial year. You are quite correct, it is the 26th of March."
"Strange!" muttered Servadac.
"And a month, a terrestrial month, thirty old days, sixty new days hence, it will be the 86th of March."
"Ha, ha!" roared the captain; "this is logic with a vengeance!"
The old professor had an undefined consciousness that his former pupil was laughing at him; and as it was growing late, he made an excuse that he had no more leisure. The visitors accordingly quitted the observatory.
It must be owned that the revised calendar was left to the professor's sole use, and the colony was fairly puzzled whenever he referred to such unheard-of dates as the 47th of April or the 118th of May.

According to the old calendar, June had now arrived; [illustration omitted] and by the professor's tables Gallia during the month would have advanced 27,500,000 leagues farther along its orbit, and would have attained a distance of 155,000,000 leagues from the sun. The thermometer continued to fall; the atmosphere remained clear as heretofore. The population performed their daily avocations with systematic routine; and almost the only thing that broke the monotony of existence was an occasional visit from the blustering, nervous, little professor, when some sudden fancy induced him to throw aside his astronomical studies for a time, and pay a visit to the common hall. His arrival there was generally hailed as the precursor of a little season of excitement. Somehow or other the conversation would eventually work its way round to the topic of a future collision between the comet and the earth; and in the same degree as this was a matter of sanguine anticipation to Captain Servadac and his friends, it was a matter of aversion to the astronomical enthusiast, who had no desire to quit his present quarters in a sphere which, being of his own discovery, he could hardly have cared for more if it had been of his own creation. The interview would often terminate in a scene of considerable animation.
On the 27th of June (old calendar) the professor burst like a cannon-ball into the central hall, where they were all assembled, and without a word of salutation or of preface, accosted the lieutenant in the way in which in earlier days he had been accustomed to speak to an idle school-boy, "Now, lieutenant! no evasions! no shufflings! Tell me, have you or have you not circumnavigated Gallia?"
The lieutenant drew himself up stiffly. "Evasions! shufflings! I am not accustomed, sir--" he began in a tone evidencing no little resentment; but catching a hint from the count he subdued his voice, and simply said, "We have."
"And may I ask," continued the professor, quite unaware of his previous discourtesy, "whether, when you made your voyage, you took any account of distances?"
"As approximately as I could," replied the lieutenant; "I did what I could by log and compass. I was unable to
take the altitude of sun or star."

"At what result did you arrive? What is the measurement of our equator?"

"I estimate the total circumference of the equator to be about 1,400 miles."

"Ah!" said the professor, more than half speaking to himself, "a circumference of 1,400 miles would give a
diameter of about 450 miles. That would be approximately about one-sixteenth of the diameter of the earth."

Raising his voice, he continued, "Gentlemen, in order to complete my account of my comet Gallia, I require to
know its area, its mass, its volume, its density, its specific gravity."

"Since we know the diameter," remarked the lieutenant, "there can be no difficulty in finding its surface and its
volume."

"And did I say there was any difficulty?" asked the professor, fiercely. "I have been able to reckon that ever
since I was born."

"Cock-a-doodle-doo!" cried Ben Zoof, delighted at any opportunity of paying off his old grudge.
The professor looked at him, but did not vouchsafe a word. Addressing the captain, he said, "Now, Servadac,
take your paper and a pen, and find me the surface of Gallia."

With more submission than when he was a school-boy, the captain sat down and endeavored to recall the proper
formula.

"The surface of a sphere? Multiply circumference by diameter."

"Right!" cried Rosette; "but it ought to be done by this time."

"Circumference, 1,400; diameter, 450; area of surface, 630,000," read the captain.

"True," replied Rosette, "630,000 square miles; just 292 times less than that of the earth."

"Pretty little comet! nice little comet!" muttered Ben Zoof.
The astronomer bit his lip, snorted, and cast at him a withering look, but did not take any further notice.

"Now, Captain Servadac," said the professor, "take your pen again, and find me the volume of Gallia."

The captain hesitated.

"Quick, quick!" cried the professor, impatiently; "surely you have not forgotten how to find the volume of a
sphere!"

"A moment's breathing time, please."

"Breathing time, indeed! A mathematician should not want breathing time! Come, multiply the surface by the
third of the radius. Don't you recollect?"

Captain Servadac applied himself to his task while the by-standers waited, with some difficulty suppressing their
inclination to laugh. There was a short silence, at the end of which Servadac announced that the volume of the comet
was 47,880,000 cubic miles.

"Just about 5,000 times less than the earth," observed the lieutenant.

"Nice little comet! pretty little comet!" said Ben Zoof.
The professor scowled at him, and was manifestly annoyed at having the insignificant dimensions of his comet
pointed out in so disparaging a manner. Lieutenant Procopé further remarked that from the earth he supposed it to be
about as conspicuous as a star of the seventh magnitude, and would require a good telescope to see it.

"Ha, ha!" laughed the orderly, aloud; "charming little comet! so pretty; and so modest!"

"You rascal!" roared the professor, and clenched his hand in passion, as if about to strike him. Ben Zoof laughed
the more, and was on the point of repeating his satirical comments, when a stern order from the captain made him
hold his tongue. The truth was that the professor was just as sensitive about his comet as the orderly was about
Montmartre, and if the contention between the two had been allowed to go on unchecked, it is impossible to say
what serious quarrel might not have arisen.

When Professor Rosette's equanimity had been restored, he said, "Thus, then, gentlemen, the diameter, the
surface, the volume of my comet are settled; but there is more to be done. I shall not be satisfied until, by actual
measurement, I have determined its mass, its density, and the force of gravity at its surface."

"A laborious problem," remarked Count Timascheff.

"Laborious or not, it has to be accomplished. I am resolved to find out what my comet weighs."

"Would it not be of some assistance, if we knew of what substance it is composed?" asked the lieutenant.

"That is of no moment at all," replied the professor; "the problem is independent of it."

"Then we await your orders," was the captain's reply.

"You must understand, however," said Rosette, "that there are various preliminary calculations to be made; you
will have to wait till they are finished."

"As long as you please," said the count.

"No hurry at all," observed the captain, who was not in the least impatient to continue his mathematical
exercises.
“Then, gentlemen,” said the astronomer, “with your leave we will for this purpose make an appointment a few weeks hence. What do you say to the 62d of April?”

Without noticing the general smile which the novel date provoked, the astronomer left the hall, and retired to his observatory.

CHAPTER V. WANTED: A STEELYARD

Under the still diminishing influence of the sun's attraction, but without let or hindrance, Gallia continued its interplanetary course, accompanied by Nerina, its captured satellite, which performed its fortnightly revolutions with unvarying regularity.

Meanwhile, the question beyond all others important was ever recurring to the minds of Servadac and his two companions: were the astronomer's calculations correct, and was there a sound foundation for his prediction that the comet would again touch the earth? But whatever might be their doubts or anxieties, they were fain to keep all their misgivings to themselves; the professor was of a temper far too cross-grained for them to venture to ask him to revise or re-examine the results of his observations.

The rest of the community by no means shared in their uneasiness. Negrete and his fellow-countrymen yielded to their destiny with philosophical indifference. Happier and better provided for than they had ever been in their lives, it did not give them a passing thought, far less cause any serious concern, whether they were still circling round the sun, or whether they were being carried right away within the limits of another system. Utterly careless of the future, the majos, light-hearted as ever, carolled out their favorite songs, just as if they had never quitted the shores of their native land.

Happiest of all were Pablo and Nina. Racing through the galleries of the Hive, clambering over the rocks upon the shore, one day skating far away across the frozen ocean, the next fishing in the lake that was kept liquid by the heat of the lava-torrent, the two children led a life of perpetual enjoyment. Nor was their recreation allowed to interfere with their studies. Captain Servadac, who in common with the count really liked them both, conceived that the responsibilities of a parent in some degree had devolved upon him, and took great care in superintending their daily lessons, which he succeeded in making hardly less pleasant than their sports.

Indulged and loved by all, it was little wonder that young Pablo had no longing for the scorching plains of Andalusia, or that little Nina had lost all wish to return with her pet goat to the barren rocks of Sardinia. They had now a home in which they had nothing to desire.

"Have you no father nor mother?" asked Pablo, one day.

"No," she answered.

"No more have I," said the boy, "I used to run along by the side of the diligences when I was in Spain."

"I used to look after goats at Madalena," said Nina; "but it is much nicer here--I am so happy here. I have you for a brother, and everybody is so kind. I am afraid they will spoil us, Pablo," she added, smiling.

"Oh, no, Nina; you are too good to be spoiled, and when I am with you, you make me good too," said Pablo, gravely.

July had now arrived. During the month Gallia's advance along its orbit would be reduced to 22,000,000 leagues, the distance from the sun at the end being 172,000,000 leagues, about four and a half times as great as the average distance of the earth from the sun. It was traveling now at about the same speed as the earth, which traverses the ecliptic at a rate of 21,000,000 leagues a month, or 28,800 leagues an hour.

In due time the 62d April, according to the revised Gallian calendar, dawned; and in punctual fulfillment of the professor's appointment, a note was delivered to Servadac to say that he was ready, and hoped that day to commence operations for calculating the mass and density of his comet, as well as the force of gravity at its surface.

A point of far greater interest to Captain Servadac and his friends would have been to ascertain the nature of the substance of which the comet was composed, but they felt pledged to render the professor any aid they could in the researches upon which he had set his heart. Without delay, therefore, they assembled in the central hall, where they were soon joined by Rosette, who seemed to be in fairly good temper.

"Gentlemen," he began, "I propose to-day to endeavor to complete our observations of the elements of my comet. Three matters of investigation are before us. First, the measure of gravity at its surface; this attractive force we know, by the increase of our own muscular force, must of course be considerably less than that at the surface of the earth. Secondly, its mass, that is, the quality of its matter. And thirdly, its density or quantity of matter in a unit of its volume. We will proceed, gentlemen, if you please, to weigh Gallia."

Ben Zoof, who had just entered the hall, caught the professor's last sentence, and without saying a word, went out again and was absent for some minutes. When he returned, he said, "If you want to weigh this comet of yours, I suppose you want a pair of scales; but I have been to look, and I cannot find a pair anywhere. And what's more," he
added mischievously, "you won't get them anywhere."

A frown came over the professor's countenance. Servadac saw it, and gave his orderly a sign that he should desist entirely from his bantering.

"I require, gentlemen," resumed Rosette, "first of all to know by how much the weight of a kilogramme here differs from its weight upon the earth; the attraction, as we have said, being less, the weight will proportionately be less also."

"Then an ordinary pair of scales, being under the influence of attraction, I suppose, would not answer your purpose," submitted the lieutenant.

"And the very kilogramme weight you used would have become lighter," put in the count, deferentially.

"Pray, gentlemen, do not interrupt me," said the professor, authoritatively, as if _ex cathedra_. "I need no instruction on these points."

Procope and Timascheff demurely bowed their heads.

The professor resumed. "Upon a steelyard, or spring-balance, dependent upon mere tension or flexibility, the attraction will have no influence. If I suspend a weight equivalent to the weight of a kilogramme, the index will register the proper weight on the surface of Gallia. Thus I shall arrive at the difference I want: the difference between the earth's attraction and the comet's. Will you, therefore, have the goodness to provide me at once with a steelyard and a tested kilogramme?"

The audience looked at one another, and then at Ben Zoof, who was thoroughly acquainted with all their resources. "We have neither one nor the other," said the orderly.

The professor stamped with vexation.

"I believe old Hakkabut has a steelyard on board his tartan," said Ben Zoof, presently.

"Then why didn't you say so before, you idiot?" roared the excitable little man.

Anxious to pacify him, Servadac assured him that every exertion should be made to procure the instrument, and directed Ben Zoof to go to the Jew and borrow it.

"No, stop a moment," he said, as Ben Zoof was moving away on his errand; "perhaps I had better go with you myself; the old Jew may make a difficulty about lending us any of his property."

"Why should we not all go?" asked the count; "we should see what kind of a life the misanthrope leads on board the _Hansa_."

The proposal met with general approbation. Before they started, Professor Rosette requested that one of the men might be ordered to cut him a cubic decimeter out of the solid substance of Gallia. "My engineer is the man for that," said the count; "he will do it well for you if you will give him the precise measurement."

"What! you don't mean," exclaimed the professor, again going off into a passion, "that you haven't a proper measure of length?"

Ben Zoof was sent off to ransack the stores for the article in question, but no measure was forthcoming. "Most likely we shall find one on the tartan," said the orderly.

"Then let us lose no time in trying," answered the professor, as he hustled with hasty strides into the gallery.

The rest of the party followed, and were soon in the open air upon the rocks that overhung the shore. They descended to the level of the frozen water and made their way towards the little creek where the _Dobryna_ and the _Hansa_ lay firmly imprisoned in their icy bonds.

The temperature was low beyond previous experience; but well muffled up in fur, they all endured it without much actual suffering. Their breath issued in vapor, which was at once congealed into little crystals upon their whiskers, beards, eyebrows, and eyelashes, until their faces, covered with countless snow-white prickles, were truly ludicrous. The little professor, most comical of all, resembled nothing so much as the cub of an Arctic bear.

It was eight o'clock in the morning. The sun was rapidly approaching the zenith; but its disc, from the extreme remoteness, was proportionately dwarfed; its beams being all but destitute of their proper warmth and radiance. The volcano to its very summit and the surrounding rocks were still covered with the unsullied mantle of snow that had fallen while the atmosphere was still to some extent charged with vapor; but on the north side the snow had given place to the cascade of fiery lava, which, making its way down the sloping rocks as far as the vaulted opening of the central cavern, fell thence perpendicularly into the sea. Above the cavern, 130 feet up the mountain, was a dark hole, above which the stream of lava made a bifurcation in its course. From this hole projected the case of an astronomer's telescope; it was the opening of Palmyrin Rosette's observatory.

Sea and land seemed blended into one dreary whiteness, to which the pale blue sky offered scarcely any contrast. The shore was indented with the marks of many footsteps left by the colonists either on their way to collect ice for drinking purposes, or as the result of their skating expeditions; the edges of the skates had cut out a labyrinth of curves complicated as the figures traced by aquatic insects upon the surface of a pool.

Across the quarter of a mile of level ground that lay between the mountain and the creek, a series of footprints,
frozen hard into the snow, marked the course taken by Isaac Hakkabut on his last return from Nina's Hive.

On approaching the creek, Lieutenant Procope drew his companions' attention to the elevation of the _Dobryna's_ and _Hansa's_ waterline, both vessels being now some fifteen feet above the level of the sea.

"What a strange phenomenon!" exclaimed the captain.

"It makes me very uneasy," rejoined the lieutenant; "in shallow places like this, as the crust of ice thickens, it forces everything upwards with irresistible force."

"But surely this process of congelation must have a limit!" said the count.

"But who can say what that limit will be? Remember that we have not yet reached our maximum of cold," replied Procope.

"Indeed, I hope not!" exclaimed the professor; "where would be the use of our traveling 200,000,000 leagues from the sun, if we are only to experience the same temperature as we should find at the poles of the earth?"

"Fortunately for us, however, professor," said the lieutenant, with a smile, "the temperature of the remotest space never descends beyond 70 degrees below zero."

"And as long as there is no wind," added Servadac, "we may pass comfortably through the winter, without a single attack of catarrh."

Lieutenant Procope proceeded to impart to the count his anxiety about the situation of his yacht. He pointed out that by the constant superposition of new deposits of ice, the vessel would be elevated to a great height, and consequently in the event of a thaw, it must be exposed to a calamity similar to those which in polar seas cause destruction to so many whalers.

There was no time now for concerting measures offhand to prevent the disaster, for the other members of the party had already reached the spot where the _Hansa_ lay bound in her icy trammels. A flight of steps, recently hewn by Hakkabut himself, gave access for the present to the gangway, but it was evident that some different contrivance would have to be resorted to when the tartan should be elevated perhaps to a hundred feet.

A thin curl of blue smoke issued from the copper funnel that projected above the mass of snow which had accumulated upon the deck of the _Hansa_. The owner was sparing of his fuel, and it was only the non-conducting layer of ice enveloping the tartan that rendered the internal temperature endurable.

"Hi! old Nebuchadnezzar, where are you?" shouted Ben Zoof, at the full strength of his lungs.

At the sound of his voice, the cabin door opened, and the Jew's head and shoulders protruded onto the deck.

CHAPTER VI. MONEY AT A PREMIUM

"Who's there? I have nothing here for anyone. Go away!" Such was the inhospitable greeting with which Isaac Hakkabut received his visitors.

"Hakkabut! do you take us for thieves?" asked Servadac, in tones of stern displeasure.

"Oh, your Excellency, my lord, I did not know that it was you," whined the Jew, but without emerging any farther from his cabin.

"Now, old Hakkabut, come out of your shell! Come and show the governor proper respect, when he gives you the honor of his company," cried Ben Zoof, who by this time had clambered onto the deck.

After considerable hesitation, but still keeping his hold upon the cabin-door, the Jew made up his mind to step outside. "What do you want?" he inquired, timorously.

"I want a word with you," said Servadac, "but I do not want to stand talking out here in the cold."

Followed by the rest of the party, he proceeded to mount the steps. The Jew trembled from head to foot. "But I cannot let you into my cabin. I am a poor man; I have nothing to give you," he moaned piteously.

"Here he is!" laughed Ben Zoof, contemptuously; "he is beginning his chapter of lamentations over again. But standing out here will never do. Out of the way, old Hakkabut, I say! out of the way!" and, without more ado, he thrust the astonished Jew on one side and opened the door of the cabin.

Servadac, however, declined to enter until he had taken the pains to explain to the owner of the tartan that he had no intention of laying violent hands upon his property, and that if the time should ever come that his cargo was in requisition for the common use, he should receive a proper price for his goods, the same as he would in Europe.

"Europe, indeed!" muttered the Jew maliciously between his teeth. "European prices will not do for me. I must have Gallian prices—and of my own fixing, too!"

So large a portion of the vessel had been appropriated to the cargo that the space reserved for the cabin was of most meager dimensions. In one corner of the compartment stood a small iron stove, in which smoldered a bare handful of coals; in another was a trestle-board which served as a bed; two or three stools and a rickety deal table, together with a few cooking utensils, completed a stock of furniture which was worthy of its proprietor.

On entering the cabin, Ben Zoof's first proceeding was to throw on the fire a liberal supply of coals, utterly
regardless of the groans of poor Isaac, who would almost as soon have parted with his own bones as submit to such reckless expenditure of his fuel. The perishing temperature of the cabin, however, was sufficient justification for the orderly's conduct, and by a little skilful manipulation he soon succeeded in getting up a tolerable fire.

The visitors having taken what seats they could, Hakkabut closed the door, and, like a prisoner awaiting his sentence, stood with folded hands, expecting the captain to speak.

"Listen," said Servadac; "we have come to ask a favor."

Imagining that at least half his property was to be confiscated, the Jew began to break out into his usual formula about being a poor man and having nothing to spare; but Servadac, without heeding his complainings, went on: "We are not going to ruin you, you know."

Hakkabut looked keenly into the captain's face.

"We have only come to know whether you can lend us a steelyard."

So far from showing any symptom of relief, the old miser exclaimed, with a stare of astonishment, as if he had been asked for some thousand francs: "A steelyard?"

"Yes!" echoed the professor, impatiently; "a steelyard."

"Have you not one?" asked Servadac.

"To be sure he has!" said Ben Zoof.

Old Isaac stammered and stuttered, but at last confessed that perhaps there might be one amongst the stores.

"Then, surely, you will not object to lend it to us?" said the captain.

"Only for one day," added the professor.

The Jew stammered again, and began to object. "It is a very delicate instrument, your Excellency. The cold, you know, the cold may do injury to the spring; and perhaps you are going to use it to weigh something very heavy."

"Why, old Ephraim, do you suppose we are going to weigh a mountain with it?" said Ben Zoof.

"Better than that!" cried out the professor, triumphantly; "we are going to weigh Gallia with it; my comet."

"Merciful Heaven!" shrieked Isaac, feigning consternation at the bare suggestion.

Servadac knew well enough that the Jew was holding out only for a good bargain, and assured him that the steelyard was required for no other purpose than to weigh a kilogramme, which (considering how much lighter everything had become) could not possibly put the slightest strain upon the instrument.

The Jew still spluttered, and moaned, and hesitated.

"Well, then," said Servadac, "if you do not like to lend us your steelyard, do you object to sell it to us?"

Isaac fairly shrieked aloud. "God of Israel!" he ejaculated, "sell my steelyard? Would you deprive me of one of the most indispensable of my means of livelihood? How should I weigh my merchandise without my steelyard--my solitary steelyard, so delicate and so correct?"

The orderly wondered how his master could refrain from strangling the old miser upon the spot; but Servadac, rather amused than otherwise, determined to try another form of persuasion. "Come, Hakkabut, I see that you are not disposed either to lend or to sell your steelyard. What do you say to letting us hire it?"

The Jew's eyes twinkled with a satisfaction that he was unable to conceal. "But what security would you give? The instrument is very valuable;" and he looked more cunning than ever.

"What is it worth? If it is worth twenty francs, I will leave a deposit of a hundred. Will that satisfy you?"

He shook his head doubtfully. "It is very little; indeed, it is too little, your Excellency. Consider, it is the only steelyard in all this new world of ours; it is worth more, much more. If I take your deposit it must be in gold--all gold. But how much do you agree to give me for the hire--the hire, one day?"

"You shall have twenty francs," said Servadac.

"Oh, it is dirt cheap; but never mind, for one day, you shall have it. Deposit in gold money a hundred francs, and twenty francs for the hire." The old man folded his hands in meek resignation.

"The fellow knows how to make a good bargain," said Servadac, as Isaac, after casting a distrustful look around, went out of the cabin.

"Detestable old wretch!" replied the count, full of disgust.

Hardly a minute elapsed before the Jew was back again, carrying his precious steelyard with ostentatious care. It was of an ordinary kind. A spring balance, fitted with a hook, held the article to be weighed; a pointer, revolving on a disc, indicated the weight of the article. Professor Rosette was manifestly right in asserting that such a machine would register results quite independently of any change in the force of attraction. On the earth it would have registered a kilogramme as a kilogramme; here it recorded a different value altogether, as the result of the altered force of gravity.

Gold coinage to the worth of one hundred and twenty francs was handed over to the Jew, who clutched at the money with unmistakable eagerness. The steelyard was committed to the keeping of Ben Zoof, and the visitors prepared to quit the _Hansa_.
All at once it occurred to the professor that the steelyard would be absolutely useless to him, unless he had the means for ascertaining the precise measurement of the unit of the soil of Gallia which he proposed to weigh. "Something more you must lend me," he said, addressing the Jew. "I must have a measure, and I must have a kilogramme."

"I have neither of them," answered Isaac. "I have neither. I am sorry; I am very sorry." And this time the old Jew spoke the truth. He would have been really glad to do another stroke or two of business upon terms as advantageous as the transaction he had just concluded.

Palmyrin Rosette scratched his head in perplexity, glaring round upon his companions as if they were personally responsible for his annoyance. He muttered something about finding a way out of his difficulty, and hastily mounted the cabin-ladder. The rest followed, but they had hardly reached the deck when the chink of money was heard in the room below. Hakkabut was locking away the gold in one of the drawers.

Back again, down the ladder, scrambled the little professor, and before the Jew was aware of his presence he had seized him by the tail of his slouchy overcoat. "Some of your money! I must have money!" he said.

"Money!" gasped Hakkabut; "I have no money." He was pale with fright, and hardly knew what he was saying. "Falsehood!" roared Rosette. "Do you think I cannot see?" And peering down into the drawer which the Jew was vainly trying to close, he cried, "Heaps of money! French money! Five-franc pieces! the very thing I want! I must have them!"

The captain and his friends, who had returned to the cabin looked on with mingled amusement and bewilderment.

"They are mine!" shrieked Hakkabut.
"I will have them!" shouted the professor.
"You shall kill me first!" bellowed the Jew.
"No, but I must!" persisted the professor again.

It was manifestly time for Servadac to interfere. "My dear professor," he said, smiling, "allow me to settle this little matter for you."

"Ah! your Excellency," moaned the agitated Jew, "protect me! I am but a poor man--"

"None of that, Hakkabut. Hold your tongue." And, turning to Rosette, the captain said, "If, sir, I understand right, you require some silver five-franc pieces for your operation?"

"Forty," said Rosette, surily.
"Two hundred francs!" whined Hakkabut.
"Silence!" cried the captain.
"I must have more than that," the professor continued. "I want ten two-franc pieces, and twenty half-francs."
"Let me see," said Servadac, "how much is that in all? Two hundred and thirty francs, is it not?"
"I dare say it is," answered the professor.

"Count, may I ask you," continued Servadac, "to be security to the Jew for this loan to the professor?"
"Loan!" cried the Jew, "do you mean only a loan?"

"Silence!" again shouted the captain.

Count Timascheff, expressing his regret that his purse contained only paper money, begged to place it at Captain Servadac's disposal.

"No paper, no paper!" exclaimed Isaac. "Paper has no currency in Gallia."
"About as much as silver," coolly retorted the count.
"I am a poor man," began the Jew.
"Now, Hakkabut, stop these miserable lamentations of yours, once for all. Hand us over two hundred and thirty francs in silver money, or we will proceed to help ourselves."

Isaac began to yell with all his might: "Thieves! thieves!"
In a moment Ben Zoof's hand was clasped tightly over his mouth. "Stop that howling, Belshazzar!"
"Let him alone, Ben Zoof. He will soon come to his senses," said Servadac, quietly.

When the old Jew had again recovered himself, the captain addressed him. "Now, tell us, what interest do you expect?"

Nothing could overcome the Jew's anxiety to make another good bargain. He began: "Money is scarce, very scarce, you know--"

"No more of this!" shouted Servadac. "What interest, I say, what interest do you ask?"
Faltering and undecided still, the Jew went on. "Very scarce, you know. Ten francs a day, I think, would not be unreasonable, considering--"

The count had no patience to allow him to finish what he was about to say. He flung down notes to the value of several rubles. With a greediness that could not be concealed, Hakkabut grasped them all. Paper, indeed, they were;
but the cunning Israelite knew that they would in any case be security far beyond the value of his cash. He was making some eighteen hundred per cent. interest, and accordingly chuckled within himself at his unexpected stroke of business.

The professor pocketed his French coins with a satisfaction far more demonstrative. "Gentlemen," he said, "with these franc pieces I obtain the means of determining accurately both a meter and a kilogramme."

CHAPTER VII. GALLIA WEIGHED

A quarter of an hour later, the visitors to the _Hansa_ had reassembled in the common hall of Nina's Hive.

"Now, gentlemen, we can proceed," said the professor. "May I request that this table may be cleared?"

Ben Zoof removed the various articles that were lying on the table, and the coins which had just been borrowed from the Jew were placed upon it in three piles, according to their value.

The professor commenced. "Since none of you gentlemen, at the time of the shock, took the precaution to save either a meter measure or a kilogramme weight from the earth, and since both these articles are necessary for the calculation on which we are engaged, I have been obliged to devise means of my own to replace them."

This exordium delivered, he paused and seemed to watch its effect upon his audience, who, however, were too well acquainted with the professor's temper to make any attempt to exonerate themselves from the rebuke of carelessness, and submitted silently to the implied reproach.

"I have taken pains," he continued, "to satisfy myself that these coins are in proper condition for my purpose. I find them unworn and unchipped; indeed, they are almost new. They have been hoarded instead of circulated; accordingly, they are fit to be utilized for my purpose of obtaining the precise length of a terrestrial meter."

Ben Zoof looked on in perplexity, regarding the lecturer with much the same curiosity as he would have watched the performances of a traveling mountebank at a fair in Montmartre; but Servadac and his two friends had already divined the professor's meaning. They knew that French coinage is all decimal, the franc being the standard of which the other coins, whether gold, silver, or copper, are multiples or measures; they knew, too, that the caliber or diameter of each piece of money is rigorously determined by law, and that the diameters of the silver coins representing five francs, two francs, and fifty centimes measure thirty-seven, twenty-seven, and eighteen millimeters respectively; and they accordingly guessed that Professor Rosette had conceived the plan of placing such a number of these coins in juxtaposition that the length of their united diameters should measure exactly the thousand millimeters that make up the terrestrial meter.

The measurement thus obtained was by means of a pair of compasses divided accurately into ten equal portions, or decimeters, each of course 3.93 inches long. A lath was then cut of this exact length and given to the engineer of the _Dobryna_, who was directed to cut out of the solid rock the cubic decimeter required by the professor.

The next business was to obtain the precise weight of a kilogramme. This was by no means a difficult matter. Not only the diameters, but also the weights, of the French coins are rigidly determined by law, and as the silver five-franc pieces always weigh exactly twenty-five grammes, the united weight of forty of these coins is known to amount to one kilogramme.

"Oh!" cried Ben Zoof; "to be able to do all this I see you must be rich as well as learned."

With a good-natured laugh at the orderly's remark, the meeting adjourned for a few hours. By the appointed time the engineer had finished his task, and with all due care had prepared a cubic decimeter of the material of the comet.

"Now, gentlemen," said Professor Rosette, "we are in a position to complete our calculation; we can now arrive at Gallia's attraction, density, and mass."

Everyone gave him his complete attention.

"Before I proceed," he resumed, "I must recall to your minds Newton's general law, 'that the attraction of two bodies is directly proportional to the product of their masses, and inversely proportional to the square of their distances.'"

"Yes," said Servadac; "we remember that."

"Well, then," continued the professor, "keep it in mind for a few minutes now. Look here! In this bag are forty five-franc pieces—altogether they weigh exactly a kilogramme; by which I mean that if we were on the earth, and I were to hang the bag on the hook of the steelyard, the indicator on the dial would register one kilogramme. This is clear enough, I suppose?"

As he spoke the professor designedly kept his eyes fixed upon Ben Zoof. He was avowedly following the example of Arago, who was accustomed always in lecturing to watch the countenance of the least intelligent of his audience, and when he felt that he had made his meaning clear to him, he concluded that he must have succeeded with all the rest. In this case, however, it was technical ignorance, rather than any lack of intelligence, that justified the selection of the orderly for this special attention.
Satisfied with his scrutiny of Ben Zoof's face, the professor went on. "And now, gentlemen, we have to see what these coins weigh here upon Gallia."

He suspended the money bag to the hook; the needle oscillated, and stopped. "Read it off!" he said.

The weight registered was one hundred and thirty-three grammes.

"There, gentlemen, one hundred and thirty-three grammes! Less than one-seventh of a kilogramme! You see, consequently, that the force of gravity here on Gallia is not one-seventh of what it is upon the earth!"

"Interesting!" cried Servadac, "most interesting! But let us go on and compute the mass."

"No, captain, the density first," said Rosette.

"Certainly," said the lieutenant; "for, as we already know the volume, we can determine the mass as soon as we have ascertained the density."

The professor took up the cube of rock. "You know what this is," he went on to say. "You know, gentlemen, that this block is a cube hewn from the substance of which everywhere, all throughout your voyage of circumnavigation, you found Gallia to be composed--a substance to which your geological attainments did not suffice to assign a name."

"Our curiosity will be gratified," said Servadac, "if you will enlighten our ignorance."

But Rosette did not take the slightest notice of the interruption.

"A substance it is which no doubt constitutes the sole material of the comet, extending from its surface to its innermost depths. The probability is that it would be so; your experience confirms that probability: you have found no trace of any other substance. Of this rock here is a solid decimeter; let us get at its weight, and we shall have the key which will unlock the problem of the whole weight of Gallia. We have demonstrated that the force of attraction here is only one-seventh of what it is upon the earth, and shall consequently have to multiply the apparent weight of our cube by seven, in order to ascertain its proper weight. Do you understand me, goggle-eyes?"

This was addressed to Ben Zoof, who was staring hard at him. "No!" said Ben Zoof.

"I thought not; it is of no use waiting for your puzzle-brains to make it out. I must talk to those who can understand."

The professor took the cube, and, on attaching it to the hook of the steelyard, found that its apparent weight was one kilogramme and four hundred and thirty grammes.

"Here it is, gentlemen; one kilogramme, four hundred and thirty grammes. Multiply that by seven; the product is, as nearly as possible, ten kilogrammes. What, therefore, is our conclusion? Why, that the density of Gallia is just about double the density of the earth, which we know is only five kilogrammes to a cubic decimeter. Had it not been for this greater density, the attraction of Gallia would only have been one-fifteenth instead of one-seventh of the terrestrial attraction."

The professor could not refrain from exhibiting his gratification that, however inferior in volume, at least, his comet had the advantage over the earth.

Nothing further now remained than to apply the investigations thus finished to the determining of the mass or weight. This was a matter of little labor.

"Let me see," said the captain; "what is the force of gravity upon the various planets?"

"You can't mean, Servadac, that you have forgotten that? But you always were a disappointing pupil."

The captain could not help himself: he was forced to confess that his memory had failed him.

"Well, then," said the professor, "I must remind you. Taking the attraction on the earth as 1, that on Mercury is 1.15, on Venus it is .92, on Mars .5, and on Jupiter 2.45; on the moon the attraction is .16, whilst on the surface of the sun a terrestrial kilogramme would weigh 28 kilogrammes."

"Therefore, if a man upon the surface of the sun were to fall down, he would have considerable difficulty in getting up again. A cannon ball, too, would only fly a few yards," said Lieutenant Procope.

"A jolly battle-field for cowards!" exclaimed Ben Zoof.

"Not so jolly, Ben Zoof, as you fancy," said his master; "the cowards would be too heavy to run away."

Ben Zoof ventured the remark that, as the smallness of Gallia secured to its inhabitants such an increase of strength and agility, he was almost sorry that it had not been a little smaller still.

"Though it could not anyhow have been very much smaller," he added, looking slyly at the professor.

"Idiot!" exclaimed Rosette. "Your head is too light already; a puff of wind would blow it away."

"I must take care of my head, then, and hold it on," replied the irrepressible orderly.

Unable to get the last word, the professor was about to retire, when Servadac detained him.

"Permit me to ask you one more question," he said. "Can you tell me what is the nature of the soil of Gallia?"

"Yes, I can answer that. And in this matter I do not think your impertinent orderly will venture to put Montmartre into the comparison. This soil is of a substance not unknown upon the earth."

And speaking very slowly, the professor said: "It contains 70 per cent. of tellurium, and 30 per cent. of gold."
Servadac uttered an exclamation of surprise.

"And the sum of the specific gravities of these two substances is 10, precisely the number that represents Gallia's density."

"A comet of gold!" ejaculated the captain.

"Yes; a realization of what the illustrious Maupertuis has already deemed probable," replied the astronomer.

"If Gallia, then, should ever become attached to the earth, might it not bring about an important revolution in all monetary affairs?" inquired the count.

"No doubt about it!" said Rosette, with manifest satisfaction. "It would supply the world with about 246,000 trillions of francs."

"It would make gold about as cheap as dirt, I suppose," said Servadac.

The last observation, however, was entirely lost upon the professor, who had left the hall with an air almost majestic, and was already on his way to the observatory.

"And what, I wonder, is the use of all these big figures?" said Ben Zoof to his master, when next day they were alone together.

"That's just the charm of them, my good fellow," was the captain's cool reply, "that they are of no use whatever."

CHAPTER VIII. JUPITER SOMEWHAT CLOSE

Except as to the time the comet would take to revolve round the sun, it must be confessed that all the professor's calculations had comparatively little interest for anyone but himself, and he was consequently left very much to pursue his studies in solitude.

The following day was the 1st of August, or, according to Rosette, the 63rd of April. In the course of this month Gallia would travel 16,500,000 leagues, attaining at the end a distance of 197,000,000 leagues from the sun. This would leave 81,000,000 leagues more to be traversed before reaching the aphelion of the 15th of January, after which it would begin once more to approach the sun.

But meanwhile, a marvelous world, never before so close within the range of human vision, was revealing itself. No wonder that Palmyrin Rosette cared so little to quit his observatory; for throughout those calm, clear Gallian nights, when the book of the firmament lay open before him, he could revel in a spectacle which no previous astronomer had ever been permitted to enjoy.

The glorious orb that was becoming so conspicuous an object was none other than the planet Jupiter, the largest of all the bodies existing within the influence of solar attraction. During the seven months that had elapsed since its collision with the earth, the comet had been continuously approaching the planet, until the distance between them was scarcely more than 61,000,000 leagues, and this would go on diminishing until the 15th of October.

Under these circumstances, was it perfectly certain that no danger could accrue? Was not Gallia, when its pathway led it into such close proximity to this enormous planet, running a risk of being attracted within its influence? Might not that influence be altogether disastrous? The professor, it is true, in his estimate of the duration of his comet's revolution, had represented that he had made all proper allowances for any perturbations that would be caused either by Jupiter, by Saturn, or by Mars; but what if there were any errors in his calculations? what if there should be any elements of disturbance on which he had not reckoned?

Speculations of this kind became more and more frequent, and Lieutenant Procope pointed out that the danger incurred might be of a fourfold character: first, that the comet, being irresistibly attracted, might be drawn on to the very surface of the planet, and there annihilated; secondly, that as the result of being brought under that attraction, it might be transformed into a satellite, or even a sub-satellite, of that mighty world; thirdly, that it might be diverted into a new orbit, which would never be coincident with the ecliptic; or, lastly, its course might be so retarded that it would only reach the ecliptic too late to permit any junction with the earth. The occurrence of any one of these contingencies would be fatal to their hopes of reunion with the globe, from which they had been so strangely severed.

To Rosette, who, without family ties which he had never found leisure or inclination to contract, had no shadow of desire to return to the earth, it would be only the first of these probabilities that could give him any concern. Total annihilation might not accord with his views, but he would be quite content for Gallia to miss its mark with regard to the earth, indifferent whether it revolved as a new satellite around Jupiter, or whether it wended its course through the untraversed regions of the milky way. The rest of the community, however, by no means sympathized with the professor's sentiments, and the following month was a period of considerable doubt and anxiety.

On the 1st of September the distance between Gallia and Jupiter was precisely the same as the mean distance between the earth and the sun; on the 16th, the distance was further reduced to 26,000,000 leagues. The planet began to assume enormous dimensions, and it almost seemed as if the comet had already been deflected from its elliptical
orbit, and was rushing on in a straight line towards the overwhelming luminary.

The more they contemplated the character of this gigantic planet, the more they became impressed with the likelihood of a serious perturbation in their own course. The diameter of Jupiter is 85,390 miles, nearly eleven times as great as that of the earth; his volume is 1,387 times, and his mass 300 times greater; and although the mean density is only about a quarter of that of the earth, and only a third of that of water (whence it has been supposed that the superificies of Jupiter is liquid), yet his other proportions were large enough to warrant the apprehension that important disturbances might result from his proximity.

"I forget my astronomy, lieutenant," said Servadac. "Tell me all you can about this formidable neighbor."

The lieutenant having refreshed his memory by reference to Flammarion's _Recits de l'Infini_, of which he had a Russian translation, and some other books, proceeded to recapitulate that Jupiter accomplishes his revolution round the sun in 4,332 days 14 hours and 2 minutes; that he travels at the rate of 467 miles a minute along an orbit measuring 2,976 millions of miles; and that his rotation on his axis occupies only 9 hours and 55 minutes.

"His days, then, are shorter than ours?" interrupted the captain.

"Considerably," answered the lieutenant, who went on to describe how the displacement of a point at the equator of Jupiter was twenty-seven times as rapid as on the earth, causing the polar compression to be about 2,378 miles; how the axis, being nearly perpendicular, caused the days and nights to be nearly of the same length, and the seasons to be invariable; and how the amount of light and heat received by the planet is only a twenty-fifth part of that received by the earth, the average distance from the sun being 475,693,000 miles.

"And how about these satellites? Sometimes, I suppose, Jupiter has the benefit of four moons all shining at once?" asked Servadac.

Of the satellites, Lieutenant Procope went on to say that one is rather smaller than our own moon; that another moves round its primary at an interval about equal to the moon's distance from ourselves; but that they all revolve in considerably less time: the first takes only 1 day 18 hours 27 minutes; the second takes 3 days 13 hours 14 minutes; the third, 7 days 3 hours 42 minutes; whilst the largest of all takes but 16 days 16 hours 32 minutes. The most remote revolves round the planet at a distance of 1,192,820 miles.

"They have been enlisted into the service of science," said Procope. "It is by their movements that the velocity of light has been calculated; and they have been made available for the determination of terrestrial longitudes."

"It must be a wonderful sight," said the captain.

"Yes," answered Procope. "I often think Jupiter is like a prodigious clock with four hands."

"I only hope that we are not destined to make a fifth hand," answered Servadac.

Such was the style of the conversation that was day by day reiterated during the whole month of suspense. Whatever topic might be started, it seemed soon to settle down upon the huge orb that was looming upon them with such threatening aspect.

"The more remote that these planets are from the sun," said Procope, "the more venerable and advanced in formation are they found to be. Neptune, situated 2,746,271,000 miles from the sun, issued from the solar nebulous, thousands of millions of centuries back. Uranus, revolving 1,753,851,000 miles from the center of the planetary system, is of an age amounting to many hundred millions of centuries. Jupiter, the colossal planet, gravitating at a distance of 475,693,000 miles, may be reckoned as 70,000,000 centuries old. Mars has existed for 1,000,000,000 years at a distance of 139,212,000 miles. The earth, 91,430,000 miles from the sun, quitted his burning bosom 100,000,000 years ago. Venus, revolving now 66,131,000 miles away, may be assigned the age of 50,000,000 years at least; and Mercury, nearest of all, and youngest of all, has been revolving at a distance of 35,393,000 miles for the space of 10,000,000 years--the same time as the moon has been evolved from the earth."

Servadac listened attentively. He was at a loss what to say; and the only reply he made to the recital of this novel theory was to the effect that, if it were true, he would prefer being captured by Mercury than by Jupiter, for Mercury, being so much the younger, would probably prove the less imperative and self-willed master.

It was on the 1st of September that the comet had crossed the orbit of Jupiter, and on the 1st of October the two bodies were calculated to be at their minimum separation. No direct shock, however, could be apprehended; the demonstration was sufficiently complete that the orbit of Gallia did not coincide with that of the planet, the orbit of Jupiter being inclined at an angle of 1 degrees 19 mins to the orbit of the earth, with which that of Gallia was, no doubt, coincident.

As the month of September verged towards its close, Jupiter began to wear an aspect that must have excited the admiration of the most ignorant or the most indifferent observer. Its salient points were illumined with novel and radiant tints, and the solar rays, reflected from its disc, glowed with a mingled softness and intensity upon Gallia, so that Nerina had to pale her beauty.

Who could wonder that Rosette, enthusiast as he was, should be irremovable from his observatory? Who could expect otherwise than that, with the prospect before him of viewing the giant among planets, ten times nearer than
any mortal eye had ever done, he should have begrudged every moment that distracted his attention?

Meanwhile, as Jupiter grew large, the sun grew small.

From its increased remoteness the diameter of the sun's disc was diminished to 5 degrees 46 mins.

And what an increased interest began to be associated with the satellites! They were visible to the naked eye!

Was it not a new record in the annals of science?

Although it is acknowledged that they are not ordinarily visible on earth without the aid of a somewhat powerful telescope, it has been asserted that a favored few, endued with extraordinary powers of vision, have been able to identify them with an unassisted eye; but here, at least, in Nina's Hive were many rivals, for everyone could so far distinguish them one from the other as to describe them by their colors. The first was of a dull white shade; the second was blue; the third was white and brilliant; the fourth was orange, at times approaching to a red. It was further observed that Jupiter itself was almost void of scintillation.

Rosette, in his absorbing interest for the glowing glories of the planet, seemed to be beguiled into comparative forgetfulness of the charms of his comet; but no astronomical enthusiasm of the professor could quite allay the general apprehension that some serious collision might be impending.

Time passed on. There was nothing to justify apprehension. The question was continually being asked, "What does the professor really think?"

"Our friend the professor," said Servadac, "is not likely to tell us very much; but we may feel pretty certain of one thing: he wouldn't keep us long in the dark, if he thought we were not going back to the earth again. The greatest satisfaction he could have would be to inform us that we had parted from the earth for ever."

"I trust from my very soul," said the count, "that his prognostications are correct."

"The more I see of him, and the more I listen to him," replied Servadac, "the more I become convinced that his calculations are based on a solid foundation, and will prove correct to the minutest particular."

"Ben Zoof here interrupted the conversation. "I have something on my mind," he said.

"Something on your mind? Out with it!" said the captain.

"That telescope!" said the orderly; "it strikes me that that telescope which the old professor keeps pointed up at yonder big sun is bringing it down straight upon us."

The captain laughed heartily.

"Laugh, captain, if you like; but I feel disposed to break the old telescope into atoms."

"Ben Zoof," said Servadac, his laughter exchanged for a look of stern displeasure, "touch that telescope, and you shall swing for it!"

The orderly looked astonished.

"I am governor here," said Servadac.

Ben Zoof knew what his master meant, and to him his master's wish was law.

The interval between the comet and Jupiter was, by the 1st of October, reduced to 43,000,000 miles. The belts all parallel to Jupiter's equator were very distinct in their markings. Those immediately north and south of the equator were of a dusky hue; those toward the poles were alternately dark and light; the intervening spaces of the planet's superficies, between edge and edge, being intensely bright. The belts themselves were occasionally broken by spots, which the records of astronomy describe as varying both in form and in extent.

The physiology of belts and spots alike was beyond the astronomer's power to ascertain; and even if he should be destined once again to take his place in an astronomical congress on the earth, he would be just as incapable as ever of determining whether or no they owed their existence to the external accumulation of vapor, or to some internal agency. It would not be Professor Rosette's lot to enlighten his brother _savants_ to any great degree as to the mysteries that are associated with this, which must ever rank as one of the most magnificent amongst the heavenly orbs.

As the comet approached the critical point of its career it cannot be denied that there was an unacknowledged consciousness of alarm. Mutually reserved, though ever courteous, the count and the captain were secretly drawn together by the prospect of a common danger; and as their return to the earth appeared to them to become more and more dubious, they abandoned their views of narrow isolation, and tried to embrace the wider philosophy that acknowledges the credibility of a habitable universe.

But no philosophy could be proof against the common instincts of their humanity; their hearts, their hopes, were set upon their natural home; no speculation, no science, no experience, could induce them to give up their fond and sanguine anticipation that once again they were to come in contact with the earth.

"Only let us escape Jupiter," said Lieutenant Procope, repeatedly, "and we are free from anxiety."

"But would not Saturn lie ahead?" asked Servadac and the count in one breath.

"No!" said Procope; "the orbit of Saturn is remote, and does not come athwart our path. Jupiter is our sole hindrance. Of Jupiter we must say, as William Tell said, 'Once through the ominous pass and all is well.'"
The 15th of October came, the date of the nearest approximation of the comet to the planet. They were only 31,000,000 miles apart. What would now transpire? Would Gallia be diverted from its proper way? or would it hold the course that the astronomer had predicted?

Early next morning the captain ventured to take the count and the lieutenant up to the observatory. The professor was in the worst of tempers.

That was enough. It was enough, without a word, to indicate the course which events had taken. The comet was pursuing an unaltered way.

The astronomer, correct in his prognostications, ought to have been the most proud and contented of philosophers; his pride and contentment were both overshadowed by the certainty that the career of his comet was destined to be so transient, and that it must inevitably once again come into collision with the earth.

CHAPTER IX MARKET PRICES IN GALLIA

"All right!" said Servadac, convinced by the professor's ill humor that the danger was past; "no doubt we are in for a two years' excursion, but fifteen months more will take us back to the earth!"

"And we shall see Montmartre again!" exclaimed Ben Zoof, in excited tones that betrayed his delight in the anticipation.

To use a nautical expression, they had safely "rounded the point," and they had to be congratulated on their successful navigation; for if, under the influence of Jupiter's attraction, the comet had been retarded for a single hour, in that hour the earth would have already traveled 2,300,000 miles from the point where contact would ensue, and many centuries would elapse before such a coincidence would possibly again occur.

On the 1st of November Gallia and Jupiter were 40,000,000 miles apart. It was little more than ten weeks to the 15th of January, when the comet would begin to re-approach the sun. Though light and heat were now reduced to a twenty-fifth part of their terrestrial intensity, so that a perpetual twilight seemed to have settled over Gallia, yet the population felt cheered even by the little that was left, and buoyed up by the hope that they should ultimately regain their proper position with regard to the great luminary, of which the temperature has been estimated as not less than 5,000,000 degrees.

Of the anxiety endured during the last two months Isaac Hakkabut had known nothing. Since the day he had done his lucky stroke of business he had never left the tartan; and after Ben Zoof, on the following day, had returned the steelyard and the borrowed cash, receiving back the paper roubles deposited, all communication between the Jew and Nina's Hive had ceased. In the course of the few minutes' conversation which Ben Zoof had held with him, he had mentioned that he knew that the whole soil of Gallia was made of gold; but the old man, guessing that the orderly was only laughing at him as usual, paid no attention to the remark, and only meditated upon the means he could devise to get every bit of the money in the new world into his own possession. No one grieved over the life of solitude which Hakkabut persisted in leading. Ben Zoof giggled heartily, as he repeatedly observed "it was astonishing how they reconciled themselves to his absence."

The time came, however, when various circumstances prompted him to think he must renew his intercourse with the inhabitants of the Hive. Some of his goods were beginning to spoil, and he felt the necessity of turning them into money, if he would not be a loser; he hoped, moreover, that the scarcity of his commodities would secure very high prices.

It happened, just about this same time, that Ben Zoof had been calling his master's attention to the fact that some of their most necessary provisions would soon be running short, and that their stock of coffee, sugar, and tobacco would want replenishing. Servadac's mind, of course, turned to the cargo on board the _Hansa_, and he resolved, according to his promise, to apply to the Jew and become a purchaser. Mutual interest and necessity thus conspired to draw Hakkabut and the captain together.

Often and often had Isaac gloated in his solitude over the prospect of first selling a portion of his merchandise for all the gold and silver in the colony. His recent usurious transaction had whetted his appetite. He would next part with some more of his cargo for all the paper money they could give him; but still he should have goods left, and they would want these. Yes, they should have these, too, for promissory notes. Notes would hold good when they got back again to the earth; bills from his Excellency the governor would be good bills; anyhow there would be the sheriff. By the God of Israel! he would get good prices, and he would get fine interest!

Although he did not know it, he was proposing to follow the practice of the Gauls of old, who advanced money on bills for payment in a future life. Hakkabut's "future life," however, was not many months in advance of the present.

Still Hakkabut hesitated to make the first advance, and it was accordingly with much satisfaction that he hailed Captain Servadac's appearance on board the _Hansa_. 
"Hakkabut," said the captain, plunging without further preface into business, "we want some coffee, some tobacco, and other things. I have come to-day to order them, to settle the price, and to-morrow Ben Zoof shall fetch the goods away."

"Merciful, heavens!" the Jew began to whine; but Servadac cut him short.

"None of that miserable howling! Business! I am come to buy your goods. I shall pay for them."

"Ah yes, your Excellency," whispered the Jew, his voice trembling like a street beggar. "Don't impose on me. I am poor; I am nearly ruined already."

"Cease your wretched whining!" cried Servadac. "I have told you once, I shall pay for all I buy."

"Ready money?" asked Hakkabut.

"Yes, ready money. What makes you ask?" said the captain, curious to hear what the Jew would say.

"Well, you see--you see, your Excellency," stammered out the Jew, "to give credit to one wouldn't do, unless I gave credit to another. You are solvent--I mean honorable, and his lordship the count is honorable; but maybe--maybe--"

"Well?" said Servadac, waiting, but inclined to kick the old rascal out of his sight.

"Ready money?" reiterated Hakkabut.

"Don't! I must have gold. Nothing so safe as gold."

"Very good," Servadac replied. "Then you shall have ready money."

"Very good," repeated Servadac, repeating that he should come again the next day, was about to quit the vessel.

"One moment, your Excellency," said Hakkabut, sidling up with a hypocritical smile; "I suppose I am to fix my own prices."

"You will, of course, charge ordinary prices--proper market prices; European prices, I mean."

"Nothing," Servadac said sternly. "You rob me of my rights; you defraud me of my privilege. The monopoly of the market belongs to me. It is the custom; it is my right; it is my privilege to fix my own prices."

"Merciful heavens!" howled the Jew, "it is sheer ruin. The time of monopoly is the time for profit; it is the time for speculation."

"The very thing, Hakkabut, that I am anxious to prevent. Just stop now, and think a minute. You seem to forget my rights; you are forgetting that, if I please, I can confiscate all your cargo for the common use. You ought to be contented with European prices; you will get no more. I am not going to waste my breath on you. I will come again to-morrow;" and, without allowing Hakkabut time to renew his lamentations, Servadac went away.

Hakkabut hereupon descended into the hold of the tartan, and soon returned, carrying ten packets of tobacco, each weighing one kilogramme, and securely fastened by strips of paper, labeled with the French government stamp.
"Ten kilogrammes of tobacco at twelve francs a kilogramme: a hundred and twenty francs," said the Jew.

Ben Zoof was on the point of laying down the money, when Servadac stopped him.

"Let us just see whether the weight is correct."

Hakkabut pointed out that the weight was duly registered on every packet, and that the packets had never been unfastened. The captain, however, had his own special object in view, and would not be diverted. The Jew fetched his steelyard, and a packet of the tobacco was suspended to it.

"Merciful heavens!" screamed Isaac.

The index registered only 133 grammes!

"You see, Hakkabut, I was right. I was perfectly justified in having your goods put to the test," said Servadac, quite seriously.

"But--but, your Excellency--" stammered out the bewildered man.

"You will, of course, make up the deficiency," the captain continued, not noticing the interruption.

"Oh, my lord, let me say--" began Isaac again.

"Come, come, old Caiaphas, do you hear? You are to make up the deficiency," exclaimed Ben Zoof.

"Ah, yes, yes; but--"

The unfortunate Israelite tried hard to speak, but his agitation prevented him. He understood well enough the cause of the phenomenon, but he was overwhelmed by the conviction that the "cursed Gentiles" wanted to cheat him. He deeply regretted that he had not a pair of common scales on board.

"Come, I say, old Jedediah, you are a long while making up what's short," said Ben Zoof, while the Jew was still stammering on.

As soon as he recovered his power of articulation, Isaac began to pour out a medley of lamentations and petitions for mercy. The captain was inexorable. "Very sorry, you know, Hakkabut. It is not my fault that the packet is short weight; but I cannot pay for a kilogramme except I have a kilogramme."

Hakkabut pleaded for some consideration.

"A bargain is a bargain," said Servadac. "You must complete your contract."

And, moaning and groaning, the miserable man was driven to make up the full weight as registered by his own steelyard. He had to repeat the process with the sugar and coffee: for every kilogramme he had to weigh seven. Ben Zoof and the Russians jeered him most unmercifully.

"I say, old Mordecai, wouldn't you rather give your goods away, than sell them at this rate? I would."

"I say, old Pilate, a monopoly isn't always a good thing, is it?"

"I say, old Sepharvaim, what a flourishing trade you're driving!"

Meanwhile seventy kilogrammes of each of the articles required were weighed, and the Jew for each seventy had to take the price of ten.

All along Captain Servadac had been acting only in jest. Aware that old Isaac was an utter hypocrite, he had no compunction in turning a business transaction with him into an occasion for a bit of fun. But the joke at an end, he took care that the Jew was properly paid all his legitimate due.

CHAPTER X. FAR INTO SPACE

A month passed away. Gallia continued its course, bearing its little population onwards, so far removed from the ordinary influence of human passions that it might almost be said that its sole ostensible vice was represented by the greed and avarice of the miserable Jew.

After all, they were but making a voyage—a strange, yet a transient, excursion through solar regions hitherto untraversed; but if the professor's calculations were correct—and why should they be doubted?—their little vessel was destined, after a two years' absence, once more to return "to port." The landing, indeed, might be a matter of difficulty; but with the good prospect before them of once again standing on terrestrial shores, they had nothing to do at present except to make themselves as comfortable as they could in their present quarters.

Thus confident in their anticipations, neither the captain, the count, nor the lieutenant felt under any serious obligation to make any extensive provisions for the future; they saw no necessity for expending the strength of the people, during the short summer that would intervene upon the long severity of winter, in the cultivation or the preservation of their agricultural resources. Nevertheless, they often found themselves talking over the measures they would have been driven to adopt, if they had found themselves permanently attached to their present home.

Even after the turning-point in their career, they knew that at least nine months would have to elapse before the sea would be open to navigation; but at the very first arrival of summer they would be bound to arrange for the _Dobryna_ and the _Hansa_ to retransport themselves and all their animals to the shores of Gourbi Island, where they would have to commence their agricultural labors to secure the crops that must form their winter store. During
four months or thereabouts, they would lead the lives of farmers and of sportsmen; but no sooner would their haymaking and their corn harvest have been accomplished, than they would be compelled again, like a swarm of bees, to retire to their semi-troglodyte existence in the cells of Nina's Hive.

Now and then the captain and his friends found themselves speculating whether, in the event of their having to spend another winter upon Gallia, some means could not be devised by which the dreariness of a second residence in the recesses of the volcano might be escaped. Would not another exploring expedition possibly result in the discovery of a vein of coal or other combustible matter, which could be turned to account in warming some erection which they might hope to put up? A prolonged existence in their underground quarters was felt to be monotonous and depressing, and although it might be all very well for a man like Professor Rosette, absorbed in astronomical studies, it was ill suited to the temperaments of any of themselves for any longer period than was absolutely indispensable.

One contingency there was, almost too terrible to be taken into account. Was it not to be expected that the time might come when the internal fires of Gallia would lose their activity, and the stream of lava would consequently cease to flow? Why should Gallia be exempt from the destiny that seemed to await every other heavenly body? Why should it not roll onwards, like the moon, a dark cold mass in space?

In the event of such a cessation of the volcanic eruption, whilst the comet was still at so great a distance from the sun, they would indeed be at a loss to find a substitute for what alone had served to render life endurable at a temperature of 60 degrees below zero. Happily, however, there was at present no symptom of the subsidence of the lava's stream; the volcano continued its regular and unchanging discharge, and Servadac, ever sanguine, declared that it was useless to give themselves any anxiety upon the matter.

On the 15th of December, Gallia was 276,000,000 leagues from the sun, and, as it was approximately to the extremity of its axis major, would travel only some 11,000,000 or 12,000,000 leagues during the month. Another world was now becoming a conspicuous object in the heavens, and Palmyrin Rosette, after rejoicing in an approach nearer to Jupiter than any other mortal man had ever attained, was now to be privileged to enjoy a similar opportunity of contemplating the planet Saturn. Not that the circumstances were altogether so favorable. Scurcly 31,000,000 miles had separated Gallia from Jupiter; the minimum distance of Saturn would not be less than 415,000,000 miles; but even this distance, although too great to affect the comet's progress more than had been duly reckoned on, was considerably shorter than what had ever separated Saturn from the earth.

To get any information about the planet from Rosette appeared quite impossible. Although equally by night and by day he never seemed to quit his telescope, he did not evince the slightest inclination to impart the result of his observations. It was only from the few astronomical works that happened to be included in the _Dobryna's_ library that any details could be gathered, but these were sufficient to give a large amount of interesting information.

Ben Zoof, when he was made aware that the earth would be invisible to the naked eye from the surface of Saturn, declared that he then, for his part, did not care to learn any more about such a planet; to him it was indispensable that the earth should remain in sight, and it was his great consolation that hitherto his native sphere had never vanished from his gaze.

At this date Saturn was revolving at a distance of 420,000,000 miles from Gallia, and consequently 874,440,000 miles from the sun, receiving only a hundredth part of the light and heat which that luminary bestows upon the earth. On consulting their books of reference, the colonists found that Saturn completes his revolution round the sun in a period of 29 years and 167 days, traveling at the rate of more than 21,000 miles an hour along an orbit measuring 5,490 millions of miles in length. His circumference is about 220,000 miles; his superficies, 144,000 millions of square miles; his volume, 143,846 millions of cubic miles. Saturn is 735 times larger than the earth, consequently he period of 29 years and 167 days, traveling at the rate of more than 21,000 miles an hour along an orbit measuring 5,490 millions of miles in length. His circumference is about 220,000 miles; his superficies, 144,000 millions of square miles; his volume, 143,846 millions of cubic miles. Saturn is 735 times larger than the earth, consequently he
17,605 miles broad; and the outer, of a dusky hue, being 8,660 miles broad.

Such, they read, is the general outline of this strange appendage, which revolves in its own plane in 10 hours 32 minutes. Of what matter it is composed, and how it resists disintegration, is still an unsettled question; but it might almost seem that the Designer of the universe, in permitting its existence, had been willing to impart to His intelligent creatures the manner in which celestial bodies are evolved, and that this remarkable ring-system is a remnant of the nebula from which Saturn was himself developed, and which, from some unknown cause, has become solidified. If at any time it should disperse, it would either fall into fragments upon the surface of Saturn, or the fragments, mutually coalescing, would form additional satellites to circle round the planet in its path.

To any observer stationed on the planet, between the extremes of lat. 45 degrees on either side of the equator, these wonderful rings would present various strange phenomena. Sometimes they would appear as an illuminated arch, with the shadow of Saturn passing over it like the hour-hand over a dial; at other times they would be like a semi-aureole of light. Very often, too, for periods of several years, daily eclipses of the sun must occur through the interposition of this triple ring.

Truly, with the constant rising and setting of the satellites, some with bright discs at their full, others like silver crescents, in quadrature, as well as by the encircling rings, the aspect of the heavens from the surface of Saturn must be as impressive as it is gorgeous.

Unable, indeed, the Gallians were to realize all the marvels of this strange world. After all, they were practically a thousand times further off than the great astronomers have been able to approach by means of their giant telescopes. But they did not complain; their little comet, they knew, was far safer where it was; far better out of the reach of an attraction which, by affecting their path, might have annihilated their best hopes.

The distances of several of the brightest of the fixed stars have been estimated. Amongst others, Vega in the constellation Lyra is 100 millions of millions of miles away; Sirius in Canis Major, 123 millions of millions; the Pole-star, 282 millions of millions; and Capella, 340 millions of millions of miles, a figure represented by no less than fifteen digits.

The hard numerical statement of these enormous figures, however, fails altogether in any adequate way to convey a due impression of the magnitude of these distances. Astronomers, in their ingenuity, have endeavored to use some other basis, and have found "the velocity of light" to be convenient for their purpose. They have made their representations something in this way:

"Suppose," they say, "an observer endowed with an infinite length of vision: suppose him stationed on the surface of Capella; looking thence towards the earth, he would be a spectator of events that had happened seventy years previously; transport him to a star ten times distant, and he will be reviewing the terrestrial sphere of 720 years back; carry him away further still, to a star so remote that it requires something less than nineteen centuries for light to reach it, and he would be a witness of the birth and death of Christ; convey him further again, and he shall be looking upon the dread desolation of the Deluge; take him away further yet (for space is infinite), and he shall be a spectator of the Creation of the spheres. History is thus stereotyped in space; nothing once accomplished can ever be effaced."

Who can altogether be astonished that Palmyrin Rosette, with his burning thirst for astronomical research, should have been conscious of a longing for yet wider travel through the sidereal universe? With his comet now under the influence of one star, now of another, what various systems might he not have explored! what undreamed-of marvels might not have revealed themselves before his gaze! The stars, fixed and immovable in name, are all of them in motion, and Gallia might have followed them in their un-tracked way.

But Gallia had a narrow destiny. She was not to be allowed to wander away into the range of attraction of another center; nor to mingle with the star clusters, some of which have been entirely, others partially resolved; nor was she to lose herself amongst the 5,000 nebulae which have resisted hitherto the grasp of the most powerful reflectors. No; Gallia was neither to pass beyond the limits of the solar system, nor to travel out of sight of the terrestrial sphere. Her orbit was circumscribed to little over 1,500 millions of miles; and, in comparison with the infinite space beyond, this was a mere nothing.

CHAPTER XI. A FETE DAY

The temperature continued to decrease; the mercurial thermometer, which freezes at 42 degrees below zero, was no longer of service, and the spirit thermometer of the _Dobryna_ had been brought into use. This now registered 53 degrees below freezing-point.

In the creek, where the two vessels had been moored for the winter, the elevation of the ice, in anticipation of which Lieutenant Procopé had taken the precautionary measure of beveling, was going on slowly but irresistibly, and the tartan was upheaved fifty feet above the level of the Gallian Sea, while the schooner, as being lighter, had
been raised to a still greater altitude.

So irresistible was this gradual process of elevation, so utterly defying all human power to arrest, that the lieutenant began to feel very anxious as to the safety of his yacht. With the exception of the engine and the masts, everything had been cleared out and conveyed to shore, but in the event of a thaw it appeared that nothing short of a miracle could prevent the hull from being dashed to pieces, and then all means of leaving the promontory would be gone. The _Hansa_, of course, would share a similar fate; in fact, it had already heeled over to such an extent as to render it quite dangerous for its obstinate owner, who, at the peril of his life, resolved that he would stay where he could watch over his all-precious cargo, though continually invoking curses on the ill-fate of which he deemed himself the victim.

There was, however, a stronger will than Isaac Hakkabut's. Although no one of all the community cared at all for the safety of the Jew, they cared very much for the security of his cargo, and when Servadac found that nothing would induce the old man to abandon his present quarters voluntarily, he very soon adopted measures of coercion that were far more effectual than any representations of personal danger.

"Stop where you like, Hakkabut," said the captain to him; "but understand that I consider it my duty to make sure that your cargo is taken care of. I am going to have it carried across to land, at once."

Neither groans, nor tears, nor protestations on the part of the Jew, were of the slightest avail. Forthwith, on the 20th of December, the removal of the goods commenced.

Both Spaniards and Russians were all occupied for several days in the work of unloading the tartan. Well muffled up as they were in furs, they were able to endure the cold with impunity, making it their special care to avoid actual contact with any article made of metal, which, in the low state of the temperature, would inevitably have taken all the skin off their hands, as much as if it had been red-hot. The task, however, was brought to an end without accident of any kind; and when the stores of the _Hansa_ were safely deposited in the galleries of the Hive, Lieutenant Procope avowed that he really felt that his mind had been unburdened from a great anxiety.

Captain Servadac gave old Isaac full permission to take up his residence amongst the rest of the community, promised him the entire control over his own property, and altogether showed him so much consideration that, but for his unbounded respect for his master, Ben Zoof would have liked to reprimand him for his courtesy to a man whom he so cordially despised.

Although Hakkabut clamored most vehemently about his goods being carried off "against his will," in his heart he was more than satisfied to see his property transferred to a place of safety, and delighted, moreover, to know that the transport had been effected without a farthing of expense to himself. As soon, then, as he found the tartan empty, he was only too glad to accept the offer that had been made him, and very soon made his way over to the quarters in the gallery where his merchandise had been stored. Here he lived day and night. He supplied himself with what little food he required from his own stock of provisions, a small spirit-lamp sufficing to perform all the operations of his meager cookery. Consequently all intercourse between himself and the rest of the inhabitants was entirely confined to business transactions, when occasion required that some purchase should be made from his stock of commodities. Meanwhile, all the silver and gold of the colony was gradually finding its way to a double-locked drawer, of which the Jew most carefully guarded the key.

The 1st of January was drawing near, the anniversary of the shock which had resulted in the severance of thirty-six human beings from the society of their fellow-men. Hitherto, not one of them was missing. The unvarying calmness of the climate, notwithstanding the cold, had tended to maintain them in good health, and there seemed no reason to doubt that, when Gallia returned to the earth, the total of its little population would still be complete.

The 1st of January, it is true, was not properly "New Year's Day" in Gallia, but Captain Servadac, nevertheless, was very anxious to have it observed as a holiday.

"I do not think," he said to Count Timascheff and Lieutenant Procope, "that we ought to allow our people to lose their interest in the world to which we are all hoping to return; and how can we cement the bond that ought to unite us, better than by celebrating, in common with our fellow-creatures upon earth, a day that awakens afresh the kindliest sentiments of all? Besides," he added, smiling, "I expect that Gallia, although invisible just at present to the naked eye, is being closely watched by the telescopes of our terrestrial friends, and I have no doubt that the newspapers and scientific journals of both hemispheres are full of accounts detailing the movements of the new comet."

"True," asserted the count. "I can quite imagine that we are occasioning no small excitement in all the chief observatories."

"Ay, more than that," said the lieutenant; "our Gallia is certain to be far more than a mere object of scientific interest or curiosity. Why should we doubt that the elements of a comet which has once come into collision with the earth have by this time been accurately calculated? What our friend the professor has done here, has been done likewise on the earth, where, beyond a question, all manner of expedients are being discussed as to the best way of
mitigating the violence of a concussion that must occur."

The lieutenant's conjectures were so reasonable that they commanded assent. Gallia could scarcely be otherwise than an object of terror to the inhabitants of the earth, who could by no means be certain that a second collision would be comparatively so harmless as the first. Even to the Gallians themselves, much as they looked forward to the event, the prospect was not unmixed with alarm, and they would rejoice in the invention of any device by which it was likely the impetus of the shock might be deadened.

Christmas arrived, and was marked by appropriate religious observance by everyone in the community, with the exception of the Jew, who made a point of excluding himself more obstinately than ever in the gloomy recesses of his retreat.

To Ben Zoof the last week of the year was full of bustle. The arrangements for the New Year _fete_ were entrusted to him, and he was anxious, in spite of the resources of Gallia being so limited, to make the program for the great day as attractive as possible.

It was a matter of debate that night whether the professor should be invited to join the party; it was scarcely likely that he would care to come, but, on the whole, it was felt to be advisable to ask him. At first Captain Servadac thought of going in person with the invitation; but, remembering Rosette's dislike to visitors, he altered his mind, and sent young Pablo up to the observatory with a formal note, requesting the pleasure of Professor Rosette's company at the New Year's _fete_.

Pablo was soon back, bringing no answer except that the professor had told him that "to-day was the 125th of June, and that to-morrow would be the 1st of July."

Consequently, Servadac and the count took it for granted that Palmyrin Rosette declined their invitation.

An hour after sunrise on New Year's Day, Frenchmen, Russians, Spaniards, and little Nina, as the representative of Italy, sat down to a feast such as never before had been seen in Gallia. Ben Zoof and the Russian cook had quite surpassed themselves. The wines, part of the _Dobryna's_ stores, were of excellent quality. Those of the vintages of France and Spain were drunk in toasting their respective countries, and even Russia was honored in a similar way by means of a few bottles of kummel. The company was more than contented--it was as jovial as Ben Zoof could desire; and the ringing cheers that followed the great toast of the day--"A happy return to our Mother Earth," must fairly have startled the professor in the silence of his observatory.

The _dejeuner_ over, there still remained three hours of daylight. The sun was approaching the zenith, but so dim and enfeebled were his rays that they were very unlike what had produced the wines of Bordeaux and Burgundy which they had just been enjoying, and it was necessary for all, before starting upon an excursion that would last over nightfall, to envelop themselves in the thickest of clothing.

Full of spirits, the party left the Hive, and chattering and singing as they went, made their way down to the frozen shore, where they fastened on their skates. Once upon the ice, everyone followed his own fancy, and some singly, some in groups, scattered themselves in all directions. Captain Servadac, the count, and the lieutenant were generally seen together. Negrete and the Spaniards, now masters of their novel exercise, wandered fleetly and gracefully hither and thither, occasionally being out of sight completely. The Russian sailors, following a northern custom, skated in file, maintaining their rank by means of a long pole passed under their right arms, and in this way they described a trackway of singular regularity. The two children, blithe as birds, flitted about, now singly, now arm-in-arm, now joining the captain's party, now making a short peregrination by themselves, but always full of life and spirit. As for Ben Zoof, he was here, there, and everywhere, his imperturbable good temper ensuring him a smile of welcome whenever he appeared.

Thus coursing rapidly over the icy plain, the whole party had soon exceeded the line that made the horizon from the shore. First, the rocks of the coast were lost to view; then the white crests of the cliffs were no longer to be seen; and at last, the summit of the volcano, with its corona of vapor, was entirely out of sight. Occasionally the skaters were obliged to stop to recover their breath, but, fearful of frost-bite, they almost instantly resumed their exercise, and proceeded nearly as far as Gourbi Island before they thought about retracing their course.

But night was coming on, and the sun was already sinking in the east with the rapidity to which the residents on Gallia were by this time well accustomed. The sunset upon this contracted horizon was very remarkable. There was not a cloud nor a vapor to catch the tints of the declining beams; the surface of the ice did not, as a liquid sea would, reflect the last green ray of light; but the radiant orb, enlarged by the effect of refraction, its circumference sharply defined against the sky, sank abruptly, as though a trap had been opened in the ice for its reception.

Before the daylight ended. Captain Servadac had cautioned the party to collect themselves betimes into one group. "Unless you are sure of your whereabouts before dark," he said, "you will not find it after. We have come out like a party of skirmishers; let us go back in full force."

The night would be dark; their moon was in conjunction, and would not be seen; the stars would only give something of that "pale radiance" which the poet Corneille has described.
Immediately after sunset the torches were lighted, and the long series of flames, fanned by the rapid motion of
their bearers, had much the appearance of an enormous fiery banner. An hour later, and the volcano appeared like a
dim shadow on the horizon, the light from the crater shedding a lurid glare upon the surrounding gloom. In time the
glow of the burning lava, reflected in the icy mirror, fell upon the troop of skaters, and cast their lengthened shadows
grotesquely on the surface of the frozen sea.

Later still, half an hour or more afterwards, the torches were all but dying out. The shore was close at hand. All
at once, Ben Zoof uttered a startled cry, and pointed with bewildered excitement towards the mountain.
Involuntarily, one and all, they plowed their heels into the ice and came to a halt. Exclamations of surprise and
horror burst from every lip. The volcano was extinguished! The stream of burning lava had suddenly ceased to flow!
Speechless with amazement, they stood still for some moments. There was not one of them that did not realize,
more or less, how critical was their position. The sole source of the heat that had enabled them to brave the rigor of
the cold had failed them! Death, in the cruelest of all shapes, seemed staring them in the face—death from cold!
Meanwhile, the last torch had flickered out.

It was quite dark.
"Forward!" cried Servadac, firmly.

At the word of command they advanced to the shore; clambered with no little difficulty up the slippery rocks;
gained the mouth of the gallery; groped their way into the common hall.
How dreary! how chill it seemed!
The fiery cataract no longer spread its glowing covering over the mouth of the grotto. Lieutenant Procope leaned
through the aperture. The pool, hitherto kept fluid by its proximity to the lava, was already encrusted with a layer of
ice.

Such was the end of the New Year's Day so happily begun.

CHAPTER XII. THE BOWELS OF THE COMET

The whole night was spent in speculating, with gloomy forebodings, upon the chances of the future. The
temperature of the hall, now entirely exposed to the outer air, was rapidly falling, and would quickly become
unendurable. Far too intense was the cold to allow anyone to remain at the opening, and the moisture on the walls
soon resolved itself into icicles. But the mountain was like the body of a dying man, that retains awhile a certain
amount of heat at the heart after the extremities have become cold and dead. In the more interior galleries there was
still a certain degree of warmth, and hither Servadac and his companions were glad enough to retreat.

Here they found the professor, who, startled by the sudden cold, had been fain to make a precipitate retreat from
his observatory. Now would have been the opportunity to demand of the enthusiast whether he would like to prolong
his residence indefinitely upon his little comet. It is very likely that he would have declared himself ready to put up
with any amount of discomfort to be able to gratify his love of investigation; but all were far too disheartened and
distressed to care to banter him upon the subject on which he was so sensitive.

Next morning, Servadac thus addressed his people. "My friends, except from cold, we have nothing to fear. Our
provisions are ample—more than enough for the remaining period of our sojourn in this lonesome world of ours; our
preserved meat is already cooked; we shall be able to dispense with all fuel for cooking purposes. All that we require
is warmth—warmth for ourselves; let us secure that, and all may be well. Now, I do not entertain a doubt but that the
warmth we require is resident in the bowels of this mountain on which we are living; to the depth of those bowels
we must penetrate; there we shall obtain the warmth which is indispensable to our very existence."

His tone, quite as much as his words, restored confidence to many of his people, who were already yielding to a
feeling of despair. The count and the lieutenant fervently, but silently, grasped his hand.
"Nina," said the captain, "you will not be afraid to go down to the lower depths of the mountain, will you?"
"Not if Pablo goes," replied the child.
"Oh yes, of course, Pablo will go. You are not afraid to go, are you, Pablo?" he said, addressing the boy.
"Anywhere with you, your Excellency," was the boy's prompt reply.

And certain it was that no time must be lost in penetrating below the heart of the volcano; already the most
protected of the many ramifications of Nina's Hive were being pervaded by a cold that was insufferable. It was an
acknowledged impossibility to get access to the crater by the exterior declivities of the mountain-side; they were far
too steep and too slippery to afford a foothold. It must of necessity be entered from the interior.

Lieutenant Procope accordingly undertook the task of exploring all the galleries, and was soon able to report that
he had discovered one which he had every reason to believe abutted upon the central funnel. His reason for coming
to this conclusion was that the caloric emitted by the rising vapors of the hot lava seemed to be oozing, as it were,
out of the tellurium, which had been demonstrated already to be a conductor of heat. Only succeed in piercing
through this rock for seven or eight yards, and the lieutenant did not doubt that his way would be opened into the old lava-course, by following which he hoped descent would be easy.

Under the lieutenant's direction the Russian sailors were immediately set to work. Their former experience had convinced them that spades and pick-axes were of no avail, and their sole resource was to proceed by blasting with gunpowder. However skillfully the operation might be carried on, it must necessarily occupy several days, and during that time the sufferings from cold must be very severe.

"If we fail in our object, and cannot get to the depths of the mountain, our little colony is doomed," said Count Timaschef.

"That speech is not like yourself," answered Servadac, smiling. "What has become of the faith which has hitherto carried you so bravely through all our difficulties?"

The count shook his head, as if in despair, and said, sadly, "The Hand that has hitherto been outstretched to help seems now to be withdrawn."

"But only to test our powers of endurance," rejoined the captain, earnestly. "Courage, my friend, courage! Something tells me that this cessation of the eruption is only partial; the internal fire is not all extinct. All is not over yet. It is too soon to give up; never despair!"

Lieutenant Procope quite concurred with the captain. Many causes, he knew, besides the interruption of the influence of the oxygen upon the mineral substances in Gallia's interior, might account for the stoppage of the lava-flow in this one particular spot, and he considered it more than probable that a fresh outlet had been opened in some other part of the surface, and that the eruptive matter had been diverted into the new channel. But at present his business was to prosecute his labors so that a retreat might be immediately effected from their now untenable position.

Restless and agitated, Professor Rosette, if he took any interest in these discussions, certainly took no share in them. He had brought his telescope down from the observatory into the common hall, and there at frequent intervals, by night and by day, he would endeavor to continue his observations; but the intense cold perpetually compelled him to desist, or he would literally have been frozen to death. No sooner, however, did he find himself obliged to retreat from his study of the heavens, than he would begin overwhelming everybody about him with bitter complaints, pouring out his regrets that he had ever quitted his quarters at Formentera.

On the 4th of January, by persevering industry, the process of boring was completed, and the lieutenant could hear that fragments of the blasted rock, as the sailors cleared them away with their spades, were rolling into the funnel of the crater. He noticed, too, that they did not fall perpendicularly, but seemed to slide along, from which he inferred that the sides of the crater were sloping; he had therefore reason to hope that a descent might be found practicable.

Larger and larger grew the orifice; at length it would admit a man's body, and Ben Zoof, carrying a torch, pushed himself through it, followed by the lieutenant and Servadac. Procope's conjecture proved correct. On entering the crater, they found that the sides slanted at the angle of about 4 degrees; moreover, the eruption had evidently been of recent origin, dating probably only from the shock which had invested Gallia with a proportion of the atmosphere of the earth, and beneath the coating of ashes with which they were covered, there were various irregularities in the rock, not yet worn away by the action of the lava, and these afforded a tolerably safe footing.

"Rather a bad staircase!" said Ben Zoof, as they began to make their way down.

In about half an hour, proceeding in a southerly direction, they had descended nearly five hundred feet. From time to time they came upon large excavations that at first sight had all the appearance of galleries, but by waving his torch, Ben Zoof could always see their extreme limits, and it was evident that the lower strata of the mountain did not present the same system of ramification that rendered the Hive above so commodious a residence.

It was not a time to be fastidious; they must be satisfied with such accommodation as they could get, provided it was warm. Captain Servadac was only too glad to find that his hopes about the temperature were to a certain extent realized. The lower they went, the greater was the diminution in the cold, a diminution that was far more rapid than that which is experienced in making the descent of terrestrial mines. In this case it was a volcano, not a colliery, that was the object of exploration, and thankful enough they were to find that it had not become extinct. Although the lava, from some unknown cause, had ceased to rise in the crater, yet plainly it existed somewhere in an incandescent state, and was still transmitting considerable heat to inferior strata.

Lieutenant Procope had brought in his hand a mercurial thermometer, and Servadac carried an aneroid barometer, by means of which he could estimate the depth of their descent below the level of the Gallian Sea. When they were six hundred feet below the orifice the mercury registered a temperature of 6 degrees below zero.

"Six degrees!" said Servadac; "that will not suit us. At this low temperature we could not survive the winter. We must try deeper down. I only hope the ventilation will hold out."

There was, however, nothing to fear on the score of ventilation. The great current of air that rushed into the
aperture penetrated everywhere, and made respiration perfectly easy.

The descent was continued for about another three hundred feet, which brought the explorers to a total depth of nine hundred feet from their old quarters. Here the thermometer registered 12 degrees above zero—a temperature which, if only it were permanent, was all they wanted. There was no advantage in proceeding any further along the lava-course; they could already hear the dull rumblings that indicated that they were at no great distance from the central focus.

"Quite near enough for me!" exclaimed Ben Zoof. "Those who are chilly are welcome to go as much lower as they like. For my part, I shall be quite warm enough here."

After throwing the gleams of torch-light in all directions, the explorers seated themselves on a jutting rock, and began to debate whether it was practicable for the colony to make an abode in these lower depths of the mountain. The prospect, it must be owned, was not inviting. The crater, it is true, widened out into a cavern sufficiently large, but here its accommodation ended. Above and below were a few ledges in the rock that would serve as receptacles for provisions; but, with the exception of a small recess that must be reserved for Nina, it was clear that henceforth they must all renounce the idea of having separate apartments. The single cave must be their dining-room, drawing-room, and dormitory, all in one. From living the life of rabbits in a warren, they were reduced to the existence of moles, with the difference that they could not, like them, forget their troubles in a long winter's sleep.

The cavern, however, was quite capable of being lighted by means of lamps and lanterns. Among the stores were several barrels of oil and a considerable quantity of spirits of wine, which might be burned when required for cooking purposes. Moreover, it would be unnecessary for them to confine themselves entirely to the seclusion of their gloomy residence; well wrapped up, there would be nothing to prevent them making occasional excursions both to the Hive and to the sea-shore. A supply of fresh water would be constantly required; ice for this purpose must be perpetually carried in from the coast, and it would be necessary to arrange that everyone in turn should perform this office, as it would be no sinecure to clamber up the sides of the crater for 900 feet, and descend the same distance with a heavy burden.

But the emergency was great, and it was accordingly soon decided that the little colony should forthwith take up its quarters in the cave. After all, they said, they should hardly be much worse off than thousands who annually winter in Arctic regions. On board the whaling-vessels, and in the establishments of the Hudson's Bay Company, such luxuries as separate cabins or sleeping-chambers are never thought of; one large apartment, well heated and ventilated, with as few corners as possible, is considered far more healthy; and on board ship the entire hold, and in forts a single floor, is appropriated to this purpose. The recollection of this fact served to reconcile them, in a great degree, to the change to which they felt it requisite to submit.

Having remounted the ascent, they made the result of their exploration known to the mass of the community, who received the tidings with a sense of relief, and cordially accepted the scheme of the migration.

The first step was to clear the cavern of its accumulation of ashes, and then the labor of removal commenced in earnest. Never was a task undertaken with greater zest. The fear of being to a certainty frozen to death if they remained where they were, was a stimulus that made everyone put forth all his energies. Beds, furniture, cooking utensils—first the stores of the Dobryna—then the cargo of the tartan—all were carried down with the greatest alacrity, and the diminished weight combined with the downhill route to make the labor proceed with incredible briskness.

Although Professor Rosette yielded to the pressure of circumstances, and allowed himself to be conducted to the lower regions, nothing would induce him to allow his telescope to be carried underground; and as it was undeniable that it would certainly be of no service deep down in the bowels of the mountain, it was allowed to remain undisturbed upon its tripod in the great hall of Nina's Hive.

As for Isaac Hakkabut, his outcry was beyond description lamentable. Never, in the whole universe, had a merchant met with such reverses; never had such a pitiable series of losses befallen an unfortunate man. Regardless of the ridicule which his abject wretchedness excited, he howled on still, and kept up an unending wail; but meanwhile he kept a keen eye upon every article of his property, and amidst universal laughter insisted on having every item registered in an inventory as it was transferred to its appointed place of safety. Servadac considerably allowed the whole of the cargo to be deposited in a hollow apart by itself, over which the Jew was permitted to keep a watch as vigilant as he pleased.

By the 10th the removal was accomplished. Rescued, at all events, from the exposure to a perilous temperature of 60 degrees below zero, the community was installed in its new home. The large cave was lighted by the Dobryna's lamps, while several lanterns, suspended at intervals along the acclivity that led to their deserted quarters above, gave a weird picturesqueness to the scene, that might vie with any of the graphic descriptions of the "Arabian Nights' Entertainments."

"How do you like this, Nina?" said Ben Zoof.
"_Va bene!_" replied the child. "We are only living in the cellars instead of upon the ground floor."

"We will try and make ourselves comfortable," said the orderly.

"Oh yes, we will be happy here," rejoined the child; "it is nice and warm."

Although they were as careful as they could to conceal their misgivings from the rest, Servadac and his two friends could not regard their present situation without distrust. When alone, they would frequently ask each other what would become of them all, if the volcanic heat should really be subsiding, or if some unexpected perturbation should retard the course of the comet, and compel them to an indefinitely prolonged residence in their grim abode. It was scarcely likely that the comet could supply the fuel of which ere long they would be in urgent need. Who could expect to find coal in the bowels of Gallia,—coal, which is the residuum of ancient forests mineralized by the lapse of ages? Would not the lava-cinders exhumed from the extinct volcano be their last poor resource?

"Keep up your spirits, my friends," said Servadac; "we have plenty of time before us at present. Let us hope that as fresh difficulties arise, fresh ways of escape will open. Never despair!"

"True," said the count; "it is an old saying that 'Necessity is the mother of invention.' Besides, I should think it very unlikely that the internal heat will fail us now before the summer."

The lieutenant declared that he entertained the same hope. As the reason of his opinion he alleged that the combustion of the eruptive matter was most probably of quite recent origin, because the comet before its collision with the earth had possessed no atmosphere, and that consequently no oxygen could have penetrated to its interior.

"Most likely you are right," replied the count; "and so far from dreading a failure of the internal heat, I am not quite sure that we may not be exposed to a more terrible calamity still?"

"What?" asked Servadac.

"The calamity of the eruption breaking out suddenly again, and taking us by surprise."

"Heavens!" cried the captain, "we will not think of that."

"The outbreak may happen again," said the lieutenant, calmly; "but it will be our fault, our own lack of vigilance, if we are taken by surprise." And so the conversation dropped.

The 15th of January dawned; and the comet was 220,000,000 leagues from the sun.

Gallia had reached its aphelion.

CHAPTER XIII. DREARY MONTHS

Henceforth, then, with a velocity ever increasing, Gallia would re-approach the sun.

Except the thirteen Englishmen who had been left at Gibraltar, every living creature had taken refuge in the dark abyss of the volcano's crater.

And with those Englishmen, how had it fared?

"Far better than with ourselves," was the sentiment that would have been universally accepted in Nina's Hive. And there was every reason to conjecture that so it was. The party at Gibraltar, they all agreed, would not, like themselves, have been compelled to have recourse to a stream of lava for their supply of heat; they, no doubt, had had abundance of fuel as well as food; and in their solid casemate, with its substantial walls, they would find ample shelter from the rigor of the cold. The time would have been passed at least in comfort, and perhaps in contentment; and Colonel Murphy and Major Oliphant would have had leisure more than sufficient for solving the most abstruse problems of the chess-board. All of them, too, would be happy in the confidence that when the time should come, England would have full meed of praise to award to the gallant soldiers who had adhered so well and so manfully to their post.

It did, indeed, more than once occur to the minds both of Servadac and his friends that, if their condition should become one of extreme emergency, they might, as a last resource, betake themselves to Gibraltar, and there seek a refuge; but their former reception had not been of the kindest, and they were little disposed to renew an acquaintance that was marked by so little cordiality. Not in the least that they would expect to meet with any inhospitable rebuff. Far from that; they knew well enough that Englishmen, whatever their faults, would be the last to abandon their fellow-creatures in the hour of distress. Nevertheless, except the necessity became far more urgent than it had hitherto proved, they resolved to endeavor to remain in their present quarters. Up till this time no casualties had diminished their original number, but to undertake so long a journey across that unsheltered expanse of ice could scarcely fail to result in the loss of some of their party.

However great was the desire to find a retreat for every living thing in the deep hollow of the crater, it was found necessary to slaughter almost all the domestic animals before the removal of the community from Nina's Hive. To have stabled them all in the cavern below would have been quite impossible, whilst to have left them in the upper galleries would only have been to abandon them to a cruel death; and since meat could be preserved for an indefinite time in the original store-places, now colder than ever, the expedient of killing the animals seemed to recommend
itself as equally prudent and humane.

Naturally the captain and Ben Zoof were most anxious that their favorite horses should be saved, and accordingly, by dint of the greatest care, all difficulties in the way were overcome, and Zephyr and Galette were conducted down the crater, where they were installed in a large hole and provided with forage, which was still abundant.

Birds, subsisting only on scraps thrown out to them did not cease to follow the population in its migration, and so numerous did they become that multitudes of them had repeatedly to be destroyed.

The general re-arrangement of the new residence was no easy business, and occupied so much time that the end of January arrived before they could be said to be fairly settled. And then began a life of dreary monotony. Then seemed to creep over everyone a kind of moral torpor as well as physical lassitude, which Servadac, the count, and the lieutenant did their best not only to combat in themselves, but to counteract in the general community. They provided a variety of intellectual pursuits; they instituted debates in which everybody was encouraged to take part; they read aloud, and explained extracts from the elementary manuals of science, or from the books of adventuous travel which their library supplied; and Russians and Spaniards, day after day, might be seen gathered round the large table, giving their best attention to instruction which should send them back to Mother Earth less ignorant than they had left her.

Selfish and morose, Hakkabut could never be induced to be present at these social gatherings. He was far too much occupied in his own appropriated corner, either in conning his accounts, or in counting his money. Altogether, with what he had before, he now possessed the round sum of 150,000 francs, half of which was in sterling gold; but nothing could give him any satisfaction while he knew that the days were passing, and that he was denied the opportunity of putting out his capital in advantageous investments, or securing a proper interest.

Neither did Palmyrin Rosette find leisure to take any share in the mutual intercourse. His occupation was far too absorbing for him to suffer it to be interrupted, and to him, living as he did perpetually in a world of figures, the winter days seemed neither long nor wearisome. Having ascertained every possible particular about his comet, he was now devoting himself with equal ardor to the analysis of all the properties of the satellite Nerina, to which he appeared to assert the same claim of proprietorship.

In order to investigate Nerina it was indispensable that he should make several actual observations at various points of the orbit; and for this purpose he repeatedly made his way up to the grotto above, where, in spite of the extreme severity of the cold, he would persevere in the use of his telescope till he was all but paralyzed. But what he felt more than anything was the want of some retired apartment, where he could pursue his studies without hindrance or intrusion.

It was about the beginning of February, when the professor brought his complaint to Captain Servadac, and begged him to assign him a chamber, no matter how small, in which he should be free to carry on his task in silence and without molestation. So readily did Servadac promise to do everything in his power to provide him with the accommodation for which he asked, that the professor was put into such a manifest good temper that the captain ventured to speak upon the matter that was ever uppermost in his mind.

"I do not mean," he began timidly, "to cast the least imputation of inaccuracy upon any of your calculations, but would you allow me, my dear professor, to suggest that you should revise your estimate of the duration of Gallia's period of revolution. It is so important, you know, so all important; the difference of one half minute, you know, would so certainly mar the expectation of reunion with the earth--"

And seeing a cloud gathering on Rosette's face, he added:

"I am sure Lieutenant Procope would be only too happy to render you any assistance in the revision."

"Sir," said the professor, bridling up, "I want no assistant; my calculations want no revision. I never make an error. I have made my reckoning as far as Gallia is concerned. I am now making a like estimate of the elements of Nerina."

Conscious how impolitic it would be to press this matter further, the captain casually remarked that he should have supposed that all the elements of Nerina had been calculated long since by astronomers on the earth. It was about as unlucky a speech as he could possibly have made. The professor glared at him fiercely.

"Astounding, sir!" he exclaimed. "Yes! Nerina was a planet then; everything that appertained to the planet was determined; but Nerina is a moon now. And do you not think, sir, that we have a right to know as much about our moon as those _terrestrials_--"--and he curled his lip as he spoke with a contemptuous emphasis--"know of theirs?"

"I beg pardon," said the corrected captain.

"Well then, never mind," replied the professor, quickly appeased; "only will you have the goodness to get me a proper place for study?"

"I will, as I promised, do all I can," answered Servadac.

"Very good," said the professor. "No immediate hurry; an hour hence will do."
But in spite of this condescension on the part of the man of science, some hours had to elapse before any place of retreat could be discovered likely to suit his requirements; but at length a little nook was found in the side of the cavern just large enough to hold an armchair and a table, and in this the astronomer was soon ensconced to his entire satisfaction.

Buried thus, nearly 900 feet below ground, the Gallians ought to have had unbounded mental energy to furnish an adequate reaction to the depressing monotony of their existence; but many days would often elapse without any one of them ascending to the surface of the soil, and had it not been for the necessity of obtaining fresh water, it seemed almost probable that there would never have been an effort made to leave the cavern at all.

A few excursions, it is true, were made in the downward direction. The three leaders, with Ben Zoof, made their way to the lower depths of the crater, not with the design of making any further examination as to the nature of the rock—for although it might be true enough that it contained thirty per cent. of gold, it was as valueless to them as granite—but with the intention of ascertaining whether the subterranean fire still retained its activity. Satisfied upon this point, they came to the conclusion that the eruption which had so suddenly ceased in one spot had certainly broken out in another.

February, March, April, May, passed wearily by; but day succeeded to day with such gloomy sameness that it was little wonder that no notice was taken of the lapse of time. The people seemed rather to vegetate than to live, and their want of vigor became at times almost alarming. The readings around the long table ceased to be attractive, and the debates, sustained by few, became utterly wanting in animation. The Spaniards could hardly be roused to quit their beds, and seemed to have scarcely energy enough to eat. The Russians, constitutionally of more enduring temperament, did not give way to the same extent, but the long and drear confinement was beginning to tell upon them all. Servadac, the count, and the lieutenant all knew well enough that it was the want of air and exercise that was the cause of much of this mental depression; but what could they do? The most serious remonstrances on their part were entirely in vain. In fact, they themselves occasionally fell a prey to the same lassitude both of body and mind. Long fits of drowsiness, combined with an utter aversion to food, would come over them. It almost seemed as if their entire nature had become degenerate, and that, like tortoises, they could sleep and fast till the return of summer.

Strange to say, little Nina bore her hardships more bravely than any of them. Flitting about, coaxing one to eat, another to drink, rousing Pablo as often as he seemed yielding to the common languor, the child became the life of the party. Her merry prattle enlivened the gloom of the grim cavern like the sweet notes of a bird; her gay Italian songs broke the monotony of the depressing silence; and almost unconscious as the half-dormant population of Gallia were of her influence, they still would have missed her bright presence sorely. The months still glided on; how, it seemed impossible for the inhabitants of the living tomb to say. There was a dead level of dullness.

At the beginning of June the general torpor appeared slightly to relax its hold upon its victims. This partial revival was probably due to the somewhat increased influence of the sun, still far, far away. During the first half of the Gallian year, Lieutenant Procope had taken careful note of Rosette's monthly announcements of the comet's progress, and he was able now, without reference to the professor, to calculate the rate of advance on its way back towards the sun. He found that Gallia had re-crossed the orbit of Jupiter, but was still at the enormous distance of 197,000,000 leagues from the sun, and he reckoned that in about four months it would have entered the zone of the telescopic planets.

Gradually, but uninterruptedly, life and spirits continued to revive, and by the end of the month Servadac and his little colony had regained most of their ordinary physical and mental energies. Ben Zoof, in particular, roused himself with redoubled vigor, like a giant refreshed from his slumbers. The visits, consequently, to the long-neglected galleries of Nina's Hive became more and more frequent.

One day an excursion was made to the shore. It was still bitterly cold, but the atmosphere had lost nothing of its former stillness, and not a cloud was visible from horizon to zenith. The old footmarks were all as distinct as on the day in which they had been imprinted, and the only portion of the shore where any change was apparent was in the little creek. Here the elevation of the ice had gone on increasing, until the schooner and the tartan had been uplifted to a height of 150 feet, not only rendering them quite inaccessible, but exposing them to all but certain destruction in the event of a thaw.

But in spite of this condescension on the part of the man of science, some hours had to elapse before any place of retreat could be discovered likely to suit his requirements; but at length a little nook was found in the side of the cavern just large enough to hold an armchair and a table, and in this the astronomer was soon ensconced to his entire satisfaction.

Buried thus, nearly 900 feet below ground, the Gallians ought to have had unbounded mental energy to furnish an adequate reaction to the depressing monotony of their existence; but many days would often elapse without any one of them ascending to the surface of the soil, and had it not been for the necessity of obtaining fresh water, it seemed almost probable that there would never have been an effort made to leave the cavern at all.

A few excursions, it is true, were made in the downward direction. The three leaders, with Ben Zoof, made their way to the lower depths of the crater, not with the design of making any further examination as to the nature of the rock—for although it might be true enough that it contained thirty per cent. of gold, it was as valueless to them as granite—but with the intention of ascertaining whether the subterranean fire still retained its activity. Satisfied upon this point, they came to the conclusion that the eruption which had so suddenly ceased in one spot had certainly broken out in another.

February, March, April, May, passed wearily by; but day succeeded to day with such gloomy sameness that it was little wonder that no notice was taken of the lapse of time. The people seemed rather to vegetate than to live, and their want of vigor became at times almost alarming. The readings around the long table ceased to be attractive, and the debates, sustained by few, became utterly wanting in animation. The Spaniards could hardly be roused to quit their beds, and seemed to have scarcely energy enough to eat. The Russians, constitutionally of more enduring temperament, did not give way to the same extent, but the long and drear confinement was beginning to tell upon them all. Servadac, the count, and the lieutenant all knew well enough that it was the want of air and exercise that was the cause of much of this mental depression; but what could they do? The most serious remonstrances on their part were entirely in vain. In fact, they themselves occasionally fell a prey to the same lassitude both of body and mind. Long fits of drowsiness, combined with an utter aversion to food, would come over them. It almost seemed as if their entire nature had become degenerate, and that, like tortoises, they could sleep and fast till the return of summer.

Strange to say, little Nina bore her hardships more bravely than any of them. Flitting about, coaxing one to eat, another to drink, rousing Pablo as often as he seemed yielding to the common languor, the child became the life of the party. Her merry prattle enlivened the gloom of the grim cavern like the sweet notes of a bird; her gay Italian songs broke the monotony of the depressing silence; and almost unconscious as the half-dormant population of Gallia were of her influence, they still would have missed her bright presence sorely. The months still glided on; how, it seemed impossible for the inhabitants of the living tomb to say. There was a dead level of dullness.

At the beginning of June the general torpor appeared slightly to relax its hold upon its victims. This partial revival was probably due to the somewhat increased influence of the sun, still far, far away. During the first half of the Gallian year, Lieutenant Procope had taken careful note of Rosette's monthly announcements of the comet's progress, and he was able now, without reference to the professor, to calculate the rate of advance on its way back towards the sun. He found that Gallia had re-crossed the orbit of Jupiter, but was still at the enormous distance of 197,000,000 leagues from the sun, and he reckoned that in about four months it would have entered the zone of the telescopic planets.

Gradually, but uninterruptedly, life and spirits continued to revive, and by the end of the month Servadac and his little colony had regained most of their ordinary physical and mental energies. Ben Zoof, in particular, roused himself with redoubled vigor, like a giant refreshed from his slumbers. The visits, consequently, to the long-neglected galleries of Nina's Hive became more and more frequent.

One day an excursion was made to the shore. It was still bitterly cold, but the atmosphere had lost nothing of its former stillness, and not a cloud was visible from horizon to zenith. The old footmarks were all as distinct as on the day in which they had been imprinted, and the only portion of the shore where any change was apparent was in the little creek. Here the elevation of the ice had gone on increasing, until the schooner and the tartan had been uplifted to a height of 150 feet, not only rendering them quite inaccessible, but exposing them to all but certain destruction in the event of a thaw.

Isaac Hakkabut, immovable from the personal oversight of his property in the cavern, had not accompanied the party, and consequently was in blissful ignorance of the fate that threatened his vessel. "A good thing the old fellow wasn't there to see," observed Ben Zoof; "he would have screamed like a peacock. What a misfortune it is," he added, speaking to himself, "to have a peacock's voice, without its plumage!"

During the months of July and August, Gallia advanced 164,000,000 leagues along her orbit. At night the cold was still intense, but in the daytime the sun, here full upon the equator, caused an appreciable difference of 20 degrees in the temperature. Like birds, the population spent whole days exposed to its grateful warmth, rarely
returning till nightfall to the shade of their gloomy home.

This spring-time, if such it may be called, had a most enlivening influence upon all. Hope and courage revived as day by day the sun's disc expanded in the heavens, and every evening the earth assumed a greater magnitude amongst the fixed stars. It was distant yet, but the goal was cheeringly in view.

"I can't believe that yonder little speck of light contains my mountain of Montmartre," said Ben Zoof, one night, after he had been gazing long and steadily at the far-off world.

"You will, I hope, some day find out that it does," answered his master.

"I hope so," said the orderly, without moving his eye from the distant sphere. After meditating a while, he spoke again. "I suppose Professor Rosette couldn't make his comet go straight back, could he?"

"Hush!" cried Servadac.

Ben Zoof understood the correction.

"No," continued the captain; "it is not for man to disturb the order of the universe. That belongs to a Higher Power than ours!"

CHAPTER XIV. THE PROFESSOR PERPLEXED

Another month passed away, and it was now September, but it was still impossible to leave the warmth of the subterranean retreat for the more airy and commodious quarters of the Hive, where "the bees" would certainly have been frozen to death in their cells. It was altogether quite as much a matter of congratulation as of regret that the volcano showed no symptoms of resuming its activity; for although a return of the eruption might have rendered their former resort again habitable, any sudden outbreak would have been disastrous to them where they were, the crater being the sole outlet by which the burning lava could escape.

"A wretched time we have had for the last seven months," said the orderly one day to his master; "but what a comfort little Nina has been to us all!"

"Yes, indeed," replied Servadac; "she is a charming little creature. I hardly know how we should have got on without her."

"What is to become of her when we arrive back at the earth?"

"Not much fear, Ben Zoof, but that she will be well taken care of. Perhaps you and I had better adopt her."

"Ay, yes," assented the orderly. "You can be her father, and I can be her mother."

Servadac laughed. "Then you and I shall be man and wife."

"We have been as good as that for a long time," observed Ben Zoof, gravely.

By the beginning of October, the temperature had so far moderated that it could scarcely be said to be intolerable. The comet's distance was scarcely three times as great from the sun as the earth from the sun, so that the thermometer rarely sunk beyond 35 degrees below zero. The whole party began to make almost daily visits to the Hive, and frequently proceeded to the shore, where they resumed their skating exercise, rejoicing in their recovered freedom like prisoners liberated from a dungeon. Whilst the rest were enjoying their recreation, Servadac and the count would hold long conversations with Lieutenant Procope about their present position and future prospects, discussing all manner of speculations as to the results of the anticipated collision with the earth, and wondering whether any measures could be devised for mitigating the violence of a shock which might be terrible in its consequences, even if it did not entail a total annihilation of themselves.

There was no visitor to the Hive more regular than Rosette. He had already directed his telescope to be moved back to his former observatory, where, as much as the cold would permit him, he persisted in making his all-absorbing studies of the heavens.

The result of these studies no one ventured to inquire; but it became generally noticed that something was very seriously disturbing the professor's equanimity. Not only would he be seen toiling more frequently up the arduous way that lay between his nook below and his telescope above, but he would be heard muttering in an angry tone that indicated considerable agitation.

One day, as he was hurrying down to his study, he met Ben Zoof, who, secretly entertaining a feeling of delight at the professor's manifest discomfiture, made some casual remark about things not being very straight. The way in which his advance was received the good orderly never divulged, but henceforward he maintained the firm conviction that there was something very much amiss up in the sky.

To Servadac and his friends this continual disquietude and ill-humor on the part of the professor occasioned no little anxiety. From what, they asked, could his dissatisfaction arise? They could only conjecture that he had discovered some flaw in his reckonings; and if this were so, might there not be reason to apprehend that their anticipations of coming into contact with the earth, at the settled time, might all be falsified?

Day followed day, and still there was no cessation of the professor's discomposure. He was the most miserable
of mortals. If really his calculations and his observations were at variance, this, in a man of his irritable temperament, would account for his perpetual perturbation. But he entered into no explanation; he only climbed up to his telescope, looking haggard and distressed, and when compelled by the frost to retire, he would make his way back to his study more furious than ever. At times he was heard giving vent to his vexation. "Confound it! what does it mean? what is she doing? All behind! Is Newton a fool? Is the law of universal gravitation the law of universal nonsense?" And the little man would seize his head in both his hands, and tear away at the scanty locks which he could ill afford to lose.

Enough was overheard to confirm the suspicion that there was some irreconcilable discrepancy between the results of his computation and what he had actually observed; and yet, if he had been called upon to say, he would have sooner insisted that there was derangement in the laws of celestial mechanism, than have owned there was the least probability of error in any of his own calculations. Assuredly, if the poor professor had had any flesh to lose he would have withered away to a shadow.

But this state of things was before long to come to an end. On the 12th, Ben Zoof, who was hanging about outside the great hall of the cavern, heard the professor inside utter a loud cry. Hurrying in to ascertain the cause, he found Rosette in a state of perfect frenzy, in which ecstasy and rage seemed to be struggling for the predominance.

"Eureka! Eureka!" yelled the excited astronomer.

"What, in the name of peace, do you mean?" bawled Ben Zoof, in open-mouthed amazement.

"Eureka!" again shrieked the little man.

"Eureka! I say," repeated Rosette; "and if you don't understand me, you may go to the devil!"

Without availing himself of this polite invitation, Ben Zoof betook himself to his master. "Something has happened to the professor," he said; "he is rushing about like a madman, screeching and yelling 'Eureka!'"

"Eureka?" exclaimed Servadac. "That means he has made a discovery;" and, full of anxiety, he hurried off to meet the professor.

But, however great was his desire to ascertain what this discovery implied, his curiosity was not yet destined to be gratified. The professor kept muttering in incoherent phrases: "Rascal! he shall pay for it yet. I will be even with him! Cheat! Thrown me out!" But he did not vouchsafe any reply to Servadac's inquiries, and withdrew to his study.

From that day Rosette, for some reason at present incomprehensible, quite altered his behavior to Isaac Hakabut, a man for whom he had always hitherto evinced the greatest repugnance and contempt. All at once he began to show a remarkable interest in the Jew and his affairs, paying several visits to the dark little storehouse, making inquiries as to the state of business and expressing some solicitude about the state of the exchequer.

The wily Jew was taken somewhat by surprise, but came to an immediate conclusion that the professor was contemplating borrowing some money; he was consequently very cautious in all his replies.

It was not Hakabut's habit ever to advance a loan except at an extravagant rate of interest, or without demanding far more than an adequate security. Count Timascheff, a Russian nobleman, was evidently rich; to him perhaps, for a proper consideration, a loan might be made: Captain Servadac was a Gascon, and Gascons are proverbially poor; it would never do to lend any money to him; but here was a professor, a mere man of science, with circumscribed means; did he expect to borrow? Certainly Isaac would as soon think of flying, as of lending money to him. Such were the thoughts that made him receive all Rosette's approaches with a careful reservation.

It was not long, however, before Hakabut was to be called upon to apply his money to a purpose for which he had not reckoned. In his eagerness to effect sales, he had parted with all the alimentary articles in his cargo without having the precautionary prudence to reserve enough for his own consumption. Amongst other things that failed him was his stock of coffee, and as coffee was a beverage without which he deemed it impossible to exist, he found himself in considerable perplexity.

He pondered the matter over for a long time, and ultimately persuaded himself that, after all, the stores were the common property of all, and that he had as much right to a share as anyone else. Accordingly, he made his way to Ben Zoof, and, in the most amiable tone he could assume, begged as a favor that he would let him have a pound of coffee.

The orderly shook his head dubiously.

"A pound of coffee, old Nathan? I can't say."

"Why not? You have some?" said Isaac.

"Oh yes! plenty--a hundred kilogrammes."

"Then let me have one pound. I shall be grateful."

"Hang your gratitude!"

"Only one pound! You would not refuse anybody else."

"That's just the very point, old Samuel; if you were anybody else, I should know very well what to do. I must
refer the matter to his Excellency."

"Oh, his Excellency will do me justice."

"Perhaps you will find his justice rather too much for you." And with this consoling remark, the orderly went to
seek his master.

Rosette meanwhile had been listening to the conversation, and secretly rejoicing that an opportunity for which he
had been watching had arrived. "What's the matter, Master Isaac? Have you parted with all your coffee?" he asked,
in a sympathizing voice, when Ben Zoof was gone.

"Ah! yes, indeed," groaned Hakkabut, "and now I require some for my own use. In my little black hole I cannot
live without my coffee."

"Of course you cannot," agreed the professor.

"And don't you think the governor ought to let me have it?"

"No doubt."

"Oh, I must have coffee," said the Jew again.

"Certainly," the professor assented. "Coffee is nutritious; it warms the blood. How much do you want?"

"A pound. A pound will last me for a long time."

"And who will weigh it for you?" asked Rosette, scarcely able to conceal the eagerness that prompted the
question.

"Why, they will weigh it with my steelyard, of course. There is no other balance here." And as the Jew spoke,
the professor fancied he could detect the faintest of sighs.

"Good, Master Isaac; all the better for you! You will get your seven pounds instead of one!"

"Yes; well, seven, or thereabouts—thereabouts," stammered the Jew with considerable hesitation.

Rosette scanned his countenance narrowly, and was about to probe him with further questions, when Ben Zoof
returned. "And what does his Excellency say?" inquired Hakkabut.

"Why, Nehemiah, he says he shan't give you any."

"Merciful heavens!" began the Jew.

"He says he doesn't mind selling you a little."

"But, by the holy city, why does he make me pay for what anybody else could have for nothing?"

"As I told you before, you are not anybody else; so, come along. You can afford to buy what you want. We
should like to see the color of your money."

"Merciful heavens!" the old man whined once more.

"Now, none of that! Yes or no? If you are going to buy, say so at once; if not, I shall shut up shop."

Hakkabut knew well enough that the orderly was not a man to be trifled with, and said, in a tremulous voice,

"Yes, I will buy."

The professor, who had been looking on with much interest, betrayed manifest symptoms of satisfaction.

"How much do you want? What will you charge for it?" asked Isaac, mournfully, putting his hand into his
pocket and chinking his money.

"Oh, we will deal gently with you. We will not make any profit. You shall have it for the same price that we paid
for it. Ten francs a pound, you know."

The Jew hesitated.

"Come now, what is the use of your hesitating? Your gold will have no value when you go back to the world."

"What do you mean?" asked Hakkabut, startled.

"You will find out some day," answered Ben Zoof, significantly.

Hakkabut drew out a small piece of gold from his pocket, took it close under the lamp, rolled it over in his hand,
and pressed it to his lips. "Shall you weigh me the coffee with my steelyard?" he asked, in a quavering voice that
confirmed the professor's suspicions.

"There is nothing else to weigh it with; you know that well enough, old Shechem," said Ben Zoof. The steelyard
was then produced; a tray was suspended to the hook, and upon this coffee was thrown until the needle registered
the weight of one pound. Of course, it took seven pounds of coffee to do this.

"There you are! There's your coffee, man!" Ben Zoof said.

"Are you sure?" inquired Hakkabut, peering down close to the dial. "Are you quite sure that the needle touches
the point?"

"Yes; look and see."

"Give it a little push, please."

"Why?"

"Because—because—"

"Well, because of what?" cried the orderly, impatiently.
"Because I think, perhaps--I am not quite sure--perhaps the steelyard is not quite correct."

The words were not uttered before the professor, fierce as a tiger, had rushed at the Jew, had seized him by the throat, and was shaking him till he was black in the face.

"Help! help!" screamed Hakkabut. "I shall be strangled."

"Rascal! consummate rascal! thief! villain!" the professor reiterated, and continued to shake the Jew furiously.

Ben Zoof looked on and laughed, making no attempt to interfere; he had no sympathy with either of the two.

The sound of the scuffling, however, drew the attention of Servadac, who, followed by his companions, hastened to the scene. The combatants were soon parted. "What is the meaning of all this?" demanded the captain.

As soon as the professor had recovered his breath, exhausted by his exertions, he said, "The old reprobate, the rascal has cheated us! His steelyard is wrong! He is a thief!"

Captain Servadac looked sternly at Hakkabut.

"How is this, Hakkabut? Is this a fact?"

"No, no--yes--no, your Excellency, only--"

"He is a cheat, a thief!" roared the excited astronomer. "His weights deceive!"

"Stop, stop!" interposed Servadac; "let us hear. Tell me, Hakkabut--"

"The steelyard lies! It cheats! it lies!" roared the irrepressible Rosette.

"Tell me, Hakkabut, I say," repeated Servadac.

The Jew only kept on stammering, "Yes--no--I don't know."

But heedless of any interruption, the professor continued, "False weights! That confounded steelyard! It gave a false result! The mass was wrong! The observations contradicted the calculations; they were wrong! She was out of place! Yes, out of place entirely."

"What!" cried Servadac and Procope in a breath, "out of place?"

"Yes, completely," said the professor.

"Gallia out of place?" repeated Servadac, agitated with alarm.

"I did not say Gallia," replied Rosette, stamping his foot impetuously; "I said Nerina."

"Gallia, of course, is on her way to the earth. I told you so. But that Jew is a rascal!"

CHAPTER XV. A JOURNEY AND A DISAPPOINTMENT

It was as the professor had said. From the day that Isaac Hakkabut had entered upon his mercantile career, his dealings had all been carried on by a system of false weight. That deceitful steelyard had been the mainspring of his fortune. But when it had become his lot to be the purchaser instead of the vendor, his spirit had groaned within him at being compelled to reap the fruits of his own dishonesty. No one who had studied his character could be much surprised at the confession that was extorted from him, that for every supposed kilogramme that he had ever sold the true weight was only 750 grammes, or just five and twenty per cent. less than it ought to have been.

The professor, however, had ascertained all that he wanted to know. By estimating his comet at a third as much again as its proper weight, he had found that his calculations were always at variance with the observed situation of the satellite, which was immediately influenced by the mass of its primary.

But now, besides enjoying the satisfaction of having punished old Hakkabut, Rosette was able to recommence his calculations with reference to the elements of Nerina upon a correct basis, a task to which he devoted himself with redoubled energy.

It will be easily imagined that Isaac Hakkabut, thus caught in his own trap, was jeered most unmercifully by those whom he had attempted to make his dupes. Ben Zoof, in particular, was never wearied of telling him how on his return to the world he would be prosecuted for using false weights, and would certainly become acquainted with the inside of a prison. Thus badgered, he secluded himself more than ever in his dismal hole, never venturing, except when absolutely obliged, to face the other members of the community.

On the 7th of October the comet re-entered the zone of the telescopic planets, one of which had been captured as a satellite, and the origin of the whole of which is most probably correctly attributed to the disintegration of some large planet that formerly revolved between the orbits of Mars and Jupiter. By the beginning of the following month half of this zone had been traversed, and only two months remained before the collision with the earth was to be expected. The temperature was now rarely below 12 degrees below zero, but that was far too cold to permit the slightest symptoms of a thaw. The surface of the sea remained as frozen as ever, and the two vessels, high up on their icy pedestals, remained unaltered in their critical position.

It was about this time that the question began to be mooted whether it would not be right to reopen some communication with the Englishmen at Gibraltar. Not that any doubt was entertained as to their having been able
successfully to cope with the rigors of the winter; but Captain Servadac, in a way that did honor to his generosity, represented that, however uncourteous might have been their former behavior, it was at least due to them that they should be informed of the true condition of things, which they had had no opportunity of learning; and, moreover, that they should be invited to co-operate with the population of Nina's Hive, in the event of any measures being suggested by which the shock of the approaching collision could be mitigated.

The count and the lieutenant both heartily concurred in Servadac's sentiments of humanity and prudence, and all agreed that if the intercourse were to be opened at all, no time could be so suitable as the present, while the surface of the sea presented a smooth and solid footing. After a thaw should set in, neither the yacht nor the tartan could be reckoned on for service, and it would be inexpedient to make use of the steam launch, for which only a few tons of coal had been reserved, just sufficient to convey them to Gourbi Island when the occasion should arise; whilst as to the yawl, which, transformed into a sledge, had performed so successful a trip to Formentera, the absence of wind would make that quite unavailable. It was true that with the return of summer temperature, there would be certain to be a derangement in the atmosphere of Gallia, which would result in wind, but for the present the air was altogether too still for the yawl to have any prospects of making its way to Gibraltar.

The only question remaining was as to the possibility of going on foot. The distance was somewhere about 240 miles. Captain Servadac declared himself quite equal to the undertaking. To skate sixty or seventy miles a day would be nothing, he said, to a practical skater like himself. The whole journey there and back might be performed in eight days. Provided with a compass, a sufficient supply of cold meat, and a spirit lamp, by which he might boil his coffee, he was perfectly sure he should, without the least difficulty, accomplish an enterprise that chimed in so exactly with his adventurous spirit.

Equally urgent were both the count and the lieutenant to be allowed to accompany him; nay, they even offered to go instead; but Servadac, expressing himself as most grateful for their consideration, declined their offer, and avowed his resolution of taking no other companion than his own orderly.

Highly delighted at his master's decision, Ben Zoof expressed his satisfaction at the prospect of "stretching his legs a bit," declaring that nothing could induce him to permit the captain to go alone. There was no delay. The departure was fixed for the following morning, the 2nd of November.

Although it is not to be questioned that a genuine desire of doing an act of kindness to his fellow-creatures was a leading motive of Servadac's proposed visit to Gibraltar, it must be owned that another idea, confided to nobody, least of all to Count Timascheff, had been conceived in the brain of the worthy Gascon. Ben Zoof had an inkling that his master was "up to some other little game," when, just before starting, he asked him privately whether there was a French tricolor among the stores. "I believe so," said the orderly.

"Then don't say a word to anyone, but fasten it up tight in your knapsack."

Ben Zoof found the flag, and folded it up as he was directed. Before proceeding to explain this somewhat enigmatical conduct of Servadac, it is necessary to refer to a certain physiological fact, coincident but unconnected with celestial phenomena, originating entirely in the frailty of human nature. The nearer that Gallia approached the earth, the more a sort of reserve began to spring up between the captain and Count Timascheff. Though they could not be said to be conscious of it, the remembrance of their former rivalry, so completely buried in oblivion for the last year and ten months, was insensibly recovering its hold upon their minds, and the question was all but coming to the surface as to what would happen if, on their return to earth, the handsome Madame de L---- should still be free. From companions in peril, would they not again be avowed rivals? Conceal it as they would, a coolness was undeniably stealing over an intimacy which, though it could never be called affectionate, had been uniformly friendly and courteous.

Under these circumstances, it was not surprising that Hector Servadac should not have confided to the count a project which, wild as it was, could scarcely have failed to widen the unacknowledged breach that was opening in their friendship.

The project was the annexation of Ceuta to the French dominion. The Englishmen, rightly enough, had continued to occupy the fragment of Gibraltar, and their claim was indisputable. But the island of Ceuta, which before the shock had commanded the opposite side of the strait, and had been occupied by Spaniards, had since been abandoned, and was therefore free to the first occupant who should lay claim to it. To plant the tricolor upon it, in the name of France, was now the cherished wish of Servadac's heart.

"Who knows," he said to himself, "whether Ceuta, on its return to earth, may not occupy a grand and commanding situation? What a proud thing it would be to have secured its possession to France!"

Next morning, as soon as they had taken their brief farewell of their friends, and were fairly out of sight of the shore, Servadac imparted his design to Ben Zoof, who entered into the project with the greatest zest, and expressed himself delighted, not only at the prospect of adding to the dominions of his beloved country, but of stealing a march upon England.
Both travelers were warmly clad, the orderly’s knapsack containing all the necessary provisions. The journey was accomplished without special incident; halts were made at regular intervals, for the purpose of taking food and rest. The temperature by night as well as by day was quite endurable, and on the fourth afternoon after starting, thanks to the straight course which their compass enabled them to maintain, the adventurers found themselves within a few miles of Ceuta.

As soon as Ben Zoof caught sight of the rock on the western horizon, he was all excitement. Just as if he were in a regiment going into action, he talked wildly about “columns” and “squares” and “charges.” The captain, although less demonstrative, was hardly less eager to reach the rock. They both pushed forward with all possible speed till they were within a mile and a half of the shore, when Ben Zoof, who had a very keen vision, stopped suddenly, and said that he was sure he could see something moving on the top of the island.

“Never mind, let us hasten on,” said Servadac. A few minutes carried them over another mile, when Ben Zoof stopped again.

“What is it, Ben Zoof?” asked the captain.

“It looks to me like a man on a rock, waving his arms in the air,” said the orderly.

“Plague on it!” muttered Servadac; “I hope we are not too late.” Again they went on; but soon Ben Zoof stopped for the third time.

“It is a semaphore, sir; I see it quite distinctly.” And he was not mistaken; it had been a telegraph in motion that had caught his eye.

“Plague on it!” repeated the captain.

“Too late, sir, do you think?” said Ben Zoof.

“Yes, Ben Zoof; if that’s a telegraph—and there is no doubt of it—somebody has been before us and erected it; and, moreover, if it is moving, there must be somebody working it now.”

He was keenly disappointed. Looking towards the north, he could distinguish Gibraltar faintly visible in the extreme distance, and upon the summit of the rock both Ben Zoof and himself fancied they could make out another semaphore, giving signals, no doubt, in response to the one here.

“Yes, it is only too clear; they have already occupied it, and established their communications,” said Servadac.

“And what are we to do, then?” asked Ben Zoof.

“We must pocket our chagrin, and put as good a face on the matter as we can,” replied the captain.

“But perhaps there are only four or five Englishmen to protect the place,” said Ben Zoof, as if meditating an assault.

“No, no, Ben Zoof,” answered Servadac; “we must do nothing rash. We have had our warning, and, unless our representations can induce them to yield their position, we must resign our hope.”

Thus discomfited, they had reached the foot of the rock, when all at once, like a “Jack-in-the-box,” a sentinel started up before them with the challenge:

“Who goes there?”

“Friends. Vive la France!” cried the captain.

“Hurrah for England!” replied the soldier.

By this time four other men had made their appearance from the upper part of the rock.

“What do you want?” asked one of them, whom Servadac remembered to have seen before at Gibraltar.

“Can I speak to your commanding officer?” Servadac inquired.

“Which?” said the man. “The officer in command of Ceuta?”

“Yes, if there is one.”

“I will acquaint him with your arrival,” answered the Englishman, and disappeared.

In a few minutes the commanding officer, attired in full uniform, was seen descending to the shore. It was Major Oliphant himself.

Servadac could no longer entertain a doubt that the Englishmen had forestalled him in the occupation of Ceuta. Provisions and fuel had evidently been conveyed thither in the boat from Gibraltar before the sea had frozen, and a solid casemate, hollowed in the rock, had afforded Major Oliphant and his contingent ample protection from the rigor of the winter. The ascending smoke that rose above the rock was sufficient evidence that good fires were still kept up; the soldiers appeared to have thriven well on what, no doubt, had been a generous diet, and the major himself, although he would scarcely have been willing to allow it, was slightly stouter than before.

Being only about twelve miles distant from Gibraltar, the little garrison at Ceuta had felt itself by no means isolated in its position; but by frequent excursions across the frozen strait, and by the constant use of the telegraph, had kept up their communication with their fellow-countrymen on the other island. Colonel Murphy and the major had not even been forced to forego the pleasures of the chessboard. The game that had been interrupted by Captain Servadac’s former visit was not yet concluded; but, like the two American clubs that played their celebrated game in...
1846 between Washington and Baltimore, the two gallant officers made use of the semaphore to communicate their well-digested moves.

The major stood waiting for his visitor to speak.
"Major Oliphant, I believe?" said Servadac, with a courteous bow.
"Yes, sir, Major Oliphant, officer in command of the garrison at Ceuta," was the Englishman's reply. "And to whom," he added, "may I have the honor of speaking?"
"To Captain Servadac, the governor general of Gallia."
"Indeed!" said the major, with a supercilious look.
"Allow me to express my surprise," resumed the captain, "at seeing you installed as commanding officer upon what I have always understood to be Spanish soil. May I demand your claim to your position?"
"My claim is that of first occupant."
"But do you not think that the party of Spaniards now resident with me may at some future time assert a prior right to the proprietorship?"
"I think not, Captain Servadac."
"But why not?" persisted the captain.
"Because these very Spaniards have, by formal contract, made over Ceuta, in its integrity, to the British government."
Servadac uttered an exclamation of surprise.
"And as the price of that important cession," continued Major Oliphant, "they have received a fair equivalent in British gold."
"Ah!" cried Ben Zoof, "that accounts for that fellow Negrete and his people having such a lot of money."
Servadac was silent. It had become clear to his mind what had been the object of that secret visit to Ceuta which he had heard of as being made by the two English officers. The arguments that he had intended to use had completely fallen through; all that he had now to do was carefully to prevent any suspicion of his disappointed project.

"May I be allowed to ask, Captain Servadac, to what I am indebted for the honor of this visit?" asked Major Oliphant presently.
"I have come, Major Oliphant, in the hope of doing you and your companions a service," replied Servadac, rousing himself from his reverie.
"Ah, indeed!" replied the major, as though he felt himself quite independent of all services from exterior sources.
"I thought, major, that it was not unlikely you were in ignorance of the fact that both Ceuta and Gibraltar have been traversing the solar regions on the surface of a comet."
The major smiled incredulously; but Servadac, nothing daunted, went on to detail the results of the collision between the comet and the earth, adding that, as there was the almost immediate prospect of another concussion, it had occurred to him that it might be advisable for the whole population of Gallia to unite in taking precautionary measures for the common welfare.

"In fact, Major Oliphant," he said in conclusion, "I am here to inquire whether you and your friends would be disposed to join us in our present quarters."
"I am obliged to you, Captain Servadac," answered the major stiffly; "but we have not the slightest intention of abandoning our post. We have received no government orders to that effect; indeed, we have received no orders at all. Our own dispatch to the First Lord of the Admiralty still awaits the mail."
"But allow me to repeat," insisted Servadac, "that we are no longer on the earth, although we expect to come in contact with it again in about eight weeks."
"I have no doubt," the major answered, "that England will make every effort to reclaim us."
Servadac felt perplexed. It was quite evident that Major Oliphant had not been convinced of the truth of one syllable of what he had been saying.
"Then I am to understand that you are determined to retain your two garrisons here and at Gibraltar?" asked Servadac, with one last effort at persuasion.
"Certainly; these two posts command the entrance of the Mediterranean."
"But supposing there is no longer any Mediterranean?" retorted the captain, growing impatient.
"Oh, England will always take care of that," was Major Oliphant's cool reply. "But excuse me," he added presently; "I see that Colonel Murphy has just telegraphed his next move. Allow me to wish you good-afternoon."
And without further parley, followed by his soldiers, he retired into the casemate, leaving Captain Servadac gnawing his mustache with mingled rage and mortification.
"A fine piece of business we have made of this!" said Ben Zoof, when he found himself alone with his master.
"We will make our way back at once," replied Captain Servadac.
"Yes, the sooner the better, with our tails between our legs," rejoined the orderly, who this time felt no inclination to start off to the march of the Algerian zephyrs. And so the French tricolor returned as it had set out—in Ben Zoof's knapsack.

On the eighth evening after starting, the travelers again set foot on the volcanic promontory just in time to witness a great commotion.

Palmyrin Rosette was in a furious rage. He had completed all his calculations about Nerina, but that perfidious satellite had totally disappeared. The astronomer was frantic at the loss of his moon. Captured probably by some larger body, it was revolving in its proper zone of the minor planets.

CHAPTER XVI. A BOLD PROPOSITION

On his return Servadac communicated to the count the result of his expedition, and, though perfectly silent on the subject of his personal project, did not conceal the fact that the Spaniards, without the smallest right, had sold Ceuta to the English.

Having refused to quit their post, the Englishmen had virtually excluded themselves from any further consideration; they had had their warning, and must now take the consequences of their own incredulity.

Although it had proved that not a single creature either at Gourbi Island, Gibraltar, Ceuta, Madalena, or Formentera had received any injury whatever at the time of the first concussion, there was nothing in the least to make it certain that a like immunity from harm would attend the second. The previous escape was doubtless owing to some slight, though unaccountable, modification in the rate of motion; but whether the inhabitants of the earth had fared so fortunately, was a question that had still to be determined.

The day following Servadac's return, he and the count and Lieutenant Procope met by agreement in the cave, formally to discuss what would be the most advisable method of proceeding under their present prospects. Ben Zoof was, as a matter of course, allowed to be present, and Professor Rosette had been asked to attend; but he declined on the plea of taking no interest in the matter. Indeed, the disappearance of his moon had utterly disconcerted him, and the probability that he should soon lose his comet also, plunged him into an excess of grief which he preferred to bear in solitude.

Although the barrier of cool reserve was secretly increasing between the captain and the count, they scrupulously concealed any outward token of their inner feelings, and without any personal bias applied their best energies to the discussion of the question which was of such mutual, nay, of such universal interest.

Servadac was the first to speak. "In fifty-one days, if Professor Rosette has made no error in his calculations, there is to be a recurrence of collision between this comet and the earth. The inquiry that we have now to make is whether we are prepared for the coming shock. I ask myself, and I ask you, whether it is in our power, by any means, to avert the evil consequences that are only too likely to follow?"

Count Timaschef, in a voice that seemed to thrill with solemnity, said: "In such events we are at the disposal of an over-ruling Providence; human precautions cannot sway the Divine will."

"But with the most profound reverence for the will of Providence," replied the captain, "I beg to submit that it is our duty to devise whatever means we can to escape the threatening mischief. Heaven helps them that help themselves."

"And what means have you to suggest, may I ask?" said the count, with a faint accent of satire.

Servadac was forced to acknowledge that nothing tangible had hitherto presented itself to his mind.

"I don't want to intrude," observed Ben Zoof, "but I don't understand why such learned gentlemen as you cannot make the comet go where you want it to go."

"You are mistaken, Ben Zoof, about our learning," said the captain; "even Professor Rosette, with all his learning, has not a shadow of power to prevent the comet and the earth from knocking against each other."

"Then I cannot see what is the use of all this learning," the orderly replied.

"One great use of learning," said Count Timaschef with a smile, "is to make us know our own ignorance."

While this conversation had been going on, Lieutenant Procope had been sitting in thoughtful silence. Looking up, he now said, "Incident to this expected shock, there may be a variety of dangers. If, gentlemen, you will allow me, I will enumerate them; and we shall, perhaps, by taking them _seriatim_, be in a better position to judge whether we can successfully grapple with them, or in any way mitigate their consequences."

There was a general attitude of attention. It was surprising how calmly they proceeded to discuss the circumstances that looked so threatening and ominous.

"First of all," resumed the lieutenant, "we will specify the different ways in which the shock may happen."

"And the prime fact to be remembered," interposed Servadac, "is that the combined velocity of the two bodies will be about 21,000 miles an hour."
"Express speed, and no mistake!" muttered Ben Zoof.

"Just so," assented Procope. "Now, the two bodies may impinge either directly or obliquely. If the impact is sufficiently oblique, Gallia may do precisely what she did before: she may graze the earth; she may, or she may not, carry off a portion of the earth's atmosphere and substance, and so she may float away again into space; but her orbit would undoubtedly be deranged, and if we survive the shock, we shall have small chance of ever returning to the world of our fellow-creatures."

"Professor Rosette, I suppose," Ben Zoof remarked, "would pretty soon find out all about that."

"But we will leave this hypothesis," said the lieutenant; "our own experience has sufficiently shown us its advantages and its disadvantages. We will proceed to consider the infinitely more serious alternative of direct impact; of a shock that would hurl the comet straight on to the earth, to which it would become attached."

"A great wart upon her face!" said Ben Zoof, laughing.

The captain held up his finger to his orderly, making him understand that he should hold his tongue.

"It is, I presume, to be taken for granted," continued Lieutenant Procope, "that the mass of the earth is comparatively so large that, in the event of a direct collision, her own motion would not be sensibly retarded, and that she would carry the comet along with her, as part of herself."

"Very little question of that, I should think," said Servadac.

"Well, then," the lieutenant went on, "what part of this comet of ours will be the part to come into collision with the earth? It may be the equator, where we are; it may be at the exactly opposite point, at our antipodes; or it may be at either pole. In any case, it seems hard to foresee whence there is to come the faintest chance of deliverance."

"Is the case so desperate?" asked Servadac.

"I will tell you why it seems so. If the side of the comet on which we are resident impinges on the earth, it stands to reason that we must be crushed to atoms by the violence of the concussion."

"Regular mincemeat!" said Ben Zoof, whom no admonitions could quite reduce to silence.

"And if," said the lieutenant, after a moment's pause, and the slightest possible frown at the interruption--"and if the collision should occur at our antipodes, the sudden check to the velocity of the comet would be quite equivalent to a shock _in situ_; and, another thing, we should run the risk of being suffocated, for all our comet's atmosphere would be assimilated with the terrestrial atmosphere, and we, supposing we were not dashed to atoms, should be left as it were upon the summit of an enormous mountain (for such to all intents and purposes Gallia would be), 450 miles above the level of the surface of the globe, without a particle of air to breathe."

"But would not our chances of escape be considerably better," asked Count Timascheff, "in the event of either of the comet's poles being the point of contact?"

"Taking the combined velocity into account," answered the lieutenant, "I confess that I fear the violence of the shock will be too great to permit our destruction to be averted."

A general silence ensued, which was broken by the lieutenant himself. "Even if none of these contingencies occur in the way we have contemplated, I am driven to the suspicion that we shall be burnt alive."

"Burnt alive!" they all exclaimed in a chorus of horror.

"Yes. If the deductions of modern science be true, the speed of the comet, when suddenly checked, will be transmuted into heat, and that heat will be so intense that the temperature of the comet will be raised to some millions of degrees."

No one having anything definite to allege in reply to Lieutenant Procope's forebodings, they all relapsed into silence. Presently Ben Zoof asked whether it was not possible for the comet to fall into the middle of the Atlantic.

Procope shook his head. "Even so, we should only be adding the fate of drowning to the list of our other perils."

"Then, as I understand," said Captain Servadac, "in whatever way or in whatever place the concussion occurs, we must be either crushed, suffocated, roasted, or drowned. Is that your conclusion, lieutenant?"

"I confess I see no other alternative," answered Procope, calmly.

"But isn't there another thing to be done?" said Ben Zoof.

"What do you mean?" his master asked.

"Why, to get off the comet before the shock comes."

"How could you get off Gallia?"

"That I can't say," replied the orderly.

"I am not sure that that could not be accomplished," said the lieutenant.

All eyes in a moment were riveted upon him, as, with his head resting on his hands, he was manifestly cogitating a new idea. "Yes, I think it could be accomplished," he repeated. "The project may appear extravagant, but I do not know why it should be impossible. Ben Zoof has hit the right nail on the head; we must try and leave Gallia before the shock."

"Leave Gallia! How?" said Count Timascheff.
A thaw had now fairly set in. The breaking up of the frozen ocean was a magnificent spectacle, and "the great voice of the sea," as the whalers graphically describe it, was heard in all its solemnity. Light vapors gathered on the horizon, and clouds were formed and carried rapidly along by breezes to which the Gallian atmosphere had long been unaccustomed. All these were of the snow continued, into torrents or cascades. Light vapors gathered on the horizon, and clouds were formed and to trickle down the declivities of the mountain and along the shelving shore, only to be transformed, as the melting voice of the sea," as the whalers graphically describe it, was heard in all its solemnity. Little streams of water began month, at the close of which it was not more than 78,000,000 leagues from the sun.

"I have thought of that. We must cut it out of the sails of the _Dobryna_; they are both light and strong," rejoined the lieutenant. Count Timascheff complimented the lieutenant upon his ingenuity, and Ben Zoof could not resist bringing the meeting to a conclusion by a ringing cheer.

"Ah, a fire-balloon! A montgolfier!" cried Servadac. "But what are you going to do for a casing?"

"Only, remember," continued Procope, "there are many chances to one against our success. One instant's obstruction and stoppage in our passage, and our balloon is burnt to ashes. Still, reluctant as I am to acknowledge it, I confess that I feel our sole hope of safety rests in our getting free from this comet."

"Listen to me," replied Procope. "Perhaps I can convince you that my idea is not so chimerical as you imagine." And, knitting his brow, he proceeded to establish the feasibility of his plan. "If we can ascertain the precise moment when the shock is to happen, and can succeed in launching ourselves a sufficient time beforehand into Gallia's atmosphere, I believe it will transpire that this atmosphere will amalgamate with that of the earth, and that a balloon whirled along by the combined velocity would glide into the mingled atmosphere and remain suspended in mid-air until the shock of the collision is overpast."

Count Timascheff reflected for a minute, and said, "I think, lieutenant, I understand your project. The scheme seems tenable; and I shall be ready to co-operate with you, to the best of my power, in putting it into execution."

"But have we hydrogen enough to inflate a balloon?" asked the count.

"Hot air will be all that we shall require," the lieutenant answered; "we are only contemplating about an hour's journey."

"Ah, a fire-balloon! A montgolfier!" cried Servadac. "But what are you going to do for a casing?"

"I have thought of that. We must cut it out of the sails of the _Dobryna_; they are both light and strong," rejoined the lieutenant. Count Timascheff complimented the lieutenant upon his ingenuity, and Ben Zoof could not resist bringing the meeting to a conclusion by a ringing cheer.

Truly daring was the plan of which Lieutenant Procope had thus become the originator; but the very existence of them all was at stake, and the design must be executed resolutely. For the success of the enterprise it was absolutely necessary to know, almost to a minute, the precise time at which the collision would occur, and Captain Servadac undertook the task, by gentle means or by stern, of extracting the secret from the professor.

To Lieutenant Procope himself was entrusted the superintendence of the construction of the montgolfier, and the work was begun at once. It was to be large enough to carry the whole of the twenty-three residents in the volcano, and, in order to provide the means of floating aloft long enough to give time for selecting a proper place for descent, the lieutenant was anxious to make it carry enough hay or straw to maintain combustion for a while, and keep up the necessary supply of heated air.

The sails of the _Dobryna_, which had all been carefully stowed away in the Hive, were of a texture unusually close, and quite capable of being made airtight by means of a varnish, the ingredients of which were rummaged out of the promiscuous stores of the tartan. The lieutenant himself traced out the pattern and cut out the strips, and all hands were employed in seaming them together. It was hardly the work for little fingers, but Nina persisted in accomplishing her own share of it. The Russians were quite at home at occupation of this sort, and having initiated the Spaniards into its mysteries, the task of joining together the casing was soon complete. Isaac Hakkabut and the professor were the only two members of the community who took no part in this somewhat tedious proceeding.

A month passed away, but Servadac found no opportunity of getting at the information he had pledged himself to gain. On the sole occasion when he had ventured to broach the subject with the astronomer, he had received for answer that as there was no hurry to get back to the earth, there need be no concern about any dangers of transit.

Indeed, as time passed on, the professor seemed to become more and more inaccessible. A pleasant temperature enabled him to live entirely in his observatory, from which intruders were rigidly shut out. But Servadac bided his time. He grew more and more impressed with the importance of finding out the exact moment at which the impact would take place, but was content to wait for a promising opportunity to put any fresh questions on the subject to the too reticent astronomer.

Meanwhile, the earth's disc was daily increasing in magnitude; the comet traveled 50,000,000 leagues during the month, at the close of which it was not more than 78,000,000 leagues from the sun.

A thaw had now fairly set in. The breaking up of the frozen ocean was a magnificent spectacle, and "the great voice of the sea," as the whalers graphically describe it, was heard in all its solemnity. Little streams of water began to trickle down the declivities of the mountain and along the shelving shore, only to be transformed, as the melting of the snow continued, into torrents or cascades. Light vapors gathered on the horizon, and clouds were formed and carried rapidly along by breezes to which the Gallian atmosphere had long been unaccustomed. All these were doubtless but the prelude to atmospheric disturbances of a more startling character; but as indications of returning
spring, they were greeted with a welcome which no apprehensions for the future could prevent being glad and hearty.

A double disaster was the inevitable consequence of the thaw. Both the schooner and the tartan were entirely destroyed. The basement of the icy pedestal on which the ships had been upheaved was gradually undermined, like the icebergs of the Arctic Ocean, by warm currents of water, and on the night of the 12th the huge block collapsed _en masse_, so that on the following morning nothing remained of the _Dobryna_ and the _Hansa_ except the fragments scattered on the shore.

Although certainly expected, the catastrophe could not fail to cause a sense of general depression. Well-nigh one of their last ties to Mother Earth had been broken; the ships were gone, and they had only a balloon to replace them!

To describe Isaac Hakkabut's rage at the destruction of the tartan would be impossible. His oaths were simply dreadful; his imprecations on the accursed race were full of wrath. He swore that Servadac and his people were responsible for his loss; he vowed that they should be sued and made to pay him damages; he asserted that he had been brought from Gourbi Island only to be plundered; in fact, he became so intolerably abusive, that Servadac threatened to put him into irons unless he conducted himself properly; whereupon the Jew, finding that the captain was in earnest, and would not hesitate to carry the threat into effect, was fain to hold his tongue, and slunk back into his dim hole.

By the 14th the balloon was finished, and, carefully sewn and well varnished as it had been, it was really a very substantial structure. It was covered with a network that had been made from the light rigging of the yacht, and the car, composed of wicker-work that had formed partitions in the hold of the _Hansa_, was quite commodious enough to hold the twenty-three passengers it was intended to convey. No thought had been bestowed upon comfort or convenience, as the ascent was to last for so short a time, merely long enough for making the transit from atmosphere to atmosphere.

The necessity was becoming more and more urgent to get at the true hour of the approaching contact, but the professor seemed to grow more obstinate than ever in his resolution to keep his secret.

On the 15th the comet crossed the orbit of Mars, at the safe distance of 56,000,000 leagues; but during that night the community thought that their last hour had taken them unawares. The volcano rocked and trembled with the convulsions of internal disturbance, and Servadac and his companions, convinced that the mountain was doomed to some sudden disruption, rushed into the open air.

The first object that caught their attention as they emerged upon the open rocks was the unfortunate professor, who was scrambling down the mountain-side, piteously displaying a fragment of his shattered telescope.

It was no time for condolence.

A new marvel arrested every eye. A fresh satellite, in the gloom of night, was shining conspicuously before them. That satellite was a part of Gallia itself!

By the expansive action of the inner heat, Gallia, like Gambart's comet, had been severed in twain; an enormous fragment had been detached and launched into space! The fragment included Ceuta and Gibraltar, with the two English garrisons!

CHAPTER XVII. THE VENTURE MADE

What would be the consequences of this sudden and complete disruption, Servadac and his people hardly dared to think.

The first change that came under their observation was the rapidity of the sun's appearances and disappearances, forcing them to the conviction that although the comet still rotated on its axis from east to west, yet the period of its rotation had been diminished by about one-half. Only six hours instead of twelve elapsed between sunrise and sunset; three hours after rising in the west the sun was sinking again in the east.

"We are coming to something!" exclaimed Servadac. "We have got a year of something like 2,880 days."

"I shouldn't think it would be an easy matter to find saints enough for such a calendar as that!" said Ben Zoof.

Servadac laughed, and remarked that they should have the professor talking about the 238th of June, and the 325th of December.

It soon became evident that the detached portion was not revolving round the comet, but was gradually retreating into space. Whether it had carried with it any portion of atmosphere, whether it possessed any other condition for supporting life, and whether it was likely ever again to approach to the earth, were all questions that there were no means of determining. For themselves the all-important problem was---what effect would the rending asunder of the comet have upon its rate of progress? and as they were already conscious of a further increase of muscular power, and a fresh diminution of specific gravity, Servadac and his associates could not but wonder whether the alteration
in the mass of the comet would not result in its missing the expected coincidence with the earth altogether.

Although he professed himself incompetent to pronounce a decided opinion, Lieutenant Procope manifestly inclined to the belief that no alteration would ensue in the rate of Gallia's velocity; but Rosette, no doubt, could answer the question directly, and the time had now arrived in which he must be compelled to divulge the precise moment of collision.

But the professor was in the worst of tempers. Generally taciturn and morose, he was more than usually uncivil whenever any one ventured to speak to him. The loss of his telescope had doubtless a great deal to do with his ill-humor; but the captain drew the most favorable conclusions from Rosette's continued irritation. Had the comet been in any way projected from its course, so as to be likely to fail in coming into contact with the earth, the professor would have been quite unable to conceal his satisfaction. But they required to know more than the general truth, and felt that they had no time to lose in getting at the exact details.

The opportunity that was wanted soon came.

On the 18th, Rosette was overheard in furious altercation with Ben Zoof. The orderly had been taunting the astronomer with the mutilation of his little comet. A fine thing, he said, to split in two like a child's toy. It had cracked like a dry nut; and mightn't one as well live upon an exploding bomb?--with much more to the same effect. The professor, by way of retaliation, had commenced sneering at the "prodigious" mountain of Montmartre, and the dispute was beginning to look serious when Servadac entered.

Thinking he could turn the wrangling to some good account, so as to arrive at the information he was so anxiously seeking, the captain pretended to espouse the views of his orderly; he consequently brought upon himself the full force of the professor's wrath.

Rosette's language became more and more violent, till Servadac, feigning to be provoked beyond endurance, cried:

"You forget, sir, that you are addressing the Governor-General of Gallia."
"Governor-General! humbug!" roared Rosette. "Gallia is my comet!"
"I deny it," said Servadac. "Gallia has lost its chance of getting back to the earth. Gallia has nothing to do with you. Gallia is mine; and you must submit to the government which I please to ordain."
"And who told you that Gallia is not going back to the earth?" asked the professor, with a look of withering scorn.
"Why, isn't her mass diminished? Isn't she split in half? Isn't her velocity all altered?" demanded the captain.
"And pray who told you this?" again said the professor, with a sneer.
"Everybody. Everybody knows it, of course," replied Servadac.
"Everybody is very clever. And you always were a very clever scholar too. We remember that of old, don't we?"
"Sire!"
"You nearly mastered the first elements of science, didn't you?"
"Sire!"
"A credit to your class!"
"Hold your tongue, sire!" bellowed the captain again, as if his anger was uncontrollable.
"Not I," said the professor.
"Hold your tongue!" repeated Servadac.
"Just because the mass is altered you think the velocity is altered?"
"Hold your tongue!" cried the captain, louder than ever.
"What has mass to do with the orbit? Of how many comets do you know the mass, and yet you know their movements? Ignorance!" shouted Rosette.
"Insolence!" retorted Servadac.

Ben Zoof, really thinking that his master was angry, made a threatening movement towards the professor.
"Touch me if you dare!" screamed Rosette, drawing himself up to the fullest height his diminutive figure would allow. "You shall answer for your conduct before a court of justice!"
"Where? On Gallia?" asked the captain.
"No; on the earth."
"The earth! Pshaw! You know we shall never get there; our velocity is changed."
"On the earth," repeated the professor, with decision.
"Trash!" cried Ben Zoof. "The earth will be too far off!"
"Not too far off for us to come across her orbit at 42 minutes and 35.6 seconds past two o'clock on the morning of this coming 1st of January."
"Thanks, my dear professor--many thanks. You have given me all the information I required;" and, with a low bow and a gracious smile, the captain withdrew. The orderly made an equally polite bow, and followed his master.
The professor, completely nonplussed, was left alone.

Thirteen days, then—twenty-six of the original Gallian days, fifty-two of the present—was all the time for preparation that now remained. Every preliminary arrangement was hurried on with the greatest earnestness.

There was a general eagerness to be quit of Gallia. Indifferent to the dangers that must necessarily attend a balloon ascent under such unparalleled circumstances, and heedless of Lieutenant Procope's warning that the slightest check in their progress would result in instantaneous combustion, they all seemed to conclude that it must be the simplest thing possible to glide from one atmosphere to another, so that they were quite sanguine as to the successful issue of their enterprise. Captain Servadac made a point of showing himself quite enthusiastic in his anticipations, and to Ben Zoof the going up in a balloon was the supreme height of his ambition. The count and the lieutenant, of colder and less demonstrative temperament, alike seemed to realize the possible perils of the undertaking, but even they were determined to put a bold face upon every difficulty.

The sea had now become navigable, and three voyages were made to Gourbi Island in the steam launch, consuming the last of their little reserve of coal.

The first voyage had been made by Servadac with several of the sailors. They found the gourbi and the adjacent building quite uninjured by the severity of the winter; numbers of little rivulets intersected the pasture-land; new plants were springing up under the influence of the equatorial sun, and the luxuriant foliage was tenanted by the birds which had flown back from the volcano. Summer had almost abruptly succeeded to winter, and the days, though only three hours long, were intensely hot.

Another of the voyages to the island had been to collect the dry grass and straw which was necessary for inflating the balloon. Had the balloon been less cumbersome it would have been conveyed to the island, whence the start would have been effected; but as it was, it was more convenient to bring the combustible material to the balloon.

The last of the coal having been consumed, the fragments of the shipwrecked vessels had to be used day by day for fuel. Hakkabut began making a great hubbub when he found that they were burning some of the spars of the _Hansa_; but he was effectually silenced by Ben Zoof, who told him that if he made any more fuss, he should be compelled to pay 50,000 francs for a balloon-ticket, or else he should be left behind.

By Christmas Day everything was in readiness for immediate departure. The festival was observed with a solemnity still more marked than the anniversary of the preceding year. Every one looked forward to spending New Year's Day in another sphere altogether, and Ben Zoof had already promised Pablo and Nina all sorts of New Year's gifts.

It may seem strange, but the nearer the critical moment approached, the less Hector Servadac and Count Timascheff had to say to each other on the subject. Their mutual reserve became more apparent; the experiences of the last two years were fading from their minds like a dream; and the fair image that had been the cause of their original rivalry was ever rising, as a vision, between them.

The captain's thoughts began to turn to his unfinished rondo; in his leisure moments, rhymes suitable and unsuitable, possible and impossible, were perpetually jingling in his imagination. He labored under the conviction that he had a work of genius to complete. A poet he had left the earth, and a poet he must return.

Count Timascheff's desire to return to the world was quite equaled by Lieutenant Procope's. The Russian sailors' only thought was to follow their master, wherever he went. The Spaniards, though they would have been unconcerned to know that they were to remain upon Gallia, were nevertheless looking forward with some degree of pleasure to revisiting the plains of Andalusia; and Nina and Pablo were only too delighted at the prospect of accompanying their kind protectors on any fresh excursion whatever.

The only malcontent was Palmyrin Rosette. Day and night he persevered in his astronomical pursuits, declared his intention of never abandoning his comet, and swore positively that nothing should induce him to set foot in the car of the balloon.

The misfortune that had befallen his telescope was a never-ending theme of complaint; and just now, when Gallia was entering the narrow zone of shooting-stars, and new discoveries might have been within his reach, his loss made him more insensible than ever. In sheer desperation, he endeavored to increase the intensity of his vision by applying to his eyes some belladonna which he found in the _Dobryna's_ medicine chest; with heroic fortitude he endured the tortures of the experiment, and gazed up into the sky until he was nearly blind. But all in vain; not a single fresh discovery rewarded his sufferings.

No one was quite exempt from the feverish excitement which prevailed during the last days of December. Lieutenant Procope superintended his final arrangements. The two low masts of the schooner had been erected firmly on the shore, and formed supports for the montgolfier, which had been duly covered with the netting, and was ready at any moment to be inflated. The car was close at hand. Some inflated skins had been attached to its sides, so that the balloon might float for a time, in the event of its descending in the sea at a short distance from the shore. If
unfortunately, it should come down in mid-ocean, nothing but the happy chance of some passing vessel could save them all from the certain fate of being drowned.

The 31st came. Twenty-four hours hence and the balloon, with its large living freight, would be high in the air. The atmosphere was less buoyant than that of the earth, but no difficulty in ascending was to be apprehended.

Gallia was now within 96,000,000 miles of the sun, consequently not much more than 4,000,000 miles from the earth; and this interval was being diminished at the rate of nearly 208,000 miles an hour, the speed of the earth being about 70,000 miles, that of the comet being little less than 138,000 miles an hour.

It was determined to make the start at two o'clock, three-quarters of an hour, or, to speak correctly 42 minutes 35.6 seconds, before the time predicted by the professor as the instant of collision. The modified rotation of the comet caused it to be daylight at the time.

An hour previously the balloon was inflated with perfect success, and the car was securely attached to the network. It only awaited the stowage of the passengers.

Isaac Hakkabut was the first to take his place in the car. But scarcely had he done so, when Servadac noticed that his waist was encompassed by an enormous girdle that bulged out to a very extraordinary extent. "What's all this, Hakkabut?" he asked.

"It's only my little bit of money, your Excellency; my modest little fortune--a mere bagatelle," said the Jew.

"And what may your little fortune weigh?" inquired the captain.

"Only about sixty-six pounds!" said Isaac.

"Sixty-six pounds!" cried Servadac. "We haven't reckoned for this."

"Merciful heavens!" began the Jew.

"Sixty-six pounds!" repeated Servadac. "We can hardly carry ourselves; we can't have any dead weight here. Pitch it out, man, pitch it out!"

"God of Israel!" whined Hakkabut.

"Out with it, I say!" cried Servadac.

"What, all my money, which I have saved so long, and toiled for so hard?"

"It can't be helped," said the captain, unmoved.

"Oh, your Excellency!" cried the Jew.

"Now, old Nicodemus, listen to me," interposed Ben Zoof; "you just get rid of that pouch of yours, or we will get rid of you. Take your choice. Quick, or out you go!"

The avaricious old man was found to value his life above his money; he made a lamentable outcry about it, but he unfastened his girdle at last, and put it out of the car.

Very different was the case with Palmyrin Rosette. He avowed over and over again his intention of never quitting the nucleus of his comet. Why should he trust himself to a balloon, that would blaze up like a piece of paper? Why should he leave the comet? Why should he not go once again upon its surface into the far-off realms of space?

His volubility was brought to a sudden check by Servadac's bidding two of the sailors, without more ado, to take him in their arms and put him quietly down at the bottom of the car.

To the great regret of their owners, the two horses and Nina's pet goat were obliged to be left behind. The only creature for which there was found a place was the carrier-pigeon that had brought the professor's message to the Hive. Servadac thought it might probably be of service in carrying some communication to the earth.

When every one, except the captain and his orderly, had taken their places, Servadac said, "Get in, Ben Zoof."

"After you, sir," said Ben Zoof, respectfully.

"No, no!" insisted Servadac; "the captain must be the last to leave the ship!"

A moment's hesitation and the orderly clambered over the side of the car. Servadac followed. The cords were cut. The balloon rose with stately calmness into the air.

CHAPTER XVIII. SUSPENSE

When the balloon had reached an elevation of about 2,500 yards, Lieutenant Procope determined to maintain it at that level. A wire-work stove, suspended below the casing, and filled with lighted hay, served to keep the air in the interior at a proper temperature.

Beneath their feet was extended the basin of the Gallian Sea. An inconsiderable speck to the north marked the site of Gourbi Island. Ceuta and Gibraltar, which might have been expected in the west, had utterly disappeared. On the south rose the volcano, the extremity of the promontory that jutted out from the continent that formed the framework of the sea; whilst in every direction the strange soil, with its commixture of tellurium and gold, gleamed under the sun's rays with a perpetual iridescence.
Applying rising with them in their ascent, the horizon was well-defined. The sky above them was perfectly clear; but away in the northwest, in opposition to the sun, floated a new sphere, so small that it could not be an asteroid, but like a dim meteor. It was the fragment that the internal convulsion had rent from the surface of the comet, and which was now many thousands of leagues away, pursuing the new orbit into which it had been projected. During the hours of daylight it was far from distinct, but after nightfall it would assume a definite luster.

The object, however, of supreme interest was the great expanse of the terrestrial disc, which was rapidly drawing down obliquely towards them. It totally eclipsed an enormous portion of the firmament above, and approaching with an ever-increasing velocity, was now within half its average distance from the moon. So close was it, that the two poles could not be embraced in one focus. Irregular patches of greater or less brilliancy alternated on its surface, the brighter betokening the continents, the more somber indicating the oceans that absorbed the solar rays. Above, there were broad white bands, darkened on the side averted from the sun, exhibiting a slow but unintermittent movement; these were the vapors that pervaded the terrestrial atmosphere.

But as the aeronauts were being hurried on at a speed of 70 miles a second, this vague aspect of the earth soon developed itself into definite outlines. Mountains and plains were no longer confused, the distinction between sea and shore was more plainly identified, and instead of being, as it were, depicted on a map, the surface of the earth appeared as though modelled in relief.

Twenty-seven minutes past two, and Gallia is only 72,000 miles from the terrestrial sphere; quicker and quicker is the velocity; ten minutes later, and they are only 36,000 miles apart!

The whole configuration of the earth is clear.

"Europe! Russia! France!" shouted Procope, the count, and Servadac, almost in a breath.

And they are not mistaken. The eastern hemisphere lies before them in the full blaze of light, and there is no possibility of error in distinguishing continent from continent.

The surprise only kindled their emotion to yet keener intensity, and it would be hard to describe the excitement with which they gazed at the panorama that was before them. The crisis of peril was close at hand, but imagination overleaped all consideration of danger; and everything was absorbed in the one idea that they were again within reach of that circle of humanity from which they had supposed themselves severed forever.

And, truly, if they could have paused to study it, that panorama of the states of Europe which was outstretched before their eyes, was conspicuous for the fantastic resemblances with which Nature on the one hand, and international relations on the other, have associated them. There was England, marching like some stately dame towards the east, trailing her ample skirts and coroneted with the cluster of her little islets; Sweden and Norway, with their bristling spine of mountains, seemed like a splendid lion eager to spring down from the bosom of the ice-bound north; Russia, a gigantic polar bear, stood with its head towards Asia, its left paw resting upon Turkey, its right upon Mount Caucasus; Austria resembled a huge cat curled up and sleeping a watchful sleep; Spain, with Portugal as a pennant, like an unfurled banner, floated from the extremity of the continent; Turkey, like an insolent cock, appeared to clutch the shores of Asia with the one claw, and the land of Greece with the other; Italy, as it were a foot and leg encased in a tight-fitting boot, was juggling deftly with the islands of Sicily, Sardinia, and Corsica; Prussia, a formidable hatchet imbedded in the heart of Germany, its edge just grazing the frontiers of France; whilst France itself suggested a vigorous torso with Paris at its breast.

All at once Ben Zoof breaks the silence: "Montmartre! I see Montmartre!" And, smile at the absurdity as others might, nothing could induce the worthy orderly to surrender his belief that he could actually make out the features of his beloved home.

The only individual whose soul seemed unstirred by the approaching earth was Palmyrin Rosette. Leaning over the side of the car, he kept his eyes fixed upon the abandoned comet, now floating about a mile and a half below him, bright in the general irradiation which was flooding the surrounding space.

Chronometer in hand, Lieutenant Procope stood marking the minutes and seconds as they fled; and the stillness which had once again fallen upon them all was only broken by his order to replenish the stove, that the montgolfier might retain its necessary level. Servadac and the count continued to gaze upon the earth with an eagerness that almost amounted to awe. The balloon was slightly in the rear of Gallia, a circumstance that augured somewhat favorably, because it might be presumed that if the comet preceded the balloon in its contact with the earth, there would be a break in the suddenness of transfer from one atmosphere to the other.

The next question of anxiety was, where would the balloon alight? If upon _terra firma_, would it be in a place where adequate resources for safety would be at hand? If upon the ocean, would any passing vessel be within hail to rescue them from their critical position? Truly, as the count observed to his comrades, none but a Divine Pilot could steer them now.

"Forty-two minutes past!" said the lieutenant, and his voice seemed to thrill through the silence of expectation.

There were not 20,000 miles between the comet and the earth!
The calculated time of impact was 2 hours 47 minutes 35.6 seconds. Five minutes more and collision must ensue!

But was it so? Just at this moment, Lieutenant Procope observed that the comet deviated sensibly in an oblique course. Was it possible that after all collision would not occur?

The deviation, however, was not great; it did not justify any anticipation that Gallia would merely graze the earth, as it had done before; it left it certain that the two bodies would inevitably impinge.

"No doubt," said Ben Zoof, "this time we shall stick together."

Another thought occurred. Was it not only too likely that, in the fusion of the two atmospheres, the balloon itself, in which they were being conveyed, would be rent into ribbons, and every one of its passengers hurled into destruction, so that not a Gallian should survive to tell the tale of their strange peregrinations?

Moments were precious; but Hector Servadac resolved that he would adopt a device to secure that at least some record of their excursion in solar distances should survive themselves.

Tearing a leaf from his note-book, he wrote down the name of the comet, the list of the fragments of the earth it had carried off, the names of his companions, and the date of the comet's aphelion; and having subscribed it with his signature, turned to Nina and told her he must have the carrier-pigeon which was nestling in her bosom.

The child's eyes filled with tears; she did not say a word, but imprinting a kiss upon its soft plumage, she surrendered it at once, and the message was hurriedly fastened to its neck. The bird wheeled round and round in a few circles that widened in their diameter, and quickly sunk to an altitude in the comet's atmosphere much inferior to the balloon.

Some minutes more were thus consumed and the interval of distance was reduced to less than 8,000 miles.

The velocity became inconceivably great, but the increased rate of motion was in no way perceptible; there was nothing to disturb the equilibrium of the car in which they were making their aerial adventure.

"Forty-six minutes!" announced the lieutenant.

The glowing expanse of the earth's disc seemed like a vast funnel, yawning to receive the comet and its atmosphere, balloon and all, into its open mouth.

"Forty-seven!" cried Procope.

There was half a minute yet. A thrill ran through every vein. A vibration quivered through the atmosphere. The montgolfier, elongated to its utmost stretch, was manifestly being sucked into a vortex. Every passenger in the quivering car involuntarily clung spasmodically to its sides, and as the two atmospheres amalgamated, clouds accumulated in heavy masses, involving all around in dense obscurity, while flashes of lurid flame threw a weird glimmer on the scene.

In a mystery every one found himself upon the earth again. They could not explain it, but here they were once more upon terrestrial soil; in a swoon they had left the earth, and in a similar swoon they had come back!

Of the balloon not a vestige remained, and contrary to previous computation, the comet had merely grazed the earth, and was traversing the regions of space, again far away!

CHAPTER XIX. BACK AGAIN

"In Algeria, captain?"

"Yes, Ben Zoof, in Algeria; and not far from Mostaganem." Such were the first words which, after their return to consciousness, were exchanged between Servadac and his orderly.

They had resided so long in the province that they could not for a moment be mistaken as to their whereabouts, and although they were incapable of clearing up the mysteries that shrouded the miracle, yet they were convinced at the first glance that they had been returned to the earth at the very identical spot where they had quitted it.

In fact, they were scarcely more than a mile from Mostaganem, and in the course of an hour, when they had all recovered from the bewilderment occasioned by the shock, they started off in a body and made their way to the town. It was a matter of extreme surprise to find no symptom of the least excitement anywhere as they went along. The population was perfectly calm; every one was pursuing his ordinary avocation; the cattle were browsing quietly upon the pastures that were moist with the dew of an ordinary January morning. It was about eight o'clock; the sun was rising in the east; nothing could be noticed to indicate that any abnormal incident had either transpired or been expected by the inhabitants. As to a collision with a comet, there was not the faintest trace of any such phenomenon crossing men's minds, and awakening, as it surely would, a panic little short of the certified approach of the millennium.

"Nobody expects us," said Servadac; "that is very certain."

"No, indeed," answered Ben Zoof, with a sigh; he was manifestly disappointed that his return to Mostaganem was not welcomed with a triumphal reception.
They reached the Mascara gate. The first persons that Servadac recognized were the two friends that he had invited to be his seconds in the duel two years ago, the colonel of the 2nd Fusiliers and the captain of the 8th Artillery. In return to his somewhat hesitating salutation, the colonel greeted him heartily, "Ah! Servadac, old fellow! is it you?"

"I, myself," said the captain.

"Where on earth have you been to all this time? In the name of peace, what have you been doing with yourself?"

"You would never believe me, colonel," answered Servadac, "if I were to tell you; so on that point I had better hold my tongue."

"Hang your mysteries!" said the colonel; "tell me, where have you been?"

"No, my friend, excuse me," replied Servadac; "but shake hands with me in earnest, that I may be sure I am not dreaming." Hector Servadac had made up his mind, and no amount of persuasion could induce him to divulge his incredible experiences.

Anxious to turn the subject, Servadac took the earliest opportunity of asking, "And what about Madame de L----?"

"Madame de L----!" exclaimed the colonel, taking the words out of his mouth; "the lady is married long ago; you did not suppose that she was going to wait for you. 'Out of sight, out of mind,' you know."

"True," replied Servadac; and turning to the count he said, "Do you hear that? We shall not have to fight our duel after all."

"Most happy to be excused," rejoined the count. The rivals took each other by the hand, and were united henceforth in the bonds of a sincere and confiding friendship.

"An immense relief," said Servadac to himself, "that I have no occasion to finish that confounded rondo!"

It was agreed between the captain and the count that it would be desirable in every way to maintain the most rigid silence upon the subject of the inexplicable phenomena which had come within their experience. It was to them both a subject of the greatest perplexity to find that the shores of the Mediterranean had undergone no change, but they coincided in the opinion that it was prudent to keep their bewilderment entirely to themselves. Nothing induced them to break their reserve.

The very next day the small community was broken up.

The _Dobryna's_ crew, with the count and the lieutenant, started for Russia, and the Spaniards, provided, by the count's liberality, with a competency that ensured them from want, were despatched to their native shores. The leave taking was accompanied by genuine tokens of regard and goodwill.

For Isaac Hakkabut alone there was no feeling of regret. Doubly ruined by the loss of his tartan, and by the abandonment of his fortune, he disappeared entirely from the scene. It is needless to say that no one troubled himself to institute a search after him, and, as Ben Zoof sententiously remarked, "Perhaps old Jehoram is making money in America by exhibiting himself as the latest arrival from a comet!"

But however great was the reserve which Captain Servadac might make on his part, nothing could induce Professor Rosette to conceal his experiences. In spite of the denial which astronomer after astronomer gave to the appearance of such a comet as Gallia at all, and of its being refused admission to the catalogue, he published a voluminous treatise, not only detailing his own adventures, but setting forth, with the most elaborate precision, all the elements which settled its period and its orbit. Discussions arose in scientific circles; an overwhelming majority decided against the representations of the professor; an unimportant minority declared themselves in his favor, and a pamphlet obtained some degree of notice, ridiculing the whole debate under the title of "The History of an Hypothesis." In reply to this impertinent criticism of his labors, Rosette issued a rejoinder full with the most vehement expressions of indignation, and reiterating his asseveration that a fragment of Gibraltar was still traversing the regions of space, carrying thirteen Englishmen upon its surface, and concluding by saying that it was the great disappointment of his life that he had not been taken with them.

Pablo and little Nina were adopted, the one by Servadac, the other by the count, and under the supervision of their guardians, were well educated and cared for. Some years later, Colonel, no longer Captain, Servadac, his hair slightly streaked with grey, had the pleasure of seeing the handsome young Spaniard united in marriage to the Italian, now grown into a charming girl, upon whom the count bestowed an ample dowry; the young people's happiness in no way marred by the fact that they had not been destined, as once seemed likely, to be the Adam and Eve of a new world.

The career of the comet was ever a mystery which neither Servadac nor his orderly could eliminate from the regions of doubt. Anyhow, they were firmer and more confiding friends than ever.

One day, in the environs of Montmartre, where they were secure from eavesdroppers, Ben Zoof incidentally referred to the experiences in the depths of Nina's Hive; but stopped short and said, "However, those things never happened, sir, did they?"
Chapter I
MYSTERIOUS SOUNDS
BANG! Bang!

The pistol shots were almost simultaneous. A cow peacefully grazing fifty yards away received one of the bullets in her back. She had nothing to do with the quarrel all the same.

Neither of the adversaries was hit.

Who were these two gentlemen? We do not know, although this would be an excellent opportunity to hand down their names to posterity. All we can say is that the elder was an Englishman and the younger an American, and both of them were old enough to know better.

So far as recording in what locality the inoffensive ruminant had just tasted her last tuft of herbage, nothing can be easier. It was on the left bank of Niagara, not far from the suspension bridge which joins the American to the Canadian bank three miles from the falls.

The Englishman stepped up to the American.
"I contend, nevertheless, that it was 'Rule Britannia!'"

"And I say it was 'Yankee Doodle!'" replied the young American.

The dispute was about to begin again when one of the seconds--doubtless in the interests of the milk trade--interposed.

"Suppose we say it was 'Rule Doodle' and 'Yankee Britannia' and adjourn to breakfast?"

This compromise between the national airs of Great Britain and the United States was adopted to the general satisfaction. The Americans and Englishmen walked up the left bank of the Niagara on their way to Goat Island, the neutral ground between the falls. Let us leave them in the presence of the boiled eggs and traditional ham, and floods enough of tea to make the cataract jealous, and trouble ourselves no more about them. It is extremely unlikely that we shall again meet with them in this story.

Which was right; the Englishman or the American? It is not easy to say. Anyhow the duel shows how great was the excitement, not only in the new but also in the old world, with regard to an inexplicable phenomenon which for a month or more had driven everybody to distraction.

Never had the sky been so much looked at since the appearance of man on the terrestrial globe. The night before an aerial trumpet had blared its brazen notes through space immediately over that part of Canada between Lake Ontario and Lake Erie. Some people had heard those notes as "Yankee Doodle," others had heard them as "Rule Britannia," and hence the quarrel between the Anglo-Saxons, which ended with the breakfast on Goat Island. Perhaps it was neither one nor the other of these patriotic tunes, but what was undoubted by all was that these extraordinary sounds had seemed to descend from the sky to the earth.

What could it be? Was it some exuberant aeronaut rejoicing on that sonorous instrument of which the Renommée makes such obstreperous use?

No! There was no balloon and there were no aeronauts. Some strange phenomenon had occurred in the higher zones of the atmosphere, a phenomenon of which neither the nature nor the cause could be explained. Today it appeared over America; forty-eight hours afterwards it was over Europe; a week later it was in Asia over the Celestial Empire.

Hence in every country of the world--empire, kingdom, or republic--there was anxiety which it was important to allay. If you hear in your house strange and inexplicable noises, do you not at once endeavor to discover the cause? And if your search is in vain, do you not leave your house and take up your quarters in another? But in this case the house was the terrestrial globe! There are no means of leaving that house for the moon or Mars, or Venus, or Jupiter, or any other planet of the solar system. And so of necessity we have to find out what it is that takes place, not in the infinite void, but within the atmospheric zones. In fact, if there is no air there is no noise, and as there was a noise--that famous trumpet, to wit--the phenomenon must occur in the air, the density of which invariably diminishes, and which does not extend for more than six miles round our spheroid.

Naturally the newspapers took up the question in their thousands, and treated it in every form, throwing on it both light and darkness, recording many things about it true or false, alarming and tranquillizing their readers--as the sale required--and almost driving ordinary people mad. At one blow party politics dropped unheeded--and the affairs
of the world went on none the worse for it.

But what could this thing be? There was not an observatory that was not applied to. If an observatory could not give a satisfactory answer what was the use of observatories? If astronomers, who doubled and tripled the stars a hundred thousand million miles away, could not explain a phenomenon occurring only a few miles off, what was the use of astronomers?

The observatory at Paris was very guarded in what it said. In the mathematical section they had not thought the statement worth noticing; in the meridional section they knew nothing about it; in the physical observatory they had not come across it; in the geodetic section they had had no observation; in the meteorological section there had been no record; in the calculating room they had had nothing to deal with. At any rate this confession was a frank one, and the same frankness characterized the replies from the observatory of Montsouris and the magnetic station in the park of St. Maur. The same respect for the truth distinguished the Bureau des Longitudes.

The provinces were slightly more affirmative. Perhaps in the night of the fifth and the morning of the sixth of May there had appeared a flash of light of electrical origin which lasted about twenty seconds. At the Pic du Midi this light appeared between nine and ten in the evening. At the Meteorological Observatory on the Puy de Dome the light had been observed between one and two o'clock in the morning; at Mont Ventoux in Provence it had been seen between two and three o'clock; at Nice it had been noticed between three and four o'clock; while at the Semnoz Alps between Annecy, Le Bourget, and Le Léman, it had been detected just as the zenith was paling with the dawn.

Now it evidently would not do to disregard these observations altogether. There could be no doubt that a light had been observed at different places, in succession, at intervals, during some hours. Hence, whether it had been produced from many centers in the terrestrial atmosphere, or from one center, it was plain that the light must have traveled at a speed of over one hundred and twenty miles an hour.

In the United Kingdom there was much perplexity. The observatories were not in agreement. Greenwich would not consent to the proposition of Oxford. They were agreed on one point, however, and that was: "It was nothing at all!"

But, said one, "It was an optical illusion!" While the other contended that, "It was an acoustical illusion!" And so they disputed. Somewhere, however, was, it will be seen, common to both "It was an illusion."

Between the observatory of Berlin and the observatory of Vienna the discussion threatened to end in international complications; but Russia, in the person of the director of the observatory at Pulkowa, showed that both were right. It all depended on the point of view from which they attacked the phenomenon, which, though impossible in theory, was possible in practice.

In Switzerland, at the observatory of Sautis in the canton of Appenzell, at the Righi, at the Gäriss, in the passes of the St. Gothard, at the St. Bernard, at the Julier, at the Simplon, at Zurich, at Somblick in the Tyrolean Alps, there was a very strong disinclination to say anything about what nobody could prove—and that was nothing but reasonable.

But in Italy, at the meteorological stations on Vesuvius, on Etna in the old Casa Inglesi, at Monte Cavo, the observers made no hesitation in admitting the materiality of the phenomenon, particularly as they had seen it by day in the form of a small cloud of vapor, and by night in that of a shooting star. But of what it was they knew nothing.

Scientists began at last to tire of the mystery, while they continued to disagree about it, and even to frighten the lowly and the ignorant, who, thanks to one of the wisest laws of nature, have formed, form, and will form the immense majority of the world's inhabitants. Astronomers and meteorologists would soon have dropped the subject altogether had not, on the night of the 26th and 27th, the observatory of Kautokeino at Finmark, in Norway, and during the night of the 28th and 29th that of Isfjord at Spitzbergen—Norwegian one and Swedish the other—found themselves agreed in recording that in the center of an aurora borealis there had appeared a sort of huge bird, an aerial monster, whose structure they were unable to determine, but who, there was no doubt, was showering off from his body certain corpuscles which exploded like bombs.

In Europe not a doubt was thrown on this observation of the stations in Finmark and Spitzbergen. But what appeared the most phenomenal about it was that the Swedes and Norwegians could find themselves in agreement on any subject whatever.

There was a laugh at the asserted discovery in all the observatories of South America, in Brazil, Peru, and La Plata, and in those of Australia at Sydney, Adelaide, and Melbourne; and Australian laughter is very catching.

To sum up, only one chief of a meteorological station ventured on a decided answer to this question, notwithstanding the sarcasms that his solution provoked. This was a Chinaman, the director of the observatory at Zi-Ka-Wey which rises in the center of a vast plateau less than thirty miles from the sea, having an immense horizon and wonderfully pure atmosphere. "It is possible," said he, "that the object was an aviform apparatus—a flying machine!"

What nonsense!
But if the controversy was keen in the old world, we can imagine what it was like in that portion of the new of which the United States occupy so vast an area.

A Yankee, we know, does not waste time on the road. He takes the street that leads him straight to his end. And the observatories of the American Federation did not hesitate to do their best. If they did not hurl their objectives at each other's heads, it was because they would have had to put them back just when they most wanted to use them. In this much-disputed question the observatories of Washington in the District of Columbia, and Cambridge in Massachusetts, found themselves opposed by those of Dartmouth College in New Hampshire, and Ann Arbor in Michigan. The subject of their dispute was not the nature of the body observed, but the precise moment of its observation. All of them claimed to have seen it the same night, the same hour, the same minute, the same second, although the trajectory of the mysterious voyager took it but a moderate height above the horizon. Now from Massachusetts to Michigan, from New Hampshire to Columbia, the distance is too great for this double observation, made at the same moment, to be considered possible.

Dudley at Albany, in the state of New York, and West Point, the military academy, showed that their colleagues were wrong by an elaborate calculation of the right ascension and declination of the aforesaid body.

But later on it was discovered that the observers had been deceived in the body, and that what they had seen was an aerolite. This aerolite could not be the object in question, for how could an aerolite blow a trumpet? It was in vain that they tried to get rid of this trumpet as an optical illusion. The ears were no more deceived than the eyes. Something had assuredly been seen, and something had assuredly been heard. In the night of the 12th and 13th of May--a very dark night--the observers at Yale College, in the Sheffield Science School, had been able to take down a few bars of a musical phrase in D major, common time, which gave note for note, rhythm for rhythm, the chorus of the Chant du Départ.

"Good," said the Yankee wags. "There is a French band well up in the air."

"But to joke is not to answer." Thus said the observatory at Boston, founded by the Atlantic Iron Works Society, whose opinions in matters of astronomy and meteorology began to have much weight in the world of science.

Then there intervened the observatory at Cincinnati, founded in 1870, on Mount Lookout, thanks to the generosity of Mr. Kilgour, and known for its micrometrical measurements of double stars. Its director declared with the utmost good faith that there had certainly been something, that a traveling body had shown itself at very short periods at different points in the atmosphere, but what were the nature of this body, its dimensions, its speed, and its trajectory, it was impossible to say.

It was then a journal whose publicity is immense--the "New York Herald"--received the anonymous contribution hereunder.

"There will be in the recollection of most people the rivalry which existed a few years ago between the two heirs of the Begum of Ragginahra, the French doctor Sarrasin, the city of Frankville, and the German engineer Schultze, in the city of Steeltown, both in the south of Oregon in the United States.

"It will not have been forgotten that, with the object of destroying Frankville, Herr Schultze launched a formidable engine, intended to beat down the town and annihilate it at a single blow.

"Still less will it be forgotten that this engine, whose initial velocity as it left the mouth of the monster cannon had been erroneously calculated, had flown off at a speed exceeding by sixteen times that of ordinary projectiles--or about four hundred and fifty miles an hour--that it did not fall to the ground, and that it passed into an aerolitic stage, so as to circle for ever round our globe.

"Why should not this be the body in question?"

Very ingenious, Mr. Correspondent on the "New York Herald!" but how about the trumpet? There was no trumpet in Herr Schulze's projectile!

So all the explanations explained nothing, and all the observers had observed in vain. There remained only the suggestion offered by the director of Zi-Ka-Wey. But the opinion of a Chinaman!

The discussion continued, and there was no sign of agreement. Then came a short period of rest. Some days elapsed without any object, aerolite or otherwise, being described, and without any trumpet notes being heard in the atmosphere. The body then had fallen on some part of the globe where it had been difficult to trace it; in the sea, perhaps. Had it sunk in the depths of the Atlantic, the Pacific, or the Indian Ocean? What was to be said in this matter?

But then, between the 2nd and 9th of June, there came a new series of facts which could not possibly be explained by the unaided existence of a cosmic phenomenon.

In a week the Hamburgers at the top of St. Michael's Tower, the Turks on the highest minaret of St. Sophia, the Rouennais at the end of the metal spire of their cathedral, the Strasburgers at the summit of their minister, the Americans on the head of the Liberty statue at the entrance of the Hudson and on the Bunker Hill monument at Boston, the Chinese at the spike of the temple of the Four Hundred Genii at Canton, the Hindus on the sixteenth
terrace of the pyramid of the temple at Tanjore, the San Pietrini at the cross of St. Peter's at Rome, the English at the cross of St. Paul's in London, the Egyptians at the apex of the Great Pyramid of Ghizeh, the Parisians at the lighting conductor of the iron tower of the Exposition of 1889, a thousand feet high, all of them beheld a flag floating from some one of these inaccessible points.

And the flag was black, dotted with stars, and it bore a golden sun in its center.

Chapter II
AGREEMENT IMPOSSIBLE
"And the first who says the contrary--"
"Indeed! But we will say the contrary so long as there is a place to say it in!"
"And in spite of your threats--"
"Mind what you are saying, Bat Fynn!"
"Mind what you are saying, Uncle Prudent!"
"I maintain that the screw ought to be behind!"
"And so do we! And so do we!" replied half a hundred voices confounded in one.
"No! It ought to be in front!" shouted Phil Evans.
"In front!" roared fifty other voices, with a vigor in no whit less remarkable.
"We shall never agree!"
"Never! Never!"
"Then what is the use of a dispute?"
"It is not a dispute! It is a discussion!"

One would not have thought so to listen to the taunts, objurgations, and vociferations which filled the lecture room for a good quarter of an hour.

The room was one of the largest in the Weldon Institute, the well-known club in Walnut Street, Philadelphia, Pennsylvania, U.S.A. The evening before there had been an election of a lamplighter, occasioning many public manifestations, noisy meetings, and even interchanges of blows, resulting in an effervescence which had not yet subsided, and which would account for some of the excitement just exhibited by the members of the Weldon Institute. For this was merely a meeting of balloonists, discussing the burning question of the direction of balloons.

In this great saloon there were struggling, pushing, gesticulating, shouting, arguing, disputing, a hundred balloonists, all with their hats on, under the authority of a president, assisted by a secretary and treasurer. They were not engineers by profession, but simply amateurs of all that appertained to aerostatics, and they were amateurs in a fury, and especially foes of those who would oppose to aerostats "apparatuses heavier than the air," flying machines, aerial ships, or what not. That these people might one day discover the method of guiding balloons is possible. There could be no doubt that their president had considerable difficulty in guiding them.

This president, well known in Philadelphia, was the famous Uncle Prudent, Prudent being his family name. There is nothing surprising in America in the qualificative uncle, for you can there be uncle without having either nephew or niece. There they speak of uncle as in other places they speak of father, though the father may have had no children.

Uncle Prudent was a personage of consideration, and in spite of his name was well known for his audacity. He was very rich, and that is no drawback even in the United States; and how could it be otherwise when he owned the greater part of the shares in Niagara Falls? A society of engineers had just been founded at Buffalo for working the cataract. It seemed to be an excellent speculation. The seven thousand five hundred cubic meters that pass over Niagara in a second would produce seven millions of horsepower. This enormous power, distributed amongst all the workshops within a radius of three hundred miles, would return an annual income of three hundred million dollars, of which the greater part would find its way into the pocket of Uncle Prudent. He was a bachelor, he lived quietly, and for his only servant had his valet Frycollin, who was hardly worthy of being the servant to so audacious a master.

Uncle Prudent was rich, and therefore he had friends, as was natural; but he also had enemies, although he was president of the club--among others all those who envied his position. Amongst his bitterest foes we may mention the secretary of the Weldon Institute.

This was Phil Evans, who was also very rich, being the manager of the Wheelton Watch Company, an important manufactory, which makes every day five hundred movements equal in every respect to the best Swiss workmanship. Phil Evans would have passed for one of the happiest men in the world, and even in the United States, if it had not been for Uncle Prudent. Like him he was in his forty-sixth year; like him of invariable health; like him of undoubted boldness. They were two men made to understand each other thoroughly, but they did not, for both
were of extreme violence of character. Uncle Prudent was furiously hot; Phil Evans was abnormally cool.

And why had not Phil Evans been elected president of the club? The votes were exactly divided between Uncle Prudent and him. Twenty times there had been a scrutiny, and twenty times the majority had not declared for either one or the other. The position was embarrassing, and it might have lasted for the lifetime of the candidates.

One of the members of the club then proposed a way out of the difficulty. This was Jem Chip, the treasurer of the Weldon Institute. Chip was a confirmed vegetarian, a proclaimer of all animal nourishment, of all fermented liquors, half a Mussulman, half a Brahman. On this occasion Jem Chip was supported by another member of the club, William T. Forbes, the manager of a large factory where they made glucose by treating rags with sulphuric acid. A man of good standing was this William T. Forbes, the father of two charming girls--Miss Dorothy, called Doll, and Miss Martha, called Mat, who gave the tone to the best society in Philadelphia.

It followed, then, on the proposition of Jem Chip, supported by William T. Forbes and others, that it was decided to elect the president "on the center point."

This mode of election can be applied in all cases when it is desired to elect the most worthy; and a number of Americans of high intelligence are already thinking of employing it in the nomination of the President of the Republic of the United States.

On two boards of perfect whiteness a black line is traced. The length of each of these lines is mathematically the same, for they have been determined with as much accuracy as the base of the first triangle in a trigonometrical survey. That done, the two boards were erected on the same day in the center of the conference room, and the two candidates, each armed with a fine needle, marched towards the board that had fallen to his lot. The man who planted his needle nearest the center of the line would be proclaimed President of the Weldon Institute.

The operation must be done at once--no guide marks or trial shots allowed; nothing but sureness of eye. The man must have a compass in his eye, as the saying goes; that was all.

Uncle Prudent stuck in his needle at the same moment as Phil Evans did his. Then there began the measurement to discover which of the two competitors had most nearly approached the center.

Wonderful! Such had been the precision of the shots that the measures gave no appreciable difference. If they were not exactly in the mathematical center of the line, the distance between the needles was so small as to be invisible to the naked eye.

The meeting was much embarrassed.

Fortunately one of the members, Truck Milnor, insisted that the measurements should be remade by means of a rule graduated by the micrometrical machine of M. Perreaux, which can divide a millimeter into fifteen-hundredths of a millimeter with a diamond splinter, was brought to bear on the lines; and on reading the divisions through a microscope the following were the results: Uncle Prudent had approached the center within less than six fifteen-hundredths of a millimeter. Phil Evans was within nine fifteen-hundredths.

And that is why Phil Evans was only secretary of the Weldon Institute, whereas Uncle Prudent was president. A difference of three fifteen-hundredths of a millimeter! And on account of it Phil Evans vowed against Uncle Prudent one of those hatreds which are none the less fierce for being latent.

Chapter III
A VISITOR IS ANNOUNCED

The many experiments made during this last quarter of the nineteenth century have given considerable impetus to the question of guidable balloons. The cars furnished with propellers attached in 1852 to the aerostats of the elongated form introduced by Henry Giffard, the machines of Dupuy de Lome in 1872, of the Tissandier brothers in 1883, and of Captain Krebs and Renard in 1884, yielded many important results. But if these machines, moving in a medium heavier than themselves, maneuvering under the propulsion of a screw, working at an angle to the direction of the wind, and even against the wind, to return to their point of departure, had been really "guidable," they had only succeeded under very favorable conditions. In large, covered halls their success was perfect. In a calm atmosphere they did very well. In a light wind of five or six yards a second they still moved. But nothing practical had been obtained. Against a miller's wind--nine yards a second--the machines had remained almost stationary. Against a fresh breeze--eleven yards a second--they would have advanced backwards. In a storm--twenty-seven to thirty-three yards a second--they would have been blown about like a feather. In a hurricane--sixty yards a second--they would have run the risk of being dashed to pieces. And in one of those cyclones which exceed a hundred yards a second not a fragment of them would have been left. It remained, then, even after the striking experiments of Captains Krebs and Renard, that though guidable aerostats had gained a little speed, they could not be kept going in a moderate breeze. Hence the impossibility of making practical use of this mode of aerial locomotion.

With regards to the means employed to give the aerostat its motion a great deal of progress had been made.
the steam engines of Henry Giffard, and the muscular force of Dupuy de Lome, electric motors had gradually been substituted. The batteries of bichromate of potassium of the Tissandier brothers had given a speed of four yards a second. The dynamo-electric machines of Captain Krebs and Renard had developed a force of twelve horsepower and yielded a speed of six and a half yards per second.

With regard to this motor, engineers and electricians had been approaching more and more to that desideratum which is known as a steam horse in a watch case. Gradually the results of the pile of which Captains Krebs and Renard had kept the secret had been surpassed, and aeronauts had become able to avail themselves of motors whose lightness increased at the same time as their power.

In this there was much to encourage those who believed in the utilization of guidable balloons. But yet how many good people there are who refuse to admit the possibility of such a thing! If the aerostat finds support in the air it belongs to the medium in which it moves; under such conditions, how can its mass, which offers so much resistance to the currents of the atmosphere, make its way against the wind?

In this struggle of the inventors after a light and powerful motor, the Americans had most nearly attained what they sought. A dynamo-electric apparatus, in which a new pile was employed the composition of which was still a mystery, had been bought from its inventor, a Boston chemist up to then unknown. Calculations made with the greatest care, diagrams drawn with the utmost exactitude, showed that by means of this apparatus driving a screw of given dimensions a displacement could be obtained of from twenty to twenty-two yards a second.

Now this was magnificent!

"And it is not dear," said Uncle Prudent, as he handed to the inventor in return for his formal receipt the last installment of the hundred thousand paper dollars he had paid for his invention.

Immediately the Weldon Institute set to work. When there comes along a project of practical utility the money leaps nimbly enough from American pockets. The funds flowed in even without it being necessary to form a syndicate. Three hundred thousand dollars came into the club's account at the first appeal. The work began under the superintendence of the most celebrated aeronaut of the United States, Harry W. Tinder, immortalized by three of his ascents out of a thousand, one in which he rose to a height of twelve thousand yards, higher than Gay Lussac, Coxwell, Sivet, Crocé-Spinelli, Tissandier, Glaisher; another in which he had crossed America from New York to San Francisco, exceeding by many hundred leagues the journeys of Nadar, Godard, and others, to say nothing of that of John Wise, who accomplished eleven hundred and fifty miles from St. Louis to Jefferson county; the third, which ended in a frightful fall from fifteen hundred feet at the cost of a slight sprain in the right thumb, while the less fortunate Pilâtre de Rozier fell only seven hundred feet, and yet killed himself on the spot!

At the time this story begins the Weldon Institute had got their work well in hand. In the Turner yard at Philadelphia there reposed an enormous aerostat, whose strength had been tried by highly compressed air. It well merited the name of the monster balloon.

How large was Nadar's Géant? Six thousand cubic meters. How large was John Wise's balloon? Twenty thousand cubic meters. How large was the Giffard balloon at the 1878 Exhibition? Twenty-five thousand cubic meters. Compare these three aerostats with the aerial machine of the Weldon Institute, whose volume amounted to forty thousand cubic meters, and you will understand why Uncle Prudent and his colleagues were so justifiably proud of it.

This balloon not being destined for the exploration of the higher strata of the atmosphere, was not called the Excelsior, a name which is rather too much held in honor among the citizens of America. No! It was called, simply, the "Go-Ahead," and all it had to do was to justify its name by going ahead obediently to the wishes of its commander.

The dynamo-electric machine, according to the patent purchased by the Weldon Institute, was nearly ready. In less than six weeks the "Go-Ahead" would start for its first cruise through space.

But, as we have seen, all the mechanical difficulties had not been overcome. Many evenings had been devoted to discussing, not the form of its screw nor its dimensions, but whether it ought to be put behind, as the Tissandier brothers had done, or before as Captains Krebs and Renard had done. It is unnecessary to add that the partisans of the two systems had almost come to blows. The group of "Beforists" were equaled in number by the group of "Behindists." Uncle Prudent, who ought to have given the casting vote--Uncle Prudent, brought up doubtless in the school of Professor Buridan--could not bring himself to decide.

Hence the impossibility of getting the screw into place. The dispute might last for some time, unless the government interfered. But in the United States the government meddles with private affairs as little as it possibly can. And it is right.

Things were in this state at this meeting on the 13th of June, which threatened to end in a riot--insults exchanged, fisticuffs succeeding the insults, cane thrashings succeeding the fisticuffs, revolver shots succeeding the cane thrashings--when at thirty-seven minutes past eight there occurred a diversion.
The porter of the Weldon Institute coolly and calmly, like a policeman amid the storm of the meeting, approached the presidential desk. On it he placed a card. He awaited the orders that Uncle Prudent found it convenient to give.

Uncle Prudent turned on the steam whistle, which did duty for the presidential bell, for even the Kremlin clock would have struck in vain! But the tumult slackened not.

Then the president removed his hat. Thanks to this extreme measure a semi-silence was obtained.

"A communication!" said Uncle Prudent, after taking a huge pinch from the snuff-box which never left him.

"Speak up!" answered eighty-nine voices, accidentally in agreement on this one point.

"A stranger, my dear colleagues, asks to be admitted to the meeting."

"Never!" replied every voice.

"He desires to prove to us, it would appear," continued Uncle Prudent, "that to believe in guiding balloons is to believe in the absurdest of Utopias!"

"Let him in! Let him in!"

"What is the name of this singular personage?" asked secretary Phil Evans.

"Robur," replied Uncle Prudent.

"Robur! Robur! Robur!" yelled the assembly. And the welcome accorded so quickly to the curious name was chiefly due to the Weldon Institute hoping to vent its exasperation on the head of him who bore it!

Chapter IV
IN WHICH A NEW CHARACTER APPEARS

"Citizens of the United States! My name is Robur. I am worthy of the name! I am forty years old, although I look but thirty, and I have a constitution of iron, a healthy vigor that nothing can shake, a muscular strength that few can equal, and a digestion that would be thought first class even in an ostrich!"

They were listening! Yes! The riot was quelled at once by the totally unexpected fashion of the speech. Was this fellow a madman or a hoaxer? Whoever he was, he kept his audience in hand. There was not a whisper in the meeting in which but a few minutes ago the storm was in full fury.

And Robur looked the man he said he was. Of middle height and geometric breadth, his figure was a regular trapezium with the greatest of its parallel sides formed by the line of his shoulders. On this line attached by a robust neck there rose an enormous spheroidal head. The head of what animal did it resemble from the point of view of passional analogy? The head of a bull; but a bull with an intelligent face. Eyes which at the least opposition would glow like coals of fire; and above them a permanent contraction of the superciliary muscle, an invariable sign of extreme energy. Short hair, slightly woolly, with metallic reflections; large chest rising and falling like a smith's bellows; arms, hands, legs, feet, all worthy of the trunk. No mustaches, no whiskers, but a large American goatee, revealing the attachments of the jaw whose masseter muscles were evidently of formidable strength. It has been calculated--what has not been calculated?--that the pressure of the jaw of an ordinary crocodile can reach four hundred atmospheres, while that of a hound can only amount to one hundred. From this the following curious formula has been deduced: If a kilogram of dog produces eight kilograms of masseteric force, a kilogram of crocodile could produce twelve. Now, a kilogram of, the aforesaid Robur would not produce less than ten, so that he came between the dog and the crocodile.

From what country did this remarkable specimen come? It was difficult to say. One thing was noticeable, and that was that he expressed himself fluently in English without a trace of the drawling twang that distinguishes the Yankees of New England.

He continued: "And now, honorable citizens, for my mental faculties. You see before you an engineer whose nerves are in no way inferior to his muscles. I have no fear of anything or anybody. I have a strength of will that has never had to yield. When I have decided on a thing, all America, all the world, may strive in vain to keep me from it. When I have an idea, I allow no one to share it, and I do not permit any contradiction. I insist on these details, honorable citizens, because it is necessary you should quite understand me. Perhaps you think I am talking too much about myself? It does not matter if you do! And now consider a little before you interrupt me, as I have come to tell you something that you may not be particularly pleased to hear."

A sound as of the surf on the beach began to rise along the first row of seats--a sign that the sea would not be long in getting stormy again.

"Speak, stranger!" said Uncle Prudent, who had some difficulty in restraining himself.

And Robur spoke as follows, without troubling himself any more about his audience.

"Yes! I know it well! After a century of experiments that have led to nothing, and trials giving no results, there still exist ill-balanced minds who believe in guiding balloons. They imagine that a motor of some sort, electric or
otherwise, might be applied to their pretentious skin bags which are at the mercy of every current in the atmosphere. They persuade themselves that they can be masters of an aerostat as they can be masters of a ship on the surface of the sea. Because a few inventors in calm or nearly calm weather have succeeded in working an angle with the wind, or even beating to windward in a gentle breeze, they think that the steering of aerial apparatus lighter than the air is a practical matter. Well, now, look here; You hundred, who believe in the realization of your dreams, are throwing your thousands of dollars not into water but into space! You are fighting the impossible!"

Strange as it was that at this affirmation the members of the Weldon Institute did not move. Had they become as deaf as they were patient? Or were they reserving themselves to see how far this audacious contradictor would dare to go?

Robur continued: "What? A balloon! When to obtain the raising of a couple of pounds you require a cubic yard of gas. A balloon pretending to resist the wind by aid of its mechanism, when the pressure of a light breeze on a vessel's sails is not less than that of four hundred horsepower; when in the accident at the Tay Bridge you saw the storm produce a pressure of eight and a half hundredweight on a square yard. A balloon, when on such a system nature has never constructed anything flying, whether furnished with wings like birds, or membranes like certain fish, or certain mammalia--"

"Mammalia?" exclaimed one of the members.

"Yes! Mammalia! The bat, which flies, if I am not mistaken! Is the gentleman unaware that this flyer is a mammal? Did he ever see an omelette made of bat's eggs?"

The interrupter reserved himself for future interruption, and Robur resumed: "But does that mean that man is to give up the conquest of the air, and the transformation of the domestic and political manners of the old world, by the use of this admirable means of locomotion? By no means. As he has become master of the seas with the ship, by the oar, the sail, the wheel and the screw, so shall he become master of atmospheric space by apparatus heavier than the air--for it must be heavier to be stronger than the air!"

And then the assembly exploded. What a broadside of yells escaped from all these mouths, aimed at Robur like the muzzles of so many guns! Was not this hurling a declaration of war into the very camp of the balloonists? Was not this a stirring up of strife between 'the lighter' and 'the heavier' than air?

Robur did not even frown. With folded arms he waited bravely till silence was obtained.

By a gesture Uncle Prudent ordered the firing to cease.

"Yes," continued Robur, "the future is for the flying machine. The air affords a solid fulcrum. If you will give a column of air an ascensional movement of forty-five meters a second, a man can support himself on the top of it if the soles of his boots have a superficies of only the eighth of a square meter. And if the speed be increased to ninety meters, he can walk on it with naked feet. Or if, by means of a screw, you drive a mass of air at this speed, you get the same result."

What Robur said had been said before by all the partisans of aviation, whose work slowly but surely is leading on to the solution of the problem. To Ponton d'Amécourt, La Landelle, Nadar, De Luzy, De Louvrie, Liais, Beleguir, Moreau, the brothers Richard, Babinet, Jobert, Du Temple, Salives, Penaud, De Villeneuve, Gauchot and Tatin, Michael Loup, Edison, Planavergne, and so many others, belongs the honor of having brought forward ideas of such simplicity. Abandoned and resumed times without number, they are sure, some day to triumph. To the enemies of aviation, who urge that the bird only sustains himself by warming the air he strikes, their answer is ready. Have they not proved that an eagle weighing five kilograms would have to fill fifty cubic meters with his warm fluid merely to sustain himself in space?

This is what Robur demonstrated with undeniable logic amid the uproar that arose on all sides. And in conclusion these are the words he hurled in the faces of the balloonists: "With your aerostats you can do nothing--you will arrive at nothing--you dare do nothing! The boldest of your aeronauts, John Wise, although he has made an aerial voyage of twelve hundred miles above the American continent, has had to give up his project of crossing the Atlantic! And you have not advanced one step--not one step--towards your end."

"Sir," said the president, who in vain endeavored to keep himself cool, "you forget what was said by our immortal Franklin at the first appearance of the fire balloon, 'It is but a child, but it will grow!' It was but a child, and it has grown."

"No, Mr. President, it has not grown! It has got fatter--and this is not the same thing!"

This was a direct attack on the Weldon Institute, which had decreed, helped, and paid for the making of a monster balloon. And so propositions of the following kind began to fly about the room: "Turn him out!" "Throw him off the platform!" "Prove that he is heavier than the air!"

But these were only words, not means to an end.

Robur remained impassible, and continued: "There is no progress for your aerostats, my citizen balloonists; progress is for flying machines. The bird flies, and he is not a balloon, he is a piece of mechanism!"
"Yes, he flies!" exclaimed the fiery Bat T. Fynn; "but he flies against all the laws of mechanics."

"Indeed!" said Robur, shrugging his shoulders, and resuming, "Since we have begun the study of the flight of large and small birds one simple idea has prevailed—to imitate nature, which never makes mistakes. Between the albatross, which gives hardly ten beats of the wing per minute, between the pelican, which gives seventy—"

"Seventy-one," said the voice of a scoffer.

"And the bee, which gives one hundred and ninety-two per second—"

"One hundred and ninety-three!" said the facetious individual.

"And, the common house fly, which gives three hundred and thirty—"

"And a half!"

"And the mosquito, which gives millions—"

"No, milliards!"

But Robur, the interrupted, interrupted not his demonstration. "Between these different rates—" he continued.

"There is a difference," said a voice.

"There is a possibility of finding a practical solution. When De Lucy showed that the stag beetle, an insect weighing only two grammes, could lift a weight of four hundred grammes, or two hundred times its own weight, the problem of aviation was solved. Besides, it has been shown that the wing surface decreases in proportion to the increase of the size and weight of the animal. Hence we can look forward to such contrivances—"

"Which would never fly!" said secretary Phil Evans.

"Which have flown, and which will fly," said Robur, without being in the least disconcerted, "and which we can call streophores, helicopters, orthopters—or, in imitation of the word 'nef,' which comes from 'navis,' call them from 'avis,' 'efs,'—by means of which man will become the master of space. The helix—"

"Ah, the helix!" replied Phil Evans. "But the bird has no helix; that we know!"

"So," said Robur; "but Penaud has shown that in reality the bird makes a helix, and its flight is helicopteral. And the motor of the future is the screw—"

"From such a maladee Saint Helix keep us free!" sung out one of the members, who had accidentally hit upon the air from Herold's "Zampa."

And they all took up the chorus: "From such a maladee Saint Helix keep us free!" with such intonations and variations as would have made the French composer groan in his grave.

As the last notes died away in a frightful discord Uncle Prudent took advantage of the momentary calm to say, "Stranger, up to now, we let you speak without interruption." It seemed that for the president of the Weldon Institute shouts, yells, and catcalls were not interruptions, but only an exchange of arguments.

"But I may remind you, all the same, that the theory of aviation is condemned beforehand, and rejected by the majority of American and foreign engineers. It is a system which was the cause of the death of the Flying Saracen at Constantinople, of the monk Volador at Lisbon, of De Leturn in 1852, of De Groof in 1864, besides the victims I forget since the mythological Icarus—"

"A system," replied Robur, "no more to be condemned than that whose martyrology contains the names of Pilâtre de Rozier at Calais, of Blanchard at Paris, of Donaldson and Grimwood in Lake Michigan, of Sivel and of Crocê-Spinelli, and others whom it takes good care, to forget."

This was a counter-thrust with a vengeance.

"Besides," continued Robur, "With your balloons as good as you can make them you will never obtain any speed worth mentioning. It would take you ten years to go round the world—and a flying machine could do it in a week!"

Here arose a new tempest of protests and denials which lasted for three long minutes. And then Phil Evans look up the word.

"Mr. Aviator," he said "you who talk so much of the benefits of aviation, have you ever aviated?"

"I have."

"And made the conquest of the air?"

"Not unlikely."

"Hooray for Robur the Conqueror!" shouted an ironical voice.

"Well, yes! Robur the Conqueror! I accept the name and I will bear it, for I have a right to it!"

"We beg to doubt it!" said Jem Chip.

"Gentlemen," said Robur, and his brows knit, "when I have just seriously stated a serious thing I do not permit anyone to reply to me by a flat denial, and I shall be glad to know the name of the interrupter."

"My name is Chip, and I am a vegetarian."

"Citizen Chip," said Robur, "I knew that vegetarians had longer alimentary canals than other men—a good foot longer at the least. That is quite long enough; and so do not compel me to make you any longer by beginning at your ears and—"
"Throw him out."
"Into the street with him!"
"Lynch him!"
"Helix him!"

The rage of the balloonists burst forth at last. They rushed at the platform. Robur disappeared amid a sheaf of hands that were thrown about as if caught in a storm. In vain the steam whistle screamed its fanfares on to the assembly. Philadelphia might well think that a fire was devouring one of its quarters and that all the waters of the Schuylkill could not put it out.

Suddenly there was a recoil in the tumult. Robur had put his hands into his pockets and now held them out at the front ranks of the infuriated mob.

In each hand was one of those American institutions known as revolvers which the mere pressure of the fingers is enough to fire--pocket mitrailleuses in fact.

And taking advantage not only of the recoil of his assailants but also of the silence which accompanied it.

"Decidedly," said he, "it was not Amerigo that discovered the New World, it was Cabot! You are not Americans, citizen balloonists! You are only Cabo--"

Four or five shots cracked out, fired into space. They hurt nobody. Amid the smoke, the engineer vanished; and when it had thinned away there was no trace of him. Robur the Conqueror had flown, as if some apparatus of aviation had borne him into the air.

Chapter V
ANOTHER DISAPPEARANCE

This was not the first occasion on which, at the end of their stormy discussions, the members of the Weldon Institute had filled Walnut Street and its neighborhood with their tumult. Several times had the inhabitants complained of the noisy way in which the proceedings ended, and more than once had the policemen had to interfere to clear the thoroughfare for the passersby, who for the most part were supremely indifferent on the question of aerial navigation. But never before had the tumult attained such proportions, never had the complaints been better founded, never had the intervention of the police been more necessary.

But there was some excuse for the members of the Weldon Institute. They had been attacked in their own house. To these enthusiasts for "lighter than air" a no less enthusiast for "heavier than air" had said things absolutely abhorrent. And at the moment they were about to treat him as he deserved, he had disappeared.

So they cried aloud for vengeance. To leave such insults unpunished was impossible to all with American blood in their veins. Had not the sons of Amerigo been called the sons of Cabot? Was not that an insult as unpardonable as it happened to be just--historically?

The members of the club in several groups rushed down Walnut Street, then into the adjoining streets, and then all over the neighborhood. They woke up the householders; they compelled them to search their houses, prepared to indemnify them later on for the outrage on their privacy. Vain were all their trouble and searching. Robur was nowhere to be found; there was no trace of him. He might have gone off in the "Go-Ahead," the balloon of the Institute, for all they could tell. After an hour's hunt the members had to give in and separate, not before they had agreed to extend their search over the whole territory of the twin Americas that form the new continent.

By eleven o'clock quiet had been restored in the neighborhood of Walnut Street. Philadelphia was able to sink again into that sound sleep which is the privilege of non-manufacturing towns. The different members of the club parted to seek their respective houses. To mention the most distinguished amongst them, William T. Forbes sought his large sugar establishment, where Miss Doll and Miss Mat had prepared for him his evening tea, sweetened with his own glucose. Truck Milnor took the road to his factory in the distant suburb, where the engines worked day and night. Treasurer Jim Chip, publicly accused of possessing an alimentary canal twelve inches longer than that of other men, returned to the vegetable soup that was waiting for him.

Two of the most important balloonists--two only--did not seem to think of returning so soon to their domicile. They availed themselves of the opportunity to discuss the question with more than usual acrimony. These were the irreconcilables, Uncle Prudent and Phil Evans, the president and secretary of the Weldon Institute.

At the door of the club the valet Frycollin waited for Uncle Prudent, his master, and at last he went after him, though he cared but little for the subject which had set the two colleagues at loggerheads.

It is only an euphemism that the verb "discuss" can be used to express the way in which the duet between the president and secretary was being performed. As a matter of fact they were in full wrangle with an energy born of their old rivalry.

"No, Sir, no," said Phil Evans. "If I had had the honor of being president of the Weldon Institute, there never, no,
never, would have been such a scandal."

"And what would you have done, if you had had the honor?" demanded Uncle Prudent.

"I would have stopped the insulter before he had opened his mouth."

"It seems to me it would have been impossible to stop him until he had opened his mouth," replied Uncle Prudent.

"Not in America, Sir; not in America."

And exchanging such observations, increasing in bitterness as they went, they walked on through the streets farther and farther from their homes, until they reached a part of the city whence they had to go a long way round to get back.

Frycollin followed, by no means at ease to see his master plunging into such deserted spots. He did not like deserted spots, particularly after midnight. In fact the darkness was profound, and the moon was only a thin crescent just beginning its monthly life. Frycollin kept a lookout to the left and right of him to see if he was followed. And he fancied he could see five or six hulking follows dogging his footsteps. Instinctively he drew nearer to his master, but not for the world would he have dared to break in on the conversation of which the fragments reached him.

In short it so chanced that the president and secretary of the Weldon Institute found themselves on the road to Fairmount Park. In the full heat of their dispute they crossed the Schuylkill river by the famous iron bridge. They met only a few belated wayfarers, and pressed on across a wide open tract where the immense prairie was broken every now and then by the patches of thick woodland--which make the park different to any other in the world.

There Frycollin's terror became acute, particularly as he saw the five or six shadows gliding after him across the Schuylkill bridge. The pupils of his eyes broadened out to the circumference of his iris, and his limbs seemed to diminish as if endowed with the contractility peculiar to the mollusca and certain of the articulate; for Frycollin, the valet, was an egregious coward.

He was a pure South Carolina Negro, with the head of a fool and the carcass of an imbecile. Being only one and twenty, he had never been a slave, not even by birth, but that made no difference to him. Grinning and greedy and idle, and a magnificent poltroon, he had been the servant of Uncle Prudent for about three years. Over and over again had his master threatened to kick him out, but had kept him on for fear of doing worse. With a master ever ready to venture on the most audacious enterprises, Frycollin's cowardice had brought him many arduous trials. But he had some compensation. Very little had been said about his gluttony, and still less about his laziness.

Ah, Valet Frycollin, if you could only have read the future! Why, oh why, Frycollin, did you not remain at Boston with the Sneffels, and not have given them up when they talked of going to Switzerland? Was not that a much more suitable place for you than this of Uncle Prudent's, where danger was daily welcomed?

But here he was, and his master had become used to his faults. He had one advantage, and that was a consideration. Although he was a Negro by birth he did not speak like a Negro, and nothing is so irritating as that hateful jargon in which all the pronouns are possessive and all the verbs infinitive. Let it be understood, then, that Frycollin was a thorough coward.

And now it was midnight, and the pale crescent of the moon began to sink in the west behind the trees in the park. The rays streaming fitfully through the branches made the shadows darker than ever. Frycollin looked around him anxiously. "Brrr!" he said, "There are those fellows there all the time. Positively they are getting nearer! Master Uncle!" he shouted.

It was thus he called the president of the Weldon Institute, and thus did the president desire to be called.

At the moment the dispute of the rivals had reached its maximum, and as they hurled their epithets at each other they walked faster and faster, and drew farther and farther away from the Schuylkill bridge. They had reached the center of a wide clump of trees, whose summits were just tipped by the parting rays of the moon. Beyond the trees was a very large clearing--an oval field, a complete amphitheater. Not a hillock was there to hinder the gallop of the horses, not a bush to stop the view of the spectators.

And if Uncle Prudent and Phil Evans had not been so deep in their dispute, and had used their eyes as they were accustomed to, they would have found the clearing was not in its usual state. Was it a flour mill that had anchored on it during the night? It looked like it, with its wings and sails--motionless and mysterious in the gathering gloom.

But neither the president nor the secretary of the Weldon Institute noticed the strange modification in the landscape of Fairmount Park; and neither did Frycollin. It seemed to him that the thieves were approaching, and preparing for their attack; and he was seized with convulsive fear, paralyzed in his limbs, with every hair he could boast of on the bristle. His terror was extreme. His knees bent under him, but he had just strength enough to exclaim for the last time, "Master Uncle! Master Uncle!"

"What is the matter with you?" asked Uncle Prudent.

Perhaps the disputants would not have been sorry to have relieved their fury at the expense of the unfortunate valet. But they had no time; and neither even had he time to answer.
A whistle was heard. A flash of electric light shot across the clearing.

A signal, doubtless? The moment had come for the deed of violence. In less time that it takes to tell, six men came leaping across from under the trees, two onto Uncle Prudent, two onto Phil Evans, two onto Frycollin—there was no need for the last two, for the Negro was incapable of defending himself. The president and secretary of the Weldon Institute, although taken by surprise, would have resisted.

They had neither time nor strength to do so. In a second they were rendered speechless by a gag, blind by a bandage, thrown down, pinioned and carried bodily off across the clearing. What could they think except that they had fallen into the hands of people who intended to rob them? The people did nothing of the sort, however. They did not even touch Uncle Prudent's pockets, although, according to his custom, they were full of paper dollars.

Within a minute of the attack, without a word being passed, Uncle Prudent, Phil Evans, and Frycollin felt themselves laid gently down, not on the grass, but on a sort of plank that creaked beneath them. They were laid down side by side.

A door was shut; and the grating of a bolt in a staple told them that they were prisoners.

Then there came a continuous buzzing, a quivering, a frrrr, with the rrr unending.

And that was the only sound that broke the quiet of the night.

Great was the excitement next morning in Philadelphia. Very early was it known what had passed at the meeting of the Institute. Everyone knew of the appearance of the mysterious engineer named Robur—Robur the Conqueror—and the tumult among the balloonists, and his inexplicable disappearance. But it was quite another thing when all the town heard that the president and secretary of the club had also disappeared during the night.

Long and keen was the search in the city and neighborhood! Useless! The newspapers of Philadelphia, the newspapers of Pennsylvania, the newspapers of the United States reported the facts and explained them in a hundred ways, not one of which was the right one. Heavy rewards were offered, and placards were pasted up, but all to no purpose. The earth seemed to have opened and bodily swallowed the president and secretary of the Weldon Institute.

Chapter VI
THE PRESIDENT AND SECRETARY SUSPEND HOSTILITIES

A bandage over the eyes, a gag in the mouth, a cord round the wrists, a cord round the ankles, unable to see, to speak, or to move, Uncle Prudent, Phil Evans, and Frycollin were anything but pleased with their position. Knowing not who had seized them, nor in what they had been thrown like parcels in a goods wagon, nor where they were, nor what was reserved for them—it was enough to exasperate even the most patient of the ovine race, and we know that the members of the Weldon Institute were not precisely sheep as far as patience went. With his violence of character we can easily imagine how Uncle Prudent felt. One thing was evident, that Phil Evans and he would find it difficult to attend the club next evening.

As to Frycollin, with his eyes shut and his mouth closed, it was impossible for him to think of anything. He was more dead than alive.

For an hour the position of the prisoners remained unchanged. No one came to visit them, or to give them that liberty of movement and speech of which they lay in such need. They were reduced to stifled sighs, to grunts emitted over and under their gags, to everything that betrayed anger kept dumb and fury imprisoned, or rather bound down. Then after many fruitless efforts they remained for some time as though lifeless. Then as the sense of sight was denied them they tried by their sense of hearing to obtain some indication of the nature of this disquieting state of things. But in vain did they seek for any other sound than an interminable and inexplicable f-r-r-r which seemed to envelop them in a quivering atmosphere.

At last something happened. Phil Evans, regaining his coolness, managed to slacken the cord which bound his wrists. Little by little the knot slipped, his fingers slipped over each other, and his hands regained their usual freedom.

A vigorous rubbing restored the circulation. A moment after he had slipped off the bandage which bound his eyes, taken the gag out of his mouth, and cut the cords round his ankles with his knife. An American who has not a bowie-knife in his pocket is no longer an American.

But if Phil Evans had regained the power of moving and speaking, that was all. His eyes were useless to him—at present at any rate. The prison was quite dark, though about six feet above him a feeble gleam of light came in through a kind of loophole.

As may be imagined, Phil Evans did not hesitate to at once set free his rival. A few cuts with the bowie settled the knots which bound him foot and hand.

Immediately Uncle Prudent rose to his knees and snatched away his bandage and gag.

"Thanks," said he, in stifled voice.
"Phil Evans?"
"Uncle Prudent?"
"Here we are no longer the president and secretary of the Weldon Institute. We are adversaries no more."
"You are right," answered Evans. "We are now only two men agreed to avenge ourselves on a third whose attempt deserves severe reprisals. And this third is--"
"Robur!"
"It is Robur!"
On this point both were absolutely in accord. On this subject there was no fear of dispute.
"And your servant?" said Phil Evans, pointing to Frycollin, who was puffing like a grampus. "We must set him free."
"Not yet," said Uncle Prudent. "He would overwhelm us with his jeremiads, and we have something else to do than abuse each other."
"What is that, Uncle Prudent?"
"To save ourselves if possible."
"You are right, even if it is impossible."
"And even if it is impossible."
There could be no doubt that this kidnapping was due to Robur, for an ordinary thief would have relieved them of their watches, jewelry, and purses, and thrown their bodies into the Schuylkill with a good gash in their throats instead of throwing them to the bottom of--Of what? That was a serious question, which would have to be answered before attempting an escape with any chance of success.
"Phil Evans," began Uncle Prudent, "if, when we came away from our meeting, instead of indulging in amenities to which we need not recur, we had kept our eyes more open, this would not have happened. Had we remained in the streets of Philadelphia there would have been none of this. Evidently Robur foresaw what would happen at the club, and had placed some of his bandits on guard at the door. When we left Walnut Street these fellows must have watched us and followed us, and when we imprudently ventured into Fairmount Park they went in for their little game."
"Agreed," said Evans. "We were wrong not to go straight home."
"It is always wrong not to be right," said Prudent. 
Here a long-drawn sigh escaped from the darkest corner of the prison. "What is that?" asked Evans.
"Nothing! Frycollin is dreaming."
"Between the moment we were seized a few steps out into the clearing and the moment we were thrown in here only two minutes elapsed. It is thus evident that those people did not take us out of Fairmount Park."
"And if they had done so we should have felt we were being moved."
"Undoubtedly; and consequently we must be in some vehicle, perhaps some of those long prairie wagons, or some show-caravan--"
"Evidently! For if we were in a boat moored on the Schuylkill we should have noticed the movement due to the current--"
"That is so; and as we are still in the clearing, I think that now is the time to get away, and we can return later to settle with this Robur--"
"And make him pay for this attempt on the liberty of two citizens of the United States."
"And he shall pay pretty dearly!"
"But who is this man? Where does he come from? Is he English, or German, or French--"
"He is a scoundrel, that is enough!" said Uncle Prudent. "Now to work." And then the two men, with their hands stretched out and their fingers wide apart, began to feel round the walls to find a joint or crack.
Nothing. Nothing; not even at the door. It was closely shut and it was impossible to shoot back the lock. All that could be done was to make a hole, and escape through the hole. It remained to be seen if the knives could cut into the walls.
"But whence comes this never-ending rustling?" asked Evans, who was much impressed at the continuous f-r-r-r.
"The wind, doubtless," said Uncle Prudent.
"The wind! But I thought the night was quite calm."
"So it was. But if it isn't the wind, what can it be?"
Phil Evans got out the best blade of his knife and set to work on the wall near the door. Perhaps he might make a hole which would enable him to open it from the outside should it be only bolted or should the key have been left in the lock. He worked away for some minutes. The only result was to nip up his knife, to snip off its point, and transform what was left of the blade into a saw.
"Doesn't it cut?" asked Uncle Prudent.
"No."
"Is the wall made of sheet iron?"
"No; it gives no metallic sound when you hit it."
"Is it of ironwood?"
"No; it isn't iron and it isn't wood."
"What is it then?"
"Impossible to say. But, anyhow, steel doesn't touch it." Uncle Prudent, in a sudden outburst of fury, began to rave and stamp on the sonorous planks, while his hands sought to strangle an imaginary Robur.

"Be calm, Prudent, be calm! You have a try."

Uncle Prudent had a try, but the bowie-knife could do nothing against a wall which its best blades could not even scratch. The wall seemed to be made of crystal.

So it became evident that all flight was impracticable except through the door, and for a time they must resign themselves to their fate—not a very pleasant thing for the Yankee temperament, and very much to the disgust of these eminently practical men. But this conclusion was not arrived at without many objurgations and loud-sounding phrases hurled at this Robur—who, from what had been seen of him at the Weldon Institute, was not the sort of man to trouble himself much about them.

Suddenly Frycollin began to give unequivocal signs of being unwell. He began to writhe in a most lamentable fashion, either with cramp in his stomach or in his limbs; and Uncle Prudent, thinking it his duty to put an end to these gymnastics, cut the cords that bound him.

He had cause to be sorry for it. Immediately there was poured forth an interminable litany, in which the terrors of fear were mingled with the tortures of hunger. Frycollin was no worse in his brain than in his stomach, and it would have been difficult to decide to which organ the chief cause of the trouble should be assigned.

"Frycollin!" said Uncle Prudent.
"Master Uncle! Master Uncle!" answered the Negro between two of his lugubrious howls.
"It is possible that we are doomed to die of hunger in this prison, but we have made up our minds not to succumb until we have availed ourselves of every means of alimentation to prolong our lives."
"To eat me?" exclaimed Frycollin.
"As is always done with a Negro under such circumstances! So you had better not make yourself too obvious—"
"Or you'll have your bones picked!" said Evans.

And as Frycollin saw he might be used to prolong two existences more precious than his own, he contented himself thenceforth with groaning in quiet.

The time went on and all attempts to force the door or get through the wall proved fruitless. What the wall was made of was impossible to say. It was not metal; it was not wood; it was not stone, and all the cell seemed to be made of the same stuff. When they stamped on the floor it gave a peculiar sound that Uncle Prudent found it difficult to describe; the floor seemed to sound hollow, as if it was not resting directly on the ground of the clearing. And the inexplicable f-r-r-r-r seemed to sweep along below it. All of which was rather alarming.

"Uncle Prudent," said Phil Evans.
"Well?"
"Do you think our prison has been moved at all?"
"Not that I know of."
"Because when we were first caught I distinctly remember the fresh fragrance of the grass and the resinous odor of the park trees. While now, when I take in a good sniff of the air, it seems as though all that had gone."
"So it has."
"Why?"
"We cannot say why unless we admit that the prison has moved; and I say again that if the prison had moved, either as a vehicle on the road or a boat on the stream, we should have felt it."

Here Frycollin gave vent to a long groan, which might have been taken for his last had he not followed it up with several more.
"I expect Robur will soon have us brought before him," said Phil Evans.
"I hope so," said Uncle Prudent. "And I shall tell him—"
"What?"
"That he began by being rude and ended in being unbearable."

Here Phil Evans noticed that day was beginning to break. A gleam, still faint, filtered through the narrow window opposite the door. It ought thus to be about four o'clock in the morning for it is at that hour in the month of June in this latitude that the horizon of Philadelphia is tinged by the first rays of the dawn.

But when Uncle Prudent sounded his repeater—which was a masterpiece from his colleague's factory—the tiny
gong only gave a quarter to three, and the watch had not stopped.

"That is strange!" said Phil Evans. "At a quarter to three it ought still to be night."

"Perhaps my watch has got slow," answered Uncle Prudent.

"A watch of the Wheelton Watch Company!" exclaimed Phil Evans.

Whatever might be the reason, there was no doubt that the day was breaking. Gradually the window became white in the deep darkness of the cell. However, if the dawn appeared sooner than the fortieth parallel permitted, it did not advance with the rapidity peculiar to lower latitudes. This was another observation—of Uncle Prudent's—a new inexplicable phenomenon.

"Couldn't we get up to the window and see where we are?"

"We might," said Uncle Prudent. "Frycollin, get up!"

The Negro arose.

"Put your back against the wall," continued Prudent, "and you, Evans, get on his shoulders while I buttress him up."

"Right!" said Evans.

An instant afterwards his knees were on Frycollin's shoulders, and his eyes were level with the window. The window was not of lenticular glass like those on shipboard, but was a simple flat pane. It was small, and Phil Evans found his range of view was much limited.

"Break the glass," said Prudent, "and perhaps you will be able to see better."

Phil Evans gave it a sharp knock with the handle of his bowie-knife. It gave back a silvery sound, but it did not break.

Another and more violent blow. The same result.

"It is unbreakable glass!" said Evans.

It appeared as though the pane was made of glass toughened on the Siemens system—as after several blows it remained intact.

The light had now increased, and Phil Evans could see for some distance within the radius allowed by the frame.

"What do you see?" asked Uncle Prudent.

"Nothing."

"What? Not any trees?"

"No."

"Not even the top branches?"

"No."

"Then we are not in the clearing?"

"Neither in the clearing nor in the park."

"Don't you see any roofs of houses or monuments?" said Prudent, whose disappointment and anger were increasing rapidly.

"No."

"What! Not a flagstaff, nor a church tower, nor a chimney?"

"Nothing but space."

As he uttered the words the door opened. A man appeared on the threshold. It was Robur.

"Honorable balloonists" he said, in a serious voice, "you are now free to go and come as you like."

"Free!" exclaimed Uncle Prudent.

"Yes—within the limits of the "Albatross!"

Uncle Prudent and Phil Evans rushed out of their prison. And what did they see?

Four thousand feet below them the face of a country they sought in vain to recognize.

Chapter VII

ON BOARD THE ALBATROSS

"When will man cease to crawl in the depths to live in the azure and quiet of the sky?"

To this question of Camille Flammarion's the answer is easy. It will be when the progress of mechanics has enabled us to solve the problem of aviation. And in a few years—as we can foresee—a more practical utilization of electricity will do much towards that solution.

In 1783, before the Montgolfier brothers had built their fire-balloon, and Charles, the physician, had devised his first aerostat, a few adventurous spirits had dreamt of the conquest of space by mechanical means. The first inventors did not think of apparatus lighter than air, for that the science of their time did not allow them to imagine. It was to contrivances heavier than air, to flying machines in imitation of the birds, that they trusted to realize aerial
This was exactly what had been done by that madman Icarus, the son of Daedalus, whose wings, fixed together with wax, had melted as they approached the sun.

But without going back to mythological times, without dwelling on Archytas of Tarentum, we find, in the works of Dante of Perugia, of Leonardo da Vinci and Guidotti, the idea of machines made to move through the air. Two centuries and a half afterwards inventors began to multiply. In 1742 the Marquis de Bacqueville designed a system of wings, tried it over the Seine, and fell and broke his arm. In 1768 Pauciton conceived the idea of an apparatus with two screws, suspensive and propulsive. In 1781 Meerwein, the architect of the Prince of Baden, built an orthopteric machine, and protested against the tendency of the aerostats which had just been invented. In 1784 Launoy and Bienvenu had maneuvered a helicopter worked by springs. In 1808 there were the attempts at flight by the Austrian Jacques Degen. In 1810 came the pamphlet by Denian of Nantes, in which the principles of "heavier than air" are laid down. From 1811 to 1840 came the inventions and researches of Derblinger, Vigual, Sarti, Dubochet, and Cagniard de Latour. In 1842 we have the Englishman Henson, with his system of inclined planes and screws worked by steam. In 1845 came Cossus and his ascensional screws. In 1847 came Camille Vert and his helicopter made of birds' wings. In 1852 came Letur with his system of guidable parachutes, whose trial cost him his life; and in the same year came Michel Loup with his plan of gliding through the air on four revolving wings. In 1853 came Béléguiq and his aeroplane with the traction screws, Vaussin-Chardannes with his guidable kite, and George Cauley with his flying machines driven by gas. From 1854 to 1863 appeared Joseph Pline with several patents for aerial systems. Bréant, Carlingford, Le Bris, Du Temple, Bright, whose ascensional screws were left-handed; Smythies, Panafieu, Crosnier, &c. At length, in 1863, thanks to the efforts of Nadar, a society of "heavier than air" was founded in Paris. There the inventors could experiment with the machines, of which many were patented. Ponton d'Amécourt and his steam helicopter, La Landelle and his system of combining screws with inclined planes and parachutes, Louvrié and his aeroscape, Esterno and his mechanical bird, Groof and his apparatus with wings worked by levers. The impetus was given, inventors invented, calculators calculated all that could render aerial locomotion practicable. Bourcart, Le Bris, Kaufmann, Smyth, Stringfellow, Prigent, Danjard, Pomés and De la Pauze, Moy, Pénaud, Jobert, Haureau de Villeneuve, Achenbach, Garapon, Duchesne, Danardan, Pariesel, Dieuaida, Melkiseff, Forlanini, Bearey, Tatin, Dandrieux, Edison, some with wings or screws, others with inclined planes, imagined, created, constructed, perfected, their flying machines, ready to do their work, once there came to be applied to thereby some inventor a motor of adequate power and excessive lightness.

This list may be a little long, but that will be forgiven, for it is necessary to give the various steps in the ladder of aerial locomotion, on the top of which appeared Robur the Conqueror. Without these attempts, these experiments of his predecessors, how could the inquirer have conceived so perfect an apparatus? And though he had but contempt for those who obstinately worked away in the direction of balloons, he held in high esteem all those partisans of "heavier than air," English, American, Italian, Austrian, French--and particularly French--whose work had been perfected by him, and led him to design and then to build this flying engine known as the "Albatross," which he was guiding through the currents of the atmosphere.

"The pigeon flies!" had exclaimed one of the most persistent adepts at aviation.

"They will crowd the air as they crowd the earth!" said one of his most excited partisans.

"From the locomotive to the aeromotive!" shouted the noisiest of all, who had turned on the trumpet of publicity to awaken the Old and New Worlds.

Nothing, in fact, is better established, by experiment and calculation, than that the air is highly resistant. A circumference of only a yard in diameter in the shape of a parachute can not only impede descent in air, but can render it isochronous. That is a fact.

It is equally well known that as the weight of a flying animal increases, the less is the proportional increase in the surface of the wings, and therefore becomes almost insignificant.

It is also known that as the weight of a flying animal increases, the less is the proportional increase in the surface beaten by the wings in order to sustain it, although the motion of the wings becomes slower.

A flying machine must therefore be constructed to take advantage of these natural laws, to imitate the bird, "that admirable type of aerial locomotion," according to Dr. Marcy, of the Institute of France.

In short the contrivances likely to solve the problem are of three kinds:--

1. Helicopters or spiralifers, which are merely screws with vertical axes.
2. Ornithopters, machines which endeavour to reproduce the natural flight of birds.
3. Aeroplanes, which are merely inclined planes like kites, but towed or driven by screws.

Each of these systems has had and still has its partisans obstinately resolved to give way in not the slightest particular. However, Robur, for many reasons, had rejected the two first.

The ornithopter, or mechanical bird, offers certain advantages, no doubt. That the work and experiments of M.
Renard in 1884 have sufficiently proved. But, as has been said, it is not necessary to copy Nature servilely. Locomotives are not copied from the hare, nor are ships copied from the fish. To the first we have put wheels which are not legs; to the second we have put screws which are not fins. And they do not do so badly. Besides, what is this mechanical movement in the flight of birds, whose action is so complex? Has not Doctor Marcy suspected that the feathers open during the return of the wings so as to let the air through them? And is not that rather a difficult operation for an artificial machine?

On the other hand, aeroplanes have given many good results. Screws opposing a slanting plane to the bed of air will produce an ascensional movement, and the models experimented on have shown that the disposable weight, that is to say the weight it is possible to deal with as distinct from that of the apparatus, increases with the square of the speed. Herein the aeroplane has the advantage over the aerostat even when the aerostat is furnished with the means of locomotion.

Nevertheless Robur had thought that the simpler his contrivance the better. And the screws--the Saint Helices that had been thrown in his teeth at the Weldon Institute--had sufficed for all the needs of his flying machine. One series could hold it suspended in the air, the other could drive it along under conditions that were marvelously adapted for speed and safety.

If the ornithopter--striking like the wings of a bird--raised itself by beating the air, the helicopter raised itself by striking the air obliquely, with the fins of the screw as it mounted on an inclined plane. These fins, or arms, are in reality wings, but wings disposed as a helix instead of as a paddle wheel. The helix advances in the direction of its axis. Is the axis vertical? Then it moves vertically. Is the axis horizontal? Then it moves horizontally.

The whole of Robur's flying apparatus depended on these two movements, as will be seen from the following detailed description, which can be divided under three heads--the platform, the engines of suspension and propulsion, and the machinery.

Platform.--This was a framework a hundred feet long and twelve wide, a ship's deck in fact, with a projecting prow. Beneath was a hull solidly built, enclosing the engines, stores, and provisions of all sorts, including the watertanks. Round the deck a few light uprights supported a wire trellis that did duty for bulwarks. On the deck were three houses, whose compartments were used as cabins for the crew, or as machine rooms. In the center house was the machine which drove the suspensory helices, in that forward was the machine that drove the bow screw, in that aft was the machine that drove the stern screw. In the bow were the cook's galley and the crew's quarters; in the stern were several cabins, including that of the engineer, the saloon, and above them all a glass house in which stood the helmsman, who steered the vessel by means of a powerful rudder. All these cabins were lighted by port-holes filled with toughened glass, which has ten times the resistance of ordinary glass. Beneath the hull was a system of flexible springs to ease off the concussion when it became advisable to land.

Engines of suspension and propulsion.--Above the deck rose thirty-seven vertical axes, fifteen along each side, and seven, more elevated, in the centre. The "Albatross" might be called a clipper with thirty-seven masts. But these masts instead of sails bore each two horizontal screws, not very large in spread or diameter, but driven at prodigious speed. Each of these axes had its own movement independent of the rest, and each alternate one spun round in a different direction from the others, so as to avoid any tendency to gyration. Hence the screws as they rose on the vertical column of air retained their equilibrium by their horizontal resistance. Consequently the apparatus was furnished with seventy-four suspensory screws, whose three branches were connected by a metallic circle which economized their motive force. In front and behind, mounted on horizontal axes, were two propelling screws, each with four arms. These screws were of much larger diameter than the suspensory ones, but could be worked at quite their speed. In fact, the vessel combined the systems of Cossus, La Landelle, and Ponton d'Amécourt, as perfected by Robur. But it was in the choice and application of his motive force that he could claim to be an inventor.

Machinery.--Robur had not availed himself of the vapor of water or other liquids, nor compressed air and other mechanical motion. He employed electricity, that agent which one day will be the soul of the industrial world. But he required no electro-motor to produce it. All he trusted to was piles and accumulators. What were the elements of these piles, and what were the acids he used, Robur only knew. And the construction of the accumulators was kept equally secret. Of what were their positive and negative plates? None can say. The engineer took good care--and not unreasonably--to keep his secret unpatented. One thing was unmistakable, and that was that the piles were of extraordinary strength; and the accumulators left those of Faure-Sellon-Volckmar very far behind in yielding currents whose ampères ran into figures up to then unknown. Thus there was obtained a power to drive the screws and communicate a suspending and propelling force in excess of all his requirements under any circumstances.

But--it is as well to repeat it--this belonged entirely to Robur. He kept it a close secret. And, if the president and secretary of the Weldon Institute did not happen to discover it, it would probably be lost to humanity.

It need not be shown that the apparatus possessed sufficient stability. Its center of gravity proved that at once. There was no danger of its making alarming angles with the horizontal, still less of its capsizing.
And now for the metal used by Robur in the construction of his aeronef--a name which can be exactly applied to the "Albatross." What was this material, so hard that the bowie-knife of Phil Evans could not scratch it, and Uncle Prudent could not explain its nature? Simply paper!

For some years this fabrication had been making considerable progress. Unsized paper, with the sheets impregnated with dextrin and starch and squeezed in hydraulic presses, will form a material as hard as steel. There are made of it pulleys, rails, and wagon-wheels, much more solid than metal wheels, and far lighter. And it was this lightness and solidity which Robur availed himself of in building his aerial locomotive. Everything--framework, hull, houses, cabins--were made of straw-paper turned hard as metal by compression, and--what was not to be despised in an apparatus flying at great heights--incor;mbustible. The different parts of the engines and the screws were made of gelatinized fiber, which combined in sufficient degree flexibility with resistance. This material could be used in every form. It was insoluble in most gases and liquids, acids or essences, to say nothing of its insulating properties, and it proved most valuable in the electric machinery of the "Albatross."

Robur, his mate Tom Turner, an engineer and two assistants, two steersman and a cook--eight men all told--formed the crew of the aeronef, and proved ample for all the maneuvers required in aerial navigation. There were arms of the chase and of war; fishing appliances; electric lights; instruments of observation, compasses, and sextants for checking the course, thermometers for studying the temperature, different barometers, some for estimating the heights attained, others for indicating the variations of atmospheric pressure; a storm-glass for forecasting tempests; a small library; a portable printing press; a field-piece mounted on a pivot; breech loading and throwing a three-inch shell; a supply of powder, bullets, dynamite cartridges; a cooking-stove, warmed by currents from the accumulators; a stock of preserves, meats and vegetables sufficient to last for months. Such were the outfit and stores of the aeronef--in addition to the famous trumpet.

There was besides a light india-rubber boat, insubmersible, which could carry eight men on the surface of a river, a lake, or a calm sea.

But were there any parachutes in case of accident? No. Robur did not believe in accidents of that kind. The axes of the screws were independent. The stoppage of a few would not affect the motion of the others; and if only half were working, the "Albatross" could still keep afloat in her natural element.

"And with her," said Robur to his guests--guests in spite of themselves--"I am master of the seventh part of the world, larger than Africa, Oceania, Asia, America, and Europe, this aerial Icarian sea, which millions of Icarians will one day people."

Chapter VIII
THE BALLOONISTS REFUSE TO BE CONVINCED

The President of the Weldon Institute was stupefied; his companion was astonished. But neither of them would allow any of their very natural amazement to be visible.

The valet Frycollin did not conceal his terror at finding himself borne through space on such a machine, and he took no pains whatever to hide it.

The suspensory screws were rapidly spinning overhead. Fast as they were going, they would have to triple their speed if the "Albatross" was to ascend to higher zones. The two propellers were running very easily and driving the ship at about eleven knots an hour.

As they leaned over the rail the passengers of the "Albatross" could perceive a long sinuous liquid ribbon which meandered like a mere brook through a varied country amid the gleaming of many lagoons obliquely struck by the rays of the sun. The brook was a river, one of the most important in that district. Along its left bank was a chain of mountains extending out of sight.

"And will you tell us where we are?" asked Uncle Prudent, in a voice tremulous with anger.

"I have nothing to teach you," answered Robur.

"And will you tell us where we are going?" asked Phil Evans.

"Through space."

"And how long will that last?"

"Until it ends."

"Are we going round the world?" asked Phil Evans ironically.

"Further than that," said Robur.

"And if this voyage does not suit us?" asked Uncle Prudent.

"It will have to suit you."

That is a foretaste of the nature of the relations that were to obtain between the master of the "Albatross" and his guests, not to say his prisoners. Manifestly he wished to give them time to cool down, to admire the marvelous
apparatus which was bearing them through the air, and doubtless to compliment the inventor. And so he went off to
the other end of the deck, leaving them to examine the arrangement of the machinery and the management of the
ship or to give their whole attention to the landscape which was unrolling beneath them.

"Uncle Prudent," said Evans, "unless I am mistaken we are flying over Central Canada. That river in the
northwest is the St. Lawrence. That town we are leaving behind is Quebec."

It was indeed the old city of Champlain, whose zinc roofs were shining like reflectors in the sun. The
"Albatross" must thus have reached the forty-sixth degree of north latitude, and thus was explained the premature
advance of the day with the abnormal prolongation of the dawn.

"Yes," said Phil Evans, "There is the town in its amphitheater, the hill with its citadel, the Gibraltar of North
America. There are the cathedrals. There is the Custom House with its dome surmounted by the British flag!"

Phil Evans had not finished before the Canadian city began to slip into the distance.

Robur, seeing that the president and secretary of the Weldon Institute had directed their attention to the external
arrangements of the "Albatross," walked up to them and said: "Well, gentlemen, do you believe in the possibility of
aerial locomotion by machines heavier than air?"

It would have been difficult not to succumb to the evidence. But Uncle Prudent and Phil Evans did not reply.

"You are silent," continued the engineer. "Doubtless hunger makes you dumb! But if I undertook to carry you
through the air, I did not think of feeding you on such a poorly nutritive fluid. Your first breakfast is waiting for
you."

As Uncle Prudent and Phil Evans were feeling the pangs of hunger somewhat keenly they did not care to stand
upon ceremony. A meal would commit them to nothing; and when Robur put them back on the ground they could
resume full liberty of action.

And so they followed into a small dining-room in the aftermost house. There they found a well-laid table at
which they could take their meals during the voyage. There were different preserves; and, among other things, was a
sort of bread made of equal parts of flour and meat reduced to powder and worked together with a little lard, which
boiled in water made excellent soup; and there were rashers of fried ham, and for drink there was tea.

Neither had Frycollin been forgotten. He was taken forward and there found some strong soup made of this
bread. In truth he had to be very hungry to eat at all, for his jaws shook with fear, and almost refused to work. "If it
was to break! If it was to break!" said the unfortunate Negro. Hence continual faintings. Only think! A fall of over
four thousand feet, which would smash him to a jelly!

An hour afterwards Uncle Prudent and Phil Evans appeared on the deck. Robur was no longer there. At the stem
the man at the wheel in his glass cage, his eyes fixed on the compass, followed imperturbably without hesitation the
route given by the engineer.

As for the rest of the crew, breakfast probably kept them from their posts. An assistant engineer, examining the
machinery, went from one house to the other.

If the speed of the ship was great the two colleagues could only estimate it imperfectly, for the "Albatross" had
passed through the cloud zone which the sun showed some four thousand feet below.

"I can hardly believe it," said Phil Evans.

"Don't believe it!" said Uncle Prudent. And going to the bow they looked out towards the western horizon.

"Another town," said Phil Evans.

"Do you recognize it?"

"Yes! It seems to me to be Montreal."

"Montreal? But we only left Quebec two hours ago!"

"That proves that we must be going at a speed of seventy-five miles an hour."

Such was the speed of the aeronef; and if the passengers were not inconvenienced by it, it was because they were
going with the wind. In a calm such speed would have been difficult and the rate would have sunk to that of an
express. In a head-wind the speed would have been unbearable.

Phil Evans was not mistaken. Below the "Albatross" appeared Montreal, easily recognizable by the Victoria
Bridge, a tubular bridge thrown over the St. Lawrence like the railway viaduct over the Venice lagoon. Soon they
could distinguish the town's wide streets, its huge shops, its palatial banks, its cathedral, recently built on the model
of St. Peter's at Rome, and then Mount Royal, which commands the city and forms a magnificent park.

Luckily Phil Evans had visited the chief towns of Canada, and could recognize them without asking Robur. After
Montreal they passed Ottawa, whose falls, seen from above, looked like a vast cauldron in ebullition, throwing off
masses of steam with grand effect.

"There is the Parliament House."

And he pointed out a sort of Nuremburg toy planted on a hill top. This toy with its polychrome architecture
resembled the House of Parliament in London much as the Montreal cathedral resembles St. Peter's at Rome. But that was of no consequence; there could be no doubt it was Ottawa.

Soon the city faded off towards the horizon, and formed but a luminous spot on the ground.

It was almost two hours before Robur appeared. His mate, Tom Turner, accompanied him. He said only three words. These were transmitted to the two assistant engineers in the fore and aft engine-houses. At a sign the helmsman changed the direction of the "Albatross" a couple of points to the southwest; at the same time Uncle Prudent and Phil Evans felt that a greater speed had been given to the propellers.

In fact, the speed had been doubled, and now surpassed anything that had ever been attained by terrestrial Engines. Torpedo-boats do their twenty-two knots an hour; railway trains do their sixty miles an hour; the ice-boats on the frozen Hudson do their sixty-five miles an hour; a machine built by the Patterson company, with a cagged wheel, has done its eighty miles; and another locomotive between Trenton and Jersey City has done its eighty-four.

But the "Albatross," at full speed, could do her hundred and twenty miles an hour, or 176 feet per second. This speed is that of the storm which tears up trees by the roots. It is the mean speed of the carrier pigeon, and is only surpassed by the flight of the swallow (220 feet per second) and that of the swift (274 feet per second).

In a word, as Robur had said, the "Albatross," by using the whole force of her screws, could make the tour of the globe in two hundred hours, or less than eight days.

Is it necessary to say so? The phenomenon whose appearance had so much puzzled the people of both worlds was the aeronef of the engineer. The trumpet which blared its startling fanfares through the air was that of the mate, Tom Turner. The flag planted on the chief monuments of Europe, Asia, America, was the flag of Robur the Conqueror and his "Albatross."

And if up to then the engineer had taken many precautions against being recognized, if by preference he traveled at night, clearing the way with his electric lights, and during the day vanishing into the zones above the clouds, he seemed now to have no wish to keep his secret hidden. And if he had come to Philadelphia and presented himself at the meeting of the Weldon Institute, was it not that they might share in his prodigious discovery, and convince "ipso facto" the most incredulous? We know how he had been received, and we see what reprisals he had taken on the president and secretary of the club.

Again did Robur approach his prisoners, who affected to be in no way surprised at what they saw, of what had succeeded in spite of them. Evidently beneath the cranium of these two Anglo-Saxon heads there was a thick crust of obstinacy, which would not be easy to remove.

On his part, Robur did not seem to notice anything particular, and coolly continued the conversation which he had begun two hours before.

"Gentlemen," said he, "you ask yourselves doubtless if this apparatus, so marvelously adapted for aerial locomotion, is susceptible of receiving greater speed. It is not worth while to conquer space if we cannot devour it. I wanted the air to be a solid support to me, and it is. I saw that to struggle against the wind I must be stronger than the wind, and I am. I had no need of sails to drive me, nor oars nor wheels to push me, nor rails to give me a faster road. Air is what I wanted, that was all. Air surrounds me as it surrounds the submarine boat, and in it my propellers act like the screws of a steamer. That is how I solved the problem of aviation. That is what a balloon will never do, nor will any machine that is lighter than air."

Silence, absolute, on the part of the colleagues, which did not for a moment disconcert the engineer. He contented himself with a half-smile, and continued in his interrogative style, "Perhaps you ask if to this power of the "Albatross" to move horizontally there is added an equal power of vertical movement—in a word, if, when, we visit the higher zones of the atmosphere, we can compete with an aerostat? Well, I should not advise you to enter the "Go-Ahead" against her!"

The two colleagues shrugged their shoulders. That was probably what the engineer was waiting for.

Robur made a sign. The propelling screws immediately stopped, and after running for a mile the "Albatross" pulled up motionless.

At a second gesture from Robur the suspensory helices revolved at a speed that can only be compared to that of a siren in acoustical experiments. Their f-r-r-r-r rose nearly an octave in the scale of sound, diminishing gradually in intensity as the air became more rarified, and the machine rose vertically, like a lark singing his song in space.

"Master! Master!" shouted Frycollin. "See that it doesn't break!"

A smile of disdain was Robur's only reply. In a few minutes the "Albatross" had attained the height of 8,700 feet, and extended the range of vision by seventy miles, the barometer having fallen 480 millimeters.

Then the "Albatross" descended. The diminution of the pressure in high altitudes leads to the diminution of oxygen in the air, and consequently in the blood. This has been the cause of several serious accidents which have happened to aeronauts, and Robur saw no reason to run any risk.

The "Albatross" thus returned to the height she seemed to prefer, and her propellers beginning again, drove her
off to the southwest.

"Now, sirs, if that is what you wanted you can reply." Then, leaning over the rail, he remained absorbed in contemplation.

When he raised his head the president and secretary of the Weldon Institute stood by his side.

"Engineer Robur," said Uncle Prudent, in vain endeavoring to control himself, "we have nothing to ask about what you seem to believe, but we wish to ask you a question which we think you would do well to answer."

"Speak."

"By what right did you attack us in Philadelphia in Fairmount Park? By what right did you shut us up in that prison? By what right have you brought us against our will on board this flying machine?"

"And by what right, Messieurs Balloonists, did you insult and threaten me in your club in such a way that I am astonished I came out of it alive?"

"To ask is not to answer," said Phil Evans, "and I repeat, by what right?"

"Do you wish to know?"

"If you please."

"Well, by the right of the strongest!"

"That is cynical."

"But it is true."

"And for how long, citizen engineer," asked Uncle Prudent, who was nearly exploding, "for how long do you intend to exercise that right?"

"How can you?" said Robur, ironically, "how can you ask me such a question when you have only to cast down your eyes to enjoy a spectacle unparalleled in the world?"

The "Albatross" was then sweeping across the immense expanse of Lake Ontario. She had just crossed the country so poetically described by Cooper. Then she followed the southern shore and headed for the celebrated river which pours into it the waters of Lake Erie, breaking them to powder in its cataracts.

In an instant a majestic sound, a roar as of the tempest, mounted towards them and, as if a humid fog had been projected into the air, the atmosphere sensibly freshened. Below were the liquid masses. They seemed like an enormous flowing sheet of crystal amid a thousand rainbows due to refraction as it decomposed the solar rays. The sight was sublime.

Before the falls a foot-bridge, stretching like a thread, united one bank to the other. Three miles below was a suspension-bridge, across which a train was crawling from the Canadian to the American bank.

"The falls of Niagara!" exclaimed Phil Evans. And as the exclamation escaped him, Uncle Prudent was doing all he could do to admire nothing of these wonders.

A minute afterwards the "Albatross" had crossed the river which separates the United States from Canada, and was flying over the vast territories of the West.

Chapter IX
ACROSS THE PRAIRIE

In one of the cabins of the after-house Uncle Prudent and Phil Evans had found two excellent berths, with clean linen, change of clothes, and traveling-cloaks and rugs. No Atlantic liner could have offered them more comfort. If they did not sleep soundly it was that they did not wish to do so, or rather that their very real anxiety prevented them. In what adventure had they embarked? To what series of experiments had they been invited? How would the business end? And above all, what was Robur going to do with them?

Frycollin, the valet, was quartered forward in a cabin adjoining that of the cook. The neighborhood did not please him; he liked to rub shoulders with the great in this world. But if he finally went to sleep it was to dream of fall after fall, of projections through space, which made his sleep a horrible nightmare.

However, nothing could be quieter than this journey through the atmosphere, whose currents had grown weaker with the evening. Beyond the rustling of the blades of the screws there was not a sound, except now and then the whistle from some terrestrial locomotive, or the calling of some animal. Strange instinct! These terrestrial beings felt the aeronef glide over them, and uttered cries of terror as it passed. On the morrow, the 14th of June, at five o'clock, Uncle Prudent and Phil Evans were walking on the deck of the "Albatross."

Nothing had changed since the evening; there was a lookout forward, and the helmsman was in his glass cage. Why was there a look-out? Was there any chance of collision with another such machine? Certainly not. Robur had not yet found imitators. The chance of encountering an aerostat gliding through the air was too remote to be regarded. In any case it would be all the worse for the aerostat--the earthen pot and the iron pot. The "Albatross" had nothing to fear from the collision.
But what could happen? The aeronef might find herself like a ship on a lee shore if a mountain that could not be outflanked or passed barred the way. These are the reefs of the air, and they have to be avoided as a ship avoids the reefs of the sea. The engineer, it is true, had given the course, and in doing so had taken into account the altitude necessary to clear the summits of the high lands in the district. But as the aeronef was rapidly nearing a mountainous country, it was only prudent to keep a good lookout, in case some slight deviation from the course became necessary.

Looking at the country beneath them, Uncle Prudent and Phil Evans noticed a large lake, whose lower southern end the "Albatross" had just reached. They concluded, therefore, that during the night the whole length of Lake Erie had been traversed, and that, as they were going due west, they would soon be over Lake Michigan. "There can be no doubt of it," said Phil Evans, "and that group of roofs on the horizon is Chicago."

He was right. It was indeed the city from which the seventeen railways diverge, the Queen of the West, the vast reservoir into which flow the products of Indiana, Ohio, Wisconsin, Missouri, and all the States which form the western half of the Union.

Uncle Prudent, through an excellent telescope he had found in his cabin, easily recognized the principal buildings. His colleague pointed out to him the churches and public edifices, the numerous "elevators" or mechanical, granaries, and the huge Sherman Hotel, whose windows seemed like a hundred glittering points on each of its faces.

"If that is Chicago," said Uncle Prudent, "it is obvious that we are going farther west than is convenient for us if we are to return to our starting-place."

And, in fact, the "Albatross" was traveling in a straight line from the Pennsylvania capital.

But if Uncle Prudent wished to ask Robur to take him eastwards he could not then do so. That morning the engineer did not leave his cabin. Either he was occupied in some work, or else he was asleep, and the two colleagues sat down to breakfast without seeing him.

The speed was the same as that during last evening. The wind being easterly the rate was not interfered with at all, and as the thermometer only falls a degree centigrade for every seventy meters of elevation the temperature was not insupportable. And so, in chatting and waiting for the engineer, Uncle Prudent and Phil Evans walked about beneath the forest of screws, whose gyratory movement gave their arms the appearance of semi-diaphanous disks.

The State of Illinois was left by its northern frontier in less than two hours and a half; and they crossed the Father of Waters, the Mississippi, whose double-decked steam-boats seemed no bigger than canoes. Then the "Albatross" flew over Iowa after having sighted Iowa City about eleven o'clock in the morning.

A few chains of hills, "bluffs" as they are called, curved across the face of the country trending from the south to the northwest, whose moderate height necessitated no rise in the course of the aeronef. Soon the bluffs gave place to the large plains of western Iowa and Nebraska--immense prairies extending all the way to the foot of the Rocky Mountains. Here and there were many rios, affluents or minor affluents of the Missouri. On their banks were towns and villages, growing more scattered as the "Albatross" sped farther west.

Nothing particular happened during this day. Uncle Prudent and Phil Evans were left entirely to themselves. They hardly noticed Frycollin sprawling at full length in the bow, keeping his eyes shut so that he could see nothing. And they were not attacked by vertigo, as might have been expected. There was no guiding mark, and there was nothing to cause the vertigo, as there would have been on the top of a lofty building. The abyss has no attractive power when it is gazed at from the car of a balloon or deck of an aeronef. It is not an abyss that opens beneath the aeronaut, but an horizon that rises round him on all sides like a cup.

In a couple of hours the "Albatross" was over Omaha, on the Nebraskan frontier--Omaha City, the real head of the Pacific Railway, that long line of rails, four thousand five hundred miles in length, stretching from New York to San Francisco. For a moment they could see the yellow waters of the Missouri, then the town, with its houses of wood and brick in the center of a rich basin, like a buckle in the iron belt which clasps North America round the waist. Doubtless, also, as the passengers in the aeronef could observe all these details, the inhabitants of Omaha noticed the strange machine. Their astonishment at seeing it gliding overhead could be no greater than that of the president and secretary of the Weldon Institute at finding themselves on board.

Anyhow, the journals of the Union would be certain to notice the fact. It would be the explanation of the astonishing phenomenon which the whole world had been wondering over for some time.

In an hour the "Albatross" had left Omaha and crossed the Platte River, whose valley is followed by the Pacific Railway in its route across the prairie. Things looked serious for Uncle Prudent and Phil Evans.

"It is serious, then, this absurd project of taking us to the Antipodes."

"And whether we like it or not!" exclaimed the other.

"Robur had better take care! I am not the man to stand that sort of thing."
"Nor am I!" replied Phil Evans. "But be calm, Uncle Prudent, be calm."
"Be calm!"
"And keep your temper until it is wanted."

By five o'clock they had crossed the Black Mountains covered with pines and cedars, and the "Albatross" was over the appropriately named Bad Lands of Nebraska--a chaos of ochre-colored hills, of mountainous fragments fallen on the soil and broken in their fall. At a distance these blocks take the most fantastic shapes. Here and there amid this enormous game of knucklebones there could be traced the imaginary ruins of medieval cities with forts and dungeons, pepper-box turrets, and machicolated towers. And in truth these Bad Lands are an immense ossuary where lie bleaching in the sun myriads of fragments of pachyderms, chelonians, and even, some would have us believe, fossil men, overwhelmed by unknown cataclysms ages and ages ago.

When evening came the whole basin of the Platte River had been crossed, and the plain extended to the extreme limits of the horizon, which rose high owing to the altitude of the "Albatross."

During the night there were no more shrill whistles of locomotives or deeper notes of the river steamers to trouble the quiet of the starry firmament. Long bellowing occasionally reached the aeronef from the herds of buffalo that roamed over the prairie in search of water and pasturage. And when they ceased, the trampling of the grass under their feet produced a dull roaring similar to the rushing of a flood, and very different from the continuous f-r-r-r-r of the screws.

Then from time to time came the howl of a wolf, a fox, a wild cat, or a coyote, the "Canis latrans," whose name is justified by his sonorous bark.

Occasionally came penetrating odors of mint, and sage, and absinthe, mingled with the more powerful fragrance of the conifers which rose floating through the night air.

At last came a menacing yell, which was not due to the coyote. It was the shout of a Redskin, which no Tenderfoot would confound with the cry of a wild beast.

Chapter X
WESTWARD--BUT WHITHER?

The next day, the 15th of June, about five o'clock in the morning, Phil Evans left his cabin. Perhaps he would today have a chance of speaking to Robur? Desirous of knowing why he had not appeared the day before, Evans addressed himself to the mate, Tom Turner.

Tom Turner was an Englishman of about forty-five, broad in the shoulders and short in the legs, a man of iron, with one of those enormous characteristic heads that Hogarth rejoiced in.

"Shall we see Mr. Robur to-day?" asked Phil Evans.
"I don't know," said Turner.
"I need not ask if he has gone out."
"Perhaps he has."
"And when will he come back?"
"When he has finished his cruise."

And Tom went into his cabin.

With this reply they had to be contented. Matters did not look promising, particularly as on reference to the compass it appeared that the "Albatross" was still steering southwest.

Great was the contrast between the barren tract of the Bad Lands passed over during the night and the landscape then unrolling beneath them.

The aeronef was now more than six hundred miles from Omaha, and over a country which Phil Evans could not recognize because he had never been there before. A few forts to keep the Indians in order crowned the bluffs with their geometric lines, formed oftener of palisades than walls. There were few villages, and few inhabitants, the country differing widely from the auriferous lands of Colorado many leagues to the south.

In the distance a long line of mountain crests, in great confusion as yet, began to appear. They were the Rocky Mountains.

For the first time that morning Uncle Prudent and Phil Evans were sensible of a certain lowness of temperature which was not due to a change in the weather, for the sun shone in superb splendor.

"It is because of the "Albatross" being higher in the air," said Phil Evans.

In fact the barometer outside the central deck-house had fallen 540 millimeters, thus indicating an elevation of about 10,000 feet above the sea. The aeronef was at this altitude owing to the elevation of the ground. An hour before she had been at a height of 13,000 feet, and behind her were mountains covered with perpetual snow.

There was nothing Uncle Prudent and his companion could remember which would lead them to discover where
they were. During the night the "Albatross" had made several stretches north and south at tremendous speed, and that was what had put them out of their reckoning.

After talking over several hypotheses more or less plausible they came to the conclusion that this country encircled with mountains must be the district declared by an Act of Congress in March, 1872, to be the National Park of the United States. A strange region it was. It well merited the name of a park--a park with mountains for hills, with lakes for ponds, with rivers for streamlets, and with geysers of marvelous power instead of fountains.

In a few minutes the "Albatross" glided across the Yellowstone River, leaving Mount Stevenson on the right, and coasting the large lake which bears the name of the stream. Great was the variety on the banks of this basin, ribbed as they were with obsidian and tiny crystals, reflecting the sunlight on their myriad facets. Wonderful was the arrangement of the islands on its surface; magnificent were the blue reflections of the gigantic mirror. And around the lake, one of the highest in the globe, were multitudes of pelicans, swans, gulls and geese, bernicles and divers. In places the steep banks were clothed with green trees, pines and larches, and at the foot of the escarpments there shot upwards innumerable white fumaroles, the vapor escaping from the soil as from an enormous reservoir in which the water is kept in permanent ebullition by subterranean fire.

The cook might have seized the opportunity of securing an ample supply of trout, the only fish the Yellowstone Lake contains in myriads. But the "Albatross" kept on at such a height that there was no chance of indulging in a catch which assuredly would have been miraculous.

In three quarters of an hour the lake was overpassed, and a little farther on the last was seen of the geyser region, which rivals the finest in Iceland. Leaning over the rail, Uncle Prudent and Phil Evans watched the liquid columns which leaped up as though to furnish the aeronef with a new element. There were the Fan, with the jets shot forth in rays, the Fortress, which seemed to be defended by waterspouts, the Faithful Friend, with her plume crowned with the rainbows, the Giant, spouting forth a vertical torrent twenty feet round and more than two hundred feet high.

Robur must evidently have been familiar with this incomparable spectacle, unique in the world, for he did not appear on deck. Was it, then, for the sole pleasure of his guests that he had brought the aeronef above the national domain? If so, he came not to receive their thanks. He did not even trouble himself during the daring passage of the Rocky Mountains, which the "Albatross" approached at about seven o'clock.

By increasing the speed of her wings, as a bird rising in its flight, the "Albatross" would clear the highest ridges of the chain, and sink again over Oregon or Utah. But the maneuver was unnecessary. The passes allowed the barrier to be crossed without ascending for the higher ridges. There are many of these canyons, or steep valleys, more or less narrow, through which they could glide, such as Bridger Gap, through which runs the Pacific Railway into the Mormon territory, and others to the north and south of it.

It was through one of these that the "Albatross" headed, after slackening speed so as not to dash against the walls of the canyon. The steersman, with a sureness of hand rendered more effective by the sensitiveness of the rudder, maneuvered his craft as if she were a crack racer in a Royal Victoria match. It was really extraordinary. In spite of all the jealousy of the two enemies of "lighter than air," they could not help being surprised at the perfection of this engine of aerial locomotion.

In less than two hours and a half they were through the Rockies, and the "Albatross" resumed her former speed of sixty-two miles an hour. She was steering southwest so as to cut across Utah diagonally as she neared the ground. She had even dropped several hundred yards when the sound of a whistle attracted the attention of Uncle Prudent and Phil Evans. It was a train on the Pacific Railway on the road to Salt Lake City.

And then, in obedience to an order secretly given, the "Albatross" dropped still lower so as to chase the train, which was going at full speed. She was immediately sighted. A few heads showed themselves at the doors of the cars. Then numerous passengers crowded the gangways. Some did not hesitate to climb on the roof to get a better view of the flying machine. Cheers came floating up through the air; but no Robur appeared in answer to them.

The "Albatross" continued her descent, slowing her suspensory screws and moderating her speed so as not to leave the train behind. She flew about it like an enormous beetle or a gigantic bird of prey. She headed off, to the right and left, and swept on in front, and hung behind, and proudly displayed her flag with the golden sun, to which the conductor of the train replied by waving the Stars and Stripes.

In vain the prisoners, in their desire to take advantage of the opportunity, endeavored to make themselves known to those below. In vain the president of the Weldon Institute roared forth at the top of his voice, "I am Uncle Prudent of Philadelphia!" And the secretary followed suit with, "I am Phil Evans, his colleague!" Their shouts were lost in the thousand cheers with which the passengers greeted the aeronef.

Three or four of the crew of the "Albatross" had appeared on the deck, and one of them, like sailors when passing a ship less speedy than their own, held out a rope, an ironical way of offering to tow them.

And then the "Albatross" resumed her original speed, and in half an hour the express was out of sight. About one o'clock there appeared a vast disk, which reflected the solar rays as if it were an immense mirror.
"That ought to be the Mormon capital, Salt Lake City," said Uncle Prudent. And so it was, and the disk was the roof of the Tabernacle, where ten thousand saints can worship at their ease. This vast dome, like a convex mirror, threw off the rays of the sun in all directions.

It vanished like a shadow, and the "Albatross" sped on her way to the southwest with a speed that was not felt, because it surpassed that of the chasing wind. Soon she was in Nevada over the silver regions, which the Sierra separates from the golden lands of California.

"We shall certainly reach San Francisco before night," said Phil Evans.

"And then?" asked Uncle Prudent.

It was six o'clock precisely when the Sierra Nevada was crossed by the same pass as that taken by the railway. Only a hundred and eighty miles then separated them from San Francisco, the Californian capital.

At the speed the "Albatross" was going she would be over the dome by eight o'clock.

At this moment Robur appeared on deck. The colleagues walked up to him.

"Engineer Robur," said Uncle Prudent, "we are now on the very confines of America! We think the time has come for this joke to end."

"I never joke," said Robur.

He raised his hand. The "Albatross" swiftly dropped towards the ground, and at the same time such speed was given her as to drive the prisoners into their cabin. As soon as the door was shut, Uncle Prudent exclaimed,

"I could strangle him!"

"We must try to escape," said Phil Evans.

"Yes; cost what it may!"

A long murmur greeted their ears. It was the beating of the surf on the seashore. It was the Pacific Ocean!

Chapter XI
THE WIDE PACIFIC

Uncle Prudent and Phil Evans had quite made up their minds to escape. If they had not had to deal with the eight particularly vigorous men who composed the crew of the aeronef they might have tried to succeed by main force. But as they were only two--for Frycollin could only be considered as a quantity of no importance--force was not to be thought of. Hence recourse must be had to strategy as soon as the "Albatross" again took the ground. Such was what Phil Evans endeavored to impress on his irascible colleague, though he was in constant fear of Prudent aggravating matters by some premature outbreak.

In any case the present was not the time to attempt anything of the sort. The aeronef was sweeping along over the North Pacific. On the following morning, that of June 16th, the coast was out of sight. And as the coast curves off from Vancouver Island up to the Aleutians--belonging to that portion of America ceded by Russia to the United States in 1867--it was highly probable that the "Albatross" would cross it at the end of the curve, if her course remained unchanged.

How long the night appeared to be to the two friends! How eager they were to get out of their cabins! When they came on deck in the morning the dawn had for some hours been silvering the eastern horizon. They were nearing the June solstice, the longest day of the year in the northern hemisphere, when there is hardly any night along the sixtieth parallel.

Either from custom or intention Robur was in no hurry to leave his deck-house, When he came out this morning he contented himself with bowing to his two guests as he passed them in the stern of the aeronef.

And now Frycollin ventured out of his cabin. His eyes red with sleeplessness, and dazed in their look, he tottered along, like a man whose foot feels it is not on solid ground. His first glance was at the suspensory screws, which were working with gratifying regularity without any signs of haste. That done, the Negro stumbled along to the rail, and grasped it with both hands, so as to make sure of his balance. Evidently he wished to view the country over which the "Albatross" was flying at the height of seven hundred feet or more.

At first he kept himself well back behind the rail. Then he shook it to make sure it was firm; then he drew himself up; then he bent forward; then he stretched out his head. It need not be said that while he was executing these different maneuvers he kept his eyes shut. At last he opened them.

What a shout! And how quickly he fled! And how deeply his head sank back into his shoulders! At the bottom of the abyss he had seen the immense ocean. His hair would have risen on end--if it had not been wool.

"The sea! The sea!" he cried. And Frycollin would have fallen on the deck had not the cook opened his arms to receive him.

This cook was a Frenchman, and probably a Gascon, his name being Francois Tapage. If he was not a Gascon he must in his infancy have inhaled the breezes of the Garonne. How did this Francois Tapage find himself in the
service of the engineer? By what chain of accidents had he become one of the crew of the "Albatross?" We can hardly say; but in any case he spoke English like a Yankee. "Eh, stand up!" he said, lifting the Negro by a vigorous clutch at the waist.

"Master Tapage!" said the poor fellow, giving a despairing look at the screws.

"At your service, Frycollin."

"Did this thing ever smash?"

"No, but it will end by smashing."

"Why? Why?"

"Because everything must end.

"And the sea is beneath us!"

"If we are to fall, it is better to fall in the sea."

"We shall be drowned."

"We shall be drowned, but we shall not be smashed to a jelly."

The next moment Frycollin was on all fours, creeping to the back of his cabin.

During this day the aeronef was only driven at moderate speed. She seemed to skim the placid surface of the sea, which lay beneath. Uncle Prudent and his companion remained in their cabin, so that they did not meet with Robur, who walked about smoking alone or talking to the mate. Only half the screws were working, yet that was enough to keep the apparatus afloat in the lower zones of the atmosphere.

The crew, as a change from the ordinary routine, would have endeavored to catch a few fish had there been any sign of them; but all that could be seen on the surface of the sea were a few of those yellow-bellied whales which measure about eighty feet in length. These are the most formidable cetaceans in the northern seas, and whalers are very careful in attacking them, for their strength is prodigious. However, in harpooning one of these whales, either with the ordinary harpoon, the Fletcher fuse, or the javelin-bomb, of which there was an assortment on board, there would have been danger to the men of the "Albatross."

But what was the good of such useless massacre? Doubtless to show off the powers of the aeronef to the members of the Weldon Institute. And so Robur gave orders for the capture of one of these monstrous cetaceans.

At the shout of "A whale! A whale!" Uncle Prudent and Phil Evans came out of their cabin. Perhaps there was a whaler in sight! In that case all they had to do to escape from their flying prison was to jump into the sea, and chance being picked up by the vessel.

The crew were all on deck. "Shall we try, sir?" asked Tom Turner.

"Yes," said Robur.

In the engine-room the engineer and his assistant were at their posts ready to obey the orders signaled to them. The "Albatross" dropped towards the sea, and remained, about fifty feet above it.

There was no ship in sight—of that the two colleagues soon assured themselves—nor was there any land to be seen to which they could swim, providing Robur made no attempt to recapture them.

Several jets of water from the spout holes soon announced the presence of the whales as they came to the surface to breathe. Tom Turner and one of the men were in the bow. Within his reach was one of those javelin-bombs, of Californian make, which are shot from an arquebus and which are shaped as a metallic cylinder terminated by a cylindrical shell armed with a shaft having a barbed point. Robur was a little farther aft, and with his right hand signaled to the engineers, while with his left, he directed the steersman. He thus controlled the aeronef in every way, horizontally and vertically, and it is almost impossible to conceive with what speed and precision the "Albatross" answered to his orders. She seemed a living being, of which he was the soul.

"A whale! A whale!" shouted Tom Turner, as the back of a cetacean emerged from the surface about four cable-lengths in front of the "Albatross."

The "Albatross" swept towards it, and when she was within sixty feet of it she stopped dead.

Tom Turner seized the arquebus, which was resting against a cleat on the rail. He fired, and the projectile, attached to a long line, entered the whale's body. The shell, filled with an explosive compound, burst, and shot out a small harpoon with two branches, which fastened into the animal's flesh.

"Look out!" shouted Turner.

Uncle Prudent and Phil Evans, much against their will, became greatly interested in the spectacle.

The whale, seriously wounded, gave the sea such a slap with his tail, that the water dashed up over the bow of the aeronef. Then he plunged to a great depth, while the line, which had been previously wetted in a tub of water to prevent its taking fire, ran out like lightning. When the whale rose to the surface he started off at full speed in a northerly direction.

It may be imagined with what speed the "Albatross" was towed in pursuit. Besides, the propellers had been stopped. The whale was let go as he would, and the ship followed him. Turner stood ready to cut the line in case a
fresh plunge should render this towing dangerous.

For half an hour, and perhaps for a distance of six miles, the "Albatross" was thus dragged along, but it was obvious that the whale was tiring. Then, at a gesture from Robur the assistant engineers started the propellers astern, so as to oppose a certain resistance to the whale, which was gradually getting closer.

Soon the aeronef was gliding about twenty-five feet above him. His tail was beating the waters with incredible violence, and as he turned over on his back an enormous wave was produced.

Suddenly the whale turned up again, so as to take a header, as it were, and then dived with such rapidity that Turner had barely time to cut the line.

The aeronef was dragged to the very surface of the water. A whirlpool was formed where the animal had disappeared. A wave dashed up on to the deck as if the aeronef were a ship driving against wind and tide.

Luckily, with a blow of the hatchet the mate severed the line, and the "Albatross," freed from her tug, sprang aloft six hundred feet under the impulse of her ascensional screws. Robur had maneuvered his ship without losing his coolness for a moment.

A few minutes afterwards the whale returned to the surface--dead. From every side the birds flew down on to the carcass, and their cries were enough to deafen a congress. The "Albatross," without stopping to share in the spoil, resumed her course to the west.

In the morning of the 17th of June, at about six o'clock, land was sighted on the horizon. This was the peninsula of Alaska, and the long range of breakers of the Aleutian Islands.

The "Albatross" glided over the barrier where the fur seals swarm for the benefit of the Russo-American Company. An excellent business is the capture of these amphibians, which are from six to seven feet long, russet in color, and weigh from three hundred to four hundred pounds. There they were in interminable files, ranged in line of battle, and countable by thousands.

Although they did not move at the passage of the "Albatross," it was otherwise with the ducks, divers, and loons, whose husky cries filled the air as they disappeared beneath the waves and fled terrified from the aerial monster.

The twelve hundred miles of the Behring Sea between the first of the Aleutians and the extreme end of Kamtschatka were traversed during the twenty-four hours of this day and the following night. Uncle Prudent and Phil Evans found that here was no present chance of putting their project of escape into execution. Flight was not to be thought of among the deserts of Eastern Asia, nor on the coast of the sea of Okhotsk. Evidently the "Albatross" was bound for Japan or China, and there, although it was not perhaps quite safe to trust themselves to the mercies of the Chinese or Japanese, the two friends had made up their minds to run if the aeronef stopped.

But would she stop? She was not like a bird which grows fatigued by too long a flight, or like a balloon which has to descend for want of gas. She still had food for many weeks and her organs were of marvelous strength, defying all weakness and weariness.

During the 18th of June she swept over the peninsula of Kamtschatka, and during the day there was a glimpse of Petropaulovski and the volcano of Kloutschew. Then she rose again to cross the Sea of Okhotsk, running down by the Kurile Isles, which seemed to be a breakwater pierced by hundreds of channels. On the 19th, in the morning, the "Albatross" was over the strait of La Perouse between Saghalien and Northern Japan, and had reached the mouth of the great Siberian river, the Amoor.

Then there came a fog so dense that the aeronef had to rise above it. At the altitude she was at there was no obstacle to be feared, no elevated monuments to hinder her passage, no mountains against which there was risk of being shattered in her flight. The country was only slightly varied. But the fog was very disagreeable, and made everything on board very damp.

All that was necessary was to get above this bed of mist, which was nearly thirteen hundred feet thick, and the ascensional screws being increased in speed, the "Albatross" was soon clear of the fog and in the sunny regions of the sky. Under these circumstances, Uncle Prudent and Phil Evans would have found some difficulty in carrying out their plan of escape, even admitting that they could leave the aeronef.

During the day, as Robur passed them he stopped for a moment, and without seeming to attach any importance to what he said, addressed them carelessly as follows: "Gentlemen, a sailing-ship or a steamship caught in a fog from which it cannot escape is always much delayed. It must not move unless it keeps its whistle or its horn going. It must reduce its speed, and any instant a collision may be expected. The "Albatross" has none of these things to fear. What does fog matter to her? She can leave it when she chooses. The whole of space is hers." And Robur continued his stroll without waiting for an answer, and the puffs of his pipe were lost in the sky.

"Uncle Prudent," said Phil Evans, "it seems that this astonishing "Albatross" never has anything to fear."

"That we shall see!" answered the president of the Weldon Institute.

The fog lasted three days, the 19th, 20th, and 21st of June, with regrettable persistence. An ascent had to be made to clear the Japanese mountain of Fujiyama. When the curtain of mist was drawn aside there lay below them
an immense city, with palaces, villas, gardens, and parks. Even without seeing it Robur had recognized it by the barking of the innumerable dogs, the cries of the birds of prey, and above all, by the cadaverous odor which the bodies of its executed criminals gave off into space.

The two colleagues were out on the deck while the engineer was taking his observations in case he thought it best to continue his course through the fog.

"Gentlemen," said he, "I have no reason for concealing from you that this town is Tokyo, the capital of Japan."

Uncle Prudent did not reply. In the presence of the engineer he was almost choked, as if his lungs were short of air.

"This view of Tokyo," continued Robur, "is very curious."

"Curious as it may be--" replied Phil Evans.

"It is not as good as Peking?" interrupted the engineer.

"That is what I think, and very shortly you shall have an opportunity of judging."

Impossible to be more agreeable!

The "Albatross" then gliding southeast, had her course changed four points, so as to head to the eastward.

Chapter XII
THROUGH THE HIMALAYAS

During the night the fog cleared off. There were symptoms of an approaching typhoon—a rapid fall of the barometer, a disappearance of vapor, large clouds of ellipsoid form clinging to a copper sky, and, on the opposite horizon, long streaks of carmine on a slate-colored field, with a large sector quite clear in the north. Then the sea was smooth and calm and at sunset assumed a deep scarlet hue.

Fortunately the typhoon broke more to the south, and had no other result than to sweep away the mist which had been accumulating during the last three days.

In an hour they had traversed the hundred and twenty-five miles of the Korean strait, and while the typhoon was raging on the coast of China, the "Albatross" was over the Yellow Sea. During the 22nd and 23rd she was over the Gulf of Pechelee, and on the 24th she was ascending the valley of the Peiho on her way to the capital of the Celestial Empire.

Leaning over the rail, the two colleagues, as the engineer had told them, could see distinctly the immense city, the wall which divides it into two parts—the Manchu town, and the Chinese town—the twelve suburbs which surround it, the large boulevards which radiate from its center, the temples with their green and yellow roofs bathed in the rising sun, the grounds surrounding the houses of the mandarins; then in the middle of the Manchu town the eighteen hundred acres of the Yellow town, with its pagodas, its imperial gardens, its artificial lakes, its mountain of coal which towers above the capital; and in the center of the Yellow town, like a square of Chinese puzzle enclosed in another, the Red town, that is the imperial palace, with all the peaks of its outrageous architecture.

Below the "Albatross" the air was filled with a singular harmony. It seemed to be a concert of Aeolian harps. In the air were a hundred kites of different forms, made of sheets of palm-leaf, and having at their upper end a sort of bow of light wood with a thin slip of bamboo beneath. In the breath of the wind these slips, with all their notes varied like those of a harmonicon, gave forth a most melancholy murmuring. It seemed as though they were breathing musical oxygen.

It suited Robur's whim to run close up to this aerial orchestra, and the "Albatross" slowed as she glided through the sonorous waves which the kites gave off through the atmosphere.

But immediately an extraordinary effect was produced amongst the innumerable population. Beatings of the tom-toms and sounds of other formidable instruments of the Chinese orchestra, gun reports by the thousand, mortars fired in hundreds, all were brought into play to scare away the aeronef. Although the Chinese astronomers may have recognized the aerial machine as the moving body that had given rise to such disputes, it was to the Celestial million, from the humblest tankader to the best-buttoned mandarin, an apocalyptical monster appearing in the sky of Buddha.

The crew of the "Albatross" troubled themselves very little about these demonstrations. But the strings which held the kites, and were tied to fixed pegs in the imperial gardens, were cut or quickly hauled in; and the kites were either drawn in rapidly, sounding louder as they sank, or else fell like a bird shot through both wings, whose song ends with its last sigh.

A noisy fanfare escaped from Tom Turner's trumpet, and drowned the final notes of the aerial concert. It did not interrupt the terrestrial fusillade. At last a shell exploded a few feet below the "Albatross," and then she mounted into the inaccessible regions of the sky.

Nothing happened during the few following days of which the prisoners could take advantage. The aeronef kept
on her course to the southwest, thereby showing that it was intended to take her to India. Twelve hours after leaving Peking, Uncle Prudent and Phil Evans caught a glimpse of the Great Wall in the neighborhood of Chen-Si. Then, avoiding the Lung Mountains, they passed over the valley of the Hoangho and crossed the Chinese border on the Tibet side.

Tibet consists of high table-lands without vegetation, with here and there snowy peaks and barren ravines, torrents fed by glaciers, depressions with glittering beds of salt, lakes surrounded by luxurious forests, with icy winds sweeping over all.

The barometer indicated an altitude of thirteen thousand feet above the level of the sea. At that height the temperature, although it was in the warmest months of the northern hemisphere, was only a little above freezing. This cold, combined with the speed of the "Albatross," made the voyage somewhat trying, and although the friends had warm traveling wraps, they preferred to keep to their cabin.

It need hardly be said that to keep the aeronef in this rarefied atmosphere the suspensory screws had to be driven at extreme speed. But they worked with perfect regularity, and the sound of their wings almost acted as a lullaby.

During this day, appearing from below about the size of a carrier pigeon, she passed over Garlock, a town of western Tibet, the capital of the province of Cari Khorsum.

On the 27th of June, Uncle Prudent and Phil Evans sighted an enormous barrier, broken here and there by several peaks, lost in the snows that bounded the horizon.

Leaning against the fore-cabin, so as to keep their places notwithstanding the speed of the ship, they watched these colossal masses, which seemed to be running away from the aeronef.

"The Himalayas, evidently," said Phil Evans; "and probably Robur is going round their base, so as to pass into India."

"So much the worse," answered Uncle Prudent. "On that immense territory we shall perhaps be able to--"  
"Unless he goes round by Burma to the east, or Nepal to the west."

"Anyhow, I defy him to go through them."

"Indeed!" said a voice.

The next day, the 28th of June, the "Albatross" was in front of the huge mass above the province of Zang. On the other side of the chain was the province of Nepal. These ranges block the road into India from the north. The two northern ones, between which the aeronef was gliding like a ship between enormous reefs are the first steps of the Central Asian barrier. The first was the Kuen Lung, the other the Karakorum, bordering the longitudinal valley parallel to the Himalayas, from which the Indus flows to the west and the Brahmapootra to the east.

What a superb orographical system! More than two hundred summits have been measured, seventeen of which exceed twenty-five thousand feet. In front of the "Albatross," at a height of twenty-nine thousand feet, towered Mount Everest. To the right was Dhawalagiri, reaching twenty-six thousand eight hundred feet, and relegated to second place since the measurement of Mount Everest.

Evidently Robur did not intend to go over the top of these peaks; but probably he knew the passes of the Himalayas, among others that of Ibi Ganim, which the brothers Schlagintweit traversed in 1856 at a height of twenty-two thousand feet. And towards it he went.

Several hours of palpitation, becoming quite painful, followed; and although the rarefaction of the air was not such as to necessitate recourse being had to the special apparatus for renewing oxygen in the cabins, the cold was excessive.

Robur stood in the bow, his sturdy figure wrapped in a great-coat. He gave the orders, while Tom Turner was at the helm. The engineer kept an attentive watch on his batteries, the acid in which fortunately ran no risk of congelation. The screws, running at the full strength of the current, gave forth a note of intense shrillness in spite of the trifling density of the air. The barometer showed twenty-three thousand feet in altitude.

Magnificent was the grouping of the chaos of mountains! Everywhere were brilliant white summits. There were no lakes, but glaciers descending ten thousand feet towards the base. There was no herbage, only a few phanerogams on the limit of vegetable life. Down on the lower flanks of the range were splendid forests of pines and cedars. Here were none of the gigantic ferns and interminable parasites stretching from tree to tree as in the thickets of the jungle. There were no animals--no wild horses, or yaks, or Tibetan bulls. Occasionally a scared gazelle showed itself far down the slopes. There were no birds, save a couple of those crows which can rise to the utmost limits of the respirable air.

The pass at last was traversed. The "Albatross" began to descend. Coming from the hills out of the forest region there was now beneath them an immense plain stretching far and wide.

Then Robur stepped up to his guests, and in a pleasant voice remarked, "India, gentlemen!"
Chapter XIII
OVER THE CASPIAN

The engineer had no intention of taking his ship over the wondrous lands of Hindustan. To cross the Himalayas was to show how admirable was the machine he commanded; to convince those who would not be convinced was all he wished to do.

But if in their hearts Uncle Prudent and his colleague could not help admiring so perfect an engine of aerial locomotion, they allowed none of their admiration to be visible. All they thought of was how to escape. They did not even admire the superb spectacle that lay beneath them as the "Albatross" flew along the river banks of the Punjab.

At the base of the Himalayas there runs a marshy belt of country, the home of malarious vapors, the Terai, in which fever is endemic. But this offered no obstacle to the "Albatross," or, in any way, affected the health of her crew. She kept on without undue haste towards the angle where India joins on to China and Turkestan, and on the 29th of June, in the early hours of the morning, there opened to view the incomparable valley of Cashmere.

Yes! Incomparable is this gorge between the major and the minor Himalayas--furrowed by the buttresses in which the mighty range dies out in the basin of the Hydaspes, and watered by the capricious windings of the river which saw the struggle between the armies of Porus and Alexander, when India and Greece contended for Central Asia. The Hydaspes is still there, although the two towns founded by the Macedonian in remembrance of his victory have long since disappeared.

During the morning the aeronef was over Serinuggur, which is better known under the name of Cashmere. Uncle Prudent and his companion beheld the superb city clustered along both banks of the river; its wooden bridges stretching across like threads, its villas and their balconies standing out in bold outline, its hills shaded by tall poplars, its roofs grassed over and looking like molehills; its numerous canals, with boats like nut-shells, and boatmen like ants; its palaces, temples, kiosks, mosques, and bungalows on the outskirts; and its old citadel of Hari-Pawata on the slope of the hill like the most important of the forts of Paris on the slope of Mont Valerien.

"That would be Venice," said Phil Evans, "if we were in Europe."

"And if we were in Europe," answered Uncle Prudent, "we should know how to find the way to America."

The "Albatross" did not linger over the lake through which the river flows, but continued her flight down the valley of the Hydaspes.

For half an hour only did she descend to within thirty feet of the river and remained stationary. Then, by means of an india-rubber pipe, Tom Turner and his men replenished their water supply, which was drawn up by a pump worked by the accumulators. Uncle Prudent and Phil Evans stood watching the operation. The same idea occurred to each of them. They were only a few feet from the surface of the stream. They were both good swimmers. A plunge would give them their liberty; and once they had reached the river, how could Robur get them back again? For his propellers to work, he must keep at least six feet above the ground.

In a moment all the chances pro and con were run over in their heads. In a moment they were considered, and the prisoners rushed to throw themselves overboard, when several pairs of hands seized them by the shoulders.

They had been watched; and flight was utterly impossible.

This time they did not yield without resisting. They tried to throw off those who held them. But these men of the "Albatross" were no children.

"Gentlemen," said the engineer, "when people, have the pleasure of traveling with Robur the Conqueror, as you have so well named him, on board his admirable "Albatross," they do not leave him in that way. I may add you never leave him."

Phil Evans drew away his colleague, who was about to commit some act of violence. They retired to their cabin, resolved to escape, even if it cost them their lives.

Immediately the "Albatross" resumed her course to the west. During the day at moderate speed she passed over the territory of Cabulistan, catching a momentary glimpse of its capital, and crossed the frontier of the kingdom of Herat, nearly seven hundred miles from Cashmere.

In these much-disputed countries, the open road for the Russians to the English possessions in India, there were seen many columns and convoys, and, in a word, everything that constitutes in men and material an army on the march. There were heard also the roar of the cannon and the crackling of musketry. But the engineer never meddled with the affairs of others where his honor or humanity was not concerned. He passed above them. If Herat as we are told, is the key of Central Asia, it mattered little to him if it was kept in an English or Muscovite pocket. Terrestrial interests were nothing to him who had made the air his domain.

Besides, the country soon disappeared in one of those sandstorms which are so frequent in these regions. The wind called the "tebbad" bears along the seeds of fever in the impalpable dust it raises in its passage. And many are the caravans that perish in its eddies.

To escape this dust, which might have interfered with the working of the screws, the "Albatross" shot up some
six thousand feet into a purer atmosphere.

And thus vanished the Persian frontier and the extensive plains. The speed was not excessive, although there were no rocks ahead, for the mountains marked on the map are of very moderate altitude. But as the ship approached the capital, she had to steer clear of Demavend, whose snowy peak rises some twenty-two thousand feet, and the chain of Elbruz, at whose foot is built Teheran.

As soon as the day broke on the 2nd of July the peak of Demavend appeared above the sandstorm, and the "Albatross" was steered so as to pass over the town, which the wind had wrapped in a mantle of dust.

However, about six o'clock her crew could see the large ditches that surround it, and the Shah's palace, with its walls covered with porcelain tiles, and its ornamental lakes, which seemed like huge turquoises of beautiful blue.

It was but a hasty glimpse. The "Albatross" now headed for the north, and a few hours afterwards she was over a little hill at the northern angle of the Persian frontier, on the shores of a vast extent of water which stretched away out of sight to the north and east.

The town was Ashurada, the most southerly of the Russian stations. The vast extent of water was a sea. It was the Caspian.

The eddies of sand had been passed. There was a view of a group of European houses rising along a promontory, with a church tower in the midst of them.

The "Albatross" swooped down towards the surface of the sea. Towards evening she was running along the coast--which formerly belonged to Turkestan, but now belongs to Russia--and in the morning of the 3rd of July she was about three hundred feet above the Caspian.

There was no land in sight, either on the Asiatic or European side. On the surface of the sea a few white sails were bellying in the breeze. These were native vessels recognizable by their peculiar rig--kesebeys, with two masts; kayuks, the old pirate-boats, with one mast; teimils, and smaller craft for trading and fishing. Here and there a few puffs of smoke rose up to the "Albatross" from the funnels of the Ashurada steamers, which the Russians keep as the police of these Turcoman waters.

That morning Tom Turner was talking to the cook, Tapage, and to a question of his replied, "Yes; we shall be about forty-eight hours over the Caspian."

"Good!" said the cook; "Then we can have some fishing."

"Just so."

They were to remain for forty-eight hours over the Caspian, which is some six hundred and twenty-five miles long and two hundred wide, because the speed of the "Albatross" had been much reduced, and while the fishing was going on she would be stopped altogether.

The reply was heard by Phil Evans, who was then in the bow, where Frycollin was overwhelming him with piteous pleadings to be put "on the ground."

Without replying to this preposterous request, Evans returned aft to Uncle Prudent; and there, taking care not to be overheard, he reported the conversation that had taken place.

"Phil Evans," said Uncle Prudent, "I think there can be no mistake as to this scoundrel's intention with regard to us."

"None," said Phil Evans. "He will only give us our liberty when it suits him, and perhaps not at all."

"In that case we must do all we can to get away from the 'Albatross'."

"A splendid craft, she is, I must admit."

"Perhaps so," said Uncle Prudent; "but she belongs to a scoundrel who detains us on board in defiance of all right. For us and ours she is a constant danger. If we do not destroy her--"

"Let us begin by saving ourselves" answered Phil Evans; "we can see about the destruction afterwards."

"Just so," said Uncle Prudent. "And we must avail ourselves of every chance that comes, along. Evidently the "Albatross" is going to cross the Caspian into Europe, either by the north into Russia or by the west into the southern countries. Well, no matter where we stop, before we get to the Atlantic, we shall be safe. And we ought to be ready at any moment."

"But," asked Evans, "how are we to get out?"

"Listen to me," said Uncle Prudent. "It may happen during the night that the "Albatross" may drop to within a few hundred feet of the ground. Now there are on board several ropes of that length, and, with a little pluck we might slip down them--"

"Yes," said Evans. "If the case is desperate I don't mind--"

"Nor I. During the night there's no one about except the man at the wheel. And if we can drop one of the ropes forward without being seen or heard--"

"Good! I am glad to see you are so cool; that means business. But just now we are over the Caspian. There are several ships in sight. The "Albatross" is going down to fish. Cannot we do something now?"
"Sh! They are watching us much more than you think," said Uncle Prudent. "You saw that when we tried to jump into the Hydaspes."

"And who knows that they don't watch us at night?" asked Evans.

"Well, we must end this; we must finish with this "Albatross" and her master."

It will be seen how in the excitement of their anger the colleagues--Uncle Prudent in particular--were prepared to attempt the most hazardous things. The sense of their powerlessness, the ironical disdain with which Robur treated them, the brutal remarks he indulged in--all contributed towards intensifying the aggravation which daily grew more manifest.

This very day something occurred which gave rise to another most regrettable altercation between Robur and his guests. This was provoked by Frycollin, who, finding himself above the boundless sea, was seized with another fit of terror. Like a child, like the Negro he was, he gave himself over to groaning and protesting and crying, and withering in a thousand contortions and grimaces.

"I want to get out! I want to get out! I am not a bird! Booohoo! I don't want to fly, I want to get out!"

Uncle Prudent, as may be imagined, did not attempt to quiet him. In fact, he encouraged him, and particularly as the incessant howling seemed to have a strangely irritating effect on Robur.

When Tom Turner and his companions were getting ready for fishing, the engineer ordered them to shut up Frycollin in his cabin. But the Negro never ceased his jumping about, and began to kick at the wall and yell with redoubled power.

It was noon. The "Albatross" was only about fifteen or twenty feet above the water. A few ships, terrified at the apparition, sought safety in flight.

As may be guessed, a sharp look-out was kept on the prisoners, whose temptation to escape could not but be intensified. Even supposing they jumped overboard they would have been picked up by the india-rubber boat. As there was nothing to do during the fishing, in which Phil Evans intended to take part, Uncle Prudent, raging furiously as usual, retired to his cabin.

The Caspian Sea is a volcanic depression. Into it flow the waters of the Volga, the Ural, the Kour, the Kouma, the Jemba, and others. Without the evaporation which relieves it of its overflow, this basin, with an area of 17,000 square miles, and a depth of from sixty to four hundred feet, would flood the low marshy ground to its north and east. Although it is not in communication with the Black Sea or the Sea of Aral, being at a much lower level than they are, it contains an immense number of fish--such fish, be it understood, as can live in its bitter waters, the bitterness being due to the naphtha which pours in from the springs on the south.

The crew of the "Albatross" made no secret of their delight at the change in their food the fishing would bring them.

"Look out!" shouted Turner, as he harpooned a good-size fish, not unlike a shark.

It was a splendid sturgeon seven feet long, called by the Russians beluga, the eggs of which mixed up with salt, vinegar, and white wine form caviar. Sturgeons from the river are, it may be, rather better than those from the sea; but these were welcomed warmly enough on board the "Albatross."

But the best catches were made with the drag-nets, which brought up at each haul carp, bream, salmon, saltwater pike, and a number of medium-sized sterlets, which wealthy gourmets have sent alive to Astrakhan, Moscow, and Petersburg, and which now passed direct from their natural element into the cook's kettle without any charge for transport.

An hour's work sufficed to fill up the larders of the aeronef, and she resumed her course to the north.

During the fishing Frycollin had continued shouting and kicking at his cabin wall, and making a tremendous noise.

"That wretched nigger will not be quiet, then?" said Robur, almost out of patience.

"It seems to me, sir, he has a right to complain," said Phil Evans.

"Yes, and I have a right to look after my ears," replied Robur.

"Engineer Robur!" said Uncle Prudent, who had just appeared on deck.

"President of the Weldon Institute!"

They had stepped up to one another, and were looking into the whites of each other's eyes. Then Robur shrugged his shoulders. "Put him at the end of a line," he said.

Turner saw his meaning at once. Frycollin was dragged out of his cabin. Loud were his cries when the mate and one of the men seized him and tied him into a tub, which they hitched on to a rope--one of those very ropes, in fact, that Uncle Prudent had intended to use as we know.

The Negro at first thought he was going to be hanged. Not he was only going to be towed!

The rope was paid out for a hundred feet and Frycollin found himself hanging in space.

He could then shout at his ease. But fright contracted his larynx, and he was mute.
Uncle Prudent and Phil Evans endeavored to prevent this performance. They were thrust aside.
"It is scandalous! It is cowardly!" said Uncle Prudent, quite beside himself with rage.
"Indeed!" said Robur.
"It is an abuse of power against which I protest."
"Protest away!"
"I will be avenged, Mr. Robur."
"Avenge when you like, Mr. Prudent."
"I will have my revenge on you and yours."
The crew began to close up with anything but peaceful intentions. Robur motioned them away.
"Yes, on you and yours!" said Uncle Prudent, whom his colleague in vain tried to keep quiet.
"Whenever you please!" said the engineer.
"And in every possible way!"
"That is enough now," said Robur, in a threatening tone. "There are other ropes on board. And if you don't be quiet I'll treat you as I have done your servant!"
Uncle Prudent was silent, not because he was afraid, but because his wrath had nearly choked him; and Phil Evans led him off to his cabin.

During the last hour the air had been strangely troubled. The symptoms could not be mistaken. A storm was threatening. The electric saturation of the atmosphere had become so great that about half-past two o'clock Robur witnessed a phenomenon that was new to him.

In the north, whence the storm was traveling, were spirals of half-luminous vapor due to the difference in the electric charges of the various beds of cloud. The reflections of these bands came running along the waves in myriads of lights, growing in intensity as the sky darkened.

The "Albatross" and the storm were sure to meet, for they were exactly in front of each other.

And Frycollin? Well! Frycollin was being towed—and towed is exactly the word, for the rope made such an angle, with the aeronef, now going at over sixty knots an hour, that the tub was a long way behind her.

The crew were busy in preparing for the storm, for the "Albatross" would either have to rise above it or drive through its lowest layers. She was about three thousand feet above the sea when a clap of thunder was heard. Suddenly the squall struck her. In a few seconds the fiery clouds swept on around her.

Phil Evans went to intercede for Frycollin, and asked him to be taken on board again. But Robur had already given orders to that effect, and the rope was being hauled in, when suddenly there took place an inexplicable slackening in the speed of the screws.

The engineer rushed to the central deck-house. "Power! More power!" he shouted. "We must rise quickly and get over the storm!"

"Impossible, sir!"
"What is the matter?"
"The currents are troubled! They are intermittent!" And, in fact, the "Albatross" was falling fast.

As with the telegraph wires on land during a storm, so was it with the accumulators of the aeronef. But what is only an inconvenience in the case of messages was here a terrible danger.

"Let her down, then," said Robur, "and get out of the electric zone! Keep cool, my lads!"
He stepped on to his quarter-deck and his crew went to their stations.

Although the "Albatross" had sunk several hundred feet she was still in the thick of the cloud, and the flashes played across her as if they were fireworks. It seemed as though she was struck. The screws ran more and more slowly, and what began as a gentle descent threatened to become a collapse.

In less than a minute it was evident they would get down to the surface of the sea. Once they were immersed no power could drag them from the abyss.

Suddenly the electric cloud appeared above them. The "Albatross" was only sixty feet from the crest of the waves. In two or three seconds the deck would be under water.

But Robur, seizing the propitious moment, rushed to the central house and seized the levers. He turned on the currents from the piles no longer neutralized by the electric tension of the surrounding atmosphere. In a moment the screws had regained their normal speed and checked the descent; and the "Albatross" remained at her slight elevation while her propellers drove her swiftly out of reach of the storm.

Frycollin, of course, had a bath—though only for a few seconds. When he was dragged on deck he was as wet as if he had been to the bottom of the sea. As may be imagined, he cried no more.

In the morning of the 4th of July the "Albatross" had passed over the northern shore of the Caspian.
Chapter XIV
THE AERONEF AT FULL SPEED

If ever Prudent and Evans despaired on escaping from the "Albatross" it was during the two days that followed. It may be that Robur considered it more difficult to keep a watch on his prisoners while he was crossing Europe, and he knew that they had made up their minds to get away.

But any attempt to have done so would have been simply committing suicide. To jump from an express going sixty miles an hour is to risk your life, but to jump from a machine going one hundred and twenty miles an hour would be to seek your death.

And it was at this speed, the greatest that could be given to her, that the "Albatross" tore along. Her speed exceeded that of the swallow, which is one hundred and twelve miles an hour.

At first the wind was in the northeast, and the "Albatross" had it fair, her general course being a westerly one. But the wind began to drop, and it soon became impossible for the colleagues to remain on the deck without having their breath taken away by the rapidity of the flight. And on one occasion they would have been blown overboard if they had not been dashed up against the deck-house by the pressure of the wind.

Luckily the steersman saw them through the windows of his cage, and by the electric bell gave the alarm to the men in the fore-cabin. Four of them came aft, creeping along the deck.

Those who have been at sea, beating to windward in half a gale of wind, will understand what the pressure was like. But here it was the "Albatross" that by her incomparable speed made her own wind.

To allow Uncle Prudent and Phil Evans to get back to their cabin the speed had to be reduced. Inside the deck-house the "Albatross" bore with her a perfectly breathable atmosphere. To stand such driving the strength of the apparatus must have been prodigious. The propellers spun round so swiftly that they seemed immovable, and it was with irresistible power that they screwed themselves through the air.

The last town that had been noticed was Astrakhan, situated at the north end of the Caspian Sea. The Star of the Desert—it must have been a poet who so called it—has now sunk from the first rank to the fifth or sixth. A momentary glance was afforded at its old walls, with their useless battlements, the ancient towers in the center of the city, the mosques and modern churches, the cathedral with its five domes, gilded and dotted with stars as if it were a piece of the sky, as they rose from the bank of the Volga, which here, as it joins the sea, is over a mile in width.

Thenceforward the flight of the "Albatross" became quite a race through the heights of the sky, as if she had been harnessed to one of those fabulous hippogriffs which cleared a league at every sweep of the wing.

At ten o'clock in the morning, of the 4th of July the aeronef, heading northwest, followed for a little the valley of the Volga. The steppes of the Don and the Ural stretched away on each side of the river. Even if it had been possible to get a glimpse of these vast territories there would have been no time to count the towns and villages. In the evening the aeronef passed over Moscow without saluting the flag on the Kremlin. In ten hours she had covered the twelve hundred miles which separate Astrakhan from the ancient capital of all the Russias.

From Moscow to St. Petersburg the railway line measures about seven hundred and fifty miles. This was but a half-day's journey, and the "Albatross," as punctual as the mail, reached St. Petersburg and the banks of the Neva at two o'clock in the morning.

Then came the Gulf of Finland, the Archipelago of Abo, the Baltic, Sweden in the latitude of Stockholm, and Norway in the latitude of Christiania. Ten hours only for these twelve hundred miles! Verily it might be thought that no human power would henceforth be able to check the speed of the "Albatross," and as if the resultant of her force of projection and the attraction of the earth would maintain her in an unvarying trajectory round the globe.

But she did stop nevertheless, and that was over the famous fall of the Rjukanfos in Norway. Gousta, whose summit dominates this wonderful region of Tellermarken, stood in the west like a gigantic barrier apparently impassable. And when the "Albatross" resumed her journey at full speed her head had been turned to the south.

And during this extraordinary flight what was Frycollin doing? He remained silent in a corner of his cabin, sleeping as well as he could, except at meal times.

Tapage then favored him with his company and amused himself at his expense. "Eh! eh! my boy!" said he. "So you are not crying any more? Perhaps it hurt you too much? That two hours hanging cured you of it? At our present rate, what a splendid air-bath you might have for your rheumatics!"

"It seems to me we shall soon go to pieces!"
"Perhaps so; but we shall go so fast we shan't have time to fall! That is some comfort!"
"Do you think so?"
"I do."

To tell the truth, and not to exaggerate like Tapage, it was only reasonable that owing to the excessive speed the work of the suspensory screws should be somewhat lessened. The "Albatross" glided on its bed of air like a Congreve rocket.
"And shall we last long like that?" asked Frycollin.
"Long? Oh, no, only as long as we live!"
"Oh!" said the Negro, beginning his lamentations.
"Take care, Fry, take care! For, as they say in my country, the master may send you to the seesaw!" And Frycollin gulped down his sobs as he gulped down the meat which, in double doses, he was hastily swallowing.

Meanwhile Uncle Prudent and Phil Evans, who were not men to waste time in wrangling when nothing could come of it, agreed upon doing something. It was evident that escape was not to be thought of. But if it was impossible for them to again set foot on the terrestrial globe, could they not make known to its inhabitants what had become of them since their disappearance, and tell them by whom they had been carried off, and provoke--how was not very clear--some audacious attempt on the part of their friends to rescue them from Robur?

Communicate? But how? Should they follow the example of sailors in distress and enclose in a bottle a document giving the place of shipwreck and throw it into the sea? But here the sea was the atmosphere. The bottle would not swim. And if it did not fall on somebody and crack his skull it might never be found.

The colleagues were about to sacrifice one of the bottles on board when an idea occurred to Uncle Prudent. He took snuff, as we know, and we may pardon this fault in an American, who might do worse. And as a snuff-taker he possessed a snuff-box, which was now empty. This box was made of aluminum. If it was thrown overboard any honest citizen that found it would pick it up, and, being an honest citizen, he would take it to the police-office, and there they would open it and discover from the document what had become of the two victims of Robur the Conqueror!

And this is what was done. The note was short, but it told all, and it gave the address of the Weldon Institute, with a request that it might be forwarded. Then Uncle Prudent folded up the note, shut it in the box, bound the box round with a piece of worsted so as to keep it from opening it as it fell. And then all that had to be done was to wait for a favorable opportunity.

During this marvelous flight over Europe it was not an easy thing to leave the cabin and creep along the deck at the risk of being suddenly and secretly blown away, and it would not do for the snuff-box to fall into the sea or a gulf or a lake or a watercourse, for it would then perhaps be lost. At the same time it was not impossible that the colleagues might in this way get into communication with the habitable globe.

It was then growing daylight, and it seemed as though it would be better to wait for the night and take advantage of a slackening speed or a halt to go out on deck and drop the precious snuff-box into some town.

When all these points had been thought over and settled, the prisoners, found they could not put their plan into execution--on that day, at all events--for the "Albatross," after leaving Gousta, had kept her southerly course, which took her over the North Sea, much to the consternation of the thousands of coasting craft engaged in the English, Dutch, French, and Belgian trade. Unless the snuff-box fell on the deck of one of these vessels there was every chance of its going to the bottom of the sea, and Uncle Prudent and Phil Evans were obliged to wait for a better opportunity. And, as we shall immediately see, an excellent chance was soon to be offered them.

At ten o'clock that evening the "Albatross" reached the French coast near Dunkirk. The night was rather dark. For a moment they could see the lighthouse at Grisnez cross its electric beam with the lights from Dover on the other side of the strait. Then the "Albatross" flew over the French territory at a mean height of three thousand feet. There was no diminution in her speed. She shot like a rocket over the towns and villages so numerous in northern France. She was flying straight on to Paris, and after Dunkirk came Doullens, Amiens, Creil, Saint Denis. She never left the line; and about midnight she was over the "city of light," which merits its name even when its inhabitants are asleep or ought to be.

By what strange whim was it that she was stopped over the city of Paris? We do not know; but down she came till she was within a few hundred feet of the ground. Robur then came out of his cabin, and the crew came on to the deck to breathe the ambient air.

Uncle Prudent and Phil Evans took care not to miss such an excellent opportunity. They left their deck-house and walked off away from the others so as to be ready at the propitious moment. It was important their action should not be seen.

The "Albatross," like a huge coleopter, glided gently over the mighty city. She took the line of the boulevards, then brilliantly lighted by the Edison lamps. Up to her there floated the rumble of the vehicles as they drove along the streets, and the roll of the trains on the numerous railways that converge into Paris. Then she glided over the highest monuments as if she was going to knock the ball off the Pantheon or the cross off the Invalides. She hovered over the two minarets of the Trocadero and the metal tower of the Champ de Mars, where the enormous reflector was inundating the whole capital with its electric rays.

This aerial promenade, this nocturnal loitering, lasted for about an hour. It was a halt for breath before the voyage was resumed.
And probably Robur wished to give the Parisians the sight of a meteor quite unforeseen by their astronomers. The lamps of the "Albatross" were turned on. Two brilliant sheaves of light shot down and moved along over the squares, the gardens, the palaces, the sixty thousand houses, and swept the space from one horizon to the other.

Assuredly the "Albatross" was seen this time—and not only well seen but heard, for Tom Turner brought out his trumpet and blew a rousing tarantaratara.

At this moment Uncle Prudent leant over the rail, opened his hand, and let his snuff-box fall.

Immediately the "Albatross" shot upwards, and past her, higher still, there mounted the noisy cheering of the crowd then thick on the boulevards—a hurrah of stupefaction to greet the imaginary meteor.

The lamps of the aeronef were turned off, and the darkness and the silence closed in around as the voyage was resumed at the rate of one hundred and twenty miles an hour.

This was all that was to be seen of the French capital. At four o'clock in the morning the "Albatross" had crossed the whole country obliquely; and so as to lose no time in traversing the Alps or the Pyrenees, she flew over the face of Provence to the cape of Antibes. At nine o'clock next morning the San Pietrini assembled on the terrace of St. Peter at Rome were astounded to see her pass over the eternal city. Two hours afterwards she crossed the Bay of Naples and hovered for an instant over the fuliginous wreaths of Vesuvius. Then, after cutting obliquely across the Mediterranean, in the early hours of the afternoon she was signaled by the look-outs at La Goulette on the Tunisian coast.

After America, Asia! After Asia, Europe! More than eighteen thousand miles had this wonderful machine accomplished in less than twenty-three clays!

And now she was off over the known and unknown regions of Africa!

It may be interesting to know what had happened to the famous snuff-box after its fall?

It had fallen in the Rue de Rivoli, opposite No. 200, when the street was deserted. In the morning it was picked up by an honest sweep, who took it to the prefecture of police. There it was at first supposed to be an infernal machine. And it was untied, examined, and opened with care.

Suddenly a sort of explosion took place. It was a terrific sneeze on the part of the inspector.

The document was then extracted from the snuff-box, and to the general surprise, read as follows:

"Messrs. Prudent and Evans, president and secretary of the Weldon Institute, Philadelphia, have been carried off in the aeronef Albatross belonging to Robur the engineer."

"Please inform our friends and acquaintances."

"P. and P. E."

Thus was the strange phenomenon at last explained to the people of the two worlds. Thus was peace given to the scientists of the numerous observatories on the surface of the terrestrial globe.

Chapter XV
A SKIRMISH IN DAHOMEY

At this point in the circumnavigatory voyage of the "Albatross" it is only natural that some such questions as the following should be asked. Who was this Robur, of whom up to the present we know nothing but the name? Did he pass his life in the air? Did his aeronef never rest? Had he not some retreat in some inaccessible spot in which, if he had need of repose or revictualing, he could betake himself? It would be very strange if it were not so. The most powerful flyers have always an eyrie or nest somewhere.

And what was the engineer going to do with his prisoners? Was he going to keep them in his power and condemn them to perpetual aviation? Or was he going to take them on a trip over Africa, South America, Australasia, the Indian Ocean, the Atlantic and the Pacific, to convince them against their will, and then dismiss them with, "And now gentlemen, I hope you will believe a little more in heavier than air?"

To these questions, it is now impossible to reply. They are the secrets of the future. Perhaps the answers will be revealed. Anyhow the bird-like Robur was not seeking his nest on the northern frontier of Africa. By the end of the day he had traversed Tunis from Cape Bon to Cape Carthage, sometimes hovering, and sometimes darting along at top speed. Soon he reached the interior, and flew down the beautiful valley of Medjeida above its yellow stream hidden under its luxuriant bushes of cactus and oleander; and scared away the hundreds of parrots that perch on the telegraph wires and seem to wait for the messages to pass to bear them away beneath their wings.

Two hours after sunset the helm was put up and the "Albatross" bore off to the southeast; and on the morrow, after clearing the Tell Mountains, she saw the rising of the morning star over the sands of the Sahara.

On the 30th of July there was seen from the aeronef the little village of Geryville, founded like Laghouat on the frontier of the desert to facilitate the future conquest of Kabylia. Next, not without difficulty, the peaks of Stillero were passed against a somewhat boisterous wind. Then the desert was crossed, sometimes leisurely over the Ksars
or green oases, sometimes at terrific speed that far outstripped the flight of the vultures. Often the crew had to fire into the flocks of these birds which, a dozen or so at a time, fearlessly hurled them selves on to the aeronef to the extreme terror of Frycollin.

But if the vultures could only reply with cries and blows of beaks and talons, the natives, in no way less savage, were not sparing of their musket-shots, particularly when crossing the Mountain of Sel, whose green and violet slope bore its cape of white. Then the "Albatross" was at last over the grand Sahara; and at once she rose into the higher zones so as to escape from a simoom which was sweeping a wave of ruddy sand along the surface of the ground like a bore on the surface of the sea.

Then the desolate tablelands of Chetka scattered their ballast in blackish waves up to the fresh and verdant valley of Ain-Massin. It is difficult to conceive the variety of the territories which could be seen at one view. To the green hills covered with trees and shrubs there succeeded long gray undulations draped like the folds of an Arab burnous and broken in picturesque masses. In the distance could be seen the wadys with their torrential waters, their forests of palm-trees, and blocks of small houses grouped on a hill around a mosque, among them Metlili, where there vegetates a religious chief, the grand marabout Sidi Chick.

Before night several hundred miles had been accomplished above a flattish country ridged occasionally with large sandhills. If the "Albatross" had halted, she would have come to the earth in the depths of the Wargla oasis hidden beneath an immense forest of palm-trees. The town was clearly enough displayed with its three distinct quarters, the ancient palace of the Sultan, a kind of fortified Kasbah, houses of brick which had been left to the sun to bake, and artesian wells dug in the valley--where the aeronef could have renewed her water supply. But, thanks to her extraordinary speed, the waters of the Hydaspes taken in the vale of Cashmere still filled her tanks in the center of the African desert.

Was the "Albatross" seen by the Arabs, the Mozabites, and the Negroes who share amongst them the town of Wargla? Certainly, for she was saluted with many hundred gunshot, and the bullets fell back before they reached her.

Then came the night, that silent night in the desert of which Felicien David has so poetically told us the secrets. During the following hours the course lay southwesterly, cutting across the routes of El Golea, one of which was explored in 1859 by the intrepid Duveyrier.

The darkness was profound. Nothing could be seen of the Trans-Saharan Railway constructing on the plans of Duponchel--a long ribbon of iron destined to bind together Algiers and Timbaktu by way of Laghouat and Gardaia, and destined eventually to run down into the Gulf of Guinea.

Then the "Albatross" entered the equatorial region below the tropic of Cancer. Six hundred miles from the northern frontier of the Sahara she crossed the route on which Major Laing met his, death in 1846, and crossed the road of the caravans from Morocco to the Sudan, and that part of the desert swept by the Tuaregs, where could be heard what is called "the song of the sand," a soft and plaintive murmur that seems to escape from the ground.

Only one thing happened. A cloud of locusts came flying along, and there fell such a cargo of them on board as to threaten to sink the ship. But all hands set to work to clear the deck, and the locusts were thrown over except a few hundred kept by Tapage for his larder. And he served them up in so succulent a fashion that Frycollin forgot for the moment his perpetual trances and said, "these are as good as prawns."

The aeronef was then eleven hundred miles from the Wargla oasis and almost on the northern frontier of the Sudan. About two o'clock in the afternoon a city appeared in the bend of a large river. The river was the Niger. The city was Timbuktu.

If, up to then, this African Mecca had only been visited by the travelers of the ancient world Batouta, Khazan, Imbert, Mungo Park, Adams, Laing, Caillé, Barth, Lenz, on that day by a most singular chance the two Americans could boast of having seen, heard, and smelt it, on their return to America--if they ever got back there.

Of having seen it, because their view included the whole triangle of three or four miles in circumference; of having heard it, because the day was one of some rejoicing and the noise was terrible; of having smelt it, because the olfactory nerve could not but be very disagreeably affected by the odors of the Youbou-Kamo square, where the meatmarket stands close to the palace of the ancient Somai kings.

The engineer had no notion of allowing the president and secretary of the Weldon Institute to be ignorant that they had the honor of contemplating the Queen of the Sudan, now in the power of the Tuaregs of Taganet.

"Gentlemen, Timbuktu!" he said, in the same tone as twelve days before he had said, "Gentlemen, India!" Then he continued, "Timbuktu is an important city of from twelve to thirteen thousand inhabitants, formerly illustrious in science and art. Perhaps you would like to stay there for a day or two?"

Such a proposal could only have been made ironically. "But," continued he, "it would be dangerous among the Negroes, Berbers, and Foullanes who occupy, it--particularly as our arrival in an aeronef might prejudice them against you."
“Sir,” said Phil Evans, in the same tone, “for the pleasure of leaving you we would willingly risk an unpleasant reception from the natives. Prison for prison, we would rather be in Timbuktu than on the "Albatross."

"That is a matter of taste," answered the engineer. "Anyhow, I shall not try the adventure, for I am responsible for the safety of the guests who do me the honor to travel with me."

"And so," said Uncle Prudent, explosively, "you are not content with being our jailer, but you insult us."

"Oh! a little irony, that is all!"

"Are there any weapons on board?"

"Oh, quite an arsenal."

"Two revolvers will do, if I hold one and you the other."

"A duel!" exclaimed Robur, "a duel, which would perhaps cause the death of one of us."

"Which certainly would cause it."

"Well! No, Mr. President of the Weldon Institute, I very much prefer keeping you alive."

"To be sure of living yourself. That is wise."

"Wise or not, it suits me. You are at liberty to think as you like, and to complain to those who have the power to help you--if you can."

"And that we have done, Mr. Robur."

"Indeed!"

"Was it so difficult when we were crossing the inhabited part of Europe to drop a letter overboard?"

"Did you do that?" said Robur, in a paroxysm of rage.

"And if we have done it?"

"If you have done it--you deserve--"

"What, sir?"

"To follow your letter overboard."

"Throw us over, then. We did do it."

Robur stepped towards them. At a gesture from him Tom Turner and some of the crew ran up. The engineer was seriously tempted to put his threat into execution, and, fearful perhaps of yielding to it, he precipitately rushed into his cabin.

"Good!" exclaimed Phil Evans.

"And what he will dare not do," said Uncle Prudent, "I Will do! Yes, I Will do!"

At the moment the population of Timbuktu were crowding onto the squares and roads and the terraces built like amphitheaters. In the rich quarters of Sankere and Sarahama, as in the miserable huts at Raguidi, the priests from the minarets were thundering their loudest maledictions against the aerial monster. These were more harmless than the rifle-bullets; though assuredly, if the aeronef had come to earth she would have certainly been torn to pieces.

For some miles noisy flocks of storks, francolins, and ibises escorted the "Albatross" and tried to race her, but in her rapid flight she soon distanced them.

The evening came. The air was troubled by the roarings of the numerous herds of elephants and buffaloes which wander over this land, whose fertility is simply marvelous. For forty-eight hours the whole of the region between the prime meridian and the second degree, in the bend of the Niger, was viewed from the "Albatross."

If a geographer had only such an apparatus at his command, with what facility could he map the country, note the elevations, fix the courses of the rivers and their affluents, and determine the positions of the towns and villages! There would then be no huge blanks on the map of Africa, no dotted lines, no vague designations which are the despair of cartographers.

In the morning of the 11th the "Albatross" crossed the mountains of northern Guinea, between the Sudan and the gulf which bears their name. On the horizon was the confused outline of the Kong mountains in the kingdom of Dahomey.

Since the departure from Timbuktu Uncle Prudent and Phil Evans noticed that the course had been due south. If that direction was persisted in they would cross the equator in six more degrees. The "Albatross" would then abandon the continents and fly not over the Bering Sea, or the Caspian Sea, or the North Sea, or the Mediterranean, but over the Atlantic Ocean.

This look-out was not particularly pleasing to the two friends, whose chances of escape had sunk to below zero. But the "Albatross" had slackened speed as though hesitating to leave Africa behind. Was Robur thinking of going back? No; but his attention had been particularly attracted to the country which he was then crossing.

We know--and he knew--that the kingdom of Dahomey is one of the most powerful on the West Coast of Africa. Strong enough to hold its own with its neighbor Ashantee, its area is somewhat small, being contained within three hundred and sixty leagues from north to south, and one hundred and eighty from east to west. But its population numbers some seven or eight hundred thousand, including the neighboring independent territories of Whydah and
Ardrah.

If Dahomey is not a large country, it is often talked about. It is celebrated for the frightful cruelties which signalize its annual festivals, and by its human sacrifices--fearful hecatombs intended to honor the sovereign it has lost and the sovereign who has succeeded him. It is even a matter of politeness when the King of Dahomey receives a visit from some high personage or some foreign ambassador to give him a surprise present of a dozen heads, cut off in his honor by the minister of justice, the "minghan," who is wonderfully skilled in that branch of his duties.

When the "Albatross" came flying over Dahomey, the old King Bahadou had just died, and the whole population was proceeding to the enthronization of his successor. Hence there was great agitation all over the country, and it did not escape Robur that everybody was on the move.

Long lines of Dahomians were hurrying along the roads from the country into the capital, Abomey. Well kept roads radiating among vast plains clothed with giant trees, immense fields of manioc, magnificent forests of palms, cocoa-trees, mimosas, orange-trees, mango-trees--such was the country whose perfumes mounted to the "Albatross," while many parrots and cardinals swarmed among the trees.

The engineer, leaning over the rail, seemed deep in thought, and exchanged but a few words with Tom Turner. It did not look as though the "Albatross" had attracted the attention of those moving masses, which were often invisible under the impenetrable roof of trees. This was doubtless due to her keeping at a good altitude amid a bank of light cloud.

About eleven o'clock in the morning the capital was sighted, surrounded by its walls, defended by a fosse measuring twelve miles round, with wide, regular streets on the flat plain, and a large square on the northern side occupied by the king's palace. This huge collection of buildings is commanded by a terrace not far from the place of sacrifice. During the festival days it is from this high terrace that they throw the prisoners tied up in wicker baskets, and it can be imagined with what fury these unhappy wretches are cut in pieces.

In one of the courtyards which divide the king's palace there were drawn up four thousand warriors, one of the contingents of the royal army--and not the least courageous one. If it is doubtful if there are any Amazons an the river of that name, there is no doubt of there being Amazons at Dahomey. Some have a blue shirt with a blue or red scarf, with white-and-blue striped trousers and a white cap; others, the elephant-huntresses, have a heavy carbine, a short-bladed dagger, and two antelope horns fixed to their heads by a band of iron. The artillery-women have a blue-and-red tunic, and, as weapons, blunderbusses and old cast cannons; and another brigade, consisting of vestal virgins, pure as Diana, have blue tunics and white trousers. If we add to these Amazons, five or six thousand men in cotton drawers and shirts, with a knotted tuft to increase their stature, we shall have passed in review the Dahomian army.

Abomey on this day was deserted. The sovereign, the royal family, the masculine and feminine army, and the population had all gone out of the capital to a vast plain a few miles away surrounded by magnificent forests.

On this plain the recognition of the new king was to take place. Here it was that thousands of prisoners taken during recent razzias were to be immolated in his honor.

It was about two o'clock when the "Albatross" arrived over the plain and began to descend among the clouds which still hid her from the Dahomians.

There were sixteen thousand people come from all parts of the kingdom, from Whydah, and Kerapay, and Ardrah, and Tombory, and the most distant villages.

The new king--a sturdy fellow named Bou-Nadi--some five-and-twenty years old, was seated on a hillock shaded by a group of wide-branched trees. Before him stood his male army, his Amazons, and his people.

At the foot of the mound fifty musicians were playing on their barbarous instruments, elephants' tusks giving forth a husky note, deerskin drums, calabashes, guitars, bells struck with an iron clapper, and bamboo flutes, whose shrill whistle was heard over all. Every other second came discharges of guns and blunderbusses, discharges of cannons with the carriages jumping so as to imperil the lives of the artillery-women, and a general uproar so intense that even the thunder would be unheard amidst it.

In one corner of the plain, under a guard of soldiers, were grouped the prisoners destined to accompany the defunct king into the other world. At the obsequies of Ghozo, the father of Bahadou, his son had dispatched three thousand, and Bou-Nadi could not do less than his predecessor. For an hour there was a series of discourses, harangues, palavers and dances, executed not only by professionals, but by the Amazons, who displayed much martial grace.

But the time for the hecatomb was approaching. Robur, who knew the customs of Dahomey, did not lose sight of the men, women, and children reserved for butchery.

The minghan was standing at the foot of the hillock. He was brandishing his executioner's sword, with its curved blade surmounted by a metal bird, whose weight rendered the cut more certain.

This time he was not alone. He could not have performed the task. Near him were grouped a hundred executioners, all accustomed to cut off heads at one blow.
The "Albatross" came slowly down in an oblique direction. Soon she emerged from the bed of clouds which hid her till she was within three hundred feet of the ground, and for the first time she was visible from below.

Contrary to what had hitherto happened, the savages saw in her a celestial being come to render homage to King Baha-dou. The enthusiasm was indescribable, the shouts were interminable, the prayers were terrific—prayers addressed to this supernatural hippogriff, which "had doubtless come to" take the king's body to the higher regions of the Dahomian heaven. And now the first head fell under the minghan's sword, and the prisoners were led up in hundreds before the horrible executioners.

Suddenly a gun was fired from the "Albatross." The minister of justice fell dead on his face!

"Well aimed, Tom!" said Robur,

His comrades, armed as he was, stood ready to fire when the order was given.

But a change came over the crowd below. They had understood. The winged monster was not a friendly spirit, it was a hostile spirit. And after the fall of the minghan loud shouts for revenge arose on all sides. Almost immediately a fusillade resounded over the plain.

These menaces did not prevent the "Albatross" from descending boldly to within a hundred and fifty feet of the ground. Uncle Prudent and Phil Evans, whatever were their feelings towards Robur, could not help joining him in such a work of humanity.

"Let us free the prisoners!" they shouted.

"That is what I am going to do!" said the engineer.

And the magazine rifles of the "Albatross" in the hands of the colleagues, as in the hands of the crew, began to rain down the bullets, of which not one was lost in the masses below. And the little gun shot forth its shrapnel, which really did marvels.

The prisoners, although they did not understand how the help had come to them, broke their bonds, while the soldiers were firing at the aeronef. The stern screw was shot through by a bullet, and a few holes were made in the hull. Frycollin, crouching in his cabin, received a graze from a bullet that came through the deck-house.

"Ah! They will have them!" said Tom Turner. And, rushing to the magazine, he returned with a dozen dynamite cartridges, which he distributed to the men. At a sign from Robur, these cartridges were fired at the hillock, and as they reached the ground exploded like so many small shells.

The king and his court and army and people were stricken with fear at the turn things had taken. They fled under the trees, while the prisoners ran off without anybody thinking of pursuing them.

In this way was the festival interfered with. And in this way did Uncle Prudent and, Phil Evans recognize the power of the aeronef and the services it could render to humanity.

Soon the "Albatross" rose again to a moderate height, and passing over Whydah lost to view this savage coast which the southwest wind hems round with an inaccessible surf. And she flew out over the Atlantic.

Chapter XVI

OVER THE ATLANTIC

Yes, the Atlantic! The fears of the two colleagues were realized; but it did not seem as though Robur had the least anxiety about venturing over this vast ocean. Both he and his men seemed quite unconcerned about it and had gone back to their stations.

Whither was the "Albatross" bound? Was she going more than round the world as Robur had said? Even if she were, the voyage must end somewhere. That Robur spent his life in the air on board the aeronef and never came to the ground was impossible. How could he make up his stock of provisions and the materials required for working his machines? He must have some retreat, some harbor of refuge—in some unknown and inaccessible spot where the "Albatross" could revictual. That he had broken off all connections with the inhabitants of the land might be true, but with every point on the surface of the earth, certainly not.

That being the case, where was this point? How had the engineer come to choose it? Was he expected by a little colony of which he was the chief? Could he there find a new crew?

What means had he that he should be able to build so costly a vessel as the "Albatross" and keep her building secret? It is true his living was not expensive. But, finally, who was this Robur? Where did he come from? What had been his history? Here were riddles impossible to solve; and Robur was not the man to assist willingly in their solution.

It is not to be wondered at that these insoluble problems drove the colleagues almost to frenzy. To find themselves whipped off into the unknown without knowing what the end might be doubting even if the adventure would end, sentenced to perpetual aviation, was this not enough to drive the President and secretary of the Weldon Institute to extremities?
Meanwhile the "Albatross" drove along above the Atlantic, and in the morning when the sun rose there was nothing to be seen but the circular line where earth met sky. Not a spot of land was insight in this huge field of vision. Africa had vanished beneath the northern horizon.

When Frycollin ventured out of his cabin and saw all this water beneath him, fear took possession of him. Of the hundred and forty-five million square miles of which the area of the world's waters consists, the Atlantic claims about a quarter; and it seemed as though the engineer was in no hurry to cross it. There was now no going at full speed, none of the hundred and twenty miles an hour at which the "Albatross" had flown over Europe. Here, where the southwest winds prevail, the wind was ahead of them, and though it was not very strong, it would not do to defy it and the "Albatross" was sent along at a moderate speed, which, however, easily outstripped that of the fastest mail-boat.

On the 13th of July she crossed the line, and the fact was duly announced to the crew. It was then that Uncle Prudent and Phil Evans ascertained that they were bound for the southern hemisphere. The crossing of the line took place without any of the Neptunian ceremonies that still linger on certain ships. Tapage was the only one to mark the event, and he did so by pouring a pint of water down Frycollin's neck.

On the 18th of July, when beyond the tropic of Capricorn, another phenomenon was noticed, which would have been somewhat alarming to a ship on the sea. A strange succession of luminous waves widened out over the surface of the ocean with a speed estimated at quite sixty miles an hour. The waves ran along at about eight feet from one another, tracing two furrows of light. As night fell a bright reflection rose even to the "Albatross," so that she might have been taken for a flaming aerolite. Never before had Robur sailed on a sea of fire--fire without heat--which there was no need to flee from as it mounted upwards into the sky.

The cause of this light must have been electricity; it could not be attributed to a bank of fish spawn, nor to a crowd of those animalculae that give phosphorescence to the sea, and this showed that the electrical tension of the atmosphere was considerable.

In the morning an ordinary ship would probably have been lost. But the "Albatross" played with the winds and waves like the powerful bird whose name she bore. If she did not walk on their surface like the petrels, she could like the eagles find calm and sunshine in the higher zones.

They had now passed the forty-seventh parallel. The day was but little over seven hours long, and would become even less as they approached the Pole.

About one o'clock in the afternoon the "Albatross" was floating along in a lower current than usual, about a hundred feet from the level of the sea. The air was calm, but in certain parts of the sky were thick black clouds, massed in mountains, on their upper surface, and ruled off below by a sharp horizontal line. From these clouds a few lengthy protuberances escaped, and their points as they fell seemed to draw up hills of foaming water to meet them.

Suddenly the water shot up in the form of a gigantic hourglass, and the "Albatross" was enveloped in the eddy of an enormous waterspout, while twenty others, black as ink, raged around her. Fortunately the gyroratory movement of the water was opposite to that of the suspensory screws, otherwise the aeronef would have been hurled into the sea. But she began to spin round on herself with frightful rapidity. The danger was immense, and perhaps impossible to escape, for the engineer could not get through the spout which sucked him back in defiance of his propellers. The men, thrown to the ends of the deck by centrifugal force, were grasping the rail to save themselves from being shot off.

"Keep cool!" shouted Robur.

They wanted all their coolness, and their patience, too. Uncle Prudent and Phil Evans, who had just come out of their cabin, were hurled back at the risk of flying overboard. As she spun the "Albatross" was carried along by the spout, which pirouetted along the waves with a speed enough to make the helices jealous. And if she escaped from the spout she might be caught by another, and jerked to pieces with the shock.

"Get the gun ready!" said Robur.

The order was given to Tom Turner, who was crouching behind the swivel amidships where the effect of the centrifugal force was least felt. He understood. In a moment he had opened the breech and slipped a cartridge from the ammunition-box at hand. The gun went off, and the waterspouts collapsed, and with them vanished the platform of cloud they seemed to bear above them.

"Nothing broken on board?" asked Robur.

"No," answered Tom Turner. "But we don't want to have another game of humming-top like that!"

For ten minutes or so the "Albatross" had been in extreme peril. Had it not been for her extraordinary strength of build she would have been lost.

During this passage of the Atlantic many were the hours whose monotony was unbroken by any phenomenon whatever. The days grew shorter and shorter, and the cold became keen. Uncle Prudent and Phil Evans saw little of Robur. Seated in his cabin, the engineer was busy laying out his course and marking it on his maps, taking his
observations whenever he could, recording the readings of his barometers, thermometers, and chronometers, and
making full entries in his log-book.

The colleagues wrapped themselves well up and eagerly watched for the sight of land to the southward. At Uncle
Prudent's request Frycollin tried to pump the cook as to whither the engineer was bound, but what reliance could be
placed on the information given by this Gascon? Sometimes Robur was an ex-minister of the Argentine Republic,
sometimes a lord of the Admiralty, sometimes an ex-President of the United States, sometimes a Spanish general
temporarily retired, sometimes a Viceroy of the Indies who had sought a more elevated position in the air. Sometimes
he possessed millions, thanks to successful razzias in the aeronef, and he had been proclaimed for piracy. Sometimes
he had been ruined by making the aeronef, and had been forced to fly aloft to escape from his creditors. As to
knowing if he were going to stop anywhere, no! But if he thought of going to the moon, and found there a
convenient anchorage, he would anchor there! "Eh! Fry! My boy! That would just suit you to see what was going on
up there."

"I shall not go! I refuse!" said the Negro, who took all these things seriously.

"And why, Fry, why? You might get married to some pretty bouncing Lunarian!"

Frycollin reported this conversation to his master, who saw it was evident that nothing was to be learnt about
Robur. And so he thought still more of how he could have his revenge on him.

"Phil," said he one day, "is it quite certain that escape is impossible?"

"Impossible."

"Be it so! But a man is always his own property; and if necessary, by sacrificing his life--"

"If we are to make that sacrifice," said Phil Evans, "the sooner the better. It is almost time to end this. Where is
the "Albatross" going? Here we are flying obliquely over the Atlantic, and if we keep on we shall get to the coast of
Patagonia or Tierra del Fuego. And what are we to do then? Get into the Pacific, or go to the continent at the South
Pole? Everything is possible with this Robur. We shall be lost in the end. It is thus a case of legitimate self-defence,
and if we must perish--"

"Which we shall not do," answered Uncle Prudent, "without being avenged, without annihilating this machine
and all she carries."

The colleagues had reached a stage of impotent fury, and were prepared to sacrifice themselves if they could
only destroy the inventor and his secret. A few months only would then be the life of this prodigious aeronef, of
whose superiority in aerial locomotion they had such convincing proofs! The idea took such hold of them that they
thought of nothing else but how to put it into execution. And how? By seizing on some of the explosives on board
and simply blowing her up. But could they get at the magazines?

Fortunately for them, Frycollin had no suspicion of their scheme. At the thought of the "Albatross" exploding in
midair, he would not have shrunk from betraying his master.

It was on the 23rd of July that the land reappeared in the southwest near Cape Virgins at the entrance of the
Straits of Magellan. Under the fifty-second parallel at this time of year the night was eighteen hours long and the
temperature was six below freezing.

At first the "Albatross," instead of keeping on to the south, followed the windings of the coast as if to enter the
Pacific. After passing Lomas Bay, leaving Mount Gregory to the north and the Brecknocks to the west, they sighted
Puerto Arena, a small Chilean village, at the moment the churchbells were in full swing; and a few hours later they
were over the old settlement at Port Famine.

If the Patagonians, whose fires could be seen occasionally, were really above the average in stature, the
passengers in the aeronef were unable to say, for to them they seemed to be dwarfs. But what a magnificent
landscape opened around during these short hours of the southern day! Rugged mountains, peaks eternally capped
with snow, with thick forests rising on their flanks, inland seas, bays deep set amid the peninsulas, and islands of the
Archipelago. Clarence Island, Dawson Island, and the Land of Desolation, straits and channels, capes and
promontories, all in inextricable confusion, and bound by the ice in one solid mass from Cape Forward, the most
southerly point of the American continent, to Cape Horn the most southerly point of the New World.

When she reached Fort Famine the "Albatross" resumed her course to the south. Passing between Mount Tam on
the Brunswick Peninsula and Mount Graves, she steered for Mount Sarmiento, an enormous peak wrapped in snow,
which commands the Straits of Magellan, rising six thousand four hundred feet from the sea. And now they were
over the land of the Fuegians, Tierra del Fuego, the land of fire. Six months later, in the height of summer, with days
from fifteen to sixteen hours long, how beautiful and fertile would most of this country be, particularly in its
northern portion! Then, all around would be seen valleys and pasturages that could form the feeding-grounds of
thousands of animals; then would appear virgin forests, gigantic trees—birches, beeches, ash-trees, cypresses, tree-
ferns—and broad plains overrun by herds of guanacos, vicunas, and ostriches. Now there were armies of penguins
and myriads of birds; and, when the "Albatross" turned on her electric lamps the guillemots, ducks, and geese came
crowding on board enough to fill Tapage's larder a hundred times and more.

Here was work for the cook, who knew how to bring out the flavor of the game and keep down its peculiar oiliness. And here was work for Frycollin in plucking dozen after dozen of such interesting feathered friends.

That day, as the sun was setting about three o'clock in the afternoon, there appeared in sight a large lake framed in a border of superb forest. The lake was completely frozen over, and a few natives with long snowshoes on their feet were swiftly gliding over it.

At the sight of the "Albatross," the Fuegians, overwhelmed with terror--scattered in all directions, and when they could not get away they hid themselves, taking, like the animals, to the holes in the ground.

The "Albatross" still held her southerly course, crossing the Beagle Channel, and Navarin Island and Wollaston Island, on the shores of the Pacific. Then, having accomplished 4,700 miles since she left Dahomey, she passed the last islands of the Magellan archipelago, whose most southerly outpost, lashed by the everlasting surf, is the terrible Cape Horn.

Chapter XVII
THE SHIPWRECKED CREW

Next day was the 24th of July; and the 24th of July in the southern hemisphere corresponds to the 24th of January in the northern. The fifty-sixth degree of latitude had been left behind. The similar parallel in northern Europe runs through Edinburgh.

The thermometer kept steadily below freezing, so that the machinery was called upon to furnish a little artificial heat in the cabins. Although the days begin to lengthen after the 21st day of June in the southern hemisphere, yet the advance of the "Albatross" towards the Pole more than neutralized this increase, and consequently the daylight became very short. There was thus very little to be seen. At night time the cold became very keen; but as there was no scarcity of clothing on board, the colleagues, well wrapped up, remained a good deal on deck thinking over their plans of escape, and watching for an opportunity. Little was seen of Robur; since the high words that had been exchanged in the Timbuktu country, the engineer had left off speaking to his prisoners. Frycollin seldom came out of the cook-house, where Tapage treated him most hospitably, on condition that he acted as his assistant. This position was not without its advantages, and the Negro, with his master's permission, very willingly accepted it. Shut up in the galley, he saw nothing of what was passing outside, and might even consider himself beyond the reach of danger. He was, in fact, very like the ostrich, not only in his stomach, but in his folly.

But whither went the "Albatross?" Was she in mid-winter bound for the southern seas or continents round the Pole? In this icy atmosphere, even granting that the elements of the batteries were unaffected by such frost, would not all the crew succumb to a horrible death from the cold? That Robur should attempt to cross the Pole in the warm season was bad enough, but to attempt such a thing in the depth of the winter night would be the act of a madman.

Thus reasoned the President and Secretary of the Weldon Institute, now they had been brought to the end of the continent of the New World, which is still America, although it does not belong to the United States.

What was this intractable Robur going to do? Had not the time arrived for them to end the voyage by blowing up the ship?

It was noticed that during the 24th of July the engineer had frequent consultations with his mate. He and Tom Turner kept constant watch on the barometer--not so much to keep themselves informed of the height at which they were traveling as to be on the look-out for a change in the weather. Evidently some indications had been observed of which it was necessary to make careful note.

Uncle Prudent also remarked that Robur had been taking stock of the provisions and stores, and everything seemed to show that he was contemplating turning back.

"Turning back!" said Phil Evans. "But where to?"

"Where he can reprovision the ship," said Uncle Prudent.

"That ought to be in some lonely island in the Pacific with a colony of scoundrels worthy of their chief."

"That is what I think. I fancy he is going west, and with the speed he can get up it would not take him long to get home."

"But we should not be able to put our plan into execution. If we get there--"

"We shall not get there!"

The colleagues had partly guessed the engineer's intentions. During the day it became no longer doubtful that when the "Albatross" reached the confines of the Antarctic Sea her course was to be changed. When the ice has formed about Cape Horn the lower regions of the Pacific are covered with icefields and icebergs. The floes then form an impenetrable barrier to the strongest ships and the boldest navigators. Of course, by increasing the speed of her wings the "Albatross" could clear the mountains of ice accumulated on the ocean as she could the mountains of
earth on the polar continent—if it is a continent that forms the cap of the southern pole. But would she attempt it in the middle of the polar night, in an atmosphere of sixty below freezing?

After she had advanced about a hundred miles to the south the "Albatross" headed westerly, as if for some unknown island of the Pacific. Beneath her stretched the liquid plain between Asia and America. The waters now had assumed that singular color which has earned for them the name of the Milky Sea. In the half shadow, which the enfeebled rays of the sun were unable to dissipate, the surface of the Pacific was a milky white. It seemed like a vast snowfield, whose undulations were imperceptible at such a height. If the sea had been solidified by the cold, and converted into an immense icefield, its aspect could not have been much different. They knew that the phenomenon was produced by myriads of luminous particles of phosphorescent corpuscles; but it was surprising to come across such an opalescent mass beyond the limits of the Indian Ocean.

Suddenly the barometer fell after keeping somewhat high during the earlier hours of the day. Evidently the indications were such as a shipmaster might feel anxious at, though the master of an aeronef might despise them. There was every sign that a terrible storm had recently raged in the Pacific.

It was one o'clock in the afternoon when Tom Turner came up to the engineer and said, "Do you see that black spot on the horizon, sir—there away to due north of us? That is not a rock?"

"No, Tom; there is no land out there."

"Then it must be a ship or a boat."

Uncle Prudent and Phil Evans, who were in the bow, looked in the direction pointed out by the mate.

Robur asked for the glass and attentively observed the object.

"It is a boat," said he, "and there are some men in it."

"Shipwrecked?" asked Tom.

"Yes! They have had to abandon their ship, and, knowing nothing of the nearest land, are perhaps dying of hunger and thirst! Well, it shall not be said that the "Albatross" did not come to their help!"

The orders were given, and the aeronef began to sink towards the sea. At three hundred yards from it the descent was stopped, and the propellers drove ahead full speed towards the north.

It was a boat. Her sail flapped against the mast as she rose and fell on the waves. There was no wind, and she was making no progress. Doubtless there was no one on board with strength enough left to work the oars. In the boat were five men asleep or helpless, if they were not dead.

The "Albatross" had arrived above them, and slowly descended. On the boat's stern was the name of the ship to which she belonged—the "Jeannette" of Nantes.

"Hallo, there!" shouted Turner, loud enough for the men to hear, for the boat was only eighty feet below him.

There was no answer. "Fire a gun!" said Robur.

The gun was fired and the report rang out over the sea.

One of the men looked up feebly. His eyes were haggard and his face was that of a skeleton. As he caught sight of the "Albatross" he made a gesture as of fear.

"Don't be afraid," said Robur in French, "we have come to help you. Who are you?"

"We belong to the barque "Jeannette," and I am the mate. We left her a fortnight ago as she was sinking. We have no water and no food."

The four other men had now sat up. Wan and exhausted, in a terrible state of emaciation, they lifted their hands towards the "Albatross."

"Look-out!" shouted Robur.

A line was let down, and a pail of fresh water was lowered into the boat. The men snatched at it and drank it with an eagerness awful to see.

"Bread, bread!" they exclaimed.

Immediately a basket with some food and five pints of coffee descended towards them. The mate with difficulty restrained them in their ravenousness.

"Where are we?" asked the mate at last.

"Fifty miles from the Chili coast and the Chonos Archipelago," answered Robur.

"Thanks. But we are becalmed, and—?"

"We are going to tow you."

"Who are you?"

"People who are glad to be of assistance to you," said Robur.

The mate understood that the incognito was to be respected. But had the flying machine sufficient power to tow them through the water?

Yes; and the boat, attached to a hundred feet of rope, began to move off towards the east. At ten o'clock at night the land was sighted—or rather they could see the lights which indicated its position. This rescue from the sky had
come just in time for the survivors of the "Jeannette," and they had good reason to believe it miraculous.

When they had been taken to the mouth of the channel leading among the Chonos Islands, Robur shouted to them to cast off the tow-line. This, with many a blessing to those who had saved them, they did, and the "Albatross" headed out to the offing.

Certainly there was some good in this aeronef, which could thus help those who were lost at sea! What balloon, perfect as it might be, would be able to perform such a service? And between themselves Uncle Prudent and Phil Evans could not but admire it, although they were quite disposed to deny the evidence of their senses.

Chapter XVIII
OVER THE VOLCANO

The sea was as rough as ever, and the symptoms became alarming. The barometer fell several millimeters. The wind came in violent gusts, and then for a moment or so failed altogether. Under such circumstances a sailing vessel would have had to reef in her topsails and her foresail. Everything showed that the wind was rising in the northwest. The storm-glass became much troubled and its movements were most disquieting.

At one o'clock in the morning the wind came on again with extreme violence. Although the aeronef was going right in its teeth she was still making progress at a rate of from twelve to fifteen miles an hour. But that was the utmost she could do.

Evidently preparations must be made for a cyclone, a very rare occurrence in these latitudes. Whether it be called a hurricane, as in the Atlantic, a typhoon, as in Chinese waters a simoom, as in the Sahara, or a tornado, as on the western coast, such a storm is always a gyratory one, and most dangerous for any ship caught in the current which increases from the circumference to the center, and has only one spot of calm, the middle of the vortex.

Robur knew this. He also knew it was best to escape from the cyclone and get beyond its zone of attraction by ascending to the higher strata. Up to then he had always succeeded in doing this, but now he had not an hour, perhaps not a minute, to lose.

In fact the violence of the wind sensibly increased. The crests of the waves were swept off as they rose and blown into white dust on the surface of the sea. It was manifest that the cyclone was advancing with fearful velocity straight towards the regions of the pole.

"Higher!" said Robur.

"Higher it is," said Tom Tumor.

An extreme ascensional power was communicated to the aeronef, and she shot up slantingly as if she was traveling on a plane sloping downwards from the southwest. Suddenly the barometer fell more than a dozen millimeters and the "Albatross" paused in her ascent.

What was the cause of the stoppage? Evidently she was pulled back by the air; some formidable current had diminished the resistance to the screws. When a steamer travels upstream more work is got out of her screw than when the water is running between the blades. The recoil is then considerable, and may perhaps be as great as the current. It was thus with the "Albatross" at this moment.

But Robur was not the man to give in. His seventy-four screws, working perfectly together, were driven at their maximum speed. But the aeronef could not escape; the attraction of the cyclone was irresistible. During the few moments of calm she began to ascend, but the heavy pull soon drew her back, and she sunk like a ship as she founders.

Evidently if the violence of the cyclone went on increasing the "Albatross" would be but as a straw caught in one of those whirlwinds that root up the trees, carry off roofs, and blow down walls.

Robur and Tom could only speak by signs. Uncle Prudent and Phil Evans clung to the rail and wondered if the cyclone was not playing their game in destroying the aeronef and with her the inventor--and with the inventor the secret of his invention.

But if the "Albatross" could not get out of the cyclone vertically could she not do something else? Could she not gain the center, where it was comparatively calm, and where they would have more control over her? Quite so, but to do this she would have to break through the circular currents which were sweeping her round with them. Had she sufficient mechanical power to escape through them?

Suddenly the upper part of the cloud fell in. The vapor condensed in torrents of rain. It was two o'clock in the morning. The barometer, oscillating over a range of twelve millimeters, had now fallen to 27.91, and from this something should be taken on account of the height of the aeronef above the level of the sea.

Strange to say, the cyclone was out of the zone to which such storms are generally restricted, such zone being bounded by the thirtieth parallel of north latitude and the twenty-sixth parallel of south latitude. This may perhaps explain why the eddying storm suddenly turned into a straight one. But what a hurricane! The tempest in
Connecticut on the 22nd of March, 1882, could only have been compared to it, and the speed of that was more than three hundred miles an hour.

The "Albatross" had thus to fly before the wind or rather she had to be left to be driven by the current, from which she could neither mount nor escape. But in following this unchanging trajectory she was bearing due south, towards those polar regions which Robur had endeavored to avoid. And now he was no longer master of her course; she would go where the hurricane took her.

Tom Turner was at the helm, and it required all his skill to keep her straight. In the first hours of the morning--if we can so call the vague tint which began to rise over the horizon--the "Albatross" was fifteen degrees below Cape Horn; twelve hundred miles more and she would cross the antarctic circle. Where she was, in this month of July, the night lasted nineteen hours and a half. The sun's disk--without warmth, without light--only appeared above the horizon to disappear almost immediately. At the pole the night lengthened into one of a hundred and seventy-nine hours. Everything showed that the "Albatross" was about to plunge into an abyss.

During the day an observation, had it been possible, would have given 66° 40' south latitude. The aeronef was within fourteen hundred miles of the pole.

Irresistibly was she drawn towards this inaccessible corner of the globe, her speed eating up, so to speak, her weight, although she weighed less than before, owing to the flattening of the earth at the pole. It seemed as though she could have dispensed altogether with her suspensory screws. And soon the fury of the storm reached such a height that Robur thought it best to reduce the speed of her helices as much as possible, so as to avoid disaster. And only enough speed was given to keep the aeronef under control of the rudder.

Amid these dangers the engineer retained his imperturbable coolness, and the crew obeyed him as if their leader's mind had entered into them. Uncle Prudent and Phil Evans had not for a moment left the deck; they could remain without being disturbed. The air made but slight resistance. The aeronef was like an aerostat, which drifts with the fluid masses in which it is plunged.

Is the domain of the southern pole a continent or an archipelago? Or is it a palaeocrystic sea, whose ice melts not even during the long summer? We know not. But what we do know is that the southern pole is colder than the northern one--a phenomenon due to the position of the earth in its orbit during winter in the antarctic regions.

During this day there was nothing to show that the storm was abating. It was by the seventy-fifth meridian to the west that the "Albatross" crossed into the circumpolar region. By what meridian would she come out--if she ever came out?

As she descended more to the south the length of the day diminished. Before long she would be plunged in that continuous night which is illuminated only by the rays of the moon or the pale streamers of the aurora. But the moon was then new, and the companions of Robur might see nothing of the regions whose secret has hitherto defied human curiosity. There was not much inconvenience on board from the cold, for the temperature was not nearly so low as was expected.

It seemed as though the hurricane was a sort of Gulf Stream, carrying a certain amount of heat along with it.

Great was the regret that the whole region was in such profound obscurity. Even if the moon had been in full glory but few observations could have been made. At this season of the year an immense curtain of snow, an icy carapace, covers up the polar surface. There was none of that ice "blink" to be seen, that whitish tint of which the reflection is absent from dark horizons. Under such circumstances, how could they distinguish the shape of the ground, the extent of the seas, the position of the islands? How could they recognize the hydrographic network of the country or the orographic configuration, and distinguish the hills and mountains from the icebergs and floes?

A little after midnight an aurora illuminated the darkness. With its silver fringes and spangles radiating over space, it seemed like a huge fan open over half the sky. Its farthest electric effluences were lost in the Southern Cross, whose four bright stars were gleaming overhead. The phenomenon was one of incomparable magnificence, and the light showed the face of the country as a confused mass of white.

It need not be said that they had approached so near to the pole that the compass was constantly affected, and gave no precise indication of the course pursued. Its inclination was such that at one time Robur felt certain they were passing over the magnetic pole discovered by Sir James Ross. And an hour later, in calculating the angle the needle made with the vertical, he exclaimed: "the South Pole is beneath us!"

A white cap appeared, but nothing could be seen of what it bid under its ice.

A few minutes afterwards the aurora died away, and the point where all the world's meridians cross is still to be discovered.

If Uncle Prudent and Phil Evans wished to bury in the most mysterious solitudes the aeronef and all she bore, the moment was propitious. If they did not do so it was doubtless because the explosive they required was still denied to them.

The hurricane still raged and swept along with such rapidity that had a mountain been met with the aeronef
would have been dashed to pieces like a ship on a lee shore. Not only had the power gone to steer her horizontally, but the control of her elevation had also vanished.

And it was not unlikely that mountains did exist in these antarctic lands. Any instant a shock might happen which would destroy the "Albatross." Such a catastrophe became more probable as the wind shifted more to the east after they passed the prime meridian. Two luminous points then showed themselves ahead of the "Albatross." There were the two volcanos of the Ross Mountains--Erebus and Terror. Was the "Albatross" to be shriveled up in their flames like a gigantic butterfly?

An hour of intense excitement followed. One of the volcanoes, Erebus, seemed to be rushing at the aeronef, which could not move from the bed of the hurricane. The cloud of flame grew as they neared it. A network of fire barred their road. A brilliant light shone round over all. The figures on board stood out in the bright light as if come from another world. Motionless, without a sound or a gesture, they waited for the terrible moment when the furnace would wrap them in its fires.

But the storm that bore the "Albatross" saved them from such a fearful fate. The flames of Erebus were blown down by the hurricane as it passed, and the "Albatross" flew over unhurt. She swept through a hail of ejected material, which was fortunately kept at bay by the centrifugal action of the suspensory screws. And she harmlessly passed over the crater while it was in full eruption.

An hour afterwards the horizon hid from their view the two colossal torches which light the confines of the world during the long polar night.

At two o'clock in the morning Balleny Island was sighted on the coast of Discovery Land, though it could not be recognized owing to its being bound to the mainland by a cement of ice.

And the "Albatross" emerged from the polar circle on the hundred and seventy-fifth meridian. The hurricane had carried her over the icebergs and ice floes, against which she was in danger of being dashed a hundred times or more. She was not in the hands of the helmsman, but in the hand of God--and God is a good pilot.

The aeronef sped along to the north, and at the sixtyieth parallel the storm showed signs of dying away. Its violence sensibly diminished. The "Albatross" began to come under control again. And, what was a great comfort, had again entered the lighted regions of the globe; and the day reappeared about eight o'clock in the morning.

Robur had been carried by the storm into the Pacific over the polar region, accomplishing four thousand three hundred and fifty miles in nineteen hours, or about three miles a minute, a speed almost double that which the "Albatross" was equal to with her propellers under ordinary circumstances. But he did not know where he then was owing to the disturbance of the needle in the neighborhood of the magnetic pole, and he would have to wait till the sun shone out under convenient conditions for observation. Unfortunately, heavy clouds covered the sky all that day and the sun did not appear.

This was a disappointment more keenly felt as both propelling screws had sustained damage during the tempest. Robur, much disconcerted at this accident, could only advance at a moderate speed during this day, and when he passed over the antipodes of Paris was only going about eighteen miles an hour. It was necessary not to aggravate the damage to the screws, for if the propellers were rendered useless the situation of the aeronef above the vast seas of the Pacific would be a very awkward one. And the engineer began to consider if he could not effect his repairs on the spot, so as to make sure of continuing his voyage.

In the morning of the 27th of July, about seven o'clock, land was sighted to the north. It was soon seen to be an island. But which island was it of the thousands that dot the Pacific? However, Robur decided to stop at it without landing. He thought, that he could repair damages during the day and start in the evening.

The wind had died away completely and this was a favorable circumstance for the maneuver he desired to execute. At least, if she did not remain stationary the "Albatross" would be carried he knew not where.

A cable one hundred and fifty feet long with an anchor at the end was dropped overboard. When the aeronef reached the shore of the island the anchor dragged up the first few rocks and then got firmly fixed between two large blocks. The cable then stretched to full length under the influence of the suspensory screws, and the "Albatross" remained motionless, riding like a ship in a roadstead.

It was the first time she had been fastened to the earth since she left Philadelphia.

Chapter XIX
ANCHORED AT LAST

When the "Albatross" was high in the air the island could be seen to be of moderate size. But on what parallel was it situated? What meridian ran through it? Was it an island in the Pacific, in Australasia, or in the Indian Ocean? When the sun appeared, and Robur had taken his observations, they would know; but although they could not trust to the indications of the compass there was reason to think they were in the Pacific.
At this height--one hundred and fifty feet--the island which measured about fifteen miles round, was like a three-pointed star in the sea.

Off the southwest point was an islet and a range of rocks. On the shore there were no tide-marks, and this tended to confirm Robur in his opinion as to his position for the ebb and flow are almost imperceptible in the Pacific.

At the northwest point there was a conical mountain about two hundred feet high.

No natives were to be seen, but they might be on the opposite coast. In any case, if they had perceived the aeronef, terror had made them either hide themselves or run away. The "Albatross" had anchored on the southwest point of the island. Not far off, down a little creek, a small river flowed in among the rocks. Beyond were several winding valleys; trees of different kinds; and birds--partridges and bustards--in great numbers. If the island was not inhabited it was habitable. Robur might surely have landed on it; if he had not done so it was probably because the ground was uneven and did not offer a convenient spot to beach the aeronef.

While he was waiting for the sun the engineer began the repairs he reckoned on completing before the day was over. The suspensory screws were undamaged and had worked admirably amid all the violence of the storm, which, as we have said, had considerably lightened their work. At this moment half of them were in action, enough to keep the "Albatross" fixed to the shore by the taut cable. But the two propellers had suffered, and more than Robur had thought. Their blades would have to be adjusted and the gearing seen to by which they received their rotatory movement.

It was the screw at the bow which was first attacked under Robur's superintendence. It was the best to commence with, in case the "Albatross" had to leave before the work was finished. With only this propeller he could easily keep a proper course.

Meanwhile Uncle Prudent and his colleague, after walking about the deck, had sat down aft. Frycollin was strangely reassured. What a difference! To be suspended only one hundred and fifty feet from the ground!

The work was only interrupted for a moment while the elevation of the sun above the horizon allowed Robur to take an horizon angle, so that at the time of its culmination he could calculate his position.

The result of the observation, taken with the greatest exactitude, was as follows:

Longitude, 176° 10' west. Latitude, 44° 25' south.

This point on the map answered to the position of the Chatham Islands, and particularly of Pitt Island, one of the group.

"That is nearer than I supposed," said Robur to Tom Turner.

"How far off are we?"

"Forty-six degrees south of X Island, or two thousand eight hundred miles."

"All the more reason to get our propellers into order," said the mate. "We may have the wind against us this passage, and with the little stores we have left we ought to get to X as soon as possible."

"Yes, Tom, and I hope to get under way tonight, even if I go with one screw, and put the other to-rights on the voyage."

"Mr. Robur," said Tom "What is to be done with those two gentlemen and their servant?"

"Do you think they would complain if they became colonists of X Island?"

But where was this X? It was an island lost in the immensity of the Pacific Ocean between the Equator and the Tropic of Cancer--an island most appropriately named by Robur in this algebraic fashion. It was in the north of the South Pacific, a long way out of the route of inter-oceanic communication. There it was that Robur had founded his little colony, and there the "Albatross" rested when tired with her flight. There she was provisioned for all her voyages. In X Island, Robur, a man of immense wealth, had established a shipyard in which he built his aeronef. There he could repair it, and even rebuild it. In his warehouses were materials and provisions of all sorts stored for the fifty inhabitants who lived on the island.

When Robur had doubled Cape Horn a few days before his intention had been to regain X Island by crossing the Pacific obliquely. But the cyclone had seized the "Albatross," and the hurricane had carried her away to the south. In fact, he had been brought back to much the same latitude as before, and if his propellers had not been damaged the delay would have been of no importance.

His object was therefore to get back to X Island, but as the mate had said, the voyage would be a long one, and the winds would probably be against them. The mechanical power of the "Albatross" was, however, quite equal to taking her to her destination, and under ordinary circumstances she would be there in three or four days.

Hence Robur's resolve to anchor on the Chatham Islands. There was every opportunity for repairing at least the fore-screw. He had no fear that if the wind were to rise he would be driven to the south instead of to the north. When night came the repairs would be finished, and he would have to maneuver so as to weigh anchor. If it were too firmly fixed in the rocks he could cut the cable and resume his flight towards the equator.

The crew of the "Albatross," knowing there was no time to lose, set to work vigorously.
While they were busy in the bow of the aeronef, Uncle Prudent and Phil Evans held a little conversation together which had exceptionally important consequences.

"Phil Evans," said Uncle Prudent, "you have resolved, as I have, to sacrifice your life?"

"Yes, like you."

"It is evident that we can expect nothing from Robur."

"Nothing."

"Well, Phil Evans, I have made up my mind. If the "Albatross" leaves this place tonight, the night will not pass without our having accomplished our task. We will smash the wings of this bird of Robur's! This night I will blow it into the air!"

"The sooner the better," said Phil Evans.

It will be seen that the two colleagues were agreed on all points even in accepting with indifference the frightful death in store for them. "Have you all you want?" asked Evans.

"Yes. Last night, while Robur and his people had enough to do to look after the safety of the ship, I slipped into the magazine and got hold of a dynamite cartridge."

"Let us set to work, Uncle Prudent."

"No. Wait till tonight. When the night comes we will go into our cabin, and you shall see something that will surprise you."

At six o'clock the colleagues dined together as usual. Two hours afterwards they retired to their cabin like men who wished to make up for a sleepless night.

Neither Robur nor any of his companions had a suspicion of the catastrophe that threatened the "Albatross."

This was Uncle Prudent's plan. As he had said, he had stolen into the magazine, and there had possessed himself of some powder and cartridge like those used by Robur in Dahomey. Returning to his cabin, he had carefully concealed the cartridge with which he had resolved to blow up the "Albatross" in mid-air.

Phil Evans, screened by his companion, was now examining the infernal machine, which was a metallic canister containing about two pounds of dynamite, enough to shatter the aeronef to atoms. If the explosion did not destroy her at once, it would do so in her fall. Nothing was easier than to place this cartridge in a corner of the cabin, so that it would blow in the deck and tear away the framework of the hull.

But to obtain the explosion it was necessary to adjust the fulminating cap with which the cartridge was fitted. This was the most delicate part of the operation, for the explosion would have to be carefully timed, so as not to occur too soon or too late.

Uncle Prudent had carefully thought over the matter. His conclusions were as follows. As soon as the fore propeller was repaired the aeronef would resume her course to the north, and that done Robur and his crew would probably come aft to put the other screw into order. The presence of these people about the cabin might interfere with his plans, and so he had resolved to make a slow match do duty as a time-fuse.

"When I got the cartridge," said he to Phil Evans, "I took some gunpowder as well. With the powder I will make a fuse that will take some time to burn, and which will lead into the fulminate. My idea is to light it about midnight, so that the explosion will take place about three or four o'clock in the morning."

"Well planned!" said Phil Evans.

The colleagues, as we see, had arrived at such a stage as to look with the greatest nonchalance on the awful destruction in which they were about to perish. Their hatred against Robur and his people had so increased that they would sacrifice their own lives to destroy the "Albatross" and all she bore. The act was that of madmen, it was horrible; but at such a pitch had they arrived after five weeks of anger that could not vent itself, of rage that could not be gratified.

"And Frycollin?" asked Phil Evans, "have we the right to dispose of his life?"

"We shall sacrifice ours as well!" said Uncle Prudent. But it is doubtful if Frycollin would have thought the reason sufficient.

Immediately Uncle Prudent set to work, while Evans kept watch in the neighborhood of the cabin. The crew were all at work forward. There was no fear of being surprised. Uncle Prudent began by rubbing a small quantity of the powder very fine; and then, having slightly moistened it, he wrapped it up in a piece of rag in the shape of a match. When it was lighted he calculated it would burn about an inch in five minutes, or a yard in three hours. The match was tried and found to answer, and was then wound round with string and attached to the cap of the cartridge. Uncle Prudent had all finished about ten o'clock in the evening without having excited the least suspicion.

During the day the work on the fore screw had been actively carried on, but it had had to be taken on board to adjust the twisted blades. Of the piles and accumulators and the machinery that drove the ship nothing was damaged.

When night fell Robur and his men knocked off work. The fore propeller not been got into place, and to finish it would take another three hours. After some conversation with Tom Turner it was decided to give the crew a rest,
and postpone what required to be done to the next morning.

The final adjustment was a matter of extreme nicetry, and the electric lamps did not give so suitable a light for such work as the daylight.

Uncle Prudent and Phil Evans were not aware of this. They had understood that the screw would be in place during the night, and that the "Albatross" would be on her way to the north.

The night was dark and moonless. Heavy clouds made the darkness deeper. A light breeze began to rise. A few puffs came from the southwest, but they had no effect on the "Albatross." She remained motionless at her anchor, and the cable stretched vertically downward to the ground.

Uncle Prudent and his colleague, imagining they were under way again, sat shut up in their cabin, exchanging but a few words, and listening to the f-r-r-r-f of the suspensory screws, which drowned every other sound on board. They were waiting till the time of action arrived.

A little before midnight Uncle Prudent said, "It is time!" Under the berths in the cabin was a sliding box, forming a small locker, and in this locker Uncle Prudent put the dynamite and the slow-match. In this way the match would burn without betraying itself by its smoke or spluttering. Uncle Prudent lighted the end and pushed back the box under the berth with "Now let us go aft, and wait."

They then went out, and were astonished not to find the steersman at his post. Phil Evans leant out over the rail.

"The "Albatross" is where she was," said he in a low voice. "The work is not finished. They have not started!"

Uncle Prudent made a gesture of disappointment. "We shall have to put out the match," said he.

"No," said Phil Evans, "we must escape!"

"Escape?"

"Yes! down the cable! Fifty yards is nothing!"

"Nothing, of course, Phil Evans, and we should be fools not to take the chance now it has come."

But first they went back to the cabin and took away all they could carry, with a view to a more or less prolonged stay on the Chatham Islands. Then they shut the door and noiselessly crept forward, intending to wake Frycollin and take him with them.

The darkness was intense. The clouds were racing up from the southwest, and the aeronef was tugging at her anchor and thus throwing the cable more and more out of the vertical. There would be no difficulty in slipping down it.

The colleagues made their way along the deck, stopping in the shadow of the deckhouses to listen if there was any sound. The silence was unbroken. No light shone from the portholes. The aeronef was not only silent; she was asleep.

Uncle Prudent was close to Frycollin's cabin when Phil Evans stopped him. "The look-out!" he said.

A man was crouching near the deck-house. He was only half asleep. All flight would be impossible if he were to give the alarm. Close by were a few ropes, and pieces of rag and waste used in the work at the screw.

An instant afterwards the man was gagged and blindfolded and lashed to the rail unable to utter a sound or move an inch. This was done almost without a whisper.

Uncle Prudent and Phil Evans listened. All was silent within the cabins. Every one on board was asleep. They reached Frycollin's cabin. Tapage was snoring away in a style worthy of his name, and that promised well.

To his great surprise, Uncle Prudent had not even to push Frycollin's door. It was open. He stepped into the doorway and looked around. "Nobody here!" he said.

"Nobody! Where can be he?" asked Phil Evans.

They went into the bow, thinking Frycollin might perhaps be asleep in the corner. Still they found nobody.

"Has the fellow got the start of us?" asked Uncle Prudent.

"Whether he has or not," said Phil Evans, "we can't wait any longer. Down you go."

Without hesitation the fugitives one after the other clambered over the side and, seizing the cable with hands and feet slipped down it safe and sound to the ground.

Think of their joy at again treading the earth they had lost for so long--at walking on solid ground and being no longer the playthings of the atmosphere!

They were staring up the creek to the interior of the island when suddenly a form rose in front of them. It was Frycollin. The Negro had had the same idea as his master and the audacity to start without telling him. But there was no time for recriminations, and Uncle Prudent was in search of a refuge in some distant part of the island when Phil Evans stopped him.

"Uncle Prudent," said he. "Here we are safe from Robur. He is doomed like his companions to a terrible death. He deserves it, we know. But if he would swear on his honor not to take us prisoners again--"

"The honor of such a man--"
Uncle Prudent did not finish his sentence.

There was a noise on the "Albatross." Evidently, the alarm had been given. The escape was discovered.

"Help! Help!" shouted somebody. It was the look-out man, who had got rid of his gag. Hurried footsteps were heard on deck. Almost immediately the electric lamps shot beams over a large circle.

"There they are! There they are!" shouted Tom Turner. The fugitives were seen.

At the same instant an order was given by Robur, and the suspensory screws being slowed, the cable was hauled in on board, and the "Albatross" sank towards the ground.

At this moment the voice of Phil Evans was heard shouting, "Engineer Robur, will you give us your word of honor to leave us free on this island?"

"Never!" said Robur. And the reply was followed by the report of a gun, and the bullet grazed Phil's shoulder.

"Ah! The brutes!" said Uncle Prudent. Knife in hand, he rushed towards the rocks where the anchor had fixed itself. The aeronef was not more than fifty feet from the ground.

In a few seconds the cable was cut, and the breeze, which had increased considerably, striking the "Albatross" on the quarter, carried her out over the sea.

Chapter XX
THE WRECK OF THE ALBATROSS

It was then twenty minutes after midnight. Five or six shots had been fired from the aeronef. Uncle Prudent and Frycollin, supporting Phil Evans, had taken shelter among the rocks. They had not been hit. For the moment there was nothing to fear.

As the "Albatross" drifted off from Pitt Island she rose obliquely to nearly three thousand feet. It was necessary to increase the ascensional power to prevent her falling into the sea.

When the look-out man had got clear of his gag and shouted, Robur and Tom Turner had rushed up to him and torn off his bandage. The mate had then run back to the stern cabin. It was empty! Tapage had searched Frycollin's cabin, and that also was empty.

When he saw that the prisoners had escaped, Robur was seized with a paroxysm of anger. The escape meant the revelation of his secret to the world. He had not been much concerned at the document thrown overboard while they were crossing Europe, for there were so many chances that it would be lost in its fall; but now!

As he grew calm, "They have escaped," said he. "Be it so! But they cannot get away from Pitt Island, and in a day or so I will go back! I will recapture them! And then--"

In fact, the safety of the three fugitives was by no means assured. The "Albatross" would be repaired, and return well in hand. Before the day was out they might again be in the power of the engineer.

Before the day was out! But in two hours the "Albatross" would be annihilated! The dynamite cartridge was like a torpedo fastened to her hull, and would accomplish her destruction in mid-air. The breeze freshened, and the aeronef was carried to the northeast. Although her speed was but moderate, she would be out of sight of the Chatham Islands before sunrise. To return against the wind she must have her propellers going, particularly the one in the bow.

"Tom," said the engineer, "turn the lights full on."

"Yes, Sir."

"And all hands to work."

"Yes, Sir."

There was no longer any idea of putting off the work till tomorrow. There was now no thought of fatigue. Not one of the men of the "Albatross" failed to share in the feelings of his chief. Not one but was ready to do anything to recapture the fugitives!

As soon as the screw was in place they would return to the island and drop another anchor, and give chase to the fugitives. Then only would they begin repairing the stern-screw; and then the aeronef could resume her voyage across the Pacific to X Island.

It was important, above all things, that the "Albatross" should not be carried too far to the northeast, but unfortunately the breeze grew stronger, and she could not head against it, or even remain stationary. Deprived of her propellers she was an unguidable balloon. The fugitives on the shore knew that she would have disappeared before the explosion blew her to pieces.

Robur felt much disappointment at seeing his plans so interfered with. Would it not take him much longer than he thought to get back to his old anchorage?

While the work at the screw was actively pushed on, he resolved to descend to the surface of the sea, in the hope that the wind would there be lighter. Perhaps the "Albatross" would be able to remain in the neighborhood until she
was again fit to work to windward. The maneuver was instantly executed. If a passing ship had sighted the aerial machine as she sunk through the air, with her electric lights in full blaze, with what terror would she have been seized!

When the "Albatross" was a few hundred feet from the waves she stopped. Unfortunately Robur found that the breeze was stronger here than above, and the aeronef drifted off more rapidly. He risked being blown a long, way off to the northeast, and that would delay his return to Pitt Island. In short, after several experiments, he found it better to keep his ship well up in the air, and the "Albatross" went aloft to about ten thousand feet. There, if she did not remain stationary, the drifting was very slight. The engineer could thus hope that by sunrise at such an altitude he would still be in sight of the island.

Robur did not trouble himself about the reception the fugitives might have received from the natives—if there were any natives. That they might help them mattered little to him. With the powers of offense possessed by the "Albatross" they would be promptly terrified and dispersed. The capture of the prisoners was certain, and once he had them again, "They will not escape from X Island!"

About one o’clock in the morning the fore-screw was finished, and all that had to be done was to get it back to its place. This would take about an hour. That done, the "Albatross" would be headed southwest and the stern-screw could be taken in hand.

And how about the match that was burning in the deserted cabin? The match of which more than a third was now consumed? And the spark that was creeping along to the dynamite?

Assuredly if the men of the aeronef had not been so busy one of them would have heard the feeble sputtering that was going on in the deck-house. Perhaps he would have smelt the burning powder! He would doubtless have become uneasy! And told Tom Turner! And then they would have looked about, and found the box and the infernal machine; and then there would have been time to save this wonderful "Albatross" and all she bore!

But the men were at work in the bow, twenty yards away from the cabin. Nothing brought them to that part of the deck; nothing called off their attention from their work. Robur was there working with his hands, excellent mechanic as he was. He hurried on the work, but nothing was neglected, everything was carefully done. Was it not necessary that he should again become absolute master of his invention? If he did not recapture the fugitives they would get away home. They would begin inquiring into matters. They might even discover X Island, and there would be an end to this life, which the men of the "Albatross" had created for themselves, a life that seemed superhuman and sublime.

Tom Turner came up to the engineer. It was a quarter past one. "It seems to me, sir, that the breeze is falling, and going round to the west."

"What does the barometer say?" asked Robur, after looking up at the sky.

"It is almost stationary, and the clouds seem gathering below us."

"So they are, and it may be raining down at the sea; but if we keep above the rain it makes no difference to us. It will not interfere with the work."

"If it is raining it is not a heavy rain," said Tom. "The clouds do not look like it, and probably the wind has dropped altogether."

"Perhaps so, but I think we had better not go down yet. Let us get into going order as soon as we can, and then we can do as we like."

At a few minutes after two the first part of the work was finished. The fore-screw was in its place, and the power was turned on. The speed was gradually increased, and the "Albatross," heading to the southwest, returned at moderate speed towards the Chatham Islands.

"Tom," said Robur, "it is about two hours and a half since we got adrift. The wind has not changed all the time. I think we ought to be over the island in an hour."

"Yes, sir. We are going about forty feet a second. We ought to be there about half-past three."

"All the better. It would suit us best to get back while it is dark, and even beach the "Albatross" if we can. Those fellows will fancy we are a long way off to the northward, and never think of keeping a look-out. If we have to stop a day or two on the island—"

"We'll stop, and if we have to fight an army of natives?"

"We'll fight," said Robur. "We'll fight then for our "Albatross.""

The engineer went forward to the men, who were waiting for orders. "My lads," he said to them, "we cannot knock off yet. We must work till day comes."

They were all ready to do so. The stern-screw had now to be treated as the other had been. The damage was the same, a twisting from the violence of the hurricane during the passage across the southern pole.

But to get the screw on board it seemed best to stop the progress of the aeronef for a few minutes, and even to drive her backwards. The engines were reversed. The aeronef began to fall astern, when Tom Turner was surprised
by a peculiar odor.

This was from the gas given off by the match, which had accumulated in the box, and was now escaping from the cabin. "Hallo!" said the mate, with a sniff.

"What is the matter?" asked Robur.

"Don't you smell something? Isn't it burning powder?"

"So it is, Tom."

"And it comes from that cabin."

"Yes, the very cabin--"

"Have those scoundrels set it on fire?"

"Suppose it is something else!" exclaimed Robur. "Force the door, Tom; drive in the door!"

But the mate had not made one step towards it when a fearful explosion shook the "Albatross." The cabins flew into splinters. The lamps went out. The electric current suddenly failed. The darkness was complete. Most of the suspensory screws were twisted or broken, but a few in the bow still revolved.

At the same instant the hull of the aeronef opened just behind the first deck-house, where the engines for the fore-screw were placed; and the after-part of the deck collapsed in space.

Immediately the last suspensory screw stopped spinning, and the "Albatross" dropped into the abyss.

It was a fall of ten thousand feet for the eight men who were clinging to the wreck; and the fall was even faster than it might have been, for the fore propeller was vertical in the air and still working!

It was then that Robur, with extraordinary coolness, climbed up to the broken deck-house, and seizing the lever reversed the rotation, so that the propeller became a suspender. The fall continued, but it was checked, and the wreck did not fall with the accelerating swiftness of bodies influenced solely by gravitation; and if it was death to the survivors of the "Albatross" from their being hurled into the sea, it was not death by asphyxia amid air which the rapidity of descent rendered unbreathable.

Eighty seconds after the explosion, all that remained of the "Albatross" plunged into the waves!

Chapter XXI

THE INSTITUTE AGAIN

Some weeks before, on the 13th of June, on the morning after the sitting during which the Weldon Institute had been given over to such stormy discussions, the excitement of all classes of the Philadelphia population, black or white, had been much easier to imagine than to describe.

From a very early hour conversation was entirely occupied with the unexpected and scandalous incident of the night before. A stranger calling himself an engineer, and answering to the name of Robur, a person of unknown origin, of anonymous nationality, had unexpectedly presented himself in the club-room, insulted the balloonists, made fun of the aeronauts, boasted of the marvels of machines heavier than air, and raised a frightful tumult by the remarks with which he greeted the menaces of his adversaries. After leaving the desk, amid a volley of revolver shots, he had disappeared, and in spite of every endeavor, no trace could be found of him.

Assuredly here was enough to exercise every tongue and excite every imagination. But by how much was this excitement increased when in the evening of the 13th of June it was found that neither the president nor secretary of the Weldon Institute had returned to their homes! Was it by chance only that they were absent? No, or at least there was nothing to lead people to think so. It had even been agreed that in the morning they would be back at the club, one as president, the other as secretary, to take their places during a discussion on the events of the preceding evening.

And not only was there the complete disappearance of these two considerable personages in the state of Pennsylvania, but there was no news of the valet Frycollin. He was as undiscoverable as his master. Never had a Negro since Toussaint L'Ouverture, Soulouque, or Dessaline had so much talked about him.

The next day there was no news. Neither the colleagues nor Frycollin had been found. The anxiety became serious. Agitation commenced. A numerous crowd besieged the post and telegraph offices in case any news should be received. There was no news.

And they had been seen coming out of the Weldon Institute loudly talking together, and with Frycollin in attendance, go down Walnut Street towards Fairmount Park! Jem Chip, the vegetarian, had even shaken hands with the president and left him with "Tomorrow!"

And William T. Forbes, the manufacturer of sugar from rags, had received a cordial shake from Phil Evans who had said to him twice, "Au revoir! Au revoir!"

Miss Doll and Miss Mat Forbes, so attached to Uncle Prudent by the bonds of purest friendship, could not get over the disappearance, and in order to obtain news of the absent, talked even more than they were accustomed to.
Three, four, five, six days passed. Then a week, then two weeks, and there was nothing to give a clue to the missing three. The most minute search had been made in every quarter. Nothing! In the park, even under the trees and brushwood. Nothing! Always nothing! Although here it was noticed that the grass looked to be pressed down in a way that seemed suspicious and certainly was inexplicable; and at the edge of the clearing there were traces of a recent struggle. Perhaps a band of scoundrels had attacked the colleagues here in the deserted park in the middle of the night!

It was possible. The police proceeded with their inquiries in all due form and with all lawful slowness. They dragged the Schuylkill river, and cut into the thick bushes that fringe its banks; and if this was useless it was not quite a waste, for the Schuylkill is in great want of a good weeding, and it got it on this occasion. Practical people are the authorities of Philadelphia!

Then the newspapers were tried. Advertisements and notices and articles were sent to all the journals in the Union without distinction of color. The "Daily Negro," the special organ of the black race, published a portrait of Frycollin after his latest photograph. Rewards were offered to whoever would give news of the three absentees, and even to those who would find some clue to put the police on the track. "Five thousand dollars! Five thousand dollars to any citizen who would--"

Nothing was done. The five thousand dollars remained with the treasurer of the Weldon Institute.

Undiscoverable! Undiscoverable! Undiscoverable! Uncle Prudent and Phil Evans, of Philadelphia!

It need hardly be said that the club was put to serious inconvenience by this disappearance of its president and secretary. And at first the assembly voted urgency to a measure which suspended the work on the "Go-Ahead."

How, in the absence of the principal promoters of the affair, of those who had devoted to the enterprise a certain part of their fortune in time and money--how could they finish the work when these were not present? It were better, then, to wait.

And just then came the first news of the strange phenomenon which had exercised people's minds some weeks before. The mysterious object had been again seen at different times in the higher regions of the atmosphere. But nobody dreamt of establishing a connection between this singular reappearance and the no less singular disappearance of the members of the Weldon Institute. In fact, it would have required a very strong dose of imagination to connect one of these facts with the other.

Whatever it might be, asteroid or aerolite or aerial monster, it had reappeared in such a way that its dimensions and shape could be much better appreciated, first in Canada, over the country between Ottawa and Quebec, on the very morning after the disappearance of the colleagues, and later over the plains of the Far West, where it had tried its speed against an express train on the Union Pacific.

At the end of this day the doubts of the learned world were at an end. The body was not a product of nature, it was a flying machine, the practical application of the theory of "heavier than air." And if the inventor of the aeronef had wished to keep himself unknown he could evidently have done better than to try it over the Far West. As to the mechanical force he required, or the engines by which it was communicated, nothing was known, but there could be no doubt the aeronef was gifted with an extraordinary faculty of locomotion. In fact, a few days afterwards it was reported from the Celestial Empire, then from the southern part of India, then from the Russian steppes.

Who was then this bold mechanician that possessed such powers of locomotion, for whom States had no frontiers and oceans no limits, who disposed of the terrestrial atmosphere as if it were his domain? Could it be this Robur whose theories had been so brutally thrown in the face of the Weldon Institute the day he led the attack against the utopia of guidable balloons? Perhaps such a notion occurred to some of the wide-awake people, but none dreamt that the said Robur had anything to do with the disappearance of the president and secretary of the Institute.

Things remained in this state of mystery when a telegram arrived from France through the New York cable at 11-37 A.M. on July 13. And what was this telegram? It was the text of the document found at Paris in a snuff-box revealing what had happened to the two personages for whom the Union was in mourning.

So, then, the perpetrator of this kidnapping "was" Robur the engineer, come expressly to Philadelphia to destroy in its egg the theory of the balloonists. He it was who commanded the "Albatross!" He it was who carried off by way of reprisal Uncle Prudent, Phil Evans and Frycollin; and they might be considered lost for ever. At least until some means were found of constructing an engine capable of contending with this powerful machine their terrestrial friends would never bring them back to earth.

What excitement! What stupefaction! The telegram from Paris had been addressed to the members of the Weldon Institute. The members of the club were immediately informed of it. Ten minutes later all Philadelphia received the news through its telephones, and in less than an hour all America heard of it through the innumerable electric wires of the new continent.

No one would believe it! "It is an unseasonable joke," said some. "It is all smoke," said others. How could such a thing be done in Philadelphia, and so secretly, too? How could the "Albatross" have been beached in Fairmount Park?
without its appearance having been signaled all over Pennsylvania?

Very good. These were the arguments. The incredulous had the right of doubting. But the right did not last long. Seven days after the receipt of the telegram the French mail-boat "Normandie" came into the Hudson, bringing the famous snuff-box. The railway took it in all haste from New York to Philadelphia.

It was indeed the snuff-box of the President of the Weldon Institute. Jem Chip would have done on at day to take some more substantial nourishment, for he fell into a swoon when he recognized it. How many a time had he taken from it the pinch of friendship! And Miss Doll and Miss Mat also recognized it, and so did William T. Forbes, Truck Milnor, Bat T. Fynn, and many other members. And not only was it the president's snuff-box, it was the president's writing!

Then did the people lament and stretch out their hands in despair to the skies. Uncle Prudent and his colleague carried away in a flying machine, and no one able to deliver them!

The Niagara Falls Company, in which Uncle Prudent was the largest shareholder, thought of suspending its business and turning off its cataracts. The Wheelton Watch Company thought of winding up its machinery, now it had lost its manager.

Nothing more was heard of the aeronef. July passed, and there was no news. August ran its course, and the uncertainty on the subject of Robur's prisoners was as great as ever. Had he, like Icarus, fallen a victim to his own temerity?

The first twenty-seven days of September went by without result, but on the 28th a rumor spread through Philadelphia that Uncle Prudent and Phil Evans had during the afternoon quietly walked into the president's house. And, what was more extraordinary, the rumor was true, although very few believed it.

They had, however, to give in to the evidence. There could be no doubt these were the two men, and not their shadows. And Frycollin also had come back! The members of the club, then their friends, then the crowd, swarmed into the president's house, and shook hands with the president and secretary, and cheered them again and again. Jem Chip was there, having left his luncheon's joint of boiled lettuces, and William T. Forbes and his daughters, and all the members of the club. It is a mystery how Uncle Prudent and Phil Evans emerged alive from the thousands who welcomed them.

On that evening was the weekly meeting of the Institute. It was expected that the colleagues would take their places at the desk. As they had said nothing of their adventures, it was thought they would then speak, and relate the impressions of their voyage. But for some reason or other both were silent. And so also was Frycollin, whom his congeners in their delirium had failed to dismember.

But though the colleagues did not tell what had happened to them, that is no reason why we should not. We know what occurred on the night of the 27th and 28th of July; the daring escape to the earth, the scramble among the rocks, the bullet fired at Phil Evans, the cut cable, and the "Albatross" deprived of her propellers, drifting off to the northeast at a great altitude. Her electric lamps rendered her visible for some time. And then she disappeared.

The fugitives had little to fear. Now could Robur get back to the island for three or four hours if his screws were out of gear? By that time the "Albatross" would have been destroyed by the explosion, and be no more than a wreck floating on the sea; those whom she bore would be mangled corpses, which the ocean would not even give up again. The act of vengeance would be accomplished.

Uncle Prudent and Phil Evans looked upon it as an act of legitimate self-defence, and felt no remorse whatever. Evans was but slightly wounded by the rifle bullet, and the three made their way up from the shore in the hope of meeting some of the natives. The hope was realized. About fifty natives were living by fishing off the western coast. They had seen the aeronef descend on the island, and they welcomed the fugitives as if they were supernatural beings. They worshipped them, we ought rather to say. They accommodated them in the most comfortable of their huts.

As they had expected, Uncle Prudent and Phil Evans saw nothing more of the aeronef. They concluded that the catastrophe had taken place in some high region of the atmosphere, and that they would hear no more of Robur and his prodigious machine.

Meanwhile they had to wait for an opportunity of returning to America. The Chatham Islands are not much visited by navigators, and all August passed without sign of a ship. The fugitives began to ask themselves if they had not exchanged one prison for another.

At last a ship came to water at the Chatham Islands. It will not have been forgotten that when Uncle Prudent was seized he had on him several thousand paper dollars, much more than would take him back to America. After thanking their adorers, who were not sparing of their most respectful demonstrations, Uncle Prudent, Phil Evans, and Frycollin embarked for Auckland. They said nothing of their adventures, and in two weeks landed in New Zealand.

At Auckland, a mail-boat took them on board as passengers, and after a splendid passage the survivors of the
“Albatross” stepped ashore at San Francisco. They said nothing as to who they were or whence they had come, but as they had paid full price for their berths no American captain would trouble them further. At San Francisco they took the first train out on the Pacific Railway, and on the 27th of September, they arrived at Philadelphia, That is the compendious history of what had occurred since the escape of the fugitives. And that is why this very evening the president and secretary of the Weldon Institute took their seats amid a most extraordinary attendance.

Never before had either of them been so calm. To look at them it did not seem as though anything abnormal had happened since the memorable sitting of the 12th of June. Three months and a half had gone, and seemed to be counted as nothing. After the first round of cheers, which both received without showing the slightest emotion, Uncle Prudent took off his hat and spoke.

"Worthy citizens," said he, "the meeting is now open."

Tremendous applause. And properly so, for if it was not extraordinary that the meeting was open, it was extraordinary that it should be opened by Uncle Prudent and Phil Evans.

The president allowed the enthusiasm to subside in shouts and clappings; then he continued: “At our last meeting, gentlemen, the discussion was somewhat animated--(hear, hear)–between the partisans of the screw before and those of the screw behind for our balloon the "Go-Ahead." (Marks of surprise.) We have found a way to bring the beforists and the behindists in agreement. That way is as follows: we are going to use two screws, one at each end of the car.” Silence, and complete stupefaction.

That was all.

Yes, all! Of the kidnapping of the president and secretary of the Weldon Institute not a word! Not a word of the "Albatross" nor of Robur! Not a word of the voyage! Not a word of the way in which the prisoners had escaped! Not a word of what had become of the aeronef, if it still flew through space, or if they were to be prepared for new reprisals on the member's of the club!

Of course the balloonists were longing to ask Uncle Prudent and the secretary about all these things, but they looked so close and so serious that they thought it best to respect their attitude. When they thought fit to speak they would do so, and it would be an honor to hear. After all, there might be in all this some secret which would not yet be divulged.

And then Uncle Prudent, resuming his speech amid a silence up to then unknown in the meetings of the Weldon Institute, said, "Gentlemen, it now only remains for us to finish the aerostat 'Go-Ahead.' It is left to her to effect the conquest of the air! The meeting is at an end!"

Chapter XXII
THE GO-AHEAD IS LAUNCHED

On the following 19th of April, seven months after the unexpected return of Uncle Prudent and Phil Evans, Philadelphia was in a state of unwonted excitement. There were neither elections nor meetings this time. The aerostat "Go-Ahead," built by the Weldon Institute, was to take possession of her natural element.

The celebrated Harry W. Tinder, whose name we mentioned at the beginning of this story, had been engaged as aeronaut. He had no assistant, and the only passengers were to be the president and secretary of the Weldon Institute.

Did they not merit such an honor? Did it not come to them appropriately to rise in person to protest against any apparatus that was heavier than air?

During the seven months, however, they had said nothing of their adventures; and even Frycollin had not uttered a whisper of Robur and his wonderful clipper. Probably Uncle Prudent and his friend desired that no question should arise as to the merits of the aeronef, or any other flying machine.

Although the "Go-Ahead" might not claim the first place among aerial locomotives, they would have nothing to say about the inventions of other aviators. They believed, and would always believe, that the true atmospheric vehicle was the aerostat, and that to it alone belonged the future.

Besides, he on whom they had been so terribly--and in their idea so justly--avenged, existed no longer. None of those who accompanied him had survived. The secret of the "Albatross" was buried in the depths of the Pacific!

That Robur had a retreat, an island in the middle of that vast ocean, where he could put into port, was only a hypothesis; and the colleagues reserved to themselves the right of making inquiries on the subject later on. The grand experiment which the Weldon Institute had been preparing for so long was at last to take place. The "Go-Ahead" was the most perfect type of what had up to then been invented in aerostatic art--she was what an "Inflexible" or a "Formidable" is in ships of war.

She possessed all the qualities of a good aerostat. Her dimensions allowed of her rising to the greatest height a balloon could attain; her impermeability enabled her to remain for an indefinite time in the atmosphere; her solidity
would defy any dilation of gas or violence of wind or rain; her capacity gave her sufficient ascensional force to lift with all their accessories an electric engine that would communicate to her propellers a power superior to anything yet obtained. The "Go-Ahead" was of elongated form, so as to facilitate her horizontal displacement. Her car was a platform somewhat like that of the balloon used by Krebs and Renard; and it carried all the necessary outfit, instruments, cables, grapnels, guide-ropes, etc., and the piles and accumulators for the mechanical power. The car had a screw in front, and a screw and rudder behind. But probably the work done by the machines would be very much less than that done by the machines of the "Albatross."

The "Go-Ahead" had been taken to the clearing in Fairmount Park, to the very spot where the aeronef had landed for a few hours.

Her ascensional power was due to the very lightest of gaseous bodies. Ordinary lighting gas possesses an elevating force of about 700 grams for every cubic meter. But hydrogen possesses an ascensional force estimated at 1,100 grams per cubic meter. Pure hydrogen prepared according to the method of the celebrated Henry Gifford filled the enormous balloon. And as the capacity of the "Go-Ahead" was 40,000 cubic meters, the ascensional power of the gas she contained was 40,000 multiplied by 1,100 or 44,000 kilograms.

On this 29th of April everything was ready. Since eleven o'clock the enormous aerostat had been floating a few feet from the ground ready to rise in mid-air. It was splendid weather and seemed to have been made specially for the experiment, although if the breeze had been stronger the results might have been more conclusive. There had never been any doubt that a balloon could be guided in a calm atmosphere; but to guide it when the atmosphere is in motion is quite another thing; and it is under such circumstances that the experiment should be tried.

But there was no wind today, nor any sign of any. Strange to say, North America on that day omitted to send on to Europe one of those first-class storms which it seems to have in such inexhaustible numbers. A better day could not have been chosen for an aeronautic experiment.

The crowd was immense in Fairmount Park; trains had poured into the Pennsylvania capital sightseers from the neighboring states; industrial and commercial life came to a standstill that the people might troop to the show-master, workmen, women, old men, children, members of Congress, soldiers, magistrates, reporters, white natives and black natives, all were there. We need not stop to describe the excitement, the unaccountable movements, the sudden pushings, which made the mass heave and swell. Nor need we recount the number of cheers which rose from all sides like fireworks when Uncle Prudent and Phil Evans appeared on the platform and hoisted the American colors. Need we say that the majority of the crowd had come from afar not so much to see the "Go-Ahead" as to gaze on these extraordinary men?

Why two and not three? Why not Frycollin? Because Frycollin thought his campaign in the "Albatross" sufficient for his fame. He had declined the honor of accompanying his master, and he took no part in the frenzied declamations that greeted the president and secretary of the Weldon Institute.

Of the members of the illustrious assembly not one was absent from the reserved places within the ropes. There were Truck Milnor, Bat T. Fynn, and William T. Forbes with his two daughters on his arm. All had come to affirm by their presence that nothing could separate them from the partisans of "lighter than air."

About twenty minutes past eleven a gun announced the end of the final preparations. The "Go-Ahead" only waited the signal to start. At twenty-five minutes past eleven the second gun was fired.

The "Go-Ahead" was about one hundred and fifty feet above the clearing, and was held by a rope. In this way the platform commanded the excited crowd. Uncle Prudent and Phil Evans stood upright and placed their left hands on their hearts, to signify how deeply they were touched by their reception. Then they extended their right hands towards the zenith, to signify that the greatest of known balloons was about to take possession of the supra-terrestrial domain.

A hundred thousand hands were placed in answer on a hundred thousand hearts, and a hundred thousand other hands were lifted to the sky.

The third gun was fired at half-past eleven. "Let go!" shouted Uncle Prudent; and the "Go-Ahead" rose "majestically"—an adverb consecrated by custom to all aerostatic ascents.

It really was a superb spectacle. It seemed as if a vessel were just launched from the stocks. And was she not a vessel launched into the aerial sea? The "Go-Ahead" went up in a perfectly vertical line—a proof of the calmness of the atmosphere—and stopped at an altitude of eight hundred feet.

Then she began her horizontal maneuvering. With her screws going she moved to the east at a speed of twelve yards a second. That is the speed of the whale—not an inappropriate comparison, for the balloon was somewhat of the shape of the giant of the northern seas.

A salvo of cheers mounted towards the skillful aeronauts. Then under the influence of her rudder, the "Go-Ahead" went through all the evolutions that her steersman could give her. She turned in a small circle; she moved forwards and backwards in a way to convince the most refractory disbeliever in the guiding of balloons. And if there
had been any disbeliever there he would have been simply annihilated.

But why was there no wind to assist at this magnificent experiment? It was regrettable. Doubtless the spectators would have seen the "Go-Ahead" unhesitatingly execute all the movements of a sailing-vessel in beating to windward, or of a steamer driving in the wind's eye.

At this moment the aerostat rose a few hundred yards. The maneuver was understood below. Uncle Prudent and his companions were going in search of a breeze in the higher zones, so as to complete the experiment. The system of cellular balloons--analogous to the swimming bladder in fishes--into which could be introduced a certain amount of air by pumping, had provided for this vertical motion. Without throwing out ballast or losing gas the aeronaut was able to rise or sink at his will. Of course there was a valve in the upper hemisphere which would permit of a rapid descent if found necessary. All these contrivances are well known, but they were here fitted in perfection.

The "Go-Ahead" then rose vertically. Her enormous dimensions gradually grew smaller to the eye, and the necks of the crowd were almost cricked as they gazed into the air. Gradually the whale became a porpoise, and the porpoise became a gudgeon. The ascensional movement did not cease until the "Go-Ahead" had reached a height of fourteen thousand feet. But the air was so free from mist that she remained clearly visible.

However, she remained over the clearing as if she were a fixture. An immense bell had imprisoned the atmosphere and deprived it of movement; not a breath of wind was there, high or low. The aerostat maneuvered without encountering any resistance, seeming very small owing to the distance, much as if she were being looked at through the wrong end of a telescope.

Suddenly there was a shout among the crowd, a shout followed by a hundred thousand more. All hands were stretched towards a point on the horizon. That point was the northwest. There in the deep azure appeared a moving body, which was approaching and growing larger. Was it a bird beating with its wings the higher zones of space? Was it an aerolite shooting obliquely through the atmosphere? In any case, its speed was terrific, and it would soon be above the crowd. A suspicious communicated itself electrically to the brains of all on the clearing.

But it seemed as though the "Go-Ahead" had sighted this strange object. Assuredly it seemed as though she feared some danger, for her speed was increased, and she was going east as fast as she could.

Yes, the crowd saw what it meant! A name uttered by one of the members of the Weldon Institute was repeated by a hundred thousand mouths:

"The "Albatross!" The "Albatross!""

Chapter XXIII
THE GRAND COLLAPSE

It was indeed the "Albatross!" It was indeed Robur who had reappeared in the heights of the sky! It was he who like a huge bird of prey was going to strike the "Go-Ahead."

And yet, nine months before, the aeronef, shattered by the explosion, her screws broken, her deck smashed in two, had been apparently annihilated.

Without the prodigious coolness of the engineer, who reversed the gyratory motion of the fore propeller and converted it into a suspensory screw, the men of the "Albatross" would all have been asphyxiated by the fall. But if they had escaped asphyxia, how had they escaped being drowned in the Pacific?

The remains of the deck, the blades of the propellers, the compartments of the cabins, all formed a sort of raft. When a wounded bird falls on the waves its wings keep it afloat. For several hours Robur and his men remained unhelped, at first on the wreck, and afterwards in the india-rubber boat that had fallen uninjured. A few hours after sunrise they were sighted by a passing ship, and a boat was lowered to their rescue.

Robur and his companions were saved, and so was much of what remained of the aeronef. The engineer said that his ship had perished in a collision, and no further questions were asked him.

The ship was an English three-master, the "Two Friends," bound for Melbourne, where she arrived a few days afterwards.

Robur was in Australia, but a long way from X Island, to which he desired to return as soon as possible.

In the ruins of the aftermost cabin he had found a considerable sum of money, quite enough to provide for himself and companions without applying to anyone for help. A short time after he arrived in Melbourne he became the owner of a small brigantine of about a hundred tons, and in her he sailed for X Island.

There he had but one idea--to be avenged. But to secure his vengeance he would have to make another "Albatross." This after all was an easy task for him who made the first. He used up what he could of the old material; the propellers and engines he had brought back in the brigantine. The mechanism was fitted with new piles and new accumulators, and, in short, in less than eight months, the work was finished, and a new "Albatross," identical with the one destroyed by the explosion, was ready to take flight. And he had the same crew.
The "Albatross" left X Island in the first week of April. During this aerial passage Robur did not want to be seen from the earth, and he came along almost always above the clouds. When he arrived over North America he descended in a desolate spot in the Far West. There the engineer, keeping a profound incognito, learnt with considerable pleasure that the Weldon Institute was about to begin its experiments, and that the "Go-Ahead," with Uncle Prudent and Phil Evans, was going to start from Philadelphia on the 29th of April.

Here was a chance for Robur and his crew to gratify their longing for revenge. Here was a chance for inflicting on their foes a terrible vengeance, which in the "Go-Ahead" they could not escape. A public vengeance, which would at the same time prove the superiority of the aeronef to all aerostats and contrivances of that nature!

And that is why, on this very day, like a vulture from the clouds, the aeronef appeared over Fairmount Park.

Yes! It was the "Albatross," easily recognizable by all those who had never before seen her.

The "Go-Ahead" was in full flight; but it soon appeared that she could not escape horizontally, and so she sought her safety in a vertical direction, not dropping to the ground, for the aeronef would have cut her off, but rising to a zone where she could not perhaps be reached. This was very daring, and at the same time very logical.

But the "Albatross" began to rise after her. Although she was smaller than the "Go-Ahead," it was a case of the swordfish and the whale.

This could easily be seen from below and with what anxiety! In a few moments the aerostat had attained a height of sixteen thousand feet.

The "Albatross" followed her as she rose. She flew round her flanks, and maneuvered round her in a circle with a constantly diminishing radius. She could have annihilated her at a stroke, and Uncle Prudent and his companions would have been dashed to atoms in a frightful fall.

The people, mute with horror, gazed breathlessly; they were seized with that sort of fear which presses on the chest and grips the legs when we see anyone fall from a height. An aerial combat was beginning in which there were none of the chances of safety as in a sea-fight. It was the first of its kind, but it would not be the last, for progress is one of the laws of this world. And if the "Go-Ahead" was flying the American colors, did not the "Albatross" display the stars and golden sun of Robur the Conqueror?

The "Go-Ahead" tried to distance her enemy by rising still higher. She threw away the ballast she had in reserve; she made a new leap of three thousand feet; she was now but a dot in space. The "Albatross," which followed her round and round at top speed, was now invisible.

Suddenly a shout of terror rose from the crowd. The "Go-Ahead" increased rapidly in size, and the aeronef appeared dropping with her. This time it was a fall. The gas had dilated in the higher zones of the atmosphere and had burst the balloon, which, half inflated still, was falling rapidly.

But the aeronef, slowing her suspensory screws, came down just as fast. She ran alongside the "Go-Ahead" when she was not more than four thousand feet from the ground.

Would Robur destroy her?

No; he was going to save her crew!

And so cleverly did he handle his vessel that the aeronaut jumped on board.

Would Uncle Prudent and Phil Evans refuse to be saved by him? They were quite capable of doing so. But the crew threw themselves on them and dragged them by force from the "Go-Ahead" to the "Albatross."

Then the aeronef gilded off and remained stationary, while the balloon, quite empty of gas, fell on the trees of the clearing and hung there like a gigantic rag.

An appalling silence reigned on the ground. It seemed as though life were suspended in each of the crowd; and many eyes had been closed so as not to behold the final catastrophe. Uncle Prudent and Phil Evans had again become the prisoners of the redoubtable Robur. Now he had recaptured them, would he carry them off into space, where it was impossible to follow him?

It seemed so.

However, instead of mounting into the sky the "Albatross" stopped six feet from the ground. Then, amid profound silence, the engineer's voice was heard.

"Citizens of the United States," he said, "The president and secretary of the Weldon Institute are again in my power. In keeping them I am only within my right. But from the passion kindled in them by the success of the "Albatross" I see that their minds are not prepared for that important revolution which the conquest of the air will one day bring, Uncle Prudent and Phil Evans, you are free!"

The president, the secretary, and the aeronaut had only to jump down.

Then Robur continued.

"Citizens of the United States, my experiment is finished; but my advice to those present is to be premature in nothing, not even in progress. It is evolution and not revolution that we should seek. In a word, we must not be before our time. I have come too soon today to withstand such contradictory and divided interests as yours. Nations
are not yet fit for union.

"I go, then; and I take my secret with me. But it will not be lost to humanity. It will belong to you the day you are educated enough to profit by it and wise enough not to abuse it. Citizens of the United States--Good-by!"

And the "Albatross," beating the air with her seventy-four screws, and driven by her propellers, shot off towards the east amid a tempest of cheers.

The two colleagues, profoundly humiliated, and through them the whole Weldon Institute, did the only thing they could. They went home.

And the crowd by a sudden change of front greeted them with particularly keen sarcasms, and, at their expense, are sarcastic still.

And now, who is this Robur? Shall we ever know?

We know today. Robur is the science of the future. Perhaps the science of tomorrow. Certainly the science that will come!

Does the "Albatross" still cruise in the atmosphere in the realm that none can take from her? There is no reason to doubt it.

Will Robur, the Conqueror, appear one day as he said? Yes! He will come to declare the secret of his invention, which will greatly change the social and political conditions of the world.

As for the future of aerial locomotion, it belongs to the aeronef and not the aerostat.

It is to the "Albatross" that the conquest of the air will assuredly fall.

THE ADVENTURES OF A SPECIAL CORRESPONDENT
AMONG THE VARIOUS RACES AND COUNTRIES OF CENTRAL ASIA
BEING THE EXPLOITS AND EXPERIENCES OF CLAUDIUS BOMBARNAC OF "THE TWENTIETH CENTURY"

BY JULES VERNE

CHAPTER I.
CLAUDIUS BOMBARNAC,
Special Correspondent,
"Twentieth Century."
Tiflis, Transcaucasia.

Such is the address of the telegram I found on the 13th of May when I arrived at Tiflis.

This is what the telegram said:

"As the matters in hand will terminate on the 15th instant Claudius Bombarnac will repair to Uzun Ada, a port on the east coast of the Caspian. There he will take the train by the direct Grand Transasiatic between the European frontier and the capital of the Celestial Empire. He will transmit his impressions in the way of news, interviewing remarkable people on the road, and report the most trivial incidents by letter or telegram as necessity dictates. The Twentieth Century trusts to the zeal, intelligence, activity and tact of its correspondent, who can draw on its bankers to any extent he may deem necessary."

It was the very morning I had arrived at Tiflis with the intention of spending three weeks there in a visit to the Georgian provinces for the benefit of my newspaper, and also, I hoped, for that of its readers.

Here was the unexpected, indeed; the uncertainty of a special correspondent's life.

At this time the Russian railways had been connected with the line between Poti, Tiflis and Baku. After a long and increasing run through the Southern Russian provinces I had crossed the Caucasus, and imagined I was to have a little rest in the capital of Transcaucasia. And here was the imperious administration of the Twentieth Century giving me only half a day's halt in this town! I had hardly arrived before I was obliged to be off again without unstrapping my portmanteau! But what would you have? We must bow to the exigencies of special correspondence and the modern interview!

But all the same I had been carefully studying this Transcaucasian district, and was well provided with geographic and ethnologic memoranda. Perhaps it may be as well for you to know that the fur cap, in the shape of a turban, which forms the headgear of the mountaineers and cossacks is called a "papakha," that the overcoat gathered in at the waist, over which the cartridge belt is hung, is called a "tcherkeska" by some and "bechmet" by others! Be prepared to assert that the Georgians and Armenians wear a sugar-loaf hat, that the merchants wear a "touloupa," a sort of sheepskin cape, that the Kurd and Parsee still wear the "bourka," a cloak in a material something like plush which is always waterproofed.
And of the headgear of the Georgian ladies, the "tassakravi," composed of a light ribbon, a woolen veil, or piece of muslin round such lovely faces; and their gowns of startling colors, with the wide open sleeves, their under skirts fitted to the figure, their winter cloak of velvet, trimmed with fur and silver gimp, their summer mantle of white cotton, the "tchadre," which they tie tight on the neck--all those fashions in fact so carefully entered in my notebook, what shall I say of them?

Learn, then, that their national orchestras are composed of "zournas," which are shrill flutes; "salamouris," which are squeaky clarinets; mandolines, with copper strings, twanged with a feather; "tchianouris," violins, which are played upright; "dimplipitos," a kind of cymbals which rattle like hail on a window pane.

Know that the "schaska" is a sword hung from a bandolier trimmed with studs and silver embroidery, that the "kindjall" or "kandijar" is a dagger worn in the belt, that the armament of the soldiers of the Caucasus is completed by a long Damascus gun ornamented with bands of chiseled metal.

Know that the "tarantass" is a sort of berline hung on five pieces of rather elastic wood between wheels placed rather wide apart and of moderate height; that this carriage is driven by a "yemtchik," on the front seat, who has three horses, to whom is added a postilion, the "falêtre," when it is necessary to hire a fourth horse from the "smatritel," who is the postmaster on the Caucasian roads.

Know, then, that the verst is two-thirds of a mile, that the different nomadic people of the governments of Transcaucasia are composed of Kalmucks, descendants of the Eleuthes, fifteen thousand, Kirghizes of Mussulman origin eight thousand, Koundrof Tartars eleven hundred, Sartof Tartars a hundred and twelve, Nogais eight thousand five hundred, Turkomans nearly four thousand.

And thus, after having so minutely absorbed my Georgia, here was this ukase obliging me to abandon it! And I should not even have time to visit Mount Ararat or publish my impressions of a journey in Transcaucasia, losing a thousand lines of copy at the least, and for which I had at my disposal the 32,000 words of my language actually recognized by the French Academy.

It was hard, but there was no way out of it. And to begin with, at what o'clock did the train for Tiflis start from the Caspian?

The station at Tiflis is the junction of three lines of railway: the western line ending at Poti on the Black Sea, where the passengers land coming from Europe, the eastern line which ends at Baku, where the passengers embark to cross the Caspian, and the line which the Russians have just made for a length of about a hundred miles between Ciscaucasia and Transcaucasia, from Vladikarkaz to Tiflis, crossing the Arkhot range at a height of four thousand five hundred feet, and which connects the Georgian capital with the railways of Southern Russia.

I went to the railway station at a run, and rushed into the departure office.

"When is there a train for Baku?" I asked.

"You are going to Baku?" answered the clerk.

And from his trap-door he gave me one of those looks more military than civil, which are invariably found under the peak of a Muscovite cap.

"I think so," said I, perhaps a little sharply, "that is, if it is not forbidden to go to Baku."

"No," he replied, dryly, "that is, if you are provided with a proper passport."

"I will have a proper passport," I replied to this ferocious functionary, who, like all the others in Holy Russia, seemed to me an intensified gendarme.

Then I again asked what time the train left for Baku.

"Six o'clock to-night."  
"And when does it get there?"

"Seven o'clock in the morning."  
"Is that in time to catch the boat for Uzun Ada?"

"In time."

And the man at the trap-door replied to my salute by a salute of mechanical precision.

The question of passport did not trouble me. The French consul would know how to give me all the references required by the Russian administration.

Six o'clock to-night, and it is already nine o'clock in the morning! Bah! When certain guide books tell you how to explore Paris in two days, Rome in three days, and London in four days, it would be rather curious if I could not do Tiflis in a half day. Either one is a correspondent or one is not!

It goes without saying that my newspaper would not have sent me to Russia, if I could not speak fluently in Russian, English and German. To require a newspaper man to know the few thousand languages which are used to express thought in the five parts of the world would be too much; but with the three languages above named, and French added, one can go far across the two continents. It is true, there is Turkish of which I had picked up a few phrases, and there is Chinese of which I did not understand a single word. But I had no fear of remaining dumb in

profusion of the fabrics of Teheran, Shiraz, Kandahar, Kabul, carpets marvelous in weaving and colors, silks, which

it interesting.

Central Asia will fail for want of interest. A special correspondent of the Twentieth Century will know how to make

picturesque lines of horsemen, pedestrians, horses, camels, asses, carts. Bah! I have no fear that my journey across

it. Since the establishment of the Transasiatic railways, it is not often that you can meet with those interminable and

Russian Turkestan. I should like to arrive with one and depart with the other. That is not possible, and I am sorry for

one just coming in, composed of Armenian merchants. There is one going out, formed of traders in Persia and

manipulated undulations of which will make you sea-sick. And everywhere amid the confusion of market booths, the

women in holiday costume, moving about with faces uncovered, both Georgians and Armenians, thereby showing that they are Christians.

As to the men, they are Apollos of the Belvedere, not so simply clothed, having the air of princes, and I should

like to know if they are not so. Are they not descended from them? But I will genealogize later on. Let us continue

our exploration at full stride. A minute lost is ten lines of correspondence, and ten lines of correspondence is--that

depends on the generosity of the newspaper and its managers.

Quick to the grand caravanserai. There you will find the caravans from all points of the Asiatic continent. Here is

one just coming in, composed of Armenian merchants. There is one going out, formed of traders in Persia and

Russian Turkestan. I should like to arrive with one and depart with the other. That is not possible, and I am sorry for

it. Since the establishment of the Transasiatic railways, it is not often that you can meet with those interminable and

picturesque lines of horsemen, pedestrians, horses, camels, asses, carts. Bah! I have no fear that my journey across

Central Asia will fail for want of interest. A special correspondent of the Twentieth Century will know how to make

it interesting.

Here now are the bazaars with the thousand products of Persia, China, Turkey, Siberia, Mongolia. There is a

profusion of the fabrics of Teheran, Shiraz, Kandahar, Kabul, carpets marvelous in weaving and colors, silks, which

are not worth as much as those of Lyons.

Will I buy any? No; to embarrass oneself with packages on a trip from the Caspian to the Celestial Empire, never! The little portmanteau I can carry in my hand, the bag slung across my shoulders, and a traveling suit will be enough for me. Linen? I will get it on the road, in English fashion.

Let us stop in front of the famous baths of Tiflis, the thermal waters of which attain a temperature of 60 degrees

centigrade. There you will find in use the highest development of massage, the suppling of the spine, the cracking of

the joints. I remember what was said by our great Dumas whose peregrinations were never devoid of incidents; he

invented them when he wanted them, that genial precursor of high-pressure correspondence! But I have no time to

be shampooed, or to be cracked or suppled.

Stop! The Hôtel de France. Where is there not a Hôtel de France? I enter, I order breakfast--a Georgian breakfast

watered with a certain Kachelie wine, which is said to never make you drunk, that is, if you do not sniff up as much

as you drink in using the large-necked bottles into which you dip your nose before your lips. At least that is the

proceeding dear to the natives of Transcaucasia. As to the Russians, who are generally sober, the infusion of tea is

enough for them, not without a certain addition of vodka, which is the Muscovite brandy.

I, a Frenchman, and even a Gascon, am content to drink my bottle of Kachelie, as we drank our Château Laffite,
in those regretted days, when the sun still distilled it on the hillsides of Pauillac. In truth this Caucasian wine,

although rather sour, accompanied by the boiled fowl, known as pilau--has rather a pleasant taste about it.

It is over and paid for. Let us mingle with the sixteen thousand inhabitants of the Georgian capital. Let us lose
ourselves in the labyrinth of its streets, among its cosmopolitan population. Many Jews who button their coats from left to right, as they write—the contrary way to the other Aryan peoples. Perhaps the sons of Israel are not masters in this country, as in so many others? That is so, undoubtedly; a local proverb says it takes six Jews to outwit an Armenian, and Armenians are plentiful in these Transcaucasian provinces.

I reach a sandy square, where camels, with their heads out straight, and their feet bent under in front, are sitting in hundreds. They used to be here in thousands, but since the opening of the Transcaspian railway some years ago now, the number of these humped beasts of burden has sensibly diminished. Just compare one of these beasts with a goods truck or a luggage van!

Following the slope of the streets, I come out on the quays by the Koura, the bed of which divides the town into two unequal parts. On each side rise the houses, one above the other, each one looking over the roof of its neighbors. In the neighborhood of the river there is a good deal of trade. There you will find much moving about of vendors of wine, with their goatskins bellying out like balloons, and vendors of water with their buffalo skins, fitted with pipes looking like elephants' trunks.

Here am I wandering at a venture; but to wander is human, says the collegians of Bordeaux, as they muse on the quays of the Gironde.

"Sir," says a good little Jew to me, showing me a certain habitation which seems a very ordinary one, "you are a stranger?"
"Quite."
"Then do not pass this house without stopping a moment to admire it."
"And why?"
"There lived the famous tenor Satar, who sang the contre-fa from his chest. And they paid him for it!"

I told the worthy patriarch that I hoped he would be able to sing a contre-sol even better paid for; and I went up the hill to the right of the Koura, so as to have a view of the whole town.

At the top of the hill, on a little open space where a reciter is declaiming with vigorous gestures the verses of Saadi, the adorable Persian poet, I abandon myself to the contemplation of the Transcaucasian capital. What I am doing here, I propose to do again in a fortnight at Pekin. But the pagodas and yamens of the Celestial Empire can wait awhile, here is Tiflis before my eyes; walls of the citadels, belfries of the temples belonging to the different religions, a metropolitan church with its double cross, houses of Russian, Persian, or Armenian construction; a few roofs, but many terraces; a few ornamental frontages, but many balconies and verandas; then two well-marked zones, the lower zone remaining Georgian, the higher zone, more modern, traversed by a long boulevard planted with fine trees, among which is seen the palace of Prince Bariatinsky, a capricious, unexpected marvel of irregularity, which the horizon borders with its grand frontier of mountains.

It is now five o'clock. I have no time to deliver myself in a remunerative torrent of descriptive phrases. Let us hurry off to the railway station.

There is a crowd of Armenians, Georgians, Mingrelians, Tartars, Kurds, Israelites, Russians, from the shores of the Caspian, some taking their tickets—Oh! the Oriental color—direct for Baku, some for intermediate stations.

This time I was completely in order. Neither the clerk with the gendarme's face, nor the gendarmes themselves could hinder my departure.

I take a ticket for Baku, first class. I go down on the platform to the carriages. According to my custom, I install myself in a comfortable corner. A few travelers follow me while the cosmopolitan populace invade the second and third-class carriages. The doors are shut after the visit of the ticket inspector. A last scream of the whistle announces that the train is about to start.

Suddenly there is a shout—a shout in which anger is mingled with despair, and I catch these words in German:
"Stop! Stop!"
I put down the window and look out.

A fat man, bag in hand, traveling cap on head, his legs embarrassed in the skirts of a huge overcoat, short and breathless. He is late.

The porters try to stop him. Try to stop a bomb in the middle of its trajectory! Once again has right to give place to might.

The Teuton bomb describes a well-calculated curve, and has just fallen into the compartment next to ours, through the door a traveler had obligingly left open.

The train begins to move at the same instant, the engine wheels begin to slip on the rails, then the speed increases.

We are off.
CHAPTER II.

We were three minutes late in starting; it is well to be precise. A special correspondent who is not precise is a geometer who neglects to run out his calculations to the tenth decimal. This delay of three minutes made the German our traveling companion. I have an idea that this good man will furnish me with some copy, but it is only a presentiment.

It is still daylight at six o'clock in the evening in this latitude. I have bought a time-table and I consult it. The map which accompanies it shows me station by station the course of the line between Tiflis and Baku. Not to know the direction taken by the engine, to be ignorant if the train is going northeast or southeast, would be insupportable to me, all the more as when night comes, I shall see nothing, for I cannot see in the dark as if I were an owl or a cat.

My time-table shows me that the railway skirts for a little distance the carriage road between Tiflis and the Caspian, running through Saganlong, Poily, Elisabethpol, Karascal, Aliat, to Baku, along the valley of the Koura. We cannot tolerate a railway which winds about; it must keep to a straight line as much as possible. And that is what the Transgeorgian does.

Among the stations there is one I would have gladly stopped at if I had had time, Elisabethpol. Before I received the telegram from the Twentieth Century, I had intended to stay there a week. I had read such attractive descriptions of it, and I had but a five minutes' stop there, and that between two and three o'clock in the morning! Instead of a town resplendent in the rays of the sun, I could only obtain a view of a vague mass confusedly discoverable in the pale beams of the moon!

Having ended my careful examination of the time-table, I began to examine my traveling companions. There were four of us, and I need scarcely say that we occupied the four corners of the compartment. I had taken the farthest corner facing the engine. At the two opposite angles two travelers were seated facing each other. As soon as they got in they had pulled their caps down on their eyes and wrapped themselves up in their cloaks--evidently they were Georgians as far as I could see. But they belonged to that special and privileged race who sleep on the railway, and they did not wake up until we reached Baku. There was nothing to be got out of those people; the carriage is not a carriage for them, it is a bed.

In front of me was quite a different type with nothing of the Oriental about it; thirty-two to thirty-five years old, face with a reddish beard, very much alive in look, nose like that of a dog standing at point, mouth only too glad to talk, hands free and easy, ready for a shake with anybody; a tall, vigorous, broad-shouldered, powerful man. By the way in which he settled himself and put down his bag, and unrolled his traveling rug of bright-hued tartan, I had recognized the Anglo-Saxon traveler, more accustomed to long journeys by land and sea than to the comforts of his home, if he had a home. He looked like a commercial traveler. I noticed that his jewelry was in profusion; rings on his fingers, pin in his scarf, studs on his cuffs, with photographic views in them, showy trinkets hanging from the watch-chain across his waistcoat. Although he had no earrings and did not wear a ring at his nose I should not have been surprised if he turned out to be an American--probably a Yankee.

That is my business. To find out who are my traveling companions, whence they come, where they go, is that not the duty of a special correspondent in search of interviews? I will begin with my neighbor in front of me. That will not be difficult, I imagine. He is not dreaming or sleeping, or looking out on the landscape lighted by the last rays of the sun. If I am not mistaken he will be just as glad to speak to me as I am to speak to him--and reciprocally.

I will see. But a fear restrains me. Suppose this American--and I am sure he is one--should also be a special, perhaps for the World or the New York Herald, and suppose he has also been ordered off to do this Grand Asiatic. That would be most annoying! He would be a rival!

My hesitation is prolonged. Shall I speak, shall I not speak? Already night has begun to fall. At last I was about to open my mouth when my companion prevented me.

"You are a Frenchman?" he said in my native tongue.

"Yes, sir," I replied in his.

Evidently we could understand each other.

The ice was broken, and then question followed on question rather rapidly between us. You know the Oriental proverb:

"A fool asks more questions in an hour than a wise man in a year."

But as neither my companion nor myself had any pretensions to wisdom we asked away merrily.

"Wait a bit," said my American.

I italicize this phrase because it will recur frequently, like the pull of the rope which gives the impetus to the swing.

"Wait a bit! I'll lay ten to one that you are a reporter!"

"And you would win! Yes. I am a reporter sent by the Twentieth Century to do this journey."

"Going all the way to Pekin?"
"To Pekin."
"So am I," replied the Yankee.
And that was what I was afraid of.
"Same trade?" said I indifferently.
"No. You need not excite yourself. We don't sell the same stuff, sir."
"Claudius Bombarnac, of Bordeaux, is delighted to be on the same road as--"
"Fulk Ephrinell, of the firm of Strong, Bulbul & Co., of New York City, New York, U.S.A."
And he really added U.S.A.
We were mutually introduced. I a traveler in news, and he a traveler in--In what? That I had to find out.
The conversation continues. Ephrinell, as may be supposed, has been everywhere--and even farther, as he
observes. He knows both Americas and almost all Europe. But this is the first time he has set foot in Asia. He talks
and talks, and always jerks in Wait a bit, with inexhaustible loquacity. Has the Hunson the same properties as the
Garomne?
I listen to him for two hours. I have hardly heard the names of the stations yelled out at each stop, Saganlong,
Poily, and the others. And I really should have liked to examine the landscape in the soft light of the moon, and
made a few notes on the road.
Fortunately my fellow traveler had already crossed these eastern parts of Georgia. He pointed out the spots of
interest, the villages, the watercourses, the mountains on the horizon. But I hardly saw them. Confound these
railways! You start, you arrive, and you have seen nothing on the road!
"No!" I exclaim, "there is none of the charm about it as there is in traveling by post, in troika, tarantass, with the
surprises of the road, the originality of the inns, the confusion when you change horses, the glass of vodka of the
yemtchiks--and occasionally the meeting with those honest brigands whose race is nearly extinct."
"Mr. Bombarnac," said Ephrinell to me, "are you serious in regretting all those fine things?"
"Quite serious," I reply. "With the advantages of the straight line of railway we lose the picturesqueness of the
curved line, or the broken line of the highways of the past. And, Monsieur Ephrinell, when you read of traveling in
Transcaucasia forty years ago, do you not regret it? Shall I see one of those villages inhabited by Cossacks who are
soldiers and farmers at one and the same time? Shall I be present at one of those merry-makings which charm the
tourist? those djiquitovkas with the men upright on their horses, throwing their swords, discharging their pistols, and
escorting you if you are in the company of some high functionary, or a colonel of the Staniza."
"Undoubtedly we have lost all those fine things," replies my Yankee. "But, thanks to these iron ribbons which
will eventually encircle our globe like a hogshead of cider or a bale of cotton, we can go in thirteen days from Tiflis
to Pekin. That is why, if you expect any incidents, to enliven you--"
"Certainly, Monsieur Ephrinell."
"Illusions, Mr. Bombarnac! Nothing will happen either to you or me. Wait a bit, I promise you a journey, the
most prosaic, the most homely, the flattest--flat as the steppes of Kara Koum, which the Grand Transasiatic traverses
in Turkestan, and the plains of the desert of Gobi it crosses in China--"
"Well, we shall see, for I travel for the pleasure of my readers."
"And I travel merely for my own business."
And at this reply the idea recurred to me that Ephrinell would not be quite the traveling companion I had
dreamed of. He had goods to sell, I had none to buy. I foresaw that our meeting would not lead to a sufficient
intimacy during our long journey. He was one of those Yankees who, as they say, hold a dollar between their teeth,
which it is impossible to get away from them, and I should get nothing out of him that was worth having.
And although I knew that he traveled for Strong, Bulbul & Co., of New York, I had never heard of the firm. To
listen to their representative, it would appear that Strong, Bulbul & Co. ought to be known throughout the world.
But then, how was it that they were unknown to me, a pupil of Chincholle, our master in everything! I was quite
at a loss because I had never heard of the firm of Strong, Bulbul & Co.
I was about to interrogate Ephrinell on this point, when he said to me:
"Have you ever been in the United States, Mr. Bombarnac?"
"No, Monsieur Ephrinell."
"You will come to our country some day?"
"Perhaps."
"Then you will not forget to explore the establishment of Strong, Bulbul & Co.?"
"Explore it?"
"That is the proper word."
"Good! I shall not fail to do so."
"You will see one of the most remarkable industrial establishments of the New Continent."
"I have no doubt of it; but how am I to know it?"

"Wait a bit, Mr. Bombarnac. Imagine a colossal workshop, immense buildings for the mounting and adjusting of the pieces, a steam engine of fifteen hundred horse-power, ventilators making six hundred revolutions a minute, boilers consuming a hundred tons of coals a day, a chimney stack four hundred and fifty feet high, vast outhouses for the storage of our goods, which we send to the five parts of the world, a general manager, two sub-managers, four secretaries, eight under-secretaries, a staff of five hundred clerks and nine hundred workmen, a whole regiment of travelers like your servant, working in Europe, Asia, Africa, America, Australasia, in short, a turnover exceeding annually one hundred million dollars! And all that, Mr. Bombarnac, for making millions of--yes, I said millions--"

At this moment the train commenced to slow under the action of its automatic brakes, and he stopped.

"Elisabethpol! Elisabethpol!" shout the guard and the porters on the station.

Our conversation is interrupted. I lower the window on my side, and open the door, being desirous of stretching my legs.

Ephrinell did not get out.

Here was I striding along the platform of a very poorly lighted station. A dozen travelers had already left the train. Five or six Georgians were crowding on the steps of the compartments. Ten minutes at Elisabethpol; the timetable allowed us no more.

As soon as the bell begins to ring I return to our carriage, and when I have shut the door I notice that my place is taken. Yes! Facing the American, a lady has installed herself with that Anglo-Saxon coolness which is as unlimited as the infinite. Is she young? Is she old? Is she pretty? Is she plain? The obscurity does not allow me to judge. In any case, my French gallantry prevents me from claiming my corner, and I sit down beside this person who makes no attempt at apology.

Ephrinell seems to be asleep, and that stops my knowing what it is that Strong, Bulbul & Co., of New York, manufacture by the million.

The train has started. We have left Elisabethpol behind. What have I seen of this charming town of twenty thousand inhabitants, built on the Gandja-tchaï, a tributary of the Koura, which I had specially worked up before my arrival? Nothing of its brick houses hidden under verdure, nothing of its curious ruins, nothing of its superb mosque built at the beginning of the eighteenth century. Of its admirable plane trees, so sought after by crows and blackbirds, and which maintain a supportable temperature during the excessive heats of summer, I had scarcely seen the higher branches with the moon shining on them. And on the banks of the stream which bears its silvery murmuring waters along the principal street, I had only seen a few houses in little gardens, like small crenelated fortresses. All that remained in my memory would be an indecisive outline, seized in flight from between the steam puffs of our engine. And why are these houses always in a state of defence? Because Elisabethpol is a fortified town exposed to the frequent attacks of the Lesghians of Chirvan, and these mountaineers, according to the best-informed historians, are directly descended from Attila's hordes.

It was nearly midnight. Weariness invited me to sleep, and yet, like a good reporter, I must sleep with one eye and one ear open.

I fall into that sort of slumber provoked by the regular trepidations of a train on the road, mingled with ear-splitting whistles and the grind of the brakes as the speed is slowed, and tumultuous roars as passing trains are met with, besides the names of the stations shouted out during the short stoppages, and the banging of the doors which are opened or shut with metallic sonority.

In this way I heard the shouts of Geran, Varvara, Oudjarry, Kiourdamir, Klourdane, then Karasoul, Navagi. I sat up, but as I no longer occupied the corner from which I had been so cavalierly evicted, it was impossible for me to look through the window.

And then I began to ask what is hidden beneath this mass of veils and wraps and petticoats, which has usurped my place. Is this lady going to be my companion all the way to the terminus of the Grand Transasiatic? Shall I exchange a sympathetic salute with her in the streets of Pekin? And from her my thoughts wander to my companion who is snoring in the corner in a way that would make all the ventilators of Strong, Bulbul & Co. quite jealous. And what is it these big people make? Is it iron bridges, or locomotives, or armor plates, or steam boilers, or mining pumps? From what my American told me, I might find a rival to Creusot or Cokerill or Essen in this formidable establishment in the United States of America. At least unless he has been taking a rise out of me, for he does not seem to be "green," as they say in his country, which means to say that he does not look very much like an idiot, this Ephrinell!

And yet it seems that I must gradually have fallen sound asleep. Withdrawn from exterior influences, I did not even hear the stentorian respiration of the Yankee. The train arrived at Aliat, and stayed there ten minutes without my being aware of it. I am sorry for it, for Aliat is a little seaport, and I should like to have had a first glimpse of the Caspian, and of the countries ravaged by Peter the Great. Two columns of the historico-fantastic might have been
made out of that, with the aid of Bouillet and Larousse.

"Baku! Baku!"

The word repeated as the train stopped awoke me.

It was seven o'clock in the morning.

CHAPTER III.

The boat did not start until three o'clock in the afternoon. Those of my companions who intended to cross the Caspian hurried off to the harbor; it being necessary to engage a cabin, or to mark one's place in the steamer's saloon.

Ephrinell precipitately left me with these words:

"I have not an instant to lose. I must see about the transport of my baggage."

"Have you much?"

"Forty-two cases."

"Forty-two cases!" I exclaimed.

"And I am sorry I have not double as many. Allow me--"

If he had had a voyage of eight days, instead of one of twenty-four hours, and had to cross the Atlantic instead of the Caspian, he could not have been in a greater hurry.

As you may imagine, the Yankee did not for a moment think of offering his hand to assist our companion in descending from the carriage. I took his place. The lady leaned on my arm and jumped--no, gently put her foot on the ground. My reward was a thank you, sir, uttered in a hard, dry, unmistakably British voice.

Thackeray has said somewhere that a well-brought-up Englishwoman is the completest of the works of God on this earth. My only wish is to verify this gallant affirmation in the case of my companion. She has put back her veil. Is she a young woman or an old girl? With these Englishwomen one never knows! Twenty-five years is apparently about her age, she has an Albionesque complexion, a jerky walk, a high dress like an equinoctial tide, no spectacles, although she has eyes of the intense blue which are generally short-sighted. While I bend my back as I bow, she honors me with a nod, which only brings into play the vertebrae of her long neck, and she walks off straight toward the way out.

Probably I shall meet this person again on the steamboat. For my part, I shall not go down to the harbor until it is time to start. I am at Baku: I have half a day to see Baku, and I shall not lose an hour, now that the chances of my wanderings have brought me to Baku.

It is possible that the name may in no way excite the reader's curiosity. But perhaps it may inflame his imagination if I tell him that Baku is the town of the Guebres, the city of the Parsees, the metropolis of the fire-worshippers.

Encircled by a triple girdle of black battlemented walls, the town is built near Cape Apcheron, on the extreme spur of the Caucasian range. But am I in Persia or in Russia? In Russia undoubtedly, for Georgia is a Russian province; but we can still believe we are in Persia, for Baku has retained its Persian physiognomy. I visit a palace of the khans, a pure product of the architecture of the time of Schahriar and Scheherazade, "daughter of the moon," his gifted romancer, a palace in which the delicate sculpture is as fresh as it came from the chisel. Further on rise some slender minarets, and not the bulbous roofs of Moscow the Holy, at the angles of an old mosque, into which one can enter without taking off one's boots. True, the muezzin no longer declaims from it some sonorous verse of the Koran at the hour of prayer. And yet Baku has portions of it which are real Russian in manners and aspect, with their wooden houses without a trace of Oriental color, a railway station of imposing aspect, worthy of a great city in Europe or America, and at the end of one of the roads, a modern harbor, the atmosphere of which is foul with the coal smoke vomited from the steamer funnels.

And, in truth, one asks what they are doing with coal in this town of naphtha. What is the good of coal when the bare and arid soil of Apcheron, which grows only the Pontic absinthium, is so rich in mineral oil? At eighty francs the hundred kilos, it yields naphtha, black or white, which the exigencies of supply will not exhaust for centuries.

A marvelous phenomenon indeed! Do you want a light or a fire? Nothing can be simpler; make a hole in the ground, the gas escapes, and you apply a match. That is a natural gasometer within the reach of all purses.

I should have liked to visit the famous sanctuary of Atesh Gah; but it is twenty-two versts from the town, and time failed me. There burns the eternal fire, kept up for centuries by the Parsee priests from India, who never touch animal food.

This reminds me that I have not yet breakfasted, and as eleven o'clock strikes, I make my way to the restaurant at the railway, where I have no intention of conforming myself to the alimentary code of the Parsees of Atesh Gah.

As I am entering, Ephrinell rushes out.
"Breakfast?" say I.  
"I have had it," he replies.  
"And your cases?"  
"I have still twenty-nine to get down to the steamer. But, pardon, I have not a moment to lose. When a man represents the firm of Strong, Bulbul & Co., who send out every week five thousand cases of their goods--"  
"Go, go, Monsieur Ephrinell, we will meet on board. By the by, you have not met our traveling companion?"
"What traveling companion?"
"The young lady who took my place in the carriage."
"Was there a young lady with us?"
"Of course."
"Well you are the first to tell me so, Mr. Bombarnac. You are the first to tell me so."
And thereupon the American goes out of the door and disappears. It is to be hoped I shall know before we get to Pekin what it is that Strong, Bulbul & Co. send out in such quantities. Five thousand cases a week--what an output, and what a turnover!

I had soon finished my breakfast and was off again. During my walk I was able to admire a few magnificent Lesghians; these wore the grayish tcherkesse, with the cartridge belts on the chest, the bechmet of bright red silk, the gaiters embroidered with silver, the boots flat, without a heel, the white papak on the head, the long gun on the shoulders, the schaska and kandijar at the belt--in short men of the arsenal as there are men of the orchestra, but of superb aspect and who ought to have a marvelous effect in the processions of the Russian emperor.

It is already two o'clock, and I think I had better get down to the boat. I must call at the railway station, where I have left my light luggage at the cloakroom.

Soon I am off again, bag in one hand, stick in the other, hastening down one of the roads leading to the harbor.

At the break in the wall where access is obtained to the quay, my attention is, I do not know why, attracted by two people walking along together. The man is from thirty to thirty-five years old, the woman from twenty-five to thirty, the man already a grayish brown, with mobile face, lively look, easy walk with a certain swinging of the hips. The woman still a pretty blonde, blue eyes, a rather fresh complexion, her hair frizzed under a cap, a traveling costume which is in good taste neither in its unfashionable cut nor in its glaring color. Evidently a married couple come in the train from Tiflis, and unless I am mistaken they are French.

But although I look at them with curiosity, they take no notice of me. They are too much occupied to see me. In their hands, on their shoulders, they have bags and cushions and wraps and sticks and sunshades and umbrellas. They are carrying every kind of little package you can think of which they do not care to put with the luggage on the steamer. I have a good mind to go and help them. Is it not a happy chance--and a rare one--to meet with French people away from France?

Just as I am walking up to them, Ephrinell appears, drags me away, and I leave the couple behind. It is only a postponement. I will meet them again on the steamboat and make their acquaintance on the voyage.

"Well," said I to the Yankee, "how are you getting on with your cargo?"
"At this moment, sir, the thirty-seventh case is on the road."
"And no accident up to now?"
"No accident."
"And what may be in those cases, if you please?"
"In those cases? Ah! There is the thirty-seventh!" he exclaimed, and he ran out to meet a truck which had just come onto the quay.

There was a good deal of bustle about, and all the animation of departures and arrivals. Baku is the most frequented and the safest port on the Caspian. Derbent, situated more to the north, cannot keep up with it, and it absorbs almost the entire maritime traffic of this sea, or rather this great lake which has no communication with the neighboring seas. The establishment of Uzun Ada on the opposite coast has doubled the trade which used to pass through Baku. The Transcaspian now open for passengers and goods is the chief commercial route between Europe and Turkestan.

In the near future there will perhaps be a second route along the Persian frontier connecting the South Russian railways with those of British India, and that will save travelers the navigation of the Caspian. And when this vast basin has dried up through evaporation, why should not a railroad be run across its sandy bed, so that trains can run through without transhipment at Baku and Uzun Ada?

While we are waiting for the realization of this desideratum, it is necessary to take the steamboat, and that I am preparing to do in company with many others.

Our steamer is called the Astara, of the Caucasus and Mercury Company. She is a big paddle steamer, making three trips a week from coast to coast. She is a very roomy boat, designed to carry a large cargo, and the builders
have thought considerably more of the cargo than of the passengers. After all, there is not much to make a fuss about in a day's voyage.

There is a noisy crowd on the quay of people who are going off, and people who have come to see them off, recruited from the cosmopolitan population of Baku. I notice that the travelers are mostly Turkomans, with about a score of Europeans of different nationalities, a few Persians, and two representatives of the Celestial Empire. Evidently their destination is China.

The Astara is loaded up. The hold is not big enough, and a good deal of the cargo has overflowed onto the deck. The stern is reserved for passengers, but from the bridge forward to the topgallant forecastle, there is a heap of cases covered with tarpaulins to protect them from the sea.

There Ephrinell's cases have been put. He has lent a hand with Yankee energy, determined not to lose sight of his valuable property, which is in cubical cases, about two feet on the side, covered with patent leather, carefully strapped, and on which can be read the stenciled words, "Strong, Bulbul & Co., New York."

"Are all your goods on board?" I asked the American.
"There is the forty-second case just coming," he replied.
And there was the said case on the back of a porter already coming along the gangway.
It seemed to me that the porter was rather tottery, owing perhaps to a lengthy absorption of vodka.
"Wait a bit!" shouted Ephrinell. Then in good Russian, so as to be better understood, he shouted:
"Look out! Look out!"
It is good advice, but it is too late. The porter has just made a false step. The case slips from his shoulders, falls--luckily over the rail of the Astara--breaks in two, and a quantity of little packets of paper scatter their contents on the deck.

What a shout of indignation did Ephrinell raise! What a whack with his fist did he administer to the unfortunate porter as he repeated in a voice of despair: "My teeth, my poor teeth!"

And he went down on his knees to gather up his little bits of artificial ivory that were scattered all about, while I could hardly keep from laughing.

Yes! It was teeth which Strong, Bulbul & Co., of New York made! It was for manufacturing five thousand cases a week for the five parts of the world that this huge concern existed! It was for supplying the dentists of the old and new worlds; it was for sending teeth as far as China, that their factory required fifteen hundred horse power, and burned a hundred tons of coal a day! That is quite American!

After all, the population of the globe is fourteen hundred million, and as there are thirty-two teeth per inhabitant, that makes forty-five thousand millions; so that if it ever became necessary to replace all the true teeth by false ones, the firm of Strong, Bulbul & Co. would not be able to supply them.

But we must leave Ephrinell gathering up the odontological treasures of the forty-second case. The bell is ringing for the last time. All the passengers are aboard. The Astara is casting off her warps.

Suddenly there are shouts from the quay. I recognize them as being in German, the same as I had heard at Tiflis when the train was starting for Baku.

It is the same man. He is panting, he runs, he cannot run much farther. The gangway has been drawn ashore, and the steamer is already moving off. How will this late comer get on board?

Luckily there is a rope out astern which still keeps the Astara near the quay. The German appears just as two sailors are manoeuvring with the fender. They each give him a hand and help him on board.

Evidently this fat man is an old hand at this sort of thing, and I should not be surprised if he did not arrive at his destination.

However, the Astara is under way, her powerful paddles are at work, and we are soon out of the harbor.

About a quarter of a mile out there is a sort of boiling, agitating the surface of the sea, and showing some deep trouble in the waters. I was then near the rail on the starboard quarter, and, smoking my cigar, was looking at the harbor disappearing behind the point round Cape Apcheron, while the range of the Caucasus ran up into the western horizon.

Of my cigar there remained only the end between my lips, and taking a last whiff, I threw it overboard.

In an instant a sheet of flame burst out all round the steamer. The boiling came from a submarine spring of naphtha, and the cigar end had set it alight.

Screams arise. The Astara rolls amid sheaves of flame; but a movement of the helm steers us away from the flaming spring, and we are out of danger.

The captain comes aft and says to me in a frigid tone:
"That was a foolish thing to do."

And I reply, as I usually reply under such circumstances:
"Really, captain, I did not know--"
"You ought always to know, sir!"
These words are uttered in a dry, cantankerous tone a few feet away from me.
I turn to see who it is.
It is the Englishwoman who has read me this little lesson.

CHAPTER IV.
I am always suspicious of a traveler's "impressions." These impressions are subjective--a word I use because it is the fashion, although I am not quite sure what it means. A cheerful man looks at things cheerfully, a sorrowful man looks at them sorrowfully. Democritus would have found something enchanting about the banks of the Jordan and the shores of the Dead Sea. Heraclitus would have found something disagreeable about the Bay of Naples and the beach of the Bosphorus. I am of a happy nature--you must really pardon me if I am rather egotistic in this history, for it is so seldom that an author's personality is so mixed up with what he is writing about--like Hugo, Dumas, Lamartine, and so many others. Shakespeare is an exception, and I am not Shakespeare--and, as far as that goes, I am not Lamartine, nor Dumas, nor Hugo.

However, opposed as I am to the doctrines of Schopenhauer and Leopardi, I will admit that the shores of the Caspian did seem rather gloomy and dispiriting. There seemed to be nothing alive on the coast; no vegetation, no birds. There was nothing to make you think you were on a great sea. True, the Caspian is only a lake about eighty feet below the level of the Mediterranean, but this lake is often troubled by violent storms. A ship cannot "get away," as sailors say: it is only about a hundred leagues wide. The coast is quickly reached eastward or westward, and harbors of refuge are not numerous on either the Asiatic or the European side.

There are a hundred passengers on board the Astara--a large number of them Caucasians trading with Turkestan, and who will be with us all the way to the eastern provinces of the Celestial Empire.

For some years now the Transcaspian has been running between Uzun Ada and the Chinese frontier. Even between this part and Samarkand it has no less than sixty-three stations; and it is in this section of the line that most of the passengers will alight. I need not worry about them, and I will lose no time in studying them. Suppose one of them proves interesting, I may pump him and peg away at him, and just at the critical moment he will get out.

No! All my attention I must devote to those who are going through with me. I have already secured Ephrinell, and perhaps that charming Englishwoman, who seems to me to be going to Pekin. I shall meet with other traveling companions at Uzun Ada. With regard to the French couple, there is nothing more at present, but the passage of the Caspian will not be accomplished before I know something about them. There are also these two Chinamen who are evidently going to China. If I only knew a hundred words of the "Kouan-hoa," which is the language spoken in the Celestial Empire, I might perhaps make something out of these curious guys. What I really want is some personage with a story, some mysterious hero traveling incognito, a lord or a bandit. I must not forget my trade as a reporter of occurrences and an interviewer of mankind--at so much a line and well selected. He who makes a good choice has a good chance.

I go down the stairs to the saloon aft. There is not a place vacant. The cabins are already occupied by the passengers who are afraid of the pitching and rolling. They went to bed as soon as they came on board, and they will not get up until the boat is alongside the wharf at Uzun Ada. The cabins being full, other travelers have installed themselves on the couches, amid a lot of little packages, and they will not move from there.

As I am going to pass the night on deck, I return up the cabin stairs. The American is there, just finishing the repacking of his case.

"Would you believe it!" he exclaims, "that that drunken moujik actually asked me for something to drink?"

"I hope you have lost nothing, Monsieur Ephrinell?" I reply.

"No; fortunately."

"May I ask how many teeth you are importing into China in those cases?"

"Eighteen hundred thousand, without counting the wisdom teeth!"

And Ephrinell began to laugh at this little joke, which he fired off on several other occasions during the voyage.

I left him and went onto the bridge between the paddle boxes.

It is a beautiful night, with the northerly wind beginning to freshen. In the offing, long, greenish streaks are sweeping over the surface of the sea. It is possible that the night may be rougher than we expect. In the forepart of the steamer are many passengers, Turkomans in rags, Kirghizes wrapped up to the eyes, moujiks in emigrant costume--poor fellows, in fact, stretched on the spare spars, against the sides, and along the tarpaulins. They are almost all smoking or nibbling at the provisions they have brought for the voyage. The others are trying to sleep and forget their fatigue, and perhaps their hunger.

It occurs to me to take a stroll among these groups. I am like a hunter beating the brushwood before getting into
the hiding place. And I go among this heap of packages, looking them over as if I were a custom house officer.

A rather large deal case, covered with a tarpaulin, attracts my attention. It measures about a yard and a half in height, and a yard in width and depth. It has been placed here with the care required by these words in Russian, written on the side, "Glass--Fragile--Keep from damp," and then directions, "Top--Bottom," which have been respected. And then there is the address, "Mademoiselle Zinca Klork, Avenue Cha-Coua, Pekin, Petchili, China."

This Zinca Klork--her name showed it--ought to be a Roumanian, and she was taking advantage of this through train on the Grand Transasiatic to get her glass forwarded. Was this an article in request at the shops of the Middle Kingdom? How otherwise could the fair Celestials admire their almond eyes and their elaborate hair?

The bell rang and announced the six-o'clock dinner. The dining-room is forward. I went down to it, and found it already occupied by some forty people.

Ephrinell had installed himself nearly in the middle. There was a vacant seat near him; he beckoned to me to occupy it, and I hastened to take possession.

Was it by chance? I know not; but the Englishwoman was seated on Ephrinell's left and talking to him. He introduced me.

"Miss Horatia Bluett," he said.

Opposite I saw the French couple conscientiously studying the bill of fare.

At the other end of the table, close to where the food came from--and where the people got served first--was the German passenger, a man strongly built and with a ruddy face, fair hair, reddish beard, clumsy hands, and a very long nose which reminded one of the proboscidean feature of the plantigrades. He had that peculiar look of the officers of the Landsturm threatened with premature obesity.

"He is not late this time," said I to Ephrinell.

"The dinner hour is never forgotten in the German Empire!" replied the American.

"Do you know the German's name?"

"Baron Weisschnitzerdörfer."

"And with that name is he going to Pekin?"

"To Pekin, like that Russian major who is sitting near the captain of the Astara."

I looked at the man indicated. He was about fifty years of age, of true Muscovite type, beard and hair turning gray, face prepossessing. I knew Russian: he ought to know French. Perhaps he was the fellow traveler of whom I had dreamed.

"You said he was a major, Mr. Ephrinell?"

"Yes, a doctor in the Russian army, and they call him Major Noltitz."

Evidently the American was some distance ahead of me, and yet he was not a reporter by profession.

As the rolling was not yet very great, we could dine in comfort. Ephrinell chatted with Miss Horatia Bluett, and I understood that there was an understanding between these two perfectly Anglo-Saxon natures.

In fact, one was a traveler in teeth and the other was a traveler in hair. Miss Horatia Bluett represented an important firm in London, Messrs. Holmes-Holme, to whom the Celestial Empire annually exports two millions of female heads of hair. She was going to Pekin on account of the said firm, to open an office as a center for the collection of the Chinese hair crop. It seemed a promising enterprise, as the secret society of the Blue Lotus was agitating for the abolition of the pigtail, which is the emblem of the servitude of the Chinese to the Manchu Tartars.

"Come," thought I, "if China sends her hair to England, America sends her teeth: that is a capital exchange, and everything is for the best."

We had been at the table for a quarter of an hour, and nothing had happened. The traveler with the smooth complexion and his blonde companion seemed to listen to us when we spoke in French. It evidently pleased them, and they were already showing an inclination to join in our talk. I was not mistaken, then; they are compatriots, but of what class?

At this moment the Astara gave a lurch. The plates rattled on the table; the covers slipped; the glasses upset some of their contents; the hanging lamps swung out of the vertical--or rather our seats and the table moved in accordance with the roll of the ship. It is a curious effect, when one is sailor enough to bear it without alarm.

"Eh!" said the American; "here is the good old Caspian shaking her skin."

"Are you subject to seasickness?" I asked.

"No more than a porpoise," said he. "Are you ever seasick?" he continued to his neighbor.

"Never," said Miss Horatia Bluett.

On the other side of the table there was an interchange of a few words in French.

"You are not unwell, Madame Caterna?"

"No, Adolphe, not yet; but if this continues, I am afraid--"

"Well, Caroline, we had better go on deck. The wind has hauled a point to the eastward, and the Astara will soon
be sticking her nose in the feathers."

His way of expressing himself shows that "Monsieur Catera"—if that was his name—was a sailor, or ought to have been one. That explains the way he rolls his hips as he walks.

The pitching now becomes very violent. The majority of the company cannot stand it. About thirty of the passengers have left the table for the deck. I hope the fresh air will do them good. We are now only a dozen in the dining room, including the captain, with whom Major Noltitz is quietly conversing. Ephrinell and Miss Bluett seem to be thoroughly accustomed to these inevitable incidents of navigation. The German baron drinks and eats as if he had taken up his quarters in some bier-halle at Munich, or Frankfort, holding his knife in his right hand, his fork in his left, and making up little heaps of meat, which he salts and peppers and covers with sauce, and then inserts under his hairy lip on the point of his knife. Fie! What behavior! And yet he gets on splendidly, and neither rolling nor pitching makes him lose a mouthful of food or drink.

A little way off are the two Celestials, whom I watch with curiosity.

One is a young man of distinguished bearing, about twenty-five years old, of pleasant physiognomy, in spite of his yellow skin and his narrow eyes. A few years spent in Europe have evidently Europeanized his manners and even his dress. His mustache is silky, his eye is intelligent his hair is much more French than Chinese. He seems to me a nice fellow, of a cheerful temperament, who would not ascend the "Tower of Regret," as the Chinese have it, oftener than he could help.

His companion, on the contrary, whom he always appears to be making fun of, is of the type of the true porcelain doll, with the moving head; he is from fifty to fifty-five years old, like a monkey in the face, the top of his head half shaven, the pigtail down his back, the traditional costume, frock, vest, belt, baggy trousers, many-colored slippers; a China vase of the Green family. He, however, could hold out no longer, and after a tremendous pitch, accompanied by a long rattle of the crockery, he got up and hurried on deck. And as he did so, the younger Chinaman shouted after him, "Cornaro! Cornaro!" at the same time holding out a little volume he had left on the table.

What was the meaning of this Italian word in an Oriental mouth? Did the Chinaman speak the language of Boccaccio? The Twentieth Century ought to know, and it would know.

Madame Catera arose, very pale, and Monsieur Catera, a model husband, followed her on deck.

The dinner over, leaving Ephrinell and Miss Bluett to talk of brokerages and prices current, I went for a stroll on the poop of the Astara. Night had nearly closed in. The hurrying clouds, driven from the eastward, draped in deep folds the higher zones of the sky, with here and there a few stars peeping through. The wind was rising. The white light of the steamer clicked as it swung on the foremast. The red and green lights rolled with the ship, and projected their long colored rays onto the troubled waters.

I met Ephrinell, Miss Horatia Bluett having retired to her cabin; he was going down into the saloon to find a comfortable corner on one of the couches. I wished him good night, and he left me after gratifying me with a similar wish.

As for me, I will wrap myself in my rug and lie down in a corner of the deck, and sleep like a sailor during his watch below.

It is only eight o'clock. I light my cigar, and with my legs wide apart, to assure my stability as the ship rolled, I begin to walk up and down the deck. The deck is already abandoned by the first-class passengers, and I am almost alone. On the bridge is the mate, pacing backward and forward, and watching the course he has given to the man at the wheel, who is close to him. The paddles are impetuously beating into the sea, and now and then breaking into thunder, as one or the other of the wheels runs wild, as the rolling lifts it clear of the water. A thick smoke rises from the funnel, which occasionally belches forth a shower of sparks.

At nine o'clock the night is very dark. I try to make out some steamer's lights in the distance, but in vain, for the Caspian has not many ships on it. I can hear only the cry of the sea birds, gulls and scoters, who are abandoning themselves to the caprices of the wind.

During my promenade, one thought besets me: is the voyage to end without my getting anything out of it as copy for my journal? My instructions made me responsible for producing something, and surely not without reason. What? Not an adventure from Tiflis to Pekin? Evidently that could only be my fault! And I resolved to do everything to avoid such a misfortune.

It is half-past ten when I sit down on one of the seats in the stern of the Astara. But with this increasing wind it is impossible for me to remain there. I rise, therefore, and make my way forward. Under the bridge, between the paddle boxes, the wind is so strong that I seek shelter among the packages covered by the tarpaulin. Stretched on one of the boxes, wrapped in my rug, with my head resting against the tarpaulin, I shall soon be asleep.

After some time, I do not exactly know how much, I am awakened by a curious noise. Whence comes this noise? I listen more attentively. It seems as though some one is snoring close to my ear.
"That is some steerage passenger," I think. "He has got under the tarpaulin between the cases, and he will not do so badly in his improvised cabin."

By the light which filters down from the lower part of the binnacle, I see nothing.

I listen again. The noise has ceased.

I look about. There is no one on this part of the deck, for the second-class passengers are all forward.

Then I must have been dreaming, and I resume my position and try again to sleep.

This time there is no mistake. The snoring has begun again, and I am sure it is coming from the case against which I am leaning my head.

"Goodness!" I say. "There must be an animal in here!"

An animal? What? A dog? A cat? Why have they hidden a domestic animal in this case? Is it a wild animal? A panther, a tiger, a lion?

Now I am off on the trail! It must be a wild animal on its way from some menagerie to some sultan of Central Asia. This case is a cage, and if the cage opens, if the animal springs out onto the deck--here is an incident, here is something worth chronicling; and here I am with my professional enthusiasm running mad. I must know at all costs to whom this wild beast is being sent; is it going to Uzon Ada, or is it going to China? The address ought to be on the case.

I light a wax vesta, and as I am sheltered from the wind, the flame keeps upright.

By its light what do I read?

The case containing the wild beast is the very one with the address:

"Mademoiselle Zinca Klork, Avenue Cha-Coua, Pekin, China."

Fragile, my wild beast! Keep from damp, my lion! Quite so! But for what does Miss Zinca Klork, this pretty--for the Roumanian ought to be pretty, and she is certainly a Roumanian--for what does she want a wild beast sent in this way?

Let us think about it and be reasonable. This animal, whatever it may be, must eat and drink. From the time it starts from Uzon Ada it will take eleven days to cross Asia, and reach the capital of the Celestial Empire. Well, what do they give it to drink, what do they give it to eat, if he is not going to get out of his cage, if he is going to be shut up during the whole of the journey? The officials of the Grand Transasiatic will be no more careful in their attentions to the said wild beast than if he were a glass, for he is described as such; and he will die of inanition!

All these things sent my brain whirling. My thoughts bewildered me. "Is it a lovely dream that dazes me, or am I awake?" as Margaret says in Faust, more lyrically than dramatically. To resist is impossible. I have a two-pound weight on each eyelid. I lay down along by the tarpaulin; my rug wraps me more closely, and I fall into a deep sleep.

How long have I slept? Perhaps for three or four hours. One thing is certain, and that is that it is not yet daylight when I awake.

I rub my eyes, I rise, I go and lean against the rail.

The Astara is not so lively, for the wind has shifted to the northeast.

The night is cold. I warm myself by walking about briskly for half an hour. I think no more of my wild beast. Suddenly remembrance returns to me. Should I not call the attention of the stationmaster to this disquieting case? But that is no business of mine. We shall see before we start.

I look at my watch. It is only three o'clock in the morning. I will go back to my place. And I do so with my head against the side of the case. I shut my eyes.

Suddenly there is a new sound. This time I am not mistaken. A half-stifled sneeze shakes the side of the case. Never did an animal sneeze like that!

Is it possible? A human being is hidden in this case and is being fraudulently carried by the Grand Transasiatic to the pretty Roumanian? But is it a man or a woman? It seems as though the sneeze had a masculine sound about it.

It is impossible to sleep now. How long the day is coming! How eager I am to examine this box! I wanted incidents--well! and here is one, and if I do not get five lines out of this--

The eastern horizon grows brighter. The clouds in the zenith are the first to color. The sun appears at last all watery with the mists of the sea.

I look; it is indeed the case addressed to Pekin. I notice that certain holes are pierced here and there, by which the air inside can be renewed. Perhaps two eyes are looking through these holes, watching what is going on outside? Do not be indiscreet!

At breakfast gather all the passengers whom the sea has not affected: the young Chinaman, Major Noltitz, Ephrinell, Miss Bluett, Monsieur Caterna, the Baron Weisschnitzerdörfer, and seven or eight other passengers. I am careful not to let the American into the secret of the case. He would be guilty of some indiscretion, and then good-by to my news par!

About noon the land is reported to the eastward, a low, yellowish land, with no rocky margin, but a few sandhills
in the neighborhood of Krasnovodsk.

In an hour we are in sight of Uzun Ada, and twenty-seven minutes afterward we set foot in Asia.

CHAPTER V.

Travelers used to land at Mikhailov, a little port at the end of the Transcaspian line; but ships of moderate tonnage hardly had water enough there to come alongside. On this account, General Annenkof, the creator of the new railway, the eminent engineer whose name will frequently recur in my narrative, was led to found Uzun Ada, and thereby considerably shorten the crossing of the Caspian. The station was built in three months, and it was opened on the 8th of May, 1886.

Fortunately I had read the account given by Boulangier, the engineer, relating to the prodigious work of General Annenkof, so that I shall not be so very much abroad during the railway journey between Uzun Ada and Samarkand, and, besides, I trust to Major Noltitz, who knows all about the matter. I have a presentiment that we shall become good friends, and in spite of the proverb which says, "Though your friend be of honey do not lick him!" I intend to "lick" my companion often enough for the benefit of my readers.

We often hear of the extraordinary rapidity with which the Americans have thrown their railroads across the plains of the Far West. But the Russians are in no whit behind them, if even they have not surpassed them in rapidity as well as in industrial audacity.

People are fully acquainted with the adventurous campaign of General Skobeleff against the Turkomans, a campaign of which the building of the railway assured the definite success. Since then the political state of Central Asia has been entirely changed, and Turkestan is merely a province of Asiatic Russia, extending to the frontiers of the Chinese Empire. And already Chinese Turkestan is very visibly submitting to the Muscovite influence which the vertiginous heights of the Pamir plateau have not been able to check in its civilizing march.

I was about to cross the countries which were formerly ravaged by Tamerlane and Genghis Khan, those fabulous countries of which the Russians in 1886 possessed six hundred and fifteen thousand square kilometres, with thirteen hundred thousand inhabitants. The southern part of this region now forms the Transcaspian province, divided into six districts, Fort Alexandrovski, Krasnovodsk, Askhabad, Karibent, Merv, Pendjeh, governed by Muscovite colonels or lieutenant-colonels.

As may be imagined, it hardly takes an hour to see Uzun Ada, the name of which means Long Island. It is almost a town, but a modern town, traced with a square, drawn with a line or a large carpet of yellow sand. No monuments, no memories, bridges of planks, houses of wood, to which comfort is beginning to add a few mansions in stone. One can see what this, first station of the Transcaspian will be like in fifty years; a great city after having been a great railway station.

Do not think that there are no hotels. Among others there is the Hôtel du Czar, which has a good table, good rooms and good beds. But the question of beds has no interest for me. As the train starts at four o’clock this afternoon, to begin with, I must telegraph to the Twentieth Century, by the Caspian cable, that I am at my post at the Uzun Ada station. That done, I can see if I can pick up anything worth reporting.

Nothing is more simple. It consists in opening an account with those of my companions with whom I may have to do during the journey. That is my custom, I always find it answers, and while waiting for the unknown, I write down the known in my pocketbook, with a number to distinguish each:

As to the Chinese, they will have a number later on, when I have made up my mind about them. As to the individual in the box, I intend to enter into communication with him, or her, and to be of assistance in that quarter if I can do so without betraying the secret.

The train is already marshaled in the station. It is composed of first and second-class cars, a restaurant car and two baggage vans. These cars are painted of a light color, an excellent precaution against the heat and against the cold. For in the Central Asian provinces the temperature ranges between fifty degrees centigrade above zero and twenty below, and in a range of seventy degrees it is only prudent to minimize the effects.

These cars are in a convenient manner joined together by gangways, on the American plan. Instead of being shut up in a compartment, the traveler strolls about along the whole length of the train. There is room to pass between the stuffed seats, and in the front and rear of each car are the platforms united by the gangways. This facility of communication assures the security of the train.

Our engine has a bogie on four small wheels, and is thus able to negotiate the sharpest curves; a tender with water and fuel; then come a front van, three first-class cars with twenty-four places each, a restaurant car with pantry and kitchen, four second-class cars and a rear van; in all twelve vehicles, counting in the locomotive and tender. The
first class cars are provided with dressing rooms, and their seats, by very simple mechanism, are convertible into beds, which, in fact, are indispensable for long journeys. The second-class travelers are not so comfortably treated, and besides, they have to bring their victuals with them, unless they prefer to take their meals at the stations. There are not many, however, who travel the complete journey between the Caspian and the eastern provinces of China—that is to say about six thousand kilometres. Most of them go to the principal towns and villages of Russian Turkestan, which have been reached by the Transcaspian Railway for some years, and which up to the Chinese frontier has a length of over 1,360 miles.

This Grand Transasiatic has only been open six weeks and the company is as yet only running two trains a week. All has gone well up to the present; but I ought to add the significant detail that the railway men carry a supply of revolvers to arm the passengers with if necessary. This is a wise precaution in crossing the Chinese deserts, where an attack on the train is not improbable.

I believe the company are doing their best to ensure the punctuality of their trains; but the Chinese section is managed by Celestials, and who knows what has been the past life of those people? Will they not be more intent on the security of their dividends than of their passengers?

As I wait for the departure I stroll about on the platform, looking through the windows of the cars, which have no doors along the sides, the entrances being at the ends.

Everything is new; the engine is as bright as it can be, the carriages are brilliant in their new paint, their springs have not begun to give with wear, and their wheels run true on the rails. Then there is the rolling stock with which we are going to cross a continent. There is no railway as long as this—not even in America. The Canadian line measures five thousand kilometres, the Central Union, five thousand two hundred and sixty, the Santa Fe line, four thousand eight hundred and seventy-five, the Atlantic Pacific, five thousand six hundred and thirty, the Northern Pacific, six thousand two hundred and fifty. There is only one line which will be longer when it is finished, and that is the Grand Transsiberian, from the Urals to Vladivostock, which will measure six thousand five hundred kilometres.

Between Tiflis and Pekin our journey will not last more than thirteen days, from Uzun Ada it will only last eleven. The train will only stop at the smaller stations to take in fuel and water. At the chief towns like Merv, Bokhara, Samarkand, Tashkend, Kachgar, Kokhand, Sou Tcheou, Lan Tcheou, Tai Youan, it will stop a few hours—and that will enable me to do these towns in reporter style.

Of course, the same driver and stoker will not take us through. They will be relieved every six hours. Russians will take us up to the frontier of Turkestan, and Chinese will take us on through China.

But there is one representative of the company who will not leave his post, and that is Popof, our head guard, a true Russian of soldierly bearing, hairy and bearded, with a folded overcoat and a Muscovite cap. I intend to talk a good deal with this gallant fellow, although he is not very talkative. If he does not despise a glass of vodka, opportunity offered, he may have a good deal to say to me; for ten years he has been on the Transcaspian between Uzun Ada and the Pamirs, and during the last month he has been all along the line to Pekin.

I call him No. 7 in my notebook, and I hope he will give me information enough. I only want a few incidents of the journey, just a few little incidents worthy of the Twentieth Century.

Among the passengers I see on the platform are a few Jews, recognizable more by their faces than their attire. Formerly, in Central Asia, they could only wear the "toppe," a sort of round cap, and a plain rope belt, without any silk ornamentation—under pain of death. And I am told that they could ride on asses in certain towns and walk on foot in others. Now they wear the oriental turban and roll in their carriages if their purse allows of it. Who would hinder them now they are subjects of the White Czar, Russian citizens, rejoicing in civil and political rights equal to those of their Turkoman compatriots?

There are a few Tadjiks of Persian origin, the handsomest men you can imagine. They have booked for Merv, or Bokhara, or Samarkand, or Tachkend, or Kokhand, and will not pass the Russo-Chinese frontier. As a rule they are second-class passengers. Among the first-class passengers I noticed a few Usbegs of the ordinary type, with retreating foreheads and prominent cheek bones, and brown complexions, who were the lords of the country, and from whose families come the emirs and khans of Central Asia.

But are there not any Europeans in this Grand Transasiatic train? It must be confessed that I can only count five or six. There are a few commercial travelers from South Russia, and one of those inevitable gentlemen from the United Kingdom, who are inevitably to be found on the railways and steamboats. It is still necessary to obtain permission to travel on the Transcaspian, permission which the Russian administration does not willingly accord to an Englishman; but this man has apparently been able to get one.

And he seems to me to be worth notice. He is tall and thin, and looks quite the fifty years that his gray hairs proclaim him to be. His characteristic expression is one of haughtiness, or rather disdain, composed in equal parts of love of all things English and contempt for all things that are not. This type is occasionally so insupportable, even to
his compatriots, that Dickens, Thackeray and others have often made fun of it. How he turned up his nose at the station at Uzun Ada, at the train, at the men, at the car in which he had secured a seat by placing in it his traveling bag! Let us call him No. 8 in my pocketbook.

There seem to be no personages of importance. That is a pity. If only the Emperor of Russia, on one side, or the Son of Heaven, on the other, were to enter the train to meet officially on the frontier of the two empires, what festivities there would be, what grandeur, what descriptions, what copy for letters and telegrams!

It occurs to me to have a look at the mysterious box. Has it not a right to be so called? Yes, certainly. I must really find out where it has been put and how to get at it easily.

The front van is already full of Ephrinell's baggage. It does not open at the side, but in front and behind, like the cars. It is also furnished with a platform and a gangway. An interior passage allows the guard to go through it to reach the tender and locomotive if necessary. Popof's little cabin is on the platform of the first car, in the left-hand corner. At night it will be easy for me to visit the van, for it is only shut in by the doors at the ends of the passage arranged between the packages. If this van is reserved for luggage registered through to China, the luggage for the Turkestan stations ought to be in the van at the rear.

When I arrived the famous box was still on the platform.

In looking at it closely I observe that airholes have been bored on each of its sides, and that on one side it has two panels, one of which can be made to slide on the other from the inside. And I am led to think that the prisoner has had it made in order that he can, if necessary, leave his prison--probably during the night.

Just now the porters are beginning to lift the box. I have the satisfaction of seeing that they attend to the directions inscribed on it. It is placed, with great care, near the entrance to the van, on the left, the side with the panels outward, as if it were the door of a cupboard. And is not the box a cupboard? A cupboard I propose to open?

It remains to be seen if the guard in charge of the luggage is to remain in this van. No. I find that his post is just outside it.

"There it is, all right!" said one of the porters, looking to see that the case was as it should be, top where top should be, and so on.

"There is no fear of its moving," said another porter; "the glass will reach Pekin all right, unless the train runs off the metals."

"Or it does not run into anything," said the other; "and that remains to be seen."

They were right--these good fellows--it remained to be seen--and it would be seen.

The American came up to me and took a last look at his stock of incisors, molars and canines, with a repetition of his invariable "Wait a bit."

"You know, Monsieur Bombarnac," he said to me, "that the passengers are going to dine at the Hôtel du Czar before the departure of the train. It is time now. Will you come with me?"

"I follow you."

And we entered the dining room. All my numbers are there: 1, Ephrinell, taking his place as usual by the side of 2, Miss Horatia Bluett. The French couple, 4 and 5, are also side by side. Number 3, that is Major Noltitz, is seated in front of numbers 9 and 10, the two Chinese to whom I have just given numbers in my notebook. As to the fat German, number 6, he has already got his long nose into his soup plate. I see also that the Guard Popol, number 7, has his place at the foot of the table. The other passengers, Europeans and Asiatics, are installed, passim with the evident intention of doing justice to the repast.

Ah! I forgot my number 8, the disdainful gentleman whose name I don't yet know, and who seems determined to find the Russian cookery inferior to the English.

I also notice with what attention Monsieur Caterna looks after his wife, and encourages her to make up for the time lost when she was unwell on board the Astara. He keeps her glass filled, he chooses the best pieces for her, etc.

"What a good thing it is," I hear him say, "that we are not to leeward of the Teuton, for there would be nothing left for us!"

He is to windward of him--that is to say, the dishes reach him before they get to the baron, which, however, does not prevent his clearing them without shame.

The observation, in sea language, made me smile, and Caterna, noticing it, gave me a wink with a slight movement of the shoulder toward the baron.

It is evident that these French people are not of high distinction, they do not belong to the upper circles; but they are good people, I will answer for it, and when we have to rub shoulders with compatriots, we must not be too particular in Turkestan.

The dinner ends ten minutes before the time fixed for our departure. The bell rings and we all make a move for the train, the engine of which is blowing off steam.

Mentally, I offer a last prayer to the God of reporters and ask him not to spare me adventures. Then, after
satisfying myself that all my numbers are in the first-class cars, so that I can keep an eye on them, I take my place.

The Baron Weisschnitzerdörfer—what an interminable name—is not behindhand this time. On the contrary, it is
the train this time which is five minutes late in starting; and the German has begun to complain, to chafe and to
swear, and threatens to sue the company for damages. Ten thousand roubles—not a penny less!—if it causes him to
fail. Fail in what, considering that he is going to Pekin?

At length the last shriek of the whistle cleaves the air, the cars begin to move, and a loud cheer salutes the
departure of the Grand Transasiatic express.

CHAPTER VI.

The ideas of a man on horseback are different to those which occur to him when he is on foot. The difference is
even more noticeable when he is on the railway. The association of his thoughts, the character of his reflections are
all affected by the speed of the train. They "roll" in his head, as he rolls in his car. And so it comes about that I am in
a particularly lively mood, desirous of observing, greedy of instruction, and that at a speed of thirty-one miles an
hour. That is the rate at which we are to travel through Turkestan, and when we reach the Celestial Empire we shall
have to be content with eighteen.

That is what I have just ascertained by consulting my time-table, which I bought at the station. It is accompanied
by a long slip map, folded and refolded on itself, which shows the whole length of the line between the Caspian and
the eastern coast of China. I study, then, my Transasiatic, on leaving Uzun Ada, just as I studied my Transgeorgian
when I left Tiflis.

The gauge of the line is about sixty-three inches—as is usual on the Russian lines, which are thus about four
inches wider than those of other European countries. It is said, with regard to this, that the Germans have made a
great number of axles of this length, in case they have to invade Russia. I should like to think that the Russians have
taken the same precautions in the no less probable event of their having to invade Germany.

On either side of the line are long sandhills, between which the train runs out from Uzun Ada; when it reaches
the arm of the sea which separates Long Island from the continent, it crosses an embankment about 1,200 yards
long, edged with masses of rock to protect it against the violence of the waves.

We have already passed several stations without stopping, among others Mikhailov, a league from Uzun Ada.
Now they are from ten to eleven miles apart. Those I have seen, as yet, look like villas, with balustrades and Italian
roofs, which has a curious effect in Turkestan and the neighborhood of Persia. The desert extends up to the
neighborhood of Uzun Ada, and the railway stations form so many little oases, made by the hand of man. It is man,
in fact, who has planted these slender, sea-green poplars, which give so little shade; it is man who, at great expense,
has brought here the water whose refreshing jets fall back into an elegant vase. Without these hydraulic works there
would not be a tree, not a corner of green in these oases. They are the nurses of the line, and dry-nurses are of no use
to locomotives.

The truth is that I have never seen such a bare, arid country, so clear of vegetation; and it extends for one
hundred and fifty miles from Uzun Ada. When General Annenkof commenced his works at Mikhailov, he was
obliged to distil the water from the Caspian Sea, as if he were on board ship. But if water is necessary to produce
steam, coal is necessary to vaporize the water. The readers of the Twentieth Century will ask how are the furnaces
fed in a country in which there is neither coal nor wood? Are there stores of these things at the principal stations of
the Transcaspian? Not at all. They have simply put in practice an idea which occurred to our great chemist, Sainte-
Claire Deville, when first petroleum was used in France. The furnaces are fed, by the aid of a pulverizing apparatus,
with the residue produced from the distillation of the naphtha, which Baku and Derbent produce in such
inexhaustible quantities. At certain stations on the line there are vast reservoirs of this combustible mineral, from
which the tenders are filled, and it is burned in specially adapted fireboxes. In a similar way naphtha is used on the
steamboats on the Volga and the other affluents of the Caspian.

I repeat, the country is not particularly varied. The ground is nearly flat in the sandy districts, and quite flat in the
alluvial plains, where the brackish water stagnates in pools. Nothing could be better for a line of railway. There are
no cuttings, no embankments, no viaducts, no works of art—to use a term dear to engineers, very "dear," I should
say. Here and there are a few wooden bridges from two hundred to three hundred feet long. Under such
circumstances the cost per kilometre of the Transcaspian did not exceed seventy-five thousand francs.

The monotony of the journey would only be broken on the vast oases of Merv, Bokhara and Samarkand.

But let us busy ourselves with the passengers, as we can do all the more easily from our being able to walk from
one end to the other of the train. With a little imagination we can make ourselves believe we are in a sort of traveling
village, and I am just going to take a run down main street.

Remember that the engine and tender are followed by the van at the angle of which is placed the mysterious
case, and that Popof's compartment is in the left-hand corner of the platform of the first car.

Inside this car I notice a few Sarthes of tall figure and haughty face, draped in their long robes of bright colors, from beneath which appear the braided leather boots. They have splendid eyes, a superb beard, arched nose, and you would take them for real lords, provided we ignore the word Sarthe, which means a pedlar, and these were going evidently to Tachkend, where these pedlars swarm.

In this car the two Chinese have taken their places, opposite each other. The young Celestial looks out of window. The old one--Ta-lao-ye, that is to say, a person well advanced in years--is incessantly turning over the pages of his book. This volume, a small 32mo, looks like our Annuaire du Bureau des Longitudes, and is covered in plush, like a breviary, and when it is shut its covers are kept in place by an elastic band. What astonishes me is that the proprietor of this little book does not seem to read it from right to left. Is it not written in Chinese characters? We must see into this!

On two adjoining seats are Ephrinell and Miss Horatia Bluett. Their talk is of nothing but figures. I don't know if the practical American murmurs at the ear of the practical Englishwoman the adorable verse which made the heart of Lydia palpitate:

"Nee tecum possum vivere sine te,"

but I do know that Ephrinell can very well live without me. I have been quite right in not reckoning on his company to charm away the tedium of the journey. The Yankee has completely "left" me--that is the word--for this angular daughter of Albion.

I reach the platform. I cross the gangway and I am at the door of the second car.

In the right-hand corner is Baron Weisschnitzerdörfer. His long nose--this Teuton is as short-sighted as a mole--rubs the lines of the book he reads. The book is the time-table. The impatient traveler is ascertaining if the train passes the stations at the stated time. Whenever it is behind there are new recriminations and menaces against the Grand Transasiatic Company.

In this car there are also the Caternas, who have made themselves quite comfortable. In his cheery way, the husband is talking with a good deal of gesticulation, sometimes touching his wife's hands, sometimes putting his arms round her waist; and then he turns his head toward the platform and says something aside. Madame Caterna leans toward him, makes little confused grimaces, and then leans back into the corner and seems to reply to her husband, who in turn replies to her. And as I leave I hear the chorus of an operetta in the deep voice of Monsieur Caterna.

In the third car, occupied by many Turkomans and three or four Russians, I perceive Major Noltitz. He is talking with one of his countrymen. I will willingly join in their conversation if they make me any advances, but I had better maintain a certain reserve; the journey has only begun.

I then visit the dining car. It is a third longer than the other cars, a regular dining room, with one long table. At the back is a pantry on one side, a kitchen on the other, where the cook and steward are at work, both of them Russians. This dining car appears to me capitally arranged. Passing through it, I reach the second part of the train, where the second-class passengers are installed. Kirghizes who do not look very intelligent with their depressed heads, their prognathous jaws stuck well out in front, their little beards, flat Cossack noses and very brown skins. These wretched fellows are Mahometans and belong either to the Grand Horde wandering on the frontier between China and Siberia, or to the Little Horde between the Ural Mountains and the Aral Sea. A second-class car, or even a third-class car, is a palace for these people, accustomed to the encampments on the Steppes, to the miserable "iourts" of villages. Neither their beds nor their seats are as good as the stuffed benches on which they have seated themselves with true Asiatic gravity.

With them are two or three Nogais going to Eastern Turkestan. Of a higher race than the Kirghizes, being Tartars, it is from them that come the learned men and professors who have made illustrious the opulent cities of Bokhara and Samarkand. But science and its teaching do not yield much of a livelihood, even when reduced to the mere necessaries of life, in these provinces of Central Asia. And so these Nogais take employment as interpreters. Unfortunately, since the diffusion of the Russian language, their trade is not very remunerative.

Now I know the places of my numbers, and I know where to find them when I want them. As to those going through to Pekin, I have no doubt of Ephrinell and Miss Horatia Bluett nor the German baron, nor the two Chinese, nor Major Noltitz, nor the Caternas, nor even for the haughty gentleman whose bony outline I perceive in the corner of the second car.

As to these travelers who are not going across the frontier, they are of most perfect insignificance in my eyes. But among my companions I have not yet found the hero of my chronicle! let us hope he will declare himself as we proceed.

My intention is to take notes hour by hour--what did I say? To "minute" my journey. Before the night closes in I go out on the platform of the car to have a last look at the surrounding country. An hour with my cigar will take me
to Kizil Arvat, where the train has to stop for some time. In going from the second to the first car I meet Major Noltitz. I step aside to let him pass. He salutes me with that grace which distinguishes well-bred Russians. I return his salute. Our meeting is restricted to this exchange of politeness, but the first step is taken.

Popof is not just now in his seat. The door of the luggage van being open, I conclude that the guard has gone to talk with the driver. On the left of the van the mysterious box is in its place. It is only half-past six as yet, and there is too much daylight for me to risk the gratification of my curiosity.

The train advances through the open desert. This is the Kara Koum, the Black Desert. It extends from Khiva over all Turkestan comprised between the Persian frontier and the course of the Amou Daria. In reality the sands of the Kara Koum are no more black than the waters of the Black Sea or than those of the White Sea are white, those of the Red Sea red, or those of the Yellow River yellow. But I like these colored distinctions, however erroneous they may be. In landscapes the eye is caught by colors. And is there not a good deal of landscape about geography?

It appears that this desert was formerly occupied by a huge central basin. It has dried up, as the Caspian will dry up, and this evaporation is explained by the powerful concentration of the solar rays on the surface of the territories between the Sea of Aral and the Plateau of the Pamir.

The Kara Koum is formed of low sandy hills which the high winds are constantly shifting and forming. These "barkans," as the Russians call them, vary in height from thirty to ninety feet. They expose a wide surface to the northern hurricanes which drive them gradually southward. And on this account there is a well-justified fear for the safety of the Transcaspian. It had to be protected in some efficacious way, and General Annenkof would have been much embarrassed if provident Nature had not, at the same time as she gave the land favorable for the railway to be laid along, given the means of stopping the barkanes.

Behind these sand hills grow a number of spring shrubs, clumps of tamarisk, star thistles, and that Haloxylon ammodendron which Russians call, not so scientifically, "saksaul." Its deep, strong roots are as well adapted for binding together the ground as those of Hippophae rhamnoides, an arbutus of the Eleagnaceous family, which is used for binding together the sands in southern Europe.

To these plantations of saksauls the engineers of the line have added in different places a series of slopes of worked clay, and in the most dangerous places a line of palisades.

These precautions are doubtless of use; but if the road is protected, the passengers are hardly so, when the sand flies like a bullet hail, and the wind sweeps up from the plain the whitish efflorescences of salt. It is a good thing for us that we are not in the height of the hot season; and it is not in June or July or August that I would advise you to take a trip on the Grand Transasiatic.

I am sorry that Major Noltitz does not think of coming out on the gangway to breathe the fresh air of the Kara Koum. I would offer him one of those choice regalias with which my case is well provided. He would tell me if these stations I see on my time-table, Balla-Ischem, Aidine, Pereval, Kansandjik, Ouchak, are of any interest—which they do not seem to be. But it would not do for me to disturb his siesta. And yet his conversation ought to be interesting, for as a surgeon in the Russian army he took part in the campaigns of Generals Skobeleff and Annenkof. When our train ran through the little stations that it honors only with a whistle, he could tell me if this one or that one had been the scene of any incident of the war. As a Frenchman I am justified in questioning him about the Russian expedition across Turkestan, and I have no doubt that my fellow passenger will be pleased to gratify me. He is the only one I can really trust besides Popof.

But why is Popof not in his seat? He also is not insensible to the charms of a cigar. It would seem that his conversation with the engineer has not finished yet.

Ah! Here he is coming from the front of the luggage van. He comes out of it and shuts the door; he remains for a moment and is about to take a seat. A hand which holds a cigar, is stretched out toward him. Popof smiles and soon his perfumed puffs are mingling voluptuously with mine.

For fifteen years I think I said our guard had been in the Transcaspian service. He knows the country up to the Chinese frontier, and five or six times already he has been over the whole line known as the Grand Transasiatic.

Popof was on duty on the section between Mikhailov and Kizil Arvat when the line opened—a section which was begun in the December of 1880 and finished in ten months, in November, 1881. Five years later the locomotive entered Merv, on the 14th July, 1886, and eighteen months later it was welcomed at Samarkand. Now the road through Turkestan joins the road through the Celestial Empire, and the ribbon of iron extends without interruption from the Caspian Sea to Pekin.

When Popof had given me this information, I asked if he knew anything of our fellow travelers, I meant those who were going through to China. And in the first place of Major Noltitz?

"The major," said Popof, "has lived a long time in the Turkestan provinces, and he is going to Pekin to organize the staff of a hospital for our compatriots, with the permission of the Czar, of course."

"I like this Major Noltitz," I said, "and I hope to make his acquaintance very soon."
"He would be equally pleased to make yours," replied Popof.
"And these two Chinese, do you know them?"
"Not in the least, Monsieur Bombarnac; all I know is the name on the luggage."
"What is that?"
"The younger man's name is Pan-Chao, the elder's is Tio-King. Probably they have been traveling in Europe for some years. As to saying where they come from, I cannot. I imagine that Pan-Chao belongs to some rich family, for he is accompanied by his doctor."
"This Tio-King?"
"Yes, Doctor Tio-King."
"And do they only speak Chinese?"
"Probably; I have not heard them speak any other language together."
On this information from Popof, I will keep to the number nine I have given to young Pan-Chao, and to the ten with which I have labelled Doctor Tio-King.
"Ephrinell?" I exclaimed, "and Miss Horatia Bluett, the Englishwoman? Oh! You can tell me nothing about them I don't know."
"Shall I tell you what I think about that couple, Monsieur Bombarnac?"
"What do you think?"
"That as soon as they reach Pekin, Miss Bluett will become Mrs. Ephrinell."
"And may Heaven bless their union, Popof, for they are really made for each other."
I saw that on this subject Popof and I held similar ideas.
"And the two French people, that couple so affectionate." I asked, "who are they?"
"Have they not told you?"
"No, Popof."
"You need not be anxious, Monsieur Bombarnac. Besides, if you wish to know their profession, it is written at full length on all their luggage.
"And that is?"
"Stage people who are going to a theater in China."
Stage people! If that explains the attitudes, and mobile physiognomy, and demonstrative gestures of Caterna, it does not explain his maritime allusions.
"And do you know what line these players are in?"
"The husband is comic lead."
"And the wife?"
"She is leading lady."
"And where are these lyrical people going?"
"To Shanghai, where they have an engagement at the French theater."
That is capital. I will talk about the theater, and behind the scenes, and such matters, and, as Popof said, I shall soon make the acquaintance of the cheery comedian and his charming wife. But it is not in their company that I shall discover the hero of romance who is the object of my desire.
As to the scornful gentleman, our guide knew nothing beyond that his luggage bore the address in full: Sir Francis Trevellyan, Trevellyan Hall, Trevellyanshire.
"A gentleman who does not answer when he is spoken to!" added Popof.
Well, my number eight will have to be dumb man, and that will do very well.
"Now we get to the German," said I.
"Baron Weisschnittzerdörfer?"
"He is going to Pekin, I think."
"To Pekin and beyond."
"Beyond?"
"Yes; he is on a trip round the world."
"A trip round the world?"
"In thirty-nine days."
And so after Mrs. Bisland who did the famous tour in seventy-three days, and Train who did it in seventy, this German was attempting to do it in thirty-nine?
True, the means of communication are more rapid the line is more direct, and by using the Grand Transasiatic which puts Pekin within a fortnight of the Prussian capital, the baron might halve the old time by Suez and Singapore--but--
"He will never do it!" I exclaimed.
"Why not?" asked Popof.
"Because he is always late. He nearly missed the train at Tiflis, he nearly missed the boat at Baku--"
"But he did not miss the start from Uzun Ada."
"It doesn't matter, Popof. I shall be much surprised if this German beats an American at globe trotting."

CHAPTER VII.
The train arrived at Kizil Arvat, two hundred and forty-two versts from the Caspian, at thirteen minutes past seven in the evening instead of seven o'clock. This slight delay provoked thirteen objurgations from the baron, one for each minute.

We have two hours to wait at Kizil Arvat. Although the day is closing in, I could not employ my time better than in visiting this little town, which contains more than two thousand inhabitants, Russians, Persians and Turkmans. There is not much to see, however, either within it or around it; there are no trees—not even a palm tree—only pasturages and fields of cereals, watered by a narrow stream. My good fortune furnished me with a companion, or I should rather say a guide, in Major Noltitz.

Our acquaintance was made very simply. The major came up to me, and I went up to him as soon as we set foot on the platform of the railway station.

"Sir," said I, "I am a Frenchman, Claudius Bombarnac, special correspondent of the Twentieth Century, and you are Major Noltitz of the Russian army. You are going to Pekin, so am I. I can speak your language, and it is very likely that you can speak mine."

The major made a sign of assent.

"Well, Major Noltitz, instead of remaining strangers to each other during the long transit of Central Asia, would it please you for us to become more than mere traveling companions? You know all about this country that I do not know, and it would be a pleasure for me to learn from you."

"Monsieur Bombarnac," replied the major in French, without a trace of accent, "I quite agree with you."

Then he added with a smile:

"As to learning from me, one of your most eminent critics, if I remember rightly, has said that the French only like to learn what they know."

"I see that you have read Sainte Beuve, Major Noltitz; perhaps this sceptical academician was right in a general way. But for my part, I am an exception to the rule, and I wish to learn what I do not know. And in all that concerns Russian Turkestan, I am in a state of ignorance."

"I am entirely at your disposal," said the major, "and I will be happy to tell you all about General Annenkof, for I was all through the work with him."

"I thank you, Major Noltitz. I expected no less than the courtesy of a Russian towards a Frenchman."

"And," said the major, "if you will allow me to quote that celebrated sentence in the Danicheffs, 'It will be always thus so long as there are Frenchmen and Russians.'"

"The younger Dumas after Sainte Beuve?" I exclaimed. "I see, major, that I am talking to a Parisian--"

"Of Petersburg, Monsieur Bombarnac."

And we cordially shook hands. A minute afterwards, we were on our way through the town, and this is what Major Noltitz told me:

It was towards the end of 1885 that General Annenkof finished, at Kizil Arvat, the first portion of this railway measuring about 140 miles, of which 90 were through a desert which did not yield a single drop of water. But before telling me how this extraordinary work was accomplished, Major Noltitz reminded me of the facts which had gradually prepared the conquest of Turkestan and its definite incorporation with the Russian Empire.

As far back as 1854 the Russians had imposed a treaty of alliance on the Khan of Khiva. Some years afterwards, eager to pursue their march towards the east, the campaigns of 1860 and 1864 had given them the Khanats of Kokhand and Bokhara. Two years later, Samarkand passed under their dominion after the battles of Irdjar and Zerabuleh.

There remained to be conquered the southern portion of Turkestan, and chiefly the oasis of Akhal Tekke, which is contiguous to Persia. Generals Sourakine and Lazaroff attempted this in their expeditions of 1878 and 1879. Their plans failed, and it was to the celebrated Skobelev, the hero of Plevna, that the czar confided the task of subduing the valiant Turkoman tribes.

Skobelev landed at the port of Mikhailov—the port of Uzun Ada was not then in existence—and it was in view of facilitating his march across the desert that his second in command, Annenkof, constructed the strategic railway
which in ten months reached Kizil Arvat.

This is how the Russians built the line with a rapidity superior, as I have said, to that of the Americans in the far west, a line that was to be of use for commerce and for war.

To begin with, the general got together a construction train consisting of thirty-four wagons. Four of these were two-decked for the officers, twenty more had two decks and were used by the workmen and soldiers; one wagon served as a dining room, four as kitchens, one as an ambulance, one as a telegraph office, one as a forge, one as a provision store, and one was held in reserve. These were his traveling workshops and also his barracks in which fifteen hundred workmen, soldiers and otherwise, found their board and lodging. The train advanced as the rails were laid. The workmen were divided into two brigades; they each worked six hours a day, with the assistance of the country people who lived in tents and numbered about fifteen thousand. A telegraph wire united the works with Mikhailov, and from there a little Decauville engine worked the trains which brought along the rails and sleepers.

In this way, helped by the horizontality of the ground, a day's work yielded nearly five miles of track, whereas in the plains of the United States only about half that rate was accomplished. Labor cost little; forty-five francs a month for the men from the oasis, fifty centimes a day for those who came from Bokhara.

It was in this way that Skobeleff's soldiers were taken to Kizil Arvat, and then eighty-four miles beyond to Gheok Tepe. This town did not surrender until after the destruction of its ramparts and the massacre of twelve thousand of its defenders; but the oasis of Akhal Tekke was in the power of the Russians. The inhabitants of the Atek oasis were only too willing as they had implored the help of the czar in their struggle with Kouli Khan, the chief of the Mervians. These latter to the number of two hundred and fifty thousand, followed their example, and the first locomotive entered Merv station in July, 1886.

"And the English?" I asked Major Noltitz. "In what way have they looked upon the progress of the Russians through Central Asia?"

"Jealously, of course. Think for a moment what it means when the Russian railways are united with the Chinese, instead of the Indian. The Transcaspian in connection with the line between Herat and Delhi! And consider that the English have not been as fortunate in Afghanistan as we have been in Turkestan. You have noticed the gentleman in our train?"

"I have. He is Sir Francis Trevellyan of Trevellyan Hall, Trevellyanshire."

"Well, Sir Francis Trevellyan has nothing but looks of contempt and shrugs of the shoulder for all we have done. His nation's jealousy is incarnate in him, and England will never be content that our railways should go from Europe to the Pacific Ocean, while the British railways end at the Indian Ocean."

This interesting conversation had lasted for the hour and a half during which we walked about the streets of Kizil Arvat. It was time to return to the station, and we did so.

Of course, matters did not end here. It was agreed that the major should leave his seat in the third car and occupy that next to mine in the first. We had already been two inhabitants of the same town; well, we would become two neighbors in the house, or, rather, two friends in the same room.

At nine o'clock the signal to start was given. The train leaving Kizil Arvat went off in a southwesterly direction towards Askhabad, along the Persian frontier.

For another half hour the major and I continued to talk of one thing or another. He told me that if the sun had not set, I should have been able to see the summits of the Great and Little Balkans of Asia which rise above the bay of Krasnovodsk.

Already most of our companions had taken up their quarters for the night on their seats, which by an ingenious mechanism could be transformed into beds, on which you could stretch yourself at full length, lay your head on a pillow, wrap yourself in rugs, and if you didn't sleep well it would be on account of a troubled conscience.

Major Noltitz had nothing to reproach himself with apparently, for a few minutes after he had said good night he was deep in the sleep of the just.

As for me, if I remained awake it was because I was troubled in my mind. I was thinking of my famous packing case, of the man it contained, and this very night I had resolved to enter into communication with him. I thought of the people who had done this sort of thing before. In 1889, 1891, and 1892, an Austrian tailor, Hermann Zeitung, had come from Vienna to Paris, from Amsterdam to Brussels, from Antwerp to Christiania in a box, and two sweethearts of Barcelona, Erres and Flora Anglora, had shared a box between them from Spain into France.

But I must wait until Popof had retired to rest. The train would not stop until it reached Gheok Tepe at one o'clock in the morning. During the run from Kizil Arvat to Gheok Tepe I reckoned that Popof would have a good sleep, and then, or never, I would put my plan into execution.

Hold! an idea! Suppose it is Zeitung who makes a trade of this sort of thing and manages to make a little money out of public generosity? It ought to be Zeitung, it must be! Confound it! he is not at all interesting! And here was I reckoning on this fellow. Well, we shall see. I shall know him by his photographs, and perhaps I may make use of
him.

Half an hour went by, and the noise of a door shutting on the platform of the car told me that our guard had just entered his little box. In spite of my desire to visit the baggage car I waited patiently, for it was possible that Popof was not yet sound asleep.

Within, all is quiet under the veiled light of the lamps.
Without, the night is very dark, and the rattle of the train mingles with the whistling of the rather high wind.
I rise. I draw aside the curtain of one of the lamps. I look at my watch.
It is a few minutes past eleven. Still two hours to Gheok Tepe.

The moment has come. I glide between the seats to the door of the car. I open it gently and shut it after me without being heard by my companions, without waking any one.

Here I am on the platform, which shakes as the train travels. Amid the unfathomable darkness which envelops the Kara Koum, I experience the feeling of a night at sea when on board.
A feeble light filters through the blind of the guard's box. Shall I wait till it is extinct, or, as is very probable, will it not last till the morning?

Anyhow, Popof is not asleep, as I discover by the noise he makes in turning over. I keep quiet, leaning against the balustrade of the platform.
Leaning forward my looks are attracted by the luminous ray thrown forward by the headlight of the engine. It seems as though we are running on a road of fire. Above me the clouds are racing across with great rapidity, and a few constellations glitter through their rifts, Cassiopeia, the Little Bear, in the north, and in the zenith Vega of Lyra.

At length absolute silence reigns on the platforms. Popof, who is in charge of the train, has his eyes closed in sleep. Assured of safety I cross the gangway and am in front of the baggage van.
The door is only fastened with a bar which is hung between two staples.
I open it and shut it behind me.
I do this without noise, for if I do not want to attract Popof's attention, I do not want as yet to attract the attention of the man in the packing case.

Although the darkness is deep in the van, although there is no side window, I know my position. I know where the case is placed; it is in the left corner as I enter. The thing is not to knock against any other case—not against one of those belonging to Ephrinell, for what a row there would be if I set all those artificial teeth chattering!

Carefully feeling with feet and hands, I reach the case. No cat could have been more gentle or more silent as I felt its edges.

I leaned over and placed my ear timidly against the outer panel.
There was no sound of breathing.
The products of the house of Strong, Bulbul & Co., of New York, could not be more noiseless in their boxes.
A fear seizes upon me—the fear of seeing all my reporter's hopes vanish. Was I deceived on board the Astara? That respiration, that sneeze; had I dreamed it all? Was there no one in the case, not even Zeitung? Were these really glass goods exported to Miss Zinca Klork, Avenue Cha-Coua, Pekin, China?
No! Feeble as it is, I detect a movement inside the case! It becomes more distinct, and I ask if the panel is going to slide, if the prisoner is coming out of his prison to breathe the fresh air?

What I had better do to see and not to be seen is to hide between two cases. Thanks to the darkness there is nothing to fear.

Suddenly a slight cracking greets my ear. I am not the sport of an illusion; it is the crack of a match being lighted.
Almost immediately a few feeble rays pierce the ventilation holes of the case.
If I had had any doubts as to the position held by the prisoner in the scale of being, I have none now. At the least it must be an ape who knows the use of fire, and also the handling of matches. Travelers tell us that such animals exist, but we have to take the statement on trust.

Why should I not confess it? A certain emotion came over me and I had to take care I did not run away.
A minute elapsed. Nothing shows that the panel has been moved, nothing gives me reason to suppose that the unknown is coming out.

Cautiously I wait. Then I have an idea to make something out of this light. The case is lighted within; if I were to peep through those holes?
I creep toward the case. A single apprehension chills my brain. If the light were suddenly extinguished!
I am against the panel, which I take care not to touch, and I put my eyes close to one of the holes.
There is a man in the box, and it is not the Austrian tailor, Zeitung! Thank Heaven! I will soon make him my No. 11.

The man's features I can make out clearly. He is from twenty-five to twenty-six years of age. He does not shave,
and his beard is brown. He is of the true Roumanian type, and that confirms me in my notion regarding his
Roumanian correspondent. He is good-looking, although his face denotes great energy of character, and he must be
energetic to have shut himself up in a box like this for such a long journey. But if he has nothing of the malefactor
about him, I must confess that he does not look like the hero I am in search of as the chief personage in my story.

After all, they were not heroes, that Austrian and that Spaniard who traveled in their packing cases. They were
young men, very simple, very ordinary, and yet they yielded columns of copy. And so this brave No. 11, with
amplifications, antonyms, diaphoreses, epitases, tropes, metaphors, and other figures of that sort, I will beat out, I
will enlarge, I will develop—as they develop a photographic negative.

Besides to travel in a box from Tiflis to Pekin is quite another affair than traveling from Vienna or Barcelona to
Paris, as was done by Zeitung, Erres and Flora Anglora.

I add that I will not betray my Roumanian; I will report him to no one. He may rely on my discretion; he may
reckon on my good offices if I can be of use to him when he is found out.

But what is he doing now? Well, he is seated on the bottom of his case and placidly eating his supper by the light
of a little lamp. A box of preserves is on his knee, biscuit is not wanting, and in a little cupboard I notice some full
bottles, besides a rug and overcoat hooked up on the wall.

Evidently No. 11 is quite at home. He is there in his cell like a snail in his shell. His house goes with him; and he
saves the thousand francs it would have cost him to journey from Tiflis to Pekin, second-class. I know he is
committing a fraud, and that the law punishes such fraud. He can come out of his box when he likes and take a walk
in the van, or even at night venture on the platform. Now! I do not blame him, and when I think of his being sent to
the pretty Roumanian, I would willingly take his place.

An idea occurs to me which may not perhaps be as good as it seems. That is to rap lightly on the box so as to
enter into communication with my new companion, and learn who he is, and whence he comes, for I know whither
he goes. An ardent curiosity devours me, I must gratify it. There are moments when a special correspondent is
metamorphosed into a daughter of Eve.

But how will the poor fellow take it? Very well, I am sure. I will tell him that I am a Frenchman, and a
Roumanian knows he can always trust a Frenchman. I will offer him my services. I will propose to soften the rigors
of his imprisonment by my interviews, and to make up the scarcity of his meals by little odds and ends. He will have
nothing to fear from my imprudences.

I rap the panel.
The light suddenly goes out.
The prisoner has suspended his respiration.
I must reassure him.
"Open!" I say to him gently in Russian.
"Open--"
I cannot finish the sentence; for the train gives a sudden jump and slackens speed.
But we cannot yet have reached Gheok Tepe?
There is a noise outside.
I rush out of the van and shut the door behind me.
It was time.
I have scarcely reached the platform before Popof's door opens, and without seeing me he hurries through the van
on to the engine.

Almost immediately the train resumes its normal speed and Popof reappears a minute afterwards.
"What is the matter, Popof?"
"What is often the matter, Monsieur Bombarnac. We have smashed a dromedary."
"Poor brute!"
"Poor brute? He might have thrown us off the line!"
"Stupid brute, then!"

CHAPTER VIII.

Before the train reaches Gheok Tepe I am back in the car. Confound this dromedary! If he had not managed to
get smashed so clumsily No. 11 would no longer be unknown to me. He would have opened his panel, we would
have talked in a friendly way, and separated with a friendly shake of the hand. Now he will be full of anxiety, he
knows his fraud is discovered, that there is some one who has reason to suspect his intentions, some one who may
not hesitate to betray his secret. And then, after being taken out of his case, he will be put under guard at the next
station, and it will be useless for Mademoiselle Zinca Klork to expect him in the capital of the Chinese Empire!
Yes! It would be better for me to relieve his anxiety this very night. That is impossible, for the train will soon stop at Gheok Tepe, and then at Askhabad which it will leave in the first hour of daylight. I can no longer trust to Popof's going to sleep.

I am absorbed in these reflections, when the locomotive stops in Gheok Tepe station at one o'clock in the morning. None of my companions have left their beds.

I get out on to the platform and prowl around the van. It would be too risky to try and get inside. I should have been glad to visit the town, but the darkness prevents me from seeing anything. According to what Major Noltitz says it still retains the traces of Skobelev's terrible assault in 1880—dismantled walls, bastions in ruins. I must content myself with having seen all that with the major's eyes.

The train starts at two o'clock in the morning, after having been joined by a few passengers who Popof tells me are Turkomans. I will have a look at them when daylight comes.

For ten minutes I remained on the car platform and watched the heights of the Persian frontier on the extreme limit of the horizon. Beyond the stretch of verdant oasis watered by a number of creeks, we crossed wide cultivated plains through which the line made frequent diversions.

Having discovered that Popof did not intend to go to sleep again, I went back to my corner.

At three o'clock there was another stop. The name of Askhabad was shouted along the platform. As I could not remain still I got out, leaving my companions sound asleep, and I ventured into the town.

Askhabad is the headquarters of the Transcaspian, and I opportunely remembered what Boulangier, the engineer, had said about it in the course of that interesting journey he had made to Merv. All that I saw on the left as I went out of the station, was the gloomy outline of the Turkoman Fort, dominating the new town, the population of which has doubled since 1887. It forms a confused mass behind a thick curtain of trees.

When I returned at half-past three, Popof was going through the luggage van, I know not why. What must be the Roumanian's anxiety during this movement to and fro in front of his box!

As soon as Popof reappeared I said to him: "Anything fresh?"
"Nothing, except the morning breeze!" said he.
"Very fresh!" said I. "Is there a refreshment bar in the station?"
"There is one for the convenience of the passengers."
"And for the convenience of the guards, I suppose? Come along, Popof."
And Popof did not want asking twice.

The bar was open, but there did not seem to be much to choose from. The only liquor was "Koumiss," which is fermented mare's milk, and is the color of faded ink, very nourishing, although very liquid. You must be a Tartar to appreciate this koumiss. At least that is the effect it produced on me. But Popof thought it excellent, and that was the important point.

Most of the Sarthes and Kirghizes who got out at Askhabad, have been replaced by other second-class passengers, Afghan merchants and smugglers, the latter particularly clever in their line of business. All the green tea consumed in Central Asia is brought by them from China through India, and although the transport is much longer, they sell it at a much lower price than the Russian tea. I need not say that their luggage was examined with Muscovite minuteness.

The train started again at four o'clock. Our car was still a sleeper. I envied the sleep of my companions, and as that was all I could do, I returned to the platform.

The dawn was appearing in the east. Here and there were the ruins of the ancient city, a citadel girdled with high ramparts and a succession of long porticos extending over fifteen hundred yards. Running over a few embankments, necessitated by the inequalities of the sandy ground, the train reaches the horizontal steppe.

We are running at a speed of thirty miles an hour in a southwesterly direction, along the Persian frontier. It is only beyond Douchak that the line begins to leave it. During this three hours' run the two stations at which the train stops are Gheours, the junction for the road to Mesched, whence the heights of the Iran plateau are visible, and Artyk where water is abundant although slightly brackish.

The train then traverses the oasis of the Atek, which is an important tributary of the Caspian. Verdure and trees are everywhere. This oasis justifies its name, and would not disgrace the Sahara. It extends to the station of Douchak at the six hundred and sixtieth verst, which we reach at six o'clock in the morning.

We stop here two hours, that is to say, there are two hours for us to walk about. I am off to look at Douchak with Major Noltitz as my cicerone.

A traveler precedes us out of the railway station; I recognize Sir Francis Trevellyan. The major makes me notice that this gentleman's face is more sullen than usual, his lip more scornful, his attitude more Anglo-Saxon.

"And do you know why, Monsieur Bombarnac? Because this station at Douchak might be the terminus of a line from British India through the Afghan frontier, Kandahar, the Bolan Pass and the Pendjeh oasis, that would unite the
two systems."

"And how long would the line be?"

"About six hundred miles. But the English will not meet the Russians in a friendly way. But if we could put Calcutta within twelve days of London, what an advantage that would be for their trade!"

Talking in this way the major and I "did" Douchak. Some years ago it was foreseen how important this village would be. A branch line unites it with Teheran in Persia, while there has, as yet, been no survey for a line to India. While gentlemen cast in the mould of Sir Francis Trevellyan are in the majority in the United Kingdom, the Asiatic network of railways will never be complete.

I was led to question the major regarding the safety of the Grand Transasiatic across the provinces of Central Asia.

In Turkestan, he told me, the safety is well assured. The Russian police keep constant watch over it; there is a regular police force at the stations, and as the stations are not far apart, I don't think the travelers have much to fear from the nomad tribes. Besides, the Turkomans are kept in their place by the Russian administration. During the years the Transcaspian has been at work, there has been no attack to hinder the train service.

"That is comforting, Major Noltitz. And as to the section between the frontier and Pekin?"

"That is another matter," replied the major. "Over the Pamir plateau, up to Kachgar, the road is carefully guarded; but beyond that, the Grand Transasiatic is under Chinese control, and I have not much confidence in that."

"Are the stations very far from each other?" I asked.

"Very far, sometimes."

"And the Russians in charge of the train are replaced by Chinese, are they not?"

"Yes, with the exception of Popof, who goes through with us."

"So that we shall have Chinese engine drivers and stokers? Well, major, that seems rather alarming, and the safety of the travelers--"

"Let me undeceive you, Monsieur Bombarnac. These Chinese are just as clever as we are. They are excellent mechanics, and it is the same with the engineers who laid out the line through the Celestial Empire. They are certainly a very intelligent race, and very fit for industrial progress."

"I think, major, that they will one day become masters of the world--after the Slavs, of course!"

"I do not know what the future may have in store," said Major Noltitz, with a smile. "But, returning to the Chinese, I say that they are of quick comprehension, with an astonishing facility of assimilation. I have seen them at work, and I speak from experience."

"Agreed," said I; "but if there is no danger under this head, are there not a lot of scoundrels prowling about Mongolia and Northern China?"

"And you think these scoundrels will be daring enough to attack the train?"

"Exactly, major, and that is what makes me feel easy."

"What? Makes you feel easy?"

"Quite so, for my sole anxiety is that our journey may not be devoid of incident."

"Really, Mr. Special Correspondent, I admire you. You must have incidents--"

"As a doctor must have patients. Now a real good adventure--"

"Well, Monsieur Bombarnac, I am afraid you will be disappointed, as I have heard that the company has treated several chiefs of the robber bands--"

"As the Greek Government treated Hadji Stavros in About's romance."

"Precisely; and who knows that if in their wisdom--"

"I don't believe it."

"Why not? It would be quite in the modern style, this way of assuring the safety of the trains during the run through the Celestial Empire. Anyhow, there is one of these highwaymen, who has retained his independence and liberty of action, a certain Ki-Tsang."

"Who is he?"

"A bold bandit chief, half-Chinaman, half-Mongol. Having for some time been a terror to Yunnan, he was being too closely pursued, and has now moved into the northern provinces. His presence has ever been reported in that part of Mongolia served by the Grand Transasiatic."

"Well, he ought to furnish a few paragraphs."

"The paragraphs Ki-Tsang will furnish you with may cost you too dearly."

"Bah! major, the Twentieth Century is quite rich enough to pay for its glory."

"To pay with its money, perhaps, but we may have to pay with our lives! Luckily our companions have not heard you talk in this way, or they might come in a body and demand your expulsion from the train. So be careful, and keep a guard on your desires as a newspaper man in quest of adventures. Above all, don't have anything to do with
this Ki-Tsang. It would be all the better in the interest of the passengers."
"But not of the passage, major."

We returned towards the station. The stoppage at Douchak had another half hour to last. As I walked on the quay, I observed something going on which would change the make-up of our train.

Another van had arrived from Teheran by the branch line to Mesphed, which puts the Persian capital in communication with the Transcaspian.

This van was bolted and barred, and accompanied by a squad of Persian police, whose orders seemed to be not to lose sight of it.

I don't know what made me think so, but it seemed as though this van had something mysterious about it, and as the major had left me, I went and spoke to Popof, who was watching over the proceedings.

"Popof, where is that van going?"
"To Pekin."
"And what has it got in it?"
"What has it got in it? An exalted personage."
"An exalted personage?"
"Are you surprised?"
"I am. In this van?"
"It is his own idea."
"Well, Popof, when this exalted personage gets out perhaps you will let me know?"
"He Will not get out."
"Why not?"
"Because he is dead."
"Dead?"
"Yes, and it is his body they are taking to Pekin, where he will be interred with all the honors due to him."

So that we were to have an important personage in our train--in the shape of a corpse, it is true. Never mind! I asked Popof to discover the name of the defunct. He ought to be some mandarin of mark. As soon as I knew it I would send a telegram to the Twentieth Century.

While I was looking at this van, a new passenger came up and examined it with no less curiosity than I did.

This traveler was a fine-looking man of about forty, wearing gracefully the costume of the richer Mongols, a tall fellow, with rather a gloomy look, a military moustache, tawny complexion, and eyes that never shut.

"Here is a splendid fellow," I said to myself. "I don't know if he will turn out the hero of the drama I am in search of, but, anyhow, I will number him twelve in my traveling troupe."

This leading star, I soon learned from Popof, bore the name of Faruskiar. He was accompanied by another Mongol, of inferior rank, of about the same age, whose name was Ghangir. As they looked at the van being attached to the tail of the train in front of the luggage van, they exchanged a few words. As soon as the arrangements were complete the Persians took their places in the second-class car, which preceded the mortuary van, so as to have the precious corpse always under their surveillance.

At this moment there was a shout on the station platform I recognized the voice. It was the Baron Weisschnitzendorfer shouting:

"Stop! stop!"

This time it was not a train on the start, but a hat in distress. A sudden gust had swept through the station and borne off the baron's hat--a helmet-shaped hat of a bluish color. It rolled on the platform, it rolled on the rails, it skimmed the enclosure and went out over the wall, and its owner ran his hardest to stop it.

At the sight of this wild pursuit the Cateras held their sides, the young Chinaman, Pan Chao, shouted with laughter, while Dr. Tio-King remained imperturbably serious.

The German purple, puffing and panting, could do no more. Twice he had got his hand on his hat, and twice it had escaped him, and now suddenly he fell full length with his head lost under the folds of his overcoat; whereupon Catera began to sing the celebrated air from "Miss Helyett":

"Ah! the superb point of view--ew--ew--ew! Ah! the view unexpected by you--you--you--you!"

I know nothing more annoying than a hat carried away by the wind, which bounds hither and thither, and spins and jumps, and glides, and slides, and darts off just as you think you are going to catch it. And if that should happen to me I will forgive those who laugh at the comic endeavor.

But the baron was in no mood for forgiveness. He bounded here, and bounded there, he jumped on to the line. They shouted to him, "Look out! look out!" for the Merv was coming in at some speed. It brought death to the hat, the engine smashed it pitilessly, and it was only a torn rag when it was handed to the baron. And then began again a series of imprecations on the Grand Transasiatic.
The signal is given. The passengers, old and new, hurry to their places. Among the new ones I notice three
Mongols, of forbidding appearance, who get into the second-class car.

As I put my foot on the platform I hear the young Chinese say to his companion:
"Well, Dr. Tio-King, did you see the German with his performing hat? How I laughed!"

And so Pan Chao speaks French. What do I say? Better than French—he speaks Persian! Most extraordinary! I
must have a talk with him.

CHAPTER IX.
We started to time. The baron could not complain this time. After all, I understood his impatience; a minute's
delay might cause him to lose the mail boat from Tien Tsin to Japan.

The day looked promising, that is to say, there might have been a wind strong enough to put out the sun as if it
were a candle, such a hurricane as sometimes stops the locomotives of the Grand Transasiatic, but to-day it is
blowing from the west, and will be supportable, as it blows the train along. We can remain out on the platforms.

I want to enter into conversation with Pan Chao. Popof was right; he must be the son of some family of
distinction who has been spending some years in Paris for education and amusement. He ought to be one of the most
regular visitors at the Twentieth Century "five o'clocks."

Meanwhile I will attend to other business. There is that man in the case. A whole day will elapse before I can
relieve his anxiety. In what a state he must be! But as it would be unwise for me to enter the van during the day, I
must wait until night.

I must not forget that an interview with the Caternas is included in the programme. There will be no difficulty in
that, apparently.

What will not be so easy is to get into conversation with my No. 12, his superb lordship Faruskiar. He seems
rather stiff, does this Oriental.

Ah! There is a name I must know as soon as possible, that of the mandarin returning to China in the form of a
mortuary parcel. With a little ingenuity Popof may manage to ascertain it from one of the Persians in charge of his
Excellency. If it would only be that of some grand functionary, the Pao-Wang, or the Ko-Wang, or the viceroy of the
two Kiangs, the Prince King in person!

For an hour the train is running through the oasis. We shall soon be in the open desert. The soil is formed of
alluvial beds extending up to the environs of Merv. I must get accustomed to this monotony of the journey which
will last up to the frontier of Turkestan. Oasis and desert, desert and oasis. As we approach the Pamir the scenery
will change a little. There are picturesque bits of landscape in that orographic knot which the Russians have had to
cut as Alexander cut the gordian knot that was worth something to the Macedonian conqueror of Asia. Here is a
good augury for the Russian conquest.

But I must wait for this crossing of the Pamir and its varied scenery. Beyond lay the interminable plains of
Chinese Turkestan, the immense sandy desert of Gobi, where the monotony of the journey will begin again.

It is half-past ten. Breakfast will soon be served in the dining car. Let us take a walk through the length of the
train.

Where is Epherinell? I do not see him at his post by the side of Miss Horatia Bluett, whom I questioned on the
subject after saluting her politely.

"Mr. Epherinell has gone to give an eye to his cases," she replies.

In the rear of the second car Faruskiar and Ghangir have installed themselves; they are alone at this moment, and
are talking together in a low tone.

As I return I meet Epherinell, who is coming back to his traveling companion. He shakes my hand Yankee
fashion. I tell him that Miss Horatia Bluett has given me news of him.

"Oh!" says he, "what a woman yonder! What a splendid saleswoman! One of those English--"

"Who are good enough to be Americans!" I add.

"Wait a bit!" he replies, with a significant smile.

As I am going put, I notice that the two Chinamen are already in the dining car, and that Dr. Tio-King's little
book is on the table.

I do not consider it too much of a liberty for a reporter to pick up this little book, to open it and to read the title,
which is as follows:

The temperate and regular life, Or the art of living long in perfect health. Translated from the Italian of Louis
Comaro, a Venetian noble. To which is added the way of correcting a bad constitution, and enjoying perfect felicity
to the most advanced years. and to die only from the using up of the original humidity in extreme old age. Salerno,
1782.
And this is the favorite reading of Dr. Tio-King! And that is why his disrespectful pupil occasionally gives him the nickname of Cornaro!

I have not time to see anything else in this volume than Abstinentia adjicit vitam; but this motto of the noble Venetian I have no intention of putting in practice, at least at breakfast time.

There is no change in the order in which we sit down to table. I find myself close to Major Noltitz, who is looking attentively at Faruskiar and his companion, placed at the extremity of the table. We are asking ourselves who this haughty Mongol could be.

"Ah!" said I, laughing at the thought which crossed my mind, "if that is--"

"Who?" asked the major.

"The chief of the brigands, the famous Ki-Tsang."

"Have your joke, Monsieur Bombarnac, but under your breath, I advise you!"

"You see, major, he would then be an interesting personage and worth a long interview!"

We enjoyed our meal as we talked. The breakfast was excellent, the provisions having come freshly on board at Askhabad and Douchak. For drink we had tea, and Crimean wine, and Kazan beer; for meat we had mutton cutlets and excellent preserves; for dessert a melon with pears and grapes of the best quality.

After breakfast I went to smoke my cigar on the platform behind the dining car. Caterna almost immediately joins me. Evidently the estimable comedian has seized the opportunity to enter into conversation with me.

His intelligent eyes, his smooth face, his cheeks accustomed to false whiskers, his lips accustomed to false moustaches, his head accustomed to wigs red, black, or gray, bald or hairy, according to his part, everything denoted the actor made for the life of the boards. But he had such an open, cheery face, such an honest look, so frank an attitude, that he was evidently a really good fellow.

"Sir," said he to me, "are two Frenchmen going all the way from Baku to Pekin without making each other's acquaintance?"

"Sir," I replied, "when I meet a compatriot--"

"Who is a Parisian--"

"And consequently a Frenchman twice over," I added, "I am only too glad to shake hands with him! And so, Monsieur Caterna--"

"You know my name?"

"As you know mine, I am sure."

"Of course, Monsieur Claudius Bombarnac, correspondent of the Twentieth Century."

"At your service, believe me."

"A thousand thanks, Monsieur Bombarnac, and even ten thousand, as they say in China, whither Madame Caterna and I are bound."

"To appear at Shanghai in the French troupe at the residency as--"

"You know all that, then?"

"A reporter!"

"Quite so."

"I may add, from sundry nautical phrases I have noticed, that you have been to sea."

"I believe you, sir. Formerly coxswain of Admiral de Boissondy's launch on board the Redoubtable."

"Then I beg to ask why you, a sailor, did not go by way of the sea?"

"Ah, there it is, Monsieur Bombarnac. Know that Madame Caterna, who is incontestably the first leading lady of the provinces, and there is not one to beat her as a waiting maid or in a man's part, cannot stand the sea. And when I heard of the Grand Transasiatic, I said to her, 'Be easy, Caroline! Do not worry yourself about the perfidious element. We will cross Russia, Turkestan, and China, without leaving terra firma!' And that pleased her, the little darling, so brave and so devoted, so--I am at a loss for a word--well, a lady who will play the duenna in case of need, rather than leave the manager in a mess! An artiste, a true artiste!"

It was a pleasure to listen to Caterna; he was in steam, as the engineer says, and the only thing to do was to let him blow off. Surprising as it may seem, he adored his wife, and I believe she was equally fond of him. A well-matched couple, evidently, from what I learned from my comedian, never embarrassed, very wide awake, content with his lot, liking nothing so much as the theater--above all the provincial theater--where he and his wife had played in drama, vaudeville, comedy, opera, opera comique, opera, spectacle, pantomime, happy in the entertainment which began at five o'clock in the afternoon and ended at one o'clock in the morning, in the grand theaters of the chief cities, in the saloon of the mayor, in the barn of the village, without boots, without patches, sometimes even without spectators--thus saving the return of the money--professionals fit for anything, no matter what.

As a Parisian, Caterna must have been the wag of the forecastle when he was at sea. As clever with his
instrument of brass or wood, he possessed a most varied and complete assortment of jokes, songs, monologues, and
dialogues. This he told me with an immense amount of attitude and gesture, now here, now there, legs, arms, hands,
and feet all going together. I should never feel dull in the company of such a merry companion.

"And where were you before you left France?" I asked.

"At La Ferté-sous-Jouarre, where Madame Caterna achieved a genuine success as Elsa in 'Lohengrin,' which we
played without music. But it is an interesting piece, and it was well done."

"You must have been a good deal about the world, Monsieur Caterna?"

"I believe you; Russia, England, both Americas. Ah! Monsieur Claudius."

He already called me Claudius.

"Ah! Monsieur Claudius, there was a time when I was the idol of Buenos Ayres, and the pet of Rio Janeiro! Do
not think I would tell you an untruth! No! I know myself. Bad at Paris, I am excellent in the provinces. In Paris you
play for yourself; in the provinces you play for the others! And then what a repertory!"

"My compliments, my dear compatriot!"

"I accept them, Monsieur Claudius, for I like my trade. What would you have? All the world cannot expect to be
a senator or--a special correspondent."

"There, that is wicked, Monsieur Caterna," said I, with a laugh.

"No; it is the last word."

And while the unwearied actor ran on in this way, stations appeared one after the other between the shrieks of
the whistle, Kulka, Nisachurch, Kulla Minor and others, not particularly cheerful to look at; then Bairam Ali at the
seven hundred and ninety-fifth verst and Kourlan Kala at the eight hundred and fifteenth.

"And to tell you the truth," continued Caterna, "we have made a little money by going about from town to town.
At the bottom of our boxes are a few Northern debentures, of which I think a good deal, and take much care, and
they have been honestly got, Monsieur Claudius. Although we live under a democratic government, the rule of
equality, the time is still far off when you will see the noble father dining beside the prefect at the table of the judge
of appeal, and the actress open the ball with the prefect at the house of the general-in-chief! Well! We can dine and
dance among ourselves--"

"And be just as happy, Monsieur Caterna."

"Certainly no less, Monsieur Claudius," replied the future premier comic of Shanghai, shaking an imaginary frill
with the graceful ease of one of Louis XV.'s noblemen.

At this point, Madame Caterna came up. She was in every way worthy of her husband, sent into the world to
reply to him in life as on the stage, one of those genial theater folks, born one knows not where or how, but
thoroughly genuine and good-natured.

"I beg to introduce you to Caroline Caterna," said the actor, in much the same tone as he would have introduced
me to Patti or Sarah Bernhardt.

"Having shaken hands with your husband," said I, "I shall be happy to shake hands with you, Madame Caterna."

"There you are, then," said the actress, "and without ceremony, foot to the front, and no prompting."

"As you see, no nonsense about her, and the best of wives--"

"As he is the best of husbands."

"I believe I am, Monsieur Claudius," said the actor, "and why? Because I believe that marriage consists entirely
in the precept to which husbands should always conform, and that is, that what the wife likes the husband should eat
often."

It will be understood that it was touching to see this honest give-and-take, so different from the dry business
style of the two commercials who were in conversation in the adjoining car.

But here is Baron Weisschnitzerdörfer, wearing a traveling cap, coming out of the dining car, where I imagine
he has not spent his time consulting the time-table.

"The good man of the hat trick!" said Caterna, after the baron went back into the car without favoring us with a
salute.

"He is quite German enough!" said Madame Caterna.

"And to think that Henry Heine called those people sentimental oaks!" I added.

"Then he could not have known that one!" said Caterna. "Oak, I admit, but sentimental--"

"Do you know why the baron has patronized the Grand Transasiatic?" I asked.

"To eat sauerkraut at Pekin!" said Caterna.

"Not at all. To rival Miss Nelly Bly. He is trying to get around the world in thirty-nine days."

"Thirty-nine days!" exclaimed Caterna. "You should say a hundred and thirty-nine!"

And in a voice like a husky clarinet the actor struck up the well-known air from the Cloches de Corneville:

"I thrice have been around the world."
CHAPTER X.

At a quarter-past twelve our train passed the station of Kari Bata, which resembles one of the stations on the line from Naples to Sorrento, with its Italian roofs. I noticed a vast Asiatico-Russian camp, the flags waving in the fresh breeze. We have entered the Mervian oasis, eighty miles long and eight wide, and containing about six hundred thousand hectares--there is nothing like being precise at the finish. Right and left are cultivated fields, clumps of fine trees, an uninterrupted succession of villages, huts among the thickets, fruit gardens between the houses, flocks of sheep and herds of cattle among the pastures. All this rich country is watered by the Mourgab--the White Water--or its tributaries, and pheasants swarm like crows on the plains of Normandy. At one o'clock in the afternoon the train stopped at Merv Station, over five hundred miles from Uzun Ada.

The town has been often destroyed and rebuilt. The wars of Turkestan have not spared it. Formerly, it seems, it was a haunt of robbers and bandits, and it is a pity that the renowned Ki-Tsang did not live in those days. Perhaps he would have become a Genghis Khan?

Major Noltitz told me of a Turkoman saying to the following effect: "If you meet a Mervian and a viper, begin by killing the Mervian and leave the viper till afterwards."

I fancy it would be better to begin with killing the viper now that the Mervian has become a Russian.

We have seven hours to stop at Merv. I shall have time to visit this curious town. Its physical and moral transformation has been profound, owing to the somewhat arbitrary proceedings of the Russian administration. It is fortunate that its fortress, five miles round, built by Nour Verdy in 1873, was not strong enough to prevent its capture by the czar, so that the old nest of malefactors has become one of the most important cities of the Transcaspian.

I said to Major Noltitz:
"If it is not trespassing on your kindness, may I ask you to go with me?"
"Willingly," he answered; "and as far as I am concerned, I shall be very pleased to see Merv again."

We set out at a good pace.

"I ought to tell you," said the major, "that it is the new town we are going to see."

"And why not the old one first? That would be more logical and more chronological."

"Because old Merv is eighteen miles away, and you will hardly see it as you pass. So you must refer to the accurate description given of it by your great geographer Elisée Reclus."

And certainly readers will not lose anything by the change.

The distance from the station to new Merv is not great. But what an abominable dust! The commercial town is built on the left of the river--a town in the American style, which would please Ephrinell, wide streets straight as a line crossing at right angles; straight boulevards with rows of trees; much bustle and movement among the merchants in Oriental costume, in Jewish costume, merchants of every kind; a number of camels and dromedaries, the latter much in request for their powers of withstanding fatigue and which differ in their hinder parts from their African congenerers. Not many women along the sunny roads which seem white hot. Some of the feminine types are, however, sufficiently remarkable, dressed out in a quasi-military costume, wearing soft boots and a cartouche belt in the Circassian style. You must take care of the stray dogs, hungry brutes with long hair and disquieting fangs, of a breed reminding one of the dogs of the Caucasus, and these animals--according to Boulangier the engineer--have eaten a Russian general.

"Not entirely," replies the major, confirming the statement. "They left his boots."

In the commercial quarter, in the depths of the gloomy ground floors, inhabited by the Persians and the Jews, within the miserable shops are sold carpets of incredible fineness, and colors artistically combined, woven mostly by old women without any Jacquard cards.

On both banks of the Mourgab the Russians have their military establishment. There parade the Turkoman soldiers in the service of the czar. They wear the blue cap and the white epaulettes with their ordinary uniform, and drill under the orders of Russian officers.

A wooden bridge, fifty yards long, crosses the river. It is practicable not only for foot-passengers, but for trains, and telegraph wires are stretched above its parapets.

On the opposite bank is the administrative town, which contains a considerable number of civil servants, wearing the usual Russian cap.

In reality the most interesting place to see is a sort of annexe, a Tekke village, in the middle of Merv, whose inhabitants have retained the villainous characteristics of this decaying race, the muscular bodies, large ears, thick
lips, black beard. And this gives the last bit of local color to be found in the new town.

At a turning in the commercial quarter we met the commercials, American and English.

"Mr. Ephrinell," I said, "there is nothing curious in this modern Merv."

"On the contrary, Mr. Bombarnac, the town is almost Yankee, and it will soon see the day when the Russians will give it tramways and gaslights!"

"That will come!"

"I hope it will, and then Merv will have a right to call itself a city."

"For my part, I should have preferred a visit to the old town, with its mosque, its fortress, and its palace. But that is a little too far off, and the train does not stop there, which I regret."

"Pooh!" said the Yankee. "What I regret is, that there is no business to be done in these Turkoman countries! The men all have teeth--"

"And the women all have hair," added Horatia Bluett.

"Well, miss, buy their hair, and you will not lose your time."

"That is exactly what Holmes-Holme of London will do as soon as we have exhausted the capillary stock of the Celestial Empire."

And thereupon the pair left us.

I then suggested to Major Noltitz--it was six o'clock--to dine at Merv, before the departure of the train. He consented, but he was wrong to consent. An ill-fortune took us to the Hotel Slav, which is very inferior to our dining car--at least as regards its bill of fare. It contained, in particular, a national soup called "borchtch," prepared with sour milk, which I would carefully refrain from recommending to the gourmets of the Twentieth Century.

With regard to my newspaper, and that telegram relative to the mandarin our train is "conveying" in the funereal acceptation of the word? Has Popof obtained from the mutes who are on guard the name of this high personage?

Yes, at last! And hardly are we within the station than he runs up to me, saying:

"I know the name."

"And it is?"

"Yen Lou, the great mandarin Yen Lou of Pekin."

"Thank you, Popof."

I rush to the telegraph office, and from there I send a telegram to the Twentieth Century.

"Merv, 16th May, 7 p.m.

"Train, Grand Transasiatic, just leaving Merv. Took from Douchak the body of the great mandarin Yen Lou coming from Persia to Pekin."

It cost a good deal, did this telegram, but you will admit it was well worth its price.

The name of Yen Lou was immediately communicated to our fellow travelers, and it seemed to me that my lord Faruskiar smiled when he heard it.

We left the station at eight o'clock precisely. Forty minutes afterwards we passed near old Merv, and the night being dark I could see nothing of it. There was, however, a fortress with square towers and a wall of some burned bricks, and ruined tombs, and a palace and remains of mosques, and a collection of archaeological things, which would have run to quite two hundred lines of small text.

"Console yourself," said Major Noltitz. "Your satisfaction could not be complete, for old Merv has been rebuilt four times. If you had seen the fourth town, Bairam Ali of the Persian period, you would not have seen the third, which was Mongol, still less the Musalman village of the second epoch, which was called Sultan Sandjar Kala, and still less the town of the first epoch. That was called by some Iskander Kala, in honor of Alexander the Macedonian, and by others Ghiaour Kala, attributing its foundation to Zoroaster, the founder of the Magian religion, a thousand years before Christ. So I should advise you to put your regrets in the waste-paper basket."

And that is what I did, as I could do no better with them.

Our train is running northeast. The stations are twenty or thirty versts apart. The names are not shouted, as we make no stop, and I have to discover them on my time-table. Such are Keltchi, Ravina--why this Italian name in this Turkoman province?--Peski, Repetek, etc. We cross the desert, the real desert without a thread of water, where artesian wells have to be sunk to supply the reservoirs along the line.

The major tells me that the engineers experienced immense difficulty in fixing the sandhills on this part of the railway. If the palisades had not been sloped obliquely, like the barbs of a feather, the line would have been covered by the sand to such an extent as to stop the running of the trains. As soon as this region of sandhills had been passed we were again on the level plain on which the rails had been laid so easily.

Gradually my companions go to sleep, and our carriage is transformed into a sleeping car.

I then return to my Roumanian. Ought I to attempt to see him to-night? Undoubtedly; and not only to satisfy a very natural curiosity, but also to calm his anxiety. In fact, knowing his secret is known to the person who spoke to...
him through the panel of his case, suppose the idea occurred to him to get out at one of the stations, give up his journey, and abandon his attempt to rejoin Mademoiselle Zinca Klork, so as to escape the company's pursuit? That is possible, after all, and my intervention may have done the poor fellow harm--to say nothing of my losing No. 11, one of the most valuable in my collection.

I am resolved to visit him before the coming dawn. But, in order to be as careful as possible, I will wait until the train has passed Tchardjoui, where it ought to arrive at twenty-seven past two in the morning. There we shall stop a quarter of an hour before proceeding towards the Amu-Daria. Popof will then retire to his den, and I shall be able to slip into the van, without fear of being seen.

How long the hours appear! Several times I have almost fallen asleep, and twice or thrice I have had to go out into the fresh air on the platform.

The train enters Tchardjoui Station to the minute. It is an important town of the Khanate of Bokhara, which the Transcaspian reached towards the end of 1886, seventeen months after the first sleeper was laid. We are not more than twelve versts from the Amu-Daria, and beyond that river I shall enter on my adventure.

I have said that the stop at Tchardjoui ought to last a quarter of an hour. A few travelers alight, for they have booked to this town which contains about thirty thousand inhabitants. Others get in to proceed to Bokhara and Samarkand, but these are only second-class passengers. This produces a certain amount of bustle on the platform.

I also get out and take a walk up and down by the side of the front van, and I notice the door silently open and shut. A man creeps out on to the platform and slips away through the station, which is dimly lighted by a few petroleum lamps.

It is my Roumanian. It can be no one else. He has not been seen, and there he is, lost among the other travelers. Why this escape? Is it to renew his provisions at the refreshment bar? On the contrary, is not his intention, as I am afraid it is, to get away from us?

Shall I stop him? I will make myself known to him; promise to help him. I will speak to him in French, in English, in German, in Russian--as he pleases. I will say to him: "My friend, trust to my discretion; I will not betray you. Provisions? I will bring them to you during the night. Encouragements? I will heap them on you as I will the refreshments. Do not forget that Mademoiselle Zinca Klork, evidently the most lovely of Roumanians, is expecting you at Pekin, etc."

Behold me then following him without appearing to do so. Amid all this hurry to and fro he is in little danger of being noticed. Neither Popof nor any of the company's servants would suspect him to be a swindler. Is he going towards the gate to escape me?

No! He only wants to stretch his legs better than he can do in the van. After an imprisonment which has lasted since he left Baku--that is to say, about sixty hours--he has earned ten minutes of freedom.

He is a man of middle height, lithe in his movements, and with a gliding kind of walk. He could roll himself up like a cat and find quite room enough in his case. He wears an old vest, his trousers are held up by a belt, and his cap is a fur one--all of dark color.

I am at ease regarding his intentions. He returns towards the van, mounts the platform, and shuts the door gently behind him. As soon as the train is on the move I will knock at the panel, and this time--

More of the unexpected. Instead of waiting at Tchardjoui one-quarter of an hour we have to wait three. A slight injury to one of the brakes of the engine has had to be repaired, and, notwithstanding the German baron's remonstrances, we do not leave the station before half-past three, as the day is beginning to dawn.

It follows from this that if I cannot visit the van I shall at least see the Amou-Daria.

The Amou-Daria is the Oxus of the Ancients, the rival of the Indus and the Ganges. It used to be a tributary of the Caspian, as shown on the maps, but now it flows into the Sea of Aral. Fed by the snows and rains of the Pamir plateau, its sluggish waters flow between low clay cliffs and banks of sand. It is the River-Sea in the Turkoman tongue, and it is about two thousand five hundred kilometres long.

The train crosses it by a bridge a league long, the line being a hundred feet and more above its surface at low water, and the roadway trembles on the thousand piles which support it, grouped in fives between each of the spans, which are thirty feet wide.

In ten months, at a cost of thirty-five thousand roubles, General Annenkof built this bridge, the most important one on the Grand Transasiatic.

The river is of a dull-yellow color. A few islands emerge from the current here and there, as far as one can see. Popof pointed out the stations for the guards on the parapet of the bridge.

"What are they for?" I asked.

"For the accommodation of a special staff, whose duty it is to give the alarm in case of fire, and who are provided with fire-extinguishers."

This is a wise precaution. Not only have sparks from the engines set it on fire in several places, but there are
other disasters possible. A large number of boats, for the most part laden with petroleum, pass up and down the Amou-Daria, and it frequently happens that these become fire-ships. A constant watch is thus only too well justified, for if the bridge were destroyed, its reconstruction would take a year, during which the transport of passengers from one bank to the other would not be without its difficulties.

At last the train is going slowly across the bridge. It is broad daylight. The desert begins again at the second station, that of Karakoul. Beyond can be seen the windings of an affluent of the Amou-Daria, the Zarafchane, "the river that rolls with gold," the course of which extends up to the valley of the Sogd, in that fertile oasis on which stands the city of Samarkand.

At five o'clock in the morning the train stops at the capital of the Khanate of Bokhara, eleven hundred and seven versits from Uzun Ada.

CHAPTER XI.
The Khanates of Bokhara and Samarkand used to form Sogdiana, a Persian satrapy inhabited by the Tadjiks and afterwards by the Usbegs, who invaded the country at the close of the fifteenth century. But another invasion, much more modern, is to be feared, that of the sands, now that the saksaous intended to bring the sandhills to a standstill, have almost completely disappeared.

Bokhara, the capital of the Khanate, is the Rome of Islam, the Noble City, the City of Temples, the revered centre of the Mahometan religion. It was the town with the seven gates, which an immense wall surrounded in the days of its splendor, and its trade with China has always been considerable. Today it contains eighty thousand inhabitants.

I was told this by Major Noltitz, who advised me to visit the town in which he had lived several times. He could not accompany me, having several visits to pay. We were to start again at eleven o'clock in the morning. Five hours only to wait and the town some distance from the railway station! If the one were not connected with the other by a Decauville—a French name that sounds well in Sogdiana—time would fail for having even a slight glimpse of Bokhara.

It is agreed that the major will accompany me on the Decauville; and when we reach our destination he will leave me to attend to his private affairs. I cannot reckon on him. Is it possible that I shall have to do without the company of any of my numbers?

Let us recapitulate. My Lord Faruskiar? Surely he will not have to worry himself about the mandarin Yen Lou, shut up in this traveling catafalque! Fulk Ephrinell and Miss Horatia Bluett? Useless to think of them when we are talking about palaces, minarets, mosques and other archaeological inutilities. The actor and the actress? Impossible, for Madame Caterna is tired, and Monsieur Caterna will consider it his duty to stay with her. The two Celestials? They have already left the railway station. Ah! Sir Francis Trevellyan. Why not? I am not a Russian, and it is the Russians he cannot stand. I am not the man who conquered Central Asia. I will try and open this closely shut gentleman.

I approach him; I bow; I am about to speak. He gives me a slight inclination and turns on his heel and walks off! The animal!

But the Decauville gives its last whistle. The major and I occupy one of the open carriages. Half an hour afterwards we are through the Dervaze gate, the major leaves me, and here am I, wandering through the streets of Bokhara.

If I told the readers of the Twentieth Century that I visited the hundred schools of the town, its three hundred mosques—almost as many mosques as there are churches in Rome, they would not believe me, in spite of the confidence that reporters invariably receive. And so I will confine myself to the strict truth.

As I passed along the dusty roads of the city, I entered at a venture any of the buildings I found open. Here it was a bazaar where they sold cotton materials of alternate colors called "al adjas," handkerchiefs as fine as spider webs, leather marvelously worked, silks the rustle of which is called "tchakhtchukh," in Bokhariot, a name that Meilhac and Halevy did wisely in not adopting for their celebrated heroine. There it was a shop where you could buy sixteen sorts of tea, eleven of which are green, that being the only kind used in the interior of China and Central Asia, and among these the most sought after, the "louka," one leaf of which will perfume a whole teapot.

Farther on I emerged on the quay of the Divanbeghi, reservoirs, bordering one side of a square planted with elms. Not far off is the Arche, which is the fortified palace of the emir and has a modern clock over the door. Arminius Vambery thought the palace had a gloomy look, and so do I, although the bronze cannon which defend the entrance appear more artistic than destructive. Do not forget that the Bokhariot soldiers, who perambulate the streets in white breeches, black tunicas, astrakan caps, and enormous boots, are commanded by Russian officers freely decorated with golden embroidery.
Near the palace to the right is the largest mosque of the town, the mosque of Mesjidi Kelan, which was built by Abdallah Khan Sheibani. It is a world of cupolas, clock towers, and minarets, which the storks appear to make their home, and there are thousands of these birds in the town.

Rambles on at a venture I reach the shores of the Zarafchane on the northeast of the town. Its fresh limpid waters fill its bed once or twice a fortnight. Excellent this for health! When the waters appear men, women, children, dogs, bipeds, quadrupeds, bathe together in tumultuous promiscuousness, of which I can give no idea, nor recommend as an example.

Going northwest towards the centre of the city, I came across groups of dervishes with pointed hats, a big stick in their hands, their hair straggling in the breeze, stopping occasionally to take their part in a dance which would not have disgraced the fanatics of the Elysée Montmartre during a chant, literally vociferated, and accentuated by the most characteristic steps.

Let us not forget that I went through the book market. There are no less than twenty-six shops where printed books and manuscripts are sold, not by weight like tea or by the box like vegetables, but in the ordinary way. As to the numerous "medresses," the colleges which have given Bokhara its renown as a university--I must confess that I did not visit one. Weary and worn I sat down under the elms of the Divanbeghi quay. There, enormous samovars are continually on the boil, and for a "tenghe," or six pence three farthings, I refreshed myself with "shivin," a tea of superior quality which only in the slightest degree resembles that we consume in Europe, which has already been used, so they say, to clean the carpets in the Celestial Empire.

That is the only remembrance I retain of the Rome of Turkestan. Besides, as I was not able to stay a month there, it was as well to stay there only a few hours.

At half-past ten, accompanied by Major Noltitz, whom I found at the terminus of the Decauville, I alighted at the railway station, the warehouses of which are crowded with bales of Bokhariot cotton, and packs of Mervian wool.

I see at a glance that all my numbers are on the platform, including my German baron. In the rear of the train the Persians are keeping faithful guard round the mandarin Yen Lou. It seems that three of our traveling companions are observing them with persistent curiosity; these are the suspicious-looking Mongols we picked up at Douchak. As I pass near them I fancy that Faruskiar makes a signal to them, which I do not understand. Does he know them? Anyhow, this circumstance rather puzzles me.

The train is no sooner off than the passengers go to the dining car. The places next to mine and the major's, which had been occupied since the start, are now vacant, and the young Chinaman, followed by Dr. Tio-King, take advantage of it to come near us. Pan Chao knows I am on the staff of the Twentieth Century, and he is apparently as desirous of talking to me as I am of talking to him.

I am not mistaken. He is a true Parisian of the boulevard, in the clothes of a Celestial. He has spent three years in the world where people amuse themselves, and also in the world where they learn. The only son of a rich merchant in Pekin, he has traveled under the wing of this Tio-King, a doctor of some sort, who is really the most stupid of baboons, and of whom his pupil makes a good deal of fun.

Dr. Tio-King, since he discovered Cornaro's little book on the quays of the Seine, has been seeking to make his existence conform to the "art of living long in perfect health." This credulous Chinaman of the Chinese had become thoroughly absorbed in the study of the precepts so magisterially laid down by the noble Venetian. And Pan Chao is always chaffing him thereupon, though the good man takes no notice.

We were not long before we had a few specimens of his monomania, for the doctor, like his pupil, spoke very good French.

"Before we begin," said Pan Chao, "tell me, doctor, how many fundamental rules there are for finding the correct amounts of food and drink?"

"Seven, my young friend," replied Tio-King with the greatest seriousness. "The first is to take only just so much nourishment as to enable you to perform the purely spiritual functions."

"And the second?"

"The second is to take only such an amount of nourishment as will not cause you to feel any dullness, or heaviness, or bodily lassitude. The third--"

"Ah! We will wait there, to-day, if you don't mind, doctor," replied Pan Chao. "Here is a certain maintuy, which seems rather good, and--"

"Take care, my dear pupil! That is a sort of pudding made of hashed meat mixed with fat and spices. I fear it may be heavy--"

"Then, doctor, I would advise you not to eat it. For my part, I will follow these gentlemen."

And Pan Chao did--and rightly so, for the maintuy was delicious--while Doctor Tio-King contented himself with the lightest dish on the bill of fare. It appeared from what Major Noltitz said that these maintuys fried in fat are even more savory. And why should they not be, considering that they take the name of "zenbusis," which signifies
"women’s kisses?"

When Caterna heard this flattering phrase, he expressed his regret that zenbusis did not figure on the breakfast table. To which his wife replied by so tender a look that I ventured to say to him:

"You can find zenbusis elsewhere than in Central Asia, it seems to me."

"Yes," he replied, "they are to be met with wherever there are lovable women to make them."

And Pan Chao added, with a laugh:

"And it is again at Paris that they make them the best."

He spoke like a man of experience, did my young Celestial.

I looked at Pan Chao; I admired him.

How he eats! What an appetite! Not of much use to him are the observations of the doctor on the immoderate consumption of his radical humidity.

The breakfast continued pleasantly. Conversation turned on the work of the Russians in Asia. Pan Chao seemed to me well posted up in their progress. Not only have they made the Transcaspian, but the Transsiberian, surveyed in 1888, is being made, and is already considerably advanced. For the first route through Iscim, Omsk, Tomsk, Krasnojarsk, Nijni-Ufimsk, and Irkutsk, a second route has been substituted more to the south, passing by Orenburg, Akmolinsk, Minoussinsk, Abatoni and Vladivostock. When these six thousand kilometres of rails are laid, Petersburg will be within six days of the Japan Sea. And this Transsiberian, which will exceed in length the Transcontinental of the United States, will cost no more than seven hundred and fifty millions.

It will be easily imagined that this conversation on the Russian enterprise is not very pleasing to Sir Francis Trevellyan. Although he says not a word and does not lift his eyes from the plate, his long face flushes a little.

"Well, gentlemen," said I, "what we see is nothing to what our nephews will see. We are traveling to-day on the Grand Transasiatic. But what will it be when the Grand Transasiatic is in connection with the Grand Transafrican."

"And how is Asia to be united by railway with Africa?" asked Major Noltitz.

"Through Russia, Turkey, Italy, France and Spain. Travelers will go from Pekin to the Cape of Good Hope without change of carriage."

"And the Straits of Gibraltar?" asked Pan Chao.

At this Sir Francis Trevellyan raised his ears.

"Yes, Gibraltar?" said the major.

"Go under it!" said I. "A tunnel fifteen kilometres long is a mere nothing! There will be no English Parliament to oppose it as there is to oppose that between Dover and Calais! It will all be done some day, all--and that will justify the vein:

"Omnia jam fieri quae posse negabam."

My sample of Latin erudition was only understood by Major Noltitz, and I heard Caterna say to his wife:

"That is volapuk."

"There is no doubt," said Pan Chap, "that the Emperor of China has been well advised in giving his hand to the Russians instead of the English. Instead of building strategic railways in Manchouria, which would never have had the approbation of the czar, the Son of Heaven has preferred to continue the Transcaspian across China and Chinese Turkestan."

"And he has done wisely," said the major. "With the English it is only the trade of India that goes to Europe, with the Russians it is that of the whole Asiatic continent."

I look at Sir Francis Trevellyan. The color heightens on his cheeks, but he makes no movement. I ask if these attacks in a language he understands perfectly will not oblige him to speak out. And yet I should have been very much embarrassed if I had had to bet on or against it.

Major Noltitz then resumed the conversation by pointing out the incontestable advantages of the Transasiatic with regard to the trade between Grand Asia and Europe in the security and rapidity of its communications. The old hatreds will gradually disappear under European influence, and in that respect alone Russia deserves the approbation of every civilized nation. Is there not a justification for those fine words of Skobeleff after the capture of Gheok Tepe, when the conquered feared reprisals from the victors: "In Central Asian politics we know no outcasts?"

"And in that policy," said the major, "lies our superiority over England."

"No one can be superior to the English."

Such was the phrase I expected from Sir Francis Trevellyan--the phrase I understand English gentlemen always use when traveling about the world. But he said nothing. But when I rose to propose a toast to the Emperor of Russia and the Russians, and the Emperor of China and the Chinese, Sir Francis Trevellyan abruptly left the table. Assuredly I was not to have the pleasure of hearing his voice to-day.

I need not say that during all this talk the Baron Weisschnitzerdörfer was fully occupied in clearing dish after dish, to the extreme amazement of Doctor Tio-King. Here was a German who had never read the precepts of
Cornaro, or, if he had read them, transgressed them in the most outrageous fashion.

For the same reason, I suppose, neither Faruskiar nor Ghangir took part in it, for they only exchanged a few words in Chinese.

But I noted rather a strange circumstance which did not escape the major.

We were talking about the safety of the Grand Transasiatic across Central Asia, and Pan Chao had said that the road was not so safe as it might be beyond the Turkestan frontier, as, in fact, Major Noltitz had told me. I was then led to ask if he had ever heard of the famous Ki Tsang before his departure from Europe.

"Often," he said, "for Ki Tsang was then in the Yunnan provinces. I hope we shall not meet him on our road."

My pronunciation of the name of the famous bandit was evidently incorrect, for I hardly understood Pan Chao when he repeated it with the accent of his native tongue.

But one thing I can say, and that is that when he uttered the name of Ki Tsang, Faruskiar knitted his brows and his eyes flashed. Then, with a look at his companion, he resumed his habitual indifference to all that was being said around him.

Assuredly I shall have some difficulty in making the acquaintance of this man. These Mongols are as close as a safe, and when you have not the word it is difficult to open them.

The train is running at high speed. In the ordinary service, when it stops at the eleven stations between Bokhara and Samarkand, it takes a whole day over the distance. This time it took but three hours to cover the two hundred kilometres which separate the two towns, and at two o'clock in the afternoon it entered the illustrious city of Tamerlane.

CHAPTER XII.

Samarkand is situated in the rich oasis watered by the Zarafchane in the valley of Sogd. A small pamphlet I bought at the railway station informs me that this great city is one of the four sites in which geographers "agree" to place the terrestrial paradise. I leave this discussion to the exegetists of the profession.

Burned by the armies of Cyrus in B.C. 329, Samarkand was in part destroyed by Genghis Khan, about 1219. When it had become the capital of Tamerlane, its position, which certainly could not be improved upon, did not prevent its being ravaged by the nomads of the eighteenth century. Such alternations of grandeur and ruin have been the fate of all the important towns of Central Asia.

We had five hours to stop at Samarkand during the day, and that promised something pleasant and several pages of copy. But there was no time to lose. As usual, the town is double; one half, built by the Russians, is quite modern, with its verdant parks, its avenues of birches, its palaces, its cottages; the other is the old town, still rich in magnificent remains of its splendor, and requiring many weeks to be conscientiously studied.

This time I shall not be alone. Major Noltitz is free; he will accompany me. We had already left the station when the Caternas presented themselves.

"Are you going for a run round the town, Monsieur Claudius?" asked the actor, with a comprehensive gesture to show the vast surroundings of Samarkand.

"Such is our intention."

"Will Major Noltitz and you allow me to join you?"

"How so?"

"With Madame Caterna, for I do nothing without her."

"Our explorations will be so much the more agreeable," said the major, with a bow to the charming actress.

"And," I added, with a view to save fatigue and gain time, "my dear friends, allow me to offer you an arba."

"An arba!" exclaimed Caterna, with a swing of his hips. "What may that be, an arba?"

"One of the local vehicles."

"Let us have an arba."

We entered one of the boxes on wheels which were on the rank in front of the railway station. Under promise of a good "silao," that is to say, something to drink, the yemtchik or coachman undertook to give wings to his two doves, otherwise his two little horses, and we went off at a good pace.

On the left we leave the Russian town, arranged like a fan, the governor's house, surrounded by beautiful gardens, the public park and its shady walks, then the house of the chief of the district which is just on the boundary of the old town.

As we passed, the major showed us the fortress, round which our arba turned. There are the graves of the Russian soldiers who died in the attack in 1868, near the ancient palace of the Emir of Bokhara.

From this point, by a straight narrow road, our arba reached the Righistan square, which, as my pamphlet says, "must not be confounded with the square of the same name at Bokhara."
It is a fine quadrilateral, perhaps a little spoiled by the fact that the Russians have paved it and ornamented it with lamps—which would certainly, please Ephrinell, if he decides upon visiting Samarkand. On three sides of the square are the well-preserved ruins of three medresses, where the mollahs give children a good education. These medresses—there are seventeen of these colleges at Samarkand, besides eighty-five mosques—are called Tilla-Kari, Chir Dar and Oulong Beg.

In a general way they resemble each other; a portico in the middle leading to interior courts, built of enameled brick, tinted pale blue or pale yellow, arabesques designed in gold lines on a ground of turquoise blue, the dominant color; leaning minarets threatening to fall and never falling, luckily for their coating of enamel, which the intrepid traveller Madame De Ujfalvy-Bourdon, declares to be much superior to the finest of our crackle enamels—and these are not vases to put on a mantelpiece or on a stand, but minarets of good height.

These statues are still in the state described by Marco Polo, the Venetian traveler of the thirteenth century.

"Well, Monsieur Bombarnac," asked the major, "do you not admire the square?"

"It is superb," I say.

"Yes," says the actor, "what a splendid scene it would make for a ballet, Caroline! That mosque, with a garden alongside, and that other one with a court--"

"You are right, Adolphe," said his wife; "but we would have to put those towers up straight and have a few luminous fountains."

"Excellent notion, Caroline! Write us a drama, Monsieur Claudius, a spectacle piece, with a third act in this square. As for the title--"

"Tamerlane is at once suggested!" I reply. The actor made a significant grimace. The conqueror of Asia seemed to him to be wanting in actuality. And leaning toward his wife, Caterina hastened to say:

"As a scene, I have seen a better at the Porte-Saint Martin, in the Fils de la Nuit--"

"And I have at the Châtelet in Michael Strogoff."

We cannot do better than leave our comedians alone. They look at everything from the theatrical point of view. They prefer the air gauze and the sky-blue foliage, the branches of the stage trees, the agitated canvas of the ocean waves, the prospectives of the drop scene, to the sites the curtain represents, a set scene by Cambon or Rubé or Jambon to no matter what landscape; in short, they would rather have art than nature. And I am not the man to try and change their opinions on the subject.

As I have mentioned the name of Tamerlane, I asked Major Noltitz if we were going to visit the tomb of the famous Tartar. The major replied that we would see it as we returned; and our itinerary brought us in front of the Samarkand bazaar.

The arba stopped at one of the entrances to this vast rotunda, after taking us in and out through the old town, the houses of which consist of only one story, and seem very comfortless.

Here is the bazaar in which are accumulated enormous quantities of woollen stuffs, velvet-pile carpets in the brightest of colors, shawls of graceful patterns, all thrown anyhow on the counters of the shops. Before these samples the sellers and buyers stand, noisily arriving at the lowest price. Among the fabrics is a silk tissue known as Kanaous, which is held in high esteem by the Samarkand ladies, although they are very far from appreciating the similar product of Lyons manufacture, which it excels neither in quality nor appearance.

Madame Caterina appeared extraordinarily tempted, as if she were among the counters of the Bon Marché or the Louvre.

"That stuff would do well for my costume in the Grande Duchesse!" she said.

"And those slippers would suit me down to the ground as Ali Bajou in the Caid!" said Caterina.

And while the actress was investing in a remnant of Kanaous, the actor paid for a pair of those green slippers which the Turkomans wear when they enter a mosque. But this was not without recourse to the kindness of the major, who acted as interpreter between the Caterinas and the merchant, whose "Yoks! Yoks!" sounded like a lot of crackers in his large mouth.

The arba started again and went off toward the square of Ribi-Khanym, where stands the mosque of that name which was that of one of Tamerlane's wives. If the square is not as regular as that of Righistan, it is in my opinion rather more picturesque. There are strangely grouped ruins, the remains of arcades, half-unroofed cupolas, columns without capitals, the shafts of which have retained all the brightness of their enamelling; then a long row of elliptical porticoes closing in one side of the vast quadrilateral. The effect is really grand, for these old monuments of the splendor of Samarkand stand out from a background of sky and verdure that you would seek in vain, even at the Grand Opera, if our actor does not object. But I must confess we experienced a deeper impression when, toward the northeast of the town, our arba deposited us in front of the finest of the mosques of Central Asia, which dates from the year 795 of the Hegira (1392 of our era).

I cannot, writing straight away, give you an idea of this marvel. If I were to thread the words, mosaics,
pediments, spandrels, bas-reliefs, niches, enamels, corbels, all on a string in a sentence, the picture would still be incomplete. It is strokes of the brush that are wanted, not strokes of the pen. Imagination remains abashed at the remains of the most splendid architecture left us by Asiatic genius.

It is in the farthest depths of this mosque that the faithful go to worship at the tomb of Kassimben-Abbas, a venerated Mussulman saint, and we are told that if we open the tomb a living man will come forth from it in all his glory. But the experiment has not been made as yet, and we prefer to believe in the legend.

We had to make an effort to throw off our contemplative mood; and fortunately the Caternas did not trouble our ecstasy by evoking any of their recollections of the theater. Doubtless they had shared in our impressions.

We resumed our seats in the arba, and the yemtchik took us at the gallop of his doves along shady roads which the Russian administration keeps up with care.

Along these roads we met and passed many figures worthy of notice. Their costumes were varied enough, "Khalats," in startling colors, and their heads enturbaned most coquettishly. In a population of forty thousand there was, of course, a great mingling of races. Most of them seemed to be Tadjiks of Iranian origin. They are fine strong fellows, whose white skin has disappeared beneath the tan of the open air and the unclouded sun. Here is what Madame de Ujfalvy-Bourdon says of them in her interesting book: "Their hair is generally black, as is also their beard, which is very abundant. Their eyes are never turned up at the corners, and are almost always brown. The nose is very handsome, the lips are not thick, the teeth are small. The forehead is high, broad, and the general shape of the face is oval."

And I cannot refrain from mentioning a note of approval from Caterna when he saw one of these Tadjiks superbly draped in his many-colored Khalat.

"What a splendid lead! What an admirable Melingue! You can see him in Richips's Nana Sahib or Meurice's Schamyl."

"He would make a lot of money! replied Madame Caterna.

"He just would--I believe you, Caroline!" replied the enthusiastic actor.

And for him, as for all other theatrical folks, is not the money the most serious and the least disputable manifestation of the dramatic art?

It was already five o'clock, and in this incomparable city of Samarkand scene succeeded scene. There! I am getting into that way of looking at it now. Certainly the spectacle should finish before midnight. But as we start at eight o'clock, we shall have to lose the end of the piece. But as I considered that, for the honor of special correspondents in general, it would never do to have been at Samarkand without seeing Tamerlane's tomb, our arba returned to the southwest, and drew up near the mosque of Gour Emir, close to the Russian town. What a sordid neighborhood, what a heap of mud huts and straw huts, what an agglomeration of miserable hovels we have just been through!

The mosque has a grand appearance. It is crowned with its dome, in which the raw blue of the turquoise is the chief color, and which looks like a Persian cap; and on its only minaret, which has now lost its head, there glitter the enamelled arabesques which have retained their ancient purity.

We visited the central hall beneath the cupola. There stands the tomb of the lame Timour the Conqueror. Surrounded by the four tombs of his sons and his patron saint, beneath a stone of black jade covered with inscriptions, whiten the bones of Tamerlane, in whose name is gathered the whole fourteenth century of Asiatic history. The walls of the hall are covered with slabs of jade, on which are engraven innumerable scrolls of foliage, and in the southwest stands a little column marking the direction of Mecca. Madame De Ujfalvy-Bourdon has justly compared this part of the mosque of Gour Emir to a sanctuary, and we had the same impression. This impression took a still more religious tone when, by a dark and narrow stairway, we descended to the crypt in which are the tombs of Tamerlane's wives and daughters.

"But who was this Tamerlane?" asked Caterna. "This Tamerlane everybody is talking about."

"Tamerlane," replied Major Noltitz, "was one of the greatest conquerors of the world, perhaps the greatest, if you measure greatness by the extent of the conquests. Asia to the east of the Caspian Sea, Persia and the provinces to the north of it, Russia to the Sea of Azof, India, Syria, Asia Minor, China, on which he threw two hundred thousand men--he had a whole continent as the theater of his wars."

"And he was lame!" said Madame Caterna.

"Yes, madame, like Genseric, like Shakespeare, like Byron, like Walter Scott, like Talleyrand, but that did not hinder his getting along in the world. But how fanatic and bloodthirsty he was! History affirms that at Delhi he massacred a hundred thousand captives, and at Bagdad he erected an obelisk of eighty thousand heads."

"I like the one in the Place de la Concorde better," said Caterna, "and that is only in one piece."

At this observation we left the mosque of Gour Emir, and as it was time to "hurry up," as our actor said, the arba was driven briskly toward the station.
For my part, in spite of the observations of the Caternas, I was fully in tone with the local color due to the marvels of Samarkand, when I was roughly shaken back into modern reality.

In the streets—yes—in the streets near the railway station, in the very center of Tamerlane's capital, I passed two bicyclists.

"Ah!" exclaimed Caterna. "Messrs. Wheeler!"

And they were Turkomans!

After that nothing more could be done than leave a town so dishonored by the masterpiece of mechanical locomotion, and that was what we did at eight o'clock.

CHAPTER XIII.

We dined an hour after the train left. In the dining car were several newcomers, among others two negroes whom Caterna began to speak of as darkies.

None of these travelers, Popof told me, would cross the Russo-Chinese frontier, so that they interested me little or not at all.

During dinner, at which all my numbers were present—I have twelve now, and I do not suppose I shall go beyond that—I noticed that Major Noltitz continued to keep his eye on his lordship Faruskiar. Had he begun to suspect him? Was it of any importance in his opinion that this Mongol seemed to know, without appearing to do so, the three second-class travelers, who were also Mongols? Was his imagination working with the same activity as mine, and was he taking seriously what was only a joke on my part? That I, a man of letters, a chronicler in search of scenes and incidents, should be pleased to see in his personage a rival of the famous Ki Tsang, or Ki Tsang himself, could be understood; but that he, a serious man, doctor in the Russian army, should abandon himself to such speculations no one would believe. Never mind now, we shall have something more to say about it by and by.

As for me, I had soon forgotten all about the Mongol for the man in the case. Tired as I am after that long run through Samarkand, if I get a chance to visit him to-night I will.

Dinner being over, we all begin to make ourselves comfortable for the night, with the intention of sleeping till we reach Tachkend.

The distance from Samarkand to Tachkend is three hundred kilometres. The train will not get in there before seven o'clock in the morning. It will stop three times at small stations for water and fuel—circumstances favorable to the success of my project. I add that the night is dark, the sky overcast, no moon, no stars. It threatens rain; the wind is freshening. It is no time for walking on platforms, and nobody walks there. It is important to choose the moment when Popof is sound asleep.

It is not necessary for the interview to be a long one. That the gallant fellow should be reassured—that is the essential point—and he will be, as soon as I have made his acquaintance. A little information concerning him, concerning Mademoiselle Zinca Klork, whence he comes, why he is going to Pekin, why he chose such a mode of transport, his provisions for the journey, how he gets into the case, his age, his trade, his birthplace, what he has done in the past, what he hopes to do in the future, etc., etc., and I have done all that a conscientious reporter can do. That is what I want to know; that is what I will ask him. It is not so very much.

And in the first place let us wait until the car is asleep. That will not be long, for my companions are more or less fatigued by the hours they have spent in Samarkand. The beds were ready immediately after dinner. A few of the passengers tried a smoke on the platform, but the gust drove them in very quickly. They have all taken up their places under the curtained lamps, and toward half-past ten the respiration of some and the snoring of others are blended with the continued grinding of the train on the steel rails.

I remained outside last of all, and Popof exchanged a few words with me.

"We shall not be disturbed to-night," he said to me, "and I would advise you to make the most of it. To-morrow night we shall be running through the defiles of the Pamir, and we shall not travel so quietly, I am afraid."

"Thanks, Popof, I will take your advice, and sleep like a marmot."

Popof wished me good night and went into his cabin.

I saw no use in going back into the car, and remained on the platform. It was impossible to see anything either to the left or right of the line. The oasis of Samarkand had already been passed, and the rails were now laid across a long horizontal plain. Many hours would elapse before the train reached the Syr Daria, over which the line passes by a bridge like that over the Amou-Daria, but of less importance.

It was about half-past eleven when I decided to open the door of the van, which I shut behind me.

I knew that the young Roumanian was not always shut up in his box, and the fancy might just have taken him to stretch his limbs by walking from one end of the other of the van.

The darkness is complete. No jet of light filters through the holes of the case. That seems all the better for me. It
is as well that my No. 11 should not be surprised by too sudden an apparition. He is doubtless asleep. I will give two little knocks on the panel, I will awake him, and we will explain matters before he can move.

I feel as I go. My hand touches the case; I place my ear against the panel and I listen.

There is not a stir, not a breath! Is my man not here? Has he got away? Has he slipped out at one of the stations without my seeing him? Has my news gone with him? Really, I am most uneasy; I listen attentively.

No! He has not gone. He is in the case. I hear distinctly his regular and prolonged respiration. He sleeps. He sleeps the sleep of the innocent, to which he has no right, for he ought to sleep the sleep of the swindler of the Grand Transasiatic.

I am just going to knock when the locomotive's whistle emits its strident crow, as we pass through a station. But the train is not going to stop, I know, and I wait until the whistling has ceased.

I then give a gentle knock on the panel.

There is no reply.

However, the sound of breathing is not so marked as before.

I knock more loudly.

This time it is followed by an involuntary movement of surprise and fright.

"Open, open!" I say in Russian.

There is no reply.

"Open!" I say again. "It is a friend who speaks. You have nothing to fear!"

If the panel is not lowered, as I had hoped, there is the crack of a match being lighted and a feeble light appears in the case.

I look at the prisoner through the holes in the side.

There is a look of alarm on his face; his eyes are haggard. He does not know whether he is asleep or awake.

"Open, my friend, I say, open and have confidence. I have discovered your secret. I shall say nothing about it. On the other hand, I may be of use to you."

The poor man looks more at ease, although he does not move.

"You are a Roumanian, I think," I add, "and I am a Frenchman."

"Frenchman? You are a Frenchman?"

And this reply was given in my own language, with a foreign accent.

One more bond between us.

The panel slips along its groove, and by the light of a little lamp I can examine my No. 11, to whom I shall be able to give a less arithmetical designation.

"No one can see us, nor hear us?" he asked in a half-stifled voice.

"No one."

"The guard?"

"Asleep."

My new friend takes my hands, he clasps them. I feel that he seeks a support. He understands he can depend on me. And he murmurs:

"Do not betray me--do not betray me."

"Betray you, my boy? Did not the French newspapers sympathize with that little Austrian tailor, with those two Spanish sweethearts, who sent themselves by train in the way you are doing? Were not subscriptions opened in their favor? And can you believe that I, a journalist--"

"You are a journalist?"

"Claudius Bombarnac, special correspondent of the Twentieth Century."

"A French journal--"

"Yes, I tell you."

"And you are going to Pekin?"

"Through to Pekin."

"Ah! Monsieur Bombarnac, Providence has sent you onto my road."

"No, it was the managers of my journal, and they delegated to me the powers they hold from Providence, courage and confidence. Anything I can do for you I will."

"Thanks, thanks."

"What is your name?"

"Kinko."

"Kinko? Excellent name!"

"Excellent?"

"For my articles! You are a Roumanian, are you not?"
"Roumanian of Bucharest."
"But you have lived in France?"
"Four years in Paris, where I was apprentice to an upholsterer in the Faubourg Saint Antoine."
"And you went back to Bucharest?"
"Yes, to work at my trade there until the day came when it was impossible for me to resist the desire to leave--"
"To leave? Why?"
"To marry!"
"To marry--Mademoiselle Zinca--"
"Zinca?"
"Yes, Mademoiselle Zinca Klork, Avenue Cha-Coua, Pekin, China!"
"You know?"
"Certainly. The address is on the box."
"True."
"As to Mademoiselle Zinca Klork--"
"She is a young Roumanian. I knew her in Paris, where she was learning the trade of a milliner. Oh, charming--"
"I am sure upon it. You need not dwell on that."
"She also returned to Bucharest, until she was invited to take the management of a dressmaker's at Pekin. We loved, monsieur; she went--and we were separated for a year. Three weeks ago she wrote to me. She was getting on over there. If I could go out to her, I would do well. We should get married without delay. She had saved something. I would soon earn as much as she had. And here I am on the road--in my turn--for China."
"In this box?"
"What would you have, Monsieur Bombarnac?" asked Kinko, reddening. "I had only money enough to buy a packing case, a few provisions, and get myself sent off by an obliging friend. It costs a thousand francs to go from Tiflis to Pekin. But as soon as I have gained them, the company will be repaid, I assure you."
"I believe you, Kinko, I believe you; and on your arrival at Pekin?"
"Zinca has been informed. The box will be taken to Avenue Cha-Coua, and she--"
"Will pay the carriage?"
"Yes."
"And with pleasure, I will answer for it."
"You may be sure of it, for we love each other so much."
"And besides, Kinko, what would one not do for a sweetheart who consents to shut himself up in a box for a fortnight, and arrives labelled 'Glass,' 'Fragile,' 'Beware of damp--'"
"Ah, you are making fun of a poor fellow."
"Not at all; and you may rest assured I will neglect nothing which will enable you to arrive dry and in one piece at Mademoiselle Zinca Klork's--in short, in a perfect state of preservation!"
"Again I thank you," said Kinko, pressing my hands. "Believe me, you will not find me ungrateful."
"Ah! friend Kinko, I shall be paid, and more than paid!"
"And how?"
"By relating, as soon as I can do so without danger to you, the particulars of your journey from Tiflis to Pekin. Think now--what a heading for a column: 'A LOVER IN A BOX! ZINCA AND KINKO!! 1,500 LEAGUES THROUGH CENTRAL ASIA IN A LUGGAGE VAN!!'"

The young Roumanian could not help smiling.
"You need not be in too much of a hurry!" he said.
"Never fear! Prudence and discretion, as they say at the matrimonial agencies."

Then I went to the door of the van to see that we were in no danger of surprise, and then the conversation was resumed. Naturally, Kinko asked me how I had discovered his secret. I told him all that had passed on the steamer during the voyage across the Caspian. His breathing had betrayed him. The idea that at first I took him for a wild beast seemed to amuse him. A wild beast! A faithful poodle, rather! Then with a sneeze he went up the animal scale to human rank.

"But," said he to me, lowering his voice, "two nights ago I thought all was lost. The van was closed. I had just lighted my little lamp, and had begun my supper when a knock came against the panel--"
"I did that, Kinko, I did that. And that night we should have become acquainted if the train had not run into a dromedary."

"It was you! I breathe again!" said Kinko. "In what dreams I have lived! It was known that some one was hidden in this box. I saw myself discovered, handed over to the police, taken to prison at Merv or Bokhara, and my little
Zinca waiting for me in vain; and never should I see her again, unless I resumed the journey on foot. Well, I would have resumed, yes, I would.”

And he said it with such an air of resolution that it was impossible not to see that the young Roumanian had unusual spirit.

"Brave Kinko!" I answered. "I am awfully sorry to have caused you such apprehensions. Now you are at ease again, and I fancy your chances have improved now we have made friends."

I then asked Kinko to show me how he managed in his box.

Nothing could be simpler or better arranged. At the bottom was a seat on which he sat with the necessary space for him to stretch his legs when he placed them obliquely; under the seat, shut in by a lid, were a few provisions, and table utensils reduced to a simple pocket knife and metal mug; an overcoat and a rug hung from a nail, and the little lamp he used at nighttime was hooked onto one of the walls.

The sliding panel allowed the prisoner to leave his prison occasionally. But if the case had been placed among other packages, if the porters had not deposited it with the precautions due to its fragility, he would not have been able to work the panel, and would have had to make a friend somehow before the end of the journey. Fortunately, there is a special Providence for lovers, and divine intervention in favor of Kinko and Zinca Klork was manifested in all its plenitude. He told me that very night he had taken a walk either in the van or else on the station platform where the train had stopped.

"I know that, Kinko. That was at Bokhara. I saw you!"

"You saw me?"

"Yes, and I thought you were trying to get away. But if I saw you, it was because I knew of your presence in the van, and I was there watching you, no one else having an idea of spying on you. Nevertheless, it was dangerous; do not do it again; let me replenish your larder when I get an opportunity."

"Thank you, Monsieur Bombarnac, thank you! I do not believe I am in danger of being discovered, unless at the Chinese frontier—or rather at Kachgar."

"And why?"

"The custom house is very keen on goods going into China. I am afraid they will come round the packages, and that my box—"

"In fact, Kinko," I replied, "there are a few difficult hours for you."

"If they find me out?"

"I shall be there, and I will do all I can to prevent anything unpleasant happening."

"Ah! Monsieur Bombarnac!" exclaimed Kinko, in a burst of gratitude. "How can I repay you?"

"Very easily, Kinko."

"And in what way?"

"Ask me to your marriage with the lovely Zinca."

"I will! And Zinca will embrace you."

"She will be only doing her duty, friend Kinko, and I shall be only doing mine in returning two kisses for one."

We exchanged a last grip of the hand; and, really, I think there were tears in the good fellow's eyes when I left him. He put out his lamp, he pushed back the panel, then through the case I heard one more "thanks" and an "au revoir."

I came out of the van, I shut the door, I assured myself that Popof was still asleep. In a few minutes, after a breath or two of the night air, I go into my place near Major Noltitz.

And before I close my eyes my last thought is that, thanks to the appearance of the episodic Kinko, the journey of their energetic "Special" will not be displeasing to my readers.
Crossing a fertile region where poplars like distaffs rise gracefully erect, skirting fields bristling with vines, running by gardens where fruit trees abound, our train stops at the new town.

As is inevitable since the Russian conquest, there are two towns side by side at Tachkend as at Samarkand, as at Bokhara, as at Merv. Here the old town has tortuous streets, houses of mud and clay, bazaars of poor appearance, caravanserais built of bricks dried in the sun, a few mosques, and schools as numerous as if the czar had decreed by ukase that everything French should be imitated. It is true that the scholars are wanting, but there is no want of schools.

The population of Tachkend does not differ very much from that met with in other parts of Turkestan. It comprises Sarthes, Usbegs, Tadjiks, Khirgizes, Nogais, Israelites, a few Afghans and Hindoos and--as may be naturally supposed--a fair supply of Russians.

It is perhaps at Tachkend that the Jews are gathered in the greatest numbers. And from the day that the town passed under Russian administration their situation has considerably improved. From that epoch dates the complete civil and political liberty they now enjoy.

I have only two hours to spare in visiting the town, and I do my work in true reporter style. You should have seen me dashing through the grand bazaar, a mere wooden building, which is crammed with Oriental stuffs, silk goods, metal ware, specimens of Chinese manufacture, including some very fine examples of porcelain.

In the streets of old Tachkend a certain number of women are to be met with. I need hardly say that there are no slaves in this country, much to the displeasure of the Mussulmans. Nowadays woman is free--even in her household.

"An old Turkoman," said Major Noltitz, "once told me that a husband's power is at an end now that he cannot thrash his wife without being threatened with an appeal to the czar; and that marriage is at an end!"

I do not know if the fair sex is still beaten, but the husbands know what they may expect if they knock their wives about. Will it be believed that these peculiar Orientals can see no progress in this prohibition to beat their wives? Perhaps they remember that the Terrestrial Paradise is not far off--a beautiful garden between the Tigris and Euphrates, unless it was between the Amou and the Syr-Daria. Perhaps they have not forgotten that mother Eve lived in this preadamite garden, and that if she had been thrashed a little before her first fault, she would probably not have committed it. But we need not enlarge on that.

I did not hear, as Madam Ujfalvy-Bourdon did, the band playing the Pompiers de Nanterre in the governor-general's garden. No! On this occasion they were playing Le Pere la Victoire, and if these are not national airs they are none the less agreeable to French ears.

We left Tachkend at precisely eleven o'clock in the morning. The country through which the Grand Transasiatic is now running is not so monotonous. The plain begins to undulate, for we are approaching the outer ramifications of the eastern orographic system. We are nearing the tableland of the Pamirs. At the same time we continue at normal speed along this section of a hundred and fifty kilometres which separates us from Khodjend.

As soon as we are on the move I begin to think of Kinko. His little love romance has touched me to the heart. This sweetheart who sent himself off--this other sweetheart who is going to pay the expenses--I am sure Major Noltitz would be interested in these two turtle doves, one of which is in a cage; he would not be too hard on this defrauder of the company, he would be incapable of betraying him. Consequently I have a great desire to tell him of my expedition into the baggage van. But the secret is not mine. I must do nothing that might get Kinko into trouble.

And so I am silent, and to-night I will, if possible, take a few provisions to my packing case--to my snail in his shell, let us say. And is not the young Roumanian like a snail in his shell, for it is as much as he can do to get out of it?

We reach Khodjend about three in the afternoon. The country is fertile, green, carefully cultivated. It is a succession of kitchen gardens, which seem to be well-kept immense fields sown with clover, which yield four or five crops a year. The roads near the town are bordered with long rows of mulberry trees, which diversify the view with eccentric branches.

Again, this pair of cities, old and new. Both of them had only thirty thousand inhabitants in 1868 and they have from forty-five to fifty thousand now. Is it the influence of the surroundings which produces the increase of the birth rate? Is the province affected by the prolific example of the Celestial Empire? No! It is the progress of trade, the concentration of merchants of all nations onto these new markets.

Our halt at Khodjend has lasted three hours. I have made my professional visit and walked on the banks of the Syr-Dana. This river, which bathes the foot of the high mountains of Mogol-Taou, is crossed by a bridge, the middle section of which gives passage to ships of moderate tonnage.

The weather is very warm. The town being protected by its shelter of mountains, the breezes of the steppe cannot reach it, and it is one of the hottest places in Turkestan.

I met the Caternas, delighted with their excursion. The actor said to me in a tone of the best humor: "Never shall I forget Khodjend, Monsieur Claudius."
"And why will you never forget Khodjend, Monsieur Caterna?"

"Do you see these peaches?" he asked, showing me the fruit he was carrying.

"They are magnificent--"

"And not dear! A kilo for four kopeks--that is to say, twelve centimes!"

"Eh!" I answer. "That shows that peaches are rather common in this country. That is the Asiatic apple and it was one of those apples that Mrs. Adam took a bite at--"

"Then I excuse her!" said Madame Caterna, munching away at one of these delicious peaches.

After leaving Tachkend the railway had curved toward the south, so as to reach Khodjend; but after leaving town it curved to the east in the direction of Kokhan. It is at Tachkend that it is nearest to the Transsiberian, and a branch line is being made to Semipalatiinsk to unite the railway systems of Central and Northern Asia.

Beyond we shall run due east, and by Marghelan and Och pass through the gorges of the Pamirs so as to reach the Turkesto-Chinese frontier.

The train had only just started when the travelers took their seats at the table, where I failed to notice any fresh arrival. We shall not pick up any more until we reach Kachgar. There the Russian cookery will give place to the Chinese, and although the name does not recall the nectar and ambrosia of Olympus, it is probable that we shall not lose by the change.

Ephrinell is in his usual place. Without going as far as familiarity, it is obvious that a close intimacy, founded on a similarity in tastes and aptitudes exists between Miss Horatia Bluett and the Yankee. There is no doubt, in our opinion, but what it will end in a wedding as soon as the train arrives. Both will have their romance of the rail. Frankly, I like that of Kinko and Zuza Klork much better. It is true the pretty Roumanian is not here!

We are all very friendly, and by "we" I mean my most sympathetic numbers, the major, the Caternas, young Pan Chao, who replies with very Parisian pleasantries to the actor’s fooleries.

The dinner is a pleasant one and a good one. We learn what is the fourth rule formulated by Cornaco, that Venetian noble, and with the object of determining the right amount for drinking and eating. Pan Chao pressed the doctor on this subject, and Tio-King replied, with a seriousness truly buddhic:

"The rule is founded on the quantity of nourishment proportionate for each temperament as regards the difference of ages, and the strength and the food of various kinds."

"And for your temperament, doctor?" asked Caterna, "what is the right quantity?"

"Fourteen ounces of solid or liquid--"

"An hour?"

"No, sir, a day," replied Tio-King. "And it was in this manner that the illustrious Cornaro lived from the age of thirty-six, so as to leave himself enough strength of body and mind to write his fourth treatise when he was eighty-five, and to live to a hundred and two."

"In that case, give me my fifth cutlet," said Pan Ghao, with a burst of laughter.

There is nothing more agreeable than to talk before a well-served table; but I must not forget to complete my notes regarding Kokham. We were not due there till nine o'clock, and that would be in the nighttime. And so I asked the major to give me some information regarding this town, which is the last of any importance in Russian Turkestan.

"I know it all the better," said the major, "from having been in garrison there for fifteen months. It is a pity you have not time to visit it, for it remains very Asiatic, and there has not been time yet for it to grow a modern town. There is a square there unrivalled in Asia, a palace in great style, that of the old Khan of Khondajar, situated on a mound about a hundred yards high, and in which the governor has left his Sarthe artillery. It is considered wonderful, and there is good reason for it. You will lose by not going there a rare opportunity of bringing in the high-flown words of your language in description: the reception hall transformed into a Russian church, a labyrinth of rooms with the floors of the precious Karagatch wood, the rose pavilion, in which visitors receive a truly Oriental hospitality, the interior court of Moorish decoration recalling the adorable architectural fancies of the Alhambra, the terraces with their splendid views, the harem where the thousand wives of the Sultan—a hundred more than Solomon—live in peace together, the lacework of the fronts, the gardens with their shady walks under the ancient vines—that is what you would have seen—"

"And which I have already seen with your eyes, dear major," said I. "My readers will not complain. Pray tell me if there are any bazaars in."

"A Turkestan town without bazaars would be like London without its docks."

"And Paris without its theaters!" said the actor.

"Yes, there are bazaars at Kokhan, one of them on the Sokh bridge, the two arms of which traverse the town and in it the finest fabrics of Asia are sold for tillahs of gold, which are worth three roubles and sixty kopeks of our money."
"I am sure, major, that you are going to mention mosques after bazaars."
"Certainly."
"And medresses?"
"Certainly; but you must understand that some of them are as good as the mosques and medresses of Samarkand of Bokhara."

I took advantage of the kindness of Major Noltitz and thanks to him, the readers of the Twentieth Century need not spend a night in Kokhan. I will leave my pen inundated with the solar rays of this city of which I could only see a vague outline.

The dinner lasted till rather late, and terminated in an unexpected manner by an offer from Caterna to recite a monologue.

I need scarcely say that the offer was gladly accepted.

Our train more and more resembled a small rolling town. It had even its casino, this dining-car in which we were gathered at the moment. And it was thus in the eastern part of Turkestan, four hundred kilometres from the Pamir plateau, at dessert after our excellent dinner served in a saloon of the Grand Transasiatic, that the Obsession was given with remarkable talent by Monsieur Caterna, grand premier comique, engaged at Shanghai theater for the approaching season.

"Monsieur," said Pan Chao, "my sincere compliments. I have heard young Coquelin--"
"A master, monsieur; a master!" said Caterna.
"Whom you approach--"
"Respectfully--very respectfully!"

The bravos lavished on Caterna had no effect on Sir Francis Trevellyan, who had been occupying himself with onomatopoeic exclamations regarding the dinner, which he considered execrable. He was not amused—not even sadly, as his countrymen have been for four hundred years, according to Froissart. And yet nobody took any notice of this grumbling gentleman's recriminations.

Baron Weisschnitzerdörfer had not understood a single word of this little masterpiece, and had he understood it, he would not have been able to appreciate this sample of Parisian monologomania.

As to my lord Faruskiar and his inseparable Ghangir, it seemed that in spite of their traditional reserve, the surprising grimaces, the significant gestures, the comical intonations, had interested them to a certain extent.

The actor had noticed it, and appreciated this silent admiration.

As he rose from the table he said to me:

"He is magnificent, this seigneur! What dignity! What a presence! What a type of the farthest East! I like his companion less—a third-rate fellow at the outside! But this superb Mongol! Caroline, cannot you imagine him as 'Morales' in the Pirates of the Savannah?"

"Not in that costume, at any rate," said I.

"Why not, Monsieur Claudius? One day at Perpignan I played 'Colonel de Montéclin' in the Closerie des Genets in the costume of a Japanese officer--"

"And he was applauded!" added Madame Caterna.

During dinner the train had passed Kastakos station, situated in the center of a mountainous region. The road curved a good deal, and ran over viaducts and through tunnels—as we could tell by the noise.

A little time afterward Popof told us that we were in the territory of Ferganah, the name of the ancient khanate of Kokhan, which was annexed by Russia in 1876, with the seven districts that compose it. These districts, in which Sarthes are in the majority, are administered by prefects, sub-prefects, and mayors. Come, then, to Ferganah, to find all the machinery of the constitution of the year VIII.

Beyond there is an immense steppe, extending before our train. Madame de Ujfalvy-Bourdon has justly compared it to a billiard table, so perfect in its horizontality. Only it is not an ivory ball which is rolling over its surface, but an express of the Grand Transasiatic running at sixty kilometres an hour.

Leaving the station of Tchontchai behind, we enter station at nine o'clock in the evening. The stoppage is to last two hours. We get out onto the platform.

As we are leaving the car I am near Major Noltitz, who asks young Pan Chao:

"Have you ever heard of this mandarin Yen Lou, whose body is being taken to Pekin?"

"Never, major."

"But he ought to be a personage of consideration, to be treated with the honor he gets."

"That is possible," said Pan Chao; "but we have so many personages of consideration in the Celestial Empire."

"And so, this mandarin, Yen Lou?"

"I never heard him mentioned."

Why did Major Noltitz ask the Chinaman this question? What was he thinking about?
CHAPTER XV.

Kokhan, two hours to stop. It is night. The majority of the travelers have already taken up their sleeping quarters in the car, and do not care to alight.

Here am I on the platform, walking the deck as I smoke. This is rather an important station, and from the engine house comes a more powerful locomotive than those which have brought the train along since we left Uzun Ada. These early engines were all very well as long as the line lay over an almost horizontal plain. But now we are among the gorges of the Pamir plateau, there are gradients of such steepness as to require more engine power.

I watch the proceedings, and when the locomotive has been detached with its tender, the baggage van--with Kinko in--is at the head of the train.

The idea occurs to me that the young Roumanian may perhaps venture out on the platform. It would be an imprudence for he runs the risk of being seen by the police, the "gardovois," who move about taking a good look at the passengers. What my No. 11 had better do is to remain in his box, or at least in his van. I will go and get a few provisions, liquid and solid, and take them to him, even before the departure of the train, if it is possible to do so without fear of being noticed.

The refreshment room at the station is open, and Popof is not there. If he was to see me making purchases he would be astonished, as the dining car contains everything we might want.

At the bar I get a little cold meat, some bread, and a bottle of vodka.

The station is not well lighted. A few lamps give only a feeble light. Popof is busy with one of the railway men. The new engine has not yet been attached to the train. The moment seems favorable. It is useless to wait until we have left. If I can reach Kinko I shall be able to sleep through the night--and that will be welcome, I admit.

I step onto the train, and after assuring myself that no one is watching me, I enter the baggage van, saying as I do so:

"It is I."

In fact it is as well to warn Kinko in case he is out of his box. But he had not thought of getting out, and I advise him to be very careful. He is very pleased at the provisions, for they are a change to his usual diet.

"I do not know how to thank you, Monsieur Bombarnac," he says to me.

"If you do not know, friend Kinko," I reply, "do not do it; that is very simple."

"How long do we stop at?"

"Two hours."

"And when shall we be at the frontier?"

"To-morrow, about one in the afternoon."

"And at Kachgar?"

"Fifteen hours afterward, in the night of the nineteenth."

"There the danger is, Monsieur Bombarnac."

"Yes, Kinko; for if it is difficult to enter the Russian possessions, it is no less difficult to get out of them, when the Chinese are at the gates. Their officials will give us a good look over before they will let us pass. At the same time they examine the passengers much more closely than they do their baggage. And as this van is reserved for the luggage going through to Pekin, I do not think you have much to fear. So good night. As a matter of precaution, I would rather not prolong my visit."

"Good night, Monsieur Bombarnac, good night."

I have come out, I have regained my couch, and I really did not hear the starting signal when the train began to move.

The only station of any importance which the railway passed before sunrise, was that of Marghelan, where the stoppage was a short one.

Marghelan, a populous town--sixty thousand inhabitants--is the real capital of Ferganah. That is owing to the fact that does not enjoy a good reputation for salubrity. It is of course, a double town, one town Russian, the other Turkoman. The latter has no ancient monuments, and no curiosities, and my readers must pardon my not having interrupted my sleep to give them a glance at it.

Following the valley of Schakhimardan, the train has reached a sort of steppe and been able to resume its normal speed.

At three o'clock in the morning we halt for forty-five minutes at Och station.

There I failed in my duty as a reporter, and I saw nothing. My excuse is that there was nothing to see.

Beyond this station the road reaches the frontier which divides Russian Turkestan from the Pamir plateau and the
This part of Central Asia is continually being troubled by Plutonian disturbances beneath its surface. Northern Turkistan has frequently suffered from earthquake—the terrible experience of 1887 will not have been forgotten—and at Tachkend, as at Samarkand, I saw the traces of these commotions. In fact, minor oscillations are continually being observed, and this volcanic action takes place all along the fault, where lay the stores of petroleum and naphtha, from the Caspian Sea to the Pamir plateau.

In short, this region is one of the most interesting parts of Central Asia that a tourist can visit. If Major Noltitz had never been beyond Och station, at the foot of the plateau, he knew the district from having studied it on the modern maps and in the most recent books of travels. Among these I would mention those of Capus and Bonvalot—again two French names I am happy to salute out of France. The major is, nevertheless, anxious to see the country for himself, and although it is not yet six o’clock in the morning, we are both out on the gangway, glasses in hand, maps under our eyes.

The Pamir, or Bam-i-Douniah, is commonly called the "Roof of the World." From it radiate the mighty chains of the Thian Shan, of the Kuen Lun, of the Kara Korum, of the Himalaya, of the Hindoo Koosh. This orographic system, four hundred kilometres across, which remained for so many years an impassable barrier, has been surmounted by Russian tenacity. The Sclav race and the Yellow race have come into contact.

We may as well have a little book learning on the subject; but it is not I that speak, but Major Noltitz.

The travelers of the Aryan people have all attempted to explore the plateau of the Pamir. Without going back to Marco Polo in the thirteenth century, what do we find? The English with Forsyth, Douglas, Biddulph, Younghur, and the celebrated Gordon who died on the Upper Nile; the Russians with Fendchenko, Skobelev, Prjevalsky, Grombtchevsky, General Pevtzoff, Prince Galitzin, the brothers Groum-Grimailo; the French with Auvergne, Bonvalot, Capus, Papin, Breteuil, Blanc, Ridgway, O'Connor, Dutreuil de Rhins, Joseph Martin, Grenard, Edouard Blanc; the Swedes with Doctor Swen-Hedin.

This Roof of the World, one would say that some devil on two sticks had lifted it up in his magic hand to let us see its mysteries. We know now that it consists of an inextricable entanglement of valleys, the mean altitude of which exceeds three thousand metres; we know that it is dominated by the peaks of Gouroudmi and Kauffmann, twenty-two thousand feet high, and the peak of Tagarma, which is twenty-seven thousand feet; we know that it sends off to the west the Oxus and the Amou Daria, and to the east the Tarim; we know that it chiefly consists of primary rocks, in which are patches of schist and quartz, red sands of secondary age, and the clayey, sandy loess of the quaternary period which is so abundant in Central Asia.

The difficulties the Grand Transasiatic had in crossing this plateau were extraordinary. It was a challenge from the genius of man to nature, and the victory remained with genius. Through the gently sloping passes which the Kirghizes call "bels," viaducts, bridges, embankments, cuttings, tunnels had to be made to carry the line. Here are sharp curves, gradients which require the most powerful locomotives, here and there stationary engines to haul up the train with cables, in a word, a herculean labor, superior to the works of the American engineers in the defiles of the Sierra Nevada and the Rocky Mountains.

The desolate aspect of these territories makes a deep impression on the imagination. As the train gains the higher altitudes, this impression is all the more vivid. There are no towns, no villages—nothing but a few scattered huts, in which the Pamirian lives a solitary existence with his family, his horses, his herds of yaks, or "koutars," which are cattle with horses' tails, his diminutive sheep, his thick-haired goats. The moulting of these animals, if we may so phrase it, is a natural consequence of the climate, and they change the dressing gown of winter for the white fur coat of summer. It is the same with the dog, whose coat becomes whiter in the hot season.

As the passes are ascended, wide breaks in the ranges yield frequent glimpses of the more distant portions of the plateau. In many places are clumps of birches and junipers, which are the principal trees of the Pamir, and on the undulating plains grow tamarisks and sedges and mugwort, and a sort of reed very abundant by the sides of the saline pools, and a dwarf labiate called "terskenne" by the Kirghizes.

The major mentioned certain animals which constitute a somewhat varied fauna on the heights of the Pamir. It is an enigma that these beasts coexist with theKirghizes and are only observed as being observed, and this volcanic action takes place all along the fault, where lay the stores of petroleum and naphtha, from the Caspian Sea to the Pamir plateau. The major is, nevertheless, anxious to see the country for himself, and although it is not yet six o’clock in the morning, we are both out on the gangway, glasses in hand, maps under our eyes.

The major mentioned certain animals which constitute a somewhat varied fauna on the heights of the Pamir. It is even necessary to keep an eye on the platforms of the cars in case a stray panther or bear might seek a ride without any right to travel either first or second class. During the day our companions were on the lookout from both ends of the cars. What shouts arose when plantigrades or felines capered along the line with intentions that certainly seemed suspicious! A few revolver shots were discharged, without much necessity perhaps, but they amused as well as reassured the travelers. In the afternoon we were witnesses of a magnificent shot, which killed instantly an enormous panther just as he was landing on the side step of the third carriage.

"It is thine, Marguerite!" exclaimed Caterna. And could he have better expressed his admiration than in appropriating the celebrated reply of Buridan to the Dauphine's wife—and not the queen of France, as is wrongly stated in the famous drama of the Tour de Nesle?
It was our superb Mongol to whom we were indebted for this marksman's masterpiece.

"What a hand and what an eye!" said I to the major, who continued to look on Faruskiar with suspicion.

Among the other animals of the Pamirian fauna appeared wolves and foxes, and flocks of those large wild sheep with gnarled and gracefully curved horns, which are known to the natives as arkars. High in the sky flew the vultures, bearded and unbearded, and amid the clouds of white vapor we left behind us were many crows and pigeons and turtledoves and wagtails.

The day passed without adventure. At six o'clock in the evening we crossed the frontier, after a run of nearly two thousand three hundred kilometres, accomplished in four days since leaving Uzun Ada. Two hundred and fifty kilometres beyond we shall be at Kachgar. Although we are now in Chinese Turkestan, it will not be till we reach that town that we shall have our first experience of Chinese administration.

Dinner over about nine o'clock, we stretched ourselves on our beds, in the hope, or rather the conviction, that the night will be as calm as the preceding one.

It was not to be so.

At first the train was running down the slopes of the Pamir at great speed. Then it resumed its normal rate along the level.

It was about one in the morning when I was suddenly awakened.

At the same time Major Noltitz and most of our companions jumped up.

There were loud shouts in the rear of the train.

What had happened?

Anxiety seized upon the travelers—that confused, unreasonable anxiety caused by the slightest incident on a railroad.

"What is the matter? What is the matter?"

These words were uttered in alarm from all sides and in different languages.

My first thought was that we were attacked. I thought of the famous Ki-Tsang, the Mongol pirate, whose help I had so imprudently called upon—for my chronicle.

In a moment the train began to slow, evidently preparing to stop.

Popof came into the van, and I asked him what had happened.

"An accident," he replied.

"Serious?"

"No, a coupling has broken, and the two last vans are left behind."

As soon as the train pulls up, a dozen travelers, of whom I am one, get out onto the track.

By the light of the lantern it is easy to see that the breakage is not due to malevolence. But it is none the less true that the two last vans, the mortuary van and the rear van occupied by the goods guard, are missing. How far off are they? Nobody knows.

You should have heard the shouts of the Persian guards engaged in escorting the remains of Yen Lou, for which they were responsible! The travelers in their van, like themselves, had not noticed when the coupling broke. It might be an hour, two hours, since the accident.

What ought to be done was clear enough. The train must be run backward and pick up the lost vans.

Nothing could be more simple. But—and this surprised me—the behavior of my lord Faruskiar seemed very strange. He insisted in the most pressing manner that not a moment should be lost. He spoke to Popof, to the driver, to the stoker, and for the first time I discovered that he spoke Russian remarkably well.

There was no room for discussion. We were all agreed on the necessity of a retrograde movement.

Only the German baron protested. More delays! A waste of time for the sake of a mandarin—and a dead mandarin!

He had to walk about and bear it. As to Sir Francis Trevelyan, he merely shrugged his shoulders, as much as to say: "What management! What couplings! We should not get this sort of thing on an Anglo-Indian line!"

Major Noltitz was as much struck as I was at the behavior of my lord Faruskiar. This Mongol, usually so calm, so impassible, with his cool look beneath his motionless eyelid, had become a prey to a sort of furious anxiety which he appeared incapable of controlling. His companion was as excited as he was. But what was there in these two missing vans which could be of interest to them? They had not even any luggage in the rear van! Was it the mandarin, Yen Lou? Was it for that reason that at Donchak they had so carefully watched the van which contained the corpse? I could see clearly enough that the major thought it all very suspicious.

The train began to run back as soon as we had taken our places. The German baron attempted to curse, but Faruskiar gave him such a look that he did not care to get another, and stowed himself away in the corner.

Dawn appeared in the east when the two wagons were found a kilometre off, and the train gently slowed up to them after an hour's run.
Faruksiar and Ghangir went to help in coupling on the vans, which was done as firmly as possible. Major Noltitz and I noticed that they exchanged a few words with the other Mongols. After all, there was nothing astonishing in that, for they were countrymen of theirs.

We resume our seats in the train, and the engineer tries to make up for lost time.

Nevertheless, the train does not arrive at Kachgar without a long delay, and it is half-past four in the morning when we enter the capital of Chinese Turkestan.

* * * * *

CHAPTER XVI.

Kachgaria is Oriental Turkestan which is gradually being metamorphosed into Russian Turkestan.

The writers in the New Review have said: "Central Asia will only be a great country when the Muscovite administration have laid hands on Tibet, or when the Russians lord it at Kachgar."

Well, that is a thing half done! The piercing of the Pamir has joined the Russian railway with the Chinese line which runs from one frontier of the Celestial Empire to the other. The capital of Kachgaria is now as much Russian as Chinese. The Sclav race and the Yellow race have rubbed elbows and live in peace. How long will it last? To others leave the future; I am content with the present.

We arrive at half-past four; we leave at eleven. The Grand Transasiatic shows itself generous. I shall have time to see Kachgar, on condition of allowing myself an hour less than the time stated.

For what was not done at the frontier has to be done at Kachgar. Russians and Chinese are one as bad as the other when there are vexing formalities; papers to verify, passports to sign, etc., etc. It is the same sort of meddling, minute and over-fastidious, and we must put up with it. We must not forget the terrible threat of the formula the functionary of the Celestial Empire affixes to his acts--"Tremble and obey!" I am disposed to obey, and I am prepared to appear before the authorities of the frontier. I remember the fears of Kinko, and it is with regard to him that the trembling is to be done, if the examination of the travelers extends to their packages and luggage.

Before we reached Kachgar, Major Noltitz said to me:

"Do not imagine that Chinese Turkestan differs very much from Russian Turkestan. We are not in the land of pagodas, junks, flower boats, yamens, hongs and porcelain towers. Like Bokhara, Merv and Samarkand, Kachgar is a double town. It is with the Central Asian cities as it is with certain stars, only they do not revolve round one another."

The major’s remark was very true. It was not so long ago since emirs reigned over Kachgaria, since the monarchy of Mohammed Yakoub extended over the whole of Turkestan, since the Chinese who wished to live here had to adjure the religion of Buddha and Confucius and become converts to Mahometanism, that is, if they wished to be respectable. What would you have? In these days we are always too late, and those marvels of the Oriental cosmorama, those curious manners, those masterpieces of Asiatic art, are either memories or ruins. The railways will end by bringing the countries they traverse down to the same level, to a mutual resemblance which will certainly be equality and may be fraternity. In truth, Kachgar is no longer the capital of Kachgaria; it is a station on the Grand Transasiatic, the junction between the Russian and Chinese lines, and the strip of iron which stretches for three thousand kilometres from the Caspian to this city runs on for nearly four thousand more to the capital of the Celestial Empire.

I return to the double town. The new one is Yangi-Chahr: the old one, three and a half miles off, is Kachgar. I have seen both, and I will tell you what they are like.

In the first place, both the old and the new towns are surrounded with a villainous earthen wall that does not predispose you in their favor. Secondly, it is in vain that you seek for any monument whatever, for the materials of construction are identical for houses as for palaces. Nothing but earth, and not even baked earth. It is not with mud dried in the sun that you can obtain regular lines, clean profiles and finely worked sculptures. Your architecture must be in stone or marble, and that is precisely what you do not get in Chinese Turkestan.

A small carriage quickly took the major and myself to Kachgar, which is three miles round. The Kizil-Sou, that is to say the Red River, which is really yellow, as a Chinese river ought to be, clasps it between its two arms, which are united by two bridges. If you wish to see a few ruins of some interest, you must go a short distance beyond the town, where there are the remains of fortifications dating from five hundred or two thousand years ago, according to the imagination of the archaeologist. What is certain is that Kachgar submitted to the furious assault of Tamerlane, and we will agree that without the exploits of this terrible cripple the history of Central Asia would be singularly monotonous. Since his time there have been fierce sultans, it is true--among others that Ouali-Khan-Toulla, who, in 1857, strangled Schlagintweit, one of the most learned and most daring explorers of the Asiatic continent. Two tablets of bronze, presented by the Geographical Societies of Paris and Petersburg, ornament his commemorative
monument.

Kachgar is an important centre of trade, which is almost entirely in Russian hands. Khotan silks, cotton, felt, woollen carpets, cloth, are the principal articles in the markets, and these are exported beyond the frontier between Tachkend and Koulja, to the north of Oriental Turkestan.

Here, as the major told me, Sir Francis Trevelyan should have special cause for manifesting his ill humor. In fact, an English embassy under Chapman and Gordon in 1873 and 1874 had been sent from Kashmir to Kachgar by way of Kothan and Yarkand. At this time the English had reason to hope that commercial relations could be established to their advantage. But instead of being in communication with the Indian railways, the Russian railways are in communication with the Chinese, and the result of this junction has been that English influence has had to give place to Russian.

The population of Kachgar is Turkoman, with a considerable mixture of Chinese, who willingly fulfil the duties of domestics, artisans or porters. Less fortunate than Chapman and Gordon, Major Noltitz and I were not able to see the Kachgarian capital when the armies of the tumultuous emir filled its streets. There were none of those Djiguit foot soldiers who were mounted, nor of those Sarbaz who were not. Vanished had those magnificent bodies of Taifourchis, armed and disciplined in the Chinese manner, those superb lancers, those Kalmuck archers, bending bows five feet high, those "tigers" with their daubed shields and their matchlocks. All have disappeared, the picturesque warriors of Kachgaria and the emir with them.

At nine o'clock we are on our return to Yangi-Chahr. There, at the end of the streets near the citadel, what do we see? The Caternas in ecstatic admiration before a troop of musical dervishes.

Who says dervish says beggar, and who says beggar evokes the completest type of filth and laziness. But with what an extraordinary combination of gestures, with what attitudes in the management of the long-stringed guitar, with what acrobatic swingings of the body do they accompany their singing of their legends and poetry which could not be more profane. The instinct of the old actor was awakened in Catera. He could not keep still; it was too much for him.

And so these gestures, these attitudes, these swingings he imitated there with the vigor of an old topman joined to that of a leading premier, and I saw him as he was figuring in this quadrille of dancing dervishes.

"Eh! Monsieur Claudius!" he said, "it is not difficult to copy the exercises of these gallant fellows! Make me a Turkestan operetta, let me act a dervish, and you will see if I don't do it to the very life."

"I do not doubt it, my dear Catera," I replied; "but before you do that, come into the restaurant at the railway station and bid farewell to Turkestan cookery, for we shall soon be reduced to Chinese."

The offer is accepted all the more willingly, for the reputation of the Kachgarian cooks is well justified, as the major made us remark.

In fact, the Caternas, the major, young Pan Chao and I were astonished and enchanted at the quantity of dishes that were served us, as well as at their quality. Sweets alternated capriciously with roasts and grills. And as the Caternas could never forget--any more than they could forget the famous peaches of Khodjend--there are a few of these dishes which the English embassy wished to retain in remembrance, for they have given the composition in the story of their journey: pigs' feet dusted with sugar and browned in fat with a dash of pickles; kidneys fried with sweet sauce and served with fritters.

Caterna asked for the first twice, and for the other three times.

"I take my precautions," said he. "Who knows what the dining-car kitchen will give us on the Chinese railways? Let us beware of shark fins, which may perhaps be ratherorny, and of swallows' nests which may not be quite fresh!"

It is ten o'clock when a stroke of the gong announces that the police formalities are about to begin. We leave the table after a parting glass of Choa-Hing wine, and a few minutes afterward are in the waiting room.

All my numbers are present, with the exception, of course, of Kinko, who would have done honor to our breakfast if it had been possible for him to take part in it. There was Doctor Tio-King, his Cornaro under his arm; Fulk Ephrinell and Miss Horatia Bluett, mingling their teeth and hair, figuratively, be it understood; Sir Francis Trevellyan, motionless and silent, intractable and stiff, smoking his cigar on the threshold; Faruskiar, accompanied by Ghangir; Russian, Turkoman, Chinese travelers--in all from sixty to eighty persons. Every one had in his turn to present himself at the table, which was occupied by two Celestials in uniform; a functionary speaking Russian fluently, an interpreter for German, French and English.

The Chinese was a man about fifty, with a bald head, a thick moustache, a long pigtail, and spectacles on his nose. Wrapped in a flowery robe, fat as if he belonged to the most distinguished people in the country, he had not a prepossessing face. After all, it was only a verification of our papers, and as ours were in order it did not much matter how repulsive he looked.

"What an air he has!" murmured Madame Catera.
"The air of a Chinaman!" said her husband, "and frankly I do not want to have one like it."

I am one of the first to present my passport, which bears the visas of the consul at Tiflis and the Russian authorities at Uzun-Ada. The functionary looks at it attentively. When you are dealing with a mandarin, you should always be on the lookout. Nevertheless, the examination raises no difficulty, and the seal of the green dragon declares me all in order.

The same result with regard to the actor and actress. Nevertheless it was worth while looking at Caterna while his papers were being examined. He assumed the attitude of a criminal endeavoring to mollify a magistrate, he made the sheepiest of eyes, and smiled the most deprecating of smiles, and seemed to implore a grace or rather a favor, and yet the most obdurate of the Chinamen had not a word to say to him.

"Correct," said the interpreter.
"Thank you, my prince!" replied Caterna, with the accent of a Paris street boy. As to Ephrinell and Miss Bluett, they went through like a posted letter. If an American commercial and an English ditto were not in order, who would be? Uncle Sam and John Bull are one as far as that goes.

The other travelers, Russian and Turkoman, underwent examination without any difficulty arising. Whether they were first-class or second-class, they had fulfilled the conditions required by the Chinese administration, which levies a rather heavy fee for each visa, payable in roubles, taels or sapeks.

Among the travelers I observed an American clergyman bound to Pekin. This was the Reverend Nathaniel Morse, of Boston, one of those honest Bible distributors, a Yankee missionary, in the garb of a merchant, and very keen in business matters. At a venture I make him No. 13 in my notebook.

The verification of the papers of young Pan Chao and Doctor Tio-King gave rise to no difficulty, and on leaving they exchanged "ten thousand good mornings" with the more amiable of the Chinese representatives.

When it came to the turn of Major Noltitz, a slight incident occurred. Sir Francis Trevellyan, who came to the table at the same moment, did not seem inclined to give way. However, nothing resulted but haughty and provoking looks. The gentleman did not even take the trouble to open his mouth. It is evidently written above that I am not to hear the sound of his voice! The Russian and the Englishman each received the regulation visa, and the affair went no further.

My lord Faruskiar, followed by Ghangir, then arrived before the man in spectacles, who looked at him with a certain amount of attention. Major Noltitz and I watched him. How would he submit to this examination? Perhaps we were to be undeceived regarding him.

But what was our surprise and even our stupefaction at the dramatic outburst which at once took place!

After throwing a glance at the papers presented to him by Ghangir, the Chinese functionary rose and bowed respectfully to Faruskiar, saying:
"May the General Manager of the Grand Transasiatic deign to receive my ten thousand respects!"

General Manager, that is what he is, this lord Faruskiar! All is explained. During our crossing of Russian Turkestan he had maintained his incognito like a great personage in a foreign country; but now on the Chinese railways he resumed the rank which belonged to him.

And I--in a joke, it is true--had permitted myself to identify him with the pirate Ki-Tsang. And Major Noltitz, who had spent his time suspecting him! At last I have some one of note in our train--I have him, this somebody, I will make his acquaintance, I will cultivate it like a rare plant, and if he will only speak Russian I will interview him down to his boots!

Good! I am completely upset, and I could not help shrugging my shoulders, when the major whispers to me:
"Perhaps one of the bandit chiefs with whom the Grand Transasiatic had to make terms!"
"Come, major, be serious."

The visit was nearing its end when Baron Weisschnitzerdörfer appeared.
He is preoccupied, he is troubled, he is anxious, he is confused, he is fidgety. Why is he shaking, and bending, and diving into his pockets like a man who has lost something valuable?
"Your papers!" demands the interpreter in German.
"My papers!" replies the baron, "I am looking for them. I have not got them; they were in my letter case."
And he dived again into his trousers pockets, his waistcoat pockets, his coat pockets, his great-coat pockets--there were twenty of them at the least--and he found nothing.
"Be quick--be quick!" said the interpreter. "The train cannot wait!"
"I object to its going without me!" exclaimed the baron. "These papers--how have they gone astray? I must have let them drop out of my case. They should have given them back to me--"

At this moment the gong awoke the echoes of the interior of the railway station.
"Wait! wait! Donner vetter! Can't you wait a few moments for a man who is going round the world in thirty-nine days--!"
"The Grand Transasiatic does not wait," says the interpreter.

Without waiting for any more, Major Noltitz and I reach the platform, while the baron continues to struggle in the presence of the impassible Chinese functionaries.

I examine the train and see that its composition has been modified on account of there being fewer travelers between Kachgar and Pekin. Instead of twelve carriages, there are now only ten, placed in the following order: engine, tender, front van, two first-class cars, dining car, two second-class cars, the van with the defunct mandarin, rear van.

The Russian locomotives, which have brought us from Uzun-Ada, have been replaced by a Chinese locomotive, burning not naphtha but coal, of which there are large deposits in Turkestan, and stores at the chief stations along the line.

My first care is to look in at the front van. The custom-house officers are about to visit it, and I tremble for poor Kinko.

It is evident that the fraud has not been discovered yet, for there would have been a great stir at the news. Suppose the case is passed? Will its position be shifted? Will it be put hind side before or upside down? Kinko will not then be able to get out, and that would be a complication.

The Chinese officers have come out of the van and shut the door, so that I cannot give a glance into it. The essential point is that Kinko has not been caught in the act. As soon as possible I will enter the van, and as bankers say, "verify the state of the safe."

Before getting into our car, Major Noltitz asks me to follow him to the rear of the train.

The scene we witness is not devoid of interest; it is the giving over of the corpse of the mandarin Yen Lou by the Persian guards to a detachment of soldiers of the Green Standard, who form the Chinese gendarmerie. The defunct passes into the care of twenty Celestials, who are to occupy the second-class car in front of the mortuary van. They are armed with guns and revolvers, and commanded by an officer.

"Well," said I to the major, "this mandarin must be some very exalted personage if the Son of Heaven sends him a guard of honor--"

"Or of defence," replies the major.

Faruskiar and Ghangir assist at these proceedings, in which there is nothing surprising. Surely the general manager of the line ought to keep an eye on the illustrious defunct, entrusted to the care of the Grand Transasiatic?

The gong was struck for the last time; we hasten into our cars.

And the baron, what has become of him?

Here he comes out on to the platform like a whirlwind. He has found his papers at the bottom of his nineteenth pocket. He has obtained the necessary visa--and it was time.

"Passengers for Pekin, take your seats!" shouts Popof in a sonorous voice.

The train trembles, it starts, it has gone.

CHAPTER XVII.

We are off on a Chinese railway, single line, the train drawn by a Chinese engine, driven by a Chinese driver. Let us hope we shall not be telescoped on the road, for among the passengers is one of the chief functionaries of the company in the person of Faruskiar.

After all, if an accident should happen it will break the monotony of the journey, and furnish me with an episode. I am forced to admit that up to the present my personages have not behaved as I expected. The drama does not run well, the action languishes. We want something startling to bring all the actors on--what Caterina would call "a good fourth act."

But then Ephrinell and Miss Bluet are all the time absorbed in their commercial tête-à-tête. Pan Chao and the doctor amused me for a time, but they are not equal to it now. The actor and the actress are of no use without opportunity. Kinko, Kinko himself, on whom I had built such hopes, has passed the frontier without difficulty, he will reach Pekin, he will marry Zinca Klork. Decidedly there is a want of excitement. I cannot get anything out of the corpse of Yen Lou! and the readers of the Twentieth Century who looked to me for something sensational and thrilling.

Must I have recourse to the German baron? No! he is merely ridiculous, stupidly ridiculous, and he has no interest for me.

I return to my idea: I want a hero, and up to the present no hero has appeared on the scene. Evidently the moment has come to enter into more intimate relations with Faruskiar. Perhaps he will not now be so close in his incognito. We are under his orders, so to say. He is the mayor of our rolling town, and a mayor owes something to those he governs. Besides, in the event of Kinko's fraud being discovered I may as well secure the
protection of this high functionary.

Our train runs at only moderate speed since we left Kachgar. On the opposite horizon we can see the high lands of the Pamir; to the southwest rises the Bolor, the Kachgarian belt from which towers the summit of Tagharma lost among the clouds.

I do not know how to spend my time. Major Noltitz has never visited the territories crossed by the Grand Transasiatic, and I am deprived of the pleasure of taking notes from his dictation. Dr. Tio-King does not lift his nose from his Cornaro, and Pan Chao reminds me more of Paris and France than of Pekin and China; besides, when he came to Europe he came by Suez, and he knows no more of Oriental Turkestan than he does of Kamtschatka. All the same, we talk. He is a pleasant companion, but a little less amiability and a little more originality would suit me better.

I am reduced to strolling from one car to another, lounging on the platforms, interrogating the horizon, which obstinately refuses to reply, listening on all sides.

Hello! there are the actor and his wife apparently in animated conversation. I approach. They sing in an undertone. I listen.

"I'm fond of my turkeys--eys--eys," says Madame Catera.
"I'm fond of my wethers--ers--ers," says Monsieur Catera, in any number of baritones.

It is the everlasting duet between Pipo and Bettina; and they are rehearsing for Shanghai. Happy Shanghai! They do not yet know the Masciiotte!

Ephrinell and Miss Bluett are talking away with unusual animation, and I catch the end of the dialogue.

"I am afraid," said she, "that hair will be rising in Pekin--"

"And I," said he, "that teeth will be down. Ah! If a good war would only break out in which the Russians would give the Chinaman a smack on the jaw."

There now! Smack them on the jaw, in order that Strong, Bulbul & Co., of New York, might have a chance of doing a trade!

Really I do not know what to do, and we have a week's journey before us. To Jericho with the Grand Transasiatic and its monotonous security! The Great Trunk from New York to San Francisco has more life in it! At least, the redskins do sometimes attack the trains, and the chance of a scalping on the road cannot but add to the charm of the voyage!

But what is that I hear being recited, or rather intoned at the end of our compartment?

"There is no man, whoever he may be, who cannot prevent himself from eating too much, and avoid the evils due to repletion. On those who are intrusted with the direction of public affairs this is more incumbent than on others--"

It is Dr. Tio-King reading Cornaro aloud, in order that he may remember his principles better. Eh! after all, this principle is not to be despised. Shall I send it by telegram to our cabinet ministers? They might, perhaps, dine with more discretion after it.

During this afternoon I find by the guide-book that we shall cross the Yamanyar over a wooden bridge. This stream descends from the mountains to the west, which are at least twenty-five thousand feet high, and its rapidity is increased by the melting of the snows. Sometimes the train runs through thick jungles, amid which Popof assures me tigers are numerous. Numerous they may be, but I have not seen one. And yet in default of redskins we might get some excitement out of tiger-skins. What a heading for a newspaper, and what a stroke of luck for a journalist! TERRIBLE CATASTROPHE. A GRAND TRANSASIATIC EXPRESS ATTACKED BY TIGERS. FIFTY VICTIMS. AN INFANT DEVORED BEFORE ITS MOTHER'S EYES--the whole thickly leaded and appropriately displayed.

Well, no! The Turkoman felidae did not give me even that satisfaction! And I treat them--as I treat any other harmless cats.

The two principal stations have been Yanghi-Hissar, where the train stops ten minutes, and Kizil, where it stops a quarter of an hour. Several blast furnaces are at work here, the soil being ferruginous, as is shown by the word "Kizil," which means red.

The country is fertile and well cultivated, growing wheat, maize, rice, barley and flax, in its eastern districts. Everywhere are great masses of trees, willows, mulberries, poplars. As far as the eye can reach are fields under culture, irrigated by numerous canals, also green fields in which are flocks of sheep; a country half Normandy, half Provence, were it not for the mountains of the Pamir on the horizon. But this portion of Kachgaria was terribly ravaged by war when its people were struggling for independence. The land flowed with blood, and along by the railway the ground is dotted with tumuli beneath which are buried the victims of their patriotism. But I did not come to Central Asia to travel as if I were in France! Novelty! Novelty! The unforeseen! The appalling!

It was without the shadow of an accident, and after a particularly fine run, that we entered Yarkand station at
four o'clock in the afternoon.

If Yarkand is not the administrative capital of eastern Turkestan, it is certainly the most important commercial city of the province.

"Again two towns together," said I to Major Noltitz. "That I have from Popof."

"But this time," said the major, "it was not the Russians who built the new one."

"New or old," I added, "I am afraid is like the others we have seen, a wall of earth, a few dozen gateways cut in the wall, no monuments or buildings of note, and the eternal bazaars of the East."

I was not mistaken, and it did not take four hours to visit both Yarkands, the newer of which is called Yanji-Shahr.

Fortunately, the Yarkand women are not forbidden to appear in the streets, which are bordered by simple mud huts, as they were at the time of the "dadkwahs," or governors of the province. They can give themselves the pleasure of seeing and being seen, and this pleasure is shared in by the farangis—as they call foreigners, no matter to what nation they may belong. They are very pretty, these Asiatics, with their long tresses, their transversely striped bodices, their skirts of bright colors, relieved by Chinese designs in Kothan silk, their high-heeled embroidered boots, their turbans of coquettish pattern, beneath which appear their black hair and their eyebrows united by a bar.

A few Chinese passengers alighted at Yarkand, and gave place to others exactly like them—among others a score of coolies—and we started again at eight o'clock in the evening.

During the night we ran the three hundred and fifty kilometres which separate Yarkand from Kothan.

A visit I paid to the front van showed me that the box was still in the same place. A certain snoring proved that Kinko was inside as usual, and sleeping peacefully. I did not care to wake him, and I left him to dream of his adorable Roumanian.

In the morning Popof told me that the train, which was now traveling about as fast as an omnibus, had passed Kargalik, the junction for the Kilian and Tong branches. The night had been cold, for we are still at an altitude of twelve hundred metres. Leaving Guma station, the line runs due east and west, following the thirty-seventh parallel, the same which traverses in Europe, Seville, Syracuse and Athens.

We sighted only one stream of importance, the Kara-kash, on which appeared a few drifting rafts, and files of horses and asses at the fords between the pebbly banks. The railroad crosses it about a hundred kilometres from Khotan, where we arrived at eight o'clock in the morning.

Two hours to stop, and as the town may give me a foretaste of the cities of China, I resolve to take a run through it.

It seems to be a Turkoman town built by the Chinese, or perhaps a Chinese town built by Turkomans. Monuments and inhabitants betray their double origin. The mosques look like pagodas, the pagodas look like mosques.

And I was not astonished when the Caternas, who would not miss this opportunity of setting foot in China, were rather disappointed.

"Monsieur Claudius," said the actor to me, "there is not a single scene here that would suit the Prise de Pékin!"

"But we are not at Pekin, my dear Catera."

"That is true, and it has to be remembered, if we are to be thankful for little."

"Thankful for very little," as the Italians say.

"Well, if they say that, they are no fools."

As we were about to board the car again, I saw Popof running toward me, shouting:

"Monsieur Bombarnac!"

"What is the matter, Popof?"

"A telegraph messenger asked me if there was any one belonging to the Twentieth Century in the train."

"A telegraph messenger?"

"Yes, on my replying in the affirmative, he gave me this telegram for you."

"Give it me! give it me!"

I seize the telegram, which has been waiting for me for some days. Is it a reply to my wire sent from Merv, relative to the mandarin Yen Lou?

I open it. I read it. And it falls from my hand.

This is what it said:

"It is not the corpse of a mandarin that the train is taking to Pekin, but the imperial treasure, value fifteen millions, sent from Persia to China, as announced in the Paris newspapers eight days ago; endeavor to be better informed for the future."

* * * * *
CHAPTER XVIII.

"Millions--there are millions in that pretended mortuary van!"

In spite of myself, this imprudent phrase had escaped me in such a way that the secret of the imperial treasure was instantly known to all, to the railway men as well as to the passengers. And so, for greater security, the Persian government, in agreement with the Chinese government, has allowed it to be believed that we were carrying the corpse of a mandarin, when we were really taking to Pekin a treasure worth fifteen million of francs.

Heaven pardon me, what a howler--pardonable assuredly--but what a howler I had been guilty of! But why should I have doubted what Popof told me, and why should Popof have suspected what the Persians had told him regarding this Yen Lou? There was no reason for our doubting their veracity.

I am none the less deeply humiliated in my self-esteem as a journalist, and I am much annoyed at the call to order which I have brought upon myself. I shall take very good care not to breathe a word of my misadventure, even to the major. Is it credible? In Paris the Twentieth Century is better informed of what concerns the Grand Transasiatic than I am! They knew that an imperial treasure is in the van, and I did not! Oh! the mistakes of special correspondents!

Now the secret is divulged, and we know that this treasure, composed of gold and precious stones, formerly deposited in the hands of the Shah of Persia, is being sent to its legitimate owner, the Son of Heaven.

That is why my lord Faruskiar, who was aware of it in consequence of his position as general manager of the company, had joined the train at Douchak so as to accompany the treasure to its destination. That is why he and Ghangir--and the three other Mongols--had so carefully watched this precious van, and why they had shown themselves so anxious when it had been left behind by the breakage of the coupling, and why they were so eager for its recovery. Yes, all is explained!

That is also why a detachment of Chinese soldiers has taken over the van at Kachgar, in relief of the Persians! That is why Pan-Chao never heard of Yen Lou, nor of any exalted personage of that name existing in the Celestial Empire!

We started to time, and, as may be supposed, our traveling companions could talk of nothing else but the millions which were enough to enrich every one in the train.

"This pretended mortuary van has always been suspicious to me," said Major Noltitz. "And that was why I questioned Pan-Chao regarding the dead mandarin."

"I remember," I said; "and I could not quite understand the motive of your question. It is certain now that we have got a treasure in tow."

"And I add," said the major, "that the Chinese government has done wisely in sending an escort of twenty well-armed men. From Kothan to Lan Teheou the trains will have two thousand kilometres to traverse through the desert, and the safety of the line is not as great as it might be across the Gobi."

"All the more so, major, as the redoubtable Ki-Tsang has been reported in the northern provinces."

"Quite so, and a haul of fifteen millions is worth having by a bandit chief."

"But how could the chief be informed of the treasure being sent?"

"That sort of people always know what it is their interest to know."

"Yes," thought I, "although they do not read the Twentieth Century."

Meanwhile different opinions were being exchanged on the gangways. Some would rather travel with the millions than carry a corpse along with them, even though it was that of a first-class mandarin. Others considered the carrying of the treasure a danger to the passengers. And that was the opinion of Baron Weisschnitzerdörfer in a furious attack on Popof.

"You ought to have told us about it, sir, you ought to have told us about it! Those millions are known to be in the train, and they will tempt people to attack us. And an attack, even if repulsed, will mean delay, and delay I will not submit to! No, sir, I will not!"

"No one will attack us," replied Popof. "No one will dream of doing it!"

"And how do you know that? how do you know that?"

"Be calm, pray."

"I will not be calm; and if there is a delay, I will hold the company responsible!"

That is understood; a hundred thousand florins damages to Monsieur le Baron Tour de Monde.

Let us pass to the other passengers.

Ephrinell looked at the matter, of course, from a very practical point of view.

"There can be no doubt that our risks have been greatly increased by this treasure, and in case of accident on account of it, the Life Travelers' Society, in which I am insured, will, I expect, refuse to pay, so that the Grand
"Transasiatic Company will have all the responsibility."

"Of course," said Miss Bluett; "and if they had not found the missing van the company would have been in a serious difficulty with China. Would it not, Fulk?"

"Exactly, Horatia!"

Horatia and Fulk--nothing less.

The Anglo-American couple were right, the enormous loss would have had to be borne by the Grand Transasiatic, for the company must have known they were carrying a treasure and not a corpse--and thereby they were responsible.

As to the Caternas, the millions rolling behind did not seem to trouble them. The only reflection they inspired was, "Ah! Caroline, what a splendid theater we might build with all that money!"

But the best thing was said by the Reverend Nathaniel Morse, who had joined the train at Kachgar.

"It is never comfortable to be dragging a powder magazine after one!"

Nothing could be truer, and this van with its imperial treasure was a powder magazine that might blow up our train.

The first railway was opened in China about 1877 and ran from Shanghai to Fou-Tcheou. The Grand Transasiatic followed very closely the Russian road proposed in 1874 by Tachkend, Kouldja, Kami, Lan Tcheou, Singan and Shanghai. This railway did not run through the populous central provinces which can be compared to vast and humming hives of bees--and extraordinarily prolific bees. As before curving off to Lan Tcheou; it reaches the great cities by the branches it gives out to the south and southeast. Among others, one of these branches, that from Tai Youan to Nanking, should have put these two towns of the Chan-Si and Chen-Toong provinces into communication. But at present the branch is not ready for opening, owing to an important viaduct not having finished building.

The completed portion gives me direct communication across Central Asia. That is the main line of the Transasiatic. The engineers did not find it so difficult of construction as General Annenkof did the Transcaspian. The deserts of Kara Koum and Gobi are very much alike; the same dead level, the same absence of elevations and depressions, the same suitability for the iron road. If the engineers had had to attack the enormous chain of the Kuen Lun, Nan Chan, Amie, Gangar Oola, which forms the frontier of Tibet, the obstacles would have been such that it would have taken a century to surmount them. But on a flat, sandy plain the railway could be rapidly pushed on up to Lan Tcheou, like a long Decauville of three thousand kilometres.

It is only in the vicinity of this city that the art of the engineer has had a serious struggle with nature in the costly and troublesome road through the provinces of Kan-Sou, Chan-Si and Petchili.

As we go along I must mention a few of the principal stations at which the train stops to take in coal and water. On the right-hand side the eye never tires of the distant horizon of mountains which bounds the tableland of Tibet to the north. On the left the view is over the interminable steppes of the Gobi. The combination of these territories constitutes the Chinese Empire if not China proper, and we shall only reach that when we are in the neighborhood of Lan Tcheou.

It would seem, therefore, as though the second part of the journey would be rather uninteresting, unless we are favored with a few startling incidents. But it seems to me that we are certainly in the possession of the elements out of which something journalistic can be made.

At eleven o'clock the train left Kothan station, and it was nearly two o'clock in the afternoon when it reached Keria, having left behind the small stations of Urang, Langar, Pola and Tschiria.

In 1889-90 this road was followed by Pevtsoff from Kothan to Lob-Nor at the foot of the Kuen Lun, which divides Chinese Turkestan from Tibet. The Russian traveler went by Keria, Nia, Tchertchen, as we are doing so easily, but then his caravan had to contend with much danger and difficulty--which did not prevent his reporting ten thousand kilometres of surveys, without reckoning altitude and longitude observations of the geographical points. It is an honor for the Russian government to have thus continued the work of Prijevalsky.

From Keria station you can see to the southwest the heights of Kara Koum and the peak of Dapsang, to which different geographers assign a height of eight thousand metres. At its foot extends the province of Kachmir. There the Indus rises in a number of inconsiderable sources which feed one of the greatest rivers of the Peninsula. Thence from the Pamir tableland extends the mighty range of the Himalaya, where rise the highest summits on the face of the globe.

Since we left Kothan we have covered a hundred and fifty kilometres in four hours. It is not a high rate of speed, but we cannot expect on this part of the Transasiatic the same rate of traveling we experienced on the Transcaspian. Either the Chinese engines are not so fast, or, thanks to their natural indolence, the engine drivers imagine that from thirty to forty miles an hour is the maximum that can be obtained on the railways of the Celestial Empire.

At five o'clock in the afternoon we were at another station, Nia, where General Pevtsoff established a
The passengers we picked up were only Chinese, men and women. There were only a few for the first class, and these only went short journeys.

We had not started a quarter of an hour when Ephrinell, with the sferious manner of a merchant intent on some business, came up to me on the gangway.

"Monsieur Bombarnac," he said, "I have to ask a favor of you."

Eh! I thought, this Yankee knows where to find me when he wants me.
"Only too happy, I can assure you," said I. "What is it about?"
"I want you to be a witness--"
"An affair of honor? And with whom, if you please?"
"Miss Horatia Bluett."
"You are going to fight Miss Bluett!" I exclaimed, with a laugh.
"Not yet. I am going to marry her."
"Marry her?"
"Yes! a treasure of a woman, well acquainted with business matters, holding a splendid commission--"
"My compliments, Mr. Ephrinell! You can count on me--"
"And probably on M. Catera?"
"He would like nothing better, and if there is a wedding breakfast he will sing at your dessert--"
"As much as he pleases," replied the American. "And now for Miss Bluett's witnesses."
"Quite so."
"Do you think Major Noltitz would consent?"
"A Russian is too gallant to refuse. I will ask him, if you like."
"Thank you in advance. As to the second witness, I am rather in a difficulty. This Englishman, Sir Francis Trevellyan--"
"A shake of the head is all you will get from him."
"Baron Weisschnitzerdörfler?"
"Ask that of a man who is doing a tour of the globe, and who would never get through a signature of a name of that length!"
"Then I can only think of Pan-Chao, unless we try Popof--"
"Either would do it with pleasure. But there is no hurry, Mr. Ephrinell, and when you get to Pekin you will have no difficulty in finding a fourth witness."
"What! to Pekin? It is not at Pekin that I hope to marry Miss Bluett!"
"Where, then? At Sou Tcheou or Lan Tcheou, while we stop a few hours?"
"Wait a bit, Monsieur Bombarnac! Can a Yankee wait?"
"Then it is to be--"
"Here."
"In the train?"
"In the train."
"Then it is for me to say, Wait a bit!"
"Not twenty-four hours."
"But to be married you require--"
"An American minister, and we have the Reverend Nathaniel Morse."
"He consents?"
"As if he would not! He would marry the whole train if it asked him!"
"Bravo, Mr. Ephrinell! A wedding in a train will be delightful."
"We should never put off until to-morrow what we can do to-day."
"Yes, I know, time is money."
"No! Time is time, simply, and I do not care to lose a minute of it."

Ephrinell clasped my hand, and as I had promised, I went to take the necessary steps regarding the witnesses necessary for the nuptial ceremonial.

It needs not be said that the commercials were of full age and free to dispose of themselves, to enter into marriage before a clergyman, as is done in America, and without any of the fastidious preliminaries required in France and other formalistic countries. Is this an advantage or otherwise? The Americans think it is for the best, and, as Cooper says, the best at home is the best everywhere.

I first asked Major Noltitz, who willingly agreed to be Miss Bluett's witness.
"These Yankees are astonishing," he said to me.
"Precisely because they are astonished at nothing, major." I made a similar proposition to Pan-Chao.
"Delighted, Monsieur Bombarnac," he replied. "I will be the witness of this adorable and adored Miss Bluett! If a wedding between an Englishwoman and an American, with French, Russian and Chinese witnesses, does not offer every guarantee of happiness, where are we likely to meet with it?"
And now for Caterina.
The actor would have consented for any number of weddings.
"What a notion for a vaudeville or an operetta!" he exclaimed. "We have the Mariage au tambour, the Mariage aux olives, the Mariage aux lanternes--well, this will be the Mariage en railway, or the Marriage by Steam! Good titles, all those, Monsieur Claudius! Your Yankee can reckon on me! Witness old or young, noble father or first lover, marquis or peasant, as you like, I am equal to it--"
"Be natural, please," said I. "It will have a good effect, considering the scenery."
"Is Madame Caterina to come to the wedding?"
"Why not--as bridesmaid!"

In all that concerns the traditional functions we must have no difficulties on the Grand Transasiatic.

It is too late for the ceremony to take place to-day. Ephrinell understood that certain conventionalities must be complied with. The celebration could take place in the morning. The passengers could all be invited, and Faruskiar might be prevailed on to honor the affair with his presence.

During dinner we talked of nothing else. After congratulating the happy couple, who replied with true Anglo-Saxon grace, we all promised to sign the marriage contract.
"And we will do honor to your signatures," said Ephrinell, in the tone of a tradesman accepting a bill.

The night came, and we retired, to dream of the marriage festivities of the morrow. I took my usual stroll into the car occupied by the Chinese soldiers, and found the treasure of the Son of Heaven faithfully guarded. Half the detachment were awake and half were asleep.

About one o'clock in the morning I visited Kinko, and handed him over my purchases at Nia. The young Roumanian was in high spirits. He anticipated no further obstacles, he would reach port safely, after all.
"I am getting quite fat in this box," he told me.
I told him about the Ephrinell-Bluett marriage, and how the union was to be celebrated next morning with great pomp.
"Ah!" said he, with a sigh. "They are not obliged to wait until they reach Pekin!"
"Quite so, Kinko; but it seems to me that a marriage under such conditions is not likely to be lasting! But after all, that is the couple's lookout."

At three o'clock in the morning we stopped forty minutes at Tchertchen, almost at the foot of the ramifications of the Kuen Lun. None of us had seen this miserable, desolate country, treeless and verdureless, which the railway was now crossing on its road to the northeast.

Day came; our train ran the four hundred kilometres between Tchertchen and Tcharkalyk, while the sun caressed with its rays the immense plain, glittering in its saline efflorescences.

CHAPTER XIX.

When I awoke I seemed to have had an unpleasant dream. A dream in no way like those we interpret by the Clef d'Or. No! Nothing could be clearer. The bandit chief Ki Tsang had prepared a scheme for the seizure of the Chinese treasure; he had attacked the train in the plains of Gobi; the car is assaulted, pillaged, ransacked; the gold and precious stones, to the value of fifteen millions, are torn from the grasp of the Celestials, who yield after a courageous defence. As to the passengers, another two minutes of sleep would have settled their fate--and mine.

But all that disappeared with the vapors of the night. Dreams are not fixed photographs; they fade in the sun, and end by effacing themselves.

In taking my stroll through the train as a good townsman takes his stroll through the town, I am joined by Major Noltitz. After shaking hands, he showed me a Mongol in the second-class car, and said to me, "That is not one of those we picked up at Douchak when we picked up Faruskiar and Ghangir."
"That is so," said I; "I never saw that face in the train before."
Popof, to whom I applied for information, told me that the Mongol had got in at Tchertchen. "When he arrived," he said, "the manager spoke to him for a minute, from which I concluded that he also was one of the staff of the Grand Transasiatic."

I had not noticed Faruskiar during my walk. Had he alighted at one of the small stations between Tchertchen and
Tcharkalyk, where we ought to have been about one o'clock in the afternoon?

No, he and Ghangir were on the gangway in front of our car. They seemed to be in animated conversation, and only stopped to take a good look toward the northeastern horizon. Had the Mongol brought some news which had made them throw off their usual reserve and gravity? And I abandoned myself to my imagination, foreseeing adventures, attacks of bandits, and so on, according to my dream.

I was recalled to reality by the Reverend Nathaniel Morse, who said to me, "It is fixed for to-day, at nine o'clock; do not forget."

That meant the marriage of Fulk Ephrinell and Horatia Bluett. Really, I was not thinking of it. It is time for me to go and dress for the occasion. All I can do will be to change my shirt. It is enough that one of the husband's witnesses should be presentable; the other, Catera, will be sure to be magnificent!

In fact, the actor had gone into the luggage van--how I trembled for Kinko!--and there, with Popof's assistance, had got out of one of his boxes a somewhat free-and-easy costume, but one certain of success at a wedding: A primrose coat with metal buttons, and a buttonhole, a sham diamond pin in the cravat, poppy-colored breeches, copper buckles, flowered waistcoat, clouded stockings, thread gloves, black pumps, and white beaver hat. What a number of bridegrooms and uncles of bridegrooms our friend had been in this traditional attire! He looked superb, with his beaming face, his close-shaven chin, and blue cheeks, and his laughing eyes and rosy lips.

Madame Catera was quite as glorious in her array. She had easily discovered a bridesmaid's costume in her wardrobe, bodice with intercrossing stripes, short petticoat in green woolen, mauve stockings, straw hat with artificial flowers, a suspicion of black on the eyelids and of rouge on the cheeks. There you have the provincial stage beauty, and if she and her husband like to play a village piece after the breakfast, I can promise them bravos enough.

It was at nine o'clock that this marriage was to take place, announced by the bell of the tender, which was to sound full clang as if it were a chapel bell. With a little imagination, we could believe we were in a village. But whither did this bell invite the witnesses and guests? Into the dining car, which had been conveniently arranged for the ceremony, as I had taken good care.

It was no longer a dining car; it was a hall car, if the expression is admissible. The big table had been taken away, and replaced by a small table which served as a desk. A few flowers bought at Tchertchen had been arranged in the corners of the car, which was large enough to hold nearly all who wished to be present--and those who could not get inside could look on from the gangways.

That all the passengers might know what was going on, we had put up a notice at the doors of the first and second-class cars, couched in the following terms:

"Mr. Fulk Ephrinell, of the firm of Messrs. Strong, Bulbul & Co., of New York City, has the honor to invite you to his wedding with Miss Horatia Bluett, of the firm of Messrs. Holmes-Holme, London, which will take place in the dining car on this the 22d of May, at nine o'clock precisely. The Reverend Nathaniel Morse, of Boston, U.S.A., will officiate.

"Miss Horatia Bluett, of the firm of Messrs. Holmes-Holme, of London, has the honor to invite you to her wedding with Mr. Fulk Ephrinell, of the firm of Messrs. Strong, Bulbul & Co., of New York City, etc., etc."

If I do not make half a dozen pars out of all this I am no newspaper man!

Meanwhile I learn from Popof the precise spot where the ceremony will take place.

Popof points it out on the map. It is a hundred and fifty kilometres from Tcharkalyk station, in the middle of the desert, amid the plains which are traversed by a little stream which flows into the Lob Nor. For twenty leagues there is no station, and the ceremony is not likely to be interrupted by any stoppage.

It need hardly be said that at half-past eight I and Catera were ready for the call.

Major Noltitz and Pan-Chao had got themselves up in all due form for the solemnity. The major looked as serious as a surgeon who was going to cut off a leg. The Chinaman looked as gay as a Parisian at a village bridal.

Doctor Tio-King and Cornaro, one carrying the other, were to be at this little festivity. The noble Venetian was a bachelor, if I am not mistaken, but I do not think he gives any opinion on marriage, at least I have no recollection of its being in the chapter headed "Safe and easy means of promptly remedying the different accidents that threaten life."

"And," added Pan-Chao, who has just quoted this Cornarian phrase, "I suppose marriage ought to be included among those accidents!"

A quarter to nine. No one has yet seen the happy couple. Miss Bluett is in one of the toilet cabinets in the first van, where she is probably preparing herself. Fulk Ephrinell is perhaps struggling with his cravat and giving a last polish to his portable jewelry. I am not anxious. We shall see them as soon as the bell rings.

I have but one regret, and that is that Faruskiar and Ghangir should be too busy to join us. Why do they continue to look out over the immense desert? Before their eyes there stretches not the cultivated steppe of the Lob Nor region, but the Gobi, which is barren, desolate and gloomy, according to the reports of Grjimailo, Blanc and Martin.
It may be asked why these people are keeping such an obstinate lookout.

"If my presentiments do not deceive me," said Major Noltitz, "there is some reason for it."

What does he mean? But the bell of the tender, the tender bell, begins its joyous appeal. Nine o'clock; it is time to go into the dining car.

Caterna comes near me, and I hear him singing:

"It is the turret bell, Which sud-denly is sounding."

While Madame Caterna replies to the trio of the Dame Blanche by the refrain of the Dragons de Villars:

"And it sounds, sounds, sounds, It sounds and resounds--"

The passengers move in a procession, the four witnesses first, then the guests from the end of the village--I mean of the train; Chinese, Turkomans, Tartars, men and women, all curious to assist at the ceremony. The four Mongols remain on the last gangway near the treasure which the Chinese soldiers do not leave for an instant.

We reach the dining car.

The clergyman is seated at the little table, on which is the certificate of marriage he has prepared according to the customary form. He looks as though he was accustomed to this sort of thing, which is as much commercial as matrimonial.

The bride and bridegroom have not appeared.

"Ah!" said I to the actor, "perhaps they have changed their minds."

"If they have," said Caterna, laughing, "the reverend gentleman can marry me and my wife over again. We are in wedding garments, and it is a pity to have had all this fuss for nothing, isn't it, Caroline?"

"Yes, Adolphe--"

But this pleasing second edition of the wedding of the Caternas did not come off. Here is Mr. Fulk Ephrinell, dressed this morning just as he was dressed yesterday--and--detail to note--with a pencil behind the lobe of his left ear, for he has just been making out an account for his New York house.

Here is Miss Horatia Bluett, as thin, as dry, as plain as ever, her dust cloak over her traveling gown, and in place of jewelry a noisy bunch of keys, which hangs from her belt.

The company politely rise as the bride and bridegroom enter. They "mark time," as Caterna says. Then they advance toward the clergyman, who is standing with his hand resting on a Bible, open probably at the place where Isaac, the son of Abraham, espouses Rebecca, the daughter of Rachel.

We might fancy we were in a chapel if we only had a harmonium.

And the music is here! If it is not a harmonium, it is the next thing to it. An accordion makes itself heard in Caterna's hands. As an ancient mariner, he knows how to manipulate this instrument of torture, and here he is swinging out the andante from Norma with the most accordionesque expression.

It seems to give great pleasure to the natives of Central Asia. Never have their ears been charmed by the antiquated melody that the pneumatic apparatus was rendering so expressively.

But everything must end in this world, even the andante from Norma. and the Reverend Nathaniel Morse began to favor the young couple with the speech which had clone duty many times before under similar circumstances.

"The two souls that blend together--Flesh of my flesh--Increase and multiply--"

In my opinion he had much better have got to work like a notary: "Before us, there has been drawn up a deed of arrangement regarding Messrs. Ephrinell, Bluett & Co.--"

My thought remained unfinished. There are shouts from the engine. The brakes are suddenly applied with a scream and a grind. Successive shocks accompany the stoppage of the train. Then, with a violent bump, the cars pull up in a cloud of sand.

What an interruption to the nuptial ceremony!

Everything is upset in the dining car, men, furniture, bride, bridegroom and witnesses. Not one kept his equilibrium. It is an indescribable pell-mell, with cries of terror and prolonged groans. But I hasten to point out that there was nothing serious, for the stoppage was not all at once.

"Quick!" said the major. "Out of the train!"

* * * * *

CHAPTER XX.

In a moment the passengers, more or less bruised and alarmed, were out on the track. Nothing but complaints and questions uttered in three or four different languages, amid general bewilderment.

Faruskiar, Ghangir and the four Mongols were the first to jump off the cars. They are out on the line, kandijar in one hand, revolver in the other. No doubt an attack has been organized to pillage the train.

The rails have been taken up for about a hundred yards, and the engine, after bumping over the sleepers, has
come to a standstill in a sandhill.

"What! The railroad not finished--and they sold me a through ticket from Tiflis to Pekin? And I came by this Transasiatic to save nine days in my trip round the world!"

In these phrases, in German, hurled at Popof, I recognized the voice of the irascible baron. But this time he should have addressed his reproaches not to the engineers of the company, but to others.

We spoke to Popof, while Major Noltitz continued to watch Faruskiar and the Mongols.

"The baron is mistaken," said Popof, "the railway is completed, and if a hundred yards of rails have been lifted here, it has been with some criminal intention."

"To stop the train!" I exclaimed.

"And steal the treasure they are sending to Pekin!" says Caterina.

"There is no doubt about that," says Popof. "Be ready to repulse an attack."

"Is it Ki-Tsang and his gang that we have to do with?" I asked.

Ki-Tsang! The name spread among the passengers and caused inexpressible terror.

The major said to me in a low voice: "Why Ki-Tsang? Why not my lord Faruskiar?"

"He--the manager of the Transasiatic?"

"If it is true that the company had to take several of these robber chiefs into its confidence to assure the safety of the trains--"

"I will never believe that, major."

"As you please, Monsieur Bombarnac. But assuredly Faruskiar knew that this pretended mortuary van contained millions."

"Come, major, this is no time for joking."

No, it was the time for defending, and defending one's self courageously.

The Chinese officer has placed his men around the treasure van. They are twenty in number, and the rest of the passengers, not counting the women, amount to thirty. Popof distributes the weapons which are carried in case of attack. Major Noltitz, Caterina, Pan-Chao, Ephrinell, driver and stoker, passengers, Asiatic and European, all resolve to fight for the common safety.

On the right of the line, about a hundred yards away, stretches a deep, gloomy thicket, a sort of jungle, in which doubtless are hidden the robbers, awaiting the signal to pounce upon us.

Suddenly there is a burst of shouting, the thicket has given passage to the gang in ambush--some sixty Mongols, nomads of the Gobi. If these rascals beat us, the train will be pillaged, the treasure of the Son of Heaven will be stolen, and, what concerns us more intimately, the passengers will be massacred without mercy.

And Faruskiar, whom Major Noltitz so unjustly suspected? I look at him. His face is no longer the same; his fine features have become pale, his height has increased, there is lightning in his eyes.

Well! If I was mistaken about the mandarin Yen Lou, at least I had not mistaken the general manager of the Transasiatic or the famous bandit of Yunnan.

However, as soon as the Mongols appeared, Popof hurried Madame Caterina, Miss Horatia Bluett, and the other women into the cars. We took every means for putting them in safety.

My only weapon was a six-shot revolver, and I knew how to use it.

Ah! I wanted incidents and accidents, and impressions of the journey! Well, the chronicler will not fail to chronicle, on condition that he emerges safe and sound from the fray, for the honor of reporting in general and the glory of the Twentieth Century in particular.

But is it not possible to spread trouble among the assailants, by beginning with blowing out Ki-Tsang's brains, if Ki-Tsang is the author of this ambuscade? That would bring matters to a crisis.

The bandits fire a volley, and begin brandishing their arms and shouting. Faruskiar, pistol in one hand, kandijar in the other, has rushed onto them, his eyes gleaming, his lips covered with a slight foam. Ghangir is at his side, followed by four Mongols whom he is exciting by word and gesture.

Major Noltitz and I throw ourselves into the midst of our assailants. Caterina is in front of us, his mouth open, his white teeth ready to bite, his eyes blinking, his revolver flourishing about. The actor has given place to the old sailor who has reappeared for the occasion.

"These beggars want to board us!" said he. "Forward, forward, for the honor of the flag! To port, there, fire! To starboard, there, fire! All together, fire!"

And it was with no property daggers he was armed, nor dummy pistols loaded with Edouard Philippe's inoffensive powder. No! A revolver in each hand, he was bounding along, firing, as he said, right and left and everywhere.

Pan-Chao also exposed himself bravely, a smile on his lips, gallantly leading on the other Chinese passengers. Popof and the railwaymen did their duty bravely. Sir Francis Trevellyan, of Trevellyan Hall, took matters very
coolly, but Ephrinell abandoned himself to true Yankee fury, being no less irritated at the interruption to his marriage as to the danger run by his forty-two packages of artificial teeth.

And in short, the band of robbers met with a much more serious resistance than they expected.

And Baron Weissenzitterdörfer? Well, he is one of the most furious of us all. He sweats blood and water, his fury carries him away at the risk of his being massacred. Many times we have to rescue him. These rails lifted, this train stopped, this attack in the open Gobi desert, the delays that it will all occasion, the mailboat lost at Tientsin, the voyage round the world spoiled, his plan come to grief before he had half accomplished it! What a shock to his German self-esteem!

Faruskiar, my hero—I cannot call him anything else—displays extraordinary intrepidity, bearing himself the boldest in the struggle, and when he had exhausted his revolver, using his kandijar like a man who had often faced death and never feared it.

Already there were a few wounded on both sides, perhaps a few dead among the passengers who lay on the line. I have had my shoulder grazed by a bullet, a simple scratch I have hardly noticed. The Reverend Nathaniel Morse does not think that his sacred character compels him to cross his arms, and, from the way he works, one would not imagine that it was the first time he has handled firearms. Caterina has his hat shot through, and it will be remembered that it is his village bridegroom's hat, the gray beaver, with the long fur. He utters a gigantic maritime oath, something about thunder and portholes, and then, taking a most deliberate aim, quietly shoots stone dead the ruffian who has taken such a liberty with his best headgear.

For ten minutes or so the battle continues with most alarming alternations. The number of wounded on both sides increases, and the issue is still doubtful. Faruskiar and Ghangir and the Mongols have been driven back toward the precious van, which the Chinese guard have not left for an instant. But two or three of them have been mortally wounded, and their officer has just been killed by a bullet in the head. And my hero does all that the most ardent courage can do for the defence of the treasure of the Son of Heaven.

I am getting uneasy at the prolongation of the combat. It will continue evidently as long as the chief of the band—-a tall man with a black beard—urges on his accomplices to the attack on the train. Up till now he has escaped unhurt, and, in spite of all we can do, he is gaining ground. Shall we be obliged to take refuge in the vans, as behind the walls of a fortress, to entrench ourselves, to fight until the last has succumbed? And that will not be long, if we cannot stop the retrograde movement which is beginning on our side.

To the reports of the guns there are now added the cries of the women, who in their terror are running about the gangways, although Miss Bluett and Madame Catera are trying to keep them inside the cars. A few bullets have gone through the panels, and I am wondering if any of them have hit Kinko.

Major Noltitz comes near me and says: "This is not going well."
"No, it is not going well," I reply, "and I am afraid the ammunition will give out. We must settle their commander-in-chief. Come, major--"

But what we are about to do was done by another at that very instant.

This other was Faruskiar. Bursting through the ranks of the assailants, he cleared them off the line, in spite of the blows they aimed at him. He is in front of the bandit chief, he raises his arm, he stabs him full in the chest.

Instantly the thieves beat a retreat, without even carrying off their dead and wounded. Some run across the plain, some disappear in the thickets. Why pursue them, now that the battle has ended in our favor? And I must say that without the admirable valor of Faruskiar, I do not expect any of us would have lived to tell the story.

But the chief of the bandits is not dead, although the blood flows abundantly from his chest.
He has fallen with one knee on the ground, one hand up, with the other he is supporting himself.
Faruskiar stands over him, towering above him.
Suddenly he rises in a last effort, his arm threatens his adversary, he looks at him.
A last thrust of the kandijar is driven into his heart.
Faruskiar returns, and in Russian, with perfect calmness, remarks:
"Ki-Tsang is dead! So perish all who bear weapons against the Son of Heaven!"

CHAPTER XXI.

And so it was Ki-Tsang who had just attacked the Grand Transasiatic on the plains of Gobi. The pirate of Vunnan had learned that a van containing gold and precious stones of enormous value had formed part of this train! And was there anything astonishing in that, considering that the newspapers, even those of Paris, had published the fact many days before? So Ki-Tsang had had time to prepare his attempt, and had lifted a portion of the rails, and would probably have succeeded in carrying off the treasure if Faruskiar had not brought him to his feet. That is why our hero had been so uneasy all the morning; if he had been looking out over the desert so persistently, it was
because he had been warned of Ki-Tsang's plans by the last Mongol who had joined the train at Tchertchen! Under any circumstances we had now nothing to fear from Ki-Tsang. The manager of the company had done justice on the bandit—speedy justice, I admit. But we are in the midst of the deserts of Mongolia, where there are no juries as yet, which is a good thing for the Mongols.

"Well," said I to the major, "I hope you have abandoned your suspicions with regard to my lord Faruskiar?"

"To a certain extent, Monsieur Bombarnac!" Only to a certain extent? Evidently Major Noltitz is difficult to please.

But let us hasten on and count our victims. On our side there are three dead, including the Chinese officer, and more than twelve wounded, four of them seriously, the rest slightly, so that they can continue their journey to Pekin. Popof escaped without a scratch, Catera with a slight graze which his wife insists on bathing.

The major has the wounded brought into the cars and does the best for them under the circumstances. Doctor Tio-King offers his services, but they seem to prefer the Russian army surgeon, and that I understand. As to those who have fallen it is best for us to take them on to the next station and there render them the last services.

The thieves had abandoned their dead. We covered them over with a little sand, and that is all we need say.

The place where we had been stopped was halfway between Tcharkalyk and Tchertchen, the only two stations from which we could procure help. Unfortunately they were no longer in telegraphic communication, Ki-Tsang having knocked down the posts at the same time as he lifted the rails.

Hence a discussion as to what was the best thing to be done, which was not of long duration.

As the engine had run off the rails, the very first thing to do was evidently to get it onto them again; then as there was a gap in the line, the simplest thing to do was to run back to Tchertchen, and wait there until the company's workmen had repaired the damage, which they could easily do in a couple of days.

We set to work without losing a moment. The passengers were only too glad to help Popof and the officials who had at their disposal a few tools, including jacks, levers and hammers, and in three hours the engine and tender were again on the line.

The most difficult business is over. With the engine behind we can proceed at slow speed to Tchertchen. But what lost time! What delays! And what recriminations from our German baron, what donnervetters and teufels and other German expletives!

I have omitted to say that immediately after the dispersal of the bandits we had in a body thanked Faruskiar. The hero received our thanks with all the dignity of an Oriental.

"I only did my duty as general manager of the company," he replied, with a truly noble modesty.

And then at his orders the Mongols had set to work, and I noticed that they displayed indefatigable ardor, for which they earned our sincere felicitations.

Meanwhile Faruskiar and Ghangir were often talking together in a whisper, and from these interviews arose a proposition which none of us expected.

"Guard," said Faruskiar, addressing Popof, "it is my opinion that we had much better run on to Tcharkalyk than go back; it would suit the passengers much better."

"Certainly, sir, it would be preferable," said Popof; "but the line is broken between here and Tcharkalyk, and we cannot get through."

"Not at present, but we could get the cars through if we could temporarily repair the line."

That was a proposal worth consideration, and we assembled to consider it, Major Noltitz, Pan-Chao, Fulk Ephrinell, Catera, the clergyman, Baron Weisschnitzerdorf, and a dozen others—all who understood Russian.

Faruskiar spoke as follows:

"I have been looking at the portion of the line damaged by the band of Ki-Tsang. Most of the sleepers are still in place. As to the rails, the scoundrels have simply thrown them onto the sand, and by replacing them end to end it would be easy to get the train over to the uninjured track. It would not take a day to do this, and five hours afterward we should be at Tcharkalyk."

Excellent notion, at once approved of by Popof, the driver, the passengers, and particularly by the baron. The plan was possible, and if there were a few rails useless, we could bring to the front those we had already run over, and in this way get over the difficulty.

Evidently this Faruskiar is a man, he is our true chief, he is the personage I was in want of, and I will sound his name over the entire universe in all the trumpets of my chronicle!

And yet Major Noltitz is mistaken enough to see in him only a rival to this Ki-Tsang, whose crimes have just received their final punishment from his hand!

We set to work to replace the sleepers that had been shifted aside from where they had left their mark, and we continued our task without intermission.

Having no fear of being noticed amid the confusion which followed the attack, I went into the luggage van to
assure myself that Kinko was safe and sound, to tell him what had passed, to caution him on no account to come put
of his box. He promised me, and I was at ease regarding him.

It was nearly three o'clock when we began work. The rails had been shifted for about a hundred yards. As
Faruskiar remarked, it was not necessary for us to fix them permanently. That would be the task of the workmen the
company would send from Tcharkalyk when we reached that station, which is one of the most important on the line.

As the rails were heavy we divided ourselves into detachments. First-class and second-class, all worked together
with good will. The baron displayed tremendous ardor. Ephrinell, who thought no more of his marriage than if he
had never thought about it, devoted strict attention to business. Pan-Chao was second to nobody, and even Doctor
Tio-King strove to make himself useful—in the fashion of the celebrated Auguste, the fly on the chariot wheel.

"It is hot, this Gobi sun!" said Caterna.

Alone sat Sir Francis Trevellyan of Trevellyanshire, calm and impassive in his car, utterly regardless of our
efforts.

At seven o'clock thirty yards of the line had been repaired. The night was closing in. It was decided to wait until
the morning. In half a day we could finish the work, and in the afternoon we could be off again.

We were in great want of food and sleep. After so rude a task, how rude the appetite! We met in the dining car
without distinction of classes. There was no scarcity of provisions, and a large breach was made in the reserves.
Never mind! We can fill up again at Tcharkalyk.

Caterna is particularly cheery, talkative, facetious, communicative, overflowing. At dessert he and his wife sang
the air—appropriate to the occasion—from the Voyage en Chine, which we caught up with more power than
precision:

"China is a charming land Which surely ought to please you."

Oh! Labiche, could you ever have imagined that this adorable composition would one day charm passengers in
distress on the Grand Transasiatic? And then our actor—a little fresh, I admit—had an idea. And such an idea! Why
not resume the marriage ceremony interrupted by the attack on the train?

"What marriage?" asked Ephrinell.

"Yours, sir, yours," replied Caterna. "Have you forgotten it? That is rather too good!"

The fact is that Fulk Ephrinell, on the one part, and Horatia Bluett, on the other part, seemed to have forgotten
that it had not been for the attack of Ki-Tsang and his band they would now have been united in the gentle bonds of
matrimony.

But we were all too tired. The Reverend Nathaniel Morse was unequal to the task; he would not have strength
effect enough to bless the pair, and the pair would not have strength enough to support his blessing. The ceremony could
be resumed on the day after to-morrow. Between Tcharkalyk and Lan Tcheou there was a run of nine hundred
kilometres, and that was quite long enough for this Anglo-American couple to be linked together in.

And so we all went to our couches or benches for a little refreshing sleep. But at the same time the requirements
of prudence were not neglected.

Although it appeared improbable, now that their chief had succumbed, the bandits might still make a nocturnal
attack. There were always these cursed millions of the Son of Heaven to excite their covetousness, and if we are not
on our guard—

But we feel safe. Faruskiar in person arranges for the surveillance of the train. Since the death of the officer he
has taken command of the Chinese detachment. He and Ghangir are on guard over the imperial treasure, and
according to Caterna, who is never in want of a quotation from some comic opera:

"This night the maids of honor will be guarded well."

And, in fact, the imperial treasure was much better guarded than the beautiful Athenais de Solange between the
first and second acts of the Mousquetaires de la Reine.

At daybreak next morning we are at work. The weather is superb. The day will be warm. Out in the Asian desert
on the 24th of May the temperature is such that you can cook eggs if you only cover them with a little sand.

Zeal was not wanting, and the passengers worked as hard as they had done the night before. The line was
gradually completed. One by one the sleepers were replaced, the rails were laid end to end, and about four o'clock in
the afternoon the gap was bridged.

At once the engine began to advance slowly, the cars following until they were over the temporary track and safe
again. Now the road is clear to Tcharkalyk; what do I say? to Pekin.

We resume our places. Popof gives the signal for departure as Caterna trolls out the chorus of victory of the
admiral's sailors in Haydee.

A thousand cheers reply to him. At ten o'clock in the evening the train enters Tcharkalyk station.

We are exactly thirty hours behind time. But is not thirty hours enough to make Baron Weisschnittzerdörfer lose
the mail from Tient-Tsin to Yokohama?
CHAPTER XXII.

I, who wanted an incident, have had one to perfection. I am thankful enough not to have been one of the victims. I have emerged from the fray safe and sound. All my numbers are intact, barring two or three insignificant scratches. Only No. 4 has been traversed by a bullet clean through--his hat.

At present I have nothing in view beyond the Bluett-Ephrinell marriage and the termination of the Kinko affair. I do not suppose that Faruskiar can afford us any further surprises. I can reckon on the casual, of course, for the journey has another five days to run. Taking into account the delay occasioned by the Ki-Tsang affair that will make thirteen days from the start from Uzun Ada.

Thirteen days! Heavens! And there are the thirteen numbers in my notebook! Supposing I were superstitious?

We remained three hours at Tcharkalyk. Most of the passengers did not leave their beds. We were occupied with declarations relative to the attack on the train, to the dead which the Chinese authorities were to bury, to the wounded who were to be left at Tcharkalyk, where they would be properly looked after. Pan-Chao told me it was a populous town, and I regret I was unable to visit it.

The company sent off immediately a gang of workmen to repair the line and set up the telegraph posts; and in a day everything would be clear again.

I need scarcely say that Faruskiar, with all the authority of the company's general manager, took part in the different formalities that were needed at Tcharkalyk. I do not know how to praise him sufficiently. Besides, he was repaid for his good offices by the deference shown him by the staff at the railway station.

At three in the morning we arrived at Kara Bouran, where the train stopped but a few minutes. Here the railway crosses the route of Gabriel Bonvalot and Prince Henri of Orleans across Tibet in 1889-90, a much more complete journey than ours, a circular trip from Paris to Paris, by Berlin, Petersbourg, Moscow, Nijni, Perm, Tobolsk, Omsk, Semipalatinsk, Kouldja, Tcharkalyk, Batong, Yunnan, Hanoi, Saigon, Singapore, Ceylon, Aden, Suez, Marseilles, the tour of Asia, and the tour of Europe.

The train halts at Lob Nor at four o'clock and departs at six. This lake, the banks of which were visited by General Povtzoff in 1889, when he returned from his expedition to Tibet, is an extensive marsh with a few sandy islands, surrounded by two or three feet of water. The country through which the Tarim slowly flows had already been visited by Fathers Hue and Gabet, the explorers Prjevalski and Carey up to the Davana pass, situated a hundred and fifty kilometres to the south. But from that pass Gabriel Bonvalot and Prince Henri of Orleans, camping sometimes at fifteen thousand feet of altitude, had ventured across virgin territories to the foot of the superb Himalayan chain.

Our itinerary lay eastwards toward Kara Nor, skirting the base of the Nan Chan mountains, behind which lies the region of Tsaidam. The railway dare not venture among the mountainous countries of the Kou-Kou-Nor, and we were on our way to the great city of Lan Tcheou along, the base of the hills.

Gloomy though the country might be, there was no reason for the passengers to be so. This glorious sun, with its rays gilding the sands of the Gobi as far as we could see, announced a perfect holiday. From Lob Nor to Kara Nor there are three hundred and fifty kilometres to run, and between the lakes we will resume the interrupted marriage of Fulk Ephrinell and Horatia Bluett, if nothing occurs to again delay their happiness.

The dining car has been again arranged for the ceremony, the witnesses are ready to resume their parts, and the happy pair cannot well be otherwise than of the same mind.

The Reverend Nathaniel Morse, in announcing that the marriage will take place at nine o'clock, presents the compliments of Mr. Ephrinell and Miss Bluett.

Major Noltitz and I, Caterna and Pan-Chao are under arms at the time stated.

Caterna did not think it his duty to resume his costume, nor did his wife. They were dressed merely for the grand dinner party which took place at eight o'clock in the evening--the dinner given by Ephrinell to his witnesses and to the chief first-class passengers. Our actor, puffing out his left cheek, informed me that he had a surprise for us at dessert. What? I thought it wise not to ask.

A little before nine o'clock the bell of the tender begins to ring. Be assured it does not announce an accident. Its joyous tinkling calls us to the dining car, and we march in procession toward the place of sacrifice.

Ephrinell and Miss Bluett are already seated at the little table in front of the worthy clergyman, and we take our places around them.

On the platforms are grouped the spectators, anxious to lose nothing of the nuptial ceremony.

My lord Faruskiar and Ghangir, who had been the object of a personal invitation, had just arrived. The assembly respectfully rises to receive them. They will sign the deed of marriage. It is a great honor, and if it were my marriage I should be proud to see the illustrious name of Faruskiar figure among the signatures to the deed.
The ceremony begins, and this time the Reverend Nathaniel Morse was able to finish his speech, so regrettably interrupted on the former occasion.

The young people rise, mud the clergyman asks them if they are mutually agreed as to marriage.

Before replying, Miss Bluett turns to Ephrinell, and says:
"It is understood that Holmes-Holme will have twenty-five per cent. of the profits of our partnership."
"Fifteen," said Ephrinell, "only fifteen."
"That is not fair, for I agree to thirty per cent, from Strong, Bulbul & Co."
"Well, let us say twenty per cent., Miss Bluett."
"Be it so, Mr. Ephrinell."
"But that is a good deal for you!" whispered Caterna in my ear.

The marriage for a moment was in check for five per cent.!

But all is arranged. The interests of the two houses have been safeguarded. The Reverend Nathaniel Morse repeats the question.

A dry "yes" from Horatia Bluett, a short "yes" from Fulk Ephrinell, and the two are declared to be united in the bonds of matrimony.

The deed is then signed, first by them, then by the witnesses, then by Faruskiar, and the other signatures follow. At length the clergyman adds his name and flourish, and that closes the series of formalities according to rule.

"There they are, riveted for life," said the actor to me, with a little lift of his shoulder.

"For life--like two bullfinches," said the actress, who had not forgotten that these birds are noted for the fidelity of their armours.

"In China," said Pan-Chao, "it is not the bullfinch but the mandarin duck that symbolizes fidelity in marriage."
"Ducks or bullfinches, it is all one," said Caterna philosophically.

The ceremony is over. We compliment the newly married pair. We return to our occupation, Ephrinell to his accounts, Mrs. Ephrinell to her work. Nothing is changed in the train. There are only two more married people.

Major Noltitz, Pan-Chao and I go out and smoke on one of the platforms, leaving to their preparations the Caternas, who seem to be having a sort of rehearsal in their corner. Probably it is the surprise for the evening.

There is not much variety in the landscape. All along is this monotonous desert of Gobi with the heights of the Humboldt mountains on the right reaching on to the ranges of Nan Chan. The stations are few and far between, and consist merely of an agglomeration of huts, with the signal cabin standing up among them like a monument. Here the tender fills up with water and coal. Beyond the Kara Nor, where a few towns appear, the approach to China Proper, populous and laborious, becomes more evident.

This part of the desert of Gobi has little resemblance to the regions of Eastern Turkestan we crossed on leaving Kachgar. These regions are as new to Pan-Chao and Doctor Tio-King as to us Europeans.

I should say that Faruskiar no longer disdains to mingle in our conversation. He is a charming man, well informed and witty, with whom I shall become better acquainted when we reach Pekin. He has already invited me to visit him at his yamen. Nothing is changed in the train. There are only two more married people.

While the train is running at full speed we talk of one thing and another. With regard to Kachgaria, which had been mentioned, Faruskiar gave us a few very interesting details regarding the province, which had been so greatly troubled by insurrectionary movements. It was at this epoch that the capital, holding out against Chinese covetousness, had not yet submitted to Russian domination. Many times numbers of Celestials had been massacred in the revolts of the Turkestan chiefs, and the garrison had taken refuge in the fortress of Yanghi-Hissar.

Among these insurgent chiefs there was one, a certain Ouali-Khan-Toulla, whom I have mentioned with regard to the murder of Schlagintweit, and who for a time had become master of Kachgaria. He was a man of great intelligence, but of uncommon ferocity. And Faruskiar told us an anecdote giving us an idea of these pitiless Orientals.

"There was at Kachgar," he said, "an armorer of repute, who, wishing to secure the favors of Ouali-Khan-Toulla, made a costly sword. When he had finished his work he sent his son, a boy of ten, to present the sword, hoping to receive some remuneration from the royal hand. He received it. The Khan admired the sword, and asked if the blade was of the first quality. 'Yes,' said the boy. 'Then approach!' said the Khan, and at one blow he smote off the head, which he sent back to the father with the price of the blade he had thus proved to be of excellent quality."

This story he told really well. Had Caterna heard it, he would have asked for a Turkestan opera on the subject.

The day passed without incident. The train kept on at its moderate speed of forty kilometres an hour, an average that would have been raised to eighty had they listened to Baron Weisschnitzendorfer. The truth is that the Chinese driver had no notion of making up the time lost between Tcherthen and Tcharkalyk.
At seven in the evening we reach Kara Nor, to stay there fifty minutes. This lake, which is not as extensive as Lob Nor, absorbs the waters of the Soule Ho, coming down from the Nan Chan mountains. Our eyes are charmed with the masses of verdure that clothe its southern bank, alive with the flight of numerous birds. At eight o’clock, when we left the station, the sun had set behind the sandhills, and a sort of mirage produced by the warming of the lower zones of the atmosphere prolonged the twilight above the horizon.

The dining car has resumed its restaurant appearance, and here is the wedding banquet, instead of the usual fare. Twenty guests have been invited to this railway love feast, and, first of them, my lord Faruskiar. But for some reason or other he has declined Ephrinell’s invitation.

I am sorry for it, for I hoped that good luck would place me near him.

It occurred to me then that this illustrious name was worth sending to the office of the Twentieth Century, this name and also a few lines relative to the attack on the train and the details of the defense. Never was information better worth sending by telegram, however much it might cost. This time there is no risk of my bringing a lecture down on myself. There is no mistake possible, as in the case of that pretended mandarin, Yen-Lou, which I shall never forget—but then, it was in the country of the false Smerdis and that must be my excuse.

It is agreed that as soon as we arrive at Sou-Tcheou, the telegraph being repaired at the same time as the line, I will send off a despatch, which will reveal to the admiration of Europe the brilliant name of Faruskiar.

We are seated at the table. Ephrinell has done the thing as well as circumstances permit. In view of the feast, provisions were taken in at Tcharkalyk. It is not Russian cookery, but Chinese, and by a Chinese chef to which we do honor. Luckily we are not condemned to eat it with chopsticks, for forks are not prohibited at the Grand Transasiatic table.

I am placed to the left of Mrs. Ephrinell, Major Noltitz to the right of her husband. The other guests are seated as they please. The German baron, who is not the man to refuse a good dinner, is one of the guests. Sir Francis Trevellyan did not even make a sign in answer to the invitation that was tendered him.

To begin with, we had chicken soup and plovers’ eggs, then swallows’ nests cut in threads, stewed spawn of crab, sparrow gizzards, roast pig’s feet and sauce, mutton marrow, fried sea slug, shark’s fin—very gelatinous; finally bamboo shoots in syrup, and water lily roots in sugar, all the most out-of-the-way dishes, watered by Chao Hing wine, served warm in metal tea urns.

The feast is very jolly and—what shall I say?—very confidential, except that the husband takes no notice of the wife, and reciprocally.

What an indefatigable humorist is our actor? What a continuous stream of wheezes, unintelligible for the most part, of antediluvian puns, of pure nonsense at which he laughs so heartily that it is difficult not to laugh with him. He wanted to learn a few words of Chinese, and Pan-Chao having told him that “tching-tching” means thanks, he has been tching-tching at every opportunity, with burlesque intonation.

Then we have French songs, Russian songs, Chinese songs—among others the “Shiang-Touo-Tching,” the Chanson de la Reverie, in which our young Celestial repeats that the flowers of the peach tree are of finest fragrance at the third moon, and those of the red pomegranate at the fifth.

The dinner lasts till ten o’clock. At this moment the actor and actress, who had retired during dessert, made their entry, one in a coachman’s overcoat, the other in a nurse’s jacket, and they gave us the Sonnettes with an energy, a go, a dash—well, it would only be fair to them if Claretie, on the recommendation of Meilhac and Halevy, offers to put them on the pension list of the Comédie Française.

At midnight the festival is over. We all retire to our sleeping places. We do not even hear them shouting the names of the stations before we come to Kan-Tcheou, and it is between four and five o’clock in the morning that a halt of forty minutes retains us at the station of that town.

The country is changing as the railway runs south of the fortieth degree, so as to skirt the eastern base of the Nan Shan mountains. The desert gradually disappears, villages are not so few, the density of the population increases. Instead of sandy flats, we get verdant plains, and even rice fields, for the neighboring mountains spread their abundant streams over these high regions of the Celestial Empire. We do not complain of this change after the dreariness of the Kara-Koum and the solitude of Gobi. Since we left the Caspian, deserts have succeeded deserts, except when crossing the Pamir. From here to Pekin picturesque sites, mountain horizons, and deep valleys will not be wanting along the Grand Transasiatic.

We shall enter China, the real China, that of folding screens and porcelain, in the territory of the vast province of Kin-Sou. In three days we shall be at the end of our journey, and it is not I, a mere special correspondent, vowed to perpetual movement, who will complain of its length. Good for Kinko, shut up in his box, and for pretty Zinca Klork, devoured by anxiety in her house in the Avenue Cha-Coua!

We halt two hours at Sou-Tcheou. The first thing I do is to run to the telegraph office. The complaisant Pan-Chao offers to be my interpreter. The clerk tells us that the posts are all up again, and that messages can be sent
through to Europe.

At once I favor the Twentieth Century with the following telegram:

"Sou-Tcheou, 25th May, 2:25 P.M.

"Train attacked between Tcherchten and Tcharkalyk by the gang of the celebrated Ki-Tsang; travelers repulsed
the attack and saved the Chinese treasure; dead and wounded on both sides; chief killed by the heroic Mongol
grandee Faruskiar, general manager of the company, whose name should be the object of universal admiration."

If this telegram does not gratify the editor of my newspaper, well--

Two hours to visit Sou-Tcheou, that is not much.

In Turkestan we have seen two towns side by side, an ancient one and a modern one. Here, in China, as Pan-
Chao points out, we have two and even three or four, as at Pekin, enclosed one within the other.

Here Tai-Tchen is the outer town, and Le-Tchen the inner one. It strikes us at first glance that both look desolate.
Everywhere are traces of fire, here and there pagodas or houses half destroyed, a mass of ruins, not the work of time,
but the work of war. This shows that Sou-Tcheou, taken by the Mussulmans and retaken by the Chinese, has
undergone the horrors of those barbarous contests which end in the destruction of buildings and the massacre of
their inhabitants of every age and sex.

It is true that population rapidly increases in the Celestial Empire; more rapidly than monuments are raised from
their ruins. And so Sou-Tcheou has become populous again within its double wall as in the suburbs around. Trade is
flourishing, and as we walked through the principal streets we noticed the well-stocked shops, to say nothing of the
perambulating pedlars.

Here, for the first time, the Caternas saw pass along between the inhabitants, who stood at attention more from
fear than respect, a mandarin on horseback, preceded by a servant carrying a fringed parasol, the mark of his
master's dignity.

But there is one curiosity for which Sou-Tcheou is worth a visit. It is there that the Great Wall of China ends.

After descending to the southeast toward Lan-Tcheou, the wall runs to the northeast, covering the provinces of
Kian-Sou, Chan-si, and Petchili to the north of Pekin. Here it is little more than an embankment with a tower here
and there, mostly in ruins. I should have failed in my duty as a chronicler if I had not noticed this gigantic work at its
beginning, for it far surpasses the works of our modern fortifications.

"Is it of any real use, this wall of China?" asked Major Noltitz.

"To the Chinese, I do not know," said I; "but certainly it is to our political orators for purposes of comparison,
when discussing treaties of commerce. Without it, what would become of the eloquence of our legislators?"

CHAPTER XXIII.

I have not seen Kinko for two days, and the last was only to exchange a few words with him to relieve his
anxiety.

To-night I will try and visit him. I have taken care to lay in a few provisions at Sou-Tcheou.

We started at three o'clock. We have got a more powerful engine on. Across this undulating country the
gradients are occasionally rather steep. Seven hundred kilometres separate us from the important city of Lan-
Tcheou, where we ought to arrive to-morrow morning, running thirty miles an hour.

I remarked to Pan-Chao that this average was not a high one.

"What would you have?" he replied, crunching the watermelon seeds. "You will not change, and nothing will
change the temperament of the Celestials. As they are conservatives in all things, so will they be conservative in this
matter of speed, no matter how the engine may be improved. And, besides, Monsieur Bombarnac, that there are
railways at all in the Middle Kingdom is a wonder to me."

"I agree with you, but where you have a railway you might as well get all the advantage out of it that you can."
"Bah!" said Pan-Chao carelessly.

"Speed," said I, "is a gain of time--and to gain time--"

"Time does not exist in China, Monsieur Bombarnac, and it cannot exist for a population of four hundred
millions. There would not be enough for everybody. And so we do not count by days and hours, but always by
moons and watches."

"Which is more poetical than practical," I remark.

"Practical, Mr. Reporter? You Westerners are never without that word in your mouth. To be practical is to be the
slave of time, work, money, business, the world, everybody else, and one's self included. I confess that during my
stay in Europe--you can ask Doctor Tio-King--I have not been very practical, and now I return to Asia I shall be less
so. I shall let myself live, that is all, as the cloud floats in the breeze, the straw on the stream, as the thought is borne
away by the imagination."
"I see," said I, "we must take China as it is."

"And as it will probably always be, Monsieur Bombarnac. Ah! if you knew how easy the life is--an adorable dolce far niente between folding screens in the quietude of the yamens. The cares of business trouble us little; the cares of politics trouble us less. Think! Since Fou Hi, the first emperor in 2950, a contemporary of Noah, we are in the twenty-third dynasty. Now it is Manchoo; what it is to be next what matters? Either we have a government or we have not; and which of its sons Heaven has chosen for the happiness of four hundred million subjects we hardly know, and we hardly care to know."

It is evident that the young Celestial is a thousand and ten times wrong, to use the numerative formula; but it is not for me to tell him so.

At dinner Mr. and Mrs. Ephrinell, sitting side by side, hardly exchanged a word. Their intimacy seems to have decreased since they were married. Perhaps they are absorbed in the calculation of their reciprocal interests, which are not yet perfectly amalgamated. Ah! they do not count by moons and watches, these Anglo-Saxons! They are practical, too practical!

We have had a bad night. The sky of purple sulphury tint became stormy toward evening, the atmosphere became stifling, the electrical tension excessive. It meant a "highly successful" storm, to quote Caterna, who assured me he had never seen a better one except perhaps in the second act of Freyschütz. In truth the train ran through a zone, so to speak, of vivid lightning and rolling thunder, which the echoes of the mountains prolonged indefinitely. I think there must have been several lightning strokes, but the rails acted as conductors, and preserved the cars from injury. It was a fine spectacle, a little alarming, these fires in the sky that the heavy rain could not put out--these continuous discharges from the clouds, in which were mingled the strident whistlings of our locomotive as we passed through the stations of Yanlu, Youn Tcheng, Houlan-Sien and Da-Tsching.

By favor of this troubled night I was able to communicate with Kinko, to take him some provisions and to have a few minutes' conversation with him.

"Is it the day after to-morrow," he asked, "that we arrive at Pekin?"

"Yes, the day after to-morrow, if the train is not delayed."

"Oh, I am not afraid of delays! But when my box is in the railway station at Pekin, I have still to get to the Avenue Cha-Coua--"

"What does it matter, will not the fair Zinca Klork come and call for it?"

"No. I advised her not to do so."

"And why?"

"Women are so impressionable! She would want to see the van in which I had come, she would claim the box with such excitement that suspicions would be aroused. In short, she would run the risk of betraying me."

"You are right, Kinko."

"Besides, we shall reach the station in the afternoon, very late in the afternoon perhaps, and the unloading of the packages will not take place until next morning--"

"Probably."

"Well, Monsieur Bombarnac, if I am not taking too great a liberty, may I ask a favor of you?"

"What is it?"

"That you will be present at the departure of the case, so as to avoid any mistake."

"I will be there, Kinko, I will be there. Glass fragile, I will see that they don't handle it too roughly. And if you like I will accompany the case to Avenue Cha-Coua--"

"I hardly like to ask you to do that--"

"You are wrong, Kinko. You should not stand on ceremony with a friend, and I am yours, Kinko. Besides, it will be a pleasure to me to make the acquaintance of Mademoiselle Zinca Klork. I will be there when they deliver the box, the precious box. I will help her to get the nails out of it--"

"The nails out of it, Monsieur Bombarnac? My panel? Ah, I will jump through my panel!"

A terrible clap of thunder interrupted our conversation. I thought the train had been thrown off the line by the commotion of the air. I left the young Roumanian and regained my place within the car.

In the morning--26th of May, 7 A.M.--we arrived at Lan-Tcheou. Three hours to stop, three hours only.

"Come, Major Noltitz, come, Pan-Chao, come, Caterna, we have not a minute to spare."

But as we are leaving the station we are stopped by the appearance of a tall, fat, gray, solemn personage. It is the governor of the town in a double robe of white and yellow silk, fan in hand, buckled belt, and a mantilla--a black mantilla which would have looked much better on the shoulders of a manola. He is accompanied by a certain number of globular mandarins, and the Celestials salute him by holding out their two fists, which they move up and down as they nod their heads.

"Ah! What is this gentleman going to do? Is it some Chinese formality? A visit to the passengers and their
baggage? And Kinko, what about him?"

Nothing alarming, after all. It is only about the treasure of the Son of Heaven. The governor and his suite have stopped before the precious van, bolted and sealed, and are looking at it with that respectful admiration which is experienced even in China before a box containing many millions.

I ask Popof what is meant by the governor's presence, has it anything to do with us?

"Not at all," says Popof; "the order has come from Pekin to telegraph the arrival of the treasure. The governor has done so, and he is awaiting a reply as to whether he is to send it on to Pekin or keep it provisionally at Lan-Tcheou."

"That will not delay us?"

"I don't think so."

"Then come on," said I to my companions. But if the imperial treasure was a matter of indifference to us, it did not seem to be so to Faruskiar. But whether this van started or did not start, whether it was attached to our train or left behind, what could it matter to him? Nevertheless, he and Ghangir seemed to be much put about regarding it, although they tried to hide their anxiety, while the Mongols, talking together in a low tone, gave the governor anything but friendly glances.

Meanwhile the governor had just heard of the attack on the train and of the part that our hero had taken in defence of the treasure, with what courage he had fought, and how he had delivered the country from the terrible Ki-Tsang. And then in laudatory terms, which Pan-Chao translated to us, he thanked Faruskiar, complimented him, and gave him to understand that the Son of Heaven would reward him for his services.

The manager of the Grand Transasiatic listened with that tranquil air that distinguished him, not without impatience, as I could clearly see. Perhaps he felt himself superior to praises as well as recompenses, no matter from how great a height they might come. In that I recognized all the Mongol pride.

But we need not wait. The treasure van may remain here or go on to Pekin, but it makes no difference to us! Our business is to visit Lan-Tcheou.

What we did briefly I will more briefly tell.

There is an outer town and an inner one. No ruins this time. A very lively city, population swarming like ants and very active, familiarized by the railway with the presence of strangers whom they do not follow about with indiscreet curiosity as they used to do. Huge quarters occupy the right of the Hoang Ho, two kilometres wide. This Hoang Ho is the yellow river, the famous yellow river, which, after a course of four thousand four hundred kilometres, pours its muddy waters into the Gulf of Petchili.

"Is not its mouth near Tien Tsin, where the baron thinks of catching the mail for Yokohama?" asks the major.

"That is so," I reply.

"He will miss it," says the actor.

"Unless he trots, our globe-trotter."

"A donkey's trot does not last long," says Catera, "and he will not catch the boat."

"He will catch it if the train is no later," said the major. "We shall be at Tien Tsin on the 23d at six o'clock in the morning, and the steamer leaves at eleven."

"Whether he misses the boat or not, my friends, do not let us miss our walk."

A bridge of boats crosses the river, and the stream is so swift that the footway rises and falls like the waves of the sea. Madame Catera, who had ventured on it, began to turn pale.

"Caroline, Caroline," said her husband, "you will be seasick! Pull yourself together; pull yourself together!"

She "pulled herself together," and we went up towards a pagoda which rises over the town.

Like all the monuments of this kind, the pagoda resembles a pile of dessert dishes placed one on the other, but the dishes are of graceful form, and if they are in Chinese porcelain it is not astonishing.

We get an outside view of a cannon foundry, a rifle factory, the workmen being natives. Through a fine garden we reach the governor's house, with a capricious assemblage of bridges, kiosks, fountains and doors like vases. There are more pavilions and upturned roofs than there are trees and shady walks. Then there are paths paved with bricks, among them the remains of the base of the Great Wall.

It is ten minutes to ten when we return to the station, absolutely tired out; for the walk has been a rough one, and almost suffocating, for the heat is very great.

My first care is to look after the van with the millions. It is there as usual behind the train under the Chinese guard.

The message expected by the governor has arrived; the order to forward on the van to Pekin, where the treasure is to be handed over to the finance minister.

Where is Faruskiar? I do not see him. Has he given us the slip?

No! There he is on one of the platforms, and the Mongols are back in the car.
Ephrinell has been off to do a round of calls--with his samples, no doubt--and Mrs. Ephrinell has also been out on business, for a deal in hair probably. Here they come, and without seeming to notice one another they take their seats.

The other passengers are only Celestials. Some are going to Pekin; some have taken their tickets for intermediate stations like Si-Ngan, Ho Nan, Lou-Ngan, Tai-Youan. There are a hundred passengers in the train. All my numbers are on board. There is not one missing. Thirteen, always thirteen!

We were still on the platform, just after the signal of departure had been given, when Caterna asked his wife what was the most curious thing she had seen at Lan-Tcheou.

"The most curious thing, Adolphe? Those big cages, hung on to the walls and trees, which held such curious birds--"

"Very curious, Madame Caterna," said Pan-Chao. "Birds that talk--"

"What--parrots?"

"No; criminals' heads."

"Horrible!" said the actress, with a most expressive grimace.

"What would you have, Caroline?" said Caterna. "It is the custom of the country."

CHAPTER XXIV.

On leaving Lan-Tcheou, the railway crosses a well-cultivated country, watered by numerous streams, and hilly enough to necessitate frequent curves. There is a good deal of engineering work; mostly bridges, viaducts on wooden trestles of somewhat doubtful solidity, and the traveler is not particularly comfortable when he finds them bending under the weight of the train. It is true we are in the Celestial Empire, and a few thousand victims of a railway accident is hardly anything among a population of four hundred millions.

"Besides," said Pan-Chao, "the Son of Heaven never travels by railway."

So much the better.

At six o'clock in the evening we are at King-Tcheou, after skirting for some time the capricious meanderings of the Great Wall. Of this immense artificial frontier built between Mongolia and China, there remain only the blocks of granite and red quartzite which served as its base, its terrace of bricks with the parapets of unequal heights, a few old cannons eaten into with rust and hidden under a thick veil of lichens, and then the square towers with their ruined battlements. The interminable wall rises, falls, bends, bends back again, and is lost to sight on the undulations of the ground.

At six o'clock we halt for half an hour at King-Tcheou, of which I only saw a few pagodas, and about ten o'clock there is a halt of three-quarters of an hour at Si-Ngan, of which I did not even see the outline.

All night was spent in running the three hundred kilometres which separate this town from Ho Nan, where we had an hour to stop.

I fancy the Londoners might easily imagine that this town of Ho Nan was London, and perhaps Mrs. Ephrinell did so. Not because there was a Strand with its extraordinary traffic, nor a Thames with its prodigious movement of barges and steamboats. No! But because we were in a fog so thick that it was impossible to see either houses or pagodas.

The fog lasted all day, and this hindered the progress of the train. These Chinese engine-drivers are really very skilful and attentive and intelligent.

We were not fortunate in our last day's journey before reaching Tien Tsin! What a loss of copy! What paragraphs were melted away in these unfathomable vapors! I saw nothing of the gorges and ravines, through which runs the Grand Transasitc; nothing of the valley of Lou-Ngan, where we stopped at eleven o'clock; nothing of the two hundred and thirty kilometres which we accomplished amid the wreaths of a sort of yellow steam, worthy of a yellow country, until we stopped about ten o'clock at night at Tai-Youan.

Ah! the disagreeable day.

Luckily the fog rose early in the evening. Now it is night--and a very dark night, too.

I go to the refreshment bar and buy a few cakes and a bottle of wine. My intention is to pay a last visit to Kinko. We will drink to his health, to his approaching marriage with the fair Roumanian. He has traveled by fraud, I know, and if the Grand Transasitc only knew! But the Grand Transasitc will not know.

During the stoppage Faruskiar and Ghangir are walking on the platform and looking at the train. But it is not the van at the rear that is attracting their attention, but the van in front, and they seem to be much interested in it.

Are they suspicious of Kinko? Not the hypothesis is unlikely. The driver and stoker seem to be the object of their very particular attention. They are two brave Chinamen who have just come on duty, and perhaps Faruskiar is not sorry to see men in whom he can trust, with this imperial treasure and a hundred passengers behind them!
The hour for departure strikes, and at midnight the engine begins to move, emitting two or three loud whistles. As I have said, the night is very dark, without moon, without stars. Long clouds are creeping across the lower zones of the atmosphere. It will be easy for me to enter the van without being noticed. And I have not been too liberal in my visits to Kinko during these twelve days on the road.

At this moment Popof says to me:
"Are you not going to sleep to-night, Monsieur Bombarnac?"
"I am in no hurry," I reply; "after this foggy day, spent inside the car, I am glad of a breath of fresh air. Where does the train stop next?"
"At Fuen-Choo, when it has passed the junction with the Nanking line."
"Good night, Popof."
"Good night, Monsieur Bombarnac."
I am alone.

The idea occurs to me to walk to the rear of the train, and I stop for an instant on the gangway in front of the treasure van.

The passengers, with the exception of the Chinese guard, are all sleeping their last sleep—their last, be it understood, on the Grand Transasiatic.

Returning to the front of the train, I approach Popof's box, and find him sound asleep.

I then open the door of the van, shut it behind me, and signal my presence to Kinko.

The panel is lowered, the little lamp is lighted. In exchange for the cakes and wine I receive the brave fellow's thanks, and we drink to the health of Zinca Klork, whose acquaintance I am to make on the morrow.

It is ten minutes to one. In twelve minutes, so Popof says, we shall pass the junction with the Nanking branch. This branch is only completed for five or six kilometres, and leads to the viaduct over the Tjon valley. This viaduct is a great work—I have the details from Pan-Chao—and the engineers have as yet only got in the piers, which rise for a hundred feet above the ground.

As I know we are to halt at Fuen-Choo, I shake hands with Kinko, and rise to take my leave.

At this moment I seem to hear some one on the platform in the rear of the van.
"Look out, Kinko!" I say in a whisper.
The lamp is instantly extinguished, and we remain quite still.
I am not mistaken. Some one is opening the door of the van.
"Your panel," I whisper.
The panel is raised, the car is shut, and I am alone in the dark.
Evidently it must be Popof who has come in. What will he think to find me here? The first time I came to visit the young Roumanian I hid among the packages. Well, I will hide a second time. If I get behind Ephrinell's boxes it is not likely that Popof will see me, even by the light of his lantern.
I do so; and I watch.

It is not Popof, for he would have brought his lantern.

I try to recognize the people who have just entered. It is difficult. They have glided between the packages, and after opening the further door, they have gone out and shut it behind them.
They are some of the passengers, evidently; but why here—at this hour?
I must know. I have a presentiment that something is in the wind
Perhaps by listening?
I approach the front door of the van, and in spite of the rumbling of the train I hear them distinctly enough—
Thousand and ten thousand devils! I am not mistaken! It is the voice of my lord Faruskiar. He is talking with Ghangir in Russian. It is indeed Faruskiar. The four Mongols have accompanied him. But what are they doing there? For what motive are they on the platform which is just behind the tender? And what are they saying?
What they are saying is this.
Of these questions and answers exchanged between my lord Faruskiar and his companions, I do not lose a word.
"When shall we be at the junction?"
"In a few minutes."
"Are you sure that Kardek is at the points?"
"Yes; that has been arranged."
What had been arranged? And who is this Kardek they are talking about?
The conversation continues.
"We must wait until we get the signal," says Faruskiar.
"Is that a green light?" asks Ghangir.
"Yes—it will show that the switch is over."
I do not know if I am in my right senses. The switch over? What switch?
A half minute elapses. Ought I not to tell Popof? Yes--I ought.
I was turning to go out of the van, when an exclamation kept me back.
"The signal--there is the signal!" says Ghangir.
"And now the train is on the Nanking branch!" replies Faruskiar.
The Nanking branch? But then we are lost. At five kilometres from here is the Tjon viaduct in course of
construction, and the train is being precipitated towards an abyss.
Evidently Major Noltitz was not mistaken regarding my lord Faruskiar. I understand the scheme of the
scoundrels. The manager of the Grand Transasiatic is a scoundrel of the deepest dye. He has entered the service of the
company to await his opportunity for some extensive haul. The opportunity has come with the millions of the
Son of Heaven I Yes! The whole abominable scheme is clear enough to me. Faruskiar has defended the imperial
treasure against Ki-Tsang to keep it from the chief of the bandits who stopped the train, whose attack would have
interfered with his criminal projects! That is why he had fought so bravely. That is why he had risked his life and
behaved like a hero. And thou, poor beast of a Claudius, how thou hast been sold! Another howler! Think of that,
my friend!
But somehow we ought to prevent this rascal from accomplishing his work. We ought to save the train which is
running full speed towards the unfinished viaduct, we ought to save the passengers from a frightful catastrophe. As
to the treasure Faruskiar and his accomplices are after, I care no more than for yesterday's news! But the passengers-
-and myself--that is another affair altogether.
I will go back to Popof. Impossible. I seem to be nailed to the floor of the van. My head swims--
Is it true we are running towards the abyss? No! I am mad. Faruskiar and his accomplices would be hurled over
as well. They would share our fate. They would perish with us! But there are shouts in front of the train. The screams of people being killed. There is no doubt now. The driver and the stoker are being strangled. I feel the speed of the train begin to slacken.
I understand. One of the ruffians knows how to work the train, and he is slowing it to enable them to jump off
and avoid the catastrophe.
I begin to master my torpor. Staggering like a drunken man, I crawl to Kinko's case. There, in a few words, I tell
him what has passed, and I exclaim:
"We are lost!"
"No--perhaps" he replies.
Before I can move, Kinko is out of his box. He rushes towards the front door; he climbs on to the tender.
"Come along! Come along!" he shouts.
I do not know how I have done it, but here I am at his side, on the foot-plate, my feet in the blood of the driver
and stoker, who have been thrown off on to the line.
Faruskiar and his accomplices are no longer here.
But before they went one of them has taken off the brakes, jammed down the regulator to full speed, thrown
fresh coals into the fire-box, and the train is running with frightful velocity.
In a few minutes we shall reach the Tjon viaduct.
Kinko, energetic and resolute, is as cool as a cucumber. But in vain he tries to move the regulator, to shut off the
steam, to put on the brake. These valves and levers, what shall we do with them?
"I must tell Popof!" I shout.
"And what can he do? No; there is only one way--"
"And what is that?"
"Rouse up the fire," says Kinko, calmly; "shut down the safety valves, and blow up the engine."
And was that the only way--a desperate way--of stopping the train before it reached the viaduct?
Kinko scattered the coal on to the fire bars. He turned on the greatest possible draught, the air roared across the
furnace, the pressure goes up, up, amid the heaving of the motion, the bellowsings of the boiler, the beating of the
pistons. We are going a hundred kilometres an hour.
"Get back!" shouts Kinko above the roar. "Get back into the van."
"And you, Kinko?"
"Get back, I tell you."
I see him hang on to the valves, and put his whole weight on the levers.
"Go!" he shouts.
I am off over the tender. I am through the van. I awake Popof, shouting with all my strength:
"Get back! Get back!"
A few passengers suddenly waking from sleep begin to run from the front car.
Suddenly there is an explosion and a shock. The train at first jumps back. Then it continues to move for about half a kilometre.
It stops.
Popof, the major, Caterna, most of the passengers are out on the line in an instant.
A network of scaffolding appears confusedly in the darkness, above the piers which were to carry the viaduct across the Tjon valley.
Two hundred yards further the train would have been lost in the abyss.

CHAPTER XXV.
And I, who wanted "incident," who feared the weariness of a monotonous voyage of six thousand kilometres, in the course of which I should not meet with an impression or emotion worth clothing in type!
I have made another muddle of it, I admit! My lord Faruskiar, of whom I had made a hero--by telegraph--for the readers of the Twentieth Century. Decidedly my good intentions ought certainly to qualify me as one of the best pavers of a road to a certain place you have doubtless heard of.
We are, as I have said, two hundred yards from the valley of the Tjon, so deep and wide as to require a viaduct from three hundred and fifty to four hundred feet long. The floor of the valley is scattered over with rocks, and a hundred feet down. If the train had been hurled to the bottom of that chasm, not one of us would have escaped alive. This memorable catastrophe--most interesting from a reporter's point of view--would have claimed a hundred victims. But thanks to the coolness, energy and devotion of the young Roumanian, we have escaped this terrible disaster.
All? No! Kinko has paid with his life for the safety of his fellow passengers.
Amid the confusion my first care was to visit the luggage van, which had remained uninjured. Evidently if Kinko had survived the explosion he would have got back into his box and waited till I put myself in communication with him.
Alas! The coffer is empty--empty as that of a company which has suspended payment. Kinko has been the victim of his sacrifice.
And so there has been a hero among our traveling companions, and he was not this Faruskiar, this abominable bandit hidden beneath the skin of a manager, whose name I have so stupidly published over the four corners of the globe! It was this Roumanian, this humble, this little, this poor fellow, whose sweetheart will wait for him in vain, and whom she will never again see! Well, I will do him justice! I will tell what he has done. As to his secret, I shall be sorry if I keep it. If he defrauded the Grand Transasiatic, it is thanks to that fraud that a whole train has been saved. We were lost, we should have perished in the most horrible of deaths if Kinko had not been there!
I went back on to the line, my heart heavy, my eyes full of tears.
Assuredly Faruskiar's scheme--in the execution of which he had executed his rival Ki-Tsang--had been cleverly contrived in utilizing this branch line leading to the unfinished viaduct. Nothing was easier than to switch off the train if an accomplice was at the points. And as soon as the signal was given that we were on the branch, all he had to do was to gain the foot-plate, kill the driver and stoker, slow the train and get off, leaving the steam on full to work up to full speed.
And now there could be no doubt that the scoundrels worthy of the most refined tortures that Chinese practice could devise were hastening down into the Tjon valley. There, amid the wreck of the train, they expected to find the fifteen millions of gold and precious stones, and this treasure they could carry off without fear of surprise when the night enabled them to consummate this fearful crime. Well! They have been robbed, these robbers, and I hope that they will pay for their crime with their lives, at the least. I alone know what has passed, but I will tell the story, for poor Kinko is no more.
Yes! My mind is made up. I will speak as soon as I have seen Zinca Klork. The poor girl must be told with consideration. The death of her betrothed must not come upon her like a thunderclap. Yes! To-morrow, as soon as we are at Pekin.
After all, if I do not say anything about Kinko, I may at least denounce Faruskiar and Ghangir and the four Mongols. I can say that I saw them go through the van, that I followed them, that I found they were talking on the gangway, that I heard the screams of the driver and stoker as they were strangled on the foot-plate, and that I then returned to the cars shouting: "Back! Back!" or whatever it was.
Besides, as will be seen immediately, there was somebody else whose just suspicions had been changed into certainty, who only awaited his opportunity to denounce Faruskiar.
We are now standing at the head of the train, Major Noltitz, the German baron, Caterna, Ephrinell, Pan-Chao, Popof, about twenty travelers in all. The Chinese guard, faithful to their trust, are still near the treasure which not
one of them has abandoned. The rear guard has brought along the tail lamps, and by their powerful light we can see in what a state the engine is.

If the train, which was then running at enormous velocity, had not stopped suddenly--and thus brought about its destruction--it was because the boiler had exploded at the top and on the side. The wheels being undamaged, the engine had run far enough to come gradually to a standstill of itself, and thus the passengers had been saved a violent shock.

Of the boiler and its accessories only a few shapeless fragments remained. The funnel had gone, the dome, the steam chest; there was nothing but torn plates, broken, twisted tubes, split cylinders, and loose connecting rods--gaping wounds in the corpse of steel.

And not only had the engine been destroyed, but the tender had been rendered useless. Its tank had been cracked, and its load of coals scattered over the line. The luggage-van, curious to relate, had miraculously escaped without injury.

And looking at the terrible effects of the explosion, I could see that the Roumanian had had no chance of escape, and had probably been blown to fragments.

Going a hundred yards down the line I could find no trace of him--which was not to be wondered at. At first we looked on at the disaster in silence; but eventually conversation began.

"It is only too evident," said one of the passengers, "that our driver and stoker have perished in the explosion."

"Poor fellows!" said Popof. "But I wonder how the train could have got on the Nanking branch without being noticed?"

"The night was very dark," said Ephrinell, "and the driver could not see the points."

"That is the only explanation possible," said Popof, "for he would have tried to stop the train, and, on the contrary, we were traveling at tremendous speed."

"But," said Pan-Chao, "how does it happen the Nanking branch was open when the Tjon viaduct is not finished? Had the switch been interfered with?"

"Undoubtedly," said Popof, "and probably out of carelessness."

"No," said Ephrinell, deliberately. "There has been a crime--a crime intended to bring about the destruction of the train and passengers--"

"And with what object?" asked Popof.

"The object of stealing the imperial treasure," said Ephrinell. "Do you forget that those millions would be a temptation to scoundrels? Was it not for the purpose of robbing the train that we were attacked between Tchertchen and Tcharkalyk?"

The American could not have been nearer the truth.

"And so," said Popof, "after Ki-Tsang's attempt, you think that other bandits--"

Up to now Major Noltitz had taken no part in the discussion. Now he interrupted Popof, and in a voice heard by all he asked:

"Where is Faruskiar?"

They all looked about and tried to discover what had become of the manager of the Transasiatic.

"And where is his friend Ghangir?" asked the major.

There was no reply.

"And where are the four Mongols who were in the rear van?" asked Major Noltitz.

And none of them presented themselves.

They called my lord Faruskiar a second time.

Faruskiar made no response.

Popof entered the car where this personage was generally to be found.

It was empty.

Empty? No. Sir Francis Trevellyan was calmly seated in his place, utterly indifferent to all that happened. Was it any business of his? Not at all. Was he not entitled to consider that the Russo-Chinese railways were the very apex of absurdity and disorder? A switch opened, nobody knew by whom! A train on the wrong line! Could anything be more ridiculous than this Russian mismanagement?

"Well, then!" said Major Noltitz, "the rascal who sent us on to the Nanking line, who would have hurled us into the Tjon valley, to walk off with the imperial treasure, is Faruskiar."

"Faruskiar!" the passengers exclaimed. And most of them refused to believe it.

"What!" said Popof. "The manager of the company who so courageously drove off the bandits and killed their chief Ki-Tsang with his own hand?"

Then I entered on the scene.

"The major is not mistaken. It was Faruskiar who laid this fine trap for us."
And amid the general stupefaction I told them what I knew, and what good fortune had enabled me to ascertain. I told them how I had overheard the plan of Faruskiar and his Mongols, when it was too late to stop it, but I was silent regarding the intervention of Kinko. The moment had not come, and I would do him justice in due time.

To my words there succeeded a chorus of maledictions and menaces.

What! This seigneur Faruskiar, this superb Mongol, this functionary we had seen at work! No! It was impossible.

But they had to give in to the evidence. I had seen; I had heard; I affirmed that Faruskiar was the author of this catastrophe in which all our train might have perished, was the most consummate bandit who had ever disgraced Central Asia!

"You see, Monsieur Bombarnac," said Major Noltitz, "that I was not mistaken in my first suspicion."

"It is only too true," I replied, without any false modesty, "that I was taken in by the grand manners of the abominable rascal."

"Monsieur Claudius," said Caterna, "put that into a romance, and see if anybody believes it likely."

Caterna was right; but unlikely as it may seem, it was. And, besides, I alone knew Kinko's secret. It certainly did seem as though it was miraculous for the locomotive to explode just on the verge of the abyss.

Now that all danger had disappeared we must take immediate measures for running back the cars on to the Pekin line.

"The best thing to do is for one of us to volunteer--"

"I will do that," said Caterna.

"What is he to do?" I asked.

"Go to the nearest station, that of Fuen Choo, and telegraph to Tai-Youan for them to send on a relief engine."

"How far is it to Fuen Choo?" asked Ephrinell.

"About six kilometres to Nanking junction, and about five kilometres beyond that."

"Eleven kilometres," said the major; "that is a matter of an hour and a half for good walkers. Before three o'clock the engine from Tai-Youan ought to be here. I am ready to start."

"So am I," said Popof! "I think several of us ought to go. Who knows if we may not meet Faruskiar and his Mongols on the road?"

"You are right, Popof," said Major Noltitz, "and we should be armed."

This was only prudent, for the bandits who ought to be on their way to the Tjon viaduct could not be very far off. Of course, as soon as they found that their attempt had failed, they would hasten to get away. How would they dare--six strong--to attack a hundred passengers, including the Chinese guard?

Twelve of us, including Pan-Chao, Caterna, and myself, volunteered to accompany Major Noltitz. But by common accord we advised Popof not to abandon the train, assuring him that we would do all that was necessary at Fuen Choo.

Then, armed with daggers and revolvers--it was one o'clock in the morning--we went along the line to the junction, walking as fast as the very dark night permitted.

In less than two hours we arrived at Fuen Choo station without adventure. Evidently Faruskiar had cleared off. The Chinese police would have to deal with the bandit and his accomplices. Would they catch him? I hoped so, but I doubted.

At the station Pan-Chao explained matters to the stationmaster, who telegraphed for an engine to be sent from Tai-Youan to the Nanking line.

At three o'clock, just at daybreak, we returned to wait for the engine at the junction. Three-quarters of an hour afterwards its whistle announced its approach, and it stopped at the bifurcation of the lines. We climbed up on to the tender, and half an hour later had rejoined the train.

The dawn had come on sufficiently for us to be able to see over a considerable distance. Without saying anything to anybody, I went in search of the body of my poor Kinko. And I could not find it among the wreck.

As the engine could not reach the front of the train, owing to their being only a single line, and no turning-table, it was decided to couple it on in the rear and run backwards to the junction. In this way the box, alas! without the Roumanian in it, was in the last carriage.

We started, and in half an hour we were on the main line again.

Fortunately it was not necessary for us to return to Tai-Youan, and we thus saved a delay of an hour and a half. At the junction the engine was detached and run for a few yards towards Pekin, then the vans and cars, one by one, were pushed on to the main line, and then the engine backed and the train proceeded, made up as before the accident. By five o'clock we were on our way across Petchili as if nothing had happened.

I have nothing to say regarding this latter half of the journey, during which the Chinese driver--to do him justice--in no way endeavored to make up for lost time. But if a few hours more or less were of no importance to us, it was
otherwise with Baron Weissschnitzerdörfer, who wanted to catch the Yokohama boat at Tien Tsin.

When we arrived there at noon the steamer had been gone for three-quarters of an hour; and when the German globe-trotter, the rival of Bly and Bisland, rushed on to the platform, it was to learn that the said steamer was then going out of the mouths of the Pei-Ho into the open sea.

Unfortunate traveler! We were not astonished when, as Gatema said, the baron "let go both broadsides" of Teutonic maledictions. And really he had cause to curse in his native tongue.

We remained but a quarter of an hour at Tien Tsin. My readers must pardon me for not having visited this city of five hundred thousand inhabitants, the Chinese town with its temples, the European quarter in which the trade is concentrated, the Pei-Ho quays where hundreds of junks load and unload. It was all Faruskiar's fault, and were it only for having wrecked my reportorial endeavors he ought to be hanged by the most fantastic executioner in China.

Nothing happened for the rest of our run. I was very sorry at the thought that I was not bringing Kinko along with me, and that his box was empty. And he had asked me to accompany him to Mademoiselle Zinca Klork! How could I tell this unfortunate girl that her sweetheart would never reach Pekin station?

Everything ends in this world below, even a voyage of six thousand kilometres on the Grand Transasiatic; and after a run of thirteen days, hour after hour, our train stopped at the gates of the capital of the Celestial Empire.

CHAPTER XXVI.

"Pekin!" shouted Popof. "All change here."

And Caterna replied with truly Parisian unction:

"I believe you, my boy!"

And we all changed.

It was four o'clock in the afternoon. For people fatigued with three hundred and twelve hours of traveling, it was no time for running about the town—what do I say?—the four towns inclosed one within the other. Besides, I had plenty of time. I was going to stop some weeks in this capital.

The important thing was to find a hotel in which one could live passably. From information received I was led to believe that the hotel of Ten Thousand Dreams, near the railway station, might be sufficiently in accord with Western notions.

As to Mademoiselle Klork, I will postpone my visit till to-morrow. I will call on her before the box arrives, and even then I shall be too soon, for I shall take her the news of Kinko's death.

Major Noltitz will remain in the same hotel as I do. I have not to bid him farewell, nor have I to part with the Caternas, who are going to stay a fortnight before starting for Shanghai. As to Pan-Chao and Dr. Tio-King, a carriage is waiting to take them to the yamen in which the young Chinaman's family live. But we shall see each other again. Friends do not separate at a simple good-by, and the grip of the hand I gave him as he left the car will not be the last.

Mr. and Mrs. Ephrinell lose no time in leaving the station on business, which obliges them to find a hotel in the commercial quarter of the Chinese town. But they do not leave without receiving my compliments. Major Noltitz and I go up to this amiable couple, and the conventional politenesses are reciprocally exchanged.

"At last," said I to Ephrinell, "the forty-two packages of Strong, Bulbul & Co. have come into port. But it is a wonder the explosion of our engine did not smash your artificial teeth."

"Just so," said the American, "my teeth had a narrow escape. What adventures they have had since we left Tiflis? Decidedly this journey has been less monotonous than I expected."

"And," added the major, "you were married on the way—unless I am mistaken!"

"Wait a bit!" replied the Yankee in a peculiar tone. "Excuse me; we are in a hurry."

"We will not keep you, Mr. Ephrinell," I replied, "and to Mrs. Ephrinell and yourself allow us to say au revoir!"

"Au revoir!" replied the Americanized lady, rather more dryly at her arrival than at her departure.

Then, turning, she said:

"I have no time to wait, Mr. Ephrinell."

"Nor have I, Mrs. Ephrinell," replied the Yankee.

Mr.! Mrs.! And not so long ago they were calling each other Fulk and Horatia.

And then, without taking each other's arm, they walked out of the station. I believe he turned to the right and she to the left; but that is their affair.

There remains my No. 8, Sir Francis Trevellyan, the silent personage, who has not said a word all through the piece—I mean all through the journey. I wanted to hear his voice, if it was only for one second.

Eh! If I am not mistaken, here is the opportunity at last.

There is the phlegmatic gentleman contemptuously looking up and down the cars. He has just taken a cigar from
his yellow morocco case, but when he looks at his match-box he finds it empty.

My cigar—a particularly good one—is alight, and I am smoking it with the blessed satisfaction of one who enjoys it, and regretting that there is not a man in all China who has its equal.

Sir Francis Trevellyan has seen the light burning at the end of my cigar, and he comes towards me.

I think he is going to ask me for a light. He stretches out his hand, and I present him with my cigar.

He takes it between his thumb and forefinger, knocks off the white ash, lights up, and then, if I had not heard him ask for a light, I at least expected him to say, "Thank you, sir!"

Not at all! Sir Francis Trevellyan takes a few puffs at his own cigar, and then nonchalantly throws mine on to the platform. And then without even a bow, he walks leisurely off out of the railway station.

Did you say nothing? No, I remained astounded. He gave me neither a word nor a gesture. I was completely dumfounded at this ultra-Britannic rudeness, while Major Noltitz could not restrain a loud outburst of laughter.

Ah! If I should see this gentleman again. But never did I see again Sir Francis Trevellyan of Trevellyan Hall, Trevellyanshire.

Half an hour afterwards we are installed at the Hotel of Ten Thousand Dreams. There we are served with a dinner in Chinese style. The repast being over—towards the second watch—we lay ourselves on beds that are too narrow in rooms with little comfort, and sleep not the sleep of the just, but the sleep of the exhausted—and that is just as good.

I did not wake before ten o'clock, and I might have slept all the morning if the thought had not occurred to me that I had a duty to fulfil. And what a duty! To call in the Avenue Cha Coua before the delivery of the unhappy case to Mademoiselle Zinca Klork.

I arise. Ah! If Kinko had not succumbed, I should have returned to the railway station—I should have assisted, as I had promised, in the unloading of the precious package. I would have watched it on to the cart, and I would have accompanied it to the Avenue Cha Coua, I would even have helped in carrying him up to Mademoiselle Zinca Klork! And what a double explosion of joy there would have been when Kinko jumped through the panel to fall into the arms of the fair Roumanian!

But no! When the box arrives it will be empty—empty as a heart from which all the blood has escaped.

I leave the Hotel of Ten Thousand Dreams about eleven o'clock, I call one of those Chinese carriages, which look like palanquins on wheels, I give the address of Mademoiselle Klork, and I am on the way.

You know, that among the eighteen provinces of China Petchili occupies the most northerly position. Formed of nine departments, it has for its capital Pekin, otherwise known as Chim-Kin-Fo, an appellation which means a "town of the first order, obedient to Heaven."

I do not know if this town is really obedient to Heaven, but it is obedient to the laws of rectilinear geometry. There are four towns, square or rectangular, one within the other. The Chinese town, which contains the Tartar town, which contains the yellow town, or Houng Tching, which contains the Red Town, or Tsen-Kai-Tching, that is to say, "the forbidden town." And within this symmetrical circuit of six leagues there are more than two millions of those inhabitants, Tartars or Chinese, who are called the Germans of the East, without mentioning several thousands of Mongols and Tibetans. That there is much bustle in the streets, I can see by the obstacles my vehicle encounters at every step, itinerating peddlers, carts heavily laden, mandarins and their noisy following. I say nothing of those abominable wandering dogs, half jackals, half wolves, hairless and mangy, with deceitful eyes, threatening jaws, and having no other food than the filthy rubbish which foreigners detest. Fortunately I am not on foot, and I have no business in the Red Town, admittance to which is denied, nor in the yellow town nor even in the Tartar town.

The Chinese town forms, a rectangular parallelogram, divided north and south by the Grand Avenue leading from the Houn Ting gate to the Tien gate, and crossed east and west by the Avenue Cha-Coua, which runs from the gate of that name to the Cpuan-Tsa gate. With this indication nothing could be easier than to find the dwelling of Mademoiselle Zinca Klork, but nothing more difficult to reach, considering the block in the roads in this outer ring.

A little before twelve I arrived at my destination. My vehicle had stopped before a house of modest appearance, occupied by artisans as lodgings, and as the signboard said more particularly by strangers.

It was on the first floor, the window of which opened on to the avenue, that the young Roumanian lived, and where, having learned her trade as a milliner in Paris, she was engaged in it at Pekin.

I go up to the first floor. I read the name of Madame Zinca Klork on a door. I knock. The door is opened.

I am in the presence of a young lady who is perfectly charming, as Kinko said. She is a blonde of from twenty-two to twenty-three years old, with the black eyes of the Roumanian type, an agreeable figure, a pleasant, smiling face. In fact, has she not been informed that the Grand Transasiatic train has been in the station ever since last evening, in spite of the circumstances of the journey, and is she not awaiting her betrothed from one moment to another?

And I, with a word, am about to extinguish this joy. I am to wither that smile.
Mademoiselle Klork is evidently much surprised at seeing a stranger in her doorway. As she has lived several
years in France, she does not hesitate to recognize me as a Frenchman, and asks to what she is indebted for my visit.
I must take care of my words, for I may kill her, poor child.
"Mademoiselle Zinca--" I say.
"You know my name?" she exclaims.
"Yes, mademoiselle. I arrived yesterday by the Grand Transasiotic."
The girl turned pale; her eyes became troubled. It was evident that she feared something. Had Kinko been found
in his box? Had the fraud been discovered? Was he arrested? Was he in prison?
I hastened to add:
"Mademoiselle Zinca--certain circumstances have brought to my knowledge--the journey of a young
Roumanian--"
"Kinko--my poor Kinko--they have found him?" she asks in a trembling voice.
"No--no--" say I, hesitating. "No one knows--except myself. I often visited him in the luggage-van at night; we
were companions, friends. I took him a few provisions--"
"Oh! thank you, sir!" says the lady, taking me by the hands. "With a Frenchman Kinko was sure of not being
betrayed, and even of receiving help! Thank you, thank you!"
I am more than ever afraid of the mission on which I have come.
"And no one suspected the presence of my dear Kinko?" she asks.
"No one."
"What would you have had us do, sir? We are not rich. Kinko was without money over there at Tiflis, and I had
not enough to send him his fare. But he is here at last. He will get work, for he is a good workman, and as soon as
we can we will pay the company--"
"Yes; I know, I know."
"And then we are going to get married, monsieur. He loves me so much, and I love him. We met one another in
Paris. He was so kind to me. Then when he went back to Tiflis I asked him to come to me in that box. Is the poor
fellow ill?"
"No, Mademoiselle Zinca, no."
"Ah! I shall be happy to pay the carriage of my dear Kinko."
"Yes--pay the carriage--"
"It will not be long now?"
"No; this afternoon probably."
I do not know what to say.
"Monsieur," says mademoiselle, "we are going to get married as soon as the formalities are complied with; and if
it is not abusing your confidence, will you do us the honor and pleasure of being present?"
"At your marriage--certainly. I promised my friend Kinko I would."
Poor girl! I cannot leave her like this. I must tell her everything.
"Mademoiselle Zinca--Kinko--"
"He asked you to come and tell me he had arrived?"
"Yes--but--you understand--he is very tired after so long a journey--"
"Tired?"
"Oh! do not be alarmed--"
"Is he ill?"
"Yes--rather--rather ill--"
"Then I will go--I must see him--I pray you, sir, come with me to the station--"
"No; that would be an imprudence--remain here--remain--"
Zinca Klork looked at me fixedly.
"The truth, monsieur, the truth! Hide nothing from me--Kinko--"
"Yes--I have sad news--to give you." She is fainting. Her lips tremble. She can hardly speak.
"He has been discovered!" she says. "His fraud is known--they have arrested him--"
"Would to heaven it was no worse. We have had accidents on the road. The train was nearly annihilated--a
frightful catastrophe--"
"He is dead! Kinko is dead!"
The unhappy Zinca falls on to a chair--and to employ the imaginative phraseology of the Chinese--her tears roll
down like rain on an autumn night. Never have I seen anything so lamentable. But it will not do to leave her in this
state, poor girl! She is becoming unconscious. I do not know where I am. I take her hands. I repeat:
"Mademoiselle Zinca! Mademoiselle Zinca!"
Suddenly there is a great noise in front of the house. Shouts are heard. There is a tremendous to do, and amid the tumult I hear a voice.

Good Heavens! I cannot be mistaken. That is Kinko's voice!
I recognize it. Am I in my right senses?
Zinca jumps up, springs to the window, opens it, and we look out.

There is a cart at the door. There is the case, with all its inscriptions: This side up, this side down, fragile, glass, beware of damp, etc., etc. It is there--half smashed. There has been a collision. The cart has been run into by a carriage, as the case was being got down. The case has slipped on to the ground. It has been knocked in. And Kinko has jumped out like a jack-in-the-box--but alive, very much alive!

I can hardly believe my eyes! What, my young Roumanian did not perish in the explosion? No! As I shall soon hear from his own mouth, he was thrown on to the line when the boiler went up, remained there inert for a time, found himself uninjured--miraculously--kept away till he could slip into the van unperceived. I had just left the van after looking for him in vain, and supposing that he had been the first victim of the catastrophe.

Then--oh! the irony of fate!--after accomplishing a journey of six thousand kilometres on the Grand Transasiatic, shut up in a box among the baggage, after escaping so many dangers, attack by bandits, explosion of engine, he was here, by the mere colliding of a cart and a carriage in a Pekin Street, deprived of all the good of his journey--fraudulent it may be--but really if--I know of no epithet worthy of this climax.

The carter gave a yell at the sight of a human being who had just appeared. In an instant the crowd had gathered, the fraud was discovered, the police had run up. And what could this young Roumanian do who did not know a word of Chinese, but explain matters in the sign language? And if he could not be understood, what explanation could he give?

Zinca and I ran down to him.
"My Zinca--my dear Zinca!" he exclaims, pressing the girl to his heart.
"My Kinko--my dear Kinko!" she replies, while her tears mingle with his.
"Monsieur Bombarnac!" says the poor fellow, appealing for my intervention.
"Kinko," I reply, "take it coolly, and depend on me. You are alive, and we thought you were dead."
"But I am not much better off!" he murmurs.

Mistake! Anything is better than being dead--even when one is menaced by prison, be it a Chinese prison. And that is what happens, in spite of the girl's supplications and my entreaties. And Kinko is dragged off by the police, amid the laughter and howls of the crowd.

But I will not abandon him! No, if I move heaven and earth, I will not abandon him.

CHAPTER XXVII.

If ever the expression, "sinking in sight of port," could be used in its precise meaning, it evidently can in this case. And I must beg you to excuse me. But although a ship may sink by the side of the jetty, we must not conclude that she is lost. That Kinko's liberty is in danger, providing the intervention of myself and fellow passengers is of no avail, agreed. But he is alive, and that is the essential point.

But we must not waste an hour, for if the police is not perfect in China, it is at least prompt and expeditious. Soon caught, soon hanged--and it will not do for them to hang Kinko, even metaphorically.

I offer my arm to Mademoiselle Zinca, and I lead her to my carriage, and we return rapidly towards the Hotel of the Ten Thousand Dreams.

There I find Major Noltitz and the Caternas, and by a lucky chance young Pan-Chao, without Dr. Tio-King. Pan-Chao would like nothing better than to be our interpreter before the Chinese authorities.

And then, before the weeping Zinca, I told my companions all about Kinko, how he had traveled, how I had made his acquaintance on the journey. I told them that if he had defrauded the Transasiatic Company it was thanks to this fraud that he was able to get on to the train at Uzun Ada. And if he had not been in the train we should all have been engulfed in the abyss of the Tjon valley.

And I enlarged on the facts which I alone knew. I had surprised Faruskiar at the very moment he was about to accomplish his crime, but it was Kinko who, at the peril of his life, with coolness and courage superhuman, had thrown on the coals, hung on to the lever of the safety valves, and stopped the train by blowing up the engine.

What an explosion there was of exclamatory ohs and ahs when I had finished my recital, and in a burst of gratitude, somewhat of the theatrical sort, our actor shouted:
"Hurrah for Kinko! He ought to have a medal!"

Until the Son of Heaven accorded this hero a green dragon of some sort, Madame Catera took Zinca's hand, drew her to her heart and embraced her--embraced her without being able to restrain her tears. Just think of a love
story interrupted at the last chapter!

But we must hasten, and as Catera says, "all on the scene for the fifth"--the fifth act, in which dramas generally clear themselves up.

"We must not let this brave fellow suffer!" said Major Noltitz; "we must see the Grand Transasiatic people, and when they learn the facts they will be the first to stop the prosecution."

"Doubtless," I said, "for it cannot be denied that Kinko saved the train and its passengers."

"To say nothing of the imperial treasure," added Catera, "the millions of his majesty!"

"Nothing could be truer," said Pan-Chao. "Unfortunately Kinko has fallen into the hands of the police, and they have taken him to prison, and it is not easy to get out of a Chinese prison."

"Let us be off," I replied, "and see the company."

"See here," said Madame Catera, "is there any need of a subscription to defray the cost of the affair?"

"The proposal does you honor, Caroline," said the actor, putting his hand in his pocket.

"Gentlemen," said pretty Zinca Klork, her eyes bathed in tears, "do save him before he is sentenced--"

"Yes, my darling," said Madame Catera, "yes, my heart, we will save your sweetheart for you, and if a benefit performance--"'

"Bravo, Caroline, bravo!" exclaimed Catera, applauding with the vigor of the sub-chief of the claque.

We left the young Roumanian to the caresses, as exaggerated as they were sincere, of the worthy actress. Madame Catera would not leave her, declaring that she looked upon her as her daughter, that she would protect her like a mother. Then Pan-Chao, Major Noltitz, Catera, and I went off to the company's offices at the station.

The manager was in his office, and we were admitted.

He was a Chinese in every acceptation of the word, and capable of every administrative Chinesery--a functionary who functioned in a way that would have moved his colleagues in old Europe to envy.

Pan-Chao told the story, and, as he understood Russian, the major and I took part in the discussion.

Yes! There was a discussion. This unmistakable Chinaman did not hesitate to contend that Kinko's case was a most serious one. A fraud undertaken on such conditions, a fraud extending over six thousand kilometres, a fraud of a thousand francs on the Grand Transasiatic Company and its agents.

We replied to this Chinesing Chinee that it was all very true, but that the damage had been inconceivable, that if the defrauder had not been in the train he could not have saved it at the risk of his life, and at the same time he could not have saved the lives of the passengers.

Well, would you believe it? This living China figure gave us to understand that from a certain point of view it would have been better to regret the deaths of a hundred victims--

"Yes! We knew that! Perish the colonies and all the passengers rather than a principle!"

In short, we got nothing. Justice must take its course against the fraudulent Kinko.

We retired while Catera poured out all the locutions in his marine and theatrical vocabulary.

What was to be done?

"Gentlemen," said Pan-Chao, "I know how things are managed in Pekin and the Celestial Empire. Two hours will not elapse from the time Kinko is arrested to the time he is brought before the judge charged with this sort of crime. He will not only be sent to prison, but the bastinado--"

"The bastinado--like that idiot Zizel in Si j'etais Roi?" asked the actor.

"Precisely," replied Pan-Chao.

"We must stop that abomination," said Major Noltitz.

"We can try at the least," said Pan-Chao. "I propose we go before the court when I will try and defend the sweetheart of this charming Roumanian, and may I lose my face if I do not get him off."

That was the best, the only thing to do. We left the station, invaded a vehicle, and arrived in twenty minutes before a shabby-looking shanty, where the court was held.

There was a crowd. The affair had got abroad. It was known that a swindler had come in a box in a Grand Transasiatic van free, gratis, and for nothing from Tiflis to Pekin. Every one wished to see him; every one wanted to recognize the features of this charming Roumanian, and may I lose my face if I do not get him off."

That was the best, the only thing to do. We left the station, invaded a vehicle, and arrived in twenty minutes before a shabby-looking shanty, where the court was held.

There was a crowd. The affair had got abroad. It was known that a swindler had come in a box in a Grand Transasiatic van free, gratis, and for nothing from Tiflis to Pekin. Every one wished to see him; every one wanted to recognize the features of this genius--it was not yet known that he was a hero.

There he is, our brave companion, between two rascally looking policemen, yellow as quinces. These fellows are ready to walk him off to prison at the judge's order, and to give him a few dozen strokes on the soles of his feet if he is condemned to that punishment.

Kinko is thoroughly disheartened, which astonishes me on the part of one I know to be so energetic. But as soon as he sees us his face betrays a ray of hope.

At this moment the carter, brought forward by the police, relates the affair to a good sort of fellow in spectacles, who shakes his head in anything but a hopeful way for the prisoner, who, even if he were as innocent as a new-born child, could not defend himself, inasmuch as he did not know Chinese.
Then it is that Pan-Chao presents himself. The judge recognized him and smiled. In fact, our companion was the son of a rich merchant in Pekin, a tea merchant in the Toung-Tien and Soung-Fong-Cao trade. And these nods of the judge's head became more sympathetically significant.

Our young advocate was really pathetic and amusing. He interested the judge, he excited the audience with the story of the journey, he told them all about it, and finally he offered to pay the company what was due to them.

Unfortunately the judge could not consent. There had been material damages, moral damages, etc., etc.

Thereupon Pan-Chao became animated, and although we understood nothing he said, we guessed that he was speaking of the courage of Kinko, of the sacrifice he had made for the safety of the travelers, and finally, as a supreme argument, he pleaded that his client had saved the imperial treasure.

Useless eloquence? Arguments were of no avail with this pitiless magistrate, who had not acquitted ten prisoners in his life. He spared the delinquent the bastinado; but he gave him six months in prison, and condemned him in damages against the Grand Transasiatic Company. And then at a sign from this condemning machine poor Kinko was taken away.

Let not my readers pity Kinko's fate. I may as well say at once that everything was arranged satisfactorily.

Next morning Kinko made a triumphal entry into the house in the Avenue Cha-Coua, where we were assembled, while Madame Caterna was showering her maternal consolations on the unhappy Zinca Klork.

The newspapers had got wind of the affair. The Chi Bao of Pekin and the Chinese Times of Tien-Tsin had demanded mercy for the young Roumanian. These cries for mercy had reached the feet of the Son of Heaven—the very spot where the imperial ears are placed. Besides, Pan-Chao had sent to his majesty a petition relating the incidents of the journey, and insisting on the point that had it not been for Kinko's devotion, the gold and precious stones would be in the hands of Faruskiar and his bandits. And, by Buddha! that was worth something else than six months in prison.

Yes! It was worth 15,000 taels, that is to say, more than 100,000 francs, and in a fit of generosity the Son of Heaven remitted these to Kinko with the remittal of his sentence.

I decline to depict the joy, the happiness, the intoxication which this news brought by Kinko in person, gave to all his friends, and particularly to the fair Zinca Klork. These things are expressible in no language—not even in Chinese, which lends itself so generously to the metaphorical.

And now my readers must permit me to finish with my traveling companions whose numbers have figured in my notebook.

Nos. 1 and 2, Fulk Ephrinell and Miss Horatia Bluett: not being able to agree regarding the various items stipulated in their matrimonial contract, they were divorced three days after their arrival in Pekin. Things were as though the marriage had never been celebrated on the Grand Transasiatic, and Miss Horatia Bluett remained Miss Horatia Bluett. May she gather cargoes of heads of hair from Chinese polls; and may he furnish with artificial teeth every jaw in the Celestial Empire!

No. 3, Major Noltitz: he is busy at the hospital he has come to establish at Pekin on behalf of the Russian government, and when the hour for separation strikes, I feel that I shall leave a true friend behind me in these distant lands.

Nos. 4 and 5, the Caternas: after a stay of three weeks in the capital of the Celestial Empire, the charming actor and actress set out for Shanghai, where they are now the great attraction at the French Residency.

No. 6, Baron Weisschnitzerdörfer, whose incommensurable name I write for the last time: well, not only did the globe-trotter miss the steamer at Tien-Tsin, but a month later he missed it at Yokohama; six weeks after that he was shipwrecked on the coast of British Columbia, and then, after being thrown off the line between San Francisco and New York, he managed to complete his round of the world in a hundred and eighty-seven days instead of thirty-nine.

Nos. 9 and 10, Pan-Chao and Dr. Tio-King: what can I say except that Pan-Chao is always the Parisian you know, and that if he comes to France we shall meet at dinner at Durand's or Marguery's. As to the doctor, he has got down to eating only the yolk of an egg a day, like his master, Cornaro, and he hopes to live to a hundred and two as did the noble Venetian.

No. 8, Sir Francis Trevellyan, and No. 12, Seigneur Faruskiar: I have never heard of the one who owes me an apology and a cigar, nor have I heard that the other has been hanged. Doubtless, the illustrious bandit, having sent in his resignation of the general managership of the Grand Transasiatic, continues his lucrative career in the depths of the Mongol provinces.

Now for Kinko, my No. 11: I need hardly say that my No. 11 was married to Zinca Klork with great ceremony. We were all at the wedding, and if the Son of Heaven had richly endowed the young Roumanian, his wife received a magnificent present in the name of the passengers of the train he had saved.

That is the faithful story of this journey. I have done my best to do my duty as special correspondent all down
the line, and perhaps my editors may be satisfied, notwithstanding the slip or two you have heard about.

As to me, after spending three weeks in Pekin, I returned to France by sea.

And now I have to make a confession, which is very painful to my self-esteem. The morning after I arrived in the Chinese capital I received a telegram thus worded, in reply to the one I had sent from Lan-Tcheou:

Claudius Bombarnac, Pekin, China.

Twentieth Century requests its correspondent, Claudius Bombarnac, to present its compliments and respects to the heroic Seigneur Faruskiar.

But I always say that this telegram never reached him, so that he has been spared the unpleasantness of having to reply to it.

THE END.

The Blockade Runners
by Jules Verne

Chapter I

THE DOLPHIN

The Clyde was the first river whose waters were lashed into foam by a steam-boat. It was in 1812 when the steamer called the Comet ran between Glasgow and Greenock, at the speed of six miles an hour. Since that time more than a million of steamers or packet-boats have plied this Scotch river, and the inhabitants of Glasgow must be as familiar as any people with the wonders of steam navigation.

However, on the 3rd of December, 1862, an immense crowd, composed of shipowners, merchants, manufacturers, workmen, sailors, women, and children, thronged the muddy streets of Glasgow, all going in the direction of Kelvin Dock, the large shipbuilding premises belonging to Messrs. Tod & MacGregor. This last name especially proves that the descendants of the famous Highlanders have become manufacturers, and that they have made workmen of all the vassals of the old clan chieftains.

Kelvin Dock is situated a few minutes’ walk from the town, on the right bank of the Clyde. Soon the immense timber-yards were thronged with spectators; not a part of the quay, not a wall of the wharf, not a factory roof showed an unoccupied place; the river itself was covered with craft of all descriptions, and the heights of Govan, on the left bank, swarmed with spectators.

There was, however, nothing extraordinary in the event about to take place; it was nothing but the launching of a ship, and this was an everyday affair with the people of Glasgow. Had the Dolphin, then — for that was the name of the ship built by Messrs. Tod & MacGregor — some special peculiarity? To tell the truth, it had none.

It was a large ship, about 1,500 tons, in which everything combined to obtain superior speed. Her engines, of 500 horse-power, were from the workshops of Lancefield Forge; they worked two screws, one on either side the stern-post, completely independent of each other. As for the depth of water the Dolphin would draw, it must be very inconsiderable; connoisseurs were not deceived, and they concluded rightly that this ship was destined for shallow straits. But all these particulars could not in any way justify the eagerness of the people: taken altogether, the Dolphin was nothing more or less than an ordinary ship. Would her launching present some mechanical difficulty to be overcome? Not any more than usual. The Clyde had received many a ship of heavier tonnage, and the launching of the Dolphin would take place in the usual manner.

In fact, when the water was calm, the moment the ebb-tide set in, the workmen began to operate. Their mallets kept perfect time falling on the wedges meant to raise the ship’s keel: soon a shudder ran through the whole of her massive structure; although she had only been slightly raised, one could see that she shook, and then gradually began to glide down the well greased wedges, and in a few moments she plunged into the Clyde. Her stern struck the muddy bed of the river, then she raised herself on the top of a gigantic wave, and, carried forward by her start, would have been dashed against the quay of the Govan timber-yards, if her anchors had not restrained her.

The launch had been perfectly successful, the Dolphin swayed quietly on the waters of the Clyde, all the spectators clapped their hands when she took possession of her natural element, and loud hurrahs arose from either bank.

But wherefore these cries and this applause? Undoubtedly the most eager of the spectators would have been at a loss to explain the reason of his enthusiasm. What was the cause, then, of the lively interest excited by this ship? Simply the mystery which shrouded her destination; it was not known to what kind of commerce she was to be appropriated, and in questioning different groups the diversity of opinion on this important subject was indeed
astonishing.

However, the best informed, at least those who pretended to be so, agreed in saying that the steamer was going to take part in the terrible war which was then ravaging the United States of America, but more than this they did not know, and whether the Dolphin was a privateer, a transport ship, or an addition to the Federal marine was what no one could tell.

"Hurrah!" cried one, affirming that the Dolphin had been built for the Southern States.
"Hip! hip! hip!" cried another, swearing that never had a faster boat crossed to the American coasts.

Thus its destination was unknown, and in order to obtain any reliable information one must be an intimate friend, or, at any rate, an acquaintance of Vincent Playfair & Co., of Glasgow.

A rich, powerful, intelligent house of business was that of Vincent Playfair & Co., in a social sense, an old and honourable family, descended from those tobacco lords who built the finest quarters of the town. These clever merchants, by an act of the Union, had founded the first Glasgow warehouse for dealing in tobacco from Virginia and Maryland. Immense fortunes were realised; mills and foundries sprang up in all parts, and in a few years the prosperity of the city attained its height.

The house of Playfair remained faithful to the enterprising spirit of its ancestors, it entered into the most daring schemes, and maintained the honour of English commerce. The principal, Vincent Playfair, a man of fifty, with a temperament essentially practical and decided, although somewhat daring, was a genuine shipowner. Nothing affected him beyond commercial questions, not even the political side of the transactions, otherwise he was a perfectly loyal and honest man.

However, he could not lay claim to the idea of building and fitting up the Dolphin; she belonged to his nephew, James Playfair, a fine young man of thirty, the boldest skipper of the British merchant marine.

It was one day at the Tontine coffee-room under the arcades of the town hall, that James Playfair, after having impatiently scanned the American journal, disclosed to his uncle an adventurous scheme.

"Uncle Vincent," said he, coming to the point at once, "there are two millions of pounds to be gained in less than a month."

"And what to risk?" asked Uncle Vincent.
"A ship and a cargo."
"Nothing else?"
"Nothing, except the crew and the captain, and that does not reckon for much."
"Let us see," said Uncle Vincent.
"It is all seen," replied James Playfair. "You have read the Tribune, the New York Herald, The Times, the Richmond Inquirer, the American Review?"

"Scores of times, nephew."
"You believe, like me, that the war of the United States will last a long time still?"
"A very long time."
"You know how much this struggle will affect the interests of England, and especially those of Glasgow?"
"And more especially still the house of Playfair & Co.," replied Uncle Vincent.
"Theirs especially," added the young Captain.
"I worry myself about it every day, James, and I cannot think without terror of the commercial disasters which this war may produce; not but that the house of Playfair is firmly established, nephew; at the same time it has correspondents which may fail. Ah! those Americans, slave-holders or Abolitionists, I have no faith in them!"

If Vincent Playfair was wrong in thus speaking with respect to the great principles of humanity, always and everywhere superior to personal interests, he was, nevertheless, right from a commercial point of view. The most important material was failing at Glasgow, the cotton famine became every day more threatening, thousands of workmen were reduced to living upon public charity. Glasgow possessed 25,000 looms, by which 625,000 yards of cotton were spun daily; that is to say, fifty millions of pounds yearly. From these numbers it may be guessed what disturbances were caused in the commercial part of the town when the raw material failed altogether. Failures were hourly taking place, the manufactories were closed, and the workmen were dying of starvation.

It was the sight of this great misery which had put the idea of his bold enterprise into James Playfair’s head.

"I will go for cotton, and will get it, cost what it may."

But, as he also was a merchant as well as his uncle Vincent, he resolved to carry out his plan by way of exchange, and to make his proposition under the guise of a commercial enterprise.

"Uncle Vincent," said he, "this is my idea."
"Well, James?"
"It is simply this: we will have a ship built of superior sailing qualities and great bulk."
"That is quite possible."
"We will load her with ammunition of war, provisions, and clothes."
"Just so."
"I will take the command of this steamer, I will defy all the ships of the Federal marine for speed, and I will run the blockade of one of the southern ports."
"You must make a good bargain for your cargo with the Confederates, who will be in need of it," said his uncle.
"And I shall return laden with cotton."
"Which they will give you for nothing."
"As you say, Uncle. Will it answer?"
"It will; but shall you be able to get there?"
"I shall, if I have a good ship."
"One can be made on purpose. But the crew?"
"Oh, I will find them. I do not want many men; enough to work with, that is all. It is not a question of fighting with the Federals, but distancing them."
"They shall be distanced," said Uncle Vincent, in a peremptory tone; "but now, tell me, James, to what port of the American coast do you think of going?"
"Up to now, Uncle, ships have run the blockade of New Orleans, Wilmington, and Savannah, but I think of going straight to Charleston; no English boat has yet been able to penetrate into the harbour, except the Bermuda. I will do like her, and, if my ship draws but very little water, I shall be able to go where the Federalists will not be able to follow."
"The fact is," said Uncle Vincent, "Charleston is overwhelmed with cotton; they are even burning it to get rid of it."
"Yes," replied James; "besides, the town is almost invested; Beauregard is running short of provisions, and he will pay me a golden price for my cargo!"
"Well, nephew, and when will you start?"
"In six months; I must have the long winter nights to aid me."
"It shall be as you wish, nephew."
"It is settled, then, Uncle?"
"Settled!"
"Shall it be kept quiet?"
"Yes; better so."

And this is how it was that five months later the steamer Dolphin was launched from the Kelvin Dock timber-yards, and no one knew her real destination.

Chapter II
GETTING UNDER SAIL

The Dolphin was rapidly equipped, her rigging was ready, and there was nothing to do but fit her up. She carried three schooner-masts, an almost useless luxury; in fact, the Dolphin did not rely on the wind to escape the Federalists, but rather on her powerful engines.

Towards the end of December a trial of the steamer was made in the gulf of the Clyde. Which was the more satisfied, builder or captain, it is impossible to say. The new steamer shot along wonderfully, and the patent log showed a speed of seventeen miles an hour, a speed which as yet no English, French, or American boat had ever obtained. The Dolphin would certainly have gained by several lengths in a sailing match with the fastest opponent.

The loading was begun on the 25th of December, the steamer having ranged along the steamboat-quay a little below Glasgow Bridge, the last which stretches across the Clyde before its mouth. Here the wharfs were heaped with a heavy cargo of clothes, ammunition, and provisions which were rapidly carried to the hold of the Dolphin. The nature of this cargo betrayed the mysterious destination of the ship, and the house of Playfair could no longer keep it secret; besides, the Dolphin must not be long before she started. No American cruiser had been signalled in English waters; and, then, when the question of getting the crew came, how was it possible to keep silent any longer? They could not embark them, even, without informing the men whither they were bound, for, after all, it was a matter of life and death, and when one risks one's life, at least it is satisfactory to know how and wherefore.

However, this prospect hindered no one; the pay was good, and everyone had a share in the speculation, so that a great number of the finest sailors soon presented themselves. James Playfair was only embarrassed which to choose, but he chose well, and in twenty-four hours his muster-roll bore the names of thirty sailors who would have done honour to her Majesty's yacht.

The departure was settled for the 3rd of January; on the 31st of December the Dolphin was ready, her hold full of ammunition and provisions, and nothing was keeping her now.

The skipper went on board on the 2nd of January, and was giving a last look round his ship with a captain's eye,
when a man presented himself at the fore part of the Dolphin, and asked to speak with the Captain. One of the
sailors led him on to the poop.

He was a strong, hearty-looking fellow, with broad shoulders and ruddy face, the simple expression of which ill-
concealed a depth of wit and mirth. He did not seem to be accustomed to a seafaring life, and looked about him with
the air of a man little used to being on board a ship; however, he assumed the manner of a Jack-tar, looking up at the
rigging of the Dolphin, and waddling in true sailor fashion.

When he had reached the Captain, he looked fixedly at him, and said, "Captain James Playfair?"

"The same," replied the skipper. "What do you want with me?"

"To join your ship."

"There is no room; the crew is already complete."

"Oh, one man, more or less, will not be in the way; quite the contrary."

"You think so?" said James Playfair, giving a sidelong glance at his questioner.

"I am sure of it," replied the sailor.

"But who are you?" asked the Captain.

"A rough sailor, with two strong arms, which, I can tell you, are not to be despised on board a ship, and which I
now have the honour of putting at your service."

"But there are other ships besides the Dolphin, and other captains besides James Playfair. Why do you come
here?"

"Because it is on board the Dolphin that I wish to serve, and under the orders of Captain James Playfair."

"I do not want you."

"There is always need of a strong man, and if to prove my strength you will try me with three or four of the
strongest fellows of your crew, I am ready."

"That will do," replied James Playfair. "And what is your name?"

"Crockston, at your service."

The Captain made a few steps backwards in order to get a better view of the giant who presented himself in this
odd fashion. The height, the build, and the look of the sailor did not deny his pretensions to strength.

"Where have you sailed?" asked Playfair of him.

"A little everywhere."

"And do you know where the Dolphin is bound for?"

"Yes; and that is what tempts me."

"Ah, well! I have no mind to let a fellow of your stamp escape me. Go and find the first mate, and get him to
enrol you."

Having said this, the Captain expected to see the man turn on his heels and run to the bows, but he was mistaken.
Crockston did not stir.

"Well! did you hear me?" asked the Captain.

"Yes, but it is not all," replied the sailor. "I have something else to ask you."

"Ah! You are wasting my time," replied James, sharply; "I have not a moment to lose in talking."

"I shall not keep you long," replied Crockston; "two words more and that is all; I was going to tell you that I
have a nephew."

"He has a fine uncle, then," interrupted James Playfair.

"Hah! Hah!" laughed Crockston.

"Have you finished?" asked the Captain, very impatiently.

"Well, this is what I have to say, when one takes the uncle, the nephew comes into the bargain."

"Ah! indeed!"

"Yes, that is the custom, the one does not go without the other."

"And what is this nephew of yours?"

"A lad of fifteen whom I am going to train to the sea; he is willing to learn, and will make a fine sailor some
day."

"How now, Master Crockston," cried James Playfair; "do you think the Dolphin is a training-school for cabin-
boys?"

"Don't let us speak ill of cabin-boys: there was one of them who became Admiral Nelson, and another Admiral
Franklin."

"Upon my honour, friend," replied James Playfair, "you have a way of speaking which I like; bring your
nephew, but if I don't find the uncle the hearty fellow he pretends to be, he will have some business with me. Go,
and be back in an hour."

Crockston did not want to be told twice; he bowed awkwardly to the Captain of the Dolphin, and went on to the
quay. An hour afterwards he came on board with his nephew, a boy of fourteen or fifteen, rather delicate and weakly looking, with a timid and astonished air, which showed that he did not possess his uncle’s self-possession and vigorous corporeal qualities. Crockston was even obliged to encourage him by such words as these:

"Come," said he, "don’t be frightened, they are not going to eat us, besides, there is yet time to return."

"No, no," replied the young man, "and may God protect us!"

The same day the sailor Crockston and his nephew were inscribed in the muster-roll of the Dolphin.

The next morning, at five o’clock, the fires of the steamer were well fed, the deck trembled under the vibrations of the boiler, and the steam rushed hissing through the escape-pipes. The hour of departure had arrived.

A considerable crowd, in spite of the early hour, flocked on the quays and on Glasgow Bridge; they had come to salute the bold steamer for the last time. Vincent Playfair was there to say good-bye to Captain James, but he conducted himself on this occasion like a Roman of the good old times. His was a heroic countenance, and the two loud kisses with which he gratified his nephew were the indication of a strong mind.

"Go, James," said he to the young Captain, "go quickly, and come back quicker still; above all, don’t abuse your position. Sell at a good price, make a good bargain, and you will have your uncle’s esteem."

On this recommendation, borrowed from the manual of the perfect merchant, the uncle and nephew separated, and all the visitors left the boat.

At this moment Crockston and John Stiggs stood together on the forecastle, while the former remarked to his nephew, "This is well, this is well; before two o’clock we shall be at sea, and I have a good opinion of a voyage which begins like this."

For reply the novice pressed Crockston’s hand.

James Playfair then gave the orders for departure.

"Have we pressure on?" he asked of his mate.

"Yes, Captain," replied Mr. Mathew.

"Well, then, weigh anchor."

This was immediately done, and the screws began to move. The Dolphin trembled, passed between the ships in the port, and soon disappeared from the sight of the people, who shouted their last hurrâhs.

The descent of the Clyde was easily accomplished, one might almost say that this river had been made by the hand of man, and even by the hand of a master. For sixty years, thanks to the dredges and constant dragging, it has gained fifteen feet in depth, and its breadth has been tripled between the quays and the town. Soon the forests of masts and chimneys were lost in the smoke and fog; the noise of the foundry hammers and the hatchets of the timber-yards grew fainter in the distance. After the village of Partick had been passed the factories gave way to country houses and villas. The Dolphin, slackening her speed, sailed between the dykes which carry the river above the shores, and often through a very narrow channel, which, however, is only a small inconvenience for a navigable river, for, after all, depth is of more importance than width. The steamer, guided by one of those excellent pilots from the Irish sea, passed without hesitation between floating buoys, stone columns, and biggings, surmounted with lighthouses, which mark the entrance to the channel. Beyond the town of Renfrew, at the foot of Kilpatrick hills, the Clyde grew wider. Then came Bouling Bay, at the end of which opens the mouth of the canal which joins Edinburgh to Glasgow. Lastly, at the height of four hundred feet from the ground, was seen the outline of Dumbarton Castle, almost indiscernible through the mists, and soon the harbour-boats of Glasgow were rocked on the waves which the Dolphin caused. Some miles farther on Greenock, the birthplace of James Watt, was passed: the Dolphin now found herself at the mouth of the Clyde, and at the entrance of the gulf by which it empties its waters into the Northern Ocean. Here the first undulations of the sea were felt, and the steamer ranged along the picturesque coast of the Isle of Arran. At last the promontory of Cantyre, which runs out into the channel, was doubled; the Isle of Rattelin was hailed, the pilot returned by a shore-boat to his cutter, which was cruising in the open sea; the Dolphin, returning to her Captain’s authority, took a less frequented route round the north of Ireland, and soon, having lost sight of the last European land, found herself in the open ocean.

Chapter III

THINGS ARE NOT WHAT THEY SEEM

The Dolphin had a good crew, not fighting men, or boarding sailors, but good working men, and that was all she wanted. These brave, determined fellows were all, more or less, merchants; they sought a fortune rather than glory; they had no flag to display, no colours to defend with cannon; in fact, all the artillery on board consisted of two small swivel signal-guns.

The Dolphin shot bravely across the water, and fulfilled the utmost expectations of both builder and captain. Soon she passed the limit of British seas; there was not a ship in sight; the great ocean route was free; besides, no ship of the Federal marine would have a right to attack her beneath the English flag. Followed she might be, and prevented from forcing the blockade, and precisely for this reason had James Playfair sacrificed everything to the
speed of his ship, in order not to be pursued.

Howbeit a careful watch was kept on board, and, in spite of the extreme cold, a man was always in the rigging ready to signal the smallest sail that appeared on the horizon. When evening came, Captain James gave the most precise orders to Mr. Mathew.

"Don't leave the man on watch too long in the rigging; the cold may seize him, and in that case it is impossible to keep a good look-out; change your men often."

"I understand, Captain," replied Mr. Mathew.

"Try Crockston for that work; the fellow pretends to have excellent sight; it must be put to trial; put him on the morning watch, he will have the morning mists to see through. If anything particular happens call me."

This said, James Playfair went to his cabin. Mr. Mathew called Crockston, and told him the Captain's orders.

"To-morrow, at six o'clock," said he, "you are to relieve watch of the main masthead."

For reply, Crockston gave a decided grunt, but Mr. Mathew had hardly turned his back when the sailor muttered some incomprehensible words, and then cried:

"What on earth did he say about the mainmast?"

At this moment his nephew, John Stiggs, joined him on the forecastle.

"Well, my good Crockston," said he.

"It's all right, all right," said the seaman, with a forced smile; "there is only one thing, this wretched boat shakes herself like a dog coming out of the water, and it makes my head confused."

"Dear Crockston, and it is for my sake."

"For you and him," replied Crockston, "but not a word about that, John. Trust in God, and He will not forsake you."

So saying, John Stiggs and Crockston went to the sailor's berth, but the sailor did not lie down before he had seen the young novice comfortably settled in the narrow cabin which he had got for him.

The next day, at six o'clock in the morning, Crockston got up to go to his place; he went on deck, where the first officer ordered him to go up into the rigging, and keep good watch.

At these words the sailor seemed undecided what to do; then, making up his mind, he went towards the bows of the Dolphin.

"Yes," replied Mr. Mathew, impatiently; "you are looking for the bars of the main on the foremast. You are like a cockney, who doesn't know how to twist a cat-o'-nine-tails, or make a splice. On board what ship can you have been, man? The mainmast, stupid, the mainmast!"

The sailors who had run up to hear what was going on burst out laughing when they saw Crockston's disconcerted look, as he went back to the forecastle.

"So," said he, looking up the mast, the top of which was quite invisible through the morning mists; "so, am I to climb up here?"

"Well, where are you off to now?" cried Mr. Mathew.

"Where you sent me," answered Crockston.

"I told you to go to the mainmast."

"And I am going there," replied the sailor, in an unconcerned tone, continuing his way to the poop.

"Are you a fool?" cried Mr. Mathew, impatiently; "you are looking for the bars of the main on the foremost. You are like a cockney, who doesn't know how to twist a cat-o'-nine-tails, or make a splice. On board what ship can you have been, man? The mainmast, stupid, the mainmast!"

The sailors who had run up to hear what was going on burst out laughing when they saw Crockston's disconcerted look, as he went back to the forecastle.

"So," said he, looking up the mast, the top of which was quite invisible through the morning mists; "so, am I to climb up here?"

"Yes," replied Mr. Mathew, "and hurry yourself! By St. Patrick, a Federal ship would have time to get her bowsprit fast in our rigging before that lazy fellow could get to his post. Will you go up?"

Without a word, Crockston got on the bulwarks with some difficulty; then he began to climb the rigging with most visible awkwardness, like a man who did not know how to make use of his hands or feet. When he had reached the topgallant, instead of springing lightly on to it, he remained motionless, clinging to the ropes, as if he had been seized with giddiness. Mr. Mathew, irritated by his stupidity, ordered him to come down immediately.

"That fellow there," said he to the boatswain, "has never been a sailor in his life. Johnston, just go and see what he has in his bundle."

The boatswain made haste to the sailor's berth.

In the meantime Crockston was with difficulty coming down again, but, his foot having slipped, he slid down the rope he had hold of, and fell heavily on the deck.

"Clumsy blockhead! land-lubber!" cried Mr. Mathew, by way of consolation. "What did you come to do on board the Dolphin! Ah! you entered as an able seaman, and you cannot even distinguish the main from the foremost! I shall have a little talk with you."

Crockston made no attempt to speak; he bent his back like a man resigned to anything he might have to bear; just then the boatswain returned.

"This," said he to the first officer, "is all that I have found; a suspicious portfolio with letters."

"Give them here," said Mr. Mathew. "Letters with Federal stamps! Mr. Halliburtt, of Boston! An Abolitionist! a
Federalist! Wretch! you are nothing but a traitor, and have sneaked on board to betray us! Never mind, you will be paid for your trouble with the cat-o'-nine-tails! Boatswain, call the Captain, and you others just keep an eye on that rogue there."

Crockston received these compliments with a hideous grimace, but he did not open his lips. They had fastened him to the capstan, and he could move neither hand nor foot.

A few minutes later James Playfair came out of his cabin and went to the forecastle, where Mr. Mathew immediately acquainted him with the details of the case.

"What have you to say?" asked James Playfair, scarcely able to restrain his anger.

"Nothing," replied Crockston.

"And what did you come on board my ship for?"

"Nothing."

"And what do you expect from me now?"

"Nothing."

"Who are you? An American, as letters seem to prove?" Crockston did not answer.

"Boatswain," said James Playfair, "fifty lashes with the cat-o'-nine-tails to loosen his tongue. Will that be enough, Crockston?"

"It will remain to be seen," replied John Stiggs’ uncle without moving a muscle.

"Now then, come along, men," said the boatswain.

At this order, two strong sailors stripped Crockston of his woollen jersey; they had already seized the formidable weapon, and laid it across the prisoner’s shoulders, when the novice, John Stiggs, pale and agitated, hurried on deck.

"Captain!" exclaimed he.

"Ah! the nephew!" remarked James Playfair.

"Captain," repeated the novice, with a violent effort to steady his voice, "I will tell you what Crockston does not want to say. I will hide it no longer; yes, he is American, and so am I; we are both enemies of the slave-holders, but not traitors come on board to betray the Dolphin into the hands of the Federalists."

"What did you come to do, then?" asked the Captain, in a severe tone, examining the novice attentively. The latter hesitated a few seconds before replying, then he said, "Captain, I should like to speak to you in private."

Whilst John Stiggs made this request, James Playfair did not cease to look carefully at him; the sweet young face of the novice, his peculiarly gentle voice, the delicacy and whiteness of his hands, hardly disguised by paint, the large eyes, the animation of which could not bide their tenderness — all this together gave rise to a certain suspicion in the Captain’s mind. When John Stiggs had made his request, Playfair glanced fixedly at Crockston, who shrugged his shoulders; then he fastened a questioning look on the novice, which the latter could not withstand, and said simply to him, "Come."

John Stiggs followed the Captain on to the poop, and then James Playfair, opening the door of his cabin, said to the novice, whose cheeks were pale with emotion, "Be so kind as to walk in, miss."

John, thus addressed, blushed violently, and two tears rolled involuntarily down his cheeks.

"Don’t be alarmed, miss," said James Playfair, in a gentle voice, "but be so good as to tell me how I come to have the honour of having you on board?"

The young girl hesitated a moment, then, reassured by the Captain’s look, she made up her mind to speak.

"Sir," said she, "I wanted to join my father at Charleston; the town is besieged by land and blockaded by sea. I knew not how to get there, when I heard that the Dolphin meant to force the blockade. I came on board your ship, and I beg you to forgive me if I acted without your consent, which you would have refused me."

"Certainly," said James Playfair.

"I did well, then, not to ask you," resumed the young girl, with a firmer voice.

The Captain crossed his arms, walked round his cabin, and then came back.

"What is your name?" said he.

"Jenny Halliburtt."

"Your father, if I remember rightly the address on the letters, is he not from Boston?"

"Yes, sir."

"And a Northerner is thus in a southern town in the thickest of the war?"

"My father is a prisoner; he was at Charleston when the first shot of the Civil War was fired, and the troops of the Union driven from Fort Sumter by the Confederates. My father’s opinions exposed him to the hatred of the slavist part, and by the order of General Beauregard he was imprisoned. I was then in England, living with a relation who has just died, and left alone, with no help but that of Crockston, our faithful servant, I wished to go to my father and share his prison with him."

"What was Mr. Halliburtt, then?" asked James Playfair.
"A loyal and brave journalist," replied Jenny proudly, one of the noblest editors of the Tribune, and the one who was the boldest in defending the cause of the negroes."

"An Abolitionist," cried the Captain angrily; "one of those men who, under the vain pretence of abolishing slavery, have deluged their country with blood and ruin."

"Sir!" replied Jenny Halliburtt, growing pale, "you are insulting my father; you must not forget that I stand alone to defend him."

The young Captain blushed scarlet; anger mingled with shame struggled in his breast; perhaps he would have answered the young girl, but he succeeded in restraining himself, and, opening the door of the cabin, he called "Boatswain!"

The boatswain came to him directly.

"This cabin will henceforward belong to Miss Jenny Halliburtt. Have a cot made ready for me at the end of the poop; that's all I want."

The boatswain looked with a stupefied stare at the young novice addressed in a feminine name, but on a sign from James Playfair he went out.

"And now, miss, you are at home," said the young Captain of the Dolphin. Then he retired.

Chapter IV

CROCKSTON'S TRICK

It was not long before the whole crew knew Miss Halliburtt's story, which Crockston was no longer hindered from telling. By the Captain's orders he was released from the capstan, and the cat-o'-nine-tails returned to its Place.

"A pretty animal," said Crockston, "especially when it shows its velvety paws."

As soon as he was free, he went down to the sailors' berths, found a small portmanteau, and carried it to Miss Jenny; the young girl was now able to resume her feminine attire, but she remained in her cabin, and did not again appear on deck.

As for Crockston, it was well and duly agreed that, as he was no more a sailor than a horse-guard, he should be exempt from all duty on board.

In the meanwhile the Dolphin, with her twin screws cutting the waves, sped rapidly across the Atlantic, and there was nothing now to do but keep a strict look-out. The day following the discovery of Miss Jenny's identity, James Playfair paced the deck at the poop with a rapid step; he had made no attempt to see the young girl and resume the conversation of the day before.

Whilst he was walking to and fro, Crockston passed him several times, looking at him askant with a satisfied grin. He evidently wanted to speak to the Captain, and at last his persistent manner attracted the attention of the latter, who said to him, somewhat impatiently:

"How now, what do you want? You are turning round me like a swimmer round a buoy: when are you going to leave off?"

"Excuse me, Captain," answered Crockston, winking, "I wanted to speak to you."

"Speak, then."

"Oh, it is nothing very much. I only wanted to tell you frankly that you are a good fellow at bottom."

"Why at bottom?"

"At bottom and surface also."

"I don't want your compliments."

"I am not complimenting you. I shall wait to do that when you have gone to the end."

"To what end?"

"To the end of your task."

"Ah! I have a task to fulfil?"

"Decidedly, you have taken the young girl and myself on board; good! You have given up your cabin to Miss Halliburtt; good! You released me from the cat-o'-nine-tails; nothing could be better. You are going to take us straight to Charleston; that's delightful, but it is not all."

"How not all?" cried James Playfair, amazed at Crockston's boldness.

"No, certainly not," replied the latter, with a knowing look, "the father is prisoner there."

"Well, what about that?"

"Well, the father must be rescued."

"Rescue Miss Halliburtt's father?"

"Most certainly, and it is worth risking something for such a noble man and courageous citizen as he."

"Master Crockston," said James Playfair, frowning, "I am not in the humour for your jokes, so have a care what you say."

"You misunderstand me, Captain," said the American. "I am not joking in the least, but speaking quite seriously.
What I have proposed may at first seem very absurd to you; when you have thought it over, you will see that you cannot do otherwise."

"What, do you mean that I must deliver Mr. Halliburtt?"

"Just so. You can demand his release of General Beauregard, who will not refuse you."

"But if he does refuse me?"

"In that case," replied Crockston, in a deliberate tone, "we must use stronger measures, and carry off the prisoner by force."

"So," cried James Playfair, who was beginning to get angry, "so, not content with passing through the Federal fleets and forcing the blockade of Charleston, I must run out to sea again from under the cannon of the forts, and this to deliver a gentleman I know nothing of, one of those Abolitionists whom I detest, one of those journalists who shed ink instead of their blood!"

"Oh, it is but a cannon-shot more or less!" added Crockston.

"Master Crockston," said James Playfair, "mind what I say: if ever you mention this affair again to me, I will send you to the hold for the rest of the passage, to teach you manners."

Thus saying, the Captain dismissed the American, who went off murmuring, "Ah, well, I am not altogether displeased with this conversation: at any rate, the affair is broached; it will do, it will do!"

James Playfair had hardly meant it when he said an Abolitionist whom I detest; he did not in the least side with the Federals, but he did not wish to admit that the question of slavery was the predominant reason for the civil war of the United States, in spite of President Lincoln’s formal declaration. Did he, then, think that the Southern States, eight out of thirty-six, were right in separating when they had been voluntarily united? Not so; he detested the Northerners, and that was all; he detested them as brothers separated from the common family — true Englishmen — who had thought it right to do what he, James Playfair, disapproved of with regard to the United States: these were the political opinions of the Captain of the Dolphin. But, more than this, the American war interfered with him personally, and he had a grudge against those who had caused this war; one can understand, then, how he would receive a proposition to deliver an Abolitionist, thus bringing down on him the Confederates, with whom he pretended to do business.

However, Crockston’s insinuation did not fail to disturb him; he cast the thought from him, but it returned unceasingly to his mind, and when Miss Jenny came on deck the next day for a few minutes, he dared not look her in the face.

And really it was a great pity, for this young girl, with the fair hair and sweet, intelligent face, deserved to be looked at by a young man of thirty. But James felt embarrassed in her presence; he felt that this charming creature who had been educated in the school of misfortune possessed a strong and generous soul; he understood that his silence towards her inferred a refusal to acquiesce in her dearest wishes; besides, Miss Jenny never looked out for James Playfair, neither did she avoid him. Thus for the first few days they spoke little or not at all to each other. Miss Halliburtt scarcely ever left her cabin, and it is certain she would never have addressed herself to the Captain of the Dolphin if it had not been for Crockston’s strategy, which brought both parties together.

The worthy American was a faithful servant of the Halliburtt family; he had been brought up in his master’s house, and his devotion knew no bounds. His good sense equalled his courage and energy, and, as has been seen, he had a way of looking things straight in the face. He was very seldom discouraged, and could generally find a way out of the most intricate dangers with a wonderful skill.

This honest fellow had taken it into his head to deliver Mr. Halliburtt, to employ the Captain’s ship, and the Captain himself for this purpose, and to return with him to England. Such was his intention, so long as the young girl had no other object than to rejoin her father and share his captivity. It was this Crockston tried to make the Captain understand, as we have seen, but the enemy had not yet surrendered; on the contrary.

"Now," said he, "it is absolutely necessary that Miss Jenny and the Captain come to an understanding; if they are going to be sulky like this all the passage we shall get nothing done. They must speak, discuss; let them dispute even, so long as they talk, and I’ll be hanged if during their conversation James Playfair does not propose himself what he refused me to-day."

But when Crockston saw that the young girl and the young man avoided each other, he began to be perplexed.

"We must look sharp," said he to himself, and the morning of the fourth day he entered Miss Halliburtt’s cabin, rubbing his hands with an air of perfect satisfaction.

"Good news!" cried he, "good news! You will never guess what the Captain has proposed to me. A very noble young man he is. Now try."

"Ah!" replied Jenny, whose heart beat violently, "has he proposed to—"

"To deliver Mr. Halliburtt, to carry him off from the Confederates, and bring him to England."

"Is it true?" cried Jenny.
"It is as I say, miss. What a good-hearted man this James Playfair is! These English are either all good or all bad. Ah! he may reckon on my gratitude, and I am ready to cut myself in pieces if it would please him."

Jenny’s joy was profound on hearing Crockston’s words. Deliver her father! She had never dared to think of such a plan, and the Captain of the Dolphin was going to risk his ship and crew!

"That’s what he is," added Crockston; "and this, Miss Jenny, is well worth an acknowledgment from you."

"More than an acknowledgment," cried the young girl; "a lasting friendship!"

And immediately she left the cabin to find James Playfair, and express to him the sentiments which flowed from her heart.

"Getting on by degrees," muttered the American.

James Playfair was pacing to and fro on the poop, and, as may be thought, he was very much surprised, not to say amazed, to see the young girl come up to him, her eyes moist with grateful tears, and, holding out her hand to him, saying:

"Thank you, sir, thank you for your kindness, which I should never have dared to expect from a stranger."

"Miss," replied the Captain, as if he understood nothing of what she was talking, and could not understand, "I do not know — "

"Nevertheless, sir, you are going to brave many dangers, perhaps compromise your interests for me, and you have done so much already in offering me on board an hospitality to which I have no right whatever — "

"Pardon me, Miss Jenny," interrupted James Playfair, "but I protest again I do not understand your words. I have acted towards you as any well-bred man would towards a lady, and my conduct deserves neither so many thanks nor so much gratitude."

"Mr. Playfair," said Jenny, "it is useless to pretend any longer; Crockston has told me all!"

"Ah!" said the Captain, "Crockston has told you all; then I understand less than ever the reason for your leaving your cabin, and saying these words which — "

Whilst speaking the Captain felt very much embarrassed; he remembered the rough way in which he had received the American’s overtures, but Jenny, fortunately for him, did not give him time for further explanation; she interrupted him, holding out her hand and saying:

"Mr. James, I had no other object in coming on board your ship except to go to Charleston, and there, however cruel the slave-holders may be, they will not refuse to let a poor girl share her father’s prison; that was all. I had never thought of a return as possible; but, since you are so generous as to wish for my father’s deliverance, since you will attempt everything to save him, be assured you have my deepest gratitude."

James did not know what to do or what part to assume; he bit his lip; he dared not take the hand offered him; he saw perfectly that Crockston had compromised him, so that escape was impossible. At the same time he had no thoughts of delivering Mr. Halliburtt, and getting complicated in a disagreeable business: but how dash to the ground the hope which had arisen in this poor girl’s heart? How refuse the hand which she held out to him with a feeling of such profound friendship? How change to tears of grief the tears of gratitude which filled her eyes?

So the young man tried to reply evasively, in a manner which would ensure his liberty of action for the future.

"Miss Jenny," said he, "rest assured I will do everything in my power for — "

And he took the little hand in both of his, but with the gentle pressure he felt his heart melt and his head grow confused: words to express his thoughts failed him. He stammered out some incoherent words:

"Miss — Miss Jenny — for you — "

Crockston, who was watching him, rubbed his hands, grinning and repeating to himself:

"It will come! it will come! it has come!"

How James Playfair would have managed to extricate himself from his embarrassing position no one knows, but fortunately for him, if not for the Dolphin, the man on watch was heard crying:

"Ahoy, officer of the watch!"

"What now?" asked Mr. Mathew.

"A sail to windward!"

James Playfair, leaving the young girl, immediately sprang to the shrouds of the mainmast.

Chapter V

THE SHOT FROM THE IROQUOIS, AND MISS JENNY’S ARGUMENTS

Until now the navigation of the Dolphin had been very fortunate. Not one ship had been signalised before the sail hailed by the man on watch.

The Dolphin was then in 32° 51’ lat., and 57° 43’ W. longitude. For forty-eight hours a fog, which now began to rise, had covered the ocean. If this mist favoured the Dolphin by hiding her course, it also prevented any observations at a distance being made, and, without being aware of it, she might be sailing side by side, so to speak, with the ships she wished most to avoid.
Now this is just what had happened, and when the ship was signalled she was only three miles to windward.

When James Playfair had reached the cross-trees, he saw distinctly, through an opening in the mist, a large Federal corvette in full pursuit of the Dolphin.

After having carefully examined her, the Captain came down on deck again, and called to the first officer.

"Mr. Mathew," said he, "what do you think of this ship?"

"I think, Captain, that it is a Federal cruiser, which suspects our intentions."

"There is no possible doubt of her nationality," said James Playfair. "Look!"

At this moment the starry flag of the North United States appeared on the gaff-yards of the corvette, and the latter asserted her colours with a cannon-shot.

"An invitation to show ours," said Mr. Mathew. "Well, let us show them; there is nothing to be ashamed of."

"What’s the good?" replied James Playfair. "Our flag will hardly protect us, and it will not hinder those people from paying us a visit. No; let us go ahead."

"And go quickly," replied Mr. Mathew, "for, if my eyes do not deceive me, I have already seen that corvette lying off Liverpool, where she went to watch the ships in building: my name is not Mathew, if that is not the Iroquois on her taffrail."

"And is she fast?"

"One of the fastest vessels of the Federal marine."

"What guns does she carry?"

"Eight."

"Pooh!"

"Oh, don’t shrug your shoulders, Captain," said Mr. Mathew, in a serious tone; "two out of those eight guns are rifled, one is a sixty-pounder on the forecastle, and the other a hundred-pounder on deck."

"Upon my soul!" exclaimed James Playfair, "they are Parrott’s, and will carry three miles."

"Yes, and farther than that, Captain."

"Ah, well! Mr. Mathew, let their guns be sixty or only four-pounders, and let them carry three miles or five hundred yards, it is all the same if we can go fast enough to avoid their shot. We will show this Iroquois how a ship can go when she is built on purpose to go. Have the fires drawn forward, Mr. Mathew."

The first officer gave the Captain’s orders to the engineer, and soon volumes of black smoke curled from the steamer’s chimneys.

This proceeding did not seem to please the corvette, for she made the Dolphin the signal to lie to, but James Playfair paid no attention to this warning, and did not change his ship’s course.

"Now," said he, "we shall see what the Iroquois will do; here is a fine opportunity for her to try her guns. Go ahead full speed!"

"Good!" exclaimed Mr. Mathew; "she will not be long in saluting us."

Returning to the poop, the Captain saw Miss Halliburtt sitting quietly near the bulwarks.

"Miss Jenny," said he, "we shall probably be chased by that corvette you see to windward, and as she will speak to us with shot, I beg to offer you my arm to take you to your cabin again."

"Thank you, very much, Mr. Playfair," replied the young girl, looking at him, "but I am not afraid of cannon-shots."

"However, miss, in spite of the distance, there may be some danger."

"Oh, I was not brought up to be fearful; they accustom us to everything in America, and I assure you that the shot from the Iroquois will not make me lower my head."

"You are brave, Miss Jenny."

"Let us admit, then, that I am brave, and allow me to stay by you."

"I can refuse you nothing, Miss Halliburtt," replied the Captain, looking at the young girl’s calm face.

These words were hardly uttered when they saw a line of white smoke issue from the bulwarks of the corvette; before the report had reached the Dolphin a projectile whizzed through the air in the direction of the steamer.

At about twenty fathoms from the Dolphin the shot, the speed of which had sensibly lessened, skimmed over the surface of the waves, marking its passage by a series of water-jets; then, with another burst, it rebounded to a certain height, passed over the Dolphin, grazing the mizzen-yards on the starboard side, fell at thirty fathoms beyond, and was buried in the waves.

"By Jove!" exclaimed James Playfair, "we must get along; another slap like that is not to be waited for."

"Oh!" exclaimed Mr. Mathew, "they will take some time to reload such pieces."

"Upon my honour, it is an interesting sight," said Crockston, who, with arms crossed, stood perfectly at his ease looking at the scene.

"Ah! that’s you," cried James Playfair, scanning the American from head to foot.
"It is me, Captain," replied the American, undisturbed. "I have come to see how these brave Federals fire; not badly, in truth, not badly."

The Captain was going to answer Crockston sharply, but at this moment a second shot struck the sea on the starboard side.

"Good!" cried James Playfair, "we have already gained two cables on this Iroquois. Your friends sail like a buoy; do you hear, Master Crockston?"

"I will not say they don't," replied the American, "and for the first time in my life it does not fail to please me."

A third shot fell still farther astern, and in less than ten minutes the Dolphin was out of range of the corvette's guns.

"So much for patent-logs, Mr. Mathew," said James Playfair; "thanks to those shot we know how to rate our speed. Now have the fires lowered; it is not worth while to waste our coal uselessly."

"It is a good ship that you command," said Miss Halliburtt to the young Captain.

"Yes, Miss Jenny, my good Dolphin makes her seventeen knots, and before the day is over we shall have lost sight of that corvette."

James Playfair did not exaggerate the sailing qualities of his ship, and the sun had not set before the masts of the American ship had disappeared below the horizon.

This incident allowed the Captain to see Miss Halliburtt's character in a new light; besides, the ice was broken, henceforward, during the whole of the voyage; the interviews between the Captain and his passenger were frequent and prolonged; be found her to be a young girl, calm, strong, thoughtful, and intelligent, speaking with great ease, having her own ideas about everything, and expressing her thoughts with a conviction which unconsciously penetrated James Playfair's heart.

She loved her country, she was zealous in the great cause of the Union, and expressed herself on the civil war in the United States with an enthusiasm of which no other woman would have been capable. Thus it happened, more than once, that James Playfair found it difficult to answer her, even when questions purely mercantile arose in connection with the war: Miss Jenny attacked them none the less vigorously, and would come to no other terms whatever. At first James argued a great deal, and tried to uphold the Confederates against the Federals, to prove that the Secessionists were in the right, and that if the people were united voluntarily they might separate in the same manner. But the young girl would not yield on this point; she demonstrated that the question of slavery was predominant in the struggle between the North and South Americans, that it was far more a war in the cause of morals and humanity than politics, and James could make no answer. Besides, during these discussions, which he listened to attentively, it is difficult to say whether he was more touched by Miss Halliburtt's arguments or the charming manner in which she spoke; but at last he was obliged to acknowledge, among other things, that slavery was the principal feature in the war, that it must be put an end to decisively, and the last horrors of barbarous times abolished.

It has been said that the political opinions of the Captain did not trouble him much. He would have sacrificed his most serious opinion before such enticing arguments and under like circumstances; he made a good bargain of his ideas for the same reason, but at last he was attacked in his tenderest point; this was the question of the traffic in which the Dolphin was being employed, and, consequently, the ammunition which was being carried to the Confederates.

"Yes, Mr. James," said Miss Halliburtt, "gratitude does not hinder me from speaking with perfect frankness; on the contrary, you are a brave seaman, a clever merchant, the house of Playfair is noted for its respectability; but in this case it fails in its principles, and follows a trade unworthy of it."

"How!" cried James, "the house of Playfair ought not to attempt such a commercial enterprise?"

"No! it is taking ammunition to the unhappy creatures in revolt against the government of their country, and it is lending arms to a bad cause."

"Upon my honour, Miss Jenny, I will not discuss the right of the Confederates with you; I will only answer you with one word: I am a merchant, and as such I only occupy myself with the interests of my house; I look for gain wherever there is an opportunity of getting it."

"That is precisely what is to be blamed, Mr. James," replied the young girl; "profit does not excuse it; thus, when you supply arms to the Southerners, with which to continue a criminal war, you are quite as guilty as when you sell opium to the Chinese, which stupefies them."

"Oh, for once, Miss Jenny, this is too much, and I cannot admit — "

"No; what I say is just, and when you consider it, when you understand the part you are playing, when you think of the results for which you are responsible, you will yield to me in this point, as in so many others."

James Playfair was dumfounded at these words; he left the young girl, a prey to angry thoughts, for he felt his powerlessness to answer; then he sulked like a child for half an hour, and an hour later he returned to the singular
young girl who could overwhelm him with convincing arguments with quite a pleasant smile.

In short, however it may have come about, and although he would not acknowledge it to himself, Captain James Playfair belonged to himself no longer; he was no longer commander-in-chief on board his own ship.

Thus, to Crockston’s great joy, Mr. Halliburtt’s affairs appeared to be in a good way; the Captain seemed to have decided to undertake everything in his power to deliver Miss Jenny’s father, and for this he would be obliged to compromise the Dolphin, his cargo, his crew, and incur the displeasure of his worthy Uncle Vincent.

Chapter VI
SULLIVAN ISLAND CHANNEL

Two days after the meeting with the Iroquois, the Dolphin found herself abreast of the Bermudas, where she was assailed by a violent squall. These isles are frequently visited by hurricanes, and are celebrated for shipwrecks. It is here that Shakespeare has placed the exciting scene of his drama, The Tempest, in which Ariel and Caliban dispute for the empire of the floods.

The squall was frightful; James Playfair thought once of running for one of the Bermudas, where the English had a military post: it would have been a sad waste of time, and therefore especially to be regretted; happily the Dolphin behaved herself wonderfully well in the storm, and, after flying a whole day before the tempest, she was able to resume her course towards the American coast.

But if James Playfair had been pleased with his ship, he had not been less delighted with the young girl’s bravery; Miss Halliburtt had passed the worst hours of the storm at his side, and James knew that a profound, imperious, irresistible love had taken possession of his whole being.

"Yes," said he, "this brave girl is mistress on board; she turns me like the sea a ship in distress — I feel that I am foundering! What will Uncle Vincent say? Ah! poor nature, I am sure that if Jenny asked me to throw all this cursed cargo into the sea, I should do it without hesitating, for love of her."

Happily for the firm of Playfair & Co., Miss Halliburtt did not demand this sacrifice; nevertheless, the poor Captain had been taken captive, and Crockston, who read his heart like an open book, rubbed his hands gleefully.

"We will hold him fast!" he muttered to himself, "and before a week has passed my master will be quietly installed in one of the best cabins of the Dolphin."

As for Miss Jenny, did she perceive the feelings which she inspired? Did she allow herself to share them? No one could say, and James Playfair least of all; the young girl kept a perfect reserve, and her secret remained deeply buried in her heart.

But whilst love was making such progress in the heart of the young Captain, the Dolphin sped with no less rapidity towards Charleston.

On the 13th of January, the watch signalled land ten miles to the west. It was a low-lying coast, and almost blended with the line of the sea in the distance. Crockston was examining the horizon attentively, and about nine o’clock in the morning he cried:

"Charleston lighthouse!"

Now that the bearings of the Dolphin were set, James Playfair had but one thing to do, to decide by which channel he would run into Charleston Bay.

"If we meet with no obstacles," said he, "before three o’clock we shall be in safety in the docks of the port."

The town of Charleston is situated on the banks of an estuary seven miles long and two broad, called Charleston Harbour, the entrance to which is rather difficult. It is enclosed between Morris Island on the south and Sullivan Island on the north. At the time when the Dolphin attempted to force the blockade Morris Island already belonged to the Federal troops, and General Gillmore had caused batteries to be erected overlooking the harbour. Sullivan Island, on the contrary, was in the hands of the Confederates, who were also in possession of Moultrie Fort, situated at the extremity of the island; therefore it would be advantageous to the Dolphin to go as close as possible to the northern shores to avoid the firing from the forts on Morris Island.

Five channels led into the estuary, Sullivan Island Channel, the Northern Channel, the Overall Channel, the Principal Channel, and lastly, the Lawford Channel; but it was useless for strangers, unless they had skilful pilots on board, or ships drawing less than seven feet of water, to attempt this last; as for Northern and Overall Channels, they were in range of the Federalist batteries, so that it was no good thinking of them. If James Playfair could have had his choice, he would have taken his steamer through the Principal Channel, which was the best, and the bearings of which were easy to follow; but it was necessary to yield to circumstances, and to decide according to the event. Besides, the Captain of the Dolphin knew perfectly all the secrets of this bay, its dangers, the depths of its water at low tide, and its currents, so that he was able to steer his ship with the greatest safety as soon as he entered one of these narrow straits. The great question was to get there.

Now this work demanded an experienced seaman, and one who knew exactly the qualities of the Dolphin.
In fact, two Federal frigates were now cruising in the Charleston waters. Mr. Mathew soon drew James Playfair’s attention to them.

"They are preparing to ask us what we want on these shores," said he.

"Ah, well! we won't answer them," replied the Captain, "and they will not get their curiosity satisfied."

In the meanwhile the cruisers were coming on full steam towards the Dolphin, who continued her course, taking care to keep out of range of their guns. But in order to gain time James Playfair made for the south-west, wishing to put the enemies’ ships off their guard; the latter must have thought that the Dolphin intended to make for Morris Island Channel. Now there they had batteries and guns, a single shot from which would have been enough to sink the English ship; so the Federals allowed the Dolphin to run towards the south-west, contenting themselves by observing her without following closely.

Thus for an hour the respective situations of the ships did not change, for James Playfair, wishing to deceive the cruisers as to the course of the Dolphin, had caused the fires to be moderated, so that the speed was decreased. However, from the thick volumes of smoke which escaped from the chimneys, it might have been thought that he was trying to get his maximum pressure, and, consequently his maximum of rapidity.

"They will be slightly astonished presently," said James Playfair, "when they see us slip through their fingers!"

In fact, when the Captain saw that he was near enough to Morris Island, and before a line of guns, the range of which he did not know, he turned his rudder quickly, and the ship resumed her northerly course, leaving the cruisers two miles to windward of her; the latter, seeing this manoeuvre, understood the steamer’s object, and began to pursue her in earnest, but it was too late. The Dolphin doubled her speed under the action of the screws, and distanced them rapidly. Going nearer to the coast, a few shell were sent after her as an acquittal of conscience, but the Federals were outdone, for their projectiles did not reach half-way. At eleven o’clock in the morning, the steamer ranging near Sullivan Island, thanks to her small draft, entered the narrow strait full steam; there she was in safety, for no Federalist cruiser dared follow her in this channel, the depth of which, on an average, was only eleven feet at low tide.

"How!" cried Crockston, "and is that the only difficulty?"

"Oh! oh! Master Crockston," said James Playfair, "the difficulty is not in entering, but in getting out again."

"Nonsense!" replied the American, "that does not make me at all uneasy; with a boat like the Dolphin and a Captain like Mr. James Playfair, one can go where one likes, and come out in the same manner."

Nevertheless, James Playfair, with telescope in his hand, was attentively examining the route to be followed. He had before him excellent coasting guides, with which he could go ahead without any difficulty or hesitation.

Once his ship was safely in the narrow channel which runs the length of Sullivan Island, James steered bearing towards the middle of Fort Moultrie as far as the Pickney Castle, situated on the isolated island of Shute’s Folly; on the other side rose Fort Johnson, a little way to the north of Fort Sumter.

At this moment the steamer was saluted by some shot which did not reach her, from the batteries on Morris Island. She continued her course without any deviation, passed before Moultrieville, situated at the extremity of Sullivan Island, and entered the bay.

Soon Fort Sumter on the left protected her from the batteries of the Federalists.

This fort, so celebrated in the civil war, is situated three miles and a half from Charleston, and about a mile from each side of the bay: it is nearly pentagonal in form, built on an artificial island of Massachusetts granite; it took ten years to construct and cost more than 900,000 dollars.

It was from this fort, on the 13th of April, 1861, that Anderson and the Federal troops were driven, and it was against it that the first shot of the Confederates was fired. It is impossible to estimate the quantity of iron and lead which the Federals showered down upon it. However, it resisted for almost three years, but a few months after the passage of the Dolphin it fell beneath General Gillmore’s three-hundred-pounders on Morris Island.

But at this time it was in all its strength, and the Confederate flag floated proudly above it.

Once past the fort, the town of Charleston appeared, lying between Ashley and Cooper Rivers.

James Playfair threaded his way through the buoys which mark the entrance of the channel, leaving behind the Charleston lighthouse, visible above Morris Island. He had hoisted the English flag, and made his way with wonderful rapidity through the narrow channels. When he had passed the quarantine buoy, he advanced freely into the centre of the bay. Miss Halliburtt was standing on the poop, looking at the town where her father was kept prisoner, and her eyes filled with tears.

At last the steamer’s speed was moderated by the Captain’s orders; the Dolphin ranged along the end of the south and east batteries, and was soon moored at the quay of the North Commercial Wharf.

Chapter VII
A SOUTHERN GENERAL

The Dolphin, on arriving at the Charleston quay, had been saluted by the cheers of a large crowd. The
inhabitants of this town, strictly blockaded by sea, were not accustomed to visits from European ships. They asked each other, not without astonishment, what this great steamer, proudly bearing the English flag, had come to do in their waters; but when they learned the object of her voyage, and why she had just forced the passage Sullivan, when the report spread that she carried a cargo of smuggled ammunition, the cheers and joyful cries were redoubled.

James Playfair, without losing a moment, entered into negotiation with General Beauregard, the military commander of the town. The latter eagerly received the young Captain of the Dolphin, who had arrived in time to provide the soldiers with the clothes and ammunition they were so much in want of. It was agreed that the unloading of the ship should take place immediately, and numerous hands came to help the English sailors.

Before quitting his ship James Playfair had received from Miss Halliburtt the most pressing injunctions with regard to her father, and the Captain had placed himself entirely at the young girl’s service.

"Miss Jenny," he had said, "you may rely on me; I will do the utmost in my power to save your father, but I hope this business will not present many difficulties. I shall go and see General Beauregard to-day, and, without asking him at once for Mr. Halliburtt’s liberty, I shall learn in what situation he is, whether he is on bail or a prisoner."

"My poor father!" replied Jenny, sighing; "he little thinks his daughter is so near him. Oh that I could fly into his arms!"

"A little patience, Miss Jenny; you will soon embrace your father. Rely upon my acting with the most entire devotion, but also with prudence and consideration."

This is why James Playfair, after having delivered the cargo of the Dolphin up to the General, and bargained for an immense stock of cotton, faithful to his promise, turned the conversation to the events of the day.

"So," said he, "you believe in the triumph of the slave-holders?"

"I do not for a moment doubt of our final success, and, as regards Charleston, Lee’s army will soon relieve it: besides, what do you expect from the Abolitionists? Admitting that which will never be, that the commercial towns of Virginia, the two Carolinas, Georgia, Alabama, fall under their power, what then? Will they be masters of a country they can never occupy? No, certainly not; and for my part, if they are ever victorious, they shall pay dearly for it."

"And you are quite sure of your soldiers?" asked the Captain. "You are not afraid that Charleston will grow weary of a siege which is ruining her?"

"No, I do not fear treason; besides, the traitors would be punished remorselessly, and I would destroy the town itself by sword or fire if I discovered the least Unionist movement. Jefferson Davis confided Charleston to me, and you may be sure that Charleston is in safe hands."

"Have you any Federal prisoners?" asked James Playfair, coming to the interesting object of the conversation.

"Yes, Captain," replied the General, "it was at Charleston that the first shot of separation was fired. The Abolitionists who were here attempted to resist, and, after being defeated, they have been kept as prisoners of war."

"And have you many?"

"About a hundred."

"Free in the town?"

"They were until I discovered a plot formed by them: their chief succeeded in establishing a communication with the besiegers, who were thus informed of the situation of affairs in the town. I was then obliged to lock up these dangerous guests, and several of them will only leave their prison to ascend the slope of the citadel, where ten confederate balls will reward them for their federalism."

"What! to be shot!" cried the young man, shuddering involuntarily.

"Yes, and their chief first of all. He is a very dangerous man to have in a besieged town. I have sent his letters to the President at Richmond, and before a week is passed his sentence will be irrevocably passed."

"Who is this man you speak of?" asked James Playfair, with an assumed carelessness.

"A journalist from Boston, a violent Abolitionist with the confounded spirit of Lincoln."

"And his name?"

"Jonathan Halliburtt."

"Poor wretch!" exclaimed James, suppressing his emotion. "Whatever he may have done, one cannot help pitying him. And you think that he will be shot?"

"I am sure of it," replied Beauregard. "What can you expect? War is war; one must defend oneself as best one can."

"Well, it is nothing to me," said the Captain. "I shall be far enough away when this execution takes place."

"What! you are thinking of going away already."

"Yes, General, business must be attended to; as soon as my cargo of cotton is on board I shall be out to sea again. I was fortunate enough to enter the bay, but the difficulty is in getting out again. The Dolphin is a good ship; she can beat any of the Federal vessels for speed, but she does not pretend to distance cannon-balls, and a shell in
her hull or engine would seriously affect my enterprise."

"As you please, Captain," replied Beauregard; "I have no advice to give you under such circumstances. You are
doing your business, and you are right. I should act in the same manner were I in your place; besides, a stay at
Charleston is not very pleasant, and a harbour where shells are falling three days out of four is not a safe shelter for
your ship; so you will set sail when you please; but can you tell me what is the number and the force of the Federal
vessels cruising before Charleston?"

James Playfair did his best to answer the General, and took leave of him on the best of terms; then he returned to
the Dolphin very thoughtful and very depressed from what he had just heard.

"What shall I say to Miss Jenny? Ought I to tell her of Mr. Halliburtt’s terrible situation? Or would it be better to
keep her in ignorance of the trial which is awaiting her? Poor child!"

He had not gone fifty steps from the governor’s house when he ran against Crockston. The worthy American had
been watching for him when he ran against Crockston. The worthy American had

"Well, Captain?"

James Playfair looked steadily at Crockston, and the latter soon understood he had no favourable news to give
him.

"Have you seen Beauregard?" he asked.
"Yes," replied James Playfair.
"And have you spoken to him about Mr. Halliburtt?"
"No, it was he who spoke to me about him."
"Well, Captain?"
"Well, I may as well tell you everything, Crockston."
"Everything, Captain."
"General Beauregard has told me that your master will be shot within a week."

At this news anyone else but Crockston would have grown furious or given way to bursts of grief, but the
American, who feared nothing, only said, with almost a smile on his lips:

"Pooh! what does it matter?"
"How! what does it matter?" cried James Playfair. "I tell you that Mr. Halliburtt will be shot within a week, and
you answer, what does it matter?"
"And I mean it — if in six days he is on board the Dolphin, and if in seven days the Dolphin is on the open sea."
"Right!" exclaimed the Captain, pressing Crockston’s hand. "I understand, my good fellow, you have got some
pluck; and for myself, in spite of Uncle Vincent, I would throw myself overboard for Miss Jenny."

"No one need be thrown overboard," replied the American, "only the fish would gain by that: the most important
business now is to deliver Mr. Halliburtt."

"But you must know that it will be difficult to do so."
"Pooh!" exclaimed Crockston.
"It is a question of communicating with a prisoner strictly guarded."
"Certainly."
"And to bring about an almost miraculous escape."
"Nonsense," exclaimed Crockston; "a prisoner thinks more of escaping than his guardian thinks of keeping him;
that’s why, thanks to our help, Mr. Halliburtt will be saved."
"You are right, Crockston."
"Always right."
"But now what will you do? There must be some plan: and there are precautions to be taken."
"I will think about it."
"But when Miss Jenny learns that her father is condemned to death, and that the order for his execution may
come any day — "

"She will know nothing about it, that is all."
"Yes, it will be better for her and for us to tell her nothing."
"Where is Mr. Halliburtt imprisoned?" asked Crockston.
"In the citadel," replied James Playfair.
"Just so! . . . On board now?"
"On board, Crockston!"

Chapter VIII
THE ESCAPE

Miss Jenny, sitting at the poop of the Dolphin, was anxiously waiting the Captain’s return; when the latter went
up to her she could not utter a word, but her eyes questioned James Playfair more eagerly than her lips could have
done. The latter, with Crockston’s help, informed the young girl of the facts relating to her father’s imprisonment. He said that he had carefully broached the subject of the prisoners of war to Beauregard, but, as the General did not seem disposed at all in their favour, he had thought it better to say no more about it, but think the matter over again.

"Since Mr. Halliburtt is not free in the town, his escape will be more difficult; but I will finish my task, and I promise you, Miss Jenny, that the Dolphin shall not leave Charleston without having your father on board."

"Thank you, Mr. James; I thank you with my whole heart."

At these words James Playfair felt a thrill of joy through his whole being. He approached the young girl with moist eyes and quivering lips; perhaps he was going to make an avowal of the sentiments he could no longer repress, when Crockston interfered:

"This is no time for grieving," said he; "we must go to work, and consider what to do."

"Have you any plan, Crockston?" asked the young girl.

"I always have a plan," replied the American: "it is my peculiarity."

"But a good one?" said James Playfair.

"Excellent! and all the ministers in Washington could not devise a better; it is almost as good as if Mr. Halliburtt was already on board."

Crockston spoke with such perfect assurance, at the same time with such simplicity, that it must have been the most incredulous person who could doubt his words.

"We are listening, Crockston," said James Playfair.

"Good! You, Captain, will go to General Beauregard, and ask a favour of him which he will not refuse you."

"And what is that?"

"You will tell him that you have on board a tiresome subject, a scamp who has been very troublesome during the voyage, and excited the crew to revolt. You will ask of him permission to shut him up in the citadel; at the same time, on the condition that he shall return to the ship on her departure, in order to be taken back to England, to be delivered over to the justice of his country."

"Good!" said James Playfair, half smiling, "I will do all that, and Beauregard will grant my request very willingly."

"I am perfectly sure of it," replied the American.

"But," resumed Playfair, "one thing is wanting."

"What is that?"

"The scamp."

"He is before you, Captain."

"What, the rebellious subject?"

"Is myself; don’t trouble yourself about that."

"Oh! you brave, generous heart," cried Jenny, pressing the American’s rough hands between her small white palms.

"Go, Crockston," said James Playfair; "I understand you, my friend; and I only regret one thing — that is, that I cannot take your place."
